COLES or **COLE, JOHN** (*fl.* 1650), translator, son of John Coles, a clergyman, was born at Adderbury, Oxfordshire, and having been educated at Winchester became a probationer of New College, Oxford, in 1643, being then about nineteen or more, and taught the grammar school held there in the cloister, but was ejected by the visitors before he took a degree. After this he lived at Wolverhampton, Staffordshire, where he married, 'but not to his content,' and took pupils. He translated the seventh part of that endless romance 'Cléopatre,' by Gauthier de Costes, seigneur de la Calprenède, which he dedicated to Alicia, 'wife of his honoured friend William Lea of Hadlow,' and his translation, published, along with other parts, in folio, in 1663, contains four sets of verses in praise of his work. The whole book is generally known as Robert Loveday's 'Hymen's Præludia, or Love's Masterpiece, being . . . that so much admired romance Cleopatra,' for Loveday translated some of the earlier parts.

[Wood's Athenæ Oxon. (Bliss), iv. 540; Hymen's Præludia, vii. and viii. pref.] W. H.

COLET, SIR HENRY (*d.* 1505), lord mayor of London, was the third son of Robert Colet of Wendover, Buckinghamshire. Apprenticed to a London mercer, he was soon one of the wealthiest members of the Mercers' Company; alderman of Farringdon ward without 15 Nov. 1476, and sheriff of London 21 June 1477. He became alderman of Bassishaw in exchange for Farringdon 28 Aug. 1478, and retired from the Corporation 15 Feb. 1481–2. He returned as alderman of Castle Baynard 1 Feb. 1482–3, and was removed to Cornhill ward 7 March 1486–7. He was first chosen mayor 13 Oct. 1486. During his mayoralty he rebuilt at his own expense the cross in West Cheap, and when Henry VII married Elizabeth of York (13 Jan. 1486–7), Colet was knighted. According to the churchwardens' account of the parish of St. Michael, Cornhill, he was granted a release from serving the office of mayor for the second time, 20 July 1495, but he was nevertheless re-elected 13 Oct. following, and did not decline the honour. He purchased an estate and a fine house at Stepney, and there he died in 1505, being buried in Stepney Church, of which his son John was at one time vicar. His London residence was situated in the parish of St. Antholin, and Stow states that a painted window containing portraits of himself and his family was erected to his memory in St. Antholin's Church, to which Colet was a great benefactor. His tomb at Stepney was twice repaired by the Mercers' Company, in 1605 and 1697, and an engraving of it is given in Knight's 'Life of Dean Colet,' p. 6. Colet's will is dated 27 Sept. 1505. There the testator expresses a desire to be buried in St. Paul's Cathedral, if he die in the city of London, and bequeaths much money to the parish of Stepney, 100*l.* for poor scholars at Oxford and Cambridge, 100*l.* for poor maidens of good name and fame on their marriage, and other sums to his nephew, William Colet, and his nephew's children. His executors, his wife Christian and his son John, afterwards dean of St. Paul's [q. v.], are the residuary legatees. The will was proved 20 Oct. 1505. Just before his death he subscribed to the fund for rebuilding St. Mary's Church, Cambridge. By his wife, Christian Knevet, to whom letters of fraternity were granted by the prior and chapter of Christchurch, Canterbury, 1 Dec. 1510, Colet had twenty-two children, but all except his son John died before 1498 (ERASMI *Opera*, Leyden, iii. 455). His widow, who continued to occupy the house at Stepney, survived the dean of St. Paul's, who died in 1519.

[The Accounts of the Churchwardens of the Parish of St. Michael, Cornhill, privately printed by Mr. A. J. Waterlow; Lupton's Colet (1887); Knight's Dean Colet (1823), pp. 1–7 and 398–400 (where the will is printed at length); Stow's Survey of London, ed. Strype. Weever, in his collection of epitaphs, quotes one from Colet's tomb, which erroneously gives the date of his death as 1510. On 6 Nov. 1505 the parish accounts show that Sir Thomas Knesworth was chosen alderman of Cornhill ward in the place of Sir Henry Colet, deceased, and this, with the fact of the will being proved 20 Oct. 1505, makes Weever's date, although often accepted, quite impossible.] S. L.

COLET, JOHN (1467 ?–1519), dean of St. Paul's and founder of St. Paul's School, was probably born in the parish of St. Antholin, London, where his family resided. The inscription on his monument states that he was fifty-three years old in 1519, which gives 1466 as the year of his birth. Erasmus, who, according to the best accounts, was born on 28 Oct.

of the same year, states that Colet was his junior by two or three months. He was the eldest child of eleven sons and eleven daughters, all of whom died before 1498. His father, Sir Henry Colet [q. v.], was twice lord mayor of London. His mother was Christian, daughter of Sir John Knevet of Ashwellthorpe by Elizabeth, daughter of Sir Constantine de Clifton, second baron Clifton. She lived to a great age, and was alive as late as 1520, the year following her surviving son's death (Erasmi *Opera*, iii. 455). Colet frequently mentions her with great tenderness in his letters, and took his friends to visit her at Stepney.

It is probable that Colet was for a time a scholar in St. Anthony's school in Threadneedle Street. About 1483 he went to Oxford, but the date of his matriculation is lost, and his college has not been identified with certainty. Several of his surname are described by Wood as students at Magdalen College near the close of the fifteenth century, and it has been thence inferred that Colet was a Magdalen scholar. After seven years of severe study Colet is stated to have proceeded M.A. at Oxford, but the exact date is not known. At an early age Colet resolved to enter the clerical profession, and in accordance with a common contemporary practice his father and other wealthy relatives conferred on him a number of benefices while he was still in his minority, and before his ordination. On 6 Aug. 1485 Sir William Knevet and Joan his wife, relatives of his mother, instituted him to the rectory of St. Mary Dennington, Suffolk, which he held till his death. About the same time Sir Henry Colet's influence at Stepney procured for his son the rich vicarage of St. Dunstan and All Saints; the rectory of St. Nicholas, Thurning, Huntingdonshire and Northamptonshire, which was in Sir Henry's gift, was conferred on him on 30 Sept. 1490, but Colet resigned this benefice three years later. On 5 March 1493–4 Colet became prebendary of Botevant at York, and the prebend of Goodeaster in the collegiate church of St. Martin-le-Grand and the free chapel of Hilberworth, Norfolk, were presented to him in early life.

Although Colet doubtless benefited by the emoluments of these preferments, there is no reason to suppose that he performed any of the duties attached to them, for none of which was he at the moment legally qualified. His studies absorbed all his attention. There was no part of mathematics in which 'he was not seen above his years,' and he read, besides the ordinary scholastic philosophy, all the classical literature to which a knowledge of Latin gave him access. Cicero was the favourite Latin author of his youth, but he explored Plato and Plotinus in recently published Latin translations, 'conferred and paralleled them, perusing the one as a commentary to the other.' About 1493 his zeal for learning induced him to undertake a continental tour, resembling that undertaken very shortly before by the Oxford tutors, Grocyn and Linacre. He went through France to Italy, and although no details of the journey are known, we learn that he mastered, while sojourning in foreign universities, the works of the fathers, and formed a decided preference for Dionysius, the so-called Areopagite, Origen, Ambrose, Cyprian, and Jerome, over St. Augustine, Duns Scotus, Aquinas, and the other mediæval schoolmen who were still in vogue in the English universities. He also studied canon and civil law, together with all the books on English history and literature that came in his way, and probably made his first acquaintance with Greek. Colet told Erasmus that he met in Italy 'certain monks, of true wisdom and piety;' he was obviously impressed by the strange contrast which their lives presented to the prevailing ecclesiastical corruption, and it has been suggested that he visited Savonarola at Florence. The sympathetic intimacy which he subsequently exhibited with the writings of two other contemporary Florentines, Ficino and Pico della Mirandola, supports the inference, but there is no positive evidence to confirm it. On returning to England Colet stayed at Paris, and met there the French historian, Gaguinus, author of 'De Origine et Gestis Francorum,' 1495. Through Gaguinus Colet first heard of Erasmus, who was also in Paris at the time; but the two scholars, who became the closest friends a few years later, failed to meet on this occasion.

About the spring of 1496 Colet was again in England. On 17 Dec. 1497 he was ordained deacon, and on 25 March 1497–8 priest, but he did not confine himself to ecclesiastical work. He took up his residence at Oxford, and there delivered, in a voluntary capacity, a remarkable course of public lectures in Latin on St. Paul's Epistle to the Romans. They were probably begun in Michaelmas term 1497. His ease as a speaker and his originality as a commentator rapidly brought a large audience around him, including the most distinguished tutors at the university. Colet abandoned the scholastic and allegorical interpretation of scripture sentence by sentence or word by word, for a free critical exposition of the obvious meaning of the text as a whole. He illustrated the apostle's personal character; compared St. Paul's references to the state of Roman society with Suetonius; rejected much of the recognised doctrine of verbal inspira-

tion; insisted on the necessity of loving rather than of knowing God; and finally spoke with dissatisfaction of the condition of the church. No schoolman was quoted, but Ficino, Pico della Mirandola, and Plotinus were frequently referred to, and their writings clearly suggested some of Colet's phraseology, although the mazes of Neo-Platonic speculation were carefully avoided. The lectures produced an immediate effect. A priest called on Colet one winter night early in 1498 and entreated him to explain privately the attraction that St. Paul's Epistles had for him. Colet, with characteristic good nature, paraphrased the first chapter of the Epistle to the Romans, to the complete satisfaction of his listener, and he described the curious interview to his friend, Richard Kidderminster, abbot of Winchcombe, in a letter which attests his practical piety and his consciousness of originality (Epist. I. in KNIGHT'S *Life*, 265 et seq.; *Cambr. Univ. Libr. MSS.* Gg. iv. 26, p. 62 et seq.) Another friend, whom Colet calls Radulphus, was stimulated at probably the same date by Colet's practical handling of St. Paul's Epistles to apply for assistance in interpreting other 'dark places of scripture,' and Colet replied in a treatise on the Mosaic creation. Radulphus has not been satisfactorily identified, and the theory that makes him out to be Ralph Collingwood, dean of Lichfield, is not well substantiated. In four letters Colet put forward the view that the first chapters of Genesis are to be treated as poetry—as an attempt on the part of a great lawgiver to accommodate his teaching to the understanding of an ignorant people. The work is not free from inconsistencies and scholastic subtleties, but its spirit is, in the main, that of a scientific inquirer. From Pico della Mirandola's 'Heptaplus' (1489)—an exposition on the same subject—some of Colet's philosophical dicta were drawn, and Philo Judæus, Origen, and St. Augustine doubtless influenced his opinions. For a young man named Edmund, who has been doubtfully identified with his mother's grand nephew, Edmund Knevet (mentioned in Colet's will), Colet also prepared a very literal paraphrase of the text of the Epistle to the Romans, of which a fragment reaching to the close of the fifth chapter is alone extant. Meanwhile Colet was following up another line of thought, first suggested to him in his Italian travels. The chief Italian Neo-Platonists were well acquainted with a number of writings in Greek, ascribed to Dionysius, called the Areopagite, who was identified with the disciple of St. Paul mentioned in Acts xvii. 34. These works, which were first published in a Latin translation at Paris in 1498, described and explained in a mystical fashion the constitution and practices of the apostolic church, and Colet, like Ficino, regarded them as authoritative. The genuineness of the Dionysian books was disputed a short time afterwards by Grocyn and Erasmus, and has been demolished by later scholars. Canon Westcott insists that they are pseudonymous, and ascribes them to the Edessene school of the fifth or sixth century (*Contemp. Review*, May 1867); others represent them as much more modern forgeries (see art. 'Dionysius Pseudo-Areopagita' in *Dict. Christ. Biog.*) Colet did not concern himself with these doubts, but drew up a series of abstracts of the pseudo-Dionysius's chief compositions, 'De Cœlesti Hierarchia' and 'De Ecclesiastica Hierarchia,' and then based on them a number of treatises, of which 'De Sacramentis Ecclesiæ,' and 'De Compositione Sancti Corporis Christi Mystici,' are extant. In these works Colet explains that man is related to God through an ascending series of emanations from the Divine Being, and that a symbolic meaning underlies all the details of the christian sacerdotal and sacramental system. But, after examining these systems as they existed according to Dionysius at their institution, Colet was astonished by the degrading contrast presented by their shape in his own day. His passion for ecclesiastical reform was thus intensified, and henceforth declared itself in unmistakable utterances.

The chronology of Colet's career is difficult to fix precisely, but it would appear that not later than 1498 he delivered, under the same conditions as before, another course of lectures at Oxford. His subject was St. Paul's first epistle to the Corinthians, and he followed with increasing boldness much the same plan as in his first course. He depicted St. Paul's character with greater vividness; introduced his theory of accommodation to account for St. Paul's views on marriage, with which he did not wholly agree; attacked with redoubled vigour the corruptions of the church, and exhibited throughout a more intense religious fervour. Among Colet's auditors was the scholar Erasmus, who came to Oxford in 1498, and was entertained by Richard Charnock, prior of St. Mary's. Charnock told Colet of his guest's attainments: Colet wrote to Erasmus a letter of welcome; Erasmus replied in highly appreciative terms, and from that time the two men were the fastest friends. A fantastic dialogue between them on the story of Cain and Abel is reported by Erasmus (Epist. xliv.) as taking place in a college hall, and must be dated very soon after their first interview. Dis-

cussions on the schoolmen followed, and the warmth of Colet's attacks upon them and his illustrations of their fatuity directly contributed to Erasmus's distrust of them and later hostility. Late in 1498 the two scholars talked at length of Christ's agony in the garden, and each gave a different explanation. Colet adopted St. Jerome's view, that the agony was not to be confounded with human dread of death, but was Christ's sorrow for the fate of his persecutors. Erasmus contended that Christ's human side was for a time dissociated from the divine, and, while defending his view in a letter written later, adopted the scholastic theory, that scripture was capable of a multiplicity of interpretations. The enunciation of this doctrine called forth strong disapproval on the part of Colet, who insisted on the unity of the Bible's meaning (Erasmi *Disputatiuncula de Tædio Jesu*, in *Opera*, v. 1265–94). Erasmus's opinion of Colet, although in details they were at times at variance, grew with increase of intimacy. He compared his conversation to Plato's, and represents him as the centre of the little band of Oxford scholars and reformers at the beginning of the sixteenth century which included Grocyn, Linacre, and Thomas More. Much to Colet's regret, Erasmus refused to actively join him in his Oxford labours, and left England for Paris early in 1500.

In the five succeeding years Colet continued his lectures on the New Testament, although few if any of them have reached us. In 1504 his position underwent a great change. Robert Sherborne was translated from the deanery of St. Paul's, London, to the see of St. David's, and Henry VII conferred the vacant deanery on Colet. He had hitherto held all the preferments granted him in his youth, with the exception of the rectory at Thurning and the addition of a prebend in the church of Salisbury, in which he was installed in 1502. But on 26 Jan. 1503–4 he resigned the prebend at St. Martin-le-Grand, and on 21 Sept. 1505 the Stepney vicarage. He proceeded D.D. at Oxford in 1504, and on 5 May 1505—nearly a year after he had settled in London—he received the temporalities of the deanery of St. Paul's, together with the prebend of Mora in the same church. Colet led in London the simple life that had characterised him at Oxford. He continued to wear a plain black robe instead of the rich purple vestments of his predecessors; he was frugal in his domestic arrangements, and preached frequently in the cathedral and often in English. His sermons resembled his Oxford lectures, and were often delivered in continuous courses. Colet's removal to London brought him into closer relations with Thomas More, who henceforth called him his spiritual director. Erasmus wrote to congratulate his friend on his elevation, sent him a copy of his 'Enchiridion,' which included an account of their discussion on Christ's agony, and expressed a desire to study with him. In 1510 Cornelius Agrippa studied with Colet at the deanery.

The death of his father in October 1505 made Colet the master of a vast fortune, but in the spirit of his tract 'Concerning a good Christian Man's Life,' which he wrote about this date, he contemplated the devotion of his money to public purposes. Meanwhile he improved the services at St. Paul's; invited Grocyn and others to deliver divinity lectures there; reformed the statutes (28 April 1507) of the mediæval guild of Jesus, which was associated with the cathedral; and instituted an inquiry into the history of the numerous chantries at St. Paul's.

By 1509 Colet had resolved to apply a portion of his wealth to the foundation of a new school in St. Paul's Churchyard, where 153 boys, without restriction as to nationality, who could already read and write and were of good capacity, should receive a sound christian education and a knowledge of Greek as well as of Latin. The site, which he had probably inherited from his father, was at the eastern end of St. Paul's Cathedral, occupied in 1505 by a number of bookbinders' shops. Colet busily superintended the erection of the schoolhouse, which embraced a large schoolroom, a small chapel, and dwellings for two masters—a head-master and a sur-master. Facing the street he placed the inscription 'Schola catechizationis puerorum in Christi Opt. Max. fide et bonis literis . . . anno Verbi incarnati MDX.' Colet obtained royal license to transfer to the company of the Mercers, with which his father had been identified, a large estate in Buckinghamshire, of the value of 53*l.* a year, for the masters' salaries (12 July 1511), and to this he added much house property and land in London in 1514 for the provision of a chaplain to teach the boys divinity in English and for other school purposes. He expended in all a sum equivalent to 40,000*l.* of the money of our own day. Colet wrote some simple precepts for the guidance of the schoolmasters and scholars, and also drew up an English version of the creed and other prayers. The story told by Erasmus of the cruelty with which an unnamed teacher of his acquaintance treated his pupils has been applied to Colet wholly without warrant, and there is every reason to believe that Colet discountenanced severe punishments. The founder chose his friend and the friend of More, William Lilly, to be the first head-master; induced a sound scholar,

John Ritwyse, to be sur-master, in whose behalf he asked Wolsey for some ecclesiastical preferment in 1517 (Ellis, *Orig. Letters*, 3rd ser. i. 190); and engaged Linacre to write a simple Latin grammar. Linacre's grammar did not satisfy Colet, and he himself prepared in 1509 a short English treatise on the Latin Accidence, prefaced by his precepts and prayers. Lilly supplied a brief English syntax, which is usually bound up with Colet's accidence. At Colet's request Lilly also wrote a Latin syntax ('Libellus de Constructione Octo partium'), which Erasmus revised. A unique copy, with Colet's letter to Lilly prefixed, printed by Richard Pynson in London in 1513, is in the Bodleian Library (*Notes and Queries*, 6th ser. ii. 441, 461). Erasmus likewise drew up several prayers and a Latin phrase-book ('De Copia Verborum et Rerum') for the use of Colet's scholars, and in Erasmus's edition of the 'Horæ' (Paris, 1532) was printed Colet's English paraphrase of the Lord's Prayer, which was not specially prepared for his pupils. Colet's translation of this prayer and of the creed also appeared in the 'Horæ' printed in London by Robert Wyer in 1533 (Ames, pp. 370-1), and the Lord's Prayer alone is in 'The Prymer of Salisbery Vse' (Lond. by John Gough, 1536).

On 6 Feb. 1511-12 convocation was summoned to consider the extirpation of the Lollard heresy, which had lately revived. Colet was appointed by Archbishop Warham to preach the preliminary sermon in St. Paul's Cathedral, and he seized the opportunity of denouncing the corruptions of the bishops and clergy—their ignorance, their self-indulgence, and their simony—and of boldly pleading for the church's internal reform. The sermon was published immediately in English, and convocation adjourned without devoting much attention to the Lollards, who are stated to have been the most attentive auditors of Colet's sermons at St. Paul's. The majority of churchmen regarded Colet as an advocate of dangerous doctrines, and they now attacked as heretical not only his preaching but the scheme of his new school. The aged bishop of London, FitzJames, who was jealous of Colet's reputation, took advantage of his unpopularity with his own order to bring specific charges of heresy against him before the Archbishop of Canterbury. Extracts from his sermons showed that he had denounced the worship of images and large episcopal revenues: some objections raised to the practice of preaching from written sermons were interpreted as reflections on the physical infirmities of his bishop. Such remarks formed the basis of the accusation. Tyndale adds that Colet was also charged with having translated the 'Paternoster' into English. Archbishop Warham sensibly dismissed all the charges as frivolous. The persecution did not silence Colet. Henry VIII's continental wars disgusted him; he had expected the new king, whose enlightenment was at one time a commonplace with the leaders of the New Learning, to inaugurate a reign of peace, and in sermons preached in 1512 and 1513 he lost no opportunity of expressing his disapproval of Henry's militant policy. Bishop FitzJames tried in vain to poison the king's mind against Colet on these grounds. After Good Friday, 27 March 1513, when the dean had denounced the expedition against France, Henry invited Colet to meet him at Greenwich, and they talked together of the possibilities of justifying war. Although they did not come to any agreement, they each made concessions in the argument and parted on the best of terms. The king is said to have marked his sense of Colet's honesty by making him a royal chaplain and admitting him to the privy council, but it is very doubtful if the latter honour was conferred on him. In 1514 Erasmus, who was bringing a second visit to England to a close, spent much of his time with Colet. Colet was involved in a quarrel with his uncle William on business matters, which Erasmus and Archbishop Warham induced him to settle amicably. About the same time the two friends made a pilgrimage together to the shrine of St. Thomas à Becket at Canterbury, where Colet openly expressed his disbelief in the healing effects of the relics and ridiculed the credulity of the vergers and his fellow-pilgrims. In 1514 the dean wrote to Erasmus that the persecution of the Bishop of London continued, and made him anxious to exchange public life for retirement in a Carthusian monastery; but on 18 Nov. 1515 he preached at the installation of Wolsey as cardinal at Westminster Abbey, and openly warned the prelate against worldly ambition. From this time till his death Colet complained of ill-health and habitually spoke of himself as an old man, although he was barely fifty years of age. He welcomed eagerly Erasmus's new Latin translation of the New Testament (1516), and read with appreciation the 'De Arte Cabalistica' (1517) of Reuchlin, the eminent Hebraist. In 1518 he was for a third time seized with the sweating sickness, and, although his recovery seemed assured, he was conscious of the approach of death. His attention was now mainly directed towards his school, and the last year of his life was chiefly occupied with the composition of its final statutes, which are said to have been modelled on those of Banbury school. He

formally appointed the Mercers' Company, and no ecclesiastical corporation, the governing body, and he desired the active governors to be 'married citizens'—a sign that his views on marriage had changed since he criticised the Epistle to the Corinthians. He wisely gave permission to the school authorities to alter the statutes in the future as occasion might require. This important business was completed on 18 June 1518, when he handed the book of statutes to Lilly. He next superintended the erection of a monument for himself in St. Paul's Cathedral, with the simple inscription 'Joannes Coletus,' and he began building a mansion for himself (afterwards tenanted by Wolsey) in the precincts of the Charterhouse at Sheen. On 1 Sept. 1518 he presented to Cardinal Wolsey a thoroughly revised version of the statutes and customs of St. Paul's Cathedral, together with an exhaustive list of the duties attaching to every office, but the new statutes were not accepted by the chapter nor confirmed by the bishop. The book containing them was at one time extant in St. Paul's Cathedral Library, and a portion of it appears in Dugdale's 'History of St. Paul's, p. 360. The original document is not now known to exist. Colet's fame had by this time spread to Germany, and he was agreeably surprised to receive in May 1519 a letter eulogising his labours from Marquard von Hatstein, canon of Mainz, and a connection of Ulrich von Hutten. Before 11 Sept. following Colet was seized with a mortal illness, and on 16 Sept. he died. Wood states that he was at the time lodging at Sheen. His disease seems to have been dropsy, complicated by a disorder of the liver. He was buried in St. Paul's Cathedral, but the Mercers' Company erected a more elaborate monument over his grave than the one he had designed for the purpose. It included a bust with several prose inscriptions in both Latin and English and elegiacs by William Lilly. In 1575–6 and 1617–18 the Mercers' Company restored and embellished it with new marble, but it was destroyed in the fire of 1666. In 1680 Colet's coffin was found under the walls of the old cathedral, and some inquisitive members of the Royal Society examined it without much result. An engraving of the tomb appears in Dugdale's 'History of St. Paul's Cathedral,' and is reproduced in Knight's 'Life of Colet.' A headless bust found in the cathedral vaults in 1809 was engraved in Churton's 'Life of Nowell,' p. 380, as the remains of Nowell's tomb, but there is good reason to believe that this was a fragment of Colet's monument (*Notes and Queries*, 5th ser. iii. 340). Erasmus passionately bewailed Colet's death in letters to his English friends, and Leland eulogises him in his 'Encomia,' 1549, p. 74.

Colet's last will is dated 22 Aug. 1516. No reference was made here to the Virgin Mary or to saints, and no money was appointed for masses for his soul. Most of his realty he had previously alienated, under dates 8 July 1511 and 10 June 1514, to the Mercers' Company for the endowment of St. Paul's School, but such portions as he retained he bequeathed to his mother's relative, Edmund Knevet, serjeant-porter to Henry VIII, and to John Colet, son of his uncle William, and small money legacies and books were assigned to his friends, Dr. Aleyn, Dr. Morgan, Thomas Lupset, his amanuensis, and William Garrard, who, with his mother and Nicholas Curleus, was an executor. Erasmus is not mentioned, but in his later years Colet had allowed him a pension. St. Paul's School was rebuilt in 1670 on its original site after the fire of 1666; the second building was pulled down in 1823–4. A third building took its place and was demolished in 1884 on the removal of the school to new buildings at Hammersmith.

The bust on Colet's monument was doubtless a portrait of the dean, but it is indistinct in the extant engraving supplied by Dugdale. In a manuscript volume containing the gospels of St. Matthew and St. Mark, which was copied out under Colet's direction, and was presented by Archbishop Parker to the Cambridge University Library, there is a finely illuminated drawing containing three figures, one of which is subscribed 'Effigies ipsa D. Johis Coletti, Decani S. Pauli.' In 1585 an artist named Segar painted (from the bust on the tomb) another portrait of the dean on the cover of the book of St. Paul's School statutes, which is now among the Mercers' Company archives, and this is reproduced in Mr. Gardiner's 'Register of the School,' 1884. A fine drawing in coloured chalk by Holbein, at Windsor, is also stated to be a portrait of Colet; but as Holbein did not come to England till 1525, it could not have been drawn from the life. Erasmus describes Colet as tall and comely.

Colet's achievements seem slight compared with his posthumous fame. On education alone, where he diminished the ecclesiastical control at the same time that he increased the religious tone, did he exert a practical influence. He printed very few of his books, and their effect must have been consequently small. 'As for John Colet,' wrote Harding to Jewell, 'he hath never a word to show, for he wrote no workes.' His knowledge of Greek —the chief source of the New Learning—was slight. Hearne contended on slender grounds that he knew nothing of it till he was fifty.

His Latin style is neither elegant nor correct; his English is not distinctive. His scriptural exegesis often takes refuge in mystical subtleties. His practical efforts of church reform were confined to the reissue of old rules of discipline to prevent the clergy from neglecting their duties. He was, however, among the first not only to recognise the necessity of making the scriptures intelligible to the masses in vernacular translations, but to criticise their subject-matter with any approach to scholarly method. Yet his chief strength lay in the overwhelming force of his personal conviction that the church had lost its primitive purity, and that the schoolmen had contributed less to the advantage of piety or of human intelligence than the early fathers or the classics, a conviction which impressed itself on all with whom he came into close contact, stirring active antagonism in the slow-witted or self-interested, but stimulating men of Erasmus's or More's intelligence into effective thought and action. Colet was conservative in the passionate enthusiasm with which he urged his countrymen to seek salvation in pre-mediæval usages and literature; reformation was in his eyes conformation to a very distant past. It is almost certain that the Lutheran Reformation, which he indirectly encouraged, although he did not foresee it, would have altogether exceeded his sense of the situation's needs, and that, had he lived, he would have been found at the side of More and Fisher.

The following separate works by Colet were published in the sixteenth and seventeenth centuries: 1. 'The Convocation Sermon of 1512.' An undated copy in English, printed by Berthelet, probably in Colet's lifetime, is at Lambeth. Herbert and Ames mention a convocation sermon by Colet, printed by Richard Pynson in 1511–12 (*Typ. Ant.* 256–8). This was reprinted in English alone in 1661, 1701, and in the 'Phœnix,' 1708, vol. ii., and in Knight's 'Life' (1724 and 1823) in Latin and English. 2. 'A righte fruitfull Admonition concerning the order of a good Christian man's life . . . made by the famous Doctour Colete,' first printed alone by John Byddell in 1534 (copy at St. John's College, Cambridge), and reprinted by John Cawood (Bodleian). Gabriel Cawood in 1577 issued it with two other anonymous religious treatises. In later editions this book took the name of 'Daily Devotions, or the Christian's Morning and Evening Sacrifice. . . . By John Colet, D.D.,' where Colet's 'Order of a Christian Life' is succeeded by a number of prayers, of which he is not the author. The eighteenth edition of Colet's so-called 'Devotions' contains Fuller's notice of the dean. A twenty-second edition appeared in 1722. 3. Colet's Grammar entitled 'Joannis Coleti Theologi olim Decani Divi Pauli æditio una cum quibusdam G. Lilii Grammatices rudimentis.' This book is almost all in English. It opens with Colet's precepts, the articles of the faith, and other religious pieces. A Latin dedication to Lilly follows, and is dated 1 Aug. 1509. After the eight parts of speech are duly treated of, 'G. Lilii Angli Rudimenta' are given in a few concluding pages. A copy dated 1527, without printer's name, is in Peterborough Cathedral Library. Several copies of an edition printed by Wynkyn de Worde in 1534 are known. In 1529 and 1536 Colet's 'Æditio' was issued with Wolsey's 'Rudimenta Grammatices,' drawn up for the use of his school at Ipswich, and first printed by Peter Treveris. There was doubtless an earlier edition, dated about 1510, but no trace of it has been found. The 'Æditio' was reprinted at Antwerp in 1535 and 1536, and in London in 1539. Lilly's Latin syntax rather than Colet's accidence is the original of nearly all the Latin grammars of the sixteenth and seventeenth centuries.

Colet's numerous manuscript treatises were left by his will at the disposition of his executors. After many wanderings some are now in St. Paul's School Library, and others are at Cambridge. Many are extant in the handwriting of Peter Meghen, one of Colet's amanuenses. Their publication was not undertaken till our own time. It was begun by the Rev. J. H. Lupton, sur-master of St. Paul's School, in 1867, and completed by him in 1876. All the volumes are carefully edited, and the Latin works are in most instances translated. Mr. Lupton's publications are as follows: 1. 'Opus de Sacramentis Ecclesiæ,' the Latin text alone, from a manuscript in St. Paul's School Library, 1867. 2. Two treatises on the Hierarchies of Dionysius, from a manuscript in St. Paul's School Library; the first treatise is also collated with Cambr. Univ. Libr. MS. Gg. iv. 26 (the Latin text with an English translation), 1869. 3. 'An Exposition of St. Paul's Epistle to the Romans,' from Cambr. Univ. Libr. MS. Gg. iv. 26 (the Latin text with an English translation), 1873. 4. 'An Exposition of St. Paul's First Epistle to the Corinthians,' from Cambr. Univ. Libr. MS. Gg. iv. 26 (the Latin text with an English translation), 1874. 5. Letters to Radulphus on the Mosaic account of the Creation, and an unfinished exposition of St. Paul's Epistle to the Romans, both from Archbishop Parker's MSS. in Corpus Christi Coll. Libr. ccclv.; 'Christ's Mys-

tical Body of the Church,' from Cambr. Univ. Libr. MS. Gg. iv. 26; 'Commentary on 1 Peter,' from Gale's MSS. in Trin. Coll. Cambr. O. 4. 44 (all with Latin text and translation), 1876. The identification of the author of the commentary on Peter with Colet is very doubtful.

The St. Paul's School statutes drawn up by Colet in 1518 are extant with the author's autograph in the Mercers' Hall archives, and a copy is in the British Museum, Addit. MS. 6274. They have been printed in Knight's 'Life' and in Rev. R. B. Gardiner's 'Register of St. Paul's School,' 375–88. Colet's revised statutes for St. Paul's Cathedral, presented to Wolsey in 1518, were printed from a chapter manuscript, now lost, by Dugdale in his 'History of St. Paul's,' and are reprinted in Rev. W. Sparrow Simpson's 'Registrum Statutorum Ecclesiæ Cathedralis S. Pauli' (1873), pp. 237–48. Dr. Simpson has also printed in the same volume, pp. 446–52, from the Tanner MS. 221 in the Bodleian, the major part of Colet's revised statutes for the fraternity of Jesus at St. Paul's. Pits gives the largest list of Colet's works, and mentions, besides those already described, 'In Proverbia Salomonis;' 'In Evangelium S. Matthæi Lib. i.;' 'Breviloquium dictorum Christi Lib. i.;' 'Excerptiones Doctorum, Lib. i.;' 'Conciones Ordinariæ, Lib. i.;' 'Conciones Extraordinariæ;' 'Epistolæ ad Tailerum, Lib. i.' None of these are now known. The 'Ortolanus Lib. i.' and the 'Abbreviationes,' also mentioned by Pits, may perhaps be respectively the apophthegms and abstracts of St. Paul's Epistles in the Gale MS. in Trin. Coll. Cambr. Libr. O. 4. 44. Colet's letters to Erasmus and to the abbot of Winchcombe are in the collected edition of Erasmus's letters. Colet's contributions to the works of Erasmus are mentioned in the article. Most of these are printed in Knight's appendices.

[Erasmus sketched Colet's life, together with that of Jehan Vitrier, in a Latin letter to Justus Jonas of Wittenberg, dated apparently in 1520 (see Erasmi Epistolæ (Leyden), iii. No. ccccxxxv.) The sketch consists almost entirely of personal reminiscences, and is, therefore, far from complete. The portion relating to Colet was translated with notes by Thomas Smith of Christ's College, Cambridge, in 1661, by J. G. Nichols in 1849, and by Mr. W. Palmer in 1851. The whole was translated and edited by the Rev. J. H. Lupton in 1883. Thomas Smith, in 1661, intended to publish some of Colet's treatises, but the plan was abandoned, except as it affected the Convocation Sermon, perhaps after the destruction of St. Paul's School and its library in 1666. John Postlethwayte, high-master of St. Paul's School, who died in 1713, designed a life of Colet, which was never completed. About the same time Dr. White Kennet was making collections for the same purpose, and they filled a folio volume of 181 pages, which is now among the Lansdowne MSS. (1030) at the British Museum, but before March 1721 other labours compelled Kennet to hand his materials over to Dr. Samuel Knight. Knight's Life appeared in 1724, and was republished with a few additions in 1823. It is a very diffuse book, and treats Colet as a protestant reformer, but it contains a large mass of information in both text and appendices. In 1867 appeared the first, and in 1869 the second, edition of Mr. Frederic Seebohm's Oxford Reformers, Colet, Erasmus, and More, where a thorough examination of Erasmus's numerous letters to or about Colet, and of most of Colet's sermons and treatises, has enabled the author to present his readers with a very vivid biography. Mr. Lupton, who has kindly revised this article, has just (1887) crowned his labours in connection with Colet by issuing a full biography. Mr. Lupton's imprints of Colet's manuscript treatises, mentioned above, also include some valuable introductory biographical notes, of which full use has been made in the article. The notices of Colet in Wood's Athenæ Oxon. ed. Bliss, i. 22, in Bale's Scriptores, in Foxe's Acts (1837), iv. 246–8, in Pits, De Rebus Anglicis, in Tanner's Bibliogr., in Holland's Herœologia Anglica, p. 155, and in Fuller's Abel Redivivus, are based almost entirely on Erasmus's letters to Jonas, with occasional supplements from the scanty memoranda of Polydore Vergil and Leland. The long notice in the Biog. Brit. (Kippis) is an abstract of Knight's Life. For the bibliography the Rev. J. H. Lupton's Appendix to his imprint of Colet's Letters on the Mosaic Creation should be consulted, and the Introduction and Appendices to Mr. R. B. Gardiner's Register of St. Paul's School, 1884, are valuable. Among the manuscripts in the Chapter House of St. Paul's are an account of the expenses incurred by Colet in a visitation of the chapter's property in 1506, a copy of Colet's will, and a bill addressed to him by a glazier for glazing the windows of his father's house at Stepney, and emblazoning the arms of the Mercers' Company in one of the windows: see Hist. MSS. Comm. 9th Rep. 44 *a*, 48 *b*, 51 *a*.]

S. L.

COLEY, HENRY (1633–1695?), mathematician and astrologer, was born, as we are told by an inscription round a portrait of him by White, found in some of his works, on 18 Oct. 1633, at Oxford. His horoscope is given, with careful readings, in Sibly's 'Occult Sciences' (London, 1790, 2 vols. 4to), and in a work by J. Kendal entitled 'Χρονομετρία, or the measure of time by directions, practically illustrated in the geniture of Mr. Henry Coley' (London, 1684, 8vo). In 1644 he narrowly escaped death by the plague. In 1655 he married his first wife, by whom he had one child, and in 1660 he married again, and became the father

of a second child. He lived in Baldwin's Gardens, Gray's Inn Lane, whence most of his works were published. He was the adopted son of the astrologer, William Lilly, who constantly makes reference in his works to Coley's merit as a man and as a professor of mathematics and occult science. He is best known by his celebrated work, 'Clavis Astrologiæ Elimata; or a Key to the whole Art of Astrology, new filed and polished,' which was first published in 1669 (not in 1663, as stated by Sibly), and of which a second and enlarged edition was published in 1676. The first number of his celebrated almanack or Ephemeris was published in 1672, and Lilly on his death in 1681 bequeathed to him his still more celebrated almanack, which had then reached its thirty-sixth year of publication, entitled 'Merlini Anglici Ephemeris, or Astrological Judgment for the Year,' which from this date (1681) was issued by Coley 'according to the method of Mr. Lilly.' Coley had acted as Lilly's amanuensis since 1677, when the latter was stricken with the illness of which he afterwards died. The editor of Lilly's 'Autobiography' tells us: 'His judgments and observations for the succeeding years till his death were all composed by his directions, Mr. Coley coming to Hersham the beginning of every summer, and stayed there till by conference with him he had despatched them for the press; to whom at these opportunities he communicated his way of judgment and other "Arcana."' Even after the death of Lilly, Coley continued to publish his predictions, as for instance, 'The great and wonderful Predictions of that late famous Astrologer, William Lilly, Mr. Partridge, and Mr. Coley concerning this present year 1683.' Coley attained considerable distinction as a mathematician. We are told by his almanack that he taught 'arithmetic, vulgar, decimal, and logarithmical, geometry, trigonometry, astronomy, navigation, the use of the celestial and terrestrial globes, dialling, surveying, gaging, measuring, and the art of astrology in all its branches,' at Baldwin's Gardens. He corrected and enlarged Joseph Moxon's 'Mathematics made easy' (London, 1692), and also Forster's 'Arithmetic, or that useful art made easie' (London, 1686). He was alive in 1694, and after 1695 we cannot trace any issue of his almanack. He therefore probably died in this year.

[Sibly's Occult Sciences; Kendal's *Χρονομετρία*; Coley's Works; W. Lilly's Autobiography.]

E. H-A.

COLFE or CALF, ABRAHAM (1580–1657), divine, son of the Rev. Richard Colfe, D.D., prebendary of Canterbury, by his first wife whose maiden name was Thorneton, was born at Canterbury, 7 Aug. 1580, of a family that had settled at Calais, and had come to England after the capture of that town [see COLFE, ISAAC]. He was educated in the free grammar school attached to the cathedral, and thence went to Christ Church, Oxford, where he graduated in arts. He was punished by George Abbot [q. v.] for supporting the Earl of Essex in 1601. He became curate of Lewisham, Kent, in 1604. On 30 Jan. 1609 he was presented by the dean and chapter of Canterbury to the rectory of St. Leonards, Eastcheap, London, but continued to live at Lewisham, and on the death of Saravia in 1610, succeeded him in the vicarage on the presentation of James I. In or about 1612 he married Margaret, daughter of John Hollard, smith, and widow of Jasper Valentine, tanner, of Lewisham. During 1614 and 1615 he was much occupied in helping his Lewisham parishioners to defend their rights over Westwood common, and he has left a short account of the course and successful issue of the suit. While Colfe seldom discharged the duties of his London parish in person, his preaching is said to have been acceptable to the religious part of the congregation there. He was one of the earliest members of Sion College, and was a benefactor to the library. About 1644 some of the Lewisham people, 'at the instigation,' he writes, 'of their impudent lecturer,' tried to turn him out of that living by proceeding against him before the committee for plundered ministers. In March of the same year he lost his wife, whom he describes on her tombstone as having been 'above forty years a willing nurse, midwife, surgeon, and in part physitian, to all both riche and poore.' In 1646 or 1647 he was forced to give up his London living to Henry Rodborough, one of the scribes to the assembly of divines, but kept Lewisham till his death. Although his father had not left him any land, and he had bestowed 420*l.* on his brothers, Colfe as early as 1626 determined to buy land to found and endow charitable institutions, and in 1634 proposed to convey certain land he had acquired to the Company of Leathersellers for pious uses. In 1652 he founded and opened a free grammar school at Lewisham. He died 5 Dec. 1657, in his seventy-eighth year. He had no children, and by his will, dated 7 Sept. 1656, left all his property for charitable purposes. In 1662 his trustees built almshouses at Lewisham in accordance with his directions, and in 1664 the Wardens and Society of the Leathersellers of London were by act of parliament constituted owners and governors of his charitable institutions. Among Colfe's foundations is a library for the use of

his grammar school and of the clergy and gentlemen of the hundred of Blackheath.

[All that is known of Colfe is contained in W. H. Black's Bibliothecæ Colfanæ Catalogus; Hasted's Kent, i. 76. See also Newcourt's Repertorium, ii. 391, 392, where the error of Wood in confusing Abraham with his uncle Isaac (Athenæ Oxon., Bliss, iii. 390) is pointed out.] W. H.

COLFE, ISAAC (1560?–1597), divine, the fourth son of Amandus, Almantius, or Aymon Colfe and his wife, Catherine Bradfield, and uncle of Abraham Colfe [q. v.], was born at Canterbury in or before 1560. His father and mother, who were zealous protestants, had a considerable estate at Guisnes, which they lost on the reconquest of Calais by the French in 1558. They came over to England, lived in a house outside the West-gate of Canterbury, afterwards occupied by their third son Joseph, mayor of the city, and were both buried in Westgate Church. Isaac was entered as a commoner of Broadgates Hall, Oxford, in 1576, and proceeded B.A. on 17 Feb. 1580, and M.A. on 4 July 1582. Having taken orders he was presented to the vicarage of Stone in Kent on 25 Feb. 1585, and resigned it in 1587, on his appointment to the vicarage of Brookland in the same county. On 18 June 1596 he was inducted master of Kingsbridge Hospital, Canterbury. He was prebendary of Canterbury from 1596 till his death. He died 15 June 1597, and was buried in the chapter-house of the cathedral. He was married and had two sons: Isaac of Christ Church, and Jacob of All Souls' College, Oxford. He published: 1. 'A Sermon preached on the Queene's Day, being 17 November 1587, at the Town of Lidd in Kent (on Ps. cxviii. 22–6),' printed in 1588 at London, 8vo, and dedicated to the mayor and jurats of Lidd; a copy is in the Bodleian. 2. 'A Comfortable Treatise on the Temptation of Christ,' 1596, London, 8vo, wrongly attributed by Wood to Isaac Colfe, rector of Chaldwell, son of Richard Colfe, prebendary of Canterbury.

[Wood's Athenæ Oxon. (Bliss), i. 590, Fasti, i. 212, 221; Hasted's History of Kent, iii. 491, 542; W. H. Black's Bibliothecæ Colfanæ Catalogus, xiv.] W. H.

COLGAN, JOHN (*d.* 1657?), hagiographer, was a native of Ulster, and a member of the Irish Minorite convent of St. Antony of Padua at Louvain. He was also professor of theology in the university of that place, but it appears that he retired from that office before 1645. He projected a colossal work on the sacred antiquities of Ireland, in six volumes. In 1645 he published at Louvain the third volume of this work, containing the lives of the Irish saints in the order of the calendar from January to March. The lives of the saints for the remaining months of the year were intended to be comprised in the three succeeding volumes. Colgan's countryman, Wadding, whose bibliography of the Minorite writers was published in 1650, says that the fourth volume, extending to June, was in the press when he wrote, but it never appeared. The portion of the work beginning with the third volume has the separate title of 'Acta Sanctorum Veteris et Majoris Scotiæ seu Hiberniæ.' The first volume, which was to consist of a general introduction to early Irish history, was not published, but the second volume, entitled 'Trias Thaumaturga,' and containing lives of the three Irish saints, Patrick, Columba, and Bridget, appeared in 1647. Colgan was an accomplished Irish scholar, and his large use of early documents in that language gives great importance to his work, which displays much critical sagacity. In 1655 he published at Antwerp a small volume on the life of John Duns Scotus, 'the subtle doctor,' in which he maintained that the great schoolman was of Irish, and not Scottish birth. He is also said to have published in 1639 a volume of his theological lectures delivered at Louvain. Colgan's enormous industry as a student and as a writer is the more remarkable as he suffered constantly from severe ill-health. In the 'Bibliotheca Franciscana' he is said to have died in 1647, but this is a mistake, as his book on Scotus contains a note signed by him and dated 30 Aug. 1655. The authors of the supplement to Wadding conjecture that the date 1647 is a misprint for 1657.

[Wadding's Scriptores Ordinis Minorum (ed. Rome, 1806), p. 136; Sbaralea Supplementum ad Scriptt. trium Ordinum S. Francisci, p. 405; Bibliotheca Universa Franciscana (Madrid, 1732), ii. 145.] H. B.

COLINTON, LORD (*d.* 1688). [See FOULIS, SIR JAMES.]

COLLARD, FREDERICK WILLIAM (1772–1860), pianoforte manufacturer, son of William and Thamosin Collard, was baptised at Wiveliscombe, Somersetshire, on 21 June 1772, and coming to London at the age of fourteen, obtained a situation in the house of Longman, Lukey, & Broderip, music publishers and pianoforte makers at 26 Cheapside. In 1799 Longman & Co. fell into commercial difficulties, and a new company, consisting of John Longman, Muzio Clementi, Frederick Augustus Hyde, F. W. Collard, Josiah Banger, and David Davis, took over the business, but on 28 June 1800 Longman

and Hyde retired, and the firm henceforth was known as Muzio Clementi & Co. After some time William Frederick Collard was admitted a partner, and on 24 June 1817 Banger went out. On 24 June 1831 the partnership between F. W. Collard, W. F. Collard, and Clementi expired, and the two brothers continued the business until 24 June 1842, when W. F. Collard retired, and F. W. Collard, then sole proprietor, took into partnership his two nephews, Frederick William Collard, jun., and Charles Lukey Collard. After 1832 the pianos which had long borne the name of Clementi began to be called Collard & Collard, and many patents were in course of time taken out for improvements both in the action and the frame of the instruments. The firm soon gave up the business of music publishing, and confined themselves to pianoforte making, except that they had also the contract for supplying bugles, fifes, and drums to the regiments of the East India Company until 1858, when the government of India was transferred to the queen. About this time a novelty was brought out, which was suggested by an article in 'Chambers's Journal,' a piano of the cottage class styled pianoforte for the people, which was sold in considerable numbers. To the Great Exhibition of 1851 Collard sent a grand, for which the musical jury awarded the council medal, but this award was not confirmed, owing to some feeling of jealousy.

The firm suffered twice from large fires; on 20 March 1807 the manufactory in Tottenham Court Road was burnt to the ground, and on 10 Dec. 1851 a new manufactory in Oval Road, Camden Town, was entirely destroyed. F. W. Collard died at 26 Cheapside on 31 Jan. 1860, aged 88, having always lived in the same house since his arrival in London in 1786. William Frederick Collard, the brother and partner of the above, was baptised at Wiveliscombe on 25 Aug. 1776, and, in addition to an inventive genius respecting improvements in pianos, also developed a taste for lyric poetry. He retired from business in 1842, and died at Folkestone on 11 Oct. 1866,

[Gent. Mag. May 1832, p. 466; Annual Register, 1807, p. 408, 1851, p. 201; Grove's Dictionary of Music, i. 373, 377, ii. 709; information from Charles Lukey Collard, esq., of Abbotsfield, Wiveliscombe.] G. C. B.

COLLEDGE, THOMAS RICHARDSON, M.D. (1796–1879), president of the Medical Missionary Society in China, was born in 1796, and received his medical education under Sir Astley Cooper. He practised in Canton and Macao and some other Chinese ports, first under the Hon. East India Company, and then under the crown, and was superintending surgeon of the Hospitals for British Seamen. During his residence in Canton and Macao he originated the first infirmary for the indigent Chinese, which was called after him, Colledge's Ophthalmic Hospital. He was also the founder, in 1837, of the Medical Missionary Society in China, and continued to be president of that society to the time of his death. On the abolition of the office of surgeon to the consulate at Canton in May 1841, and his consequent return to England, deep regret was expressed by the whole community, European and native, and a memorial of his services was addressed to her majesty by the Portuguese of the settlement of Macao, which caused Lord Palmerston to settle on him an annuity from the civil list. Colledge took the degree of M.D. at King's College, Aberdeen, in 1839, became a fellow of the Royal College of Physicians, Edinburgh, 1840, a fellow of the Royal Society of Edinburgh 1844, and a fellow of the Royal College of Surgeons, England, 1853. The last thirty-eight years of his life were spent in Cheltenham, where he won universal esteem by his courtesy and skill. He died at Lauriston House, Cheltenham, 28 Oct. 1879, aged 83. His widow, Caroline Matilda, died 6 Jan. 1880.

He was the author of: 1. 'A Letter on the subject of Medical Missionaries, by T. R. Colledge, senior surgeon to his Majesty's Commission;' printed at Macao, China, 1836. 2. 'Suggestions for the Formation of a Medical Missionary Society offered to the consideration of all Christian Nations,' Canton, 1836.

[Medical Times and Gazette, 15 Nov. 1879, p. 568; Proceedings of Royal Society of Edinburgh, x. 339 (1880); Times, 5 Nov. 1879, p. 9.] G. C. B.

COLLEGE, STEPHEN (1635?–1681), the protestant joiner, was born about 1635, and probably in London. He worked at the trade of carpentry, and became known as a political speaker, denouncing what he called the superstitions of popery. He had been a presbyterian for twenty years, until the Restoration, when he conformed to the church of England. His ingenuity as a joiner brought him into contact with many persons of rank, who treated him with familiarity, encouraging him so far that he became ambitious of distinction. Lord William Russell and Lady Berkeley showed him imprudent kindness, considering him to be 'a man of more enlarged understanding than is commonly found in mechanics.' He made himself notorious

by his declamations against the papists, by writing and singing political ballads, and by inventing a weapon resembling the modern life-preserver, which he called 'the protestant flail,' consisting of a short staff, loaded with lead, and attached to the wrist by a leathern thong, to be used with deadly force at close quarters. He was one of the bitterest opponents of William Lord Stafford, and exulted over his condemnation and death. Among the writings attributed to him are several attacks on the lawyers and Romanists, with malicious coarseness instead of poetic skill or satirical point. Among these are 'Truth brought to Light, or Murder will out;' 'Justice in Masquerade, or Scroggs upon Scroggs;' another beginning 'Since Justice Scroggs Pepys and Dean did bail;' 'The Pope's Advice and Benediction to his Judge and Jury in Eutopia;' 'The Wolf Justice' (against Scroggs); 'A Caution,' and 'A Satyr' against the Duke of York, the Duchess of Portsmouth, and Scroggs, whom he hated for favouring Wakeman. When the parliament was removed to Oxford, in March 1681, College went thither on horseback, ostentatiously displaying weapons and wearing defensive armour, speaking threateningly against the king, and advocating resistance. In June 1681, after the condemnation of Edward Fitzharris, College was arrested, carried before Secretary Jenkins on the 29th, and committed to the Tower. He was indicted at the Old Bailey on 8 July for seditious words and actions, but saved by the influence of the whig sheriffs, Slingsby Bethel [q. v.] and Henry Cornish [q. v.] The latter packed a jury who, under the guidance of their foreman, John Wilmore, threw out the bill with 'ignoramus.' This did not deter the government from making an example of College. His conduct at Oxford had laid him open to a fresh trial there, where a jury might be readier to comply with the direction of the court lawyers. His state of mind and intemperance of language are shown in 'A Letter from Mr. S. College,' dated from the Tower, 15 Aug. Aaron Smith, an attorney, favoured by Russell and others of the revolutionary party, attempted through Henry Starkey to bribe the chief gaoler, Murrel, with four guineas, to obtain access to College. Being refused, he gained admission by an order from the attorney-general, Sir Robert Sawyer, and was seen to place papers in the hand of the prisoner. These papers on examination by the authorities were accounted seditious, or beyond the privileges of defensive counsel as then allowed by law. They were therefore seized. Only mutilated copies were given to the prisoner, after long altercation, when the trial began at the court-house on Wednesday, 17 Aug. 1681, before Lord Norreys, Lord-chief-justice North, and other judges. Three or four hours were also spent in wrangling over the indictment. The prisoner claimed, as a freeman of London, that he should be tried there, but he was told that for offences committed at Oxford he could be tried at Oxford. He pleaded hard for restoration of his papers, which would have guided him whom to challenge of the jury, and how to conduct his defence. He kept arguing in a circle, and at last pleaded not guilty. Aaron Smith had next to submit to be browbeaten and to enter into recognisances for appearance, while Henry Starkey was summoned for attempted bribery. The examination of witnesses lasted until midnight. Stephen Dugdale [q. v.] bore witness of treasonable talk, and that College avowed himself the author of sundry libels, the pretended 'Letter, intercepted, to Roger L'Estrange,' and the ballad of 'The Raree Show,' to the tune of Rochester's 'I am a senseless thing, with a hey;' that College sang the latter and gave copies of it to be spread abroad; and that he made 'abundance of scandalous pamphlets,' all of which were seized in his custody, among these being 'The Character of a Popish Successor.' Other witnesses for the prosecution were Edward Turberville, Masters, Bryan Haynes, the two Macnamaras, and Sir William Jennings. But Shewin, Hickman, and Mrs. Elizabeth Oliver tried to weaken the credit of Bryan Haynes, and Titus Oates violently assailed Turberville. The witnesses who had formerly been in league against the Romanists were now in direct conflict. Dugdale, Turberville, and John 'Narrative Smith' swore positively to the guilt of College; Oates, Boldron, and others contradicted their testimony, and exposed the worthlessness of their personal character. At the trial of Lord Stafford, College had been the chief asserter of Dugdale's respectability.

After Oates had laboured to invalidate the credit of his own former supporters, but now opponents, Serjeant Jeffreys argued to the jury that 'if these three witnesses were not believed, the evidence and discovery of the popish plot would be tripped up.' College had conducted his defence vigorously. At nearly two o'clock in the morning the jury retired, and in half an hour gave their verdict of guilty. The court then adjourned until ten o'clock, when sentence of death was pronounced against him. He was visited in prison by two of the university divines, Dr. Marshall and Dr. Hall, who declared him to be penitent. His family was admitted to see

him, and attempts made to obtain a remission of the sentence, but the sole concession granted was that his quarters should be delivered to his friends. On 31 Aug. he was borne in a cart to the place of execution, and made a long speech, chiefly to clear himself from the charge of being a papist, admitting that he had been present once at a Romanist service, but only from curiosity. He denied that he was guilty of the treason whereof he had been convicted, and knew of no plot except the popish plot; that the witnesses against him had sworn falsely; but he admitted that he rode armed to Oxford, for the sake of defending the parliament from assaults of the papists, and that he had been very zealous for protestantism, and might have uttered in heat words of indecency against the king and his council; he finally desired the people to pray for him, and wished that his blood might be the last protestant's blood the church of Rome would shed. Having kissed his son he was then hanged and quartered. His body was carried to London by his friends, and buried the next evening at St. Gregory's Church, by St. Paul's. No trust can be placed in 'A Letter written from Oxford by Mr. Stephen College to his friends in London,' dated 1681; it is one of Nathaniel Thompson's 'pious frauds,' or a jest not intended to mislead anybody. Another clever party squib from the same publisher is mockingly entitled 'A Modest Vindication of the Proceedings of the late Grand Jury at the Old Baily, who returned the bill against Stephen College, *Ignoramus*.' It pretends to attribute their doing so to a loyal impulse, in order to bring about the sure punishment at Oxford, as if tried in London the petty jury would have acquitted him. Many ballads and lampoons were circulated against him at the time of his death, one of the best being Matthew Taubman's song, 'On the Death of the Protestant Joyner,' beginning,

Brave College is hang'd, the chief of our hopes,
For pulling down bishops and making new popes.

Sung to the tune of 'Now, now the Right's done' (180 *Loyal Songs*, 1685, p. 64).

The portrait of College is in the Crachero de collection, British Museum. Although the features are plebeian, with high cheek-bones, coarse nose and mouth, long upper lip, and massive chin, he has an intelligent expression of eye, and is dressed above his station, with flowing peruke, lace cravat, and rich cloak.

[The Arraignment, Tryal, and Condemnation of Stephen College for High Treason (Brit. Mus. 6495, i. 4); Sir John Hawles's Remarks upon the Trials of E. Fitzharris, Stephen College, and others; Lingard, x. 33; Cobbett's State Trials, vii. 1466, and viii. 549, &c.; Bulstrode; North's Examen; Notes upon Stephen College, by Roger L'Estrange, 2nd ed. 1681; Strange News from Newgate, or A Relation how the Ghost of College the Protestant Joyner appeared to Hone the Joyner since his condemnation. Printed for N. T., 1683; Stephen College's Ghost to the Fanatical Cabal, 1681, beginning 'From the unfathom'd bowels of those cells;' A Poem by way of Elegie upon Mr. Stephen College, beginning, 'Ah, College! how relentless is thy fate;' answered in A Modest Reply to the too hasty and malicious Libel entituled An Elegy, etc., beginning, ''Tis wicked with insulting feet to tread upon the monuments of the dead,' printed for R. Janeway, 1681; Granger, iv. 205; Loyal Poems and Satyrs upon the Times, collected by M. T. (Matthew Taubman), 1685; Have you any Work for a Cooper? or A Comparison between a Cooper's (Shaftesbury's) and a Joyner's Trade, beginning 'The Cooper and the Joyner are two famous Trades,' 1681; most of these ballads and elegies are reproduced in the Bagford Ballads and the Roxburghe Ballads, iv. 262, 263, and v. 34 to 40, of the Ballad Society, including 'The Protestant Flail' and 'The Oxford Health;' Poems on Affairs of State, iii. 178–90, 1704. The verses below his portrait in the copper-plate declare that 'By Irish oaths and wrested law I fell, A prey to Rome, a sacrifice to hell,' &c.] J. W. E.

COLLES, ABRAHAM (1773–1843), surgeon, was born in 1773 at Milmount, near Kilkenny, being descended from an English family of good means long settled in co. Kilkenny. During his education in Kilkenny grammar school a flood swept away part of the house of a doctor named Butler, and carried a work on anatomy into a field near Colles's home. The boy picked it up; the doctor gave him the book, and this led to Colles's choice of a profession. Entering Dublin University in 1790 he was at the same time apprenticed to Dr. Woodroffe, resident surgeon in Steevens's Hospital. He refused to be tempted aside from his profession, though Edmund Burke, a family acquaintance, recommended his publishing some 'remarks on the condition of political satire,' which he had written. When his uncle talked of the name he was sacrificing, the youth replied: 'A name, sir! Yes, as an author, and then not a dowager in Dublin would call me in to cure a sore throat.'

Having obtained the diploma of the Irish College of Surgeons in 1795, Colles studied at Edinburgh for two sessions, and graduated M.D. He went on foot from Edinburgh to London, where he remained some time, assisting Astley Cooper in the dissections for his work on hernia, and attending the London hospitals. In 1797 Colles returned to Dublin.

with little means and no interest to forward his plans. At first he practised medicine and was appointed visiting physician to the Meath Hospital; but in 1799 he gave up medicine on receiving the appointment of resident surgeon to Steevens's Hospital. This he held till 1813, then becoming visiting surgeon to the same hospital.

Colles early became a masterly operator, being cool and dexterous, and singularly fertile in resource. When he first tied the subclavian artery for aneurism, the operation had only twice been attempted in England, never in Ireland. He was the first man in Europe to tie the innominate artery, and he did it successfully. In his unfinished 'Treatise on Surgical Anatomy,' Dublin, 1811, pt. i., he discusses the forms of hernia and various important surgical operations in a manner which shows his deep and accurate study. For many years he occupied some hours a day in dissection. His name is, however, most widely known in connection with Colles's fracture of the radius, a fracture just above the wrist presenting peculiar phenomena, usually the result of a fall on the palm of the hand, which had escaped the notice of surgeons before his time, notwithstanding its comparative frequency. His paper on the subject appeared in the 'Edinburgh Medical and Surgical Journal,' 1814, vol. x.

In 1804 Colles became professor of anatomy and surgery in the Irish College of Surgeons, and held the office thirty-two years. His ability as a lecturer greatly extended the repute of the college and of the Dublin Medical School. In his lectures he was constantly watchful to prevent the influence of preconceived theories on his own and his pupils' judgment. His lectures were published in 1844 in the 'Dublin Medical Press,' and separately in two volumes, from notes by Simon McCoy; they are among the most easily comprehended and practical extant. Colles's practice, both as physician and surgeon, was very remunerative, for many years exceeding 5,000*l.* per annum. He remained surgeon to Steevens's Hospital till 1841, and died on 16 Nov. 1843. He was twice president of the Irish College of Surgeons, in 1802 and in 1830, and was offered a baronetcy in 1839, but declined it. He married in 1807 Miss Sophia Cope, by whom he had a large family. A son, William Colles, became regius professor of surgery in Dublin University.

Though somewhat lacking in speculative power, Colles had great perspicuity and the art of seizing on salient points. Cautious in criticism, he expressed simple ideas in clear language. He was cheerful, generous, and modest, a liberal in politics, and a protestant in religion, despising fanaticism and charlatanism. He never lost an opportunity of frankly admitting his blunders. On one conspicuous occasion at a post-mortem examination of a patient on whom he had operated he turned to the class and said, 'Gentlemen, it is no use mincing the matter; I caused the patient's death.' Colles was about the middle size, well proportioned and of dignified manner, with a shrewd, clear eye, a fine forehead, and decided mouth.

Selections from the works of Colles have been edited with annotations by Dr. R. McDonnell for the New Sydenham Society (published 1881). They include his classic work on the 'Use of Mercury in Venereal Complaints,' originally published in 1837, and also 'Essays on Lithotomy,' 'Tying the Subclavian Artery,' 'Dissection Wounds,' and on Colles's 'Fracture of the Radius.'

[Memoir of A. Colles, Dublin University Magazine, xxiii. 688; Memoir prefixed to Works, ed. McDonnell; Preface and Notes to Colles's Lectures on Surgery.] G. T. B.

COLLET, JOHN (1725?–1780), painter, born in London about 1725, and son of a gentleman holding a public office, was a pupil of George Lambert, and studied at the art school in St. Martin's Lane. He first exhibited at the exhibition of the Free Society of Artists in 1761, to which he sent three landscapes. In 1762 he exhibited with the same society 'A Gipsy telling some Country Girls their Fortune.' From this time, though he occasionally exhibited landscapes, portraits, animals, and other subjects, his pictures are mainly of a humorous description, based on the style of Hogarth, whose 'comedy in art' he strove to imitate, if not to surpass. There was a large demand for his pictures, and the engravings from them, many by first-class engravers, were published by Carington Bowles, Smith & Sayer, Boydell, and other well-known publishers. Collet represented scenes of debauchery, low life, and social weaknesses and absurdities. He did not possess, however, the force and deep moral of Hogarth's work, and his pictures are often mere plagiarisms, appealing only to a vulgar taste. When, however, he cared to be original, he showed great ability, and his pictures are always carefully executed. He continued to exhibit with the Free Society of Artists up to 1783. His pictures give a curious insight into the social manners at the end of the last century. In 1775 Sheridan brought out his comedy of 'The Duenna,' and Collet drew several pictures founded on scenes in this play. One of them, representing the drinking scene in the convent (act iii. scene 5), is figured in Wright's

'History of Caricature and Grotesque in Art.' Two water-colour pictures by him, entitled 'The Asylum for the Deaf' and 'Promenaders in St. James's Park,' are in the South Kensington Museum. In the print room of the British Museum there is a collection of engravings from his works, some very probably engraved by his own hand. J. Goldar engraved after him 'The Sacrifice,' 'The Refusal,' 'The Recruiting Sergeant,' exhibited in 1767, 'The Female Bruisers,' exhibited in 1768, and also engraved in mezzotint by Butler Clowes [q. v.], 'The Spirit is Willing, but the Flesh is Weak,' 'The Country Choristers,' 'The Unlucky Attempt,' 'The Discovery,' 'The Mutual Embrace,' and 'Modern Love,' in four scenes, 'Courtship, The Elopement, The Honeymoon, Discordant Matrimony,' painted in 1765, and published in 1782, after his death. J. Caldwall engraved 'The Gipsies,' 'The Ladies' Disaster,' 'The Bold Attempt,' 'The Unwelcome Customer,' 'The Guards of the Night defeated,' 'A Macaroni taking his Morning Ride in Hyde Park,' 'The Englishman in Paris,' 'High Life below Stairs,' 'The Cotillion Dancers,' exhibited in 1772. Among numerous others were: 'Sweets of Liberty' and 'The City Chanters,' in mezzotint by S. Okey; 'A Rescue, or the Tars Triumphant,' and 'Grown Gentlemen taught to dance,' in mezzotint by Butler Clowes; 'The Coaxing Wife' and 'An Holland Smock to be run for,' by T. Morris; 'January and May,' by C. Grignion; 'The Frenchman in London,' by C. White; 'A Taylor riding to Brentford,' by T. Stayner; 'Minerva protecting Innocence,' by F. B. Lorieux; and 'A Snare laid by Love,' by J. Pillement. Collet is said to have been of shy and retiring habits and much respected. He inherited a fortune from a relation, and resided in Chelsea, where he died, in Cheyne Row, on 6 Aug. 1780, and was buried there on 11 Aug. He etched one or two plates of a satirical description.

C.

COLLETON, JOHN (1548–1635), catholic divine, was son of Edmund Colleton, gentleman, of Milverton, Somersetshire, where he was born in 1548. He was sent to the university of Oxford in 1565, and studied, 'according to report,' in Lincoln College (Wood, *Athenæ Oxon.* ed. Bliss, ii. 597). Having been converted to catholicism when about twenty years of age, he proceeded to Louvain with the intention of becoming a Carthusian monk, entered the novitiate, and remained upon his trial for eleven months; but ill-health and a melancholy disposition not suited to that order prevented him from proceeding any further. He then went to the English college at Douay, where he was admitted 14 Jan. 1575-6 (*Douay Diaries*, p. 100). As he had already devoted considerable time to the study of theology, he was ordained priest at Binche on 11 June 1576 (*ib.* p. 105), and sent to the mission on the 19th of the following month. He exercised his priestly functions in several parts of England till 1581, when he was taken prisoner, arraigned and tried with Edmund Campion [q.v.] and others for conspiring abroad against the queen and government. The indictment charged them with having concerted an invasion and compassed the queen's death by a conspiracy carried on at Rheims and at Rome; but as it was proved that Colleton had never set foot in either of those cities he obtained an acquittal. However, he was kept a prisoner in the Tower of London till 1584, when he was exiled with seventy-one other priests. He arrived at the English college of Douay, then temporarily removed to Rheims, on 3 March 1584-5, and quitted it on 24 April 1585 (*ib.* pp. 204, 206). He remained abroad till 1587, when he returned to England on the mission, and lived for the most part in London and Kent. Colleton sided with the secular clergy in the dispute which originated between them and the jesuits at Wisbech Castle in 1595, and after the settlement of that quarrel he was associated with Mush in an attempt to establish a congregation or fraternity which was to unite the members and regulate the concerns of the general body of the English clergy (Dodd, *Church Hist.* ed. Tierney, iii. 45 *n.*) He was one of the thirteen priests who signed the protestation of allegiance to Queen Elizabeth in 1602 (Brady, *Episcopal Succession*, iii. 60), and he energetically opposed the appointment and the maladministration of the archpriest George Blackwell [q. v.]

Afterwards he was made archdeacon by Birkhead, the archpriest [q. v.], upon whose decease he supplied his place until Dr. Harrison was appointed to the vacant post. In 1610, when the gaols were filled with priests and laymen who had refused to take the oath of allegiance, Colleton was an inmate of the Clink prison in Southwark, whence he petitioned for his liberty on the ground of his infirmities and his unsuspected loyalty to the king.

On Dr. Bishop, bishop of Chalcedon [q. v.],

coming to England in 1623 and erecting a chapter, Colleton was constituted dean of the English clergy and also the bishop's vicar-general. As he could not thoroughly discharge the duties of those offices in consequence of his great age and declining health, George Fisher, alias Musket, archdeacon of Surrey and Middlesex, was appointed his coadjutor by letters bearing date 10 Feb. 1625-6, and signed by the bishop of Chalcedon.

On 22 Nov. 1624 he wrote to Pope Urban VIII, praying his holiness that a dispensation for the marriage of Prince Charles with Henrietta Maria, sister of the most christian king, might be issued as speedily as possible, inasmuch as complete ruin would impend over the afflicted church in this country if the negotiations for the marriage were broken off. He adds that the puritans were bitterly opposed to the match, and concludes by urging the pontiff to obtain the best possible conditions for the English catholics with a guarantee for their fulfilment (*Addit. MS.* 24204, f. 25). In a letter to Colleton on 24 Dec. the pope announces that the negotiations for the marriage have been concluded, and expresses a hope that, as a consequence, the catholics who were languishing in prison will be released (*ib.* 15389, f. 60). Colleton spent the latter part of his life in the house of Mr. Roper at Eltham in Kent, where he died on 19 Oct. 1635, aged 87. Dodd says that his candid behaviour and long experience in affairs had gained him great esteem, not only among his brethren, but also with the moderate party in the church of England. Even James I depended very much upon his sincerity in matters relating to catholics.

His works are: 1. 'A Ivst Defence of the Slandered Priestes: Wherein the reasons of their bearing off to receiue Maister Blackwell to their Superiour before the arriuall of his Holines Breue are layed downe . . . Newly imprinted 1602,' 4to, *sine loco*. 2. A supplication to the king of Great Britain for a toleration of the catholic religion. 3. Epistle to Pope Paul V.

COLLEY, Sir GEORGE POMEROY (1835–1881), major-general, governor of Natal, was third and youngest son of the Hon. George Francis Colley of Ferney, co. Dublin (who took that name instead of his patronymic Pomeroy), by his wife, Frances, third daughter of Thomas Trench, dean of Kildare, and was grandson of the fourth Viscount Harberton. He was born in November 1835, and educated at the Royal Military College, Sandhurst, where he was first in general merit and good conduct at the examinations in May 1852, and was appointed at the age of sixteen to an ensigncy without purchase in the 2nd or Queen's foot. After two years' service with the depôt, he was promoted to a lieutenancy without purchase, and joined the headquarters of his regiment, then on the eastern frontier of Cape Colony. In 1857–8 he held a border magistracy at the Cape, and showed great energy. On one occasion he received notice from the governor, Sir George Grey, of an insurrection which he had already suppressed. He was also employed to execute a survey of the Trans-kei country, a dangerous service in the then disturbed state of Kaffirland. When the Queen's were ordered to China, Colley rejoined his regiment, in which he obtained his company on 12 June 1860, and was present with it at the capture of the Taku forts, the actions of 12–14 Aug. and 18–21 Sept. 1860, and the advance on Pekin. His regiment went home, and he returned for a brief period to the Cape to complete his work there, and then entered the Staff College, Sandhurst. He came out at the head of the list the same year, having passed with great distinction in ten months instead of the ordinary two years. Colley was an accomplished artist in water-colours, and spent much of his leave in sketching tours on Dartmoor, in Normandy, Spain, and other places. His literary attainments were considerable. He was in the habit of rising early, and securing always two hours before breakfast time for some special study. He thus acquired the Russian language, and studied chemistry, political economy, and other subjects not directly connected with his profession. In recognition of his services he was promoted to a brevet-majority on 6 March 1863. After serving for some years as major of brigade at Plymouth, the headquarters of the western district, he was appointed professor of military administration and law at the Staff College. While there he wrote the article 'Army,' extending over sixty pages, for the ninth edition of the 'Encyclopædia Britannica.' He was engaged on this work from June to November 1873. The last portion of the manuscript was sent in a few days before the author, now a

lieutenant-colonel, started for the Gold Coast to join the Ashanti expedition under Sir Garnet Wolseley. Arriving at a time when the failure of the transport was causing serious apprehension, Colley infused new life into that service; and the administrative skill and energy which he displayed contributed largely to the success of the expedition. Early in 1875 Colley, who had been made a colonel for his services in Ashanti, accompanied Sir Garnet Wolseley on a special mission to Natal, where he temporarily undertook the duties of colonial treasurer, in which capacity he was instrumental in introducing many reforms into the administration of the colony. But the chief feature of this visit to South Africa was a journey that he made into the Transvaal, and thence through Swaziland to the Portuguese settlement at Delagoa Bay, which bore fruit in a valuable report, and a map, which is entered in the 'British Museum Map Catalogue,' 67075 (6). When Lord Lytton was appointed viceroy of India, early in 1876, he took Colley as his military secretary. This appointment was subsequently exchanged for the higher one of private secretary to the viceroy. It is no secret that in this capacity Colley exercised great influence in the events which led to the occupation of Cabul and the treaty of Gandamuk. He was still holding the office of private secretary to the viceroy when Sir Garnet Wolseley, on being ordered from Cyprus to Natal, after the disasters in Zululand, asked that Colley might join him, to which Lord Lytton consented. Colley accordingly served as chief of the staff to Wolseley in Zululand and the Transvaal, until the murder of Sir Louis Cavagnari [q. v.] at Cabul and the outbreak of the second Afghan war caused his recall to India, when he resumed his post of private secretary to the viceroy. Colley, who was already C.B. (1874) and C.M.G. (1878), was created K.C.S.I. in July 1879 in recognition of his official services in India during a period of which the history has yet to be written. On 24 April 1880 he was appointed to the Natal command, with the rank of major-general, succeeding Sir Garnet Wolseley as governor and commander-in-chief in Natal, and high commissioner for South-eastern Africa. The close of that year found affairs in the Transvaal, which had been annexed since 1877, in a very critical state. On 16 Dec. 1880 a Boer republic was proclaimed at Heidelberg, Transvaal, and with the new year Colley found himself compelled to take immediate measures for the relief of the small garrisons of British troops scattered throughout that territory, and already besieged. With the small force available—about fifteen hundred men—he at once proceeded to the extreme northern border of Natal, and in the course of January had several conflicts with the Boer forces, the principal being at Laing's Nek and Ingogo, the former of which was unsuccessful. On 17 Feb. 1881 Sir Evelyn Wood, who had been appointed second in command, arrived at Newcastle with some additional troops, afterwards returning to Pietermaritzburg, and on 26 Feb., by a night march, Colley, with part of the troops, occupied, after an arduous climb of eight hours, a height known as Majuba, commanding the Boer camp. Next morning, after a comparatively harmless fusillade, the hill was suddenly and quite unexpectedly carried by a rush of the Boers, Colley being shot dead by a rifle bullet through the forehead. The most trustworthy account of this campaign, which deprived the army of one of its ablest and most accomplished officers, is to be found in the parliamentary blue books of that year. Colley was beloved by his comrades in arms, and looked up to, especially by the rising soldiers of the modern school, as a future leader. A high military authority speaks of him as 'the ablest soldier I have ever served with,' and attributes the disaster at Majuba to the fact that even the best troops are liable to panic.

Colley's capacity as an administrator was of a very high order. During his short government of Natal he effected improvements and initiated progressive undertakings which are still gratefully remembered by the colonists. Colley married, in 1878, Edith, daughter of Major-general H. Meade Hamilton, C.B.

[Burke's Peerage, under 'Harberton;' Army Lists. For an excellent account of Cape frontier affairs, when Sir George Colley was first employed in the Trans-kei, see a series of articles on Kaffir Wars, by V. Sampson, in Colonies and India, 1879. For notices of Transvaal affairs see, under that heading, Annual Register, 1875, 1877, and 1881; also Parliamentary Papers, various years. An account of the engagements at Laing's Nek and Ingogo, by an officer present, is given in Proceedings Roy. Art. Institution, xi. 677 et seq. A portrait of Sir George Colley, after a photograph by Mayall, is given in the Illustrated London News, 1881.] H. M. C.

COLLEY, JOHN (*fl.* 1440), theological writer, was a member of the Carmelite convent at Doncaster. He is said to have been an elegant Latin writer and an eloquent preacher, and to have written the following works: 'De Passione Christi,' 'De Laudibus Apostolorum,' 'Sermones,' 'Epistolæ ad Diversos.' It does not appear that any of these writings are known to exist.

[Bale's Scriptt. Brit. Cat.; Pits, De Angl. Scriptt.; Tanner's Bibl. Brit.; Bibliotheca Carmelitana, i. 827.] H. B.

COLLIBER, SAMUEL (*fl.* 1718–1737), author, published in 1727 'Columna Rostrata,' a naval history, more especially of the Dutch wars of the previous century, for which it is often referred to as a contemporary authority. This, of course, it is not; but notwithstanding its unsatisfactory brevity, it has an unwonted value from the fact of its author being familiar with Dutch and French, and having examined the works of writers in those languages. A second edition was published in 1742. Colliber wrote also a number of semi-religious, or rather pantheistic tracts, including 'An Impartial Enquiry into the Existence and Nature of God' (1718, 8vo, 230 pp.), which ran through several editions; 'Free Thoughts concerning Souls' (1734, 8vo); and 'The Known God, or the Author of Nature unveiled' (1737, 8vo). They display considerable ingenuity of argument, the style of which, as well as occasional illustrations, shows him to have had some knowledge of mathematics and to have been not unacquainted with Latin and Greek.

Nothing is known of him except what little is gathered from his writings. Though he wrote on religious subjects, he was not a clergyman; and though he wrote on naval subjects he was not a seaman. He may possibly have served for some little time in the navy as a volunteer, or more probably as a schoolmaster.

[Colliber's Works.] J. K. L.

COLLIER, ARTHUR (1680–1732), metaphysician, was born 12 Oct. 1680 at Langford Magna, Wiltshire, a family living which had been held by his great-grandfather. His grandfather, Henry Collier, succeeded and was ejected under the Commonwealth (WALKER, *Sufferings of the Clergy*, ii. 227). Two of Henry Collier's sons were transported to Jamaica for their share in Penruddocke's rising at Salisbury. The rector returned upon the Restoration, and, dying in 1672, was succeeded by his son Arthur. Arthur's third and eldest surviving son, also named Arthur, was entered at Pembroke College, Oxford, in July 1697, and on 22 Oct. 1698 migrated to Balliol, of which his younger brother William became a member at the same time. Their father had died 10 Dec. 1697; the living was held for a time by Francis Eyre, brother of Chief-justice Eyre, until Arthur Collier, having taken priest's orders, was instituted upon his mother's presentation in 1704. He held it until his death.

Arthur and his brother William had been deeply interested in metaphysical studies. William had carefully analysed Descartes, Malebranche, and Norris of Bemerton, whose 'Theory of the Ideal World' (1701–4) is highly praised by Collier. Collier at an early age reached a conclusion in striking coincidence with Berkeley's doctrine. In 1713 he published his 'Clavis Universalis, or a new Inquiry after Truth, being a demonstration of the non-existence or impossibility of an external world.' Collier's statement (*Clavis*, p. 1) that he had waited for 'ten years' before publishing, and the existence of a manuscript essay dated January 1708, prove his independence of Berkeley, whose 'Theory of Vision' appeared in 1709. Collier's treatise is by comparison dry and jejune. It was translated into German by Eschenbach in 1756, privately printed at Edinburgh in 1836, and is reprinted in the 'Metaphysical Tracts' (1837) prepared for the press by Samuel Parr. Collier, like Berkeley, brought his opinions before Samuel Clarke, and received a 'learned and civil answer' (BENSON, p. 40). He remained unknown, however, though he took a keen interest in the controversies of the time and wrote letters to Waterland, Hare, afterwards bishop of Chichester, Courayer, and other eminent men. He was an original and ingenious disputant, sympathising with the high-church party in which he had been educated, but led by his peculiar turn of mind across the limits of orthodoxy. He wrote letters to the Jacobite 'Mist's Journal' in 1719, attacking Hoadly's theory of the innocence of sincere errors. His theological writings are a curious parallel to Berkeley's 'Siris,' showing the same tendency to a mystical application of his metaphysics, but working out his theories in more technical and scholastic fashion. He was inclined to Arianism, or, as he said, to a doctrine which reconciled the Arians and the orthodox, and fell into the heresy of Apollinaris in regard to the Incarnation. His theories upon these abstruse questions are given in 'A Specimen of True Philosophy . . . not improper to be bound up with the Clavis Universalis' (1730—at p. 114 occurs his only reference to Berkeley—reprinted in 'Metaphysical Tracts,' pp. 101–28); and in his very rare 'Logology, a treatise on the Logos or Word of God in seven sermons on St. John's Gospel, chap. i. verses 1, 2, 3, and 14' (1732; an analysis by Parr in 'Metaphysical Tracts,' pp. 129–41). Collier corresponded for a time with William Whiston, and invited him to Salisbury (BENSON, pp. 133–7). He was, however, disgusted by the intrusions into theology of his Salisbury neighbour, Thomas Chubb [q.v.], and made a collection of Chubb's letters on business in order to expose his ignorance (*Memoirs of Chubb*, 1747, p. 20).

Collier's first child was born 13 Oct. 1707.

His wife, Margaret, was daughter of Nicholas Johnson, by a sister of Sir Stephen Fox. Fox was an executor of Johnson's will and guardian of his children. In that capacity he was accused by Collier of not properly accounting for the Johnsons' estate. A dignified letter from Collier to Fox (10 Oct. 1710) is printed by Benson. A chancery suit followed, the issue of which does not appear. Mrs. Collier is said to have been extravagant. Collier got into difficulties; he obtained leave in 1716 to take lodgings in Salisbury, his parsonage being too handsome for his means; he applied vainly to his wife's aunt, Lady Fox, probably alienated by the previous quarrel, for her interest to obtain a prebend; and at last he sold the advowson of Langford to Corpus Christi College, Oxford, for sixteen hundred guineas. He died in 1732, and was buried at Langford 9 Sept. His brother William became rector of Baverstock in 1713, took an interest in metaphysics and horseracing, and also died in 1732. Arthur Collier's wife and four children survived him. One son, Arthur, became a civilian, and died in 1777; Charles entered the army; Jane wrote 'The Art of Tormenting,' 1753, republished in 1804 as 'The Art of ingeniously Tormenting;' the other daughter, Mary or Margaret, appears to have accompanied Fielding on his voyage to Lisbon (Benson, p. 162). Letters from the two sisters are in Richardson's 'Correspondence.' Collier's papers were discovered at a house in Salisbury, and a memoir founded upon them was published soon afterwards by Robert Benson (1797–1844) [q. v.] in 1837.

L. S.

COLLIER, Sir FRANCIS AUGUSTUS (1783?–1849), rear-admiral, second son of Vice-admiral Sir George Collier [q. v.], entered the navy in 1794, and after a few years' service in the Channel was, early in 1798, at the desire of Sir Horatio Nelson, appointed to the Vanguard, the ship which bore Sir Horatio's flag in the Mediterranean and at the battle of the Nile. He was afterwards moved into the Foudroyant, with Nelson and Sir Edward Berry [q. v.], and continued serving in the Mediterranean till the peace. He was promoted to be lieutenant on 11 April 1803; commander, 25 Jan. 1805; and captain, 13 Dec. 1808; during which years he was actively employed in the West Indies, though without any opportunity of special distinction. On 8 Dec. 1815 he was made a C.B., and in February 1818 was appointed to the Liverpool of 50 guns, going out to the East Indies. In December 1819 he was sent to the Gulf of Persia, in naval command of a joint expedition against the Joasmi pirates. Their chief fortress, Ras-el-Khyma, was captured, the fortifications all round the coast were blown up, their shipping was destroyed, and on 8 Jan. 1820 a formal treaty of peace was signed, and piracy, on the part of the Arabs, declared to be at an end for ever. Not the least remarkable part of the business is that the treaty was fairly well kept. It did really put an end to the national and patriotic piracy which had been the scourge of Eastern seas; although, of course, piracy in its more vulgar form continued, and, in fact, still continues. Collier returned to England in October 1822. From 1826 to 1830 he was commodore on the west coast of Africa, from 1841 to 1846 was superintendent of Woolwich Dockyard, and in 1846 commanded a squadron in the Channel. On 9 Nov. 1846 he became a rear-admiral, and in April 1848 was appointed to the command of the China station, where he died suddenly of apoplexy on 28 Oct. 1849.

His services in the Persian Gulf had been rewarded by the order of the Lion and Sun; he was knighted 28 July 1830, and made K.C.H. 1 Jan. 1833. He was twice married and left issue.

J. K. L.

COLLIER, Sir GEORGE (1738–1795), vice-admiral, was born in London in 1738, and entered the navy in 1751. After serving on the home station, and under Sir George Pocock in the East Indies, he was made commander on 6 Aug. 1761, and on 12 July 1762 was posted to the Boulogne frigate, which he commanded till the peace. He was then appointed to the Edgar, guardship at Plymouth, which he commanded for three years; and afterwards, in succession, to the Tweed, Levant, and Flora frigates. In 1775 he seems to have been sent to North America on some special service, the circumstances of which have not been chronicled, but which obtained for him the honour of knighthood. He was then appointed to the Rainbow of 44 guns, in which he sailed for America on 20 May 1776. Shortly after his arrival on the station he was charged by Lord Howe with the duties of senior officer at Halifax, and on 17 June 1777 received the thanks of the House of Assembly of Nova Scotia 'for his constant and generous attention to the safety and protection of the province.' On 8 July 1777, after a long chase, he captured the Hancock, a large frigate which the colonists had newly built and commissioned, and which was added to the English navy as the

Iris. In the following month, on intelligence that an expedition was preparing at Machias to invade Nova Scotia, Collier went thither with what force he could collect; burnt the magazines and stores at that place, and, proceeding along the coast, destroyed some thirty vessels got together for the intended invasion, which was thus completely prevented. For this well-timed service he was again officially thanked by the governor and council of the colony, 24 Aug. 1777. He continued in this command till February 1779, when, by the recall of Rear-admiral Gambier, the command of the station temporarily devolved on him, and summoned him to New York, where he hoisted his broad pennant in the Raisonnable of 64 guns.

The strength of the squadron had been reduced to the lowest ebb, all the ships of force having been taken by Hotham and Byron to the West Indies; but he nevertheless immediately proposed to Sir Henry Clinton the elder, the military commander-in-chief, a joint expedition to the Chesapeake, which was accordingly set on foot, Clinton supplying two thousand men, under the command of General Matthews. On 9 May the squadron anchored in Hampton roads, and for the next fortnight was busily engaged in the work of destruction. There was no serious opposition, but 137 vessels—ships of war built or building, privateers and merchant ships—were captured or burnt. Stores of all kinds for the colonial army were likewise burnt, much to the regret of Collier, in consequence of Matthews refusing to extend his stay in the Chesapeake. Within twenty-four days the squadron was back at New York, having destroyed stores the mere money value of which was estimated at more than a million sterling. After this Collier co-operated with Clinton in expeditions up North River and along the coast of Connecticut, and burnt a great number of boats and small vessels 'in which the rebels had used to make frequent depredations in Long Island on the king's faithful subjects.' In the beginning of July he received news that a settlement lately established in the bay of Penobscot was attacked both by sea and land. He immediately proceeded thither, with a force of four frigates and the 64-gun ship, but being obliged to anchor for the night at the mouth of the bay, the enemy took advantage of the delay to re-embark their troops and the greater part of their stores. The next day, as the English squadron advanced, they fled up the river, and, being closely pursued, set fire to their ships and took to the woods. Four armed vessels fell into Collier's hands, but the rest, with all their stores, were completely destroyed. On his return to New York, Collier found that Vice-admiral Marriot Arbuthnot [q. v.] had come out to assume the command. He could not have expected to retain it, but he seems, by his correspondence at this time, to have felt aggrieved at being superseded just after his brilliant service at Penobscot, and by such a man as Arbuthnot, of whose capacity he had formed a very low estimate (*Naval Chronicle*, xxxii. 381–3). He returned home in the Daphne frigate, arriving at Portsmouth on 27 Nov. 1779.

Early in the following year he was appointed to the Canada of 74 guns, which he commanded in the Channel during the summer of 1780, and at the relief of Gibraltar by Vice-admiral Darby in the spring of 1781. On the homeward voyage he had the luck to chase and come up with the Spanish frigate Leocadia of 44 guns, which he took after a short though spirited resistance; her captain, Don Francisco Winthuysen—who, as a rear-admiral, was slain in the battle of St. Vincent, on board the San Josef (*Nelson's Despatches*, ii. 343)—losing his right arm. Owing, it is said, to some discontent with the government, or dissatisfaction with Lord Sandwich, then first lord of the admiralty, Collier resigned his command on his return to England. In 1784 he was returned to parliament as member for Honiton. He had no further naval employment till 1790, when he was appointed to the St. George during the time of the Spanish armament. He was promoted to his flag in February 1793, and advanced to be vice-admiral of the blue on 12 July 1794. In the following January he was appointed to the command-in-chief at the Nore, but was compelled by ill-health to resign it a few weeks later. He died 6 April 1795. His life during the last fifteen years had been embittered by a feeling that his really distinguished service in America, during the few months of his independent command, had not received due recognition. Whether, as has been stated, this neglect is to be attributed to a too frank expression of an opinion adverse to the policy of the ministry in America may be doubted. Lord Keppel, or after him Lord Howe, made no attempt to atone for the conduct of Lord Sandwich; and even after he attained his flag rank he was left unemployed, with the last exception of a harbour appointment, in which, but for his early death, he might have lived down the hostile influence.

He was twice married: first, in 1773, to Miss Christiana Gwyn, by whom he had one son; second, in 1781, to Miss Elizabeth Fryer, by whom he had two daughters and four sons, who all entered the service of their country,

two in the navy [see COLLIER, SIR FRANCIS AUGUSTUS] and two in the army. During his stay on shore previous to the American war he adapted for the stage a version of 'Beauty and the Beast,' which, under the name of 'Selima and Azor,' was favourably received at Drury Lane in 1776. He wrote also a very full journal of a visit to Paris and Brussels in the summer of 1773, published by his granddaughter, Mrs. Charles Tennant, in 1865, under the title of 'France on the Eve of the Great Revolution.'

[Naval Chronicle (with what seems a good portrait), vol. xxxii.; Ralfe's Naval Biog. i. 357; Charnock's Biog. Nav. vi. 490.] J. K. L.

COLLIER, GILES (1622–1678), divine, was the son of Giles Collier of Pershore, Worcestershire, in which county he was born in 1622. In Lent term 1637 he became either a battler or a servitor at New Inn Hall, Oxford, taking the degrees of B.A. and M.A. in 1641 and 1648 respectively. When he left the university he became a presbyterian, subscribing in 1648 to the covenant, and was afterwards presented to the livings of Blockley and Evesham in Warwickshire. In 1654 he was made assistant to the commissioners acting within that county for the ejection of 'scandalous, ignorant, and insufficient ministers and schoolmasters,' but on the Restoration he retained his livings by complying with the Act of Uniformity, to the disappointment of the neighbouring loyalists, who disliked his meddlesome and somewhat vindictive nature. He died at Blockley in July 1678, and was buried there. His works are: 1. 'Vindiciæ Thesium de Sabato, or a Vindication of certain passages in a sermon on the Morality of the Sabbath, from the exceptions to which they were subjected by Edw. Fisher, esq., in his book called "A Christian Caveat,"' &c. 2. 'Appendix wherein is briefly examined the bold assertion of Edw. Fisher, esq., viz. there is an equal antiquity for the observance of the 25 Dec. as for the Lord's Day,' 1653. 3. 'Answer to Fifteen Questions lately published by Edward Fisher, esq., and the suggestions therein delivered against suspended ignorant and scandalous persons from the Lord's Supper,' &c.

[Wood's Athenæ Oxon. (Bliss), iii. 1171; Chambers's Worcestershire Biography.] A. C. B.

COLLIER, JEREMY (1650–1726), nonjuror, 'son of Jeremy Collier, was born at Stow Qui, or Quire, in Cambridgeshire, on 23 Sept. 1650. His father was a divine and considerable linguist, and some time master of the free school at Ipswich in the county of Suffolk. . . . His mother was Elizabeth Smith of Qui in Cambridgeshire, where her family were possessed of a considerable interest. . . . He was educated under his father at Ipswich, from whence he was sent to Cambridge, and admitted a poor scholar of Caius College, under the tuition of Mr. John Ellys. His admission bears date 10 April 1669, in the eighteenth year of his age. He took the degree of B.A. in 1672–3, and that of M.A. in 1676, being ordained deacon on 24 Sept. of the same year by Dr. Peter Gunning, bishop of Ely, and priest on 24 Feb. 1677 by Dr. Henry Compton, bishop of London. Having entered into priest's orders he officiated for some time at the Countess Dowager of Dorset's, at Knowle in Kent, from whence he removed to a small rectory at Ampton, near St. Edmund's Bury in Suffolk, to which he was presented by James Calthorpe, esq., and instituted . . . 25 Sept. 1679. After he had held this benefice six years, he resigned it, and came to reside in London, in 1685, and was some little time after made lecturer at Gray's Inn. But the Revolution coming on the public exercise of his function became impracticable' (thus far, from the *Biographia Britannica*, was, except some dates, drawn up by Collier himself). Collier took an active part in the discussion that arose on the question of the vacancy of the throne, and Dr. Gilbert Burnet, afterwards bishop of Salisbury [q. v.], having published his 'Enquiry into the State of Affairs' (1688), he answered it by a short pamphlet entitled 'The Desertion discuss'd in a Letter to a Country Gentleman' in which he argues that the king had sufficient grounds for apprehension, and therefore his withdrawal was not an abdication; that it was impossible for him to leave any representatives behind him; and that it was not consonant either with law or nature to pronounce the throne void under such circumstances. This pamphlet was answered by Edmund Bohun [q. v.] It gave such offence to the government that Collier was imprisoned in Newgate for some months, but was at last released without being brought to trial. In the course of the next three years he wrote several more political pamphlets on questions concerning submission to the supreme power, the character of a king *de facto*, the duty of churchmen with regard to those bishops who occupied the sees of nonjurors, and the like. His pamphlets are clear, brilliant, and incisive, the work of 'a great master of sarcasm, a great master of rhetoric' (MACAULAY). In the autumn of 1692 information was laid before the Earl of Nottingham, then secretary of state, that Collier and another nonjuring clergyman named Newton were gone to Romney Marsh, and as this was

supposed to indicate an endeavour to hold communications with the exiled king they were apprehended on 8 Nov., and after being examined by the secretary were imprisoned in the Gatehouse. No evidence was found against them, and they were accordingly admitted to bail. Before long, however, Collier felt scruples as to his conduct in giving bail, considering that this was an acknowledgment of the jurisdiction of the court, and consequently of the royal authority; he therefore appeared before Chief-justice Holt, surrendered in discharge of his bail, and was imprisoned in the king's bench, from which he was released in about a week or ten days on the application of his friends. During this short imprisonment he wrote a defence of his conduct, which he dated from the king's bench, 23 Nov. 1692. The next year he produced a pamphlet of extraordinary bitterness, entitled 'Remarks on the London Gazette,' on the loss of English property on the coast of Spain and the defeat of the king at the battle of Landen (MACAULAY, *History of England*, iv. 423). For some years nothing further is known of his life.

When, in 1696, Sir John Friend and Sir William Parkyns were condemned to death for their share in the assassination plot, Collier attended them in Newgate, and when they were drawn to Tyburn on 3 April he and two other nonjuring clergymen named Cook and Snatt were allowed to minister to them at the place of execution. Prayers were read, and then the three clergymen, laying their hands on the heads of the dying men, pronounced over them the form of absolution contained in the Service for the Visitation of the Sick. A somewhat similar scene had taken place at the execution of John Ashton [q. v.] in January 1690–1, and it has been supposed, from certain words used by Collier with reference to this occasion, that he was one of the ministers who absolved him (LATHBURY). The sentence referred to, however, seems rather to imply that this was not the case, for Collier is there quoting what was done at Ashton's death as a precedent for his own conduct (*State Trials*, xiii. 420). The ceremony at the execution of Friend and Parkyns caused considerable scandal. Tories as well as whigs blamed the priests, for as no public confession had been made, the absolution seemed to show that they did not consider the attempt to assassinate William as sinful. As Collier was fully determined not to give bail for his appearance, he concealed himself. On Monday, 6 April, his lodgings were entered at midnight and several of his papers were seized; on the 9th he published a 'Defence of the Absolution;' and on the following day the two archbishops and twelve bishops who were then in London put forth a 'Declaration' condemning the action of the three clergymen as 'an open affront to the laws both of church and state,' and 'as insolent and unprecedented in the manner and altogether irregular in the thing.' To this Collier replied on the 25th, arguing that the absolution was defensible in manner, the imposition of hands being the general practice of the ancient church, that the exercise of the absolving power was allowed to priests and enjoined in the office of ordination, and that the thing itself and the occasion were equally justified. On 2 July Cook and Snatt were found guilty upon an indictment for absolving traitors, and were shortly afterwards released. Collier refused to deliver himself up and was outlawed, an incapacity under which he remained during the rest of his life. As the pamphlets he put forth on this matter have no printer's name, it is probable that he remained in concealment during the rest of the year. It was not long, however, before he was allowed to return to his ordinary life; and though he occasionally signed himself J. Smith in after life, he perhaps did so rather to prevent his literary correspondence being traced to himself than from any fear of legal consequences, though with him literary and political matters were so often the same thing that it is impossible to speak with certainty. In the course of 1697 he seems to have published the first volume of his essays, some of which had already appeared both in a separate form and in a smaller collection. The most famous of these, 'Upon the Office of a Chaplain,' which has a special value from the fact that the author had himself held such a position, was intended to excite self-respect in those who were thus employed, and to cause them to be regarded by others in a manner more becoming their profession. Collier maintains that a chaplain was no servant, branching off on his favourite topic, the independence that rightly pertains to the church, and that, whatever expectations of preferment a chaplain might have, they could not justify either imperiousness in the employer or servility in the employed. The essay is of considerable historical value with reference to the light it throws on the condition of a large class of the stipendiary clergy.

Collier's greatest achievement, his attack on the corruptions of the stage, began with the publication of his 'Short View of the Immorality and Profaneness of the English Stage' in March 1697–8. While this pamphlet attacks the English dramatists generally,

it deals most sharply with contemporary writers, and especially with their latest works. It appeared at a time when the immorality of the theatre had reached its utmost pitch, when ladies, if they could not resist going to see a new play, went in masks, and when it was generally recognised that a play could scarcely please the public unless it was grossly indecent. Collier's mode of dealing was unsparing and courageous. Full of righteous indignation he delivers his blows, if perhaps with something less than the cool skill which generally marks his attacks, still with a force and vigour that were equally effective. He was hindered by no fear and by no respect of persons. Dryden and Congreve receive no more deference than D'Urfey. In spite, however, of the passion, the scorn, and the sarcasm he displays, he does not even here throw off the pedantry of the learned controversialist. He begins by a comparison of the immodesty of the contemporary stage with the better examples set by the Greeks and Romans, and quotes the opinions of some modern writers on the degeneracy of the drama. He then proceeds to the charge of profaneness, which he supports by a number of specific instances. The next part contains an indignant remonstrance against the abuse and ridicule of the clergy, a favourite subject with the dramatists of the Restoration. He then points out the encouragement to immorality offered by the stage, and cites many passages of particular plays, such, for example, as Dryden's 'Amphitryon,' Vanbrugh's 'Relapse, or Virtue in Danger,' and D'Urfey's 'Don Quixote,' and ends by setting forth the opinions of pagans, of the state, and of the church concerning the stage. The chief defect in the work is that the author goes too far and detects allusions where none were intended, especially in treating the charge of profaneness. He also commits the mistake of attributing to the corrupting influence of the stage the social immorality that was really due to other causes, and that may more truly be said to have found expression in the contemporary drama than to have arisen from it. That he is wholly lacking in artistic taste would scarcely be worth notice were it not that in addition to scourging dramatists for their sins against morality, he corrects them for what he considers their literary shortcomings. Writing throughout at boiling-point he makes little distinction between offences of diverse magnitude, and being perpetually indignant has no suspicion of anything ridiculous in his expressions, even though his jealousy for the reverence due to religion leads him to blame Dryden for writing lightly of Mahomet and scornfully of Apis. Despite some faults, however, the 'Short View' is a noble protest against evil. It had a marvellous success. Even before it appeared there were some faint signs of an impending reaction (Beljame, *Histoire du Public et des Hommes de Lettres au Dix-huitième Siècle*, p. 244), and its readers found that it gave distinctness and expression to feelings of which they had hitherto scarcely been conscious. Much, too, that had passed almost unnoticed in a play, assumed its true character when it appeared as a part of a mass of obscenity, and people were shocked at remembering that such things had given them pleasure. Collier had public opinion on his side. Men of the stricter sort were especially delighted, and, enraged as they had been at his conduct in the matter of the absolution, many of them considered that this pamphlet atoned even for that crime. Several of the wealthy among them sent him money; one presbyterian, for example, Sir Owen Buckingham, an alderman of London and M.P. for Reading, sending him twenty guineas (Oldmixon, *History of England*, p. 192). The king, who never took much pleasure in the theatre, is said to have shown his approval by granting him a *nolle prosequi*, thereby stopping all proceedings against him (Cibber, *Apology for his own Life*, p. 158); he renewed an order previously issued against 'plays contrary to religion and good manners,' using in it the very words of the title of the 'Short View,' and further warned the master of the revels to be strict in licensing new plays. The authors did not remain silent under Collier's attack. Dryden indeed declined the conflict, and confessed that he had been to blame. In the preface to his 'Fables,' though writing somewhat bitterly of the uncivil, and as he thought not altogether fair, treatment he had received, and making some excuses for himself, he nevertheless says, 'If he [Collier] be my enemy, let him triumph. If he be my friend, as I have given him no personal occasion to be otherwise, he will be glad of my repentance.' And in his epilogue to Fletcher's 'Pilgrim,' while marking a defect in Collier's pamphlet, he acknowledges the justice of his censure—

> Perhaps the Parson stretched a point too far,
> When with our theatre he waged a war.
> He tells you that this very moral age
> Received the first infection from the Stage;
> But sure a banisht Court, with lewdness fraught,
> The seeds of open vice, returning, brought.

Congreve did not follow the example of his master; he wrote an angry reply to the 'Short View,' full of abuse, but wanting alike

in wisdom and in wit. Vanbrugh had little better success, though he pointed out a flaw or two in his great adversary's pamphlet. Both were answered in crushing style by Collier, 'for contest was his delight; he was not to be frighted from his purpose or his prey' (JOHNSON, *Lives of the Poets*, Works, x. 192). The wretched D'Urfey tried to retaliate in a song and a preface. Others followed—Dennis, Drake, Filmer, and a crowd of small and some anonymous writers. Collier renewed his attack, and, in spite of all the efforts of the poets, remained the victor. Even Congreve and Vanbrugh acknowledged their defeat, for, conscious of the change in public opinion, they cut out some coarse expressions in their plays, the one making some alterations in the 'Double Dealer,' which in 1698 was advertised to be acted 'with several expressions omitted,' the other in the 'Provoked Wife' (BELJAME). Collier's pamphlet ushered in a new era in dramatic literature. Cibber remarks that 'his calling dramatick writers to this strict account had a very wholesome effect on those who writ after this time.' The courage implied in this attack can scarcely be over-estimated. Although he was a writer of no special mark, he dared to array against himself the most fashionable authors of the day, the whole band of wits who provided the favourite amusement of the upper classes of society. Champion as he was of the Stuart cause, he did not shrink from making war upon habits closely connected with the Restoration and advocating sentiments that were especially agreeable to the presbyterians. And at the very time when he thus deliberately offended a large and powerful body of men, and ran the risk of being jeered at as a false friend to the cause for which he had suffered so much, he was in disgrace with the government, an actual outlaw, and was blamed by all except violent Jacobites for his imprudent conduct two years before. (A list of works on Collier's attack on the stage is given below; for full treatment of the whole subject see M. BELJAME'S admirable *Histoire du Public et des Hommes de Lettres en Angleterre*).

During the reign of Anne several attempts were made to induce Collier to take the oaths and return to the national church. He refused to do so, and continued to minister to a separate congregation of nonjurors. While the controversy of the stage was still going on, he put forth the first two volumes of his 'Historical Dictionary,' founded on, and in great part translated from, the work of L. Moreri. Although many of the original articles, especially those on church matters, are learned, the book as a whole did not satisfy the requirements of scholars, and was pronounced inaccurate (HEARNE, *Collections*, i. 38). The labour of production must have been very great. In 1708 he published the first folio volume of his 'Ecclesiastical History,' which comes down to the reign of Henry VII. Hearne, who seems hitherto to have had a small opinion of his scholarship, did not expect much from it; he afterwards notes that he was mistaken (*ib.* 316). It is a work of great learning, the first of its kind that had appeared, save Fuller's 'Church History,' and, in spite of the advance of historical scholarship, it has not lost its value. Besides a narrative of events, it contains several dissertations, largely taken from other writers, on subjects of ecclesiastical importance. It recognises the necessity of basing history on original authorities by giving copious and minute references; and though Collier's peculiar views on church questions may be discerned in his treatment of certain points, his representation of facts is honest and impartial. Collier now judged it well 'to breathe a little after a folio' (Preface to *Essays*, iii). Nevertheless he did not abstain from literary work. It is curious to find him writing to Atkins the publisher on 1 Dec. 1710 with reference to the advertisement of some book of his that was forthcoming (which of his books this was does not appear), and warning him to frame it so as not to give 'an expectation of a quarrelling humour.' This letter is signed 'J. Smith' (*Addit. MS.* 4275). Collier did not remain without matter for controversy, for the second volume of his 'History,' which deals with the Reformation and puritan periods, was attacked with some asperity by Bishop Nicolson, and with greater judgment by Bishops Burnet and Kennet, and was defended by the author. Towards the end of the reign Collier appears to have officiated in a room up two pairs of stairs in Broad Street, London, and about this time to have had Thomas Carte [q. v.], the historian, as his assistant. In 1712 he was invited by the Society for Promoting Christian Knowledge, through Nelson and Higden, to write a treatise on the abuse of music, for distribution to organists and music-teachers, to dissuade them from teaching their pupils lewd songs and from composing music to profane ballads. As, however, he was then hard at work on the second volume of his 'History,' he declined the offer (SECRETAN, *Life of Nelson*, p. 69). On the death of Wagstaffe in this year the separation of the nonjurors from the national church seemed as though it would before long come to an end, for Hickes was now the only surviving bishop. With the help,

however, of two Scottish bishops, he consecrated Collier and two others to the episcopal office in 1713. After the death of Hickes in 1715, Collier became the foremost man of the nonjuring body. He was fully determined to maintain the separation, and in 1716 he and his colleagues consecrated Henry Gandy and Thomas Brett [q. v.] He had agreed with Hickes in preferring the communion office of the first prayer-book of Edward VI (1549) to the revision of 1552, and in 1717 urged the restoration of certain prayers and directions contained in it. The four points for which he chiefly contended—the *usages* as they were called—were the mixture of water with the wine used in the communion, the restoration of the petition for the faithful departed, of the prayer for the descent of the Holy Ghost upon the elements, and of the oblatory prayer. A vigorous controversy ensued, part of the nonjurors holding with Collier and part being against him. He and his allies went so far as to pronounce the 'usages' essential, and were therefore called 'essentialists.' In 1718 they published a new communion office, chiefly no doubt the work of Collier, which was brought into use at the Easter of that year; communion with those who held to the Common Prayer-book was forbidden, and a fresh schism took place. Collier was accused of holding Romish views, an accusation that Burnet had already brought against him with reference to his 'History.' As, however, the new communion office expressly declares against 'praying the dead out of purgatory' and any approach to a belief in the corporal presence, it would be more correct to describe him as advocating certain usages of the church of Rome while refusing to assent to its doctrines (Lathbury, *Life of Collier*; *History of the Nonjurors*). Meanwhile Collier took an active part in an attempt to form a union with the Eastern church. The idea originated with a visit to England made by the Archbishop of Thebais, and a long correspondence with the court of Russia ensued, in which Collier sometimes signs himself as 'Jeremias, Primus Anglo-Britanniæ Episcopus.' The matter dropped in 1725. In 1722 he again joined in consecrating a bishop. He employed Samuel Jebb as his librarian; but during the last few years of his life produced comparatively little literary work, for, as he grew old, his health, which had generally been strong, was much enfeebled by frequent and violent attacks of the stone. He died on 26 April 1726, in the seventy-sixth year of his age, and was buried in the churchyard of St. Pancras, London.

Collier published: 1. 'The Difference between the Present and Future State of our Bodies consider'd in a Sermon,' London, 1686, 4to. 2. 'The Comparison between Giving and Receiving . . . stated in a Sermon preached at Whitehall, 19 April 1687.' 3. 'The Office of a Chaplain,' 1688, 4to (Cole), see 17. 4. 'The Desertion discuss'd in a Letter to a Country Gentleman,' 1688, 4to; also in 'The History of the Desertion,' with 'An Answer to a piece call'd The Desertion discuss'd . . . [by E. Bohun],' 1689, 4to; 1705, fol.; and in 'Collection of State Tracts,' vol. i. 1705, fol. 5. 'Translation of 9th, 10th, 11th, and 12th books of Sleidan's [J. Philippson] Commentaries,' 1689, 4to. 6. 'Vindiciæ Juris Regni, or Remarks upon a paper entituled An Inquiry into the Measure of Submission . . .' [by Dr. Burnet], 1689, 4to. 7. 'Animadversions upon the Modern Explanation of . . . a King *de facto*,' 1689, 4to. 8. 'A Caution against Inconsistency, or the Connection between Praying and Swearing, in relation to the Civil Powers,' 1690, 4to; 1703, 8vo. 9. 'A Dialogue concerning the Times between Philobelgus and Sempronius,' 1690, 4to. 10. 'To the Right Hon. the Lords and the Gentlemen convened at Westminster,' October 1690, half-sheet (a petition for an inquiry into the birth of the Prince of Wales). 11. 'Dr. Sherlock's Case of Allegiance considered, with some Remarks upon his Vindication,' 1691, 4to. 12. 'A brief Essay concerning the Independency of Church Power,' 1692, 4to. 13. 'The case of giving bail to a pretended authority examined,' dated from the king's bench, 23 Nov. 1692, the preface bearing date December, and a 'Letter to Sir J. Holt,' 30 Nov. 1692, 4to. 14. 'A Reply to some Remarks upon "The case" . . .,' dated April 1693, 4to. 15. 'A Persuasive to Consideration tendered to the Royalists, particularly those of the Church of England,' 1693, 4to; 1716, 8vo (Cole), on which see Macaulay's opinion, 'History of England,' iii. 459. 16. 'Remarks upon the "London Gazette" relating to the Streights Fleet and the Battle of Landen in Flanders,' 1693, 4to, 'Somers Tracts' (1814), xi. 462. 17. 'Miscellanies in Five Essays,' 1694, 8vo (Cole), afterwards in Part I. of 'Essays on Moral Subjects.' 18. 'A Defence of the Absolution given to Sir W. Perkins,' 1696, 4to (Cole). 19. 'A further Vindication of the Absolution . . .,' 21 April 1696, 4to; also in Howell's 'State Trials,' xiii. 451. 20. 'A Reply to the Absolution of a Penitent . . .,' 20 May 1696. 21. 'An Answer to the Animadversions on Two Pamphlets lately published,' 1 July 1696. These form together fifty pages, without title-page or printer's name. 22. 'The Case of the Two Absolvers

that were tried at the King's Bench Bar,' 1696, 'Somers Tracts' (1814), ix. 541. 23. 'Essays upon several Moral Subjects,' 1697, 8vo, in two parts; part i. (see 17) includes 'The Duties of a Chaplain,' and a sixth essay; part ii. has seventeen short essays. (Cole's entry, 'Miscellanies. Essays upon Moral Subjects, two parts, 1695,' is probably taken from a volume containing the first part (see No. 17) printed with title-page, with the second series added. Unless this is so, then the production of the 'Essays' in two parts mentioned in the foregoing biography should be put two years earlier.) The chronology adopted in the biographical part of the article is that in the article in the 'Biographia Britannica,' by Campbell, and no better authority could be desired, see art. in Kippis's 'Biographia.' Other editions, 5th, 1703; 6th, 1722; 7th, 1722. 'Essays,' vol. ii., or third part, 1705, 1720; vol. iii., or fourth part, 1709, all 8vo. Also 'Essay on Gaming,' in a dialogue, 1713, 8vo. A collected edition, 1722, 8vo.

The pamphlets on the stage.—24. 'A short View of the Immorality and Profaneness of the English Stage, together with the Sense of Antiquity upon this Argument,' 1698, 8vo; 3rd edition, 1698 (BELJAME); 4th, 1699; 'La Critique du Theatre Anglois comparé au Theatre d'Athenes, de Rome, et de France . . .' [translated by Du Courbeville], Paris, 1715 (BELJAME). 25. 'A Defence of the Short View of the Profaneness and Immorality . . . being a Reply to Mr. Congreve's Amendments . . . and to the Vindication of the Author of the Relapse,' 1699, 8vo. 26. 'A Second Defence of the Short View . . . being a Reply to a Book intituled "The Ancient and Modern Stages surveyed"' [by J. Drake], 1700, 8vo. 27. 'Mr. Collier's Dissuasive from the Playhouse in a Letter to a Person of Quality, occasioned by the late Calamity of the Tempest,' 1703, 8vo, republished together with 'A Letter by another Hand relating to the Irregularities charged upon the Stage,' 1704, 8vo. 28. 'A Letter to a Lady concerning the New Playhouse,' 1706, 8vo. 29. 'A Further Vindication of the Short View . . . in which the Objections of a Defence of Plays [by Filmer] are consider'd,' 1708, 8vo. Collected edition, 'A Short View . . . with Defences to Answers . . .,' 5th edit., with portrait, 1730; reprinted without portrait and with new title-page, 1738. For references and replies, see Scott's 'Dryden' (ed. Saintsbury), viii. 502, xi. 243; Congreve's 'Amendments of Mr. Collier's False and Imperfect Citations from the "Old Bachelor," "Double Dealer" . . . by the Author of those Plays,' 1698, 8vo; Vanbrugh's 'A Short Vindication of the Relapse . . . from Immorality and Profaneness,' 1698, 8vo; D'Urfey's 'The Campaigners, with a familiar preface by a late Reformer of the Stage,' 1698, 4to; Dennis's 'The Usefulness of the Stage, occasioned by a late Book,' 1698, 8vo; Filmer's 'A Defence of Dramatick Poetry, being a Review of Mr. Collier's Vindication . . .,' 1698, 8vo; 'A Further Defence . . . being the Second Part of a Review . . .,' 1698, 8vo; 'A Defence of Plays, or the Stage vindicated . . .,' 1707, 8vo; also anonymous, 'The Stage condemned and the Encouragement given to the Immoralities and Profaneness of the Theatre by the English Schools, Universities, and Pulpits censured . . . The Arguments . . . against Mr. Collier considered,' 1698, 8vo; 'A Vindication of the Stage, with the Usefulness and Advantages of Dramatick Representations, in answer to Mr. Collier's late Book . . . In a Letter to a Friend . . .,' 1698, 4to; 'Some Thoughts concerning the Stage in a Letter to a Lady,' 1704, 8vo; 'A Representation of the Impiety and Immorality of the English Stage . . .,' 1704, 4to.

Collier also published: 30. 'The Great Historical, Geographical, Genealogical, and Poetical Dictionary,' vols. i. and ii. 1701 and 1705; vol. iii., or 'A Supplement,' 1705, reprinted 1727; vol. iv., or 'An Appendix,' 1721, fol. 31. 'The Emperor M. Aurelius Antoninus, his conversation with himself,' together with other pieces, translated, 1701, 1708, 1726, 8vo. 32. Preface to S. Parker's translation of Cicero's 'De Finibus,' 1702, 1812, and one or two other prefaces, an advertisement, &c., see 'Biog. Brit.' and Nichols's 'Lit. Anecd.' 33. 'An Ecclesiastical History of Great Britain . . . to the end of the Reign of Charles II,' vol. i. 1708, vol. ii. 1714, fol.; a new edition with Life . . . by F. Barham, 9 vols. 8vo, 1840; a new edition, 9 vols. 8vo, with Life, by T. Lathbury (the best), 1852. In connection with the 'History'—34. 'An Answer to some Exceptions in Bishop Burnet's Third Part of the "History of the Reformation" . . . with a Reply to . . . Bishop Nicholson,' 1715, fol. (COLE). 35. 'Some Remarks on Dr. Kennet's Second and Third Letters . . .,' 1717, fol., and as 'Some Considerations . . .,' 8vo. These pamphlets may be read conveniently in vol. ix. of Lathbury's edition of the 'Ecclesiastical History.' 36. 'Reasons for restoring some Prayers and Directions as they stand in the Communion Service of the First English Reformed Liturgy . . .,' 1717, 8vo, 1718. 37. 'A Defence of the Reasons . . . being an Answer to a book entituled "No Reason for Restoring . . ,"' 1718, 8vo. 38. 'A Vindication of the Reasons and Defence . . .,' part i. 1718, part ii.

1719, 8vo. 39. 'A Further Defence, being an Answer to a Reply to the Vindication . . . ,' 1719. These tracts were published in a collected form without title-pages in 1736. 40. Possibly in conjunction with others 'A Communion Office, taken partly from Primitive Liturgies and partly from the First English Reformed Common Prayer-book,' 1718, 8vo. 41. 'Several [twelve] Discourses upon Practical Subjects,' 1725, 8vo, some of these also published separately. 42. 'God not the Author of Evil, being an additional sermon . . . ,' 1726, 8vo.

COLLIER, JOEL (18th cent.), was the pseudonym of a musician named George Veal (not of J. L. Bicknell, as stated by Fetis), who was a tenor-player at the Italian Opera in the latter half of the eighteenth century, and who wrote a satire of Dr. Burney's 'Musical Tour,' entitled 'Musical Travels in England,' which enjoyed a wide popularity. The first edition appeared in 1774; the second was published in 1775, and contains an appendix consisting of a fictitious account of the last sickness and death of Joel Collier, by Nat Collier. Other editions appeared in 1776 and 1785, but all editions are rare, owing, says M. Fetis, to the suppression of the work by the Burney and Bicknell (?) families. In 1818 Veal followed his previous effort by a scathing satire of Jean-Baptiste Logier's system of pianoforte instruction, entitled 'Joel Collier Redivivus, an entirely new edition of that celebrated author's Musical Travels, dedicated to that great musical luminary of the musical world, J. B. L-g-r' (London, 1818, 8vo).

[Fetis's Biographie Universelle des Musiciens; Collier's Works.] E. H.-A.

COLLIER, JOHN, 'Tim Bobbin' (1708–1786), author and painter, son of the Rev. John Collier, minister of Stretford, near Manchester, 'a poor country curate whose stipend never amounted to 30*l.* a year,' was born at Urmston on 16 Dec. 1708, and baptised at Flixton on 6 Jan. 1708–9. He was in all probability educated by his father, who intended to bring him up for the church. In his fourteenth year, however, he was apprenticed to a Dutch-loom weaver at Newton Moor, Mottram, but after little more than a year, having prevailed with his master to cancel the indentures, he became an itinerating schoolmaster. This roving occupation he continued until 1729, when he was appointed sub-master at the free school at Milnrow, near Rochdale, under the Rev. Robert Pearson, with whom he shared the annual salary of 20*l.* On Pearson's death in 1739 Collier succeeded him as master, though he did not procure his license from the Bishop of Chester until 1742. He held the position up to his death in 1786, with the exception of an interval of some months in 1751, when he filled the situation of bookkeeper to a cloth manufacturer at Kebroyd in Yorkshire. His patron at Milnrow was Colonel Richard Townley of Belfield, who remained his friend to the end and wrote his biography after death. He began early to exercise his faculty for rhyming, and he acquired a knowledge of music, drawing, painting, modelling, and etching. Townley reports that his landscapes and portraits were drawn in good taste. At Shaw chapel and elsewhere there are some sacred figures by him; but serious painting he soon abandoned for caricature, and in the course of his career he produced large numbers of grotesque pictures of buffoons and hideous old women, painted in a style which is absolutely devoid of artistic merit. They found a ready sale in the north of England, and many specimens were until lately to be met with, chiefly in the drinking-rooms of old public-houses. He came to be styled the Lancashire Hogarth, but the designation is inappropriate. He turned his hand occasionally to carriage and sign painting, and to gravestone carving, as well as to land surveying, at which he was expert.

In 1739 he wrote 'The Blackbird,' a versified satire on Mr. Samuel Chetham of Castleton, and first used the signature of 'Tim Bobbin.'

From an early period Collier appears to have made a study of the Lancashire dialect. He was an acute observer of character, and for many years used to take note of every quaint and out-of-the-way term or phrase he heard in village alehouses and elsewhere. He had some acquaintance with Anglo-Saxon and early English literature, and possessed a good library for a man in his position. Among his books was a copy of Chaucer's 'Canterbury Tales,' printed by Caxton, which after-

wards passed into Earl Spencer's collection. In 1746 appeared the first edition of his 'View of the Lancashire Dialect, by way of Dialogue between Tummus o' William's o' Margit's o' Roaf's and Meary o' Dick's o' Tummus o' Peggy's.' It is mainly on this humorous work, the value of which is increased by a glossary, that his claim to remembrance rests. It was one of the first books of its kind, and soon had great popularity. It was seven times reprinted by the author, with engravings by himself, and concurrently there were several pirated editions. Of the authorised edition of 1775 there was an impression of six thousand copies. Up to the present date at least sixty-four editions have been published (FISHWICK). Many of the editions bear the title of 'Works of Tim Bobbin,' and include his miscellaneous poems and letters. The best edition is that issued by Westall of Rochdale in 1819 (reprinted in 1862). Other notable editions are Cowdroy and Slack's, Salford, 1812; one with plates by George Cruikshank, 1828, and one edited by Samuel Bamford, 1850.

In 1757 Collier published 'Truth in a Mask, or Shudehill Fight, being a Short Manchester Chronicle of the Present Times,' and in 1771 'The Fortune Teller, or the Court-Itch at Littleborough.' In 1771 appeared also his 'Curious Remarks on the History of Manchester,' under the name of 'Muscipula, Senr.,' and in 1773 'More Fruit from the same Pannier, or additional Remarks on the History of Manchester.' The object of the last two pamphlets, in which he was assisted by Colonel Townley, was to refute and ridicule some parts of Dr. John Whitaker's 'History of Manchester.' It has been shown by Mr. J. E. Bailey that the piece called 'Lancashire Hob and the Quack-Doctor,' included in Collier's works, was really written by the Rev. Henry Brooke (1694–1757) [q. v.] In 1772–3 Collier published a folio volume of twenty-six engravings, with poetical descriptions, entitled 'The Human Passions delineated, in above 120 figures, droll, satyrical, and humourous,' some of which had been before sold as separate plates. Other editions in folio were published in 1810, 1819, 1858, and 1860, and in quarto in 1811 and 1846.

He married in 1744 Mary Clay of Flockton, near Huddersfield, who had been brought up by the pious Lady Elizabeth Hastings. She was fourteen years his junior and had some little property, which is said to have been soon dissipated by her husband's intemperate habits (CORRY). He died at Milnrow on 14 July 1786, and was buried in Rochdale churchyard. Some of his manuscripts, in his remarkably neat hand, are preserved at the Chetham Library.

Collier's eldest son, John, was settled for many years as a coachmaker at Newcastle-on-Tyne, and there published 'An Essay on Charters, in which are particularly considered those of Newcastle, with remarks on its constitution, customs, and franchises' (1777, 8vo, pp. vi, 108), and 'An Alphabet for Grown-up Grammarians,' 1778, 8vo. His second son, Thomas, printed at Penrith in 1792 a pamphlet entitled 'Poetical Politics,' but the whole impression was seized and burnt with the exception of a single copy. Charles, his third son, was a portrait painter. All three were very eccentric men, and the eldest became hopelessly insane long before his death.

[Townley's Acct. of Collier in Aikin's Manchester, 1795, and in several editions of Tim Bobbin; Corry's Memoir in edit. of 1819; Heywood on the South Lanc. Dialect, in Chetham Society, vol. lvii. 1861; Canon Raines's annotated copy of the same in the Chetham Library; Raines's MSS. vol. ix. in Chetham Library; Jesse Lee's unpublished memoir (1839) and manuscript collections in Manch. Free Library; Whitaker's Whalley, 1872, i. pp. xl, 234; Bamford's Dialect of S. Lanc. 1850; Bailey's Old Stretford, 1878, p. 41; Bailey on Lancashire Hob, in Manch. Literary Club, vol. vi.; Axon's Literature of the Lanc. Dialect in English Dialect Society's Bibliographical List, 1877, pp. 61–6.] C. W. S.

COLLIER, JOHN PAYNE (1789–1883), Shakespearean critic, was born in Broad Street, London, on 11 Jan. 1789. His father, John Dyer Collier (1762–1825), was son of a London physician, and, after being educated at the Charterhouse (1771–6), was for some time in the Spanish wool trade. Meeting with reverses in 1793–4, he turned for a livelihood to letters, and, besides editing the 'Monthly Register' and 'Critical Review,' published an 'Essay on the Patent Laws,' 1803, and a 'Life of Abraham Newland,' 1808. In 1804 he became connected with the 'Times,' at first as a law reporter and subsequently in higher capacities. After a few years he transferred his services to the 'Morning Chronicle,' and latterly he also established, with the aid of his son, a successful system of newsletters to provincial towns. He died on 26 Nov. 1825, his wife, Jane Collier (born Payne), surviving him

till 20 Oct. 1833. Both are frequently mentioned in the warmest terms in the 'Diary' of Crabb Robinson, who for some years resided with them. Mrs. Collier was a special favourite of Lamb and Hazlitt, and they lived in friendly intercourse with Wordsworth, Coleridge, and other writers of note.

Collier's infancy was passed at Leeds, and curious recollections of it were inserted by him, when in his eighty-fifth year, in a copy of Thoms's 'Human Longevity' (Brit. Mus. C. 45. d. 26). In his 'Old Man's Diary' he states that he was never at school or college, and that he 'began authorship' before he was sixteen. The result, as he candidly admits, was 'unredeemable rubbish.' In or before 1809 he was appointed by John Walter, junior, to succeed the elder Collier as reporter on the 'Times.' This engagement lasted until about 1821, when it was terminated by a disagreement with T. Barnes, the editor [q. v.] Meanwhile Collier became a student of the Middle Temple, 31 July 1811. On 20 Aug. 1816 he married Mary Louisa, youngest daughter of William Pycroft, formerly of Edmonton. She brought him some accession of fortune and a family of six children. He was still attached to the 'Times' when, in 1819, he got into trouble with the House of Commons for misreporting a speech of Joseph Hume to the prejudice of Canning. For this he was summoned before the house on 15 June, and, although he accounted for his error, was committed to the custody of the sergeant-at-arms. A submissive petition, however, procured his discharge on the following day, upon payment of fees and a reprimand from the speaker. When he finally left the 'Times' he joined the 'Morning Chronicle.' He had already had a connection of some kind with the same paper while it was under the active management of Perry; and he is said to have visited France and Holland in its interest during 1813–15. Henceforth, until 1847, he continued a member of its regular staff as law and parliamentary reporter, dramatic and literary critic, and writer of leading articles.

Collier's prospects as a lawyer were injuriously affected by the earliest of his separate publications, a small volume called 'Criticisms on the Bar,' 1819, by 'Amicus Curiæ,' consisting of sketches of leading counsel, most of which were reprinted from the 'Examiner.' Their tone gave not unnatural offence, and the author was soon known. His own verdict, written on a fly-leaf, was 'Foolish, flippant, and fatal to my prospects, if I ever had any,' and he elsewhere alludes to the hostile feeling thus excited as one of the causes which retarded his call to the bar until 6 Feb. 1829. He states himself (*Spenser*, i. p. vii) that he declined the post of a police magistrate in 1832, and that a proposal of Lord Campbell in 1848 or 1849 to procure him a county-court appointment was treated by him in the same way. He soon gave up any professional ambition. The real bent of his mind had been revealed in his 'Poetical Decameron,' 1820, in which he displayed a remarkable familiarity with the less known Elizabethan poets. His study of early English literature dated from his boyhood. It was stimulated probably by Lamb, and aided by an acquaintance with Rodd, the antiquarian bookseller; and he had already contributed numerous articles on the subject to the 'Critical Review' of 1816–17 and other magazines. In 1822 he printed, privately and anonymously, a long allegorical poem of his own, 'The Poet's Pilgrimage,' written several years before, when he was fresh from the reading of the 'Faery Queen.' The flattering comments of Wordsworth and Lamb prompted him to submit it to the public in 1825 under his own name; but, a 'literary bookseller' advising him 'to put it into prose, and then he would consider of it again,' he recalled the impression in disgust. His faculty of verse was no doubt shown to more advantage in his lighter pieces. Some of these, including imitations of early ballads, are printed in his 'Old Man's Diary,' 1871–2, and 'Odds and Ends,' 1870; and two of his translations from Schiller appeared separately in 1824–5. In 1825–7 he published a new edition of Dodsley's 'Old Plays,' in 12 vols., but his share in it was chiefly confined to six early dramas not previously included. To these he ultimately added five more, under the title 'Five Old Plays,' 1833. In 'Punch and Judy,' 1828, he gave the text, with a highly interesting introduction, of a humbler form of popular entertainment. This was printed anonymously, to accompany a series of plates by George Cruikshank.

In 1831 appeared his 'History of English Dramatic Poetry and Annals of the Stage,' 3 vols. Although awkwardly arranged, this work was full of new and valuable matter. Unhappily it also contained the earliest of a long series of insidious literary frauds; but at the time no suspicion of his good faith was entertained. The work helped to secure for him a friendly connection with the Duke of Devonshire, to whom, as lord chamberlain, it was fitly dedicated. The duke not only gave him in return 100*l.*, but soon after entrusted to him the care of his own unrivalled dramatic library and made him his literary adviser, rewarding his services with a yearly pension, which at his own death the next

duke generously continued. The unaffected kindness of his patron is the subject of continual entries in 'An Old Man's Diary,' which ostensibly covers the two years 1832–3. The duke stood sponsor for Collier at the Garrick Club and introduced him at Holland House; he would have made him also licenser of plays, but George Colman, even though guaranteed the income for life, obstinately refused to resign the office to a whig nominee, and the project fell through. Lord Francis Gower, afterwards Egerton (1833) and Earl of Ellesmere (1846), liberally allowed Collier free access to the rich collection of books and papers at Bridgewater House. It was from this source that he professedly derived the most interesting of the materials for his 'New Facts,' 1835; 'New Particulars,' 1836; and 'Further Particulars,' 1839, relating to Shakespeare and his works. As the documents on which they were founded are mainly spurious, these pamphlets have long ceased to be of value. A less exceptionable result of his labours in the Bridgewater Library was a descriptive catalogue of some of the earliest and most curious books, which was privately printed for Lord F. Egerton in 1837. Many years after it was incorporated into the author's still more valuable 'Bibliographical and Critical Account of the Rarest Books in the English Language,' 1865. It was followed in 1840 by a selection from the manuscripts, under the title of 'The Egerton Papers.' This was edited by Collier for the Camden Society, of which, since its foundation in 1838, he was a leading supporter. He had already edited for it Bale's play of 'Kynge Johan,' 1838, and his later contributions included two volumes of 'Trevelyan Papers,' 1857, 1863. He acted also as treasurer to the society from 1845 to 1861. His services to the Percy Society and to the Shakespeare Society (of which he was the director) were still more conspicuous. Both were formed in 1840, and he contributed ten publications to the former (1840–4) and twenty-one to the latter (1841–1851). He was a frequent contributor also to the 'Transactions' of the Society of Antiquaries, of which he became a fellow in 1830, treasurer in 1847, and vice-president in 1849. The earliest of his Shakespeare Society volumes was the 'Memoirs of E. Alleyn,' 1841. To this he added the 'Alleyn Papers,' 1843, and the 'Diary of P. Henslowe,' 1845, the three volumes together giving the result of his researches among the manuscripts at Dulwich College [see ALLEYN, EDWARD]. Valuable as they otherwise are, they were eventually found to have added largely to the evidence of imposture accumulating against him.

Meanwhile Collier completed an annotated edition of Shakespeare, 8 vols., published in 1842–4. It was preceded by a pamphlet dwelling upon 'the lately acquired means of illustrating the plays, poems, and biography of the poet.' Besides the materials already noticed, they included certain manuscript corrections, 'probably as old as the reign of Charles I,' in a copy of the first folio of 1623 at Bridgewater House. In the text of his edition Collier was essentially conservative. The introductory matter was full and valuable, and the edition was appropriately supplemented by 'Shakespeare's Library,' 2 vols. 1844, in which he reprinted the novels, histories, &c., upon which the plays were founded.

In June 1847 a royal commission was appointed on the British Museum. Its chairman was the Earl of Ellesmere, and by his influence Collier was made secretary. He thereupon gave up his employment on the 'Morning Chronicle.' Besides acting as secretary until the commission made its report in 1850, he was also examined as a witness (February 1849); and, both orally and in two privately printed letters to Lord Ellesmere, he strongly advocated a printed as against a manuscript catalogue of the library. On this and other vexed questions he joined issue with Panizzi, then keeper of printed books, in whom he found more than his match, although he lived long enough to see (1881) the beginning of the catalogue actually in type. In the spring of 1850 he removed from London to Maidenhead, where he resided for the rest of his life; and on 30 Oct. he was granted, 'in consideration of his literary merits,' a civil list pension of 100*l.* During his official employment, besides smaller tracts, he found time to edit 'A Booke of Roxburghe Ballads,' 1847, and 'Extracts from the Registers of the Stationers' Company,' 2 vols., 1848–9; and these were succeeded by 'The Dramatic Works of Thomas Heywood,' 1850–1, and 'Five Old Plays' (Roxburghe Club), 1851.

A letter from Collier in the 'Athenæum,' 31 Jan. 1852, announced his possession of a copy of the second folio Shakespeare, 1632, annotated throughout in a hand of about the middle of the seventeenth century. This was the volume since known as the Perkins Folio, 'Tho. Perkins his Booke' being inscribed on the outer cover. Collier stated that he bought it for 30*s.* from Rodd, the bookseller, shortly before the latter's death in 1849, in order to supply from it some leaves missing in another copy. Finding it too imperfect, he laid it aside; about a year later he 'first observed some marks in the margin,' and later still, and not till then, he found in manuscript on nearly every page changes in

punctuation, cancellings, stage directions, and textual emendations in profusion. To the specimens which he gave in his first letter he added others in a second (7 Feb.), and one more, the famous 'bisson multitude,' in a third (27 March). The emendations, varying widely in merit and novelty, were now stamped with the authority of a corrector working soon after the book was printed, and possibly having access to better authorities than the early editors. The actual additions to the text included nine entire lines in as many places. Further details were at once called for. They were supplied at the end of 1852 in 'Notes and Emendations to the Plays of Shakespeare,' which claimed to include all the 'essential' manuscript readings. A second edition appeared in 1853, with a preface giving a circumstantial account of the identification of the annotated folio by a Mr. Parry, as having belonged to himself many years before. Collier also published in 1853 a single volume Shakespeare, without notes. In this edition he transferred the deference he showed in 1842–1844 to the first folio, 1623, to the anonymous corrections of the second, 1632, which were imported wholesale into the text without an attempt to distinguish them. The intrinsic merits of the manuscript readings had been questioned from the first. Real students of Shakespeare, such as Dyce, Knight, Staunton, and Halliwell, were not disposed to accept them blindly, and the proved futility of many of them negatived the idea of their specially authoritative character. Anything like criticism was, however, met by Collier with imputations of the meanest motives, and the result in Dyce's case in particular was the final breach of a long friendship. Doubts as to the authenticity of the corrections, grounded upon internal evidence alone, were first openly expressed by S. W. Singer, 'The Text of Shakespeare vindicated,' 1853; and more pointedly still by the anonymous author (E. A. Brae) of 'Literary Cookery,' 1855. The latter pamphlet, however, was particularly directed against the authenticity of the alleged discovery by Collier (*Notes and Queries*, 1 July 1854) of his own long-lost shorthand notes of Coleridge's lectures on Shakespeare and Milton in 1811. In answer to this attack Collier moved the court of queen's bench, 17 Jan. 1856, for a criminal information against the publisher for libel, having on 8 Jan. sworn to the truth of all his statements concerning both the Coleridge lectures and the Perkins folio. The motion was heard by Lord Campbell, who refused the rule on the ground that the case was not one in which the court ought to interfere. He had, however, worked, like Collier, for the 'Morning Chronicle,' and knew him well. He now gave him from the bench a high character as 'a most honourable man,' declaring his own belief that he had vindicated himself completely in his affidavit. In 1858 Campbell further addressed to him, as 'an old and valued friend,' his pamphlet on the legal acquirements of Shakespeare. Although the remedy of an ordinary action for libel was still left to him, Collier remained content with the result of his ex-parte application, and later in 1856 he published the 'Seven Lectures,' with interesting particulars in the preface of his early intercourse with Coleridge and Wordsworth. Brae attacked the 'Lectures' again in 1860 ('Collier, Coleridge, and Shakespeare') with considerable effect. The case against them was, in fact, one of grave suspicion; but, as they were confessedly worked up merely from notes, it was hardly capable of proof. In the volume which contained them Collier also gave a 'List of every Manuscript Note and Emendation in the Perkins Folio.' The extent to which this list belied its reiterated claim to completeness was one of the most curious discoveries which were soon to be made. In spite of all criticism, Collier's own faith in his folio remained unshaken. In a new edition of his annotated Shakespeare, 6 vols. 1858, he adopted most of its manuscript readings, and avowed his conviction that the great majority 'were made not from better manuscripts, still less from unknown printed copies, but from the recitations of actors.' While this work was in the press he lost his wife, who died, aged 70, on 10 Dec. 1857. His patron, the Duke of Devonshire, died soon after, 17 Jan. 1858.

Down to 1859 the corrected folio had never been submitted to the judgment of experts. It had been exhibited on a few occasions, but Collier had apparently never let it go out of his own custody. In June 1853 he presented it to the Duke of Devonshire; and on the duke's death it came to his successor, who in May 1859, at the request of Sir F. Madden, keeper of manuscripts, deposited it at the British Museum for examination. The result was published by Mr. N. E. Hamilton, of the manuscript department, in the 'Times' of 2 and 16 July. Not only were the manuscript notes of themselves pronounced to be recent fabrications, merely simulating a seventeenth-century hand, but they were frequently found to correspond with other marginal notes in pencil undeniably modern. The latter had been rubbed out, but were (and are) still faintly legible, and the test of the micro-

scope applied by Professor Maskelyne (*Times*, 16 July) proved that in some cases they underlie the ink-writing of the so-called 'Old Corrector.' Collier (7 July) denied that he had written either ink-notes or pencillings, and refused to discuss the matter further. He also repeated his former statement of the recognition of the folio, notes and all, by Mr. Parry in 1853. When, however, it was now shown to Mr. Parry, he repudiated it at once, as differing from his own lost volume in every respect; he had hastily assumed the identity in 1853 without seeing the book, from a facsimile of part of a page. Upon this point Collier flatly contradicted him, and their statements (20 July, 1 Aug.) remained hopelessly at variance. Early in 1860 Hamilton's 'Inquiry,' &c., impeached the Perkins folio in more detail, and brought within the charge of spuriousness not only the manuscript notes in the Ellesmere folio, 1623, but a number of Shakespearean documents published by Collier at various times since 1831. As regards the Bridgewater House papers this was no more than a confirmation of the opinion of Mr. Halliwell, published as far back as 1853; but further forgeries were now brought to light at Dulwich College, and one even in the State Paper Office. A lengthy 'Reply' from Collier speedily followed. It was weak, disingenuous, and ineffective, and by its gross insinuations it further embittered an acrimonious contest. He produced, indeed, in a letter from Dr. H. Wellesley, evidence of some weight to confirm his account of the purchase of the folio. The terms of the letter, however, were ambiguous, and the writer's refusal to be more explicit left it still doubtful whether after all he referred to the same volume. Meanwhile Collier did not lack zealous support in the press. All that could be said for the 'Old Corrector' was urged by H. Merivale in the 'Edinburgh Review' (April 1860), but his remarks on Collier himself were by no means flattering. The adverse view was ably and temperately argued by T. J. Arnold in a series of articles in 'Fraser's Magazine' (January, February, May, 1860). The verdict of all competent paleographers, with Sir F. Madden and T. D. Hardy at their head, went the same way, nor could any trained eye judge otherwise. Whether Collier had been himself the victim of fraud or its actual contriver was left undecided. Besides the corrections in the two folios, he had printed, so far as was known down to the end of 1860, a dozen separate documents adjudged to be spurious, all of which he distinctly claimed to have discovered himself at various times and in four different localities. It was shown beyond the possibility of doubt that in editing a genuine letter at Dulwich he had not scrupled to falsify it in order to introduce Shakespeare's name. But the full extent of the fabrications to which he gave currency has never been ascertained. At Dulwich alone sixteen more forgeries were detected in 1881. All of them had been printed by Collier, except the interlineations in Alleyn's 'Diary,' and convincing proof that he forged the latter was before long supplied. After his 'Reply' he remained obstinately mute on the subject, even when, in 1861, directly challenged in a volume from Dr. C. M. Ingleby.

In 1862 he published 'The Works of Edmund Spenser,' 5 vols., an excellent edition, with the completest life of the poet that had as yet appeared. During the same year he projected a series of reprints in very limited impressions; and in this way, between 1863 and 1871, he issued a large number of rare pieces in prose and verse of the sixteenth and seventeenth centuries. His 'Bibliographical and Critical Account,' &c., 2 vols. 1865, already mentioned, gave in a different form the fruit of his lifelong researches in the same field, and is in many respects the most practically useful of all his works. With the exception of a new edition of his 'History of English Dramatic Poetry,' &c., 1875, from which none of the spurious matter was withdrawn, his subsequent productions were all privately printed. Foremost in interest was the autobiographical fragment, 'An Old Man's Diary Forty Years ago' (1832-3), 4 parts, 1871-2, containing a mass of curious literary gossip extending back into the preceding century. In a 'Trilogy,' 1874, he returned once more to the Perkins folio, for the purpose of showing how many of its manuscript readings had been adopted by Dyce and other editors. After an attempt to prove (*Athenæum*, 28 March 1874) that Shakespeare was the author of 'Edward III,' he reprinted the play itself; and finally, 1875-8, he issued (fifty-eight copies only) yet another edition of Shakespeare, 8 vols., 'with the purest text and the briefest notes.' It included not only 'Edward III,' but 'The Two Noble Kinsmen,' 'A Yorkshire Tragedy,' and 'Mucedorus,' and the preface was dated on his eighty-ninth birthday. He died at Maidenhead on 17 Sept. 1883. His library was sold on 7-9 Aug. 1884; many of the lots were enriched with his own notes, and some fetched extraordinary prices. A transcript in his own hand from Alleyn's 'Diary' (lot 200, now at Dulwich) yielded the proof hitherto lacking that he was personally guilty of actual forgery. Interlineations agreeing with the spurious entries in the original diary appear

in the transcript, but they were evidently not written concurrently with the transcript itself. More remarkable still was a so-called seventeenth-century manuscript of ballads (lot 214, now Brit. Mus. Add. MS. 32380). Extracts from this volume, highly interesting in relation to Shakespeare and Marlowe, were published by Collier in 1836 and 1839, but he had never produced it. As had been suspected, it proved to be an artful fraud; real old ballads, already well known, are mixed up with three which have every appearance of being spurious, and the whole collection is written in a manifestly imitative hand ([Sir] E. M. Thompson in *Academy*, xxvii. 170, 1885).

To one fatal propensity Collier sacrificed an honourable fame won by genuine services to English literature. Apart from his labours on Shakespeare and the history of the drama, few have done more to rescue the works of less famous writers from undeserved oblivion. His critical judgment, however, was not always equal to his industry, and he was never a particularly accurate editor. Worse than this, the taint of suspicion necessarily rests upon all his work. None of his statements or quotations can be trusted without verifying, and no volume or document that has passed through his hands (e.g. B. M. Egerton MS. 2623) can be too carefully scrutinised. His maltreatment of the collections to which he was given access was an abuse of confidence which nothing can palliate; but in literary matters he was apparently devoid of conscience, and probably he regarded as applicable to all his works the motto from Milton prefixed to the earliest of them, 'I have done in this nothing unworthy of an honest life and studies well employed.' In other respects his character was irreproachable, and he had the reputation of a genial, kind-hearted, and amiable man.

F. W.

COLLIER, ROBERT PORRETT, Lord Monkswell (1817–1886), judge, was the eldest son of Mr. John Collier, a merchant of Plymouth, formerly a member of the Society of Friends and M.P. for that town from 1832 to 1841. Robert Collier was born in 1817, and was educated at the grammar school and other schools at Plymouth till the age of sixteen, when he was placed under the tuition of Mr. Kempe, subsequently rector of St. James's, Piccadilly, London. Thence he went to Trinity College, Cambridge, and while there wrote some clever parodies, and published a satirical poem called 'Granta.' Ill-health compelled him to abandon reading for honours and to quit the university, to which he only returned to take the ordinary B.A. degree in 1843. Already a politician, he made some speeches at Launceston in 1841 with a view to contesting the borough in the liberal interest, but did not go to the poll, and he was an active member of the Anti-Cornlaw League and addressed the meetings in Covent Garden Theatre. He was called to the bar at the Inner Temple in Hilary term 1843, and joined the western circuit and Devonshire, Plymouth, and Devonport sessions. His first important success was a brilliant defence of some Brazilian pirates at Exeter in July 1845; the prisoners were, however, condemned to death, and the judge (Baron Platt) refused to reserve a point of law on which Collier insisted. Collier hurried to London and laid the matter before the home secretary (Sir James Graham) and Sir Robert Peel. Both ministers appear to have been convinced by Collier's argument, and on 5 Aug. it was announced in both houses of parliament that Baron Platt had yielded (*Hansard*, lxxxii. 1349–50, 1367–8). The subsequent argument before all the judges in London of the point taken at the trial resulted in the grant of a free pardon to Collier's clients. On his next visit to Exeter he had nineteen briefs. Local influence and wide practical knowledge gave him a good practice, and he was an excellent junior. He was appointed recorder of Penzance, and in 1852 he was returned to parliament for Plymouth, and retained the seat till he became a member of the judicial committee of the privy council. Lord Cranworth made him a queen's counsel in 1854. After a keen rivalry with Montague Smith, afterwards a judge, for the foremost place, he obtained the lead of the circuit and kept it for many years. In 1859 he was appointed counsel to the admiralty and judge-advocate of the fleet. It was his opinion in favour of detaining the Confederate rams in the Mersey that Mr. Adams, the American minister, submitted in 1862 to Lord John Russell, and, although too late to prevent the Alabama going to sea, it was afterwards adopted by the law officers of the crown. He had spoken frequently and with good effect in parliament, especially on trade with Russia in 1855, but chiefly on legal topics; and when, on Sir William Atherton's retirement in October 1863, Sir Roundell Palmer became attorney-general, Collier's appointment as solicitor-general in succession to him was somewhat unexpected. He filled

the office, however, with success until the liberal government resigned in 1866, and in December 1868 he became attorney-general, and in the next year he had the conduct of the Bankruptcy Bill in the House of Commons. He was, while attorney-general, appointed recorder of Bristol, but resigned the appointment at once in deference to the wishes of his constituency. In 1871, to enable the judicial committee of the privy council to overtake its arrears of colonial appeals, an act (34 & 35 Vict. c. 91) was passed providing for four paid judgeships, two of which were to be held by judges or ex-judges of the English bench. To none could one of the law officers be appointed. One of these two judgeships was accepted by Sir Montague Smith. The other was offered to and refused by three English judges, and a fourth having intimated that he would refuse it if offered, Lord Hatherley, the lord chancellor, thought it unseemly to hawk the appointment about any further. It was imperative that the vacancy should be at once filled, and Collier agreed to relieve the government in this difficulty. To give him the necessary technical qualification, Lord Hatherley in November 1871 appointed him to a vacant puisne judgeship in the court of common pleas. Here he sat a few days only; three judgments of his are, however, reported (*Law Reports*, vii. Common Pleas, 163). Though a writ was made out appointing him a serjeant, it was never executed in open court, nor was he a member of Serjeants' Inn. Then Mr. Gladstone appointed him to the vacancy on the privy council. No doubt was cast either on his fitness for the place or on his personal conduct in accepting it; but a controversy, very damaging to the government, arose out of the appointment. Lord-chief-justice Cockburn and Chief-justice Bovill [q. v.] protested against it as contrary to the spirit of the act, and on 15 Feb. 1872 Lord Stanhope made a motion in the House of Lords condemning it, which was lost only by two votes. A similar motion in the House of Commons was lost by only twenty-seven. This post Collier held till his death, and the task of giving literary shape to the judgments of the privy council was frequently committed to him. In 1885 he was created a peer, taking his title from Monkswell, a small property in Devonshire. He married in 1844 a daughter of Mr. William Rose of Woolston Heath, near Rugby, and her sudden death in April 1886 shook him severely. In failing health he went to the Riviera, and died at Grasse, near Cannes, on 27 Oct. 1886, and was buried in London on 3 Nov. He was highly versatile and accomplished. He was a good billiard-player, an excellent scholar, and wrote some very pretty verses both in Latin and English. His memory was most retentive. But it was chiefly in painting, of which he was passionately fond, that he was distinguished As a young man he drew very clever caricatures in the H.B. manner. When solicitor-general he painted in St. James's Park, and he exhibited frequently at the Royal Academy and Grosvenor Gallery, especially pictures of the neighbourhood of Rosenlaui, Switzerland, where he spent many vacations. He published a treatise on the Railways Clauses Acts, 1845; another on Mines in 1849; a letter to Lord John Russell on the 'Reform of the Common Law Courts,' 1851, 2nd ed. 1852; and a translation of 'Demosthenes de Coronâ' in 1875. He was succeeded by his son Robert, a barrister, who was under-secretary for war in Lord Rosebery's ministry 1895, and was chairman of the London County Council 1903–4; his son John became a well-known artist; and his daughter Margaret, Mme. Galetti di Cadilhac, has written 'Our Home by the Adriatic' and 'Prince Peerless,' a fairy tale.

COLLIER, THOMAS (*fl.* 1691), baptist minister, is said to have been originally an illiterate carter or husbandman (Edwards, *Gangræna*, iii. 41). In 1634, when he is described as of Witley, Surrey, he was complained of for obstinately refusing to pay taxations in the tithing of Enton, in the parish of Godalming, where he had an estate. Having adopted the opinions of the baptists, he assumed the office of a preacher, although he had not received any academical education. He preached for some time in Guernsey, where he made many converts, but ultimately he and some of his followers were banished the island for their heresies and turbulent behaviour, and he was cast into prison at Portsmouth (Crosby, *Hist. of the English Baptists*, iii. 51). In, or perhaps shortly before, 1646 he was a preacher at York. About the same period there are traces of him at Guildford, Lymington, Southampton, Waltham, Poole, Taunton, London, and Putney; and in 1652 he was preacher at Westbury, Somersetshire (Wood, *Athenæ Oxon.* ed. Bliss, iii. 678, *Fasti*, i. 508; *Notes and Queries*, 3rd ser. vi. 322). At one time he was minister at Luppitt and Up-Ottery, Devonshire (Ivimey, *Hist. of the English Baptists*, ii. 141). 'This Collier,' remarks Edwards, 'is a great sectary in the west of

England, a mechanical fellow, and a great emissary, a dipper who goes about Surrey, Hampshire, and those counties, preaching and dipping' (Brook, *Puritans*, iii. 27). What became of him at the Restoration does not appear, but it is probable that he was living in 1691, when the last of his numerous publications came from the press.

His works are: 1. 'Certain Queries, or points now in controversy examined,' 1645. 2. 'The Exaltation of Christ,' Lond. 1646, 12mo, with an epistle to the reader by Hanserd Knollys prefixed. 3. Letters dated Guildford, 20 April 1646, and London, 2 May 1646: printed in Edwards's 'Gangræna,' ii. 51, 52, and in Brook's 'Puritans,' iii. 28, 29. 4. 'The Marrow of Christianity,' Lond. 1647, 8vo. 5. 'The Glory of Christ, and the Ruine of Antichrist, unvailed,' 1647, 12mo. 6. 'A Brief Discovery of the Corruption of the Ministry of the Church of England,' Lond. 1647, 12mo. 7. 'A Discovery of the New Creation. In a Sermon preached at the Head-Quarters at Putney,' Lond. 1647, 12mo. 8. 'A Vindication of the Army Remonstrance,' Lond. 1648, 4to. This was in reply to a tract by William Sedgwick (Wood, *Athenæ Oxon.* iii. 895). 9. 'A General Epistle to the Universall Church of the First Born,' Lond. 1648, 12mo. 10. 'A Second Generall Epistle to all the Saints,' Lond. 1649, 12mo. 11. 'The Heads and Substance of his Discourse with John Smith and Charles Carlile,' Lond. 1651, 12mo. 12. 'Narrative of the Conference between John Smith and Thomas Collier,' Lond. 1652, 4to. 13. 'The Pulpit-guard routed in its twenty Strongholds,' Lond. 1652, 4to, in answer to a book published in the previous year by Thomas Hall, B.D., of King's Norton, Worcestershire, entitled 'The Pulpit guarded.' Hall replied to Collier, who published a rejoinder, with answers to comments which had been made on his work by John Ferriby and Richard Saunders. 14. 'The Right Constitution and True Subjects of the Visible Church of Christ,' Lond. 1654, 12mo. 15. 'A Brief Answer to some of the Objections and Demurs made against the coming in and inhabiting of the Jews in this Commonwealth,' Lond. 1656, 4to. 16. 'A Looking-glasse for the Quakers,' Lond. 1657, 4to. In reply to James Naylor. 17. 'A Discourse of the true Gospel-Blessedness in the New Covenant,' Lond. 1659, 12mo. 18. 'The Decision of the Great Point now in Controversie about the Interest of Christ and the Civill Magistrate in the Government of this World,' Lond. 1659, 4to. 19. 'The Body of Divinity,' Lond. 1674, 12mo. 20. 'Additional Word to the Body of Divinity,' 167–, to which Nehemiah Coxe published a reply. 21. 'A Doctrinal Discourse of Self-denial,' Lond. 1691, 8vo.

COLLIGNON, CATHERINE (1755–1832), translator, was the daughter of Dr. Charles Collignon [q. v.] She translated from the French of the Abbé Ladvocat 'An Historical and Biographical Dictionary,' 4 vols. 8vo, Cambridge, 1792; 2nd edition, 1799–1801. Miss Collignon died at Bromley, Kent, on 4 Feb. 1832. By her will she left 1,000*l.* stock to Addenbrooke's Hospital, Cambridge.

[Gent. Mag. cii. pt. i. p. 187; Lowndes's Bibl. Man. (Bohn), p. 1297.] T. C.

COLLIGNON, CHARLES, M.D. (1725–1785), anatomist, was of French extraction, and educated at Trinity College, Cambridge, where he graduated M.B. in 1749 and M.D. in 1754. He practised in Cambridge as a physician, and was in 1753 elected professor of anatomy, which office he held till his death on 1 Oct. 1785.

Collignon married a lady of Dutch parentage at Colchester, by whom he had an only daughter, Catherine [q. v.] Cole, who knew him well, says of him: 'He is an ingenious, honest man, and if they had picked the three kingdoms for a proper person to represent an anatomical professor, they could not have pitched upon a more proper one, for he is a perfect skeleton himself, absolutely a walking shadow, nothing but skin and bones; indeed, I never saw so meagre a figure, such as one can conceive a figure to be after the flesh and substance is all dried away and wasted, and nothing left to cover the bones but a shrivelled dry leather; such is the figure of our present professor of anatomy, 19 June 1770' (Cole, *MS. Collections*, British Museum, xxxiii. 264). He was a fellow of the Royal Society.

Collignon's works, which are mostly in the nature of moral reflections based on a little anatomy and medicine, include: 1. 'Compendium Anatomico-Medicum,' 1756. 2. 'Tyrocinium Anatomicum,' 1763. 3. 'Enquiry into the Structure of the Human Body relative to its supposed Influence on the Morals of Mankind,' 1764; third edition, 1771. 4. 'Medicina Politica; or Reflections on the Art of Physic as inseparably connected with the Prosperity of a State,' 1765. 5. 'Moral and Medical Dialogues,' 1769. These were collected with some other minor writings in a quarto volume of 'Miscellaneous Works,' published by subscription in 1786.

[European Mag. viii. 320; Cole, loc. cit.; Collignon's Works.] G. T. B.

COLLINGES, JOHN, D.D. (1623–1690), presbyterian divine, was the son of Edward Collinges, M.A., 'concerning whose faithfulnesse in his ministery,' his son informs us, 'many soules in glory, many in this and the other England, can beare witnesse.' He was born in 1623 at Boxted, Essex, and educated, 'till I was sixteen,' at the neighbouring grammar school of Dedham, where he came under the influence and preaching of the famous John Rogers and his successor, Matthew Newcomen. His father died when he was fifteen, leaving an estate, 'little above 50*l.* a yeare,' to maintain his wife, son, and two daughters; but the son was sent to Cambridge, 'where I lived, though in no heighth, yet in no want, by the favour of my learned tutor.' At Cambridge he studied diligently, but confesses that he fell into ungodly ways, which he had scarcely abandoned when he became, about two-and-twenty, 'a constant preacher,' living in the family of Mr. Isaac Wyncoll of Bures, Essex, whose eldest daughter he married. After two years at Bures he was called to Norwich, at first apparently to St. Saviour's parish; but in 1653 he took the place of Harding, ejected vicar of St. Stephen's, which he held without institution till the Restoration compelled him to resign it. In September 1646, when he came to Norwich, he was invited by Sir John Hobart 'to take my chamber in his house, . . . and to take some oversight of his family as to the things of God.' After Sir John Hobart's death part of the house was converted into a chapel by his widow, and here for sixteen years, till the passing of the act restraining religious meetings, Collinges lectured on weekdays, and repeated his public discourses on Sunday nights.

Collinges was a keen controversialist and most prolific writer. In 1651 he published 'Vindiciæ Ministerii Evangelici,' which is a vindication of a Gospel ministry against the claim of 'intercommonage' on the part of 'gifted men' not regularly set apart to preach. This was attacked by William Sheppard in 'The People's Priviledges and Duty guarded against the Pulpit and Preachers,' to which Collinges at once replied in 'Responsoria ad Erratica Pastoris.' In 1653 he attacked two pamphlets, one by Edward Fisher, and the other published anonymously by Alan Blane with the title 'Festorum Metropolis,' in which the puritan observance of the Sabbath was criticised, and the better observance of Christmas day insisted upon. Collinges names his reply 'Responsoria ad Erratica Piscatoris,' and has a dedication in heroic verse 'to my dear Saviour.' He denies that the date of Christ's birth can be fixed. In 1654 he attacked the 'Change of Church-Discipline' of Theophilus Brabourne [q. v.] in a tract entitled 'Indoctus Doctor Edoctus.' Brabourne replied in part ii. of his work, and Collinges rejoined with 'A New Lesson for the Edoctus Doctor,' in which he gives some particulars of his own life (pp. 8–10). In 1655 he published 'Responsoria Bipartita,' again discussing church government, and considering the right of the church to suspend the ignorant and the scandalous from the Lord's Supper. In 1658 these controversies are concluded by the publication of 'Vindiciæ Ministerii Evangelici revindicatæ,' against a book 'in the defence of gifted brethren's preaching,' which answered Collinges, and against a book called 'The Preacher sent.' In the preface to this work he enumerates and classifies his controversial tracts. After this Collinges dropped controversy; but his devotional and exegetical writings are even more voluminous. In 1650 appeared 'Five Lessons for a Christian to learn;' in 1649, 1650, and 1652, parts i. ii. and iii. respectively of 'A Cordial for a Fainting Soule,' containing thirty-six sermons in its first two parts. In 1675 he produced 'The Weaver's Pocket Book, or Weaving spiritualised,' perhaps his most curious work, intended specially for the weavers of Norwich, in imitation of Flavel's 'Navigation and Husbandry spiritualised.' In 1676 he published 'The Intercourses of Divine Love between Christ and His Church,' an exposition of chapter ii. of Solomon's Song, which in 1683 was incorporated with a similar exposition of chapter i., and a metrical paraphrase. In 1678 there appeared 'Several Discourses concerning the actual Providence of God,' containing ninety-eight sermons. This volume, as well as that last mentioned, contains the author's portrait at the age of fifty-five. In 1680 appeared the 'Defensative Armour against four of Satan's most fiery Darts,' and in 1681 a tract on the 'Improveableness of Water Baptism.' In conclusion, two biographical works must be mentioned: 'Faith and Experience,' published in 1647, containing an account of Mary Simpson of St. Gregory's parish, Norwich, and 'Par Nobile,' begun in 1665 on the death of his patron, Lady Frances Hobart, but hindered from publication by the plague and destroyed in 1666 by the fire. It was rewritten and published in 1675, because of certain slanders of the papists, and contains accounts of the lives of Lady Frances Hobart and Lady Katharine Courten, daughters of the Earl of Bridgewater, which suggests the substance of two

discourses. Besides all this work and numerous sermons, Collinges wrote the annotations in Poole's Bible on the last six chapters of Isaiah, Jeremiah, Lamentation, the four Evangelists, 1 and 2 Corinthians, Galatians, 1 and 2 Timothy, Philemon, and Revelation. He was appointed one of the commissioners at the Savoy Conference, and was extremely anxious for an accommodation. He died in January 1690.

Palmer's Nonconformist's Memorial, iii. 9, gives a list of his works, which are the only source for the facts of his life. Many of the books mentioned above are omitted, but one or two on presbyterianism and nonconformity not noticed above are inserted.] R. B.

COLLINGRIDGE, PETER BERNARDINE, D.D. (1757–1829), catholic prelate, was born in Oxfordshire on 10 March 1757, and assumed the Franciscan habit in the convent of St. Bonaventure at Douay in 1770. He taught philosophy to his brethren from 1779 till 1785, when he was made lector of divinity. He was elected guardian of the convent in 1788, and on the expiration of the term of his triennial government he was appointed president of the Franciscan academy at Baddesley, near Birmingham. Subsequently he was stationed at the Portuguese chapel, London, and at St. George's-in-the-Fields. In 1806 he was elected provincial of his brethren. The following year Bishop Sharrock, vicar-apostolic of the western district, secured him as his coadjutor, and he was consecrated at St. Edmund's College, Ware, on 11 Oct. 1807, as bishop of Thespiæ. He died in the monastery at Cannington, Somersetshire, on 3 March 1829.

[Oliver's Catholic Religion in Cornwall, 267; Brady's Episcopal Succession, iii. 305; Gillow's Bibl. Dict. i. 541; Catholic Miscellany, April 1829, p. 240.] T. C.

COLLINGS, SAMUEL (*fl.* 1780–1790?), painter and caricaturist, first appears as an exhibitor at the Royal Academy in 1784, sending 'The Children in the Wood, a Sketch;' in 1785 he exhibited 'The Chamber of Genius,' which was engraved; in 1786 'The Triumph of Sensibility.' He exhibited for the last time in 1789, sending 'The Frost on the Thames, sketched on the spot.' Collings is best known, however, as a caricaturist; he was a friend of Thomas Rowlandson, and contributed designs, which were etched by Rowlandson for some of his satirical publications, notably the satires on Johnson and Boswell's tour to the Hebrides, and on Goethe's 'Sorrows of Werter.' The original drawings for the former are in the South Kensington Museum, and have been erroneously attributed to Bunbury. To the 'Wit's Magazine' for 1784 Collings contributed some designs of a humorous character, which were engraved by William Blake and others. To the same magazine he contributed verses, and seems to have been as productive with his pen as with his pencil. He painted a portrait of Lord Thurlow, which was engraved by J. Condé; a picture by him, entitled 'The Disinherited Heir,' was published in aquatint by F. Jukes. It is not known when he died.

COLLINGTON. [See COLLETON.]

COLLINGWOOD, CUTHBERT, LORD COLLINGWOOD (1750–1810), vice-admiral, of an old Northumberland family which had fallen into reduced circumstances during the civil war of the 17th century and the rebellion of 1715, was born in Newcastle-on-Tyne on 26 Sept. 1750. He received his early education in the grammar school of that town; but at the age of eleven was entered as a volunteer on board the Shannon frigate, commanded by his maternal cousin, Captain Braithwaite; and for the next eleven years he continued with Braithwaite in the Shannon, and afterwards in the Gibraltar and Liverpool, always on the home station, though occasionally stretching as far as Gibraltar or Newfoundland in charge of convoy. In March 1772 he was appointed to the Lennox, guardship at Portsmouth, with Captain Roddam, and in February 1774 was moved into the Preston, going out to North America with the flag of Vice-admiral Samuel Graves. In the following year he was landed with the party of seamen attached to the army at the battle of Bunker's Hill, a service which won for him his promotion to the rank of lieutenant, 17 June 1775. In the following March he was appointed to the Hornet sloop, with Captain Haswell, and went in her to the West Indies, where, at Port Royal, on 30 Sept. 1777, he was tried by court-martial on a number of charges amounting to disobedience of the captain's orders and neglect of duty. On each and all of these charges he was fully acquitted; but in pronouncing his acquittal the court remarked on the apparent want of 'cheerfulness on the part of Lieutenant Collingwood in carrying on the duty of the sloop,' and 'therefore recommended it to him to conduct himself for the future with that alacrity which is so

essentially necessary for carrying on his majesty's service.' The admonition did him no harm, and in the course of a few months he was moved by the admiral, Sir Peter Parker, into the Lowestoft as first lieutenant, on the appointment to the flagship of Horatio Nelson, with whose career his own becomes curiously and closely connected. In June 1779 he was made commander into the Badger, vacant by the promotion of Nelson to post rank; and on 22 March 1780 was posted into the Hinchingbrook frigate, from which Nelson was removed to the Janus. The Hinchingbrook was at the time employed on an expedition against San Juan, an expedition which was defeated by the pestilential climate. Nelson himself was for many months most dangerously ill, and of the original complement of 200, 180 were buried in the short space of four months. Collingwood was one of the few who escaped, and in the following December was appointed to command the Pelican of 24 guns, which was wrecked on the Morant Keys in August 1781, in a violent hurricane. The loss of life was fortunately small, and after ten days of extreme privation on the barren Keys the men were rescued by a frigate sent from Jamaica. Shortly after his return to England, Collingwood was appointed to the Sampson of 64 guns, which was paid off at the peace, and her captain appointed to the Mediator frigate for service in the West Indies. It was during this time that his friendship with Nelson became most intimate, partly perhaps from the peculiar circumstances of their commission, which threw Nelson, then the senior captain on the station, into a most remarkable opposition to the commander-in-chief in reference to the strict carrying out of the navigation laws, which the admiral was disposed to relax [see Nelson, Horatio, Viscount]. Collingwood entirely agreed with Nelson in his line of conduct, and strictly followed the course which he prescribed; but as a junior officer his name did not come into any prominence in connection with the dispute. Towards the end of 1786 the Mediator returned to England and was paid off. The next three years Collingwood passed in Northumberland, 'making,' as he said, 'acquaintance with his own family, to whom he had hitherto been, as it were, a stranger.' During the Spanish armament of 1790 he was appointed to the Mermaid, in which he afterwards went to the West Indies; but returning, and being paid off the following year, he went back to Northumberland, and married Miss Sarah Blackett, apparently the grand-daughter of Admiral Roddam, his old captain in the Lennox.

Early in 1793 he was appointed to command the Prince, carrying the flag of Rear-admiral Bowyer [see Bowyer, Sir George, (1740?–1800)], with whom he afterwards moved into the Barfleur, and had an important share in the battle of 1 June 1794; but though Bowyer's services on this occasion were acknowledged by a baronetcy, Collingwood's name was not mentioned by Lord Howe, and the gold medal was therefore not awarded to him. When Admiral Bowyer left the Barfleur, Collingwood was transferred to the Hector, and in the following year to the Excellent, in which he was sent to the Mediterranean, August 1795. It was really his first entry into that sea, though by some misapprehension Nelson wrote on his arrival, 'You are so old a Mediterranean man that I can tell you nothing new about the country.' During the rest of 1795 and the whole of 1796 the Excellent was one of the fleet guarding Corsica and keeping up a close blockade on Toulon, and which, being withdrawn from the Mediterranean when Italy was overrun by the French, and Spain had declared war, fought the action off Cape St. Vincent on 14 Feb. 1797. In this battle the Excellent, under Collingwood, had a very distinguished share, two Spanish ships, one of them a 1st rate, striking their flags to her; after which, passing on to the relief of the Captain, she silenced the fire of the San Nicolas, which the Captain boarded and took possession of, and then engaged the great Spanish four-decker, the Santisima Trinidad. This huge ship had been already very roughly handled by the Captain and Culloden, and might, it was thought, have been compelled to strike to the Excellent, but, being to windward at the time, succeeded in effecting her escape. The assistance rendered to the Captain was most timely, and on the following day Nelson wrote: '"A friend in need is a friend indeed" was never more truly verified than by your most noble and gallant conduct yesterday in sparing the Captain from further loss; and I beg, both as a public officer and a friend, you will accept my most sincere thanks.' Collingwood, in replying, said: 'It added very much to the satisfaction which I felt in thumping the Spaniards, that I released you a little.' In a letter to his father-in-law three months later he said, in reference to the four-decker: 'I am sorry to see in the newspapers some reflections on Captain Berkeley of the Emerald (see James, *Naval Hist.* 1860, ii. 56). I do not believe the Trinidad was ever in so bad a condition as to submit to frigates, though she might have been taken by a line-of-battle ship. His losing sight of her was the conse-

quence of bad weather, and I think he is very unfairly censured.' Of Collingwood's own conduct in the battle there was but one opinion, which was warmly expressed at the time by Vice-admiral Waldegrave, and by Dacres, Waldegrave's flag-captain.

Gold medals were awarded to all the captains of the ships of the line. When Collingwood was informed of this by the admiral, he replied that he could not receive such a medal while that for 1 June was withheld from him. 'I feel,' he said, 'that I was then improperly passed over, and to receive such a distinction now would be to acknowledge the propriety of that injustice.' Both medals were afterwards, and, as Collingwood believed, by desire of the king, sent to him by Lord Spencer, the first lord of the admiralty, who wrote: 'The former medal would have been transmitted to you some months ago if a proper conveyance had been found for it.'

For the next two years, till the very end of 1798, Collingwood, in the Excellent, continued attached to the fleet before Cadiz. The service, though of the highest importance, was extremely irksome. It is impossible to read the published correspondence of Collingwood at this time without seeing how much it had preyed on his temper, leading him to expressions which, if made public, would have been in the highest degree reprehensible and even mutinous. Indeed, in one of his letters (22 July 1798), after saying that all the captains 'complain that they are appointed to many unworthy services,' he adds: 'I do them with all the exactness in my power, as if they were things of the utmost importance, though I do not conceal what I think of them.' If this is to be understood literally, there can be no doubt whatever that Collingwood was guilty of a very grave breach of discipline; and that had Lord St. Vincent known of it, he would have sent him home by the first ship, if indeed he did not try him by court-martial. Other incidents related by his biographer cannot be accepted as facts without corroborative evidence. One of these is the often-quoted story of Collingwood's gross incivility to his commander-in-chief, and his violation of service etiquette on the occasion of the Excellent being ordered to close the flagship to receive two bags of onions. The details of the story are manifestly inaccurate, and quite unworthy of belief: Lord St. Vincent's character has been strangely misrepresented if he would have tolerated for one moment conduct such as that imputed to Collingwood. Another of the absurdities which have passed muster as history is the story of Collingwood's having seriously explained to a man of bad character his intention to head him up in a cask and heave him overboard. Collingwood had a distinct reputation for keeping his ship's company in first-rate order, with a minimum of corporal punishment; but the statement that he indulged in unmeaning threats is contradicted by the results which he is known to have obtained.

The Excellent was paid off at Portsmouth early in January 1799. Within a few weeks (14 Feb.) Collingwood was advanced to the rank of rear-admiral, and was almost immediately appointed to a command in the Channel fleet, with his flag in the Triumph. From off Brest, he was detached in May, under Sir Charles Cotton [q. v.], with a squadron of twelve ships to reinforce Lord Keith in the Mediterranean, and accompanied him back off Brest, when the French fleet had returned after an uneventful cruise. In the beginning of 1800 he shifted his flag into the Barfleur, and continued in her, attached to the Channel fleet and employed for the most part in the blockade of Brest, till released by the peace of Amiens. After a short year at home, he was again appointed to a command in the fleet off Brest under Admiral Cornwallis. On 23 April 1804 he was advanced to the rank of vice-admiral, but continued as before, with Cornwallis, till May 1805, when he was detached in command of a squadron to reinforce Nelson, then in pursuit of the French fleet, or to act as circumstances required. In accordance with this discretionary power, he took up his station off Cadiz, where, on 18 July, he was joined by Nelson on his return from the West Indies, and where he still remained when Nelson, having intelligence that the combined fleet had been seen to the northward, sailed (25 July) to reinforce Cornwallis off Brest. He was still off Cadiz, keeping watch on the combined fleet which had put into that port, when he was again joined by Nelson on 28 Sept.; and commanding in the second post, he led the lee line in the memorable battle of Trafalgar, 21 Oct. 1805. By Nelson's death in the hour of victory, Collingwood succeeded to the chief command, and thus, in popular estimation, reaped a certain portion of the glory which, had Nelson lived, would have fallen to him alone. That Collingwood ably carried out the plan of the battle, so far as the duty was entrusted to him, is beyond dispute; but the popular idea, which seems to regard him as holding the command jointly with Nelson, is absolutely without foundation. Perhaps, too, a common misunderstanding of Nelson's orders has given Collingwood's share in the action an appearance of initiative which it very certainly had not. The Royal Sovereign, which

carried Collingwood's flag, led through the allied fleet some few minutes before the Victory at the head of the weather line, a circumstance very generally spoken of as if due to some better management, good fortune, or exuberant courage on the part of Collingwood. It was, to the minutest detail, pre-arranged by Nelson that it was to be so, he reserving for himself the possibly more difficult task of holding the enemy's van in check, and of taking care 'that the movements of the second in command are as little interrupted as possible.' What Collingwood did under Nelson's directions he did gallantly and splendidly; what he did after Nelson's death left him commander-in-chief has been considered more doubtful. The last order which Nelson gave to the fleet—not, as has been said, from the depths of the cockpit, but from the quarterdeck of the Victory a few minutes before she opened fire (*Nelson Despatches*, vii. 146)—was to prepare to anchor immediately after the battle. When the order was given, Nelson knew perfectly well that the ships must be in a shattered condition, and that foul weather was fast coming on. Later on, and after Nelson's death, Collingwood's judgment of the situation was different, and the fleet did not anchor. In the gale which followed, many of the prizes foundered, and others made their escape into Cadiz; the loss, it was said, was due to Collingwood's mistaken judgment, and the question has been often discussed with much warmth. In reality, it does not now admit of solution; for though we know that the prizes were lost, we do not know that they would not have been equally lost if the alternative course had been followed.

Collingwood's brilliant service was at once acknowledged by his being raised to the peerage as Baron Collingwood of Caldburne and Hethpoole in Northumberland; by a pension of 2,000*l.* a year for life, with, after his death, 1,000*l.* a year to his widow, and 500*l.* to each of his daughters; by the thanks of parliament, and by a sword from the Duke of Clarence. Not having a son, Collingwood was anxious that the title should descend through his daughters, but the request was not complied with. The rank brought him other anxieties, for he was a poor man, 'and how we are to make it out'—he wrote to his wife—'I know not, with high rank and no fortune. It is true I have the chief command; but there are neither French nor Spaniards on the sea, and our cruisers find nothing but neutrals, who carry on all the trade of the enemy.'

Collingwood was continued in the command which had fallen to him by the death of Nelson, but the work had been done too thoroughly to leave him much opportunity of distinction. For the next eighteen months, with his flag in the Ocean, he remained on the coast of Spain, for the most part before Cadiz; but in June 1807, owing to the very unsatisfactory state of our relations with Turkey, and the failure of the expedition under Sir John Duckworth, he was ordered to take the fleet to the Dardanelles, 'not so much'—he wrote 24 Oct.—'to carry on an active war against the Turks, as to conciliate them and give the ambassadors of Russia and England an opportunity of making a peace which ought never to have been broken. . . . To the Russians they would have little to say, as they always bear them a most inveterate hatred. To us it was the very reverse; all their correspondence bore the marks of kindness; but we had unadvisedly thrown them into the hands of France, and it was not possible to extricate them. They do not hesitate to say now that the fear of France alone prevents them making peace with us; and when or how that fear is to cease, I do not know.' The threatening relations between England and Russia abruptly broke up this ill-judged attack on Turkey, and the Russian fleet left the Mediterranean for the Baltic, only to be driven into the Tagus, where it eventually surrendered, on capitulation, to Sir Charles Cotton.

Collingwood meantime had his anxieties directed to Sicily, on the coast of which island he continued for many months, stretching occasionally as far as Toulon, but returning to his station, generally at Syracuse. He was still there in the following year (1808) when Vice-admiral Ganteaume, who commanded at Toulon, having been joined by the squadron from Rochefort, put to sea (10 Feb.) with a squadron of ten sail of the line, with the object, as afterwards appeared, of relieving Corfu, then closely blockaded by a small squadron of frigates and the Standard of 64 guns. On 22 Feb. Ganteaume anchored at Corfu, while the Standard made the best of her way to join the admiral, who was then lying at Syracuse with five ships of the line, Vice-admiral Thornbrough with five more being at Palermo. On the afternoon of 24 Feb. Collingwood put to sea to join Thornbrough, and unfortunately an hour or two before the Standard made the port. The squadron, being under the land, was not seen by the Standard, and by some unexplained neglect she, though seen by the squadron, was not signalled to join. Collingwood thus remained in perfect ignorance of the French fleet being at sea, and went, under easy sail, towards Palermo. On the way he was joined near Maritimo by the squadrons under Thorn-

brough and Sir Richard Strachan, raising his force to fifteen sail of the line; but it was not till 6 March, when off Cape St. Vito, that he heard of the French having left Toulon. He then stood across to Naples, where, some days later, he received the news which he ought to have received from the Standard on 24 Feb. Even then he did not seem to understand the necessity for prompt action. He returned to Syracuse, not through the Straits, but round the west end of Sicily, and did not arrive till 21 March. On the 22nd he sailed with the fleet for the Adriatic; but on the 28th, off Cape Rizzuto, he learned that Ganteaume, after cruising between Sicily and the Morea for nearly three weeks, and visiting several of the islands, had finally left Corfu on or about 16 March. He turned westward to look for his enemy; but, impressed with the idea that Sicily was the object of the French, continued to guard that island too carefully; while Ganteaume, having hugged the African shore as far west as Cape Bon, passed to the north without hindrance, and anchored safely at Toulon on 10 April (James, *Nav. Hist.* (1860), iv. 291; Brun, *Guerres Maritimes de la France*, ii. 483).

Collingwood was much mortified at having missed the French fleet, and writing to Lord Radstock on 18 June said: 'My heart was bent on the destruction of that fleet, but I never got intelligence where they really were until they were out of reach. . . . Their escape was by chance; for at one time we were very near them without knowing it.' When, however, we reflect on Collingwood's extraordinary neglect, on 24 Feb., to communicate with the Standard, which had left her station, presumably for some urgent cause; when we remember also that the motions of the French fleet were watched by English frigates almost all the time it was in the Adriatic, and that it was followed along the coast of Africa by the Spartan, and yet that none of these frigates brought satisfactory intelligence to the commander-in-chief, it is difficult to avoid the conclusion that its escape was due to other causes than mere chance. The fact indeed seems to be that Collingwood's idea of the duties of a commander-in-chief was limited, almost entirely, to office work. To this he devoted himself with an all-absorbing zeal, spending the whole day at his desk, to the ruin of his health and to the necessary neglect of other more important duties. Thus he wrote on 14 June 1807: 'I hardly ever see the face of an officer, except when they dine with me, and am seldom on deck above an hour in the day, when I go in the twilight to breathe the fresh air.' The conduct of a fleet consisting of thirty sail of the line and upwards of fifty smaller vessels involved a great deal of clerical work, exclusive of much official correspondence; but a commander-in-chief who seldom moves from his desk can scarcely be absolved of neglecting other most necessary parts of his duty. It is to this, in a measure, that the uneventful nature of Collingwood's command must be ascribed.

During the remainder of 1808 a watch was kept on the port of Toulon by Vice-admiral Thornbrough, and through 1809 by Collingwood in person, with the bulk of his fleet, which was then, by the great exertions of the French, almost equalled in number by the force under Ganteaume. On one occasion, April and May 1809, a squadron of five sail of the line, under Rear-admiral Baudin, did succeed in convoying a reinforcement of troops and provisions to Barcelona, and in getting back safe to Toulon. A second attempt in October, with three ships of the line, was less fortunate; they fell in with Collingwood on their way, and were chased and driven on shore by a detached squadron under Rear-admiral Martin. Only one succeeded in getting into Cette; the other two were burnt and blown up about six miles distant from the harbour, 26 Oct. It was the one incident which enlivened the later years of Collingwood's command. His health had long been failing; disorders attributable to the confined sedentary life which he forced on himself were aggravated, till they became truly serious. 'Lately,' he wrote on 10 Feb. 1810, 'I have had a very severe complaint in my stomach, which has almost prevented my eating. It is high time I should return to England, and I hope that I shall be allowed to do so before long.' In fact, however, for the last eighteen months he had held the official permission of the admiralty to go to England, and an offer of the command at Plymouth, although accompanied by a hope that his health would permit him to remain in the Mediterranean. It has often been said that he died at his post in obedience to the call of duty. A more correct way of stating the case would be to say that he had not realised the very serious nature of his illness, and postponed taking advantage of the admiralty permission till it was too late. On 3 March 1810, being then so ill that he was medically ordered to return to England without delay, he resigned the command to Rear-admiral Martin, and on the 6th sailed from Port Mahon in the Ville de Paris. The excitement of being at sea, homeward bound, gave him unwonted strength, and he said, 'Then I may yet live to meet the French once more!' It was but the expiring

flicker. He died the following evening, 7 March. The body was brought to England, and, after lying in state in the Painted Hall at Greenwich, was buried in the crypt of St. Paul's by the side of Nelson. The monument to his memory is in the south transept of the cathedral. His portrait, by Howard, is in the Painted Hall, to which it was presented by the family. By his wife, who died 17 Sept. 1819, he had two daughters, Sarah, whose husband, Mr. G. L. Newnham, afterwards took the name of Collingwood, and Mary Patience, who married Mr. Anthony Denny, both of whom had issue. He had no son, and the title, on his death, became extinct.

From the close connection between the careers of Nelson and Collingwood at different and critical stages, it has become to some extent customary to speak of Collingwood as Nelson's compeer, and as one of the greatest of England's admirals. A critical examination of the story of Collingwood's life shows that there is, in reality, no foundation for any such opinion. As a young officer Collingwood was certainly not distinguished above his fellows for either zeal or ability. He was promoted, mainly by family interest, to be lieutenant at the age of twenty-five; his promotions to be commander and captain came from the private friendship of Sir Peter Parker. As a captain or an admiral, where he had Nelson's example or instruction he did splendidly; where Nelson's influence was wanting, he won no especial distinction; and after Nelson's death, as commander-in-chief, he did, at most, no better than scores of other respectable mediocrities who have held high command. A careful study of the 'general order' which he issued on 23 March 1808, when in daily hopes of meeting the enemy, shows how curiously he had failed to grasp the secret of the tactics which had triumphed at Trafalgar. He seems to have fancied that the magic of 'the Nelson touch' lay, not in the concentration of the attack, but in the formation in two columns; and by dispersing the attack along the whole line, was prepared to repeat so much of the tactical blunders of a past age. To speak of the author of this memorandum, who never commanded in chief before the enemy, as a tactician worthy of being named along with the victor at the Nile, at Copenhagen, and at Trafalgar, is simply a misuse of language. But stress is often laid on the fact that Collingwood's private life was noble and pure. That he was an earnest and pious man, exemplary in his domestic relations, is admitted; but from a strictly professional point of view, Collingwood can only be considered as a brave and capable sailor, a good officer, an admirable second in command, but without the genius fitting him to rise to the first rank as a commander-in-chief.

[A selection from the public and private correspondence of Vice-admiral Lord Collingwood, interspersed with memoirs of his life, by G. L. Newnham Collingwood, 8vo, 1828. This, by Collingwood's son-in-law, is the standard biography, and has passed through several editions; all others of later date are mere transcriptions of Mr. Newnham Collingwood's statements and opinions, which, from the writer's natural bias, ought not to be by any means always implicitly accepted. Official letters and other documents in the Public Record Office; Naval Chronicle, xv. 15, and xxiii. 379; Nicolas's Nelson Despatches, passim (see index at end of vol. vii.); Brenton's Life of Lord St. Vincent, vol. i. chap. xvi.; Bourchier's Life of Sir Edward Codrington, i. 47–51.] J. K. L.

COLLINGWOOD, GEORGE (*d.* 1716), Jacobite, was descended from the ancient family of Collingwood which was seated at Eslington, Northumberland, in the early part of the reign of Henry VIII. Having taken part in the rebellion of 1715, he was taken prisoner at Preston. He was ordered for London, but, having been seized with the gout at Wigan, was carried thence to Liverpool, where, after trial, he was found guilty and executed there on 25 Feb. 1715–16.

[Patten's History of the Rebellion in 1715; Noble's continuation of Granger's Biog. History of England, iii. 464; Burke's History of the Commons, i. 472.] T. F. H.

COLLINGWOOD, ROGER (*fl.* 1513), mathematician, was elected a fellow of Queens' College, Cambridge, in 1497, being then B.A., and proceeded M.A. two years later. He had the college title for orders on 7 Aug. 1497, was dean of his college in 1504, and obtained a license on 16 Sept. 1507 to travel on the continent during four years for the purpose of studying canon law. On the expiration of that term it was stipulated that he was to resign his fellowship, and his name, accordingly, disappears from the college books after 1509–10. He acted, however, as proctor of the university in 1513. Under the name of 'Carbo-in-ligno' Collingwood wrote an unfinished treatise entitled 'Arithmetica Experimentalis,' which he dedicated, in the character of a former pupil, to Richard Fox, bishop of Winchester. The manuscript is preserved in the library of Corpus Christi College, Oxford.

[Cooper's Athenæ Cantab. i. 24, 526; Tanner's Bibl. Brit. (title Carbo); Coxe's Cat. of Oxford MSS. Corpus Christi Coll. Collection, p. 36.] A. M. C.

COLLINS, ANTHONY (1676–1729), deist, born at Isleworth or at Heston, near Hounslow, on 21 June 1676 (LYSONS, *Environs*, iii. 34, 115), was the son of Henry Collins, a man of good estate. He was educated at Eton and King's College, Cambridge, and afterwards was for a time a student in the Temple. In 1698 he married Martha, daughter of Sir Francis Child the elder [q. v.] Soon afterwards he made the acquaintance of Locke, who wrote many affectionate letters to him in 1703 and 1704, the last two years of the philosopher's life. Collins executed little commissions for Locke, sending him literary gossip, getting him books bound, and ordering a chariot for him. At Collins's request Sir Godfrey Kneller painted a portrait of Locke in 1704. Locke observes that Collins has 'an estate in the country, a library in town, and friends everywhere.' Locke left him a small sum in his will, made him one of the trustees for a bequest to Francis Masham, and left a letter to be delivered after his own decease, referring to the trust, and expressing warm affection for his young disciple (these letters were first published in Des Maizeaux's 'Collection of several Pieces' (1720), and are in the editions of Locke's works). Collins's writings show that he had been profoundly influenced by Locke's teaching. His first publications were: 'Several of the London Cases considered' (1707); and an 'Essay concerning the Use of Reason' (1707), attacking the distinction between things 'contrary to' and 'above' reason (2nd edit. 1709). In 1707 he also published a 'Letter to Mr. Dodwell,' containing an attack upon Samuel Clarke's argument for the natural immortality of the soul. Four other tracts followed in reply to defences from Clarke. They are published in the third volume of Clarke's collected works, together with Clarke's answers. Collins was here following Locke's speculation as to the possibility of thought being superadded to matter, upon which he had had some correspondence with its author. In 1709 Collins published 'Priestcraft in Perfection' (printed in 'Somers's Tracts,' vol. xii.), a pamphlet in which he argues that the clause in the 20th of the Thirty-nine Articles, declaring that 'the church has power to decree rites and ceremonies and authority in controversies of faith,' had been fraudulently inserted. Two more editions were published in 1710, and 'reflections' (by Collins) in defence of the original pamphlet against opponents. In 1724 Collins continued the argument in a more elaborate 'Historical and Critical Essay on the Thirty-nine Articles.' An account of the controversy is given in Collier's 'Ecclesiastical History' (COLLIER, pt. ii. bk. vi.) In 1710 Collins published a 'Defence of the Divine Attributes,' an attack upon the theory of 'analogical' knowledge advocated in Archbishop King's sermon on 'Predestination.' In 1711 he visited Holland and made acquaintance with Le Clerc and others of the learned. In 1713 he published his 'Discourse of Freethinking.' The book urges that all belief should be based upon free inquiry, and insinuates that such inquiry will be destructive of orthodox views. The book produced a vigorous reply from Bentley, 'Remarks . . . by Phileleutherus Lipsiensis.' Bentley destroyed any pretensions of Collins to thorough scholarship, exposed many gross blunders, and claimed Collins's principle of free inquiry as his own and that of all the orthodox believers. Whether Bentley or Collins was right as to the ultimate tendency of that principle is another question. Swift attacked Collins in one of his best pieces of irony, 'Mr. Collins's Discourse of Freethinking put into Plain English by way of Abstract, for the use of the Poor.'

A second trip to Holland made by Collins soon afterwards was ascribed, unfairly as it seems, to fear of the consequences of his book (NICHOLS, *Illustrations*, ii. 148). Some copies of Collins's book tacitly correct errors mentioned by Bentley, especially the translation 'idiot evangelists' for 'idiotis evangelistes.' An edition apparently printed in Holland, but with London on the title-page, corrects other blunders. Collins has often been accused of disingenuous conduct for suppressing these errors, in order, as it is suggested, to insinuate that Bentley had invented them. There are, however, references to Bentley's reply in the Dutch edition, proving that Collins could not have meant it to pass for an original edition, which is, indeed, highly improbable in itself (see NICHOLS, *Lit. Anecd.* ii. 673–8, for correspondence between Dr. Lort and Mr. Prichard on this subject). Richard Cumberland [q. v.] says in his memoirs that Bentley afterwards helped Collins in distress. Collins was never in distress, and the anecdote doubtless refers to Arthur Collins [q. v.] When I. D'Israeli pointed this out to Cumberland, Cumberland replied that the anecdote should stand, because it was creditable to his grandfather (BENTLEY), while Collins was 'little short of an atheist' (*Curiosities of Literature*, ed. 1841, p. 380).

Collins returned to London in October 1713, having been respectfully received in Flanders by 'priests, jesuits, and others.' In 1715 he removed into Essex, where he acted as justice of the peace and deputy-lieutenant, offices which he had before held in Middle-

sex. In 1718 he was chosen treasurer for the county of Essex, and is said to have greatly improved the administration of the funds. In 1715 he published a 'Philosophical Enquiry concerning Human Liberty' (reprinted with corrections in 1717), an able argument for determinism. This again produced an answer from S. Clarke, subjoined to Clarke's correspondence with Leibnitz. In 1724 Collins published a 'Discourse on the Grounds and Reasons of the Christian Religion,' called by Warburton one of the most plausible attacks ever made against christianity. Collins takes advantage of Whiston's allegorical interpretations to argue that the Old Testament prophecies, which, according to him, are the essential proofs of christianity, can only be reconciled to the facts by such straining as is implied in 'allegorical' treatment, that is, by making nonsense of them. The book excited a vehement controversy. To one of his antagonists, E. Chandler [q. v.], bishop of Lichfield, and afterwards of Durham, Collins replied in the 'Literal Scheme of Prophecy considered' (Hague, 1726; London, 1727). In the preface he enumerates thirty-five publications produced by the controversy. The book shows considerable reading, and anticipates more modern criticism in assigning the book of Daniel to the date of Antiochus Epiphanes. The book suggested Sherlock's 'Six Discourses,' besides many less conspicuous books.

Collins's health was now weakened by attacks of the stone, and he died on 13 Dec. 1729. By his first wife, Martha Child, he had two sons and two daughters. In 1724 he married Elizabeth, daughter of Sir Walter Wrottesley, by whom he had no children. He was buried in Oxford chapel, where a monument with an epitaph (given in the 'Biog. Brit.') was erected by his widow. By his will he left his manuscripts to Des Maizeaux, who gave them to the widow for fifty guineas, and afterwards repented of the transaction, and sent back the money. Some letters between Des Maizeaux and Mrs. Collins, on his spreading a report that the manuscripts had been 'betrayed' to the bishop of London, are given in D'Israeli's 'Curiosities of Literature.'

Collins was so bitterly attacked for his writings that the absence of attacks upon his character may be favourably interpreted. He appears to have been an amiable and upright man, and to have made all readers welcome to the use of a free library. A story is told that Collins once said to Lord Barrington, whom he frequently visited at Tofts in Essex, 'I think so well of St. Paul, who was both a man of sense and a gentleman, that if he had asserted that he had worked miracles himself, I would have believed him.' Collins, it is added, was disconcerted by the production of some passage from St. Paul (*Biog. Brit.* s. v. 'Barrington, John Shute'). Collins is the most conspicuous of the deist writers who took the line of historical criticism, and was the object of innumerable attacks. His works, though not of high merit, literary or philosophical, are of interest in the history of contemporary speculation, and show one application, not intended by its author, of Locke's principles.

[The authority for the life of Collins is the life contributed by Birch to the General Dictionary, and afterwards reprinted in the Biog. Brit. from materials supplied by Collins's friend Des Maizeaux; see Nichols's Illustrations, ii. 148–9. Many letters from Collins are in the Des Maizeaux Papers in the British Museum.] L. S.

COLLINS, ARTHUR (1682?–1760), author of the 'Peerage,' was born probably in 1682. His father had been in 1669 gentleman-usher to Queen Catherine of Braganza, consort of Charles II, and while dissipating a large fortune is said to have given him a liberal education. Collins is first noticed as a bookseller at 'the Black Boy, opposite St. Dunstan's Church in Fleet Street,' in partnership with Abel Roper, a name which appears among those of the publishers of Dugdale's 'Baronage' issued in 1675–6. In 1709 was published the first edition of Collins's 'Peerage of England, or an Historical and Genealogical Account of the Present Nobility. . . . collected as well from our best historians, publick records, and other sufficient authorities, as from the personal information of most of the Nobility,' without the compiler's name, but described on the title-page as 'printed . . . for Abel Roper and Arthur Collins.' It is an octavo volume of only 470 pages, and its accounts of noble families are naturally meagre. But it supplied a want by its accounts of those families in which peerages had been conferred subsequently to the publication of Dugdale's 'Baronage,' and in the preface to the second edition the compiler speaks of 'the extraordinary success' of the first. This second edition, with large additions and corrections, appeared in 1710 (some copies are dated 1712), a second volume being added in 1711 (some copies are dated 1714), 'printed for A. Collins' alone. A third edition in two parts, 'sold by Arthur Collins,' was issued in 1714 (some copies are dated 1715), followed by a supplementary volume in 1716. The so-called fourth edition of 1717 is said to be merely a reissue of the third with new titles and an appendix (Lowndes, i. 498). In 1716,

in expectation of a place under government, apparently a situation in the custom house, Collins gave up his business in Fleet Street (*Thoresby Correspondence*, ii. 359, 363). In 1720 appeared, in two volumes, his 'Baronetage of England, being an Historical Account of Baronets from their first introduction.' In the preface Collins speaks of it as merely an instalment of a projected work, and of the great discouragements which he had met with in compiling it—among the rest, the failure of many families to let him see their pedigrees. In a letter of March 1723 (*ib.* ii. 377) he represents himself as very poor, as still expecting some provision to be made for him by the government, as not intending to publish any more of the 'Baronetage,' and as occupied with the preparation of an enlarged peerage. Of this work a one-volume instalment was issued in 1727, as 'The English Baronage; or an Historical Account of the Lives and most memorable Actions of our Nobility, with their Descent, Marriages, and Issue.' It was dedicated to Sir Robert Walpole, on whom there is a rather fulsome eulogium in a preliminary address 'to the reader,' while a flattering account of the Walpole family is introduced on the strength of the peerage conferred on Walpole's eldest son, Lord Walpole. In 1735 appeared, in three volumes, the first approximately complete edition of Collins's 'Peerage,' with the arms, crests, and supporters of the then existing peers. In compiling it Collins drew largely on Dugdale, of whose manuscript corrections of the 'Baronage' he had become possessed, but he added much multifarious information laboriously collected by himself. A second of this new series of editions (4 vols. 1741) was further distinguished by copious references to authorities. The completed 'English Baronetage,' 5 vols. 1741, is often ascribed to Collins, an error committed even by Sir Egerton Brydges in the preface to his edition of the 'Peerage.' It is more accurately called Wotton's, from the name of the editor, who in the preface, however, acknowledges obligations to Collins for assistance. In the preface to a supplement (2 vols. 1750) to the 1741 edition of the 'Peerage,' Collins complains that he has spent his fortune in researches the results of which he will be unable to publish without help. He contrasts the neglect of himself with the favour shown to Dugdale and Ashmole. In a plaintive letter to the Duke of Newcastle, 3 Feb. 1752 (Nichols, viii. 392), he describes himself as engaged on a new edition of the 'Peerage,' but without funds to pay for a transcriber. At the same time he acknowledges kindness from Lord Granville. In another letter to the Duke of Newcastle (*Gent. Mag.* liii. 414) Collins represents himself as 'reduced to great straits' by having to pay for printing of his account of Holles's family, and asks for 'a warrant for some money.' Ultimately he received from the king a pension of 400*l.* a year, and thus probably was enabled to complete the third of the enlarged editions of his 'Peerage,' 5 vols. in 6, 1756, the last published under his own superintendence. He died in March 1760, and was buried in Battersea Church, 'aged 70,' according to the burial register (Lysons, *Environs of London*, Supplement, 1811, p. 4), a loose statement irreconcilable with the date generally assigned to his birth. The posthumous editions of his 'Peerage' are: (1) the fourth, 7 vols. 1768; (2) the fifth, 8 vols. 1779, edited by B. Longmate, who in 1784 added a supplementary volume, bringing the work up to date; and (3) the final and standard edition, 'Collins's Peerage of England, Genealogical, Biographical, and Historical, greatly augmented and continued to the Present Time by Sir Egerton Brydges,' 9 vols. 1812. Collins's indefatigable industry and general accuracy are worthy of all praise. In these respects he rivalled Dugdale, on whose method he improved but little. In prosecuting his unrequited, or very tardily requited, labours, on which he expended not only a lifetime but all that he possessed, his only inducement to persevere was, as he himself has said (Preface to the *Historical Collections of the Families of Cavendish*, &c.), 'an innate desire to preserve the memory of famous men;' and his general disinterestedness must be set off against what may often seem adulation of birth and rank. Carlyle, in his rectorial address to the students of Edinburgh University, acknowledged that when writing his 'Cromwell' he 'got a great deal of help out of poor Collins,' whom he called 'a diligent and dark London bookseller of about a hundred years ago, a very meritorious man,' and whose chief work he pronounced 'a very poor peerage as a work of genius, but an excellent book for diligence and fidelity.' In a letter of 9 Feb. 1752 to the Duke of Newcastle, already quoted, Collins says: 'I have left, in manuscript, an account of my family, my life, and the cruel usage I have undeservedly undergone;' but no trace of its survival has been discovered by the writer of this article.

The other works compiled or edited by Collins are: 1. 'The Life of William Cecil, Lord Burghley, published from the original manuscript wrote soon after his Lordship's death, now in the Library of the . . . Earl of Exeter,' 1732, Collins adding memoirs of the Cecil family and other matter. 2. 'Proceedings, Precedents, and Arguments on Claims

and Controversies concerning Baronies by writ and other honours,' 1734, fol., much of the volume being based on the collections made by Gregory King [q. v.], Lancaster herald. 3. 'The Life and Glorious Actions of Edward, Prince of Wales, commonly called the Black Prince,' 1740, which, with the 'History of John of Gaunt,' published in the same year, was written for the uncompleted 'English Baronage' of 1727. 4. 'Genealogical Account of the Ancient Family of Harley,' 1741. 5. 'Memoirs of the Antient and Noble Family of Sackville,' 1741, consisting simply of those leaves detached from the copies of the 'Peerage' of 1741 which contain the history of the Sackvilles. 6. 'Letters and Memorials of State in the Reigns of Queen Mary, Queen Elizabeth, King James, King Charles I, part of the Reign of King Charles II, and Oliver's Usurpation, faithfully transcribed from the originals at Penshurst Place in Kent, and from his Majesty's Office of Papers and Records of State,' 2 vols. fol. 1746, published by subscription. To the 'Sydney Papers,' as this work is commonly called, Collins added 'genealogical and historical observations,' and 'memorials of the actions of the Sydneys,' with Sir Philip Sydney's 'defence of Robert Dudley, earl of Leicester.' 7. 'A History of the Ancient and Illustrious Family of the Percys,' 1750. 8. 'Historical Collections of the Noble Families of Cavendish, Holles, Vere and Harley, and Ogle, with . . . prints of the principal persons, engraved by Mr. George Vertue from original pictures drawn by the most eminent painters,' fol. 1752. The Countess Dowager of Oxford, widow of the son and successor of Harley the statesman, contributed to the printing of this volume, which contained a great deal about her ancestors. 9. 'Historical Collections of the Family of Windsor,' 1754, 'printed for the author.' 10. 'A History of the Noble Family of Carteret, . . . inscribed to . . . John, Earl Granville,' 1756, privately printed.

[Collins's Works, especially the Prefaces; notice of him in Gent. Mag. for April 1799; Nichols's Lit. Anecd.; Letters of Eminent Men addressed to Ralph Thoresby, 1832; Lowndes's Bibl. Man. (Bohn), 1864.] F. E.

COLLINS, CHARLES ALLSTON (1828–1873), painter and author, second son of William Collins, R.A. (1788–1847) [q. v.], was born on 25 Jan. 1828, and showed at an early age inherited gifts in art, which encouraged his father to permit him to study in the schools of the Royal Academy. On completing his education as a student, he attached himself to the once famous 'Pre-Raphaelite brotherhood,' and produced pictures which, after attracting general attention at the Royal Academy, took their place among the deservedly valued possessions of collectors of works of art. But it was in the modest and sensitive nature of the man to underrate his own success. His ideal was a high one; and he never succeeded in satisfying his own aspirations. The later years of his life were devoted to literature. In 1860 he married Kate, the younger daughter of Charles Dickens. He was the author of the series of essays (first published in 'All the Year Round') called 'The Eye-witness;' a work distinguished by subtle observation and delicate sense of humour. 'A Cruise on Wheels,' 'A Sentimental Journey,' and two novels, showing rare ability in the presentation of character, steadily improved his position with readers and gave promise of achievement in the future, never destined to be fulfilled. The last years of his life were years of broken health and acute suffering, borne with a patience and courage known only to those nearest and dearest to him. He died on 9 April 1873, in the forty-fifth year of his age.

[Private information.] W. C.

COLLINS, CHARLES JAMES (1820–1864), journalist and novelist, was connected with the London press for more than twenty years, having been on the parliamentary staff of the 'Sun,' 'Daily Telegraph,' and 'Standard.' He projected and edited the 'Racing Times,' and at one period was editor of the 'Comic News.' He died at Brixton on 31 Dec. 1864.

He was author of 'Kenilworth,' a burlesque, and other dramas of a similar character, and of the following novels: 1. 'The Life and Adventures of Dick Diminy,' London [1854] 12mo, reprinted under the title of 'Dick Diminy, or the Life and Adventures of a Jockey,' London, 1855 [1875], 8vo. 2. 'Sackville Chase,' 3 vols. London, 1863 and 1865, 8vo. 3. 'Matilda the Dane, a Romance of the Affections,' London, 1863, 8vo. 4. 'Singed Moths, a City romance,' 3 vols. London, 1864, 8vo. 5. 'The Man in Chains,' 3 vols. London, 1864, 8vo.

[Times, 3 Jan. 1865; Gent. Mag. ccxviii. 258; Cat. of Printed Books in Brit. Mus.] T. C.

COLLINS, DAVID (1756–1810), lieutenant-colonel and colonial governor, was the eldest son of Major-general Arthur Tooker Collins, of Pack, in the King's County, by his wife Harriet Fraser, and the grandson of Arthur Collins, the antiquary. Born on 3 March 1756, he received his education at Exeter grammar school, and in 1770, when

only fourteen, was gazetted to a lieutenant's commission in the marines. In 1775 he was present at Bunker's Hill; two years later he was acting as adjutant of the Chatham division; and in 1782, as captain of marines on board the Courageux, he took part in the action for the relief of Gibraltar. On the proclamation of peace in the last-mentioned year, he returned home on half-pay and settled at Rochester; but in May 1787, after five years' retirement, he sailed with Governor Arthur Phillip, as secretary and judge-advocate, on the expedition to establish a convict settlement at Botany Bay, New South Wales, lately discovered by Captain Cook. A more suitable locality, Port Jackson, was eventually selected, and there Sydney was founded. Collins stayed in Australia for nine years, and on his return wrote 'An Account of the English Colony in New South Wales. . . . To which are added some particulars of New Zealand, compiled . . . from the MSS. of Governor King' (with many engravings), 2 vols. 4to, London, 1798–1802, 2nd edition (abridged and edited by Maria Collins), 4to, London, 1804). The work, apart from its singular, almost painful interest as a narrative, is of especial value as the first official account of the infant colony. It includes an account of the discovery of Bass's Strait from Bass's 'Journal.' Collins, however, found that his appointment abroad had cost him the loss of many years' rank at home; he died a captain instead of a colonel-commandant, his rank in the army being merely brevet. His remarks on what he termed 'the peculiar hardship of my case,' at the close of the second volume of his book, appear to have awakened the sympathy of those in power; and almost immediately after its publication he was offered and accepted the governorship of another projected settlement in Australia. An attempt to found one on the south-eastern coast of Port Phillip proving a failure, he crossed to Van Diemen's Land (now Tasmania), and there, on 19 Feb. 1804, he laid the first stone of the present city of Hobart Town. Collins continued governor until his death, which occurred almost suddenly on 24 March 1810, at the age of fifty-four. By his wife, an American lady who survived him, he left no issue. In person he was remarkably handsome, his manners were delightful, while in a post of difficulty and danger he showed himself a wise and enlightened administrator. A portrait of Collins is prefixed to the second edition of his book.

[Gent. Mag. lxix. i. 282–3, lxxx. ii. 489–90; Webb's Compendium of Irish Biography, pp. 582–583; Allibone's Dictionary; Encyclopædia Britannica, 8th edit.] G. G.

COLLINS, GREENVILE (*fl.* 1679–1693), captain in the royal navy and hydrographer, was in 1679 appointed commander of the Lark, a small frigate, apparently in some connection with the duties of the Trinity House, of which Collins was a younger brother. In 1681 he was ordered to survey and chart the coasts of the kingdom, for which purpose he was appointed to command the Merlin yacht. This survey occupied the next seven years, the charts being published from time to time as ready, and it was not till 1693 that he was able to issue them collectively in a large folio, together with sailing directions, under the title of 'Great Britain's Coasting Pilot.' The scope of the work, embracing, as it does, the complete circuit of Great Britain, is very great, and for one man in seven, or even in twelve, years excessive. The charts have not, of course, the rigid accuracy of those of our own time, and some of them are possibly edited from Dutch originals; but with all their shortcomings they are an enormous advance on anything before them, and entitle Collins to rank not only with the earliest, but with the best of English hydrographers. The 'Coasting Pilot' was printed by a namesake, Freeman Collins, who may have been a brother, but of his further life or family nothing is known.

[Preface and Dedication to the Coasting Pilot; Charnock's Biog. Navalis, ii. 60.] J. K. L.

COLLINS, HERCULES (*d.* 1702), baptist minister, had not the advantage of a learned education. 'He began to be religious at an early age, and continued faithful to the last, and was not shock'd by the fury of the persecutors' (Crosby, *Hist. of the English Baptists*, iii. 129). He appears to have officiated to a congregation at Wapping, and at one period he was imprisoned in Newgate (Wilson, *Dissenting Churches*, ii. 178). He died on 4 Oct. 1702, and his funeral sermon, by the Rev. John Piggott, was printed in the following year; but it contains no biographical particulars.

Besides some single sermons, he wrote the following works, some of which occasioned a good deal of controversy: 1. 'An Orthodox Catechism, being the sum of Christian Religion contained in the Law and Gospel,' London, 1680, 12mo. 2. 'A Voice from the Prison, or Meditations on Revelations,' London, 1684, 4to. 3. 'Believers' Baptism from Heaven, and of Divine Institution—Infants' Baptism from Earth, and Human Invention,' London, 1691, 8vo., revised and republished by John Bailey, London, 1803, 8vo. 4. 'The Antidote proved a Counterfeit, or Error de-

tected, and Believers' Baptism vindicated, containing an answer to "An Antidote to prevent the Prevalency of Anabaptism,"' London, 1693, 4to. 5. 'Three books, viz. I. The Scribe instructed unto the Kingdom of Heaven. II. Mountains of Brass, or a Discourse upon the Decrees of God. III. A poem on the Birth, Life, Death, Resurrection, and Ascension of Jesus Christ.' 3 parts, London, 1696, 12mo.

[Cat. of Dr. Williams's Library, i. 82, ii. 87; Wilson's Dissenting Churches, ii. 558; Cat. of Printed Books in Brit. Mus.; Bodleian Cat. i. 576; Watt's Bibl. Man.] T. C.

COLLINS, JOHN, M.D. (*d.* 1634), professor at Cambridge, was born in Surrey, and educated at St. John's College, Cambridge, where he gained a fellowship on Lady Margaret's foundation on 7 April 1598. He proceeded B.A. in 1595-6, M.A. in 1599, and M.D. in 1608. Admitted a candidate of the College of Physicians 'the day after Palm Sunday,' 1611, he became a fellow on 7 May 1613, censor in 1615, and anatomy lecturer in 1624. On 8 Nov. 1626 he obtained a grant of the office of regius professor of physic at Cambridge for life, 'with the fee of 40*l.* per annum, in place of John Gostlin, deceased.' He died at Cambridge in December 1634. By his will, dated 8 Dec. and proved on 24 Dec. in that year, he bequeathed most of his 'phisick books' to St. John's College, and 100*l.* to buy more (reg. in P. C. C. 108, Seager).

[Munk's Coll. of Phys. (1878), i. 158; Cal. State Papers, Dom. 1625-6, p. 579.] G. G.

COLLINS, JOHN (1625-1683), mathematician, was the son of a nonconformist divine, and was born at Wood Eaton in Oxfordshire, 5 March 1625. Apprenticed at the age of sixteen to Thomas Allam, a bookseller, living outside the Turl Gate of Oxford, he was driven to quit the trade by the troubles of the time, and accepted a clerkship in the employment of John Marr, clerk of the kitchen to the Prince of Wales. From him he derived some instruction in mathematics, but the outbreak of civil war drove him to sea for seven years, 1642-9, most of which time he spent on board an English merchantman, engaged by the Venetians as a ship of war in their defence of Candia against the Turks. He devoted his leisure to the study of mathematics and merchants' accounts, and on leaving the service set up in London as a teacher. In 1652 he published 'An Introduction to Merchants' Accounts,' originally drawn up for the use of his scholars. Reprinted in 1665, the major part of the impression perished in the great fire of London, but was replaced in 1674 by a new and amplified folio edition. He next wrote 'The Sector on a Quadrant, or a Treatise containing the Description and Use of three several Quadrants.' Also an appendix touching 'Reflected Dyalling, from a Glass however posited' (London, 1658); and 'The Description and Uses of a general Quadrant, with the Horizontal Projection upon it Inverted' (1658). In 1659 appeared his 'Geometricall Dyalling, or Dyalling performed by a Line of Chords only,' and 'The Mariner's Plain Scale new Plained,' a useful treatise on navigation, dedicated to 'the governor, deputy, and committee of merchant-adventurers trading to the East India,' and designed especially for use in their navy. It was well received, and became a class-book with the students of navigation at Christ Church Hospital.

After the Restoration, Collins was appointed successively accountant to the excise office, accountant in chancery, and secretary to the council of plantations, exchanging the last post in 1672 for that of manager of the farthing office. With this employment went a 'fair dwelling-house' in Fenchurch Street, where he had thoughts of setting up a stationer's shop, and hoped 'to fall into the printing of books,' including some he himself designed to write, 'particularly one of the modern advancement of mathematical sciences, and an account of the best authors of that kind' (Rigaud, *Correspondence of Scientific Men*, i. 201). He did not, however, succeed in carrying the plan into effect. With the failure of his arguments against the issue of tin farthings his office ceased, and he was glad subsequently to accept a small post as accountant to the Royal Fishery Company.

He had refused in March 1669 a lucrative situation offered to him in Ireland by the surveyor-general, Sir James Shaen, and about the same time married one of two daughters of William Austen, head cook to Charles II. As his family increased his means of subsistence became more and more precarious. He had a pension of 50*l.* a year from the excise office, which rapidly fell into arrear; his official salary, and that of his wife as laundress to the queen's table linen, were scantily, if at all, forthcoming, and in order to support his seven children he was obliged to undertake any remunerative tasks that offered, especially in the disentangling of intricate accounts, neglecting the learned correspondence which was his especial delight.

Several of his writings testify to his acquaintance with the course of trade and interest in public matters. He published in

1680 'A Plea for the bringing in of Irish Cattel, and keeping out Fish caught by Foreigners, together with an humble Address to the Honourable Members of Parliament of the counties of Cornwall and Devon, about the Advancement of Tin, Fishery, and divers Manufactures;' and in 1682 a little treatise entitled 'Salt and Fishery,' in which he dwelt upon the several modes of preparing salt in England and abroad, the catching of fish, the salting and cooking of fish and meat, besides offering proposals for the relief of the salt-workers.

Collins died, 10 Nov. 1683, at his lodging on Garlick Hill, London, of asthma and consumption, contracted in July of the previous year during a ride from Oxford to Malmesbury, and was buried in the parish church of St. James. An enlarged edition of his 'Doctrine of Decimal Arithmetick,' the preparation of which had engaged his attention during about a year before his death, appeared in 1685. It had originally been printed in 1664 on a quarter of a sheet for portability in a letter-case. His 'Arithmetic in whole Numbers and Fractions, both Vulgar and Decimal, with Tables for the Forbearance and Rebate of Money,' &c., was published by Thomas Plant in 1688.

Collins was elected a fellow of the Royal Society 24 Oct. 1667, and on 11 Nov. following communicated a useful exposition of a theorem by the learned Jesuit De Billi, entitled 'A Method for finding the Number of the Julian Period for any Year assigned, the Number of the Cycle of the Sun, the Cycle of the Moon, and of the Indictions for the same Year being given, together with the Demonstration of that Method' (*Phil. Trans.* ii. 568). He contributed further 'An Account concerning the Resolution of Equations in Numbers' (*ib.* iv. 929), being a narrative of recent algebraical improvements made in England, and 'A Solution of a Chorographical Problem' (*ib.* vi. 2093); while a letter written to Dr. Wallis, 3 Oct. 1682, 'giving his thoughts about some defects in algebra' (*ib.* xiv. 575), was imparted to the society 20 May 1684. This was designed as preliminary to a formal treatise on the same subject, the composition of which was anticipated by his death.

For his zeal in collecting and diffusing scientific information, and in urging the accomplishment of appropriate and useful tasks, Collins was not undeservedly styled the 'English Mersennus.' 'He was considered as a kind of register of all new improvements in the mathematics, and was constantly stimulating others to useful inquiries and pointing out the defects in different branches of science, and the methods by which those defects might be supplied' (*Biog. Brit.* iv. 22). His correspondence with eminent mathematicians, both British and foreign, was an important factor in the progress of his time; he spared no expense in procuring new and rare books, and helped forward many important publications. To him was due the printing of Dr. Barrow's 'Optical and Geometrical Lectures,' as well as of his editions of Apollonius and Archimedes; of Kersey's 'Algebra,' Brancker's translation of Rhonius's 'Algebra,' and Wallis's 'History of Algebra.' He took besides an active part in seeing Horrocks's 'Astronomical Remains' through the press.

About twenty-five years after Collins's death his books and papers came into the possession of W. Jones, F.R.S. They included a voluminous correspondence with Newton, Leibnitz, Gregory, Barrow, Flamsteed, Wallis, Slusius, and others, providing a repertory of the utmost value to the history of science. From it was selected and published in 1712, by order of the Royal Society, the 'Commercium Epistolicum,' by which Newton's priority over Leibnitz in the discovery of the infinitesimal calculus was established; the first specimens of results from the use of the fluxional method, transmitted 20 July 1669 through Barrow to Collins, and by him made widely known, affording positive proof of Newton's early possession of it.

Collins is described by Wood as 'a person of extraordinary worth, considering his education.' He never learned Greek, nor more of Latin than an ordinary schoolboy; he himself designates his attainments as 'mean,' and his works as 'toys done in ignorance and haste' (Rigaud, *Correspondence*, ii. 178). Yet his influence was widely felt, and willingly recognised. The exceptional position thus accorded to him was due in part to his disinterested love of science, in part to the sterling qualities and genuine modesty of his character. 'A man' (as Sir Philip Warwick styled him) 'of good arts, and yet greater simplicity; able, but no ways forward,' he found in unobtrusive zeal the secret of effectiveness without pretension, yet even beyond the proportion of his abilities.

Brit.; Rigaud's Correspondence of Scientific Men of the Seventeenth Century; Sherburne's Sphere of M Manilius, p. 116; Boase and Courtney's Bibl. Cornub. i. 82.] A. M. C.

COLLINS, JOHN (1632?–1687), congregational minister, was born in England, but educated in America. It is not impossible

that he was the John Collins, aged three years, who sailed for New England in the Abigail on 30 June 1635, with the rest of the family of Henry Collins, starch-maker, whose conformity was certified by the minister of Stepney parish. His father became a deacon of the congregational church at Cambridge, Mass. John graduated at Harvard in 1649, and became a fellow. In 1659 he was acting as chaplain to General Monk, whom he accompanied from Scotland to London. Monk dismissed his independent chaplains in March 1660, when he turned to the presbyterians. Collins held no preferment at the date of the Uniformity Act of 1662, but is included by Calamy among the silenced ministers. Subsequently he succeeded Thomas Mallory (ejected from the lectureship of St. Michael's, Crooked Lane) as pastor of a congregational church in Lime Street. He was also one of the Pinners' Hall lecturers. He is described as a good preacher, and a man of catholic spirit. He died on 3 Dec. 1687. His son Thomas (educated at Utrecht) was elected copastor at Lime Street in 1697. According to Calamy, Collins published no separate work, but furnished a sermon to the London 'Farewell Sermons' (1663), 8vo; and another (anonymous) to the third volume (1676) of 'Morning Exercise at Cripplegate,' edited by Samuel Annesley, D.D. [q. v.] In conjunction with James Baron, B.D., he wrote a prefatory epistle to Ralph Venning's 'Remains, or Christ's School,' &c. (1675), 8vo; he also wrote an epistle prefixed to a 'Discourse of the Glory to which God hath called Believers' (1677), 12mo, by Jonathan Mitchel, a New England divine.

[Cotton Mather's Hist. New Eng. (1702), pt. iv. 136, 200; Calamy's Account (1713), p. 837; Continuation (1727), p. 962; Palmer's Nonconf. Memorial (1802), ii. 4, (1803) iii. 511; Hist. Acct. of my own Life, 2nd ed. (1830), i. 142; Neal's Hist. Puritans (Dublin, 1759), iv. 203; Original Lists of Emigrants to America (1874), p. 97.] A. G.

COLLINS, JOHN (1725?–1759?), landscape painter, was from an early age patronised by the aristocracy. At the expense of the Duke of Ancaster, the Marquis of Exeter, and others, he travelled in Italy and studied his art there. On his return to England he painted scenes for one of the principal theatres in London. He died of an infectious fever at a silversmith's in Henrietta Street, Covent Garden, about 1758 or 1759. He was aged between thirty and forty, and left a wife and two children. The best known of his works are a set of landscape views from Tasso's 'Gerusalemme Liberata.' They are painted in a truly romantic style, and have a fine scenic effect. They were engraved by Paul Sandby, E. Rooker, P. C. Canot, and others, and published by his widow.

[Gent. Mag. liv. (1784), 741; Redgrave's Dict. of English Artists.] L. C.

COLLINS, JOHN (1741–1797), Shakespearean scholar, only son of the Rev. Edward Collins, vicar of St. Erth in Cornwall, who married Elizabeth, daughter of Nicholas Kendall, canon of Exeter and archdeacon of Totnes, was born, presumably at St. Erth, on 28 Sept. 1741, and was educated at Eton, being in the same remove with George Hardinge, his friend in youth and his generous benefactor in after life. From Eton he proceeded to Queen's College, Oxford, and became on 3 March 1766 a grand-compounder for the degree of B.C.L. Having taken orders in the church of England, he was placed in charge of the parish of Ledbury in Herefordshire. He was endowed with a good person and a clear voice, his manners were cheerful, and his scholarship was praised by his friends, and he could probably have obtained higher preferment; but he had inherited the strong prejudices and keen sensibilities of his father. In 1769 he married his cousin, Mary Kendall, only daughter of Walter Kendall of Pelyn in Lanlivery, who died on 8 Nov. 1781, aged 36, when his health broke down, and the rest of his life was passed in mental anxiety and pecuniary pressure. His old schoolfellow Hardinge, who revived their friendship on a chance visit to Ledbury, befriended him zealously, and Jacob Bryant was another of the old friends who came forward to help him. After many years of trouble Collins died at Penryn in Cornwall in March 1797. The names of his wife and himself, and of four out of the six children who were alive in 1791, are recorded on a monument in Lanlivery church.

Edward Capell [q. v.], the Shakespearean commentator, was a stranger to Collins; but when the cynical George Steevens, in the preface to his edition of Shakespeare, published some characteristic remarks in depreciation of the labours of his rival commentator, an anonymous letter in refutation of the criticisms was published in 1777 by Collins, with the assistance of Hardinge. At this act Capell was highly gratified, and on his death he left Collins, who attended him in his last illness, one of his executors, adding to this recognition of his friendship the gift of a large sum of money, with some of his books and manuscripts. The dying man gave as his reason: 'I am led to this by several considerations, but principally of a promise obtained from him, the discharge of which I leave to his honour and (I am proud to say) his friend-

ship.' Collins thereupon published in 1781 three volumes of collections by Capell, the first two entitled 'Notes and various Readings to Shakespeare,' and the last called 'The School of Shakespeare.' The dedication to Lord Dacre alludes, under the phrase of 'a sudden and most severe stroke of affliction,' to the death of Mrs. Collins. In a collection of 'Johnsoniana' in the 'European Magazine,' vii. 52 (1785), Collins is dubbed 'a sleep-compelling divine;' his 'Letter to George Hardinge' is styled 'a heavy half-crown pamphlet,' and Johnson is credited with the criticism of it as 'a great gun without powder or shot,' as well as with some rough remarks on the author's grief at the loss of his wife. These anecdotes were contributed by Steevens himself, and if they are not altogether fictitious, their language is coloured by his brutality. The coarseness of the disposition of Steevens was further displayed in the notes in his own edition of a questionable character, which he fathered on Collins.

W. P. C.

COLLINS, JOHN (*d.* 1807), colonel, proceeded to India as a cadet in the Bengal infantry in 1769, and became an ensign in that branch of the East India Company's service in 1770, lieutenant on 17 Nov. 1772, captain on 20 Nov. 1780, and major in 1794. There can be little doubt that he served in the Rohilla war and in other campaigns of the Bengal army, and he probably acted in a subordinate capacity with some of the residents at native courts, before he was appointed by Sir John Shore in 1795 to be resident at the court of Daulat Ráo Sindhia. This young prince had only in the previous year succeeded his great-uncle, Máhádaji Sindhia, the founder of the family, and was eager to make some use of the magnificent army, disciplined by the French generals, De Boigne and Perron, which had been bequeathed to him. Major, or Lieutenant-colonel Collins, as he became on 27 July 1796, soon acquired great influence over this ambitious prince, but not enough to prevent him from desiring to try his strength with that of the company. Daulat Ráo Sindhia looked upon him as the emissary of a hostile power, but treated him nevertheless as an honourable foe. The fearless character of Collins had much to do with this involuntary respect, and it was well shown in his daring march with a small body of his personal escort under Captain (afterwards Sir Thomas) Brown, in October 1799, to Jeypore, in the heart of the then almost unknown region of Rajputana, to make a successful demand from the Máhárájá of Jeypore for the surrender of Vizier Ali, the treacherous murderer of Mr. Cherry. Lord Wellesley, when governor-general of India, had the greatest confidence in Collins, who played a most important part in the proceedings which led to the overthrow of the great Márátha princes by Lake and Arthur Wellesley. Collins did all in his power to prevent Sindhia from coming to blows with the English, but the young prince still continued his preparations for war, and with his ally, the Bhonslá Rájá of Nagpur, persisted in his march on Poona, which was then occupied by an English army under Sir Arthur Wellesley. In June 1803 Collins was told to deliver the ultimatum of the company, that if Sindhia and the Rájá of Nagpur did not return to their own territories, the English would attack them. Collins could get no definite answer to this ultimatum. On 3 Aug. 1803 he left Sindhia's court, and the war commenced; which, after the victories of Assaye and Argaum, Laswaree and Díg, finally overthrew the power of the Márátha princes. In Kaye's 'Life of Lord Metcalfe,' it is said that young Metcalfe was, through his father's influence, appointed an assistant to Collins at Sindhia's court, and joined him in April 1802 at Oojein. But he found the imperious character of Collins, which justified his nickname 'King Collins,' quite insupportable, and quickly left him. Collins was not sent back to Sindhia after the war, but succeeded Colonel Scott as resident at the court of the Nawáb Vizier of Oudh at Lucknow in 1804, where he died on 11 June 1807. Lord Minto issued a gazette extraordinary on the news of his death, and he received a grand public funeral, at which one of the sons of the Nawáb was present; the whole Oudh court went into mourning for him.

[Dodwell and Miles's List of Officers for the Indian Army; Wellesley and Wellington Despatches; Pearce's Life of Lord Wellesley; Kaye's Life of Lord Metcalfe; Lady Minto's Lord Minto in India; East India Military Calendar under 'Sir Thomas Brown' for his expedition into Jeypore; Asiatic Annual Register, 1808, for the Gazette Extraordinary on his death.]

H. M. S.

COLLINS, JOHN (*d.* 1808), actor and poet, obtained great popularity at the close of the last century for his musical entertainments, and his fame as a poet has recently been revived through the circumstance that one of his compositions, 'the truly noble poem' of 'To-morrow,' was included in Mr.

Palgrave's 'Golden Treasury,' and two other pieces were inserted in Mr. Locker's 'Lyra Elegantiarum.' He was born at Bath, and from some lines in his own collection of poems, entitled 'Scripscrapologia,' he would seem to have been a tailor's son. He was bred up to the business of a staymaker, but an occupation of that nature ill accorded with his disposition, and he very early in life made his appearance on the Bath stage and filled many parts there, extending to 'tragedy, genteel comedy, low comedy, and old men and country boys in farces and operas,' a range of character which could not have been uniformly successful. In October 1764 he appeared at the theatre in Smock Alley, Dublin, as young Mirabel in the 'Inconstant,' and 'proved a very respectable acquisition to the Irish stage.' In Ireland, as at Bath, the characters assigned to him were of necessity often varied, but he seems to have always played with credit, and to have made his mark in comic opera. It is stated in the 'Memoirs of Charles Lee Lewes,' i. 79–85, that Collins played Captain Plume at Covent Garden Theatre 'many years ago,' but that a severe cold prevented him from obtaining the success which his talents deserved, and drove him from the London stage into the country. At a later period he returned to London 'with a very entertaining evening's amusement called "The Brush," composed of pleasant old theatrical stories well told, with humorous songs well written by himself.' His entertainment had different names at different periods. Dr. Thomas Campbell of Clogher, who paid a visit to London in 1775, went one evening 'to hear Collins lecture upon oratory at the Devil tavern,' and noted in his diary that 'the fellow displayed good enunciation and good sense. His ridicule of the Scots, Welsh, and Irish was passing well' ('Johnsoniana' in Napier's *Boswell*, v. 229). At Belfast, in 1776, the performance was styled 'The Elements of Modern Oratory;' at another date the title of 'The Brush' was given to it; and at a still later year the name was changed to 'The Evening Brush.' In substance, however, the entertainment never changed; it was from first to last a medley of 'story, song, and sentiment.' During the winter of 1791–2 Collins gave his performance at the Lyceum Theatre in London on fifty-two nights, and with that striking tribute to his popularity he quitted the London stage. In January 1793 he was amusing Birmingham audiences by his recitations, and in that year he was so far settled in that town as to occupy a house in Great Brook Street, Ashted. By these performances he obtained a 'well-earned easy competency,' and it must have been with some portion of his gains that he acquired an interest with a Mr. Swinney in a newspaper called 'The Birmingham Chronicle.' Many of the poetic effusions of Collins were inspired by local events, and many of them were published in his paper, from the pages of which, as he complains, they were reproduced without acknowledgment. While he was resident in Birmingham his niece, Miss Brent, lived with him. Collins suffered in the spring of 1808 from a severe illness, but his death at Birmingham on 2 May 1808, in his sixty-sixth year, was sudden. The best-known of the poems of Collins, most of which are of unusual excellence for the date of their composition, are 'To-morrow,' 'The Golden Days of good Queen Bess,' 'Date obolum Belisario,' and 'Ben Block,' the last of which was printed in 'Notes and Queries' for 17 April 1886, p. 310; and the chief merit of his performances lay in the feeling with which he sang his lyric compositions, the 'rare perfection' of his musical expression being universally acknowledged. The original manuscript of 'The Brush,' formerly in the possession of Thomas Bell and William Pinkerton, is now the property of Mr. Samuel Timmins of Birmingham. It was printed at Newcastle in 1800. In 1804 there was printed at Birmingham a volume of the poems of Collins, with the queer title of 'Scripscrapologia, or Collins's doggerel dish of all sorts.' To it is prefixed a portrait of the author, followed by an apostrophe to Mr. Meyler, bookseller and printer in the Grove, Bath. His name is found on the title-pages of two other works: 1. 'Lecture on Heads [by G. A. Stevens] as delivered by Mr. Palmer at the Royalty Theatre. . . . The Golden Days of good Queen Bess, written by Mr. Collins,' n. d. [1787], 12 pages. 2. 'The Theatrical Banquet, or the Actor's Budget. Together with Collins's "Evening Brush." [Compiled] by W. Oxberry,' 1809, 2 vols., the portion belonging to Collins filling pp. 3–44 of vol. ii. His wife, who was distinguished for her beauty, painted likenesses in profile at the price of half a guinea each, 'frame and glass included.' She suffered from cancer in the breast and died from the effects of an operation. They had no family.

Lewes, i. 79–85; Belgravia, xvi. 443–8, by Mortimer Collins; Langford's Birmingham Life, ii. 124; Dent's Birmingham, i. 179–80, 195–6, ii. 259–78; Hitchcock's Irish Stage, ii. 133–8; Notes and Queries, 3rd ser. iv. 445–6 (1863), v. 17–20, 461 (1864), x. 358–9 (1866), 4th ser. ii. 411 (1868), viii. 44 (1871).]

W. P. C.

COLLINS, MORTIMER (1827-1876), miscellaneous writer, was born 29 June 1827 at Plymouth, where his father, Francis Collins, was a solicitor. The father was a mathematician, and in 1824 published a volume of 'Spiritual Songs.' He died in 1839. Collins, his only child, was educated at private schools, and while still a schoolboy contributed to papers. He was anxious to become a journalist, but by his mother's desire accepted a tutorship. About 1849 he married Susannah, daughter of John Hubbard, and widow of the Rev. J. H. Crump. He had by her one daughter, married in 1871 to Mr. Keningale Cook. Soon after his marriage he went to Guernsey, where he was appointed mathematical master of Queen Elizabeth's College. He published a volume called 'Idyls and Rhymes' in 1855. In 1856 he left Guernsey to devote himself entirely to literature, which he had never abandoned. He became a well-known writer in the press, edited some provincial papers, and wrote many political squibs. He took a cottage at Knowl Hill, Berkshire, in 1862. In 1867 he lost his wife. In 1868 he married Frances Cotton and settled at Knowl Hill for the rest of his life, rarely leaving his house for a day.

Collins was a man of great physical and mental vigour. He was over six feet high and powerfully built. He wrote several hours in the day, and again from ten to two at night. Besides contributing to newspapers, he wrote many novels and other works, and turned out an enormous quantity of playful verse for the amusement of his friends. He was a great athlete, a first-rate pedestrian, a lover of dogs, and a keen observer of nature. He revered White of Selborne, and wrote many interesting letters upon the habits of birds in the 'Times' and elsewhere. He was a mathematician and a good chess-player. He had a surprising facility of versification, his work ranging from humorous doggerel to a really high level in the lighter kind of poetry. His novels, carelessly constructed, are those of a humourist, more interesting for detached remarks than for the development of the stories. He was a lover of classical literature and a special admirer of Aristophanes, whose wit and politics were both congenial to him. He was from his earliest years a strong tory and a lover of old fashions in books and principles. He had strong religious sentiments, and a special aversion to positivists and freethinkers. Though called the 'King of the Bohemians' in his earlier period, and defying social conventionalities of dress and so forth, he was an ardent defender of the established order in church and state, and could give rough though not malicious blows in controversy. He took a keen interest in his rustic neighbours, and wrote poems for 'penny readings,' one of which, by a sympathetic mention of 'kisses' and 'sweethearts' without condemnation, offended his vicar and provoked a silly feud in the village. He had many warm literary friends, among whom were James Hannay, R. H. Horne, Mr. T. E. Kebbel, F. Locker [-Lampson], John Ormsby, Edmund Yates, and especially R. D. Blackmore. He showed in private the chivalrous courtesy to women frequently manifested in his later writings, was kindly to his servants, and, according to the best testimony, a perfect husband. He had a rheumatic fever in the winter of 1869-70, which probably increased a tendency inherited from his mother, who died in 1873 of heart-disease. His health showed no serious symptoms till 1876, when he gradually declined. He died of heart-disease on 28 July 1876.

His works are: 1. 'Idyls and Rhymes,' 1855. 2. 'Summer Songs,' 1860. 3. 'Who is the Heir?' 1865. 4. 'Sweet Anne Page, 1868 (partly descriptive of his own career, and accused of being 'indecorous'). 5. 'The Ivory Gate,' 1869. 6. 'Letter to the Rt. Honble. B. Disraeli' (in verse), 1869 (anon.) 7. 'The Vivian Romance,' 1870. 8. 'The Inn of Strange Meetings, and other poems,' 1871. 9. 'The Secret of Long Life,' 1871 (a collection of essays first published anonymously; it went through five editions, and is his most successful work). 10. 'The Marquis and Merchant,' 1871 (said to be his best novel). 11. 'The British Birds, from the Ghost of Aristophanes,' 1872. 12. 'Two Plunges for a Pearl,' 1872. 13. 'Princess Clarice,' 1872. 14. 'Squire Sylvester's Whim,' 1873. 15. 'Miranda, a Midsummer Madness,' 1873. 16. 'Mr. Carington,' 1873. 'By Robert Turner Cotton' (an assumed name). 17. 'Transmigration,' 1874. 18. 'Frances,' 1874. 19. 'Sweet and Twenty,' 1875. 20. 'Blacksmith and Scholar,' with 'From Midnight to Midnight,' 1875. 21. 'Fight with Fortune,' 1876. 22. 'The Village Comedy,' 1876 (in course of publication in the 'Pictorial World'). 23. 'You play me false' (posthumous), 1878.

Collins contributed to the 'Owl,' the 'Church and State Review,' the 'Realm,' the 'Press,' the 'Globe,' 'Punch,' the 'British Quarterly,' the 'Temple Bar,' 'Tinsley's Magazine,' the 'Press and St. James's Chronicle,' and the 'World.' 'Pen Sketches by a Vanished Hand,' from his papers, was edited by Tom Taylor in 1879; 'Attic Salt,' a selection of epigrammatic sayings from his works, by F. Kerslake in 1880; and 'Thoughts in my Garden,' by E. Yates, chiefly from a

series of 'Adversaria' contributed to the 'St. James's Chronicle,' in 1885. His widow, who died on 17 March 1886, co-operated with him in 'Frances,' 'Sweet and Twenty,' 'The Village Comedy,' and 'You play me false;' and in 1882 published 'A Broken Lily,' a novel.

[Mortimer Collins, his Letters and Friendships, with some Account of his Life, edited by Frances Collins, 1877; notices of Collins prefixed to Pen Sketches and Notes in my Garden.]

COLLINS, RICHARD (*d.*1732), draughtsman, was son of a painter at Peterborough, from whom he received his first instruction in art. He afterwards completed his studies under Michael Dahl [q. v.] On 10 Aug. 1727 he was elected a fellow of the Spalding Society, and subsequently made many drawings for their transactions and publications. Among these was a fine drawing of the 'Front and Grand Vestibule of Peterborough Minster;' this was engraved by Gerard van der Gucht. He also painted a S.W. view of Croyland Abbey, and a view of the triangular bridge at Croyland. These were engraved by Samuel Buck [q. v.] and published among his Lincolnshire views. Collins died in 1732.

[Redgrave's Dict. of English Artists; Bibliotheca Topographica Britannica, vol. iii.] L. C.

COLLINS, RICHARD (1755–1831), miniature-painter, a native of Hampshire, was born on 30 Jan. 1755. He studied enamel-painting under Jeremiah Meyer, R.A. [q. v.], and soon attained a very high position as a miniature-painter. His miniatures were painted both on enamel and on ivory. He first exhibited at the Royal Academy in 1777, and continued to contribute miniatures regularly for about thirty years; he exhibited for the last time in 1818. He shared with Richard Cosway and Samuel Shelley the fashionable sitters of the day, and in 1789 was appointed principal portrait-painter in enamel to George III. He executed some fine miniature portraits of the royal family. Having acquired a comfortable income by his art, he quitted London in 1811, and retired into private life at Pershore, Worcestershire, resigning his post in the royal service. About 1828, however, the love of art and culture led Collins to return to London, and he resided in the vicinity of Regent's Park until his death on 5 Aug. 1831, in his seventy-seventh year.

[Redgrave's Dict. of English Artists; Arnold's Library of the Fine Arts, vol. ii.; Cat. of the Special Exhibition of Portrait Miniatures, 1865; Royal Academy Catalogues.] L. C.

COLLINS, SAMUEL, D.D. (1576–1651), provost of King's College, Cambridge, was son of Baldwin Collins, fellow and vice-provost of Eton College, 'a pious and painfull preacher, prodigiously bountifull to the poor, whom Queen Elizabeth constantly called Father Collins' (FULLER, *Worthies*, ed. Nichols, i. 144). He was born at Eton on 5 Aug. 1576, and studied for nine years in Eton School, where he made rapid progress in learning, as he had an excellent natural memory, which his father improved by art. In 1591 he was elected to a scholarship at King's College, Cambridge, where he graduated B.A. 1595–6, M.A. 1599, B.D. 1606. He became chaplain to Archbishop Bancroft and to his successor, Archbishop Abbot. Newcourt, Cole, Bentham, and other writers erroneously state that he was the Samuel Collins who on 15 Feb. 1610–11 was instituted to the vicarage of Braintree in Essex, on the presentation of Lord Rich. The subject of this notice died in 1651, whereas the vicar of Braintree survived till 1667 (WRIGHT, *Essex*, ii. 22; *Notes and Queries*, 2nd series, x. 42).

Collins obtained the rectory of Fen Ditton in Cambridgeshire, and held also the sinecure rectory of Milton in the same county. He was created D.D. at the Cambridge commencement, 3 March 1612–13, when he was selected by Dr. Richardson, regius professor of divinity, to answer upon three questions in a divinity act held in St. Mary's Church before Charles, prince of Wales, and his brother-in-law, Frederick, prince elector palatine of the Rhine (COOPER, *Annals of Cambridge*, iii. 57). Upon the death of Dr. Smith he was elected the eighteenth provost of King's College in April 1615, and about the same time he was appointed one of the king's chaplains. On 22 Oct. 1617 he was elected regius professor of divinity at Cambridge (LE NEVE, *Fasti*, ed. Hardy, iii. 656). To this chair James I annexed, as an augmentation, or rather full endowment, the rectory of Somersham in Huntingdonshire. Collins 'constantly read his lectures twice a week for above fourty [in reality thirty-four] years, giving notice of the time to his auditors in a ticket on the school-dores, wherein never any two alike, without some considerable difference in the critical language thereof' (FULLER, *Worthies*, ed. Nichols, i. 144). On 19 Feb. 1617–18 he was collated to a prebend in the seventh stall of the cathedral of Ely (LE NEVE, *Fasti*, i. 361). He contracted a close friendship and maintained a constant correspondence with Sir Henry Wotton during his embassy at Venice, and through him that diplomatist presented to King's College a fine portrait of Father Paolo Sarpi, the historian of the council of Trent.

In 1628 the fellows of King's, in a petition

to Williams, bishop of Lincoln, charged the provost with bribery, simony, partiality in disposing of all matters of moment, and with intolerable negligence; but the bishop examined the charges, found them groundless, and attributed the fellows' dissatisfaction to Collins's biting wit (HACKET, *Life of Abp. Williams*, ii. 61; COLE, *Hist. of King's Coll.* ii. 234).

At the time of the rebellion he adhered loyally to the royal cause, and in 1643 the Earl of Manchester and the other commissioners for removing scandalous and insufficient ministers ejected him from the rectory of Fen Ditton. The following year (9 Jan. 1644–5) he was deprived of the provostship of King's College by order of parliament, in a visitation of the university by the Earl of Manchester (COOPER, *Annals of Cambridge*, iii. 377). It appears that he was allowed to retain the sinecure rectory of Milton, but the only other preferment left to him was the regius professorship of divinity, from which, however, the living of Somersham, annexed to it by James I, was severed. Provost Whichcote, who succeeded him in the government of King's College, consented that his ejected predecessor should have a yearly stipend out of the common dividend allotted to the provost, and this was regularly paid to him until his death. In 1646, on the decease of Thomas Howell, bishop of Bristol, that see was offered to Collins, but he prudently declined it. After he was ejected from his provostship he lived a retired life in the great brick house in St. Rhadegund's Lane, opposite Jesus College, Cambridge. There he died on 16 Sept. 1651, at the age of seventy-five. He was buried in the same grave with Provost Hacumblen, in the second south vestry from the west of the royal chapel belonging to King's College. A mural monument with a Latin inscription was erected there. He left behind him several sons.

He was reckoned the most fluent Latinist of his age, and was remarkable for his admirable wit and memory. His works are: 1. 'A Sermon [on 1 Tim. vi. 3–5] preached at Paules-Crosse 1 Nov. 1607,' London, 1607, 1608, 4to; dedicated to Archbishop Bancroft. 2. 'Increpatio Andreæ Eudæmono-Johannis Jesuitæ, de infami Parallelo, et renovata assertio Torturæ Torti [Cardinal Bellarmini] pro clarissimo domino atque antistite Elieno, [Lancelot Andrewes], auctore S. Collins,' Cambridge, 1612, 4to; dedicated to Archbishop Abbot, whose chaplain he then was, and who had requested him to undertake the work. 3. 'Epphata to F. T.; or, the defence of . . . the Lord Bishop of Elie [Lancelot Andrewes], . . . concerning his answer to Cardinall Bellarmines Apologie; against the slaunderous cauills of a namelesse Adioyner; entitling his booke, in every page of it, A discouerie of many fowle absurdities, falsities, lyes, &c.,' Cambridge, 1617, 4to; dedicated to James I, by whose command he first undertook to write the book. It is in reply to the treatise of the jesuit, Thomas Fitzherbert, published in 1603 under the initials F.T., and entitled a 'Confutation of certain Absurdities in Lancelot Andrews's Answer to Bellarmine's Apology.' Fitz-Herbert published in 1621 a reply to Collins, entitled 'The Obmutesce of F. T. to the Epphata of Dr. Collins.' 4. Latin verses (*a*) in the university collection on the deaths of Sir Edward and Lady Lewkenor, 1606, (*b*) before Phineas Fletcher's 'Locustæ,' 1627, (*c*) English verses before Bishop Rainbow's sermon at the funeral of the Countess of Suffolk, 1649.

COLLINS, SAMUEL (1619–1670), author of the 'Present State of Russia,' born in 1619, was the eldest son of Samuel Collins, vicar of Braintree, Essex, who appears to have surrendered his living in 1661, died 2 May 1667, and is not to be confounded with Samuel Collins (1576–1651), provost of King's College, Cambridge [q. v.] Collins was admitted to Corpus Christi College, Cambridge, in 1635; took no degree in that university; but he afterwards graduated M.D. at Padua. It would appear that about 1660 he met in Holland Gebden, the commissary of the Russian court, who was gathering a band of celebrated men to serve the Czar Alexis, father of Peter the Great, at Moscow. Collins accepted Gebden's invitation to settle in Russia, and for nine years he acted as the czar's physician. Many honours and rewards were given him, but in 1669 he left Moscow for England. He soon afterwards made a journey to France, and died at Paris on 26 Oct. 1670. A brass mural tablet containing an inscription to his memory was set up, in accordance with the instructions in his will, outside the eastward of

Braintree Church. Collins's only book—'The Present State of Russia, in a Letter to a Friend at London, written by an eminent person residing at the Great Tzar's Court at Mosco for the space of nine years. Illustrated with many copper plates'—was first published in London after the author's death in 1671. It is a very entertaining account of life in the Russian court, and was issued in a French translation in 1679. Dorman Newman, the original publisher, according to his own statement, received the manuscript from 'a gentleman that attended upon the learned Dr. C. all the time of his being with the emperor of Russia.' It was distributed into chapters and sections by 'some that were learned and skilful,' but the doctor's death before 'it came to press' compelled Newman to employ 'another worthy person' to transcribe the manuscript and see it through the press. Although the title-page bears no author's name, Collins is stated to be the writer in the publisher's advertisement at the end of the book. Collins has often been erroneously identified with another physician of the same name [see COLLINS, SAMUEL, M.D., 1617–1685].

[Notes and Queries, 2nd ser. x. 42 (by Messrs. C. H. and Thompson Cooper); Munk's Coll. of Phys. (2nd edit.), i. 265; Wright's Essex, ii. 22; Collins's Present State of Russia; Wood's Fasti Oxon. (Bliss), ii. 221, where both Wood and Bliss fail to distinguish accurately between three seventeenth-century physicians all named Samuel Collins; information kindly supplied by Rev. J. W. Kenworthy, vicar of Braintree.] S. L.

COLLINS, SAMUEL, M.D. (1617-1685), physician, was the son of Daniel Collins, vice-provost of Eton, and rector of Cowley, Middlesex. He was born in 1617 at Tring, Hertfordshire, and educated at Eton, whence he was elected to a scholarship at King's College, Cambridge, in 1634. He was elected a fellow of that house in 1637, proceeded B.A. in 1638, and on 1 June 1639 was entered on the physic line at Leyden. He commenced M.A. at Cambridge in 1642, and was created M.D. by that university 4 Oct. 1648. On 27 July 1649 he was admitted a candidate of the College of Physicians of London, and a fellow on 25 June 1651. Collins was incorporated at Oxford in his doctor's degree in May 1650, and about that time was, by an ordinance of parliament, elected a fellow of New College in that university. He settled in London; was appointed censor of the College of Physicians in 1659, 1669, and 1679; was Harveian orator in 1665, and again in 1682; Gulstonian lecturer in 1675; and registrar from 1682 to his death. He was buried at Cowley, Middlesex, on 11 June 1685.

To him Wood erroneously ascribes the authorship of 'The History of the present State of Russia,' printed at London 1671. The real author of that work was Samuel Collins, M.D. (*d.* 1670) [q. v.]

[Birch's Hist. of the Royal Society, i. 163, ii. 156; Cole's Hist. of King's Coll. Camb. iii. 153; Harwood's Alumni Eton., 136; Hutchinson's Biog. Medica, i. 213; Lysons's Environs, v. 15; Munk's Coll. of Phys. (1878), i. 264; Notes and Queries, 2nd ser., x. 42; Peacock's English-speaking Students at Leyden, 22; Retrospective Review, xiv. 32; Wood's Fasti Oxon. (Bliss), ii. 162, 163.] T. C.

COLLINS, SAMUEL, M.D. (1618-1710), anatomist, was the only son of John Collins, rector of Rotherfield, Sussex, who was descended from an ancient family settled in the counties of Somerset and Devon. He received his education at Trinity College, Cambridge, where he was elected to a scholarship, and afterwards to a fellowship. He graduated B.A. in 1638–9, M.A. in 1642. Then he travelled on the continent, and visited many universities in France, Italy, and the Low Countries, but found none to compare with our own. He was created M.D. at Padua 25 Aug. 1654, and incorporated in that degree at Oxford 24 June 1659, and at Cambridge in 1673. He was admitted a candidate of the College of Physicians of London in 1656, and a fellow in 1668. About the latter date he was appointed physician in ordinary to Charles II. Between 1671 and 1707 he was frequently elected to the office of censor in the College of Physicians; he was anatomy reader in 1684; and on 10 Sept. 1694 was appointed Lumleian lecturer, an office which he retained to his death. He was constituted an elect in 1689; was several times appointed consiliarius; and in 1695 was elected president of the college. He died 11 April 1710. To his 'memory' is inscribed the view of the interior of the nave of St. Paul's in Dugdale's 'History' of that church. The plate being dated 1658 is calculated to mislead as to the date of Collins's death. He married, first, Anne, eldest daughter of John Bodenham, esq.; and secondly, Dame Catharine, countess-dowager of Carnwath in Scotland, daughter of John Abington, esq., of Dowdeswell, Gloucestershire.

Dr. Munk says that Collins, who is mentioned in Garth's 'Dispensary,' was an accomplished anatomist, and stood foremost among his contemporaries, whether at home or abroad, in his knowledge of comparative anatomy. His great work, which embodies a full report of his original investigations, is entitled 'A Systeme of Anatomy, treating of the Body of Man, Beasts, Birds, Fish, Insects,

and Plants. Illustrated with many schemes,' 2 vols. London, 1685, fol. It is often referred to by Boerhaave and Haller, the latter of whom writes thus of the author and his work:—'Anatomen comparatam amavit, ut ipse de se fatetur; hinc magna pars operis in zootome versatur, cujus præcipuus certè auctor est; et avium pisciumque imprimis copiosissimas figuras dedit, ad Peraltianum fere morem. Ex homine icones pauciores sunt. Anatomen practicam interponit, et physiologiam, anatomen, atque pathologiam conjungit.' Collins's portrait, engraved by W. Faithorne, is prefixed to his 'Anatomy.'

[Addit. MS. 5865, f. 65; Annals of Queen Anne, ix. 414; Garth's Dispensary, canto iv.; Granger's Biog. Hist. of England (1824), v. 225; Guillim's Display of Heraldry (1724), 431; Hutchinson's Biog. Medica, i. 213; Lowndes's Bibl. Man. (Bohn), 499; Munk's College of Physicians (1878), i. 355; Notes and Queries, 2nd series, x. 42; Rees's Cyclopædia; Wood's Fasti Oxon. (Bliss), ii. 172, 221.] T. C.

COLLINS, SAMUEL (*fl.* 1750–1780), miniature-painter, son of a clergyman at Bristol, was originally educated as an attorney, but quitted this profession and became a miniature-painter. He settled at Bath, where he soon obtained a very large practice, and gained the reputation of one of the most perfect miniature-painters in this country. He had numerous pupils, among whom was Ozias Humphry [q. v.], to whom he eventually relinquished his practice at Bath. He then removed to Dublin and enjoyed a high reputation there. He painted both on enamel and on ivory. Portraits by him of George III and of the second Viscount Gage were exhibited at the Special Exhibition of Portrait Miniatures in 1865.

[Redgrave's Dict. of English Artists; Pasquin's History of Painting in Ireland; Cat. of Special Exhibition of Portrait Miniatures, 1865.] L. C.

COLLINS, SAMUEL (1802–1878), the bard of Hale Moss, son of a hand-loom weaver, was born on 1 Dec. 1802 at Hollinwood, near Manchester. He was put to work when very young, before he had gained more education than a knowledge of his letters. While still in his teens he became an ardent follower of Henry Hunt and Cobbett, and shared in the affair of Peterloo in 1819. Afterwards, when chartism was rife, he joined a local radical association, and gave the aid of his pen and tongue on behalf of the reform movement. He suffered for a time some obloquy by his temerity in denouncing Feargus O'Connor's land scheme. He wrote homely verses, some of them in the Lancashire dialect, which were collected in 1859 in a small volume entitled 'Miscellaneous Poems and Songs,' with a biographical notice by B. Brierley. Collins, who worked at his loom almost to the last, died at Hale Moss, Chadderton, near Manchester, on 8 July 1878.

[Biog. notice cited above; Brierley's Home Memories, 1886, p. 61; Manchester Examiner, 10 July 1878.] C. W. S.

COLLINS, THOMAS (*fl.* 1615), poet, was the author of a very rare religious poem entitled 'The Penitent Publican, his Confession of Mouth, Contrition of Heart, unfained Repentance. And feruent Prayer unto God for Mercie and Forgiuenesses,' London (by Arthur Johnson), 4to, 1610. The dedicatory epistle, dated 6 July 1610, is addressed 'To the Right Honourable, Graue and Vertuous Lady, the Lady Katherine Hastings, Countesse of Huntington,' and is signed with the author's name. The poem is written throughout in seven-line stanzas, and evinces strong religious fervour. In 1615 Collins wrote a pastoral poem named 'The Teares of Loue, or Cupid's Progresse. Together with the complaint of the sorrowfull Shepheardesse fayre (but unfortunate) Candida, deploring the death of her dearelo'd Coravin, a late living (and an ever to be lamented) Shepheard. In a passionate pastorall Elegie. Composed by Thomas Collins,' &c. London (by George Purslowe), 1615. The poet Coravin, whose death Collins laments, has not been identified. The poem is full of conceits, but at its close Sidney, Spenser, and Drayton are eulogised, and allusion is made to Lodge. Jo. B[eaumont?] and Samuel Rowlands contributed prefatory verses. The former refers to a third poem by Collins on 'Newport's bloudy battell . . . with Yaxley's death,' which is not otherwise known. Rowlands calls Collins 'his affected friend.' Copies of both the known poems of Collins were in Sir Francis Freeling's library, but only unique copies of either are now believed to be extant.

[Corser's Collectanea, pt. iv. 410–14; Collier's Bibliograph. Account of English Lit. i. 146–8; Hazlitt's Handbook; Halliwell's Ancient Inventions (1854), p. 82.] S. L.

COLLINS, WILLIAM (1721–1759), poet, was born on 25 Dec. 1721 at Chichester. His father, a respectable hatter, was twice mayor of Chichester. In 1703 he married Elizabeth Martin, and was by her father of Elizabeth (*b.* 1704), Anne (*b.* 1705), and William. The son was probably sent to the prebendal school, Chichester, and was ad-

mitted scholar of Winchester on 19 Jan. 1733. In the 'Gentleman's Magazine' for 1734, p. 167, is mentioned a poem by 'W. Collins' on the royal nuptials, but the poem is lost and the identification uncertain. It is said that he wrote poetry at twelve, one line being remembered—

> And every Gradus flapped his leathern wing
> (*European Mag.* xxviii. 377).

At Winchester he was a schoolfellow of Joseph Warton, ever afterwards his friend. While at school he published a copy of verses to 'Miss Aurelia C—r' in the 'Gentleman's Magazine' for January 1739. Three poems, sent by him, Warton, and another schoolfellow, appeared in the same magazine in October 1739, and a complimentary notice of them in the following number is attributed by Wooll to Johnson. He was first on the roll for New College; but no vacancy occurring he and Warton were both superannuated. On 21 March 1740 he was entered as a commoner at Queen's College, Oxford, and on 29 July 1741 he was elected to a demyship at Magdalene, possibly through the influence of William Payne, a cousin, who was fellow of the college. Joseph Warton was at Oriel, where Gilbert White of Selborne, an old pupil of Warton's father, was also a student. White became intimate with Collins, and his recollections are given in a letter to the 'Gentleman's Magazine' for 1781 (p. 11). From this and the letter of another friend, John Ragsdale, it appears that Collins was at this time fond of dissipation and contemptuous of academical pedants and college discipline. In January 1742 he published his 'Persian Eclogues,' republished as 'Oriental Eclogues' in 1757. Woodfall printed five hundred of these in December 1741, and a thousand of the odes in December 1746 (*Notes and Queries*, 1st ser. xi. 419). His 'verses humbly addressed to Sir Thomas Hanmer on his edition of Shakespeare by a gentleman of Oxford,' were dated 3 Dec. 1743. He graduated as B.A. on 18 Nov. 1743, and soon afterwards left Oxford, having, according to some reports, got into debt. His father had died in 1734, and on his mother's death, 6 July 1744, he inherited a small property, with which he soon parted. It was probably at this time that he visited his uncle, Lieutenant-colonel Martin of the 8th regiment, then quartered in Flanders. His uncle, we are told, thought him 'too indolent even for the army,' and consequently recommended the church. He obtained a title to a curacy from a clergyman near Chichester, but was dissuaded from taking orders by a tobacconist named Hardman, and came to London to try literature. He now proposed to bring out a volume of odes in conjunction with his friend Joseph Warton. He was not to publish unless he could obtain ten guineas for them. Collins's odes appeared in December 1746 (1747 is on the title-page). Warton's volume appeared separately at the same time, and reached a second edition. Collins was less successful, and it is said by Langhorne that he afterwards burnt the unsold copies in disgust. The ode on the death of Colonel Ross had appeared in Dodsley's 'Museum' in June 1746. This ode, the ode to 'Evening,' and 'How sleep the brave' appeared again in Dodsley's 'Museum' (vol. iv. 1749), with variations in the two first, the authenticity of which has been disputed, but which are probably due to Collins himself (see *Notes and Queries*, 2nd ser. i. 237, 3rd ser. xi. 350, 371). Meanwhile he issued proposals for a history of the revival of learning. A reference in the first volume of Warton's 'Essay on Pope' (note to *Essay on Criticism*, l. 47) seems to show that some hopes were entertained by his friends so late as 1756 of the completion of this undertaking. He planned, but, according to Johnson, 'only planned,' tragedies, and indulged in schemes for many works. Johnson, who made his acquaintance about this time, found him in lodgings which were watched by a bailiff 'prowling in the street.' He obtained an advance from a bookseller on the strength of a projected translation of Aristotle's 'Poetics,' and 'escaped into the country.' He became intimate in the literary circles of the day, knowing Armstrong, Quin, Garrick, and Foote, and forming a special friendship with Thomson. He was frequently at the house of a Mr. Ragsdale, Thomson's neighbour at Richmond. After Thomson's death he wrote the beautiful ode published by Manby in June 1749. The dirge to 'Cymbeline' appeared in the 'Gentleman's Magazine' for October 1749.

Collins's uncle, Colonel Martin, had been severely wounded at the battle of Val in Flanders, and returned to England in 1747, where he died in 1749. His fortune of about 7,000*l.* was divided between his nephew and nieces, Collins receiving about 2,000*l.* He repaid the advance made for his proposed translation of Aristotle (Johnson), and also (unless there is some confusion) the sum paid by Millar for his odes. In the autumn of 1749 he met John Home, the author of 'Douglas,' at Winchester, where they were visiting a common friend, an officer named Barrow, who died in America during the following war. To Home Collins gave an imperfect copy of the 'Ode on the Popular Superstitions of the Highlands.' Home gave it to

a friend, among whose papers it was found by Alexander Carlyle [q. v.] A reference to it as undiscovered in Johnson's 'Life' induced Carlyle to look it up, and by him it was communicated to the Royal Society of Edinburgh. It is published in their 'Transactions' (vol. i. pt. ii. p. 63, 1788) with some emendations by Carlyle and a passage supplied by Henry Mackenzie. A rival edition was immediately published by an anonymous editor in London with a dedication to the Wartons.

Collins was now failing. Johnson says that it was 'a deficiency rather of his vital than his intellectual powers.' He could talk well, but a few minutes exhausted him. He tried to disperse the 'clouds gathering on his intellects' by a journey to France, and on his return saw Johnson at Islington. Johnson noticed that Collins's only literary possession was a testament. 'I have but one book,' he said, 'but that is the best.' He appears to have been for a time at a madhouse in Chelsea. Afterwards he lived with his sister Anne, who married a Captain Sempell, and after his death in 1764 a Dr. Durnford, and died in 1789. Elizabeth married Lieutenant Tanner in 1750, and died in 1754 (*Gent. Mag.* lix. 1056).

A letter of November 1750 (Seward, *Anecdotes, Suppl.* 123) speaks of an ode upon the music of the Greek theatre which he was then writing, but which has disappeared. He collected a library at Chichester, containing some curious old books, to which there are references in Thomas Warton's 'History of Poetry' (ed. 1840, iii. 80, 244, 386). He stayed a month at Oxford in 1754, when he was too feeble for conversation, but often saw Warton. The Wartons visited him at Chichester the same year. He is mentioned (March 1759) in Goldsmith, in the 'Polite Literature of Europe' (chap. x.), as 'still alive—happy it insensible of our neglect, not raging at our ingratitude.' Johnson, who inquired tenderly after him in letters to the Wartons in 1754 and 1756, gave the date of his death as 1756, a statement which has misled later writers. He died on 12 June 1759 (Hay, *Chichester*), and was buried at St. Andrew's Church, as appears from the register, on 15 June 1759 (Dyce, pp. 19, 20). A tablet by Flaxman to his memory was erected in the cathedral in 1795, with a joint inscription by Hayley and John Sargent. An engraving from the only known portrait, at the age of fourteen, is prefixed to Mr. Moy Thomas's edition of his works.

Johnson's affection for Collins is shown in the life. Collins's amiability, and the charm of a conversation enlivened by wide knowledge of French, Spanish, and Italian, as well as the learned languages, are gratefully commemorated by the biographer, whose prejudices prevented any cordial appreciation of the poetical merits of his friend. Collins belonged to the new school, represented in criticism and history by his friends the Wartons, who showed the love of the romantic element in literature which was afterwards to become fashionable. The Wartons could appreciate what they could not rival. Gray, his only equal in contemporary poetry, says (letter to Warton, 27 Dec. 1746) of Collins's and Warton's odes just published: 'Each is the half of a considerable man, and one the counterpart of the other. The first has but little invention, very poetical choice of expression, and a good ear. The second, a fine fancy modelled upon the antique, a bad ear, great variety of words and images, with no choice at all. They both deserve to last some years, but will not.' The singular sweetness and delicate sensibility of Collins have made him a favourite, and poetical writers in particular rather grudge the superior popularity of Gray. The fondness for allegorical personages which he shares with Gray is characteristic of the time, but his poetry was the first distinct utterance of the school which uttered in Warton's essay a public protest against the canons accepted by Pope and his followers. Goldsmith's admiration of the 'Eclogues' is shown in the passage already cited, where they are said to excel any in our language, and in the introduction to the 'Beauties of English Poetry' he calls him 'very pretty.' The poems gradually became more popular in the course of the century, as appears from the separate publications by Langhorne and Mrs. Barbauld and their admission into the collections of British poets. Chatterton's contemptuous references to Collins may perhaps refer to an Emmanuel Collins, who published some verses at Bristol in 1762 (*Notes and Queries*, 2nd ser. vi. 430, 533). Collins's works, edited by J. Langhorne, with a memoir, appeared in 1765, 1771, and 1781; Mrs. Barbauld's edition in 1797; an edition with notes by Alex. Dyce in 1827; and the Aldine edition, with notes and a memoir by Moy Thomas, in 1858, require special notice.

[Johnson's Character of Collins in the Poetical Calendar, 1763; Lives of the Poets (1781), in which the preceding is quoted; Gent. Mag. for 1764, 23; Life by Langhorne in Works, 1765 and 1781; Monthly Review, xxxii. 294 (review of preceding; in later editions Langhorne's reference to the publisher Millar is omitted in consequence of a statement in this review); biographical notes in Dyce's edition, 1827; life by Moy Thomas in Aldine edition, adds little to Dyce;

in both will be found the letters from Gilbert White, printed by Thomas from original manuscript (first in Gent. Mag. for 1781); Letter from Ragsdale in Monthly Mag. xxi. 494; notes by T. Warton, communicated to W. Hymers for projected edition in 1783 (the two last originally appeared in a paper called the Reaper contributed to the York Chronicle, 1796–7, afterwards in Dr. Drake's Gleaner, see Dyce, 24, 29); Hay's Chichester, 526–8; Notes and Queries, 2nd ser. v. 43; Wooll's Life of Warton, 4, 15 *n.*, 219, 239.] L. S.

COLLINS, WILLIAM (*d.* 1793), modeller, had a large practice during the last half of the eighteenth century as a modeller of friezes and bas-reliefs for chimneypieces, reredoses, &c. He was one of the first members of the St. Martin's Lane Academy, and a member of the Incorporated Society of Artists, and signed the roll declaration in 1765, being one of the first directors of that society. He contributed to the first exhibition in 1760, and continued to exhibit up to 1768; among the bas-reliefs exhibited by him were 'Spring—Boys with a Bird's Nest,' and 'Romulus and Remus' (1760), 'Mary Magdalene and the other Mary coming to the Sepulchre' (1761); 'Belisarius' (1763); 'Bacchus and Ariadne' (1764); 'Œdipus' (1765), subjects from Æsop's fables, &c. He modelled a prototype bust of Hayman's 'Don Quixote.' A good example of his work, a bas-relief, representing 'The Resurrection,' was made for the chapel of Magdalene College, Cambridge, in 1756, and is now in the library of that college. In Ralph Willett's 'Description of the Library at Merly, Dorset' (London, 1785), there is a vignette of Minerva on the title-page from a model by Collins. William Sharp also engraved two large oval subjects of 'Britannia' and 'Athens' from models by Collins. Collins was a friend of Gainsborough, and resided in Tothill Fields, Westminster, where he died in May 1793.

(1793), 576; Willis and Clark's Architectural History of the University of Cambridge, ii. 377; Baker's Catalogue of the Works of William Sharp; Catalogues of the Incorporated Society of Artists.] L. C.

COLLINS, WILLIAM (1788–1847), landscape and figure painter, was born in Great Titchfield Street, London, on 8 Sept. 1788. His father, a native of Wicklow, came over to England and settled in London, supporting his family by his literary talents. Among other works he wrote a poem on the slave trade, and a memoir of George Morland. Young Collins, when a child, stood by Morland's easel, and showed so great an aptitude for art, that his father expected 'to see poor Bill an R.A.' In 1807 he entered, at the same time with Etty, the schools of the Royal Academy, and sent two small landscapes, both of them views near Millbank. In 1809 he gained a medal in the life school, and exhibited three pictures, viz. 'Boy at Breakfast,' 'Boys with a Bird's-nest' (purchased by Mr. Lister, his first patron), and a 'Portrait of Master Lee as he spoke the Prologue at the Haymarket Theatre.' Collins then resided at 118 Great Portland Street. In 1811 he sold to the Marquis of Stafford for eighty guineas a picture entitled 'The Young Fifer.' His father died in pecuniary difficulties early in the following year. In 1812 Collins painted the picture which made his name famous, viz. 'The Sale of the Pet Lamb,' sold for a hundred and forty guineas, afterwards engraved by S. W. Reynolds. He now became the chief support of his family, and found some valuable patrons, especially Sir Thomas Freeman Heathcote, Sir John Leicester, Sir Robert Peel, Sir George Beaumont, and Lord Liverpool. In 1814 his two pictures, 'The Blackberry Gatherers,' purchased by Mrs. Hand, and 'The Birdcatchers,' purchased by the Marquis of Lansdowne, gained for him admission as associate of the Royal Academy. This honour increased his industry, and encouraged him to attempt more elaborate subjects. In 1815 he was sketching on the coast near Cromer, and produced the 'Scene on the Coast of Norfolk,' acquired by George IV, then prince regent. This picture was engraved for the series of royal pictures, and is now in the corridor at Windsor Castle. In 1817 Collins visited Paris in company with Leslie and Washington Allston, and painted 'The Departure of the Diligence from Rouen,' sold to Sir George Beaumont, and the 'Scene on the Boulevards,' bought by the Duke of Newcastle. These were exhibited at the Royal Academy in 1818, when Collins resided at 11 New Cavendish Street, Portland Place. About this period Collins painted several portraits. In 1820 he was elected a Royal Academician, presenting as his diploma picture 'The Young Anglers.' Two years later he married Miss Geddes, the daughter of Andrew Geddes, A.R.A., and sister of Margaret Sarah Carpenter, the portrait painter [q. v.] He now continued to exhibit, and to travel in England and Scotland. At this period his art was very popular. In 1826 Collins painted 'The Fisherman's Departure,' engraved by Phelps. In 1828 he made a tour in Holland and Belgium, and lived a short time at Boulogne in 1836. 'Rustic Popularity' was executed in 1834 for John

Marshall; a replica made for Mr. Hogarth, the art dealer, was engraved in 'Finden's Gallery of Modern British Art.' Two years later appeared 'Sunday Morning,' scraped in mezzotint by S. W. Reynolds; and 'As Happy as a King,' representing children swinging on a gate in a wood, now in the National Gallery, and engraved by G. Finden and C. Cousen. A repetition of the picture, exhibited at the Royal Academy in 1836, is now in the Vernon Collection, South Kensington Museum. Mr. Wilkie Collins tells us that the subject of the picture was suggested to his father by the story of the country boy whose ideal of kingly happiness was swinging upon a gate all day long and eating fat bacon. In the month of September 1836 he left London for Italy, remaining there until 1838. During these two years he occupied himself unremittingly in advancing his knowledge of painting, but he caught a severe illness by sketching at Sorrento in the noonday sun. On the advice of his friend Wilkie he returned home and began several pictures from Italian life. The Royal Academy of 1839 contained the first produce of his continental tour, such as 'Poor Travellers at the door of a Capuchin Convent near Vico, Bay of Naples,' 'A Scene near Subiaco,' &c. These were followed in 1840–1 by two subjects taken from sacred history, 'Our Saviour with the Doctors in the Temple,' and 'The Two Disciples at Emmaus.' Collins now resided at 85 Oxford Terrace, and removed in 1843 to a larger house, 1 Devonport Street, Hyde Park Gardens. In 1840 he was appointed librarian to the Royal Academy, but finding its duties more onerous than he could conscientiously discharge, he resigned the office in 1842. In 1840 he visited Germany, and in 1842 the Shetland Islands, his tour in the latter place being productive of a series of illustrations to Sir Walter Scott's 'Pirate,' which were published in the Waverley edition of that fiction. In 1846 his 'Early Morning' was exhibited. Mr. Ruskin says of it: 'I have never seen the oppression of sunlight in a clear, lurid, rainy atmosphere more perfectly or faithfully rendered, and the various portions of reflected and scattered light are all studied with equal truth and solemn feeling.' Collins sketched in water-colour some of his works; in this style 'The Rat-catcher' and 'Landing Fish' are in the British Museum, and at the South Kensington Museum 'A Street in Naples' and 'Kentish Peasant Girls.' He also etched several plates, most of which, presented by Mrs. Collins, are in the Department of Prints and Drawings, British Museum, besides a folio volume containing choice impressions of engravings after him. Collins died from disease of the heart, terminating in dropsy, in Devonport Street, on 17 Feb. 1847, and was buried in the cemetery of the church of St. Mary, Paddington, where a handsome monument, in the form of a cross, was erected to his memory by his widow. He left two sons, William Wilkie Collins, the novelist, and Charles Allston Collins [q. v.] Collins exhibited altogether 124 pictures at the Royal Academy, and forty-five at the British Institution. One of his last works was commenced at Torquay in 1845.

[Memoirs of the Life of William Collins; R.A., by William Wilkie Collins, 2 vols. London, 1848, 8vo; Athenæum, 20 Feb. 1847, p. 200.] L. F.

COLLINS, WILLIAM LUCAS (1817–1887), miscellaneous writer, was educated at Jesus College, Oxford (B A. 1838, M.A. 1841). He became curate of Great Houghton, Northamptonshire (1853–1862), and of Brayfield, Northamptonshire (1862–3), rector of Cheriton, Glamorganshire, vicar of Kilsby (1867–1873), and rector of Lowick, both in Northamptonshire (1873–87). With the last-named benefice he held the vicarage of Slipton, to which he was presented in 1876; and he was also an honorary canon of Peterborough. He died at Lowick on 24 March 1887.

Collins was editor of 'Ancient Classics for English Readers,' and wrote for the series the volumes on Homer's 'Iliad,' Homer's 'Odyssey,' Aristophanes, Lucian, Virgil, Plautus, Terence, Cicero, Livy, and Thucydides. His other works are: 1. 'The Luck of Ladysmede,' London, 1860, 8vo. 2. 'The Education Question,' London, 1862, 8vo. 3. 'Etoniana Ancient and Modern; being notes of the History and Traditions of Eton College,' London, 1865, 8vo. 4. 'The Public Schools: Winchester, Westminster, Shrewsbury, Harrow, Rugby: notes of their History and Traditions,' London, 1867, 8vo. 5. 'Montaigne,' in Mrs. Oliphant's 'Foreign Classics for English Readers,' 1879. 6. 'Butler,' a biography and an analysis of his works, in Dr. William Knight's 'Philosophical Classics for English Readers,' 1881. 7. 'La Fontaine and other French Fabulists,' in 'Foreign Classics,' 1882.

[Times, 28 March 1887; Crockford's Clerical Directory (1887); Blackwood's Mag., May 1887; Academy, 2 April 1887, p. 236.] T. C.

COLLINSON, JAMES (1825?–1881), painter, born at Mansfield, Nottinghamshire, about 1825, was the son of a bookseller. He entered the Royal Academy School, and was also a fellow-student with Holman Hunt and Dante Gabriel Rossetti. He did not give much

sign of talent until 1847, when he exhibited at the Royal Academy a picture called 'The Charity Boy's Début.' The earnest and truthful work shown in this picture attracted the attention of Rossetti, who sought Collinson's friendship, and on the formation of the Pre-Raphaelite Brotherhood induced him to become one of the original seven 'brothers.' Collinson, however, was of a slow temperament, and incapable of partaking in the enthusiasm which the others displayed, and having recently embraced the Roman catholic religion, displayed more of zeal in the practice thereof than in his art. He devoted, however, considerable time and labour to the execution of a picture according to the pre-Raphaelite laws, viz. 'An Incident in the Life of St. Elizabeth of Hungary,' an illustration to Charles Kingsley's 'Saint's Tragedy.' This was exhibited at the Portland Gallery in 1851, and excited some attention. To the pre-Raphaelite periodical, 'The Germ,' for 1850 he contributed a devotional poem in blank verse, entitled 'The Child Jesus,' accompanied by an etching illustrative of a passage in the poem. Shortly after this Collinson quitted the pre-Raphaelite ranks and retired to Stonyhurst, remaining there a long time in seclusion. About 1854 he emerged again, married a connection of J. R. Herbert, R.A., and resumed his profession as an artist. Abandoning all ideas of adventure or ambition, he confined himself to small subjects of a domestic and humorous character, and continued to exhibit at the Royal Academy, British Institution, and the Society of British Artists, of which he was a fellow, up to 1880. His pictures latterly did not rise above commonplace work, but some have been engraved, e.g. 'To Let' and 'For Sale' (Royal Academy, 1858), and 'Good for a Cold.' Collinson lived a very retired life, though he was much respected by those who knew him, and at his death in April 1881 had almost passed out of the memory of his old associates.

[Athenæum, 9 April 1881; Contemporary Review, May 1883; Graves's Dict. of Artists, 1760–1880; Catalogues of the Royal Academy, &c.; private information.] L. C.

COLLINSON, JOHN (1757 ?–1793), county historian, vicar of Clanfield, Oxfordshire, became vicar of Long Ashton, Somerset, in 1787, and also held the perpetual curacy of Whitchurch in the same county. He died at the Hotwells, Bristol, on 27 Aug. 1793, aged 36, being buried in Long Ashton church. He published 'The Beauties of British Antiquities, selected from the writings of Antiquaries,' 1779, 8vo, and in 1781 issued proposals for a history of the county of Somerset in one volume folio. The work was finally published in 1791, with the title 'History and Antiquities of the County of Somerset, collected from authentick Records and an actual Survey made by the late Mr. Edmund Rack,' in 3 vols. 4to (for account of Rack see COLLINSON, *Somerset*, i. 77). Collinson appears to have largely used, and indeed to have appropriated bodily from, the Palmer MSS., now in the possession of Sir Alexander Acland Hood, bart., of St. Audries, Somerset. The 'History' was severely criticised in the 'Gentleman's Magazine.'

[Gent. Mag. 1793, lxiii. i. 148, 236, ii. 865; Collinson's Somerset, ii. 299; Hist. MSS. Comm. 6th Rep., Introd. p. xiii and 344; Athenæum, 8 Jan. 1887, p. 65.] W. H.

COLLINSON, PETER (1694–1768), naturalist and antiquary, was born near Windermere on 14 Jan. 1693–4. His parents were members of the Society of Friends, who were settled on the paternal estate called Hugal Hall, on the borders of Windermere Lake. They were especially known as producers of men's mercery. Peter Collinson, in partnership with his brother, improved the father's trade, and opened a large business with the American colonies.

Collinson from his youth displayed a considerable fondness for natural history, and especially devoted himself to a close examination of the metamorphoses of insects. While yet a young man he secured the notice of some of the best naturalists of the age, and especially of Sir Hans Sloane. The Earl of Bute greatly encouraged his botanical pursuits, and Sir Charles Wager [q. v.] sought his assistance, and at Collinson's suggestion systematised his search for illustrative examples of natural products during his voyages. A considerable portion of the collections thus made were eventually deposited in Sir Hans Sloane's Museum.

Collinson was a lover of the antiquities near his home. He was active in the formation of the Society of Antiquaries, being one of its earliest members and a constant contributor to the meetings of the society. He withdrew from the Society of Friends, but always maintained their distinguishing simplicity of character. In 1724 Collinson married Mary, the daughter of Mr. Bushell of Mill Hill, Hendon, by whom he had one son and one daughter. Collinson was elected a fellow of the Royal Society in December 1728. He communicated papers to the 'Philosophical Transactions.' The relations of Collinson's firm with America led to a close intercourse with the scientific men of the colonies. In 1730 a subscription library was

originated in Philadelphia, and Collinson was consulted by some of the more active members as to its organisation. On the committee of the library was Benjamin Franklin, to whom Collinson sent in 1745 an account of some new electrical experiments recently made in Germany, and some parts of the apparatus required for carrying them out. This was the first intimation which Franklin had received respecting the advances of electrical inquiry in Europe, and he at once repeated and considerably extended the inquiry. Franklin acknowledged his obligation to Collinson, and they established a lasting friendship. By 1740 Collinson had acquired a high reputation as a botanist. He formed a botanic garden at Mill Hill, and by its means considerably improved the English system of horticulture. He established a good system of exchanges with the colonies, which proved of considerable advantage to the respective countries. He strongly urged the Americans to cultivate flax, hemp, silk, and wine, which led to the introduction of these industries in several of the states. Collinson was always a contributor to the collections of the British Museum, and at one time it was contemplated to appoint him as curator of the botanical division. It is not quite clear why this was not carried out. Collinson was evidently disappointed, but he never displayed any bitterness on the matter. He was always surrounded by friends, who valued his acquaintance and admitted the worth of his knowledge.

On 11 Aug. 1768 he died peacefully while on a visit to Lord Petre in Essex. The titles of thirteen papers by Collinson in the 'Gent. Mag.' are given in Smith's 'List of Friends' Books.' In 1843 L. W. Dillwyn privately printed 'Hortus Collinsonianus: plants cultivated by Peter Collinson.' Dr. Fothergill wrote a life of Collinson, privately printed (1771), and reprinted in Fothergill's 'Works' (1781).

R. H–T.

COLLINSON, Sir RICHARD (1811–1883), admiral, was a native of Gateshead, of which place his father, the Rev. John Collinson, was rector. He entered the navy in December 1823, and in 1828 served as a midshipman of the Chanticleer with Captain Forster, in a surveying voyage round the coast of South America. In 1834 he was a mate of the Medea, one of the first steamers in the navy; was promoted in 1835, and appointed on 28 Sept. to the Sulphur, surveying vessel [see Beechey, Frederick William; Belcher, Sir Edward]. In June 1838 he was appointed to the President, the flagship of Rear-admiral Ross in the Pacific; and in January 1840 to the Wellesley, on board which Sir James John Gordon Bremer [q. v.] subsequently hoisted his broad pennant as senior officer in China. During the first Chinese war Collinson was employed as surveyor and pilot in seas and rivers till then unknown; and to his skill and ability was largely due the success of the operations both in the Canton river and in the Yang-tse-kiang. After commanding for some time the Bentinck brig on this service as a lieutenant, he was promoted, 19 Feb. 1842, to be commander; was advanced to post rank on 23 Dec. 1842, and nominated a C.B. on the next day; but continued in command of the Bentinck, renamed the Plover, till 1846, during which time he was employed in the exact survey of the coast of China, from Chusan to Hongkong, the results of which afterwards formed the groundwork of the 'China Pilot.'

In 1849 Collinson was appointed to command an expedition for the relief of Sir John Franklin, by way of Behring Straits; he himself had command of the Enterprise, and with him was Commander Robert Le Mesurier McClure [q. v.] in the Investigator. The two ships sailed together from Plymouth on 20 Jan. 1850, but unfortunately separated in the neighbourhood of Cape Horn and did not meet again. The Enterprise passed Point Barrow on 21 Aug. 1850; but the ice, which had offered but slight hindrance to the Investigator a fortnight earlier, was now impenetrable, and Collinson, finding his attempts to go north or east were vain, determined to return southwards and to winter at Hongkong, from which place, after having filled up with provisions, he sailed on 2 April 1851. After rounding Point Barrow he gradually worked his way to the eastward, and passed through Prince of Wales Strait to where the Investigator had wintered while the Enterprise was at Hongkong; but finding further progress barred by the dense pack, he returned and wintered at the southern entrance of the Strait. On 5 Aug. 1852 the Enterprise was released from her winter quarters, and during the short season got as far east as Cambridge Bay, where she was frozen in and wintered. In retracing her way the following year she was caught in the ice in Camden Bay, and there passed the third winter; she reached Point Barrow on 8 Aug. 1854, after being shut up in the Arctic, entirely on her own resources, for upwards of three years. The addition to geographical knowledge was very considerable, and would

have been tantamount to the discovery of the North-west passage, had this not been already actually achieved by the men of the Investigator. In recognition of the good work which he had performed, the Royal Geographical Society awarded Collinson its gold medal in 1858; but he had expected some official reward, and was much mortified by the scanty acknowledgment his service received. He never again applied for employment under the admiralty, though he acted on commissions on the naval defence of the Canadian lakes, and of the United Kingdom generally.

He attained his flag in 1862; became a vice-admiral in 1869, and admiral, on the retired list, in 1875, in which year he was also made a K.C.B. In 1857 he settled at Ealing, and there, in the society of his mother and sisters, he spent the remainder of his life. In 1862 he was elected an elder brother of the Trinity House, and in 1875 to be deputy-master, an appointment rarely conferred on an officer of the royal navy. He was an active fellow of the Royal Geographical Society, serving for many years on its council, and assisting in 1871 in editing the 'Hints to Travellers.' He also edited for the Hakluyt Society 'The Three Voyages of Martin Frobisher in Search of a Passage to Cathaia' (1867), and contributed in 1862 'Three Weeks in Canada' to Mr. Francis Galton's 'Vacation Tourists.' To the last, too, he took a great interest in the local affairs of his neighbourhood, with which he had closely identified himself, serving as churchwarden, on the local board, or in other offices of the parish and district. He died on 13 Sept. 1883 at Ealing, and was buried at the adjacent hamlet of Perivale, where a monument to his memory has been erected by subscription.

[O'Byrne's Nav. Biog. Dict.; Journal of the Royal Geographical Society, xvii. 130, xxv. 194; Proceedings of the Royal Geographical Society (new series), 1883, pp. 606, 734.] J. K. L.

COLLINSON, SEPTIMUS, D.D. (1739–1827), provost of Queen's College, Oxford, seventh son of Joseph and Agnes Collinson, was born at Gotree, near Huntsonby, Cumberland, on 11 Sept. 1739. He was brought up at Great Musgrave, Westmoreland, where his parents had purchased a small estate. He began his studies at Appleby grammar school, and then removed to Queen's College, Oxford, graduating B.A. in 1763 and M.A. in 1767 (*Cat. of Oxford Graduates*, ed. 1851, p. 142). In 1778 he was presented to the rectories of Dowlish Wake and Dowlish West, Somersetshire. He graduated B.D. in 1792, and D.D. in 1793. For some years he was one of the city lecturers at Oxford. In 1794 he accepted the college living of Holwell, Dorsetshire, but in 1796 was appointed provost of Queen's College. In 1798 he obtained the Margaret professorship of divinity, to which was annexed a prebend of Worcester cathedral. His lectures on the Thirty-nine Articles, though much admired at the time of their delivery, have never been printed. He was a frequent preacher before the university. He died at the college lodge on 24 Jan. 1827. He left 1,500*l.* to found a school in the parish of Great Musgrave, which is still in existence.

[Memoir by Rev. John Collinson, Newcastle, 1829, 8vo; Gent. Mag. xcvii. pt. i. p. 179; Nichols's Illustr. of Lit. i. 785.] T. C.

COLLIS, JOHN DAY (1816–1879), educational writer, son of the Rev. Robert Fitzgerald Collis, prebendary of Kilconnell, co. Galway, by Maria, daughter of Edward Bourke of Nun's Island, Galway, was born 24 Feb. 1816, and, after being educated at Rugby 1832–4 under Dr. Arnold, entered Merton College, Oxford, as a postmaster in the latter year. In 1835 he became Eaton scholar of Worcester College, proceeding B.A. 1836, M.A. 1841, and B.D. and D.D. 1860. He was elected to a fellowship at his college, and gained the Kennicott, and Pusey and Ellerton Hebrew scholarships, 1839–41. Having been nominated to the head-mastership of Bromsgrove in December 1842, that school, through his indomitable energy, grew to be one of the best educational establishments in England. The tercentenary of the grammar school was celebrated on 31 March 1853. In 1856, through his exertions, the chapel was built at a cost of 1,500*l.*, and new school rooms were erected and the old buildings enlarged and improved at a cost of 5,000*l.* He was nominated an honorary canon of Worcester Cathedral in 1854, and in 1856 was offered, but declined, the colonial bishopric of Grafton and Armidale. From 1863 to 1865 he held the Grinfield lectureship on the Septuagint at Oxford. His connection with Bromsgrove was severed in 1867 by his appointment to the vicarage of Stratford-on-Avon. During his incumbency Stratford church was restored and improved, and he completed the formation of the water terrace in the churchyard. He was the founder and first warden of Trinity College school at Stratford, 27 Jan. 1872. He married first, 18 June 1846, Josephine Martha, eldest daughter of John Chatfield Tyler of Kingswood, Gloucestershire, who died 16 Oct. 1868; and secondly, 11 Oct. 1871, Elizabeth, daughter of Edward Castleman of Chettle, Dorsetshire, and widow of Rear-admiral Douglas Curry

of Shottery Hall, Stratford-on-Avon. Collis died at Shottery Hall 1 April 1879, and was buried in the Bromsgrove cemetery on 4 April. He was the author of: 1. 'The Chief Rules of Greek Accentuation,' 1849. 2. 'Exercises and Examination Papers,' 1851. 3. 'The Chief Tenses of Latin Irregular Verbs,' 1854, thirty-four editions. 4. 'Ordination and other Sermons,' 1854 and 1869. 5. 'The Chief Tenses of Greek Irregular Verbs,' 1855, thirty-four editions. 6. 'Praxis Græca,' three parts, 1855–6, many editions. 7. 'Praxis Latina,' 1856. 8. 'Praxis Iambica,' 1857, seven editions. 9. 'Tirocinium Gallicum,' 1857, four editions. 10. 'Historical Notes on the Parish Church of St. John the Baptist, Bromsgrove,' 1859. 11. 'Pontes Classici,' No. I. A Stepping-stone from the beginning of Latin Grammar to Cæsar, 1860; and No. II. A Stepping-stone from the beginning of Greek Grammar to Xenophon, 1860. 12. 'Ponticulus Latinus, the History of Rome to the Destruction of Carthage,' 1860. 13. 'Ponticulus Græcus, Exercises from the Greek Testament, Æsop, and Xenophon,' 1860. 14. 'Praxis Gallica,' 1864. 15. 'Praxis Latina Primaria,' 1867. 16. 'German Card of Irregular Verbs,' 1875. 17. 'Pontes Latini,' eleventh edition, 1878. 18. 'Pontes Græci,' 1879. 19. 'The History of Bromsgrove School.'

[Stratford-on-Avon Herald, 4 and 10 April 1879; Times, 2 April 1879, p. 16; Illustrated London News, 9 April 1853, p. 277.] G. C. B.

COLLOP, JOHN (*fl.* 1660), royalist writer, whose name bears the letters M.D. on the title-page of his books, although we have been unable to trace him to any university, was the author of the following works:— 1. 'Poesis rediviva, or Poesie reviv'd' (London, 1656), a collection of short poems and epigrams dedicated to Henry Pierrepont, marquis of Dorchester. Much of the verse is directed against the puritan sectaries; some treats of the author's friends or leaders, like Dr. Field, Ussher, Chillingworth, and Hammond. The songs scattered through the volume show some lyrical capacity. 2. 'Medici Catholicon, or a Catholick Medicine for the Diseases of Charitie, by J. C., M.D.,' London, 1656; an interesting plea for universal toleration in religion. This work was reissued in 1667 with the new title 'Charity commended, or a Catholick Christian soberly instructed.' The author's initials appeared here. 3. 'Itur (*sic*) Satyricum, in Loyall Stanzas,' London, 1660; a short poem welcoming the Restoration.

[Collop's Works; Hunter's MS. Chorus Vatum in Add. MS. 24492, f. 13 *b*; Brit. Mus. Cat.] S. L.

COLLYER, JOSEPH, the elder (*d.* 1776), compiler and translator, was probably the son of Joseph Collyer, a bookseller, who from 1704 till his death (1724) was treasurer of the Stationers' Company. He edited the translation of Klopstock's 'Messiah,' made by his wife, Mary Collyer [q. v.], and was himself the author of: 1. A translation of Bodmer's 'Noah,' 1767. 2. 'A New System of Geography,' in conjunction with D. Fenning and others. 3. 'History of England from the Invasion of Julius Cæsar to the calling of the Parliament in 1774,' 14 vols. London, 1774–5, 12mo. 4. 'The History of Lady Sophia Sternheim,' translated from the German. He died on 20 Feb. 1776. His son Joseph [q. v.] became a celebrated engraver.

[Gent. Mag. xlvi. 95, xcviii. pt. i. p. 184; Nichols's Lit. Anecd. iii. 607, viii. 723, ix. 809; Cat. of Printed Books in Brit. Mus.; Watt's Bibl. Brit.; Lowndes's Bibl. Man. (Bohn), p. 501.] T. C.

COLLYER, JOSEPH (1748–1827), the younger, engraver, born in London on 14 Sept. 1748, was the son of Joseph Collyer (*d.* 1776) [q. v.] and Mary Collyer (*d.* 1763) [q. v.] Joseph Collyer, the son, studied for a short time under the engraver Anthony Walker, and applied himself to book illustrations with success. He attracted the notice of Alderman Boydell [q. v.], and was employed to make an engraving after David Teniers. In 1761 he received a premium from the Society of Arts; about nine years later he entered the Royal Academy, where he exhibited for the first time in 1770. He was admitted as a student in 1771. Sir Joshua Reynolds allowed Collyer to reproduce two of his paintings, 'Venus' and 'Una,' both engraved in the chalk manner. One of his large plates, published in 1784, was 'The Volunteers of Ireland' after F. Wheatley. In 1786 he was elected an associate engraver, and appointed engraver to Queen Charlotte. In 1815 he was master warden of the Stationers' Company. Among his engraved portraits may be mentioned those of the Princess of Wales and the Princess Charlotte (1799); George, duke of Montagu (1793); Sir Charles Grey, K.B. (1797); Sir Joseph Banks (1789); Kien Long, emperor of China (1796); Thomas Newton, bishop of Bristol; Miss Palmer (1785); William Whitehead (1787); Paul Whitehead (1776); and Sir William Young. Collyer also engraved the illustrations to Hervey's 'Naval History,' besides several plates after Rooker. He last exhibited at the Royal Academy in 1822, and died on 24 Dec. 1827.

COLLYER, MARY (*d.* 1763), authoress, whose maiden name was Mitchell, became the wife of Joseph Collyer the elder [q. v.] She is principally known as the translator of Gesner's 'Death of Abel' (1761). This work passed through numerous editions in England, Scotland, and Ireland. She had previously published in 1750, in two volumes, 'Letters from Felicia to Charlotte,' which recommended her to the notice of Mrs. Montague, Miss Talbot, and Mrs. Carter. The latter in 1761 spoke of her to Mrs. Montague as 'writing for the support of her family,' which, she adds, 'is a laudable employment.' Mrs. Collyer afterwards translated part of Klopstock's 'Messiah;' but dying in 1763, before it was completed, the remainder was translated and published by her husband about the end of that year in two volumes. The third volume did not appear till 1772, when the taste for this species of poetry, or mixture of poetry and prose, was beginning to decline.

[Lowndes's Bibl. Man. (Bohn), p. 883; Gent. Mag. xcviii. pt. i. p. 184.] T. C.

COLLYER, WILLIAM BENGO (1782–1854), minister of the congregational church and religious writer, was the only surviving child of Thomas Collyer, a builder of Deptford, where he was born on 14 April 1782. After a good education at the public school belonging to the Leathersellers' Company at Lewisham, he entered the old college of Homerton as a scholar in 1798. In 1800 he began his ministry to a small congregation at Peckham, over which he was ordained in December of the following year. Under his ministry the congregation speedily increased, and after the chapel had been several times enlarged, it was in 1816 rebuilt and reopened under the name of Hanover Chapel. Previous to this, he had in 1813 received an invitation to succeed to the pulpit at Salters' Hall Chapel, which, with the consent of the congregation at Peckham, he accepted, an arrangement being made that he should occupy both pulpits. In 1808 he received the degree of D.D. from the university of Edinburgh. He died in his seventy-second year in 1854. By his wife Mary, daughter and coheiress of Thomas Hawkes of Lutterworth, he left one daughter. Besides several sermons published at different periods throughout his life, Collyer was the author of 'Fugitive Pieces for the use of Schools,' 1803; 'Hymns designed as a Supplement to Dr. Watts,' 1812; 'Services suited to the Solemnisation of Matrimony, administration of Baptism, &c., with Original Hymns,' 1837; and several series of popular lectures on scriptural subjects, including 'Lectures on Scripture Facts,' 1807, 'Scripture Prophecy,' 1809, 'Scripture Miracles,' 1812, 'Scripture Parables,' 1815, 'Scripture Doctrines,' 1818, 'Scripture Duties,' 1819, and 'Scripture Comparison,' 1823.

[Notice, with portrait, in European Mag. vol. lxxii. (1817), pp. 407–10; Gent. Mag. June 1854, vol. xli. new ser. pt. i. 655–6.]

COLMAN of Cloyne, SAINT (522–600), was the son of Lenin, who, according to his pedigree in the 'Book of Leinster,' was ninth in descent from Mogh Nuadat, king of Munster, A.D. 166. His birthday is stated in the 'Martyrology of Tamlacht' to have been 15 Oct., and the year, which is not exactly ascertained, is believed to have been 522 (LANIGAN). He was brought up in heathenism and adopted the profession of bard, which required a special education. There were several degrees of rank in it, and to reach the highest twelve years of study were necessary. On completing his education he was attached to the court of the king of Cashel, and his duties there may be inferred from the following ancient description of the order generally: 'They were historians as well as poets; it was their duty to record the deeds of the kings, chieftains, and heroes; to describe their battles and victories; to register the genealogies and privileges of noble families, together with the bounds and limits of their lands and territories.' He was engaged in these important duties until somewhere about the forty-eighth year of his age. In 570 a dispute as to the succession to the throne of Cashel (or Munster) took place between two relatives, Aodh-*dubh* and Aodh-*caomh* (Hugh the dark and Hugh the handsome). To prevent the usual recourse to war, a meeting was arranged between the rival candidates, at which St. Brendan of Clonfert [q. v.] was present with the son of Lenin, and by their influence a compromise was effected, by which Aedh-*caomh* was acknowledged as king, and in due course was inaugurated with much ceremony. He was the first christian king of Cashel, and though the son of Lenin was the official bard the chief place in the proceedings was taken by St. Brendan, apparently because it was appropriate that a christian ecclesiastic should instal a christian king. During the proceedings circumstances led to the discovery of the shrine of Ailbhe of Emly, which had been stolen, but had fallen into a lake, the thieves having been drowned, probably when crossing it. The son of Lenin was one of those who found it, and then 'Brendan said it was not right that the hands which had held this sacred relic should be defiled henceforth (i.e. by heathen obser-

vances); hence it was that the son of Lenin offered himself to God and Brendan, and Brendan blessed him and changed his name.'

The adoption of christianity, however, made it necessary for him to resign his office, and as this implied the loss of his livelihood he acquainted the king with his difficulties, who granted him in perpetuity a remission of the tribute or rent which was due from his lands to the kings of Cashel, conferring the same favour on St. Brendan also. The name given to him by St. Brendan on his reception into the christian church was Colman, which is the diminutive of Colum, the equivalent of the Latin *columbus*, a dove. No less than two hundred and nine saints named Colman are enumerated in the 'Book of Leinster,' to the immense perplexity of the student of history. On becoming a christian Colman went to the school of St. Jarlath of Tuam to acquaint himself more fully with christian doctrine; after this the next notice we meet with of him is as engaged in preaching to the heathen population in the east of the county of Cork. He is described as then a 'religious and holy presbyter, who afterwards became a famous bishop.' Here a family connected with the reigning prince of the Deise, in the present county of Waterford, came under his influence, and becoming christians presented their child for baptism. Colman baptised him and named him Declan, ordering at the same time that 'he should be carefully reared, and when he reached his seventh year given in charge to a christian teacher if one could be found.' This was the well-known St. Declan [q. v.]

Colman is stated by Dr. O'Donovan to have been present at the great assembly of Drumceat, which took place in 590; but the passage to which he refers from a poem of Colman quoted in the account of the assembly does not assert that he was present. Of the further incidents which occurred between this period and his death, which took place on 24 Nov. 600, ten years after, we have no documentary evidence; but the connection of many places in the counties of Cork and Limerick with his name at this day proves the reality of his labours. His earliest settlement appears to have been at Cloyne, *cluain uamha*, the lawn of the cave. The cathedral and round tower are situated on a small limestone eminence in the midst of the valley, surrounded by rich meadows. In the rock is the cave extending in various branches underground to a great distance, from which the town derives its name. Here it is supposed Colman took up his abode as a place of security, and the ruins of his primitive oratory, known as Colman's Chapel, were still to be seen in 1813. In the north of the county is the small parish of Kilmaclenine (*cill-mac-Lenin*), the church of the son of Lenin, which was the property of the see of Cloyne down to the sixteenth century. Here about 1228 a colony of English settlers was introduced by the bishop of Cloyne, but the village was eventually destroyed and the inhabitants driven away by the natives. Colman belonged to the second order of Irish saints, who observed Easter according to the Irish usage, had the Irish tonsure, but used various masses or liturgies, some of which were derived from the British church. Five of Colman's sisters formed a small community in accordance with the practice of the old Irish church; this was known as 'the daughters of Lenin,' and their church, *cill-inghen Lenin*, has given its name to the well-known Killiney Hill, near Kingstown, where its ruins may still be seen. His day is 24 Nov., at which the 'Calendar of Oengus' describes him as 'Mac Lenini the Vehement,' and St. Brendan in a poem quoted in the 'Book of Munster' refers to him as follows:—

> Colman of Cluain uamha
> A height golden excellent prosperous:
> Sun-bright is our pleasant poet
> Pleasant royal pure.

COLMAN, ELA or ELO, SAINT (553–610), son of Beogna and Mor, the sister of St. Columba, was of the race of the Hy Neill. He is also termed Mac ui Seilli, having been twenty-second in descent from Fedhlim Sailne, head of the Dal Sailne or Dal Seilli. His parents lived in Meath, which being then devastated by the king of Leinster, they took refuge in Glen Foichle, now Glenelly, county of Tyrone, where Colman was born. The child was placed under the charge of a senior named Coemán, of Enach-truim, now Annatrim, near Slieve Bloom, in the Queen's County, and after a time he was sent to another monastery that he might see the piety and learning of its inmates. This place is not named, but may have been Hy, where his uncle, St. Columba, had not long before established his famous monastery. If this is so, the incident recorded in Adamnan's 'Life of St. Columba'

may be assigned to this period: 'Another day St. Columba while in his mother church called out, smiling a little, "Columbanus (Colmán), son of Beogna, who has commenced his voyage to us to-day, is at present in great danger in the tempestuous waves of the Charybdis of Brecan."' The Coire Brecain, as it was termed by the ancient Irish, or the Whirlpool of Brecan, was the channel between Ballycastle, in the county of Antrim, and the island of Rathlin. It was the terror of mariners, 'being at certain times so disturbed by the action of the tides that even in the absence of wind no small craft could live in it.' Having escaped these perils he arrived at Hy, and appears to have remained there until he was ordained a presbyter, when he was sent forth with some disciples to found an establishment for himself. First proceeding to that part of Ulster where lay the holy Bishop Macnisse of Condere, now Connor, he founded the abbey of Muckamore in the barony of Lower Massarene; here 'he stayed many days, and blessed the people of that city' (*civitas*, i.e. monastery). He has since been accounted joint patron with Bishop Macnisse of Connor. Returning to his own province of Meath, he presented himself before an assembly in which were Aedh mac Ainmire, king of Ireland, Aedh Slane, lord of the Hy Neill, St. Columba, St. Cainnech, and many others. He was honourably received by them, and appears to have made a request that land should be granted to him, on which St. Columba said, 'Give a portion of good land to our brother Colman that he may found a monastery.' They replied, 'Let him choose wherever he likes in the territory of the Hy Neill.' Ædh Slane, who was the next heir to the throne, and subsequently king of Ireland, offered a great wood in the south quarter of Fercall, in the King's County, called Fidh Elo, the wood of Ela. 'Thence shall I be named,' said Colman, i.e. Colman Ela. Then bestowing his blessing and receiving the freedom of that place from the authorities before many witnesses, he built a monastery in the middle of the wood, in a place where there was an abundance of water and pleasant fields. This was Land-Elo, the church of Ela, now Lynally, in the King's County, about a mile to the south-west of Tullamore, where he lies; Ela according to some having been the name of a stream, or, according to the 'Lebar Brecc,' of a woman. This transaction occurred about A.D. 580, when Colman was twenty-seven years of age.

The monks appear to have been much distressed for food at times. On one occasion, at Epiphany, St. Colman told the steward to furnish supplies for the festival. He answered that he had an abundance of spring water, but nothing else. Just at that moment, however, a crowd of people appeared bringing provisions. The difficulty of transporting food was equally great; a farmer having loaded his wagon with supplies was only enabled to convey it through the wood by a miracle; a monk visiting his relatives at a distance, and telling how St. Colman and his community were perishing of hunger, obtained large supplies of butter and other viands, but his friends were unable to take them to the monastery because a hostile tribe lay between. When four of his disciples were sent to dwell in a certain place, three of them died of hunger, and the fourth, refusing all nourishment, shared their fate 'that he might go to Christ.' On another occasion, travelling through Dalaraidhe in the present county of Antrim, and arriving at the river Mín, he found people assembled for the purpose of battle. He and his party went to the deepest part of the river. Here some of the people asked him in the name of Christ to make peace. Others, who belonged to the strongest side, seized the boats that the saint might not go across to make peace, but according to the story he walked across for the purpose. From this he and his party went to the house of Edan, son of Oengus, where they passed 'the holy Lord's day.' St. Colman seeing a man splitting wood on the pavement commanded him to rest from such work, for it was the Lord's day. Another day, finding them about to drown an illegitimate child, he rescued him and baptised him by the name of Chellan and had him taught the scriptures. He was about forty years of age when he paid his second visit to Hy, and it was on his parting from St. Columba that the latter said to those around, 'The holy man Columbanus (Colmán), to whom we gave our blessing when leaving, shall never see my face again in this world,' which was fulfilled, for St. Columba died the same year (595).

Towards the close of his life St. Colman visited Clonard and Clonmacnois, and expressed an anxious wish to be buried at the former place. His death took place on 26 Sept. 610, about the fifty-sixth year of his age; in after years his remains were taken up and enclosed in a shrine of such marvellous workmanship that it was regarded as miraculous. In the 'Lebar Brecc' he is famed as one of the three great Colmans of Meath, the others being Colman of the Coffer, and Colman son of Luachan; in the 'Calendar of Oengus' he is

> Colman of Lann Ela,
> With perfection of high readings,
> So that he is splendid and praiseworthy,
> The great John of Ireland's sons;

i.e. 'like John for wisdom and virginity.' The crosier of St. Colman was preserved at Lynally in the seventeenth century.

O.

COLMAN, SAINT (*d.* 676), bishop of Lindisfarne, sometimes confused with St. Colman, an Irish martyr put to death in Austria, and erroneously credited with the conversion of Penda, king of the Mercians (FORBES, *Kalendar of Scottish Saints*, 303), was probably a native of Mayo. He became a monk of the Scottish (Irish) monastery of Hy or Iona, and left it to preach the Gospel to the English. He was consecrated bishop of Lindisfarne in 661 after the death of Finan. On his succession the dispute between the Roman and Celtic parties on the date of Easter and on other usages became especially violent. The Northumbrian court was divided by the quarrel; King Oswiu, who greatly loved Colman, and who had been baptised by the Celtic monks, upheld the doctrine of his early masters. His queen Eanflæd, and his son Alchfrith [q. v.], who was associated with him in the kingship, were on the side of the Roman party which found its ablest advocate in Wilfrith. In 664 the kings held a synod at Streanaeshalch (Whitby), in the convent presided over by the abbess Hild, to settle the dispute between the churches. Thither came Colman and his Irish clergy, and on their side were Bishop Cedd [q. v.] and the abbess. Colman, who was then acting as bishop in Yorkshire during the vacancy of the see (EDDIUS, *Vita Wilfridi*, c. 10), was the spokesman of the Scottish party, and Wilfrith conducted the debate on the other side. In answer to Wilfrith, who sneered at the isolated position of the Celtic church, and derided its teaching, Colman warmly replied that he and his party were followers of St. John, and later on argued that men so holy as Columba [q. v.] and his successors could never have acted in opposition to the divine will. Wilfrith declared that St. Peter was to be preferred to Columba, and in the peroration of his speech quoted Matthew xvi. 18 as a proof of the dignity of the chief of the apostles. Then King Oswiu asked: 'Is it true, Colman, that these things were said by the Lord to Peter?' And when the bishop said that it was true, he asked again whether he could assert that his Columba had received any such power. 'No,' replied Colman. Then the king declared that he would be on the side of the doorkeeper of heaven lest when he should come to the gates he should find none to let him in. All agreed in the king's decision, and so Colman and his party were defeated (BÆDA, *Hist.* iii. 25).

Colman would not yield to the decision of the synod, indeed it is said that he dared not do so for fear of his countrymen (EDDIUS, c. 10). Finding that his doctrine was slighted and his party despised, he determined to return to Ireland to take counsel with his friends there. It is often asserted (*Dict. of Christian Biog.* i. 599) that the place where he intended to take refuge was Hy, and that he went thither to seek the advice of the 'family' of Columba. Bæda, however, who says (*Hist. Eccl.* iv. 26) 'in Scottiam regressus est,' never uses 'Scottia' except in the sense of Ireland (SKENE), and it may therefore be considered certain that Colman set out for Ireland in order to seek the opinion of the abbots of the great monasteries there on the course to be pursued on the overthrow of the Celtic church in England. Before he left he asked and obtained from Oswiu, 'who loved him for the wisdom that was in him,' that the brethren who were to remain at Lindisfarne might be under the charge of Eata, abbot of Melrose. Then he took with him part of the bones of Aidan [q. v.], the founder of the house, leaving the rest in the church, and bidding the monks lay them in the sacristy, and departed in company with the Irish monks and such of the English brethren as clung to the Celtic usages and wished to follow him. Instead of going straight to Ireland, he and his party went to Hy, and dwelt there for four years. His route is perhaps marked by the dedication of the church of Fearn in Angus to St. Aidan, and that of Tarbet in Easter Ross to St. Colman. During his stay at Hy he must have told the abbot Cummene the particulars of his dispute with Wilfrith, and how he appealed to the holiness and the miracles of Columba, and so probably led the abbot to write his 'Life' of the saint which is still extant, and is embodied in the 'Life of Adamnan' (SKENE). In 668 he and his company left Hy and sailed for Ireland, taking with them the sons of Gartnaith, the king of Alban, and 'the people of Skye,' i.e. the Columban clergy there, who after a while returned to their old home (TIGHERNAC). They settled in Inisboufinde, or, as it is now called, Inishbofin (the island of the white heifer), in the barony of Murrisk, off the coast of Mayo, and there Colman built a monastery. After a while, however, the monks of the two nations disagreed because the Irish left the

monastery during the summer, and went each one to his old home or whither he would, and when they came back at the approach of winter, expected to share in the harvest that had been gathered in during their absence by the toil of their English brethren. Accordingly Colman bought land in Mayo, obtaining it at a small price, for the noble who sold it added the condition that the monks should pray for him, and there he built another monastery, and settled the Englishmen of his party in it. The Irish monks he kept on the island, and he himself remained with them there. He died at Inishbofin on 8 Aug. 676. The ruins of his church are still to be seen in the town-land of Knock. St. Colman's day in the Irish calendar is 8 Aug., and in the Scottish 18 Feb.

COLMAN, GEORGE, the elder (1732–1794), dramatist, was born in Florence, in which capital his father, Francis Colman, resided as envoy at the court of Tuscany. His mother, Mary Gumley, was sister to Mrs. Pulteney, subsequently Countess of Bath. A scandalous suggestion—that George Colman was in fact the son of William Pulteney, afterwards earl of Bath, by whom after the death of Francis Colman he was befriended, and who left him a handsome annuity—had sufficient currency to lead Colman in later years to publish a denial. From Francis Colman, who was a dilettante musician and a correspondent of Handel, and who for Owen McSwiney, at one time manager of Drury Lane Theatre, corresponded with Senesino and other Italian vocalists, George Colman assumably derived his dramatic tastes. His name of George was bestowed upon him after George II, who, as was customary in the case of a child of an ambassador, was his sponsor. For a similar reason his only sister was named after the queen, Caroline. Colman was baptised in the Duomo of Florence on 18 April 1732. A year later (20 April 1733) his father died, and his mother was assigned a house near Rosamond's Pond, in the south-west corner of St. James's Park, where she resided till her death, May 1767. The charge of young Colman was undertaken by William Pulteney, by whom he was sent to Westminster School. His first literary production, consisting of 'Verses to the Right Hon. Lord Viscount Pulteney,' his cousin, was written at Westminster. It subsequently appeared in the 'St. James's Magazine,' edited by his friend and schoolfellow, Robert Lloyd. In 1751, having at the request of Lord Bath 'stood over' for a year, making his entire stay at Westminster five years, he 'was elected head to Oxford' (Forshall, *Westminster School Past and Present*, p. 242), entering at Christ Church on 5 June 1751. His first published production consisted of 'A Vision,' contributed to the 'Adventurer' of Dr. Hawkesworth, in which it appeared as No. 90, on Saturday, 15 Sept. 1753. On 31 Jan. 1754 he began with Bonnell Thornton 'The Connoisseur,' which lasted until 30 Sept. 1756. While at Oxford, where he took his B.A. degree in 1755, Colman was entered by Lord Bath at Lincoln's Inn, where he was called to the bar in 1757. His position about this time, with his uncle urgently persuading him to aim at legal distinction, his aunt recommending him to take orders, and his own temptations to literature, is depicted in 'The Law Student' (*Works*—Prose, ii. 284), which contains a few interesting autobiographical particulars. His chief associates at this time were Lloyd, Bonnell Thornton, and Churchill, and he also made the acquaintance of Cowper. An intimacy with Garrick, which soon ripened into a friendship, interfered greatly with his chance of legal preferment. In 1759 Colman, who the previous year had proceeded M.A., went on the Oxford circuit, receiving from his uncle, who addressed him constantly as 'Dear Coley,' all encouragement in so doing. Not until the death of Lord Bath, however, who had become reconciled to Colman's literary pursuits and proud of his reputation, was the bar definitely abandoned. Colman's acquaintance with Garrick began through his dedicating to the actor a pamphlet entitled 'Critical Reflections on the Old English Dramatick Writers' (*ib.* ii. 107), afterwards prefixed to Coxeter's edition of 'Massinger,' or, according to another account, presenting him with an unsigned pamphlet entitled 'A Letter of Abuse to David Garrick, Esq.,' 1757–8, in which, at the expense of Theophilus Cibber and Macklin, Garrick is warmly if covertly complimented. The 'Ode to Obscurity and Oblivion,' parodies on those of Mason and Gray (*ib.* p. 273), were published in 1759. Colman was now known as a writer, and as a man of taste. Murphy, in February 1758, quotes in favour of his farce, 'The Upholsterer,' the

opinion of Colman; Churchill, in his 'Rosciad' (1761), lines 65–6, speaking of the judge of art to be appointed, writes:

For Colman many, but the peevish tongue
Of prudent age found out that he was young.

On Friday, 5 Dec. 1760, after 'Merope,' was produced at Drury Lane 'Polly Honeycombe,' a 'dramatic novel,' otherwise a farce, Colman's first dramatic attempt. It was well acted by Miss Pope, who acquired much reputation as the heroine, Yates, and King, and was a success. It was anonymous, and was ascribed to Garrick, who, however, in some lines he added to the prologue, denied the authorship. The secret was kept out of regard to Lord Bath until, on 12 Feb. 1761 (not 26th, as stated by Peake, the biographer of the Colmans), the conspicuous success of the 'Jealous Wife' rendered impossible the further concealment of Colman's dramatic proclivities. This comedy, derived in part from 'Tom Jones,' and acted by Garrick, Yates, Palmer, King, Moody, Mrs. Pritchard, and Mrs. Clive, was the most popular piece of its epoch. The 'St. James's Chronicle' was started by Bonnell Thornton, Garrick, and Colman. In this the fifteen numbers of 'The Genius' by Colman were printed, 1761–2. On 6 March 1762 'The Musical Lady,' rejected as surplusage by Garrick from 'The Jealous Wife,' and converted into a two-act farce, was played at Drury Lane. During the Encænia at Oxford (July 1763) in honour of the peace Colman published daily the not very brilliant satire entitled 'Terræ Filius,' in which, under the name of Mr. and Mrs. Folio, Newberry the publisher and his wife appear to be held up to ridicule. On 8 Oct. 1763 Colman gave at Drury Lane his alteration of 'Philaster,' in which Powell, soon to become a great favourite, made his first appearance on the stage. The alterations of Colman are in the main judicious. On 4 Nov. of the same year he produced at the same house 'The Deuce is in him,' a two-act comedy founded on two tales of Marmontel. Prattle in this piece, played by King, appears to have been the first of the so-called 'patter parts' in which, in days comparatively recent, Charles Mathews won much reputation. On 8 July 1764 the Earl of Bath died, leaving Colman an income of nine hundred guineas. His brother, General Pulteney, who came in for the bulk of the property, extended to Colman a protection scarcely less active than that of Lord Bath. A translation of the 'Comedies' of Terence, 4to, 1765, was received with signal favour, and did much to raise Colman in public estimation. It won enthusiastic praise from scholars of the day, and in subsequent times from Southey. To a translation of 'Plautus,' begun by Bonnell Thornton, Colman contributed one play, 'The Merchant.' In connection with Garrick Colman now wrote 'The Clandestine Marriage,' a highly successful comedy, played at Drury Lane on 20 Feb. 1766. The refusal of Garrick to take the part of Lord Ogleby, which was assigned to King, led to a temporary estrangement between the joint authors. 'The English Merchant,' a comedy founded on 'L'Écossaise' of Voltaire, was given at Drury Lane on 21 Feb. 1767. It brought Colman, in subsequent years, a letter from Voltaire, behind the polite phraseology of which lurks more than a suspicion of satire. A step which converted into anger the coolness of Garrick, and influenced unfavourably in many ways the fortunes of Colman, was now taken. The death of his mother had led to an accession of fortune. With these and other means, in connection with Powell the actor, Harris, and Rutherford, he purchased Covent Garden Theatre. More serious than the annoyance of Garrick was the vexation of General Pulteney, who had always disapproved of Colman's theatrical tastes, and had offered him a seat in parliament and a provision if he would quit the stage and his connection with Miss Ford, the mother of George Colman the younger [q. v.], and Colman's subsequent wife. The refusal of Colman is held to have cost him a large estate, which had been willed to him. Since the death of John Rich in 1762, Beard, his son-in-law, had conducted Covent Garden, principally with musical entertainments. According to powers conferred on him by the will of Rich, Beard sold for the sum of 60,000*l.* the two patents granted by Charles II, the purchasers being Colman and his associates. The conduct of the stage was by agreement left to Colman. On 14 Sept. 1767 Covent Garden opened under Colman's management with 'The Rehearsal' and a prologue by Whitehead, in lieu of one refused on the ground of illness by Dr. Johnson. A few weeks later, on 26 Oct. 1767, General Pulteney died. Disputes among the four proprietors broke out at once, and a pamphlet warfare, in which others joined, was waged by Colman and Powell on the one side, against Harris and Rutherford on the other. So trivial and personal are the causes of quarrel that the pamphlets, though not wanting in wit, are unreadable to all except those who, in studying the history of the stage, are compelled to take them into account. Litigation was a natural result of these proceedings. Into this a new disputant, in the person of Macklin, entered as an opponent of Colman, with the result that

chancery proceedings were continued for some years, with sufficiently damaging results to the management. At the end of nine years Macklin won his cause (*Memoirs of Macklin*, 1804, pp. 271–2). New pieces, including Goldsmith's 'Good-natured Man,' were, however, produced, and new actors, among whom were Spranger Barry and Miss Dancer, were brought on the stage. Colman, moreover, revived 'Cymbeline' on 28 Dec. 1767, and produced a version of 'King Lear,' altered by himself, on 20 Feb. 1768. In four acts of this Shakespeare, with some alteration, is substituted for Tate's miserable version. In the last act a happy termination is supplied. Colman's additions, though commended in their day, contrast, it is needless to say, unpleasantly with the original text with which they are associated. Beaumont and Fletcher's comedy, 'The Beggar's Bush,' was given on 14 Dec. 1767 as an opera, entitled 'The Royal Merchant.' At this time Colman was the subject of an onslaught from William Kenrick in a satire entitled 'A Poetical Epistle to George Colman.' Colman underwent a great loss in the death (3 July 1769) of Powell, his partner, friend, and principal actor. Two years later, in April 1771, Colman lost his wife. For Powell Colman wrote a prologue, which was recited at Bristol for the benefit of the actor's family by Holland, and an epitaph, which is on Powell's tomb in St. Mary Redclyffe at Bristol. In November 1771 the differences between the partners were settled, and on 30 Nov. of the same year Colman had a fit in the theatre, from which he recovered. On 15 March 1773 the management produced Goldsmith's 'She stoops to conquer.' Colman resigned, on 26 May 1774, his post of manager at Covent Garden. In addition to the pieces named, he had during his seven years of management produced, among other works, his own 'Oxonian in Town,' a two-act comedy, 7 Nov. 1767; 'Man and Wife,' a three-act comedy, 7 Oct. 1769; 'The Portrait,' a burletta from the French, 22 Nov. 1770; 'The Fairy Prince,' a masque founded on Ben Jonson's 'Oberon,' 12 Nov. 1771; 'Achilles in Petticoats,' an opera in two acts, altered from Gay, 16 Dec. 1773; an alteration of 'Comus,' 16 Oct. 1773; and the 'Man of Business,' a five-act comedy extracted from Terence and other writers, 31 Jan. 1774. After a retirement to Bath, Colman, who spent most of his time at the Literary Club, started in 1764, in the company of Dr. Johnson, Boswell, Beauclerck, Bunbury, &c., contributed to the 'London Packet' some essays called 'The Gentleman.' The first number appeared on 10 July 1775, the last, which is signed 'The Blackguard,' on 4 Dec. 1775. Among his associates, past or present, were Woodfall, master of the Stationers' Company, Glover, author of 'Leonidas,' Hawkesworth, Goldsmith, Smollett. On 7 March 1776 Garrick, whose feud with Colman had been healed, and who had maintained with him an active correspondence, produced 'The Spleen, or Islington Spa,' a two-act comedy of Colman, and on 13 Jan. 1776 a version by Colman of Ben Jonson's 'Epicœne, or the Silent Woman.' In 1776 the result of negotiations with Foote was the transfer to Colman of the Haymarket Theatre. Foote died on 21 Oct. 1777, relieving Colman from an annuity of 1,600*l.*, which was part of the transaction. Engaging Henderson, who was a country actor, with Palmer, Parsons, Bannister, Miss Farren, and others, and bringing forward Edwin, whom Foote had kept in the background, Colman got together a good company, with which the Haymarket opened with 'The English Merchant' on 15 May 1777; after which, on account of the players being engaged at Drury Lane, it closed for twenty days. On the 8th of the same month Colman supplied the epilogue to 'The School for Scandal,' produced at Drury Lane. The season of 1778 opened on 18 May with Colman's unprinted 'Female Chevalier,' an alteration of 'The Artful Husband' of Taverner, intended to turn to advantage the curiosity stirred by the Chevalier d'Éon. 'The Suicide,' a four-act drama of Colman's, also never printed, followed on 11 July with little success. Better fortune attended his alteration of Beaumont and Fletcher's 'Bonduca,' produced 30 July 1778. With his own prelude, 'The Manager in Distress,' Colman began on 30 May his season of 1780. On 2 Sept. 1780 he played his extravaganza (unprinted), 'The Genius of Nonsense.' The chief novelty of the season of 1781 was the 'Beggar's Opera,' played with women in the male characters, and *vice versa*. This absurd experiment proved very remunerative. On 16 Aug. 1782 was produced 'The Female Dramatist,' the first dramatic essay of George Colman the younger. In 1783 Colman published a translation of Horace's 'Art of Poetry,' with a commentary, in which he advanced a theory concerning the poem which won the approval of Hurd, bishop of Worcester, Walpole, and the Wartons. 'The Election of the Managers,' an 'occasional prelude' of Colman's, served, 2 June 1784, for the reopening of the Haymarket. With Reynolds, Burke, Sir John Hawkins, and others Colman was pall-bearer at the funeral of Dr. Johnson, 20 Dec. 1784. After the close of the theatre in 1785 Colman, then at Margate, had a stroke of paralysis. Some

progress towards recovery was made, but the mind remained enfeebled. In 1787 he published in 3 vols., under the title of 'Prose on Several Occasions, accompanied with some Pieces in Verse,' his miscellaneous essays, introductions, prologues, epilogues, and poems, and wrote some particulars of his life, which were published under the care of Richard Jackson, his executor, in London in 1795, 8vo. This has little autobiographical information, and is principally occupied with defending himself from the charge of having, by his theatrical proceedings, forfeited the respect of General Pulteney, and with a vindication of his legitimacy. Growing feebler in mind, Colman was put under restraint in Paddington, where on 14 Aug. 1794 he died, at the age of sixty-four. His remains are in the vaults under Kensington Church. Colman was a man of tact, enterprise, and taste; his plays are ingenious and occasionally brilliant, and more than one of them remains on the acting list. The characters are as a rule well drawn, and types of living eccentricity are well hit off. He was extravagant and ostentatious, but preserved during his life the esteem and affection of the best men of his day. Byron contrasted him favourably with Sheridan, saying in a well-known passage in his 'Memoirs:' 'Let me begin the evening with Sheridan and finish it with Colman. Sheridan for dinner, Colman for supper,' &c. His prologues, epilogues, and occasional pieces are often very happy. In addition to the pieces mentioned, a selection from which was published under the title of 'Dramatic Works' in 1777, 4 vols. 8vo, there were acted 'The Fairy Tale,' from 'Midsummer Night's Dream,' Haymarket, 18 July 1777; 'New Brooms,' Drury Lane, 21 Sept. 1776; 'The Spanish Barber, or the Fruitless Precaution,' from 'Le Barbier de Séville' of Beaumarchais, Haymarket, 30 Aug. 1777; 'Polly,' an opera altered from Gay, Haymarket, 19 June 1777; 'The Sheep Shearing,' from Garrick's alteration of 'The Winter's Tale,' Haymarket, 1777; 'The Separate Maintenance,' a four-act comedy, Haymarket, 31 Aug. 1779; 'The Manager in Distress,' Haymarket, 30 May 1780; 'Harlequin Teague, or the Giant's Causeway,' pantomime, Haymarket, 1782; 'Fatal Curiosity,' a tragedy altered from Lillo, 29 June 1782; 'Tit for Tat,' comedy altered from the 'Mutual Deception' of Joseph Atkinson, Haymarket, 29 Aug. 1786; 'Ut Pictura Poesis,' his last dramatic production, from Hogarth's print, 'The Enraged Musician,' Haymarket, 18 May 1789. A complete collection of Colman's dramas has not been made, and many of them have never been printed. Colman edited, in 1778, 'The Dramatic Works of Beaumont and Fletcher,' 10 vols. 8vo. This was reprinted by Percival Stockdale with the works of Ben Jonson, also edited by Colman, 1811, 4 vols. royal 8vo. The preface to Beaumont and Fletcher is included in 'Prose on Several Occasions,' &c. ii. 149, in which appears also the appendix to the second edition of the translation of Terence, 'Remarks on Shylock,' 'Orthopædia, or Thoughts on Publick Education,' a scene from 'The Death of Adam' of Klopstock, 'The Rolliad, an Heroick Poem,' written in 1759, &c.. Stories concerning Colman, mostly to his credit, are to be found in many quarters. O'Keefe speaks of him as 'a man of strict probity.' Manuscript letters of Colman and his father are in the British Museum. According to Nichols's 'Illustrations' Colman threatened an edition of Shakespeare.

J. K.

COLMAN, GEORGE, the younger (1762–1836), dramatist, miscellaneous writer, and theatrical manager, the son of George Colman the elder [q. v.], was born on 21 Oct. 1762. His mother, whose name was Ford, is said to have been an actress, and to have lived in close relations with Mossop the actor, previous to forming a similar intimacy with the elder Colman, whom she ultimately married. Young Colman was placed at a fashionable school in Marylebone, under Dr. Fountain, which he quitted the day of his mother's death, 29 March 1771. After a short stay with his father in Richmond, he was sent in 1772 to Westminster School. A narrow escape from drowning while bathing in the Thames is the only incident of his school life worth mentioning. At his father's house in Soho Square he made the acquaintance of Johnson, Goldsmith, Garrick, and many other celebrities, principally members of the Literary Club. His father's position offered him an early initiation into theatrical life, and private theatricals, in which during three years he took part at Wynnstay, the seat of Sir Watkin Williams Wynn, fostered his

taste for the stage. In January 1779 Colman matriculated at Christ Church. His life at Oxford was, by his own confession, irregular, and in the autumn of 1781 he was removed from Oxford and sent to complete his education at King's College, Aberdeen, whither he went in charge of the Haymarket treasurer, Jewell. Of the vicissitudes of this journey, of the routine of education in King's College, and of his life in Scotland, he gives in his 'Random Records' an amusing account. While in Aberdeen he commenced to write, his first publication being 'The Man of the People,' a satire upon Fox. This he describes as a schoolboy tract. He also wrote a musical farce in two acts, 'The Female Dramatist,' which he sent to his father. This was anonymously produced at the Haymarket on 16 Aug. 1782 for the benefit of Jewell, and was not printed nor again acted. 'Two to One,' a three-act musical comedy, also written in Aberdeen, was sent to London and accepted by the elder Colman. It was not acted, however, until 19 June 1784, when Colman, whose period of banishment was over, was present to witness its success. In a happy prologue by Colman the elder the author is spoken of as 'a chip of the old block.' The songs only of 'Two to One' were printed, 8vo, 1784. The music was by Dr. Arnold. At the Haymarket the following pieces of Colman saw in succession the light: 'Turk and no Turk,' 9 July 1785; 'Inkle and Yarico,' a musical comedy taken from No. 11 of the 'Spectator,' 8vo, no date (1787), 4 Aug. 1787; 'Ways and Means, or a Trip to Dover,' 8vo, 1788, 10 July 1788; 'Battle of Hexham,' musical drama, three acts, 8vo, 1808, 11 Aug. 1789; 'Surrender of Calais,' musical drama in three acts, 8vo, 1808, 30 July 1791; 'Poor old Haymarket, or Two Sides of the Gutter,' 8vo, 1792, a prelude, 15 June 1792; 'Mountaineers,' from 'Don Quixote,' 8vo, 1795, 3 Aug. 1793; 'New Hay at the Old Market,' an occasional drama in one act, afterwards in a reduced form known as 'Sylvester Daggerwood,' 8vo, 1795, 9 June 1795; 'The Heir at Law,' 8vo, 1808, 15 July 1797, a five-act comedy, still retaining possession of the stage. During this period Colman the elder, who had been stricken with paralysis (1785), showed signs of mental derangement, and the management of the theatre devolved in 1789 upon his son. Like his father, Colman had been designed for the bar. He had chambers in King's Bench Walk and kept a few terms at Lincoln's Inn. His legal studies proceeded, however, no further. On 3 Oct. 1784 he married at Gretna Green Miss Clara Morris, an actress of small parts at the Haymarket. This marriage Colman kept a secret from his father, who disapproved of the connection. When it was at length revealed, the pair were again married, 10 Nov. 1788, at Chelsea Church. Colman meantime had begun a feud with the critics which lasted through his life. In his epilogue to 'Ways and Means,' spoken by Palmer in the character of a newspaper critic, he opened the battle with more spirit than judgment. Upon the death of his father in 1794 Colman purchased the Haymarket patent. 'The Iron Chest,' a three-act drama, taken from Godwin's 'Caleb Williams,' with music by Storace, Drury Lane, 12 March 1796, was the first play of Colman's produced elsewhere than at the Haymarket. Though it remains an acting play, and has supplied Kean and other tragedians with a favourite character, it was at first a failure. Colman attributed the responsibility of this to Kemble, the exponent of Sir Edward Mortimer. To the first published edition, accordingly, he affixed a petulant, abusive, and ill-natured preface, afterwards suppressed, which has rendered the edition a bibliographical rarity. 'Blue Beard, or Female Curiosity,' 8vo, 1798, a musical entertainment, was acted at Drury Lane (sixth time), 23 Jan. 1798, with signal success. 'Feudal Times, or the Banquet Gallery,' 8vo, 1799, a two-act drama, followed at Drury Lane, 19 Jan. 1799. 'Poor Gentleman,' 8vo, 1802, a comedy produced at Covent Garden, 11 Feb. 1801, was an essay in a higher line. 'John Bull, or an Englishman's Fireside,' comedy, 8vo, no date (1805), Covent Garden, 5 March 1803, set the seal on Colman's reputation, and is indeed his masterpiece. It was written under pressure for money and extracted act by act. Harris, the manager, refusing supplies till it was finished, Colman, it is said, 'wrote the fifth act in one night, on separate pieces of paper,' throwing them on the floor as he finished, whence they were picked up by Fawcett after Colman had gone to bed. Then followed 'Who wants a Guinea?' a three-act comedy, 8vo, 1805, 18 April 1805. 'We fly by Night, or Long Stories,' a farce with songs, 8vo, 1806, Covent Garden, 28 Jan. 1806. This piece was published under the name of Arthur Griffinhoofe, as were 'Review, or the Wags of Windsor,' a musical farce (Dublin, pirated edition, 12mo, 1801), London, 8vo, 1806; Haymarket (second time of performance), 2 Sept. 1800; 'Gay Deceivers, or More Laugh than Love,' taken from 'Les Événements Imprévus' of Hell, music by Grétry, 8vo, 1804, Haymarket, 22 Aug. 1804; 'Love laughs at Locksmiths,' from 'Une Folie' by Bouilly, music by Méhul, 8vo, 1808, Haymarket, 25 July 1803. Colman had taken from 'Caleb Quotem and

his Wife, or Paint, Poetry, and Putty!' acted at the Haymarket, 6 July 1798, under the altered title of 'Throw Physic to the Dogs,' the very popular character of Caleb Quotem; the 'Review' involved Colman in a dispute with Lee, its author, who with some justice objected to the appropriation, and published his piece in 1809 with a preface in which Colman's behaviour is reprehended. 'Blue Devils,' from the French of Patrat, a farce, 8vo, 1808, was given at Covent Garden, 24 April 1798, and transferred to the Haymarket, 12 June 1798. 'The Africans, or War, Love, and Duty,' a 'pastoral' from 'Florian,' at the Haymarket, 29 July 1808; and 'X. Y. Z.,' a farce, at Covent Garden, 11 Dec. 1810. The piece last named was acted only once, an injunction against its performance having been obtained in chancery by Morris, Colman's brother-in-law and partner in the management. 'The Law of Java,' three-act play, 8vo, 1822, was given at Covent Garden, 11 May 1822. A collection of these plays has not been made in England, though one in four volumes 16mo has been issued (Paris, 1827), with an original life of the author (by J. W. Lake). Some of the plays have never been printed, of others the songs only exist. Manuscript copies of some, including one or two which Colman not too ingenuously claims to have destroyed as worthless, were in the collection of the Duke of Devonshire, to whom they were presented by 'Mrs.' Colman. Many of these works are included in the collections of Duncombe, Cumberland, Lacy, and the 'London Stage.' Colman's plays are often briskly written, and certain characters, such as Dr. Pangloss, Dr. Ollapod, Dennis Brulgruddery, &c., remain to this day test characters for comedians. For many of his plays he received what were then held large sums. For the 'Poor Gentleman' and 'Who wants a Guinea?' he was paid 550*l.* each. For 'John Bull,' the most attractive and remunerative (to the management) piece of its day, he received in all 1,200*l.* These sums and the profits of the theatre were swallowed up in extravagance and ostentation. Almost from the outset Colman's recklessness involved him in disputes and litigation. He lived for some time in an obscure chamber at the back of the Haymarket Theatre, and afterwards, under the name of Campbell, in a cottage a few miles from town. In 1805 he disposed of shares for 8,000*l.* in the theatre to David Morris (his brother-in-law), Winston, and an attorney named Tahourdin, who subsequently assigned his share to Morris. Quarrels soon began, and in 1810 Colman and Winston were engaged in continuous litigation with Harris. In consequence of these proceedings the salaries of principal actors were not paid, and other irregularities were made public. Colman's monetary difficulties compelled him to reside in the King's Bench. With or without leave, however, he made frequent sorties. On one occasion permission was obtained for him by the Duke of York, his constant patron, to dine with him at Carlton House to meet George IV, then prince regent, with whom he took some comical liberties which were pardoned. From the King's Bench Colman managed the Haymarket. In 1813, however, so bitter was the feud, no performance could be given at the theatre. In the following year it reopened, though litigation continued. On 13 May 1820, by which time he had disposed of his share of the theatre to Morris, Colman was appointed lieutenant of the yeomen of the guard, a post ordinarily sold, but given him by George IV. This office by permission he afterwards sold. On 19 Jan. 1824 Colman was appointed examiner of plays. This post he held until his death. His conduct in it has subjected him to not unreasonable condemnation. Himself the author of some of the least decent publications of his day, he showed himself squeamish beyond precedent in the task of censor, his proceedings being at once tyrannical, futile, and rapacious. Not only did he cut out all reference to the deity, every form of prayer or hymn, and even such modified forms of apostrophe as 'O Lord!' and 'demmee!' but he objected to the use of words such as 'heaven' and 'providence,' and would not even allow a lover to address his mistress as an 'angel.' When examined in 1832 before a committee of the House of Commons appointed to inquire into the state of dramatic literature, he with apparent seriousness defended the preposterous severity. The works of Colman in which he permitted himself the greatest license were his comic poems. The first of these appeared under the title of 'My Nightgown and Slippers,' London, 4to, 1797. It was reprinted, London, 1802, crown 8vo, and 1839, 12mo, with additional tales, under the title of 'Broad Grins.' 'Poetical Vagaries' followed, 4to, 1812. In 1813, 4to, appeared 'Vagaries vindicated, or Hypocritic Hypercritics. A Poem addressed to the Reviewers.' Lastly in this line came 'Eccentricities for Edinburgh,' Edinburgh, no date (1820?). The stories were written in imitation of 'Peter Pindar' (Wolcot), and are very humorous and some of them extravagantly indecent. They brought upon Colman severe reprimands, especially at the hands of the 'Quarterly Review,' viii. 144. This magazine he answered in the 'Vagaries vindicated,' with the result of receiving a

further castigation (ix. 246). These poems, frequently reprinted, were collected under the title of 'The Humorous Works of George Colman,' London, no date, 8vo. Colman wrote in addition many prologues and epilogues to occasional pieces and many songs, principally comic. The best-known of these are 'Mynheer Van Dunck,' set to music as a glee by Bishop, and 'Unfortunate Miss Bailey.' He published 'Posthumous Letters from various Celebrated Men addressed to Francis and George Colman the Elder,' London, 1820, 4to. Colman is said by Peake, his biographer (*Memoirs of the Colman Family*, ii. 331), to have espoused in secret nuptials Mrs. Gibbs, a pretty and an accomplished actress, who played successfully the heroines of many of his pieces, the characters being in many cases designed for her. The legitimacy of this union is called in question by the theatrical publications of the day. All admit, however, that Mrs. Gibbs was a woman of character generally good, and many striking stories are told of her generosity and nobleness of nature. She was a Miss Logan, made her début at the Haymarket on 18 June 1783 as Sally in the elder Colman's 'Man and Wife,' and is first heard of as Mrs. Gibbs during Palmer's tenure of the Royalty, 1787. Colman suffered much from gout; a severe attack in November 1830 disabled him. On 17 Oct. 1836 he died in Brompton Square, and was buried beside his father under the vaults in Kensington Church.

'The Circle of Anecdote and Wit,' which bears Colman's name, went through many editions, but was disowned by him. 'Memoirs of the Life, Public and Private, of Madame Vestris, by Arthur Griffinhoofe,' London, no date (1836?), 8vo, bears a pseudonym of Colman, but there is no evidence on which to fix on him the reproach of authorship. 'The Rovers, or the Double Arrangement,' is reprinted in the 'Dramatic Magazine,' vols. ii. and iii. (1830–1), from the 'Anti-Jacobin,' 1797, as by George Canning and George Colman. An alteration of this, in which is the famous song on 'The University of Göttingen,' under the title of 'The Quadrupeds of Quadlinburgh,' was played at the Haymarket on 26 July 1811. This was assigned to Colman and is probably by him. 'Some Remarks on Colman's Preface to the "Iron Chest,"' which appeared in the 'Monthly Mirror,' 1796–7, were reprinted in 8vo, 1796. Colman was an entertaining companion and a genuine humourist. He was, however, disorderly if not profligate in his writings and in his life. The trustworthiness and stability of his father did not descend to him. As a manager he was capable, but his extravagance led to constant difficulties and feuds.

J. K.

COLMAN, WALTER (*d.* 1645), poet, was descended from an ancient family in Staffordshire. His parents, being Roman catholics, sent him to the English college at Douay, Flanders, and he subsequently studied in France. He then returned to England, but afterwards returned to Douay, and entered the convent of the English Franciscans of the Strict Observance. Soon after being ordained priest he was sent to the mission. On landing he was apprehended and searched, and being found to be without a shirt, according to the rule of his order, he was exposed to much ridicule. In the end he was committed to prison for refusing to take the oath of allegiance; but he procured his release through the influence of friends and money, and served the mission for several years. Being again apprehended, he was, after a long imprisonment, brought to trial at the Old Bailey, with six other priests, in December 1641, and received sentence of death. By the favour of Charles I he was reprieved from time to time, and he died a lingering death in Newgate in 1645, 'continuis ærumnis et loci pædore extinctus, præ inedia et squalore in carcere.' There is a fine engraved portrait of him in the 'Certamen Seraphicum.'

Colman is the author of a poem in 262 stanzas, entitled 'La Dance Machabre, or Deaths Duell, by W. C.,' London [1632 or 1633], sm. 8vo. The dedication to Henrietta Maria, consort of King Charles I, is in French. This is a work of great rarity, only three or four copies being known to exist.

T. C.

COLNAGHI, DOMINIC PAUL (1790–1879), print dealer and connoisseur, eldest son of Paul Colnaghi [q. v.] (or more properly Colnago), and Elizabeth Baker, his wife, was born in London on 15 July 1790. He entered business early in life, and succeeded his father as the head of the firm of Paul and Dominic Colnaghi in 1833. For many years under his sway the house in 14 Pall Mall East formed a well-known art centre, it being frequented by peers and members of parliament, so that the intermingling of politicians with artists and literary men gave the large room in the season the appearance of a club. Colnaghi's knowledge of prints and taste in art were very great. He had a European reputation, and was held in high esteem by collectors and officials. He was also a connoisseur in ancient armour, and was the original possessor of a large portion of the Meyrick collection. He married Miss Katherine Pontet in 1832. She died on 21 Nov. 1881. Colnaghi retired from business about 1865 and spent the remaining years of his life in quiet leisure. He died at his residence, 62 Margaret Street, Cavendish Square, on 19 Dec. 1879, and was buried in Brompton cemetery. He left two sons, the eldest of whom, Dominic Ellis Colnaghi, was appointed English consul-general at Florence on 24 Feb. 1881. There is an engraved portrait of Colnaghi after Brocky. A sale of ancient and modern engravings, books on art, autographs, portraits, &c., took place at Christie's on 2 April 1879.

[Manuscript notes in the British Museum.]

L. F.

COLNAGHI, PAUL (1751–1833), print dealer, was born, probably in Milan, in 1751. His father, Dr. Martino Colnago, a distinguished Milanese lawyer, died about 1770–5, leaving his estate in a very embarrassed condition. His mother's name was Ippolita Raggi. Paul having, in union with his elder brother, settled his father's affairs, left Italy soon afterwards to seek his fortune in France. After undergoing various vicissitudes he became the Paris agent of Signor Torre, the well-known London printseller of the day, with whom he finally entered into partnership, and the firm of Torre was merged in the house of Paul and Dominic Colnaghi & Co. He now became a naturalised Englishman, and married Maria Elizabeth Baker, who was a family connection of Captain Thomas Coram. He died on 26 Aug. 1833. There exist of him a portrait drawn on stone by Edward Morton from a drawing by Raphael Smith (1800), a medallion engraved by R. Easton after a bust of Danlau (1833), and a drawing by Charles Turner.

[Manuscript notes in Brit. Mus.] L. F.

COLOMIÈS or COLOMESIUS, PAUL (1638–1692), librarian, was born at La Rochelle on 2 Dec. 1638. His father, Jean, was a doctor of repute; his grandfather, a minister of the reformed religion, was descended from a family of Béarn, settled in La Rochelle. He was sent at the age of sixteen to the academy of Saumur for the usual courses of study in philosophy and history. Cappel taught him Hebrew. He went to Paris in 1664, and became acquainted with Isaac Vossius, who took him to Holland. Here he lived twelve months and brought out 'Gallia Orientalis' (1665), his first and most useful work, dealing with the lives and writings of Frenchmen who had distinguished themselves in Hebrew and oriental studies. The original project included Belgian, German, English, and other sections; 'Italia et Hispania Orientalis' was a posthumous publication. He returned to La Rochelle, where he remained until 1681, and wrote several books. He then came to England, visited Vossius, who had been a resident since 1670, and had become canon of Windsor, and he obtained the post of reader in the French Anglican church established by Peter Allix [q. v.] Among the Tanner manuscripts in the Bodleian Library is a letter from Colomiès to Sancroft, dated from Lambeth, 25 Feb. 1684–5, and another in the same collection to Cave on 15 Nov. 1686, complaining of not finding employment in the church of England. His constant friend Vossius had introduced him to the archbishop, who collated him to the rectory of Eynesford in Kent on 18 Nov. 1687, and who had previously made him librarian or perhaps assistant to Wharton, the first librarian at Lambeth. Colomiès, however, distinctly styles himself 'Bibliothecæ Lambethanæ curator' on one of his title-pages. He retired on the deprivation of Sancroft in 1690, and Wharton still retained the office. One authority states that 'as librarian he left behind him no mark' (J. CAVE-BROWNE, *Lambeth Palace*, 1883, pp. 101–2), but H. J. Todd (*Cat. of the Archiep. MSS. in the Library at Lambeth Palace*, 1812, p. x) mentions as still existing a written 'Catalogue of [the Printed] Books in the Lambeth Library by Paul Colomesius,' and says, 'This proof, however, of Colomesius's diligence adds weight to the refutation of the charge [of indulging their ease and of taking as little trouble as possible] brought against him and his predecessors by Dr. Wilkins.' He was naturalised in 1688 (*Lists of Foreign Protestants*, 1618–88, ed. by W. D. Cooper, Camden Soc. p. 54). While in England he published some books which brought upon him much obloquy from Jurieu and others. He was on the point of going to Germany

to become librarian to the Prince of Holstein-Gottorp when the fatal illness said to have been brought on by disappointment at the loss of his office overtook him. The story of an unhappy marriage is disproved by his will, dated '2 Jan. 1691–2,' leaving, with the exception of a few legacies, all his small savings to a cousin, the Rev. Peter Hamelot (*Notes and Queries*, 2nd ser. i. 5–6). He had previously parted with his library for a trifling sum. He died in London 4 Jan. 1692, aged 54, and was buried in the churchyard of St. Martin's-in-the-Fields.

Colomiès was a great reader and a diligent annotator of his books, as specimens preserved in the British Museum witness. Baillet calls him 'un des plus intelligents qui soient aujourd'hui dans la connaissance des livres' (*Jugemens des Savans*, 1725, ii. 11), and Bayle, referring to a current sneer that he was 'le grand auteur des petits livres,' justly remarks: 'C'est lui faire honneur d'une chose qui n'avoit été dite que pour se moquer de lui' (*Dict.* i. 906). A 'bibliothèque parlante,' like Justel, he was also the friend of Saint-Evremond, 'qui s'amusait des bizarreries de son esprit' (Weiss, i. 341). Arcère praises his sweet and conciliatory manners, his good sense and moderation. Honest and impartial in his writings, he was accused of Socinianism and incredulity.

His works are: 1. 'Gallia Orientalis, sive Gallorum qui linguam Hebræam vel alias orientales excoluerunt Vitæ,' the Hague, 1665, 4to. 2. 'Epigrammes et Madrigaux,' La Rochelle, 1668, 12mo; a rare book of small literary merit. 3. 'Opuscula,' Paris, 1668; Utrecht, 1669 and Amst. 1700, 12mo. 4. 'Prima Scaligerana nusquam antehac edita [auctore ipsomet Scaligero], cum præfatione; quibus adjuncta et altera Scaligerana [collig. Molinæo], quam antea emendatiora, cum notis cujusdam V. D. anon. [P. Colomesii],' Groningen, 1669, 12mo. 5. 'Scaligerana, ou bons mots, etc. de J. Scaliger, avec des notes de Mr. Le Fevre et de M. de Colomiès,' Cologne, 1695, 12mo, reprinted with additions by P. Des Maizeaux, Amst. 1740, 2 vols. 12mo. 6. 'Vie du P. Jacques Sirmond,' La Roch. 1671, 12mo, contains 'Avertissement sur les Mémoires de la reine Marguérite,' not reprinted, like the 'Vie,' in the 'Bibliothèque Choisie' (1731). 7. 'Exhortation de Tertullien aux Martyrs,' La Roch. 1673, 12mo, reprinted in 'Bibl. Choisie' (1731). 8. 'Rome Protestante, ou Témoignages de plusieurs Catholiques Romains en faveur de la créance et de la pratique des Protestans,' Lond. [Rouen, 1675], 1678, 12mo. 9. 'Mélanges historiques,' Orange, 1675, 16mo, Utrecht, 1692, anonymous, contains much curious literary gossip and some information as to persons of the name of Colomiès. It is a continuation of the 'Recueil des particularitez fait en 1665,' printed in 'Opuscula' (No. 3). Both pieces appear under the title of 'Colomesiana' in 'Mélange curieux des meilleures pièces attrib. a M. de St. Evremond,' Amst. 1706, 2 vols. 12mo, ed. by P. Des Maizeaux, and in the latter's 'Scaligerana, Thuana, Perroniana, Pithoeana et Colomesiana,' Amst. 1740, 2 vols. 12mo. 10. 'Observationes Sacræ,' Amst. 1679, Lond. 1688, 12mo, a collection of marginalia in French and Latin, with extracts from private letters and reviews relating to the author and his writings. 11. 'Bibliothèque Choisie,' La Roch. 1682, Amst. 1700, 12mo, with additions and suppressions; 'Nouvelle édition, augmentée des notes de MM. Bourdelot, de la Monnoye et autres, avec quelques opuscules du même C.,' Paris, 1731, 12mo, with life; the 'Bibliothèque' consists of a list of works in the literature of the day, with bibliographical and critical notes. 12. 'Theologorum Presbyterianorum Icon: ex protestantium scriptis ad vivum expressa' [sine loco], anno 1682, 16mo, from p. 39 to end is: 'Parallèle de la pratique de l'église ancienne et de celle des Protestans de France dans l'exercice de leur religion.' The first piece includes passages from Casaubon, Languet, Grotius, and others, set forth to prove how far the presbyterians had departed from the rule of the early church with regard to orders, discipline, and the sacrament. The second establishes twenty-four points of difference between the ancients and the moderns. The work occasioned a violent attack on the part of Jurieu, and was Colomiès's justification for his Anglican secession. 13. 'Lettre à M. Justel touchant l'Histoire Critique du Vieux Testament du P. Simon,' printed at the end of 'Appendix observationum ad Pomponium Melam' by Vossius, Lond. 1686, 4to. 14. 'Ad Gul. Cave Chartophylacem Ecclesiasticum Paralipomena,' Lond. 1686, Leipzig, 1687, contains 'De Photii scriptis diss.' and 'Passio S. Victoris Massiliensis;' an edition of Lond. 1689, 12mo, includes his 'Observationes Sacræ.' 15. 'S. Clementis Epistolæ duæ ad Corinthios [Gr. et Lat.], accedit T. Brunonis diss. de Therapeutis Philonis: his subnexæ sunt Epistolæ aliquot singulares, vel nunc primum editæ vel non ita facile obviæ,' Lond. 1687 and 1695, 12mo, with 'Observationes Sacræ.' 16. 'Catalogus Codd. MSS. Isaaci Vossii,' printed in 'Cat. libb. MSS. Angliæ et Hiberniæ,' 1697, ii. pt. i. p. 57. The original is in the Bodleian Library (Cod. Tanneri, 271). 17. 'G. J. Vossii et clarorum virorum ad eum Epistolæ, collectore P. C.,' Lond. 1690, folio. 18. 'L. G. Gyraldi Opera omnia, animadversionibus hactenus ineditis P. C. illustrata, ex-

hibet J. Jensius,' Leyden, 1696, 2 vols. folio. The notes of Colomiès are on the treatise 'De Historia Poetarum.' 19. 'Opera theologici, critici et historici argumenti junctim edita,' Hamb. 1709, 4to; incomplete edition, badly edited by Fabricius. 20. 'Lettres de la reine de Suède [Christine] et de quelques autres personnes' [sine nota, 1687], 12mo, ed. by Colomiès. 21. 'Italia et Hispania Orientalis, nunc primum ed. a J. C. Wolfio,' Hamb. 1730, 4to. Haag gives a list of ten other works said to have been projected by Colomiès.

COLONIA, ADAM DE (1634–1685), painter, was son of Adam Louisz de Colonia, a painter, who was a native of Antwerp, but settled in Rotterdam about 1593. The younger Adam painted cattle pieces in the style of Berghem, and gained some repute for depicting village-wakes and conflagrations by night, the latter a style popularised by Egbert Vander Poel. He copied a great many pictures by Bassano, whose striking effects of light and shade he endeavoured to imitate. Pictures by him (or his father) are to be met with in Holland, and there are examples of his art in the museum at Lille and at Copenhagen. Colonia came over to England and spent the latter part of his life in this country. He occasionally etched; an unimportant example, representing 'Apollo and Marsyas,' is sometimes met with. He died in London in 1685, aged 51, and was buried in St. Martin's-in-the-Fields. By his wife Cornelia, daughter of Arent Kerckhoven, he had four children, including a daughter Huberta, married to Adriaen Van Diest, the painter [q. v.], and a son, Hendrik Adriaen de Colonia. The latter, usually known as Adrian Colonia, was born in 1668 at Rotterdam, was his father's pupil, and also received instruction from his brother-in-law, Van Diest. In the landscapes painted by the latter he often painted the figures. He also painted landscapes himself in the style of Salvator Rosa. He attained a reputation for rapidity both of invention and execution. He died in London in 1701, aged 33, and was buried with his father in St. Martin's-in-the-Fields.

COLONSAY, LORD. [See MACNEILL, DUNCAN, 1793–1874.]

COLORIBUS, JOHN DE (*fl.* 1525), Dominican friar, was a foreigner by birth. He graduated B.D. at Oxford in 1511, D.D. in 1517, and for several years lectured on theology in that university (WOOD, *Fasti*, ed. Bliss, i. 46; BOASE, *Register of the Univ. of Oxford*, i. 78). Afterwards he became a favourite of Cardinal Wolsey, who selected him as one of the learned doctors of the university appointed to write against Luther. In 1525 the cardinal made him a member of his newly founded college of Christ Church, 'but in what capacity,' says Wood, 'I know not' (*Athenæ Oxon.* i. 47). He wrote 'Tractatus contra Doctrinam M. Lutheri,' 1521 (DODD, *Church Hist.* i. 231).

[Authorities cited above.] T. C.

COLPOYS, SIR JOHN (1742?–1821), admiral, is said to have entered the navy in 1756 and to have served at the reduction of Louisbourg in 1758, and of Martinique in 1762. In 1770, being then a lieutenant, he went to the East Indies, was there made commander, and advanced to post rank on 25 Aug. 1773. In 1774 he returned to England, and was shortly after sent again to the West Indies. In 1776 he commanded the Seaford frigate on the North American station, and in the West Indies during 1777–8. In the summer of 1779 he commanded the Royal George, bearing the flag of Rear-admiral Sir John Lockhart Ross, in the Channel, and in 1781 went to North America in command of the Orpheus frigate. He afterwards commanded the Phaeton frigate in the Mediterranean, and in 1790 was appointed to the Hannibal of 74 guns, which he commanded till 1793. He had thus an almost uninterrupted service of nearly forty years, more than twenty of them actually in command of ships of war, when on 12 April 1794 he was made a rear-admiral. No officer living had so wide an experience of the various phases of naval discipline. In October 1794 he hoisted his flag on board the London of 98 guns, one of the winter fleet under Lord Howe. Continuing in the London, in the fleet under Lord Bridport, he was promoted to be vice-admiral

on 1 June 1795; was present in the action off L'Orient on 23 July 1795, in the Channel cruises of 1796, and at Spithead when the mutiny broke out on 15 April 1797. When order was to some extent restored, the greater part of the fleet, under Admiral Lord Bridport, was taken to St. Helens, the Minotaur and Marlborough, which had not yet returned to their duty, being left at Spithead with the London, whose men had throughout appeared among the most moderate.

On 7 May the mutiny again broke out in the ships at St. Helens. Colpoys, on board the London, turned the hands up and desired them to let him know their grievances. They answered they had none. Colpoys then ordered them to go below and remain quiet; the officers and marines to get under arms. When, however, the boats of the fleet drew near, the men became restless and attempted to come again on deck. This the officers at the hatchways resisted; and on the men becoming more violent, called to the admiral to know if they should prevent them 'by firing on them.' 'Yes, certainly,' answered Colpoys; 'they must not be allowed to come up till I order them.' Some shots were exchanged between the officers on deck and the men in the hatchways. The marines threw down their arms and made way for the men to come up; on which Colpoys, seeing that any further struggle was useless, desired the officers to go aft. The men clustering on deck now raised a cry for the first lieutenant, Mr. Bover, to whom they attributed the recent firing and the death of five of their comrades. Bover was seized, carried forward on to the forecastle, and immediate preparations were made for hanging him. The rope was round his neck, when the admiral, having with much difficulty obtained a hearing, said that 'if anybody was culpable for what had happened it was he himself, and that Mr. Bover had only obeyed his orders.' At the time he fully believed that the result of his interference would be to remove the rope from Bover's neck and to place it round his own; and for the next twenty-four hours he considered himself in imminent danger of being hanged. The mutineers, however, having read and considered the admiralty orders, which were given up to them, merely confined the admiral and the other principal officers separately in their cabins; and on the 11th sent them on shore. On the 14th Colpoys received an order from the admiralty to strike his flag, 'judging it expedient under existing circumstances.' The order was accompanied by a highly complimentary letter from Lord Spencer, and neither on the part of the admiralty nor of the admiral does there seem to have been any suspicion of a reprimand being intended or understood.

In the following year, when Colpoys was made knight of the Bath, it was arranged for him to have command of a detached squadron, with his flag in the Bellona; but on its becoming known that there was a certain feeling against him on the Bellona's lower deck, the admiralty judged it better that he should not at that time hoist his flag. He readily accepted the decision of the board, and had no further employment till, in June 1803, he was appointed commander-in-chief at Plymouth. On 1 Jan. 1801, he had attained the rank of admiral, and in May 1804, at the special request of Lord Melville, he gave up his command at Plymouth to take a seat at the admiralty. A few months later he was spoken of as the probable commander-in-chief in the Mediterranean (*Nelson Despatches*, vi. 320); but as the vacancy did not occur, he was in the following year appointed treasurer, and on the death of Lord Hood, on 27 Jan. 1816, to be governor of Greenwich Hospital, where he died 4 April 1821.

[Naval Chronicle (with a portrait), xi. 265; Ralfe's Nav. Biog. ii. 3, and iii. 167. The original pamphlet by Rear-admiral Griffith Colpoys, which Ralfe has reprinted, is A letter to Vice-admiral Sir Thomas Byam Martin, K.C.B., containing an account of the mutiny of the fleet at Spithead in 1797, in correction of that given in Captain Brenton's Naval History of the last War (1825); it is now scarce, but there is a copy in the British Museum; Gent. Mag. (1821), vol. xci. pt. i. p. 381.] J. K. L.

COLQUHOUN, ARCHIBALD CAMPBELL- (*d.* 1820), lord clerk register, was the only son of John Campbell of Clathick, Perthshire, provost of Glasgow, by his wife Agnes, the only child of Laurence Colquhoun of Killermont, Dumbartonshire. On succeeding to the estate of Killermont upon the death of his father in 1804 he assumed the additional surname and arms of Colquhoun. He was admitted an advocate in 1768, and on the downfall of the ministry of All the Talents was appointed lord advocate on 28 March 1807. At this time most of the Scotch patronage was in the hands of the Dundas family, and William Erskine, Alexander Maconochie, and Henry Cockburn were actually chosen deputes by Lord Melville before Colquhoun had received the appointment. In the following May he was returned member for the Elgin district of burghs, but after three years resigned his seat, and in July 1810 was elected member for Dumbartonshire, which county he continued to represent until his death in 1820. Colquhoun,

as the lord advocate, took part in reforming the constitution of the court of session, and was appointed one of the thirteen commissioners who sat for the first time on 30 Nov. 1808 for the purpose of inquiring into the administration of justice in Scotland. The correspondence between him and Erskine, the late lord advocate, on the subject of the respective merits of Lord Grenville's and Lord Eldon's bills for the reform of legal procedure will be found in the 'Scots Magazine' for 1808, pp. 70–2, 149–52. On the death of Lord Frederick Campbell, Colquhoun was appointed lord clerk register on 4 July 1816, much to the disappointment of Erskine's friends, who had hoped that the post would have been offered to him.

Colquhoun died on 8 Dec. 1820, after an illness of a few days, at the house of his son-in-law, Walter Long, at Hartham, Wiltshire, and was buried in the parish churchyard of New Kilpatrick near Glasgow. In 1796 he married Mary Ann, daughter of the Rev. William Erskine, episcopalian minister at Muthill, Perthshire, and sister of William Erskine, afterwards Lord Kinneder, by whom he had six daughters and two sons, viz. John Campbell-Colquhoun of Killermont and Garscadden [q. v.], and William Laurence Colquhoun, who died on 16 Jan. 1861. Their eldest child died within a year of her birth, and it was on this occasion that Carolina Oliphant, afterwards Baroness Nairne, wrote 'The Land of the Leal,' which she sent to her old friend Mrs. Colquhoun. Colquhoun was a good classical scholar, a sound lawyer, and an eloquent pleader. Being a man of independent fortune and of reserved manners, he hardly took the position at the bar to which his abilities entitled him. His only reported speech does not appear to have been a great success. He rose 'amidst a tumultous cry of Question! Question!' to take part in the debate on the Duke of York's conduct, and had not got very far when the house became 'so clamorous for the question that the hon. member could no longer be heard' (Hansard, *Parl. Debates*, 1809, xiii. 577–8). His wife survived him for many years, and died at Rothesay on 15 May 1833. His portrait by Raeburn is in the possession of his grandson, the Rev. J. E. Campbell-Colquhoun of Killermont, and a capital etching of him by Kay will be found in the second volume of 'Original Portraits' (No. 317).

G. F. R. B.

COLQUHOUN, JANET, Lady (1781–1846), religious writer, was the second daughter of the Right Hon. Sir John Sinclair of Ulbster, bart., by his first wife, Sarah, only child and heiress of Alexander Maitland of Stoke Newington. She was born in London 17 April 1781, but, together with her elder sister Hannah, passed her childhood at Thurso Castle with their grandmother, Lady Janet Sinclair, daughter of William, lord Strathnaven. This lady took the sisters to live in the Canongate of Edinburgh, whence they went to complete their education at a school at Stoke Newington. The younger of the two was about fifteen when they returned to be introduced into Edinburgh society. In June 1799 Janet was married to Major James Colquhoun, eldest son of Sir James Colquhoun of Luss, bart., on whose death, in 1805, her husband succeeded to the title, and Rossdhu, on Loch Lomond, became her home. Here she took a keen interest in all philanthropic and religious schemes, especially in the Luss and Arrochar Bible Society. In 1820 her health became enfeebled, and she was prevented from taking any active share in these or other benevolent objects, but she devoted herself to the composition of religious works, the first of which was published anonymously in 1822 under the title of 'Despair and Hope.' This was followed by 'Thoughts on the Religious Profession,' 1823; 'Impressions of the Heart,' 1825; 'The Kingdom of God,' 1836; and 'The World's Religion,' 1839. It was not until the death of her husband, in 1836, that her name was appended to her books. Dr. James Hamilton, her biographer, quaintly apologises for defects of artistic skill in Lady Colquhoun's books, but insists on their graceful ease and natural truthfulness. 'Like the conversation of their compiler, they are genuine and inartificial, spontaneous and heartfelt.' At the time of the disruption of the Scotch church in 1843, she took an ardent interest in the question at issue, throwing herself heart and soul into the Free church cause. She died at Helensburgh on 21 Oct. 1846, and was buried on the 27th at Luss.

their Country, by William Fraser, 2 vols. privately printed, Edinburgh, 1869.]

J. A. F. M.

COLQUHOUN, JOHN, D.D. (1748-1827), theological writer, born at Luss in Dumbartonshire in January 1748, was originally a shepherd and weaver, but, having acquired the rudiments of knowledge at a village school, studied at Glasgow for the Scottish ministry, and was licensed in August 1780 and received a charge in South Leith in March 1781. He died on 27 Nov. 1827 at South Leith. He published 'A Treatise on Spiritual Comfort,' 1813; also 'The Covenant of Grace,' 1818.

[Irving's Book of Scotsmen; Allibone's Dict. of English Literature.] J. M. R.

COLQUHOUN, JOHN (1805–1885), writer on sport, second son of Sir James Colquhoun of Luss, third baronet, and of Janet, lady Colquhoun [q. v.], was born in Charlotte Square, Edinburgh, 6 March 1805. Together with his elder brother he was educated first at a school in Edinburgh, subsequently at a private school in Lincolnshire (Rev. Mr. Grainger's of Winteringham), and finally at the university of Edinburgh. In 1828 he joined the 33rd regiment in the wilds of Connaught, where he had plenty of hard work and a full share of adventures in the way of protecting the excise, or 'still-hunting,' as it was called. His autobiographical preface to 'The Moor and the Loch' contains a very vivid description of his life at this time. In 1829 he was gazetted into the 4th dragoon guards. He sold out of the army on the occasion of his marriage with Frances Sarah, fourth daughter of Ebenezer Fuller Maitland of Park Place, Henley-on-Thames, which took place on 29 Jan. 1834. She herself is not without a claim to notice, since, when quite young, she completed Henry Kirke White's fragment, beginning 'Much in sorrow, oft in woe,' and this completion has been universally accepted for church use (see *Book of Praise*). A small volume of her poems was published in 1876 under the title 'Rhymes and Chimes.' Four sons and five daughters were the issue of this marriage, and all, with the exception of the eldest and youngest sons, survive Colquhoun. He was always a keen sportsman and an accurate observer of nature, and during his long life he acquired an experience in matters of sport and natural history that was quite exceptional, for the summer quarters were changed almost every year, and the list of places rented by him embraces nearly every district of Scotland, so that his opportunities for observation were especially favourable. In 1840 he embodied his experiences in 'The Moor and the Loch,' which speedily took a high rank among books on Scotch sport. In 1851 the third edition was published, and the fourth, which was not issued until 1878, contained many additions, notably the most valuable portions of some other books written in the meantime, 'Rocks and Rivers,' 1849; 'Salmon Casts and Stray Shots,' 1858; and 'Sporting Days,' 1866. Besides these works he wrote two lectures, 'On the Ferae Naturae of the British Islands,' and 'On Instinct and Reason,' which were published in 1873 and 1874 respectively. It was not until the fifth edition of 'The Moor and the Loch' appeared that the autobiographical introduction, which now forms not the least interesting portion of the book, was prefixed to the text, and a sixth edition was issued in 1884, the year before the author's death. This took place on 27 May 1885 at Royal Terrace, Edinburgh, after a short illness.

[Autobiographical preface to The Moor and the Loch; The Chiefs of Colquhoun and their Country, by William Fraser, 2 vols. privately printed. Edinburgh, 1869; information from private sources.] J. A. F. M.

COLQUHOUN, JOHN CAMPBELL (1785–1854), writer on physical research, the fifth son of Sir James Colquhoun of Luss, the second baronet, by his wife Jane, daughter of James Falconer of Monkstown in the county of Edinburgh, and Miltonhaven and Lauriston, Kincardineshire, was born at Edinburgh on 31 Jan. 1785. Having studied law and philosophy at Göttingen, where he made the acquaintance of Herbart and Ludwig crown prince of Bavaria, he returned to Scotland in 1806, and was called to the Scottish bar. While in Germany he had acquired a taste for the investigation of the phenomena then grouped under the category of 'animal magnetism,' which were just beginning to attract the attention of scientific men. In 1831 a report on the subject was read before the Académie des Sciences, in which it was pronounced worthy of systematic investigation. This report Colquhoun translated and published with an historical introduction and an appendix embodying the results of his own research in 1833, Edinburgh, 8vo, and it became the basis of a work entitled 'Isis Revelata,' published in 1836, Edinburgh, 8vo. Colquhoun was an intimate friend of Sir William Hamilton and Sir David Brewster. In 1815 he was appointed sheriff-depute of Dumbartonshire. He held this office until a few months of his death, which took place on 21 Aug. 1854. He was buried at Dean Cemetery, Edinburgh. He never married. Besides the above-mentioned work, Colquhoun contributed to the third volume of Sir J.

Sinclair's 'Code of Health and Longevity,' Edinburgh, 1806, 8vo, a translation of Kant's treatise on the power of the mind in overcoming unpleasant sensations by mere resolution. He also published a translation of Wienholt's 'Seven Lectures on Somnambulism,' with a preface, introduction, and notes, Edinburgh, 1845, 8vo.

[Fraser's Chiefs of Colquhoun; Brit. Mus. Cat.] J.M.R.

COLQUHOUN, JOHN CAMPBELL (1803–1870), miscellaneous writer, eldest son of Archibald Campbell-Colquhoun [q.v.], was born in Edinburgh on 23 Jan. 1803, and educated at the high school, Edinburgh, and at Oriel College, Oxford. In 1832 he was elected member for Dumbartonshire, and in 1837 for the Kilmarnock burghs. He unsuccessfully contested the Kilmarnock burghs in July 1841, but was elected in July 1842 one of the members for Newcastle-under-Lyme, which he continued to represent till the dissolution of 1847, when he retired from reasons of health. He was chairman of the general committee of the National Club, of the Church of England Education Society, and of the Irish Church Mission to Roman Catholics. Besides a number of political and religious pamphlets upon questions of the day in Scotland and Ireland, he was the author of 'Short Sketches of some Notable Lives,' 1855; 'Life in Italy and France in the Olden Time,' 1858; 'Scattered Leaves of Biography,' 1864; 'William Wilberforce, his Friends and his Times,' 1866, 2nd edit. 1867; and 'Memorials of Henrietta Maria Colquhoun,' 1870. He died 17 April 1870.

[Men of the Time, 7th ed.; Brit. Mus. Cat.] T. F. H.

COLQUHOUN, PATRICK, LL.D. (1745–1820), metropolitan police magistrate, was born on 14 March 1745 at Dumbarton, and received his early education at the grammar school there. His father was registrar of the records of Dumbartonshire. Before he was sixteen he proceeded to Virginia, where he engaged in commercial pursuits, in which he continued with marked success on returning to Scotland in 1766, when he settled in Glasgow. In 1778, during the excitement caused by the war of the American Revolution, he was one of the twelve principal contributors to the local fund for raising the Glasgow regiment, afterwards the 83rd of the line. In 1779–82 he paid several visits to London, to urge on the government legislative measures favourable to the industries of Glasgow and Scotland. He was so successful there, and in initiating schemes of local improvement, that in 1782 he was elected, and in 1783 re-elected, lord provost of Glasgow, in the latter year founding the Glasgow Chamber of Commerce, of which he was appointed chairman. In 1785–9 he was again indefatigable, and often successful, in his exertions to procure administrative and legislative measures beneficial to the trade and commerce of Glasgow and to the British cotton manufactures generally, visiting Manchester to obtain information, which he embodied in a statement presented to Pitt, showing the condition of the cotton trade in 1788. In a visit which he paid in 1789 to Flanders and Brabant he is said to have made known on the continent the merits of the Lanarkshire and other British muslins. He published during this period a number of pamphlets—none of them, apparently, are in the library of the British Museum—in aid of his personal efforts. His zeal and success procured him formal expressions of thanks from the Lanarkshire and Lancashire manufacturers, and the title, since bestowed on him, of 'father of Glasgow' (CLELAND, i. 177 *n.*)

In 1789, for some unexplained reason, Colquhoun removed with his family to London, and in 1792, when its police system was partially reconstructed, he was appointed, through the influence of Henry Dundas, afterwards Viscount Melville, one of the new justices. In 1794 he published anonymously a pamphlet previously printed for private circulation, 'Observations and Facts relative to Public-houses, by a Magistrate acting for the Counties of Middlesex, Surrey, Kent, and Essex.' It contains curious particulars of the London liquor trade of the time. In 1794 appeared his pamphlet, 'A Plan for affording extensive Relief to the Poor, by raising a moderate sum of money by subscription, to be laid out in redeeming pledges of honest, industrious families, who have been compelled to pledge their goods and working-tools for subsistence during the late severe weather,' and in 1796 (PETTIGREW, ii. 356) he established a society to carry out that object. In 1795, when political discontent was aggravated by the high price of food, he aided in establishing the soup-kitchen in Spitalfields, which was the first of its kind, publishing in that year two pamphlets, 'An Account of the Meat and Soup Charity,' and 'Suggestions . . . showing how a Small Income may be made to go far, . . . so as to produce a Considerable Saving in the article of Bread,' which were printed at the public expense—neither of which is in the library of the British Museum. In the same year appeared the work by which Colquhoun is chiefly known, his 'Treatise on the Police of the Metropolis,

explaining the various Crimes and Misdemeanours which are at present felt as a pressure upon the Community, and suggesting Remedies for their Prevention, by a Magistrate.' Much of the information still possesses some interest. Colquhoun suggested the appointment of a public prosecutor, the extension of the jurisdiction of stipendiary magistrates to the city proper, and the employment of convicts in reproductive labour. He pointed out the inevitable inefficiency of the old London watchmen, mainly dependent for support on their daily labour in other employments, often chosen out of charity for their poverty or advanced years, and directed by more than seventy different local authorities, who acted without co-operation and under no general system of superintendence. The work attracted the attention of the government, and even of the king, going through several editions, in the seventh of which (1806) Colquhoun proposed the establishment of a board of commissioners of police for the whole of London. It was doubtless this work which stimulated the university of Glasgow to confer on Colquhoun, in 1797, the degree of LL.D., and the West India merchants to apply to him in the same year to frame a plan for the prevention of depredations on their property in ships lying in the Thames —a task which he undertook with the co-operation of the government, for the consequent loss of customs duties rendered the matter one of importance to the revenue. The result was the composition of his 'Treatise on the Commerce and Police of the River Thames,' 1800, and the establishment for the first time of an effective Thames police. The benefits which Colquhoun's exertions conferred on the West India planters led the colonies of St. Vincent, Nevis, Dominica, and the Virgin Islands to appoint him their agent in England.

In 1798 Colquhoun was appointed magistrate of the Queen Square Office, Westminster, where he proceeded to procure the establishment of a soup-kitchen, framing, at the request of the privy council, 'Suggestions . . . distributed over England and Wales, with a view to the encouragement of Soup Establishments, and containing plans and directions for carrying them into effect.' In 1799 was issued for private circulation his 'State of Indigence, and the Situation of the Casual Poor in the Metropolis explained,' in which he urged that wealthy parishes should be called on to mitigate the pressure of the rates on poor parishes, and recommended the establishment of a sort of charity organisation society to investigate the circumstances of applicants for relief, and to provide work for the unemployed. In the same year, one of great scarcity and distress, he suggested the provision of a supply of salt herrings and other cheap fish as food for the poor, a suggestion to which he saw effect ultimately given. In 1803 appeared his 'Treatise on the Functions and Duties of a Constable,' and in 1804 the free town of Hamburg appointed him its resident and consul-general in London, an example which was followed by the other Hanseatic towns. In 1806 he published 'A New and Appropriate System of Education for the Labouring People,' explaining that carried out in a school in Orchard Street, Westminster, of which three years before he had promoted the establishment, and in which a sound and very cheap elementary education was given to the children of the poor on Dr. Bell's system. In the same year was issued his 'Treatise on Indigence,' in which he recommended the establishment of a board of education, of a national savings bank with a state guarantee to the depositors, of a system of reproductive employment for those out of work, of a national poor-rate uniformly assessed, and the issue of a police gazette, containing instructive reading, with the statistics of crime and descriptions of the persons of offenders. His last work of importance was his 'Treatise on the Population, Wealth, Power, and Resources of the British Empire in every quarter of the World,' 1814, of which a second edition appeared in 1815. The most noticeable section of it is that in which, often on insufficient data, Colquhoun attempted to frame an estimate of the total wealth, in all kinds, of the British empire, and not only of the value of the 'new property' created in it from year to year, but of the distribution of this among the various classes of the community. It includes a history of the public revenue and expenditure from the earliest times to 1813, and a descriptive sketch of the British colonies and of the foreign dependencies of the crown. In a concluding chapter Colquhoun predicted, with the close of the war, the growth of a surplus population, and pointed to the colonies as a promising outlet for it. This idea he developed, with a specific application to South Africa, in an anonymous pamphlet, 'Considerations on the Means of affording Profitable Employment to the Redundant Population of Great Britain and Ireland,' &c., issued in 1818 (see LOWNDES, i. 502). In that year Colquhoun resigned his office of police magistrate, and there appeared in the 'European Magazine' an exhaustive account of his useful and disinterested labours (reprinted separately in the same year) signed 'Ἰατρός, contributed by his son-in-law, Dr.

Yeats, and containing a catalogue of his numerous writings. In the 'Additional MSS.' of the British Museum there are several letters from Colquhoun to Henry Boase [q. v.], approving of the latter's currency proposals. Colquhoun died in Westminster on 25 April 1820, leaving by his will 200*l.*, the interest of which was to be divided among poor people of the name of Colquhoun in several specified parishes of his native county, and not in receipt of parochial relief (Irving, i. 123).

[Dr. Yeats's Memoir; Annual Biography and Obituary for 1821; Gent. Mag. for May 1820; Irving's Book of Dumbartonshire, 1879; Cleland's Annals of Glasgow, 1816; Pettigrew's Memoirs of Dr. Lettsom, 1817; Lowndes's Bibl. Man. (Bohn), 1864.] F. E.

COLSON, JOHN (1680–1760), Lucasian professor at Cambridge, was son of Francis Colson of Lichfield, vicar-choral of the cathedral and nephew of John Strype, the ecclesiastical historian. He was educated at Lichfield grammar school and at Christ Church, Oxford (matriculating 26 May 1699), which he left without taking a degree. He was appointed master of the new mathematical school founded at Rochester by Sir Joseph Williamson. There he had a good house, with a salary of 100*l.* per annum. In 1713 he was elected a fellow of the Royal Society (Thomson, *List of Fellows of the Royal Soc.*, p. xxxiii). He was instituted on 10 Sept. 1724 to the vicarage of Chalk, near Gravesend (Hasted, *Kent*, i. 521, fol.)

Cole, the antiquary, who was personally acquainted with him, says: 'I do not know that he was regularly of either university originally. He was a very worthy, honest man; an old bachelor when he was first brought to Cambridge through the interest of Dr. Smith, master of Trinity College, when he had chambers in Sidney College, and read lectures there in the mathematics. He was an humourist and peevish, and afterwards removed to an house in Jesus Lane, where a sister lived with him very uncomfortably, as their tempers did not suit. Before he came to Cambridge he had translated for the booksellers, and he, with Mr. Samuel D'Oyly of Trinity College, fellow and A.M., and vicar of St. Nicholas in Rochester, translated in conjunction. His niece married Alderman Newling, junior, of Cambridge' (*Athenæ Cantab.* C. 200). Afterwards he became a member of Emmanuel College, and took the degree of M.A. (*comitiis regiis*) in 1728 (*Cantabrigienses Graduati*, ed. 1787, p. 92). Colson was appointed Lucasian professor of mathematics in May 1739 in succession to Dr. Nicholas Saunderson (*Graduati Cantab.* ed. 1846, p. 483; Nichols, *Lit. Anecd.* viii. 467). Referring to this appointment Cole remarks that 'he was a plain, honest man, of great industry and assiduity, but the university was much disappointed in its expectations of a professor that was to give credit to it by his lectures. He was opposed by old Mr. De Moivre, who was brought down to Cambridge and created M.A. when he was almost as much fit for his coffin; he was a mere skeleton, nothing but skin and bone.' In 1737 Gilbert Walmsley, registrar of Lichfield, wrote to Colson, then at Rochester, recommending Samuel Johnson and David Garrick to his care and encouragement; and Garrick subsequently placed himself under Colson's tuition (Davies, *Life of Garrick*, ed. 1780, i. 9–15). At the time of his death at Cambridge, 20 Jan. 1760, Colson was rector of Lockington, Yorkshire (*Gent. Mag.* xxx. 102; *London Mag.*, 1760, p. 108).

His works are: 1. 'Account of Negative-Affirmative Arithmetic,' 1726; in 'Philosophical Transactions Abridged,' vii. 163. 2. Translation (conjointly with the Rev. Samuel D'Oyly) of Father Calmet's 'Dictionary of the Bible,' 3 vols. fol. Lond., 1732. 3. 'The Universal Resolution of Cubic and Biquadratic Equations, as well Analytical as Geometrical and Mechanical,' 1707; in 'Philosophical Transactions Abridged,' v. 334, also printed in Latin with Sir Isaac Newton's 'Arithmetica Universalis,' Leyden, 1732, 4to, p. 258. 4. Sir Isaac Newton's 'Method of Fluxions; translated from the author's Latin original not yet made publick. To which is subjoin'd a Perpetual Comment upon the whole work,' &c., Lond. 1736 and 1737, 4to. 5. 'The Construction and Use of the Spherical Maps,' 1736; in 'Philosophical Transactions Abridged,' viii. 61. 6. 'Dr. Saunderson's Palpable Arithmetic Decypher'd.' Prefixed to the first volume of Saunderson's 'Elements of Algebra,' Cambridge, 1740, 4to. In this curious essay Colson describes the ingenious method by which his predecessor in the Lucasian professorship was able, notwithstanding the loss of his sight, to make long and intricate calculations, both arithmetical and algebraical. 7. 'Lectures in Experimental Philosophy,' translated from the French of the Abbé Nollet, Lond., 1752, 8vo. 8. 'The Plan of the Lady's System of Analytics;' manuscript in Cambridge University Library, Ee. 2, 36. 9. A translation of 'Analytical Institutions, originally written in Italian by Donna Maria Gaetani Agnesi, professor of the mathematicks and philosophy in the university of Bologna,' 2 vols. Lond. 1801, 4to. Colson when at an advanced age learnt Italian in order that he might make this translation,

which was published from his manuscript at the expense of Baron Maseres under the inspection of John Hellins, B.D., F.R.S., vicar of Potterspury, Northamptonshire.

[Authorities cited above; MS. Rawl. G. fol. 20, in Bodleian Lib.; also Watt's Bibl. Brit.; Cat. of Printed Books in Brit. Mus.] T. C.

COLSON, LANCELOT (*fl.* 1668), was an astrologer who practised at the sign of the Royal Oak on Great Tower Hill. His almanack or ephemeris was published there from 1660 to 1676, together with his 'Philosophia Maturata, an Exact Piece of Philosophy, containing the practick and operative part thereof in gaining the philosopher's stone,' &c. (London, 1668, 12mo). This volume is one of the leading works on the philosopher's stone. He also compiled an almanac for 1680.

[Colson's Ephemerides.] E. H.-A.

COLSTON, EDWARD (1636–1721), philanthropist, eldest son of William Colston, merchant and sheriff of Bristol, and Sarah, daughter of Edward Batten, barrister-at-law, of the Inner Temple, was born at the house of his mother's parents in Temple Street, Bristol, on 2 Nov. 1636, and is said to have passed his infancy at Winterbourne, Gloucestershire, where his father owned an estate. William Colston was a royalist; he was to some extent concerned in the attempt of Boucher and Yeomans to deliver Bristol to Prince Rupert in March 1643, and in the September following entertained Charles I at his noble house in Small Street, now virtually destroyed, though partially incorporated with the modern Guildhall. Accordingly in October 1645, after the surrender of the city by Rupert, he was removed from his office as alderman by order of the parliament. The disturbed state of the city and the part thus taken by his father in the struggle between the king and the parliament account for Colston's removal to London. He received his education at Christ's Hospital. The next fact known about him is his nomination as a governor of the hospital in 1680. At different dates he gave 2,000*l.* to this institution. The statements that he resided some time in Spain and was largely engaged in trade with that country (Barret, p. 655) do not appear to rest on any satisfactory ground. His trade lay chiefly with the West Indies, and having been admitted to the freedom of the city of Bristol on 10 Dec. 1683, and becoming a member of the Merchants' Hall a few days later, he is described as 'a free burgess of Bristol and a meire (or St. Kitts') merchant.' At this time he appears to have been residing in Bristol. By 1689, however, he had become a resident at Mortlake, Surrey, and was taking part in parochial affairs there. He visited Bristol occasionally, and his charities there were very large. He founded and endowed almshouses on St. Michael's Hill, and placed them under the care of the Merchant Venturers, 1690–6, and in conjunction with that society enlarged the almshouses for poor sailors in King Street, 1695–9. He also endowed Queen Elizabeth's Hospital, a school for boys, chiefly from lands in Somersetshire, and urged the corporation of the city, the governors of the hospital, to raise the number of scholars from 44 to 120. His desire for the increased efficiency of the school was not warmly received by some of the members of the corporation, who, from one of Colston's letters, appear to have considered an institution of that kind 'a nursery for beggars and sloths.' Accordingly, in 1705, he wrote to the Society of Merchant Venturers offering to build and endow a school for fifty boys and place it under their charge. The society gladly accepted the trust they have ever since nobly fulfilled. During the progress of the building Colston added another fifty boys to the foundation. Colston's School, now removed to Stapleton, Gloucestershire, was founded on St. Augustine's Back, on the site of a Carmelite friary, and was opened by the founder in July 1710. In 1712 he built and endowed a school for forty poor boys to be clothed and educated in Temple parish, which became the origin of the present school in Victoria Street, opened in 1866. He also gave money to various other charity schools in the city. To St. Bartholomew's and four other hospitals in London he gave 5,500*l.* At Sheen, Surrey, he founded and endowed an almshouse for six poor men, and gave 900*l.* for the education and clothing of twelve boys and twelve girls at Mortlake.

Colston, though not a nonjuror, was a strong tory and high churchman, and gave large sums to the repair of various churches in Bristol. All his foundations were in strict connection with the church. Writing to the Merchants' Hall in 1717 on the subject of the appointment of a master to his school, he reminds the governors that his object in endowing his 'hospital' was 'not the bare feeding of the one hundred boys,' but that they should 'be bred up in the doctrine of our present established church of England.' When in Bristol he attended daily service at the cathedral, and each Sunday used to stand at the door to see his boys enter the church. In 1709 he was elected a member of the Society for Promoting Chris-

tian Knowledge, and the next year he instituted a course of Lent lectures in various parish churches in Bristol on 'the primitive discipline and usages of the church of England.' He gave 6,000*l.* to the governors of Queen Anne's Bounty for the augmentation of small livings. Much that has been said of his narrow-mindedness was the natural consequence of the times in which he lived. His dislike and distrust of whigs and dissenters were shared by all his party, and both sides in politics and religion were equally violent in their words and actions. He was peremptory in his dealings and strict in exacting the deference and obedience he thought due to him from those whom he entrusted to carry out his benevolent schemes. As a strong party man he had many enemies, who misrepresented and hindered his plans and spread untrue reports as to his private life. At the general election in October 1710, Colston, after a four days' poll, was returned as the senior member for Bristol. He did not take an active part in parliament, and seems to have confined himself to presenting petitions on matters which concerned the commercial interests of his constituency. He did not seek re-election after the dissolution of 1713. On his retirement a gross of bottles of sherry of the value of 16*l.* 18*s.* 6*d.* was presented to him by the corporation in acknowledgment of his services. Colston never married, and his house at Mortlake was kept first by his sister and after her death by a niece. He died at Mortlake on 11 Oct. 1721, in his eighty-fifth year. Although he left minute directions for his funeral, which was to be simply conducted, he was buried with much state in All Saints' Church, Bristol. His public charities are known to have amounted to 70,695*l.*, besides the large sums he gave away each year in an unostentatious manner. Nevertheless he died very wealthy. Four portraits of him exist; one belongs to the school he founded on St. Augustine's Back; another, painted by Richardson and engraved by Virtue, was executed by order of the corporation in 1702, at the cost of 17*l.* 11*s.*, and is still in the council house; a third is in the Merchants' Hall; and the fourth, painted by Kneller in 1693, is in St. Bartholomew's Hospital, London. The effigy on his tomb was executed by Rysbrach from Richardson's portrait. Flowers are still placed on this tomb every Sunday. His memory is also celebrated on 13 Nov. of each year by the Colston or 'Parent' Society, founded in 1726; by the Dolphin Society, established by the tories in 1749; by the Grateful Society, founded in 1758, which belongs to no political party; and by the Anchor Society, founded by the whigs in 1769. At each anniversary large sums are raised by subscription, which are expended on charitable purposes.

[Garrard's Edward Colston, ed. Tovey; Seyer's Memoirs of Bristol, ii. 359; Nicholls's and Taylor's Bristol Past and Present, iii. 121–38; Manchee's Bristol Charities, i. 174, 247, 253, ii. 52.] W. H.

COLT or COULT, MAXIMILIAN (*fl.* 1600–1618), sculptor, was born at Arras in Artois, and settled in England at the close of Elizabeth's reign. He married, at the Dutch church in Austin Friars, on 31 Jan. 1604, Susanna Geeraerts van Antwerpen (*Reg.* ed. W. J. C. Moens). On 4 March 1604–5 he signed an agreement with the lord treasurer, Sir Robert Cecil, to carve a monument above Queen Elizabeth's grave in Westminster Abbey for 600*l.* The work was completed at the end of 1606. On 17 March 1607–8 Colt was employed on a second monument in Westminster Abbey above the grave of the Princess Sophia, the infant child of James I (born and died June 1606) and in Sept. 1608 it was agreed that this monument should also commemorate the princess's sister Mary (*d.* 16 Sept. 1607). Colt received for this work 215*l.* On 28 July 1608 Colt was nominated the king's master-carver, and on 3 March 1608–9 he was granted a suit of broadcloth and fur to be renewed annually for life. In 1611 he carved 'a crown on the head of the Duke of York's barge,' and in the following years he was employed in decorating the king's and queen's private barges. The last payment for this work was made on 14 Oct. 1624. Between 1610 and 1612 he is credited with having designed and superintended the building of Wadham College, Oxford, but this statement is probably due to a confusion of Colt with (Thomas) Holt [q. v.] Colt was imprisoned in the Fleet, and released by the warden in 1641, when a petition was presented to the House of Lords praying for an inquiry into the warden's leniency (*Hist. MSS. Comm.* 4th Rep. 111). A letter (7 Jan. 1610–11) from Colt to Suffolk and Salisbury is among the manuscripts at Longleat.

Colt's name appears to have been originally 'Poultrain,' and in early life he is often described as 'Powtran or Poutraine, *alias* Colt,' but he was afterwards known only as Colt or Coult. In the marriage register he is described as 'Maximilian Poictrin van Utrecht.' He had a house in Bartholomew Close, and was living in Farringdon Ward in 1618 with JOHN COLT, probably his son, who was also a sculptor and a native

of Arras. A daughter Abigail was buried, at the age of sixteen, in St. Bartholomew's Church 29 March 1629, and his wife, Susan, in 1646. He had another son named Alexander.

[Pell Records, ed. Devon (1836), 21, 27, 50, 60, 88, 139, 249, 289; Foreigners resident in England, 1618–88 (Camd. Soc.), xxiv. 80; Walpole's Anecdotes, ed. Wornum (1862), 195, 238; Notes and Queries, 3rd ser. v. 434; Stanley's Westminster Abbey, 152–3, 156; Cal. State Papers (Dom. 1603–1610), 449, 496, 524; Redgrave's Dict. of Artists.] S. L.

COLTON, CHARLES CALEB (1780?–1832), author of 'Lacon,' born about 1780, was probably a son of Barfoot Colton, elected to King's College, Cambridge, in 1755, and afterwards canon of Salisbury. Colton was educated at Eton, elected to King's College in 1796, B.A. 1801, and M.A. 1804. In 1801 he was presented by his college to the rectory of Prior's Portion, Tiverton, tenable with a fellowship. Here he published a sermon (1809), a 'Plain and Authentic Narrative of the Sampford Ghost' (1810), and 'Hypocrisy; a Satire in three Books' (only one book published) in 1812. He was more famous as a sportsman, and especially as a skilful fisherman, than as a divine. In 1818 he was presented to the college living of Kew and Petersham. Here his eccentricities became marked. A writer in the 'Literary Magnet,' who first met him in company with 'Walking Stewart,' describes him as wearing a military dress. He said that it was cheaper to live in London than at his living, and the stranger found him in squalid lodgings over a marine-store shop, with a few books, such as Defoe's 'History of the Devil,' fishing-rods, and scattered manuscripts. He produced, however, two bottles of excellent wine, and talked brilliantly. Another visitor, Cyrus Redding, softens the description, and declares that Colton was always temperate, and his surroundings cleanly. For a time he carried on business as a wine merchant. In 1816 he published a poem, which had first been called 'Napoleon,' as 'Lines on the Conflagration of Moscow' (4th edition 1822), and in 1819 'Remarks Critical and Moral on the Talents of Lord Byron.' In 1820 appeared the first volume of his 'Lacon, or many Things in few Words addressed to those who think.' A sixth edition appeared in 1821. A second volume was added in 1822, and it has been frequently reprinted. It is a collection of aphorisms of an edifying kind, and often very forcibly expressed. He is charged with borrowing from Bacon's 'Essays' and the 'Materials for Thinking' of William Burdon [q. v.], but absolute originality could scarcely be expected. Colton was addicted to gambling, and became deeply embarrassed. He had associated with Thurtell, who murdered Weare in 1823. When Colton disappeared about the same time, Thurtell was at first thought to be concerned. Colton had in fact retired to America, and, according to Redding, his debts were caused by speculations in Spanish bonds. He went to Paris, and in 1827 returned to claim his living. In 1828, however, a successor was appointed. Colton again visited America, and finally settled in Paris, where Redding saw him in 1829. He became known at the gaming tables in the Palais Royal, and is said at one time to have gained 25,000*l.*, to have collected a picture gallery, and afterwards to have been ruined. His friend, Major Markham Sherwell, says that he was supported by his 'aged mother,' and was above distress. He suffered from a painful disease. He falsified one of the remarks in 'Lacon,' viz. that no one ever committed suicide from bodily anguish, though thousands have done so from mental anguish, by killing himself while visiting Major Sherwell at Fontainebleau 28 April 1832, rather than submit to a surgical operation. A volume called 'Modern Antiquity and other Poems' was edited by M. Sherwell in 1835. Colton seems to have been a man of great talent, though unfitted by character, and, it would seem, by his real opinions, for a clerical career.

[Gent. Mag. for 1832, i. 564–6; Cyrus Redding's Fifty Years' Recollections (1858), ii. 303–311; The Literary Magnet, new series, 1827, iii. 218–23; The Georgian Era, iii. 582; Introduction to 'Modern Antiquity.']

COLTON, JOHN (*d.* 1404), archbishop of Armagh, is said to have been born at Terrington in Norfolk. He was chaplain to William Bateman [q. v.], bishop of Norwich, who may have introduced him to Edmond Gonville, the founder of Gonville Hall, Cambridge, of which he was appointed the first master in 1348. In this year he proceeded doctor of canon law, and on the death of his patron Gonville (1350) succeeded to his parish of Terrington, near King's Lynn. Twenty-seven years later his name appears as prebendary of Bugthorpe in the diocese of York (Hardy, *Le Neve*, iii. 179); but it would seem that he had been serving in Ireland at least as early as 1372 (*Rot. Pat. et Claus. Hib.* p. 87; Mason). In this year he distinguished himself by defeating a body of Irish plunderers, who had burned the priory of Athy in Kildare. For this purpose he had levied twenty-six knights at his own expense. A little later he pawned his goods for money to defend 'Newcastle

Mackynegan' against the O'Brynnes, and had his horse slain on the same occasion or in the defence of Carrickmain. According to Mason, he was probably appointed dean of St. Patrick's between 20 Aug. and 25 Oct. 1374; and he is certainly styled both dean of St. Patrick's and treasurer of Ireland in a document dated 25 Oct. of this year (*Rot. Hib.* p. 87). On 6 Sept. he appears as dean of St. Patrick's only (*ib.* p. 89 *b*). Mason says that he was made chancellor in 1379; he certainly held this office in December 1380 (*ib.* p. 106), and according to the same authority (*Ann. of St. Pat.* p. 127, &c.) till 26 Nov. 1381. On the death of Edmund, earl of March (26 Dec. 1381), whom he was attending in his progress through Munster, he summoned the English barons to meet at St. Peter's, Cork, for the purpose of appointing a justiciar in the place of the deceased nobleman. Both Ormonde and Desmond refused the office, which was finally conferred upon Colton on or before 20 Jan. (Mason; *Rot. Hib.* p. 111 *a*, *b*). Mason considers that he occupied this office for only a very short time; and he is probably correct in this supposition, as Colton seems to have gone to England about 6 March, and is simply styled 'lately dean of Dublin' in a document dated 1 April 1382 (*ib.* pp. 115, 118 *b*). He had resigned the chancellorship on 19 Feb. (Mason). On the death of Milo Sweetman, archbishop of Armagh (11 Aug. 1380), he seems to have been appointed guardian of the temporalities of that see, and was made archbishop in 1382. He died on 27 April 1404, having shortly before resigned his see, and was buried in the church of St. Peter at Drogheda (Reeves). Two of his provincial constitutions are still extant, and Tanner, quoting from Bale, makes mention of two treatises written by him against the papal schism, viz. 'De Causis Schismatis' and 'De Remediis ejusdem.' Dr. Reeves has edited his visitation of the diocese of Derry (1397) for the Irish Archæological Association (Dublin, 1850).

[Mason's History and Annals of St. Patrick's Church, Dublin; Rotuli Patentes et Clausi Cancellariæ Hiberniæ, vol. i. pt. i.; Reeves's Colton's Visitation, pref.; Tanner's Bibliotheca, 192. The dates given by Mason do not agree in all cases with those of the Irish Rolls.] T. A. A.

COLUMBA, Saint (521–597), is known in Ireland and the western isles as Columcille. Columbanus (Bædæ *Historia Ecclesiastica*, bk. iii. c. 4, p. 94, ed. Cologne, 1601) is another form of the name. He was born on the day on which St. Buite [q. v.] of Monasterboice died, 7 Dec. 521. Feidilmid, his father, was chief of a mountainous district in the north-west of Ireland, well described in an old verse 'cuigeadh Ulaidh seo sios as mile cnuic in a lar,' the province of Ulster down here and a thousand hills in its midst. Feidilmid is a name still in use in that region, where the warlike deeds of Feidilmid Ruadh are often related by the fire, while till a few years ago the music of Feidilmid Coll was a frequent delight to the country-side. Columba's father was grandson of Conall Gulban, from whom the north-west of Ulster takes its name of Tirconaill, and great-grandson of Niall Naighiallach, king of Ireland from 379 to 405. Feidilmid's wife, Ethne, was eleventh in descent from Cathair Mor, king of Leinster. Thus, through both father and mother, the saint was kin to many powerful families. His birthplace was at Gartan in Donegal, on the side of a small hill at the foot of which are three lakes, overshadowed by dark mountains, haunted in the sixth century by numbers of wolves (O'Donnell, *Life*), whose last descendants were killed by the grandfathers of the old men of a few years ago (local tradition). A large flagstone in the townland of Lacknacor is visited by pilgrims as the actual couch on which Columba was born. The intending emigrant believes that to lie upon it will save him from home sickness, and there is a strong local belief in its merit as causing easy parturition. The saint was baptised Colum by Cruithnechan mac Ceallachain, a priest, at Dooglas, and to his baptismal name the addition of cille (of the church) was added, probably during his life. The child of an Irish king was always put out to fosterage, and Columba's foster parents were the O'Firghils, who lived but a few miles from his birthplace. His childhood was spent with them at Doire Eithne, a place so wild to this day that the eagle, the raven, the badger, and the pine marten have their homes in it. Some of the tribe that fostered him still live at Kilmacrenan, as their ancient home is now called. After the formal termination of his fosterage the saint became a pupil of St. Finnian, on the shore of Strangford Lough, and by him was ordained deacon. He next studied under Gemman, one of the Oes dana of Leinster, and here became confirmed in the love for the old poetic tales of Ireland which he had doubtless acquired under the shadow of Lochasalt, and which, as Irish tradition asserts, he retained throughout life. He and his teacher vainly endeavoured to prevent the lawless murder of a girl, and the sudden death of the murderer after Columba's vehement expression of indignation was counted as one of the first evidences of his power as a saint. He next went to Clonard, and, with other afterwards

famous men, studied under Finnian till ordained priest by Etchen, a bishop whose diocese is obsolete, and whose church is indicated by a slight irregularity in the pasture at Clonfad in the parish of Killucan in Westmeath. After his ordination, Columba, with Comgall, Ciaran mac Antsair, and Cairrech, three of his fellow-students at Clonard, lived a religious life at Glasnevin, on the banks of the Finglass. In 544 an epidemic broke up the community and Columba returned to his kindred. As he crossed the river Bior, which separated the kingdom of the Airghialla from the lands of Cinel Eoghain, he prayed that its waters might be the northern limit of the epidemic, an incident of importance as showing that at that time no feud had yet grown up between the tribe of Conall and that of his brother Eoghan. His first foundation was in their marchland. In the far north, a few miles from Ailech, the stone hill fortress of the northern N-i Neill, there was a fortified hill, the sides of which were clothed with an oak wood, and which was called, from some long-forgotten chief, Daire Calgaich. The fort was given by his admiring kinsmen to Columba, and there he built his first church, one day's journey only from the mountains of his birth, and in sight of the sea which was to carry him to the place of his death. In after times the hill acquired the name of its consecrator, and was known for nearly a thousand years as Daire Choluimcille; it then took a prefix from the home of its conquerors and was called Londonderry, but is now universally known by its oldest name of all, Daire, phonetically spelt Derry. A great church, which gives its name of Templemore to the parish, and which was the predecessor of the present cathedral, was built in 1164 on another site, but a lane called Longtower still marks the locality of the church built by Columba in 545, and near which for many centuries there stood a tall round tower. In the fifteen years following 545 Columba founded many churches with monastic societies. The most important was Durrow, founded in 553. The most secluded was built in the westernmost glen of Ulster, called in some parts of Ireland Seangleann, and in the place itself Glen Columbcille. Here the natives, wishing their patron not to be inferior in achievements to the greatest saint of Ireland, relate how Columba, after prayer and fasting in the solitude, drove out from the glen into the ocean some demons who had fled from the wrath of Patrick in Connaught. The ruins of Columba's church, the small size of which is one sign of its antiquity, and some traces of monastic buildings, are on the north side of the glen. Just below it the sea is always covered with foam round the promontory of Garraros; while mists for six months shut out from view the opposite side of the glen and the path ascending it into the world. The saint and his followers always thought the roar of the sea and mists sweeping across desolate moorland incitements to devotion. In 563 he crossed to the west of Scotland, and received a grant of the island known in English as St. Colm's isle, or Iona, and in Irish as I-coluim-cille, and in Latin as Hy. It lay on the line which divided the nominally christian Scots of Britain from the pagan Picts. Columba's voyage was made in the second year after a war between his kinsmen and the king of Ireland, of which the saint was the originator. A youth who had taken sanctuary with him was killed by the king. The saint went to the north and roused his tribe to avenge the wrong. They marched several miles beyond the boundary of Tirconaill by the plain which lies between the sea and the foot of Ben Bulben, and met King Diarmait at Cuildremhne, not far from Drumcliff in Sligo, where at this day a very ancient carved stone cross of graceful proportions marks a subsequent monastic foundation of the saint. The accounts of ecclesiastical censure following this conduct are indefinite in the early lives, but seem to have some foundation of truth (O'Donovan, note on the subject, *Annala R. I.* i. 197). It seems most likely that the banishment was voluntary, and that it was a self-inflicted mortification and not a publicly imposed penance. All late Irish writings represent the banishment as penal, and an elaborate legend, which makes the copying of another saint's gospel Columba's offence, is transferred into most English and foreign accounts of him, but it contains intrinsic evidence that it is not historical. The conversion of the Picts, if not the original object of the migration, soon became part of the saint's work. His preaching was successful, and his reputation for sanctity spread so that in 574, on the death of Conall, lord of the British Dalriada, who had given Inchcolm to Columba, Aidan, his cousin and successor, sought and received formal inauguration in the monastery. In the next year Columba visited Ireland in company with Aidan (*d.* 606) [q. v.] A great folkmote was held on Drumceatt, a long green ridge which rises from Myroe, the second largest plain of Ireland, a few miles from the northern coast. Here Aedh mac Anmire, king of Ireland, was persuaded formally to renounce rights of sovereignty over the tribes of British Dalriada, and the terms of release of

Scanlann, a royal captive from Ossory, were arranged. Both arrangements are attributed to Columba's influence, and a very ancient authority (Preface to *Amra Choluimcille*; 'Lebor na Huidre' facs.) also ascribes a third decision to him. The exactions of the bards and senachies had roused general indignation, and their order was threatened with destruction. He obtained terms for them; they were to be moderate in their satires, their visits were not to be too long, and their demands for reward were to be moderate. They assented, and continued for centuries to perambulate the country, to praise or to satirise kings, lords and squires, farmers and ecclesiastics, till in the present reign their last representatives were reduced, in the general ruin of the literature of Ireland, to a chair by the kitchen fire in winter and a meal on the doorstep in summer. In 585 Columba again visited Ireland, stayed at his monastery of Durrow and afterwards at Clonmacnois.

From his distant island he ruled other churches in the western isles, and many in Ireland, of which the chief were Derry, Durrow, Kells (Meath), Tory, Drumcliff, Swords, Raphoe, Kilmore, Moone, Clonmore, Rechra (Lambay), Kilmacrenan, Gartan, Templedouglas, Assylyn, Skreen (Meath), Skreen (Tyrone), Skreen (Derry), Drumcolumb, Mismor Loch Gowna, Emlaghfad, Glencolumbkille (Clare), Kilcolumb, Knock, Termon Maguirk, Cloghmore, Columbkille (Kilkenny), Ardcolum, Armagh, Mornington, Desertegny, Clonmany, Desertoghill, Ballymagroarty, Ballymagrorty, Glencolumbkille (Donegal), Eskaheen (ADAMNAN, *Life of Columba*, ed. Reeves, p. 276). Of the saint's life in his island a vivid picture is given in Adamnan's 'Vita Sancti Columbæ.' The author was Columba's ecclesiastical successor and his kinsman, and in his youth knew some who had been contemporaries of the saint. The earliest existing manuscript of the life is almost as old as the time of Adamnan. Carlyle had read the book often and admired it. 'You can see,' he said, 'that the man who wrote it would tell no lie; what he meant you cannot always find out, but it is clear that he told things as they appeared to him.' The object of the life is not to give dates or descriptions, but to exhibit the saintly character of Columba. In the account, however, of his prophetic revelations, of his miracles, and of his angelic visions, the three sections of the biography, his way of life, his disposition, and his tastes, are easily learned. Most of what are described as wonders are simple events which take their miraculous colour from the observer's belief in the constant interposition of providence in daily life. He spent the day in religious exercises, in manual labour, and in writing. If his monastery was governed by a precise and definite code, it has not survived. The Irish 'Regula Choluimcille,' transcribed by Michael O'Clery (printed in Reeves's 'Primate Colton's Visitation,' p. 109), consists of general exhortations to holy poverty (rule 2), to obedience (rules 2, 8, 3), to seclusion from the world (rules 1, 4, 5, 6, and 7), to readiness for martyrdom (rules 9 and 10), to the general practice of christian morality (rules 11, 12, 13, 14, 19, 20, 23, 24, and 25), to silence (rule 22), to prayer (rules 27, 28, and 29), while two of the rules, 16 and 17, are somewhat more definite, and ordered 'three labours in the day, prayers, work, and reading,' and 'to help the neighbours, namely by instruction, or writing, or sewing garments, or by whatever labour they may be in want of.' This is perhaps the rule of which St. Wilfrith spoke in his discussion at Strenaeshalch with Colman (BÆDÆ *Historia Ecclesiastica gentis Anglorum*, iii. 25, ed. Cologne, 1601, p. 134), saying, 'De parte (leg. patre) autem vestro Columba et sequacibus ejus, quorum sanctitatem vos imitari et regulam ac præcepta cœlestibus signis confirmata sequi perhibetis.'

The arrangements of the community which Columba founded and over which he ruled are traceable in his biography. He looked upon monastic life as a military service of Christ. The monastic society was modelled on the secular institutions with which the saint was familiar, and consisted of an abbot (or chief) and of a muinter, family or clan. Columba himself, the abbot, was in priest's orders, and all his successors styled themselves 'abbas et presbyter.' He permitted no episcopal jurisdiction within the monastery, but often entertained bishops, employed them to ordain, and treated them with veneration, as in superior orders. His authority was absolute. Besides the regular hours for devotion he sometimes called the brethren suddenly to the church and there exhorted them from the altar. He instituted a feast on the day of the death of Colman mac U-loigse, and dispensed the community from fasting on the advent of a guest. He gave a benediction as a formal exeat from the island, and sometimes forbade people to land on it, sometimes he crossed over to the mainland of Scotland, preaching to the Picts and baptising converts. Columba named his own successor, but evidently intended the office to be elective in a particular line, as were the chiefships of the Irish clans; of his eleven immediate successors nine were certainly of his kin, one was probably so, and one only was not a descendant of Conall Gulban. The family,

in Irish muinter, which the abbot ruled consisted of a varying number of brethren. He brought twelve with him from Ireland, but afterwards admitted both Britons and Saxons. All property was in common, and celibacy was observed, but the rules as to silence merely applied to frivolous conversation. Hospitality like that of an Irish king was practised. The abbot and brethren went out to meet strangers, and Columba often kissed a guest on his arrival. The sick were treated and the needy relieved. The canonical hours were observed, with necessary relaxation for those brethren who tilled the ground. Columba often retired for prayer at night to solitary places, or by day into the woods. His ordinary diet and that of his community consisted of bread, milk, fish, eggs, and the flesh of seals, with beef and mutton only on great occasions. He wore a coarse cassock and hood of homespun undyed wool, and beneath it a linen shirt, and on his feet sandals. He slept on a flag of stone in his clothes. Of Columba's appearance it is known that he was tall with brilliant eyes, and with the whole front of his head shaved. His solitary habits had not made him inconsiderate of the concerns of ordinary men, and he was passionately loved by his community. He was kind to animals as well as to men. When an exhausted heron fell upon the strand, he ordered it to be fed and tended till it was able to fly again, and on the last evening of his life he caressed an old horse, which rubbed its head against him, and blessed it. He taught his followers to think that they and the great whales which now and then appeared in their seas had a common ruler: 'Ego et illa bellua sub Dei potestate sumus.' In 593 he felt his health failing, but lived four years more. On Saturday, 8 June, he spent part of the day, as was his wont, in writing, and wrote to the verse of Psalm xxxiii. 'Inquirentes autem dominum non deficient omni bono.' The words reached to the foot of the page. 'Here,' he said in Irish, 'I make an end; what follows Baithene will write.' These words were afterwards held to be a formal nomination of his successor. He attended the first service on Sunday morning, and then went back and rested on his stone bed and stone pillow. As he lay filled with a consciousness of approaching death, and heard only by his attendant, he uttered a blessing on his monks. Soon after the bell rang for matins; he rose and with a last effort hurried to the church. His attendant followed, and as the church was dark called out, 'Where art thou, father?' A moment later the brethren bearing lanterns, as was the custom, came in to service, when they saw the saint lying before the altar. Diarmait raised him up and supported his head; all saw he was dying and began to wail. Columba opened his eyes and looked with a delighted smile to right and left. They thought he saw attendant angels. Diarmait held up Columba's right hand, and the saint moved it in benediction of those present, but could not speak; then he passed away.

He was buried in his island, and his remains rested there for a century. They were then disinterred and enshrined, and the reliquary brought to Ireland in 878. In 1127 the Danes of Dublin carried it off, but restored it again; but what ultimately became of the elaborately adorned shrine and its contents is unknown. A book attributed to his hand, and called 'Cathach' (*cath*, battle), because it was carried into battle, was long preserved by the O'Donnells, descendants of Conall Gulban and kinsmen of the saint, was at last deposited in the Royal Irish Academy, Dublin, by one of them, and may there be seen. It was an object of veneration as of great antiquity in the eleventh century, when its present silver cover was made; but though a very ancient manuscript it is stated to contain no evidence of having been written by Columba. The 'Book of Durrow,' now in Trinity College, Dublin, belonged to the Columban monastery of Durrow, and was enshrined as a venerable relic by Flann mac Maelsechnaill, king of Ireland, in 916. It was then believed to be a manuscript of the saint himself, and its original colophon, still legible, was certainly written long before 916, and may be the autograph of Columba, 'Rogo beatitudinem tuam, sancte presbiter Patrici, ut quicumque hunc libellum manu tenuerit meminerit Columbæ scriptoris qui hoc scripsi met evangelium per xii dierum spatium.' Several other books attributed to Columba and his personal relics are fully described by Reeves (Adamnan, *Vita Columbæ*, p. 353). Adamnan mentions no original compositions of Columba, but several works in prose and verse are in middle Irish literature attributed to him. Colgan (*Trias Thaumaturga*, p. 471) gives a list of several works in Latin and in Irish attributed to Columba, and has printed three Latin hymns which are perhaps the most likely of the list to be authentic. Two are on the Trinity, and are said to have been composed on the island. The third, beginning 'Noli pater indulgere,' is a prayer for protection and guidance, of extreme simplicity of thought and rudeness of expression. Columba was succeeded as abbot of Icolumcille by Baithene, whom he had nominated, and the missionary school which he had founded continued for several generations to send preachers and founders

of religious communities into Northern Britain and into several parts of Europe. At Milan (from Bobbio), at St. Gall in Switzerland, and at Würzburg may be seen manuscripts in the hands of men who had learnt penmanship and theology in Icolumcille or in the monasteries which recognised the successor of Columba as their superior. It was not till the twelfth century that the fire kindled by Columba was outshone and lost to view in the light of a new learning and a fresh religious enthusiasm. In his own mountain country he is still an object of popular devotion.

The chief biographies of Columba are: 1. That of Cumine, abbot of Icolumcille, who died in 669. This is not extant, but is cited by Adamnan. 2. 'Vita Sancti Columbæ,' by Adamnan [q. v.], ninth abbot, based on that of Cumine. 3. An old life in Irish ('Leabhar Breac,' fol. 15 *a* and *b*). This is a sermon on the text 'exi de terra tua,' &c., printed by W. Stokes, Calcutta, 1877. Other copies exist in the 'Book of Lismore' and in a manuscript in the Advocates' Library, Edinburgh. 4. A life, or rather collection of all written information and local tradition about Columba, written in 1532 by Manus O'Donnell at Lifford in Donegal. This interesting collection of everything believed about Columba in Donegal is a finely written manuscript of 120 pages with double columns. It was bought by Rawlinson at the Duke of Chandos's sale in 1777 for twenty-three shillings, and is now in the Bodleian collection, Rawlinson B. 514. It contains a large illuminated figure of the saint with a mitre on his head. 5. Colgan prints ('Trias Thaumaturga,' pp. 325, 332) two lives, which are compilations of little value. It is a curious illustration of Columba's fame in his own region that all the writers who have thrown light on the life of Columba have come from the north of Ireland. Cumine, Adamnan, and Colgan from Donegal, while Dr. William Reeves, whose book 'The Life of St. Columba, written by Adamnan,' Dublin, 1857, is the storehouse to which all modern writers on the Columban period have gone, and in which no points are neglected, was curate of Kilconriola in Antrim when he wrote the book, and is now bishop of Down, Connor, and Dromore.

[Reeves's Adamnan; Reeves's Acts of Archbishop Colton, Dublin, 1850; Colgan's Trias Thaumaturga, Louvain, 1647; O'Donovan's Notes in Ordnance Survey of the County of Londonderry, Dublin, 1837; Crowe's Amra Choluimcille, Dublin, 1871; Bædæ Historia Ecclesiastica, bk. iv. ed Cologne, 1601; Irish Historical MSS facsimiles of Book of Durrow and of Cathach, and of O'Donnell's Life; Royal Irish Academy, facsimiles of Leabhar Breac and Lebor na Huidre; Stuart's History of Armagh, Newry, 1819; Bodleian MS., Rawlinson B. 514.] N. M.

COLUMBAN, SAINT (543–615), abbot of Luxeuil and Bobbio, was born in Leinster in 543, the year of the death of St. Benedict at Monte Cassino. His youth was studious, and he became well versed in literature and in the works of the grammarians. As he grew to manhood his singular beauty exposed him to many temptations from his countrywomen. In order to resist these he applied himself with redoubled diligence to his work, and studied grammar, rhetoric, and geometry with all his might. Still troubled by carnal desires, he sought counsel of an aged woman, who lived as a recluse. She bade him flee from temptation. In obedience to her advice he left his parents and his home, and went to dwell with a learned doctor named 'Silene,' probably Sinell, abbot of Cluaininis in Lough Erne (comp. *Vita S. Columbani Abb.* by JONAS, a monk of Bobbio, and almost a contemporary, and LANIGAN, *Eccl. Hist.* ii. 233, 263). While with him Columban composed a metrical version of some of the Psalms and wrote other poems and treatises. After a while he left Sinell and entered the monastery of Bangor on the coast of Down, which was then under the rule of its founder, St. Congall, where he was conspicuous for his devotion and the strict discipline of his life. After remaining there many years he longed to go as a missionary to foreign lands, and, having obtained the reluctant consent of his abbot, sailed with twelve other monks who wished to accompany him to Britain. They made only a short stay there, and then, probably in 585, went on to Gaul. Constant wars and the consequent negligence of the priests had caused religion to decay throughout the dominions of the Merovingian kings. Christianity indeed remained, but men no longer cared to practise self-mortification and penance (*Vita*, p. 11). Columban preached in various places, and then went to the court, his biographer Jonas says, of Sigebert, king of the Austrasians and Burgundians. This must, however, be wrong, for Sigebert of Austrasia was slain in 575 (ST. GREG. Ep. Turon. iv. 52), and this king must therefore have been either Guntramn of Burgundy, who died in 593, or Hildebert II, who succeeded his father Sigebert in Austrasia and his uncle Guntramn in Burgundy. It is probable that Columban arrived at the court of Hildebert after he had succeeded to Guntramn's kingdom (ORDERIC, 716 A). The king received him graciously, and begged him to remain in his country, offering him whatsoever he

would. Columban refused his gifts, and only asked that he might settle in some desert place. The king agreed, and he and his companions took up their abode in the wilderness country of the Vosges mountains, where they found the ruins of an ancient fortification to which the tradition of the day gave the name of Anagrates (*Vita*, p. 12), the present hamlet of Anegray, in the commune of Faucogney, department Haute-Saône. There they lived very hardly, sometimes having nothing to eat save grass and the bark of trees. About three leagues distant was the abbey of Salix or Le Saucy, and the cellarer Marculf, who was sent by his abbot to carry food to the strangers, spoke so much of Columban's holiness that many disciples joined him and much people resorted to him. Columban, however, loved solitude. He often withdrew himself from his little society, and only taking one youth as his companion would abide for a time in some lonely place. He had a full share of the tenderness of character and the love of all living things conspicuous in St. Columba, St. Patrick, and, indeed, in the Celtic saints generally. Birds, it is said, would light on his shoulder that he might caress them, and as he wandered in the forest squirrels would run down from the trees and nestle in his cowl. Like other Celtic saints, too, he was eager, dauntless, and passionate.

When the number of monks became so great that they could not all live together in the ruins at Anegray, Columban determined to build a monastery in the immediate neighbourhood, and chose the site of the once famous baths of Luxovium or Luxeuil, about eight miles off. The ruins of the Gallo-Roman town lay on the borders between Austrasia and Burgundy, at the foot of the Vosges mountains, in a district that had long lain deserted, and was thickly covered with pine forests and brushwood. When, probably in 590, Columban obtained a grant of Luxeuil from the king, he found the images of pagan gods standing among the ruins of the ancient town. Leaving a certain number of monks at Anegray, he built a monastery for the rest here. The sons of many Frankish nobles entered his new house, and that too soon became full to overflowing. He accordingly built another monastery at Fontaine. He kept the headship of these houses himself, and was often at one or the other of them. At the same time he spent many days in solitary retirement, and he therefore appointed provosts who were to govern the monks in each convent under his direction. It was for these congregations that he drew up his rule. Obedience 'even unto death' was the basis of his system. Less precise than the rule of St. Benedict, Columban's rule enjoined severe labour as a means of gaining self-control, without laying down any particular regulations. Self-denial was to be universally practised, but was to stop short of any privation that might hinder devotion. Vast as the power of the abbots was as regards the duty of obedience, they were not allowed to inflict punishments at their own discretion, for a minute penal code is appended to the rule prescribing the exact penalties for various offences. Corporal punishment is generally ordered, and the number of stripes to be administered is laid down in each case. Something of the unpractical spirit of Celtic monasticism appears in the sentence that the purity of the monk was to be judged by his thoughts as well as by his actions. Columban's rule was followed in Gaul before the rule of Benedict, and was formally approved by the council of Mâcon in 627. It is printed in the 'Collectanea Sacra' of Patrick Fleming, an Irish monk, and in 'Bibliotheca Maxima Patrum,' xii. 2 (see also LANIGAN, ii. 269, and NEANDER, *Ecclesiastical History*, v. 37–44). The number of Columban's monks increased rapidly, and it is said, though on no very good authority, that he instituted the 'Laus perennis' in his convents, a system by which each monk in turn took his share in the divine service, so that the voice of praise rose continually from the congregation. Columban adhered to the Celtic usages as regards the date of Easter, the shape of the tonsure, and other matters (BÆDA, *Hist. Eccl.* ii. 4). The Frankish bishops, who seem to have looked on his growing influence with some jealousy, urged him to conform to the Roman practice. He wrote letters to Gregory the Great on the subject of the difference of ritual. Three of these letters never reached the pope; Satan, he says, hindered their delivery. One is preserved: it is respectful, though at the same time the language is bold and free (FLEMING, *Collect.* 157, ep. v.) The bishops in 602 held a council to judge him. Instead of appearing before this council Columban sent the bishops a letter written in a tone of dignified authority, in which he bids them examine the question with meekness; he reminds them that he was not the author of these differences, for he and his companions followed the practices of their forefathers, and prays that he may be allowed to remain in the woods where he had dwelt for the last twelve years, and so be near the bodies of the seventeen of his brethren who had passed away (*ib.* 113, ep. ii.) At a later date he also wrote to Pope Boniface (the third Boniface 606-607, the fourth 607–615)

asking his protection. Columban at this time was strong in the favour of the royal house, and so the bishops seem to have taken no further steps against him.

Before long Columban lost the support he derived from the Burgundian court. Attracted by his holiness Theodorik II, king of Orleans and Burgundy, often came to Luxeuil to seek his prayers and counsel. The king, who had put away his wife, lived very evilly, and in 609 Columban took advantage of one of his visits to urge him to put away his concubines, and have children by a lawful wife and queen. The king was inclined to obey him. Columban's conduct, however, enraged the king's grandmother, the famous Brunhild, for she feared that if her grandson married she would lose much of her dignity and power. It chanced one day that Columban visited the old queen at the town now called Bourcheresse. When Brunhild saw him enter the hall, she brought the sons that different concubines had borne the king and set them before him. He asked what they wanted of him. 'They are the king's sons,' she answered; 'strengthen them with thy blessing.' The quick temper of the Celtic saint was thoroughly roused. 'Know this,' said he, 'that these boys shall never hold the kingly sceptre, for they are the offspring of the stews' (Fredegarius, c. 36). After this Brunhild and the king acted spitefully towards Columban, and though a temporary reconciliation took place the abbot again excited their anger by writing to warn Theodorik that unless he amended his life he would withdraw from communion with him—he would, that is to say, personally separate himself from him, as St. Ambrose did from the Emperor Theodosius, a wholly different matter from a general excommunication (Lanigan, ii. 279). On this Brunhild stirred up the nobles against the abbot, and incited the bishops to find fault with his monastic rule (*Vita*, 18). Urged by the party thus formed, Theodorik went to Luxeuil and ordered the abbot to grant free access to his convent to every one alike, according to the custom of the country. Columban refused, and shortly afterwards the king sent him to Besançon that he might there await his pleasure. No restraint was put upon the abbot's movements while he was there, and so he quietly returned to Luxeuil. When the king heard of his return he sent soldiers to drive him out of the monastery, ordering that none save his Celtic monks were to accompany him. Columban left Burgundy in 610, after having spent twenty years there. He and his companions were conducted with considerable harshness to Auxerre, and thence to Nevers, where they were made to embark on the Loire. From Tours, where he visited the tomb of St. Martin, Columban sent a message to Theodorik warning him that in three years he and his children would be destroyed utterly. At Nantes the party was to be shipped off to Ireland. While waiting there for a vessel Columban wrote a touching letter of farewell to the monks he had left in his Burgundian monasteries. With many passionate expressions of grief he bade them obey their new head, Attala, and requested that he would remain with them unless there arose some danger of division about the Easter question (*Collect.* 132). It is said that the ship that was to have taken him back to Ireland was miraculously driven ashore, and that he and his monks were allowed to go whither they would (*Vita*, 22; Fredegarius). They visited the court of Hlotair (Clothaire) II, king of Neustria, at Soissons, and were warmly welcomed. While Columban was at the Neustrian court the king consulted him as to whether he should join Theodebert or Theodorik in the quarrel that was then impending between them. Columban, it is said, bade him help neither of them, declaring that within three years the dominion of both should be his. Although earnestly pressed to abide in Neustria, he refused to do so, for he desired to visit other countries. In 611 he left Neustria, and, guarded by an escort provided him by Hlothair, travelled to the court of Theodebert, king of Austrasia, at Metz. Theodebert received him graciously and offered to settle him in any place that he thought would be a suitable station for mission work among the heathen people of the surrounding districts. Columban went to seek out a field of labour for himself; he ascended the Rhine, and entered the present canton of Zug. Here he and his monks preached to the Alemanni and the Suevi. In his zeal he set fire to a heathen temple, and this so enraged the people that he and his party were forced to flee. They went to Arbon on the Lake of Constance, and thence to the ruins of the ancient Bregentium, now Bregenz, where they established themselves. Columban again destroyed the images of the heathen people, but the preaching of St. Gall, who was one of his companions, and who knew the language of the country, had considerable effect, and the missionaries appear to have been unmolested.

The overthrow of Theodebert at Tolbiac in 612 brought Bregenz under the power of Columban's enemies, Theodorik and Brunhild (Fredegarius, c. 38). He therefore departed for Italy, leaving St. Gall, who either was or pretended to be sick, behind him

(WALAFRID, i. 8; LANIGAN, ii. 291), and in the same year as the battle of Tolbiac arrived at Milan, having spent about a year at Bregenz (Walafrid says three years, but this, as Lanigan shows, is probably incorrect). He was received with great kindness by the Lombard king, Agilulf, and appears to have remained at Milan for a year. During this time he disputed with the Arians, and wrote a treatise against their doctrine, which has not been preserved (*Vita*, 29). At the request of Agilulf and Queen Theodelinda he wrote a letter to Boniface IV on the subject of the Nestorian heresy, which prevailed widely in northern Italy. In this letter he appears to defend the Nestorian doctrine, and urges the pope to submit the matter to a general council. In 613 Agilulf gave him a grant of land in the Apennines, and there he founded his monastery of Bobbio, rebuilding an old church which he found there, and building another. While he was thus engaged a messenger came to him from Hlothair telling him that his prophecy had been fulfilled. Theodebert had been defeated and slain in 612, and his conqueror, Theodorik, had died the next year. Hlothair slew the sons of Theodorik, and was now king over all the three Frankish kingdoms. He wished Columban to come to him. This, however, the abbot refused, and only begged the king to show kindness to his monastery at Luxeuil. He died at Bobbio on 21 Nov. 615, and was there buried. His memory is held in honour in northern Italy, and is preserved in the name of the town San Columbano. His name is really only another form of Columba (*Vita*, i.) The example of missionary zeal set by St. Columban found many imitators both in England and Ireland. About fifty years after his death his rule was superseded by the rule of St. Benedict. Nevertheless his work did not perish, for in Gaul no monastery for many years became so famous as his house at Luxeuil, while in Italy the congregation he founded in his last days was full and flourishing a century and a half after his death (PAULUS DIACONUS, iv. 41), and long continued a seat of learning and a stronghold of orthodoxy (*Dict. of Christian Biog.* art. 'Columban').

Columban's extant works, collected and published by Patrick Fleming, are: 1. 'Regula Monastica,' his Rule, in ten chapters. 2. 'Regula cœnobialis . . . sive Liber de quotidianis pœnitentiis monachorum,' his book of punishments for the offences of monks, in fifteen chapters. 3. 'Instructiones variæ,' including seventeen discourses. 4. 'Liber de modo . . . pœnitentiarum,' a penitential. 5. 'Instructio de octo vitiis principalibus.' 5. 'Epistolæ aliquot,' letters to the synod of 602, his parting charge to the monks in his Burgundian houses, to Boniface III and IV, and to Gregory the Great. 6. His six poems on the vanity and vexations of life, including an epigram 'De Muliere;' the authorship of one of these, 'Rythmus de Vanitate . . . vitæ mortalis,' is doubtful (WRIGHT). Besides these: 7. A commentary on the Psalms is not in Fleming's collection. The collected editions of his works are: 'Patricii Flemingi Hiberni Collectanea sacra, seu S. Columbani . . . acta et opuscula,' 8vo, Augsburg, 1621, fol. Louvain, 1667, which includes the life by Jonas and the Miracles, and reprinted from this the 'Opera omnia' in the 'Bibliothecæ Patrum,' and in Migne's 'Patrologiæ Cursus completus,' tom. lxxxvi., 1844. The rules are also in Goldast's 'Paræneticorum Vet.' pars i., Messingham's 'Florilegium Insulæ Sanctorum,' fol. Paris, 1624, and Lucas Holstenius's 'Codex Regularum,' ii.; the poems with the 'Rythmus' are in Goldast's collection, and in 'Dionysii Catonis Disticha de Moribus,' 8vo, Zwickau, 1672. Fuller information will be found in Wright's 'Biographia Literaria,' which also contains some account of the works. The commentary on the Psalms is in 'Il codice irlandese,' Rome, 1878.

COLVILE or **COLDEWEL, GEORGE** (*fl.* 1556), translator, a student of Oxford (WOOD; his name does not appear in BOASE, *Register of the University*), translated 'Boethius de Consolatione Philosophiæ' with the title 'Boetius de Consolationæ [*sic*] Philosophiæ. The boke of Boecius, called the comforte of philosophye or wysedome . . . in maner of a dialoge betwene two persones, the one is Boecius, and the other is Philosophy, whose disputations . . . do playnly declare the lyfe actiue . . . and the lyfe contemplatyue . . . Translated out of latin into the Englyshe tounge by George Coluile *alias* Coldewel . . . And to the mergentis is added the Latin . . . accordynge to the boke of the Translatour, whiche was a very olde prynte. Anno MDLVI.', printed by John Cawood, 4to.

The epistle dedicatory is 'To the hygh and myghty pryncesse our souereigne Ladye, and Quene, Marye . . . Quene of Englande, Spayne, Fraunce, both Cicilles, Jerusalem, and Irelande . . . Archeduches of Austrie, Duches of Myllayne, Burgundye and Brabante, Countesse of Haspurge, Flaunders and Tyroll.' The Latin is in italics on the inner margin, the rest of the book is in black letter. This is in the British Museum. Another edition was printed, also by Cawood, without date, in 1561.

COLVILE, SIR JAMES WILLIAM (1810–1880), judge, eldest son of Andrew Wedderburn (who had changed his surname to Colvile) of Ochiltree and Crombie in Fifeshire by his wife, the Hon. Louisa Mary Eden, daughter of William, first lord Auckland, was born in 1810, and was educated at Eton and at Trinity College, Cambridge, where he obtained the third place in the second class in mathematical honours, and graduated B.A. in 1831 and M.A. in 1834. He was an intimate friend at Cambridge of Monckton Milnes, afterwards Lord Houghton. In Hilary term 1835 he was called to the bar at the Inner Temple, and practised in Lincoln's Inn as an equity draughtsman. In 1845 he was appointed advocate-general in Calcutta to the East India Company. In 1848 he became a puisne judge, and in 1855 the chief justice of the supreme court of Bengal. He was knighted in 1848, and in 1859 retired and returned to England. He acquired in India a great knowledge of Indian systems of law, and of scientific and economic questions affecting India, and was president of the Asiatic Society of Calcutta. On his return home he was at once on account of these special attainments sworn of the privy council, and acted with Sir Laurence Peel as Indian assessor to the judicial committee. In November 1865 he was appointed a member of that committee, and took a large share in its decisions, and in 1871, under the Judicial Committee Act, was appointed one of the four paid judges. He continued to act in that capacity until on 6 Dec. 1880 he died suddenly at his town house, 8 Rutland Gate, and was buried on the 11th at his Scotch seat, Craigflower, near Dunfermline in Fifeshire, of which county he was a justice of the peace and deputy-lieutenant. He was a bencher of the Inner Temple, and a fellow of the Royal Society. He married in 1857 Frances Elinor, daughter of Sir John Peter Grant, K.C.B., G.C.M.G., of Rothiemurchus, lieutenant-governor of Lower Bengal, by whom he had one son, Andrew John Wedderburn, born in 1859, who died in 1876.

[Times, 8 Dec. 1880; Law Times, 11 Dec. 1880.] J. A. H.

COLVILL or COLVILLE, ALEXANDER, M.D. (1700–1777), Irish presbyterian minister, was son of Alexander Colville. He originally wrote his name Colville, but adopted the spelling Colvill from about 1724. He was probably born at Newtownards, where his father was ordained on 26 July 1696. The elder Colville became in 1700 minister of the congregation at Dromore, county Down, and died in his pulpit in November 1719. At the date of his father's death, Colvill, who had graduated M.A. at Edinburgh on 2 March 1715, was studying medicine, but where is unknown. The Dromore congregation at once sought him as their minister. He went through a theological course at Edinburgh under William Dunlop [q. v.] After acting as tutor in the family of Major Hay of Parbroath, he was licensed by the Cupar-Fife presbytery, on 19 June 1722. Being called to Dromore, he was refused ordination in 1724 by Armagh presbytery, as he declined to renew his subscription. His father had been a member of the Belfast Society, a clerical club which fostered the anti-subscription movement of 1720–6. Colvill appealed to the sub-synod and thence to the general synod, but evaded an adverse decision by repairing to London in December 1724, and getting himself ordained in Calamy's vestry, Joshua Oldfield, the leader of the London non-subscribers, presiding. The Armagh presbytery would not receive him. On appeal, the general synod (June 1725), though threatened by Calamy with a withdrawal of the *regium donum*, suspended him from ministerial functions for three months. Disregarding this sentence, Colvill, who had already (29 March 1725) applied for admission to the non-subscribing presbytery of Dublin, was by three of its members, Choppin, McGachy, and Woods, with Smyth from the Munster presbytery, installed at Dromore on 27 Oct. 1725 [see BOYSE, JOSEPH]. These proceedings were followed by a schism in the Dromore congregation; but the majority (above four hundred heads of families) adhered to Colvill, whose orthodoxy, except on the points of predestination and the powers of the civil magistrate, there seems no good reason for questioning. After his settlement at Dro-

more he apparently obtained his degree in medicine. In 1730 he and his congregation transferred themselves to the non-subscribing presbytery of Antrim (expelled from the synod in 1726). His original meeting-house being out of the town, a new one was built for him on Pound Hill, Dromore. On the outbreak of the rebellion of 1745 Colvill obtained from Lord Chesterfield a commission for raising a volunteer corps, which he commanded in person. He died of apoplexy at Dromore on 23 April 1777, in his seventy-eighth year. His funeral sermon was preached on 4 May by James Bryson [q. v.], who eulogises his 'rich, clear, and comprehensive understanding.' From his will (dated 3 Oct. 1772) it appears that he had a son, Maturine, and five daughters, two of them married. His congregation returned to the general synod after his death, but left it again with the remonstrants of 1829.

Colvill published: 1. 'Funeral Sermon for Rev. T. Nevin of Downpatrick,' Belfast, 1745, 8vo. 2. 'The Persecuting, Disloyal, and Absurd Tenets of those who affect to call themselves Seceders, &c.,' Belfast, 1749, 8vo. 3. 'Some important Queries,' &c., Belfast, 1773, 8vo (defends the 'Catholic Christian,' by John Cameron (1724–1799) [q. v.], against the attack of Benjamin McDowell).

G.

COLVILLE, ALEXANDER (1530?–1597), Scotch judge, was the second son of Sir James Colville of Easter Wemyss, by his wife Janet, second daughter of Sir Robert Douglas of Lochleven, sister of William Smith, earl of Morton. On 4 Feb. 1566–7 he obtained a charter of the abbey of Culross, and by an act of the secret council, 20 Jan. 1574, it was decreed that 100 marks only should be paid by him for the thirds of this benefice. After the death of Darnley he had supported the party who opposed Queen Mary, and during the regency of Morton he was, some time before 26 Oct. 1575, appointed one of the judges of the court of session. He was a member of the commission appointed by parliament on 15 July 1578 to 'visit, sycht, and consider the laws,' and about the same time he was appointed one of the arbitrators in the deadly feud between the families of Gordon and Forbes. On 11 Nov. of the following year he was named a privy councillor, and appointed a lord of the articles and a commissioner for settling the jurisdiction of the church. He was present at Holyrood House on 19 Oct. 1582, when King James was forced to emit a declaration regarding the raid of Ruthven. After the return of Hamilton and other banished lords in 1585, he was again named a privy councillor. From May till 21 June, through illness, he withdrew from the bench in favour of his nephew John Colville, chanter of Glasgow. In 1592 he was made a commissioner for the reform of the hospitals. He died in April or May 1597. He collected the decisions of the court of session from 1570 to 1584. By his wife Nicolas, daughter of Alexander Dundas of Fingask, he had, with two daughters, two sons: John of Wester Cumbrae, who in 1640 became by right third Lord Colville of Culross, but did not assume the title; and Alexander, justice depute and professor of divinity at St. Andrews.

[Lord Hailes's Catalogue of the Lords of Session; Haig and Brunton's Senators of the College of Justice, 160–2; Douglas's Scottish Peerage (Wood), i. 354.] T. F. H.

COLVILLE, ALEXANDER (1620–1676), Scottish episcopalian divine, eldest son of John Colville of Wester Cumbrae, by right third lord Colville, and Elizabeth, daughter of Sir James Melville of Halhil, was born in 1620. He was educated at the university of Edinburgh, and for some time had a charge at Dysart, Fifeshire. Subsequently he became professor of Hebrew and theology in the university of Sedan, France, under the patronage of the reformed churches. He died at Edinburgh in 1676. By his wife Ann le Blanc he had two sons. He has been confused with a contemporary Samuel Colvill, who attacked the papacy in 'The Grand Impostor Discovered' (Edinb. 1673, 4to), and satirised the presbyterians in 'a mock poem' imitating Butler's 'Hudibras' called 'Whiggs Supplication' (pt. i. Lond. 1681; pts. i. and ii. Edinb., 'by S. C.' 1687, and 'by Sam. Colvill' 1695). London editions (1692 and 1710) have the alternative title 'The Scotch Hudibras.'

[Douglas's Scottish Peerage (Wood), i. 355; Anderson's Scottish Nation.] T. F. H.

COLVILLE, SIR CHARLES (1770–1843), general, second son of John, ninth lord Colville of Culross in the peerage of Scotland, was born on 7 Aug. 1770. He entered the army as an ensign in the 28th regiment on

26 Dec. 1781, but did not join until 1787, in which year he was promoted lieutenant. In May 1791 he was promoted captain into the 13th Somersetshire light infantry, with which regiment he remained for nineteen years, until he became a major-general. He joined it in December 1791 in the West Indies, and remained with it until its return to England in 1797, seeing much service in the interval, especially in San Domingo, and being promoted major 1 Sept. 1795 and lieutenant-colonel 26 Aug. 1796. He then commanded the 13th in the suppression of the Irish insurrection of 1798, and in the expedition to Ferrol and to Egypt in 1800 and 1801. In Egypt his regiment formed part of Major-general Cradock's brigade, and distinguished itself in the battles of 8, 13, and 21 March, and in the investment of Alexandria. On leaving Egypt, Colville, who had there established his reputation as a good regimental officer, took his regiment to Gibraltar, where he remained until 1805, in which year he was promoted colonel. After a short period in England he went with his regiment to Bermuda in 1808, and in 1809 he was made a brigadier-general and commanded the 2nd brigade of Prevost's division in the capture of Martinique in that year. On 25 July 1810 he was promoted major-general and at once applied for a command in the Peninsula. In October 1810 he took over the command of the 1st brigade of the 3rd division, which was under the command of Picton. It was now that he had his great opportunity, and he soon became not only Picton's trusted lieutenant, but one of Wellington's favourite brigadiers. He commanded his brigade in the pursuit after Masséna, and in the battle of Fuentes de Onoro, shared the superintendence of the trenches with Major-general Hamilton at the second siege of Badajoz, commanded the infantry in the affair at El Bodon on 25 Sept. 1811, and the 4th division in the place of Major-general Cole in the successful siege of Ciudad Rodrigo. He shared the superintendence of the trenches in the third and last siege of Badajoz with Generals Bowes and Kempt, and commanded the 4th division in the storming of the Trinidad bastion, where he was shot through the left thigh and lost a finger of his right hand. He had to go to England for his cure, and thus missed the battle of Salamanca, but returned to the Peninsula in October 1812 and commanded the 3rd division in winter quarters until superseded by the arrival of General Picton. He commanded his brigade only at the battle of Vittoria, where he was slightly wounded, but was specially appointed by Lord Wellington to the temporary command of the 6th division from August to November 1813, when he reverted to the 3rd division, which he commanded at the battles of the Nivelle and the Nive. He was again superseded by the arrival of Sir Thomas Picton, but in February 1814 Lord Wellington appointed him permanently to the 5th division in the place of Sir James Leith. With it he served under Sir John Hope in the siege of Bayonne, and Colville it was who superintended the final embarkation at Passages of the last English troops left in France. His services were well rewarded; he received a cross with one clasp; he was made a K.C.B. in January and a G.C.B. in March 1815; he was appointed colonel of the 94th regiment in April 1815; and when the return of Napoleon from Elba made it necessary for an English army to be sent to the continent, he was made a local lieutenant-general in the Netherlands at Wellington's special request, and took command of the 4th division there. Colville's division was posted on the extreme right of the English division at Hal during the battle of Waterloo. To compensate him for not being more actively engaged there, Wellington gave him the duty of storming Cambray, the only French fortress which did not immediately surrender. He succeeded with the loss of only thirty men killed and wounded. Colville did not again see active service. He was promoted lieutenant-general in 1819, and was commander-in-chief at Bombay from 1819 to 1825, and governor of the Mauritius from 1828 to 1832. He was promoted general on 10 Jan. 1837, and died on 27 March 1843 at Rosslyn House, Hampstead. He married in 1818 Jane, eldest daughter of William Mure of Caldwell. His eldest son (*d.* 1903), who succeeded as eleventh Lord Colville of Culross in the peerage of Scotland, was created Baron (1885) and Viscount Colville (1902) in the peerage of the United Kingdom.

[Royal Military Calendar; Napier's Peninsular War.] H. M. S.

COLVILLE, ELIZABETH, Lady Colville of Culros (*fl.* 1603), poetess, is supposed to be identical with Elizabeth, daughter of Sir James Melville of Halhil, author of 'Memoirs of his own Life' (Bannatyne Club). To this lady, who married John, eldest son of Alexander Colville (1530?–1597) [q.v.], commendator of Culros, Alexander Hume dedicated his 'Hymns, or Sacred Songs' (1599). In 1603 appeared a poem in ottava rima describing a dream in which Christ rescued the author from hell. The title-page runs: 'Ane Godlie Dreame compylit in Scottish Meter be M.M., Gentilwoman in Culros, at the requesst of her freindis,' Edinburgh, 1603. It will be

observed that the initials are not E. M. but M. M. (explained as Mistress Melvill). By the death of his kinsman, the second lord Colvill of Culros, in 1640, John Colvill became of right the third lord, but did not assume the title. Her eldest son, Alexander [q. v.] (1620–1676), is separately noticed. Armstrong (*Launcelot Temple*) refers to a melody known as Lady Culross's dream as 'an old composition, now I am afraid lost; perhaps because it was almost too terrible for the ear' (*Miscellanies* (1770) *on Vulgar Errors*), and in 1859 Lady Lytton communicated to 'Notes and Queries' the fact that she had once possessed a ballad printed in the reign of Richard III in which the following couplet occurred:—

It was fals Sir Gawyn's culp that faire Alice now did seme
Like the ghast Ladye of Culrosse in her wild shrieking dreme.

It is probable that the existing poem is a *rifacimento* of a much earlier one, the subject or reputed author of which was a certain lady of Culross. The existing poem, which answers on the whole very ill to the description 'wild shrieking dreme,' after passing through various editions in the seventeenth and eighteenth centuries, was reprinted with a biographical note in 'Early Metrical Tales,' edited by David Laing, 1826.

[Douglas's Peerage of Scotland, i. 355; Notes and Queries, 2nd ser. viii. 247, 312.] J. M. R.

COLVILLE, Sir JAMES (*d.* 1540 ?), of Easter Wemyss, lord of session and diplomatist, was the elder son of Robert Colville of Ochiltree and Margaret Logan. He was one of the commissioners to parliament on 15 Feb. 1525, and was appointed to the office of comptroller previous to 1527. In 1529 he exchanged the lands of Ochiltree with Sir James Hamilton of Finnart for the lands of Easter Wemyss and Lochorshyre in Fifeshire. The same year he was appointed a director of the chancery. He was one of the commissioners to parliament on 24 April and 13 May 1531, 15 Dec. 1535, and 29 April 1536. He was nominated a lord of the articles on 13 May 1532 and 7 June 1535, and at the latter date was chosen a commissioner for the taxation of 6,000*l.* voted by the three estates to James V on his approaching marriage. On the institution of the College of Justice in 1532 he was appointed one of the judges on the temporal side of the bench, and received the honour of knighthood. He was one of the commissioners at the truce of Newcastle on 8 Oct. 1533, and was sent again into England to treat of peace in the following year. For siding with the Douglases he was in 1538 deprived of the office of comptroller, and on 30 May 1539 a summons of treason was executed against him for affording them in various ways countenance and assistance. He appeared to answer to the charge before the parliament on 18 July 1539, when the only charge persisted in against him was that while comptroller he, on 14 July 1528, had made a pretended assignation for the benefit of Archibald Douglas of Kilspindy, when he knew that a summons of treason against him had been at that time executed. For this he was ordered on 21 Aug. to enter himself in ward in the castle of Blackness. This order he disobeyed, and, returning to England, associated with Angus and his brother in treasonable attempts against the king. He died some time previous to 10 Jan. 1541, when a summons was executed against his widow and children, on account of his having incurred the crime of 'lese-majesty.' His estate was annexed to the crown, but was afterwards bestowed on Norman Leslie of Rothes. The forfeiture was rescinded in parliament on 12 Dec. 1543, under the direction of Cardinal Beaton, to which fact Father Hay in his 'Memoirs' attributes the prominent part played by Leslie in the murder of the cardinal in 1546. Colville was twice married: first, to Alison, eldest daughter of Sir David Bruce of Clackmannan, and, second, to Margaret Forrester, who survived him. Besides several legitimate children, he had a natural son, Robert, ancestor of the Lord Colvilles of Ochiltree.

[Douglas's Scottish Peerage, i. 353–4; Lord Hailes's Catalogue of the Lords of Session; Scot's Staggering State of Scottish Statesmen; Foster's Members of the Parliament of Scotland, 78.] T. F. H.

COLVILLE, JOHN (1542 ?–1605), Scotch divine and politician, was the second son of Robert Colville of Cleish, Kinross-shire, by Margaret, daughter of James Lindsay of Dowhill. He was educated in the university of St. Andrews, where he graduated M.A., probably in 1561. He became a presbyterian minister, and was parson of Kilbride in Clydesdale in 1567, and two years later he was appointed chantor or precentor of Glasgow. In 1571, when new arrangements were introduced into the church and sanctioned by the general assembly, he was chosen to act as representative of the archdeacon of Teviotdale in the election of a titular archbishop. In the register of ministers for 1574 Colville is entered as minister of the united parishes of Kilbride, Torrens, Carmunnock, and Egleschame, his stipend extending to 200*l.*, being the 'haill Chantorye of Glas-

gow, and thrid of the pension furth of the same; he paying his Reider at Kilbryde,' and readers to officiate at the three other parishes. Complaints were made about him several times to the general assembly on account of his non-residence and neglecting his churches. In answer to an inquiry, the assembly stated in 1570 that 'he was presently at the point of excommunication.' He contrived, however, to ingratiate himself at court, and in November 1578 he was appointed master of requests. At this period he became acquainted with the English ambassadors, and for many years he furnished secret information to Queen Elizabeth's government concerning the political affairs of Scotland. After the execution of the Earl of Morton in June 1581, Colville attached himself to the protestant faction of which the Earl of Gowrie was the leader. He took part in the raid of Ruthven in August 1582, and to his pen has been attributed the manifesto issued in vindication of the enterprise that was published under this title: 'Ane Declaration of the just and necessar Caussis moving us of the Nobillitie of Scotland, and utheris, the Kingis Maiesties faithful Subiectis, to repair to his Hienes presence, and to remane with him, &c. Directit from Striuiling. Anno 1582,' 8vo (reprinted in facsimile at Edinburgh in 1822). By his party, who looked to Queen Elizabeth as their chief support, Colville was employed on two successive missions to the English court, and by his zealous efforts he rendered himself peculiarly obnoxious to the catholic party (Tytler, *Hist. of Scotland*, viii. 124). When the king recovered his liberty, Colville, on 15 July 1583, entered himself in ward in the castle of Edinburgh, to abide his trial (Bowes, *Correspondence*, p. 503), but he soon succeeded in obtaining his liberty, and a license 'to pass furth of this realm' except to England and Ireland, and to remain absent for three years. Regardless of the conditions of this license he retired to England, and was consequently forfeited by act of parliament, the offices he held being declared vacant. After Arran had been driven from court, the act of Colville's forfeiture was doubtless repealed, and he was restored to royal favour, for in two special grants by the king (November 1586) he continues to be styled chantor of Glasgow, and payment is ordered of three years' arrears of his pension as master of requests.

On 2 June 1587 he was admitted a senator of the College of Justice in the room of his uncle, Alexander Colville, commendator of the abbey of Culross, but in less than three weeks he resigned his seat on the bench 'in favour of his uncle foresaid' (Brunton and Haig, *Senators of the College of Justice*, pp. 161, 212). In the same year he was returned to the Scottish parliament as commissioner for the borough of Stirling. He was employed as a collector of the taxation granted by parliament to the king for his marriage. Subsequently he associated himself with the turbulent Earl of Bothwell, and he was one of those who, on 27 Dec. 1591, attacked Holyrood Palace with the view of seizing the king and Chancellor Maitland. It is uncertain whether he also accompanied Bothwell on 28 June 1592, when another unsuccessful attempt was made to seize the person of the king. For his treasonable acts he was again forfeited in parliament. On 24 July 1593 he accompanied Bothwell to Holyrood Palace, when they both fell on their knees and craved pardon of their offences (Calderwood, *Historie of the Kirk of Scotland*, ed. 1844, v. 256). On 11 Dec. in the same year they were both declared outlaws.

Colville withdrew himself from his connection with Bothwell when that nobleman entered into alliance with the catholic faction; and he treacherously gave assurance of his life to Bothwell's natural brother, Hercules Stewart, who nevertheless was executed in 1595 (Moysie, *Memoirs of the Affairs of Scotland*, ed. 1830, p. 124; Calderwood, *Historie*, v. 364). This base action secured for him the royal favour, though it discredited him in the estimation of his countrymen. In July 1597 Colville was in Holland 'with his Majesties good lyking, under his hand and Great Seall for his lawfull affairs.' Whether he ever revisited his native land is uncertain. In 1599 he was in London in a state of destitution, offering his services in vain to Sir Robert Cecil. Leaving his wife in England, he withdrew to France, and arrived at Paris on 5 Feb. 1599–1600. Soon afterwards he renounced protestantism, but the sincerity of his conversion has not unnaturally been questioned. With a view to induce his countrymen to follow his example, he wrote his 'Parænesis.' He made a pilgrimage to Rome and wrote the 'Palinode,' which he represented to be a refutation of a former work of his own against James's title to the English crown. Archbishop Spotiswood asserts, however, that Colville was 'not the author of that which he oppugned; only to merit favour at the king's hands he did profess the work that came forth without a name to be his' (*History of the Church of Scotland*, iii. 80). Colville caused a copy of his pretended recantation to be forwarded to King James, who received it with great satisfaction.

Dempster states that Colville died while

on a journey to Rome in 1607 (*Historia Ecclesiastica*, ed. 1829, i. 197). In reality he died at Paris in November 1605. He married in 1572 Janet, sister of John Russell, an advocate of some note, and had several children.

He is the author of: 1. 'Notes to be presentit to my speciall good Lord my Lord Hunsdon,' &c. 1584; in the 'Bannatyne Miscellany,' i. 85. 2. 'The Palinod of John Colvill, wherein he doth penitently recant his former proud offences, . . .,' Edinburgh, 1600, 8vo; reprinted with Colville's 'Original Letters.' 3. 'Parænesis Ioannis Colvilli Scoti (post quadraginta annorum errores in gremium Sanctæ Catholicæ Romanæ Ecclesiæ quasi postliminio reuersi) ad suos Tribules & Populares,' Paris, 1601, 8vo; it also appeared in lowland Scotch under the title of 'The Parænese or admonition of Io. Coluille,' Paris, 1602, 8vo. 4. 'Oratio Funebris exequiis Elizabethæ nuperæ Angliæ, Hiberniæ, &c., Reginæ, destinata,' Paris, 1603, 8vo. 5. 'In Obitv Beatiss. Papæ Clementis Octaui Lacrymæ Joannis Colvilli Scoti. Eiusdem in felicissima Assumptione Beatiss. Papæ Leonis Vndecimi Gaudia,' Paris, 1605, 4to. 6. 'Original Letters, 1582–1603,' edited for the Bannatyne Club (Edinb. 1858, 4to) by David Laing, who has prefixed an admirable memoir of Colville, and who conjectures that he was also the author of 'The Historie and Life of King James the Sext' (edited for the Bannatyne Club by Thomas Thomson, 1825), embracing the period from 1556 to 1596 with a short continuation to 1617. This anonymous work was first published, with unjustifiable interpolations and omissions by David Crawfurd, as 'Memoirs of the Affairs of Scotland, containing a full and impartial account of the Revolution in that kingdom, begun in 1567. Faithfully publish'd from an authentick MS.,' London, 1706, 8vo; reprinted in 1753 and 1757. The genuine work, from 1566 to 1582, was first edited by Malcolm Laing, in 1804.

[Memoir by David Laing.] T. C.

COLVILLE or COLVILL, SAMUEL (*fl.* 1681). [See COLVILLE, ALEXANDER, 1620–1676.]

COLVILLE or COLVILL, WILLIAM (*d.* 1675), principal of Edinburgh University, son of Robert Colvill of Cleish, studied at St. Andrews, graduating 1617. He was elected second minister of Trinity College in 1635, elected to the second charge of Greyfriars in January 1638, and translated to Trinity College in January 1639. In the same year he was sent by the covenanters to the king of France to solicit aid against the despotic proceedings of Charles I, but in travelling through England had his papers seized and was incarcerated till the victory of Newburn gained him his release in August 1640. In December 1641 he was removed to the Tron Church. He was suspended by the assembly in July 1648 and deposed in 1649 for 'favouring the unlawful engagement.' He then was for some time minister of the English church at Utrecht. In 1652 he was elected principal of the university of Edinburgh, but, having been carried prisoner to the castle for praying for Charles II, was not permitted by the government of Cromwell to take possession of the office, which was declared vacant on 17 Jan. 1653. He, however, received a year's stipend, in consideration of his having demitted his charge in Holland. In 1654 he was reponed by the assembly and became minister of Perth. On Leighton's resignation in 1662 he was again appointed principal of the university. He was the author of a work entitled 'Ethica Christiana' and of sermons on the 'Righteous Branch.' He died in 1675.

[Scott's Fasti Eccles. Scot. i. 55, 133; Wodrow's Analecta; Robert Baillie's Letters and Journals, i. 362, ii. 85, 463, iii. 19–21, 34, 41, 63, 64, 92, 96, 105, 184, 284, 468, 522, 545; Histories of the University of Edinburgh by Bower and Grant.] T. F. H.

COLVIN, JOHN RUSSELL (1807–1857), lieutenant-governor of the north-western provinces of Bengal, second son of James Colvin of the well-known mercantile house of Colvin, Bazett, & Co. of London and Calcutta, was born in Calcutta in May 1807, educated until near the age of fifteen at St. Andrews in Fifeshire, and, after remaining a short time with a private tutor, highly distinguished himself as a student at the East India College at Haileybury, whence he passed as a writer on 30 April 1825. He went to Bengal in the following year, and, after receiving his certificate from the college of Fort William, was on 21 Sept. 1826 gazetted extra assistant to the registrar of Sudder Dewanny and Nizamut Adawlut, and was promoted to be third assistant on 15 Feb. 1827. His next appointment was as second assistant to the resident at Hyderabad on 14 Dec. 1827. In 1830 Lord William Bentinck created the office of assistant-secretary in each of the government departments at Calcutta, on the model of the English under-secretaryships, and Colvin was selected on 4 Jan. 1831 to be assistant to the secretary of the judicial and revenue departments. In these departments he remained some years, having become the deputy secretary, 18 Sept. 1832. He was appointed secretary to the Sudder board of reve-

nue, Lower Provinces, 13 March 1835, and in the following year became private secretary to Lord Auckland, the governor-general of India. In this post he served for six years, obtaining the entire confidence of the governor-general, and 'bringing (in Lord Auckland's words) to his duties an extensive and accurate knowledge of the interests of India, in its history, and in the details of its administration.' Colvin (with Henry Torrens) is generally credited with having induced Lord Auckland to undertake the first expedition into Afghanistan (cf. KAYE, *Hist. of War in Afghanistan* (1874), i. 351). He returned to England with Lord Auckland, and after a furlough of three years recommenced his Indian career. He held for a short time in 1845 the post of resident in Nepaul, and was then in 1846 transferred to the commissionership of the Tenasserim Provinces, where his administration gave much satisfaction both to the government and to the public. He was next promoted to the Sudder court in 1849, where he became *facile princeps*, so much so that it was generally said that the pleaders had sometimes to be reminded that they ought to address the court and not Mr. Colvin. As he had not had a regular judicial training, and his knowledge of law was chiefly derived from the vigour with which he had applied to the study of it at the time, this was justly considered as a remarkable proof of his intellectual superiority. When, therefore, he was appointed lieutenant-governor of the north-western provinces on the death of Mr. James Thomason in 1853, there was no man in the service whose name stood higher for activity, ability, and force of character, and he had already been marked out as a fit man for the council. As lieutenant-governor he exhibited an industry and mastery of details which were quite astonishing. In the suppression of crime he took an especial interest, and kept the whole machinery of the police on the alert. In the revenue department he did much for the settlement of the Saugor and Nerbudda territories, then recently attached to his government, and gave great attention to the department of public works. Under his rule the Ganges canal was prosecuted to completion, and road-making was everywhere advanced. In education, while developing the scheme of primary education introduced by his predecessor, Mr. Thomason, he inaugurated the more comprehensive system prescribed by the home authorities in 1854. It was sometimes said that he over-governed, and such was his conscientious anxiety to make himself acquainted with even the minutest details, that the accumulation of business was almost too great for his secretaries, and he himself suffered from constant and unwearying labour. From works of peace and improvement Colvin was suddenly called to face the military insurrection of 1857. His position was very perilous. Of British troops he only had at his disposal a weak regiment of infantry and a battery of artillery, while the officer commanding the brigade at Agra proved to be singularly inefficient. Unlike Lawrence in the Punjab, Colvin had no warning, and the mutiny had actually broken out within his government and the rebels were in possession of Delhi before he could begin to act; but he promptly and vigorously did what was in his power. He held a parade of the troops at Agra, when he tried to disabuse the minds of the native troops of the prevalent delusions as to the government's intention of interfering with their religion or caste. On 24 May he issued a proclamation offering a pardon to the soldiers who had engaged in the disturbances, with the exception of those who had committed heinous crimes. This proclamation did not receive the approval of the governor-general, and was at the time a subject of much discussion. Colvin was ordered to modify its terms, which he did; but he defended his policy with much ability. On 1 June he disarmed the two native regiments at Agra; subsequently organised a corps of volunteer horse for service in the neighbourhood, and a foot militia for the protection of the city; strengthened the fort and made arrangements for the reception within its walls of the entire christian population of the cantonment and city. On 5 July a battle with the mutinous regiments of the Kota contingent ended in the retreat of the British force just at the moment when the natives had exhausted their ammunition and were about to retire. The garrison and the christian population had taken refuge in the fort. Colvin's first attack of illness immediately preceded his entry into the fort. He lived, however, to be transferred to the cantonments, where he died on 9 Sept. 1857, and was buried inside the fort on the following morning. The governor-general announced his death in a public notification, describing him as 'one of the most distinguished among the servants of the East India Company,' and bearing testimony to his 'ripe experience, his high ability, and his untiring energy.' He married Emma Sophia, daughter of the Rev. W. Sneyd, by whom he was father of Sir Auckland Colvin, K.C.M.G. and K.C.S.I. (1838–1908).

[Times, 25 Dec. 1857, p. 10; Gent. Mag. February 1858, pp. 212–19; Annual Register, 1857, Chronicle, pp. 363–6; Letter from Indophilus (Sir Charles Trevelyan) to the Times, 23 Nov. 1857.] G. C. B.

COLWALL, DANIEL (*d.* 1690), was a wealthy citizen of London, who devoted much of his time and fortune to the cause of science and philanthropy. Elected an original fellow of the Royal Society on 20 May 1663, he was placed on the council in the following November, and acted as treasurer for the long term of nearly fourteen years, from 1665 to 1679. Colwall from the first was an active, and soon became a very influential fellow of the society, which, thanks to his energy, was saved more than once from threatened collapse. On two occasions, in 1663 and 1666, he presented the society with 50*l.*, besides continuing his weekly payments. With this money the collection of 'rarities formerly belonging to Mr. Hubbard' was acquired in 1666, a first step towards the formation of a museum, which eventually became the most extensive in London (BIRCH, *Hist. of Royal Society*, i. 337, ii. 64, 73; WELD, *Hist. of Royal Society*, i. 171, 186, 278). The preparation of the catalogue was entrusted to Dr. Nehemiah Grew, who published it in 1681 with the title 'Musæum Regalis Societatis.' This curious book is embellished with thirty-one plates, many of which, if not all, were engraved at Colwall's expense. In the epistle dedicatory addressed to Colwall as 'founder of the museum,' the doctor trusts that the Royal Society 'might always wear this catalogue, as the miniature of your abundant respects, near their hearts;' and further on he adds, 'Besides the particular regard you had to the Royal Society it self, which seeming (in the opinion of some) to look a little pale, you intended hereby to put some fresh blood into their cheeks, pouring out your box of oyntment, not in order to their burial, but their resurrection.' Colwall's contributions to the 'Philosophical Transactions' are unimportant. He died in the liberty of the Tower of London in November 1690 (*Probate Act Book, P. C. C.* 1690; *Genealogist*, iii. 53). He had long been a governor of Christ's Hospital, to which in his lifetime he was a liberal benefactor (TROLLOPE, *Hist. of Christ's Hospital*, p. 78). In his will, dated 12 Aug., with codicil dated 19 Aug., proved on 20 Nov. 1690, he bequeathed to that institution 'for ever one rent or yearly payment of sixty-two pounds and eight shillings issuing and payable out of the hereditary excise which was assigned to me by Sir Robert Viner, knt. and bart., deceased,' and the sum of 4,000*l.*; besides supplementing the salary of the then master of the grammar school by a life annuity of 20*l.* (Will. reg. in P. C. C., 176, Dyke). Colwall's portrait is in Christ's Hospital; his head, by R. White, is prefixed to Grew's 'Musæum.' It is to be noted that Granger (*Biog. Hist. of England*, iii. 402–3), followed by Manning and Bray (*Hist. of Surrey*, i. 21), and Brayley and Britton (*Hist. of Surrey*, i. 307–8), has confounded Colwall with his great-nephew of the same name, of the Friary, near Guildford, and the son of Arnold Colwall.

[Weld's Hist. of Royal Society, ii. 560; Trollope's Hist. of Christ's Hospital, p. 344; Malcolm's Londinium Redivivum, iii. 370.] G. G.

COLYEAR, SIR DAVID, first EARL OF PORTMORE (*d.* 1730), was the elder son of Sir Alexander Robertson, of the family of Strowan, Perthshire, who settled in Holland, where he acquired a considerable property, and adopted the name of Colyear. The son entered the army of the Prince of Orange as a volunteer in 1674, and ultimately obtained the command of a Scotch regiment in the Dutch service. At the revolution he accompanied William to England, and for his distinguished services in the Irish campaigns of 1689 and 1690, and afterwards in Flanders, he was, 1 June 1699, created a peer of Scotland by the title of Lord Portmore and Blackness to him and his heirs male. Macky in his 'Memoirs' thus describes him: 'He is one of the best foot officers in the world; is very brave and bold; hath a great deal of wit; very much a man of honour and nice that way, yet married the Countess of Dorchester, and had by her a good estate; pretty well shaped; dresses clean; but one eye; towards fifty years old.' In 1702 he obtained the rank of major-general, and on 27 Feb. 1703 received the command of the 2nd regiment of foot. On 13 April of the latter year he was raised to the dignities of Earl of Portmore, Viscount of Milsington, and Lord Colyear, to him and heirs male of his body. In the war of succession in Spain he served under the Duke of Ormonde as lieutenant-general. In 1710 he was appointed commander-in-chief of the forces in Scotland, and in January of the following year was raised to the rank of general. In 1712 he served under the Duke of Ormonde in Flanders, and the same year he was named a member of the privy council and made a knight of the Thistle. In August 1713 he was constituted governor of Gibraltar, and in October of the same year he was chosen one of the sixteen representative peers of Scotland. When Gibraltar was besieged by the Spaniards in 1727, he embarked for that place to assume command, but on the approach of Admiral Wager with eleven ships the siege was raised. He died 2 Jan. 1730. He married Catherine, daughter of Sir Charles Sedley of Southfleet, Kent, and mistress of

James II. She was created Countess of Dorchester and Baroness of Darlington for life, 20 Jan. 1685, and had a pension of 5,000*l.* per annum on the Irish establishment. She died at Bath 26 Oct. 1717. By King James she had a son, who died young, and a daughter, Lady Catherine Darnley, who was married first to James, earl of Anglesea, and secondly to John, duke of Buckingham. By the earl of Portmore she had two sons, David, viscount Milsington, who died in 1729, and Charles, second earl of Portmore, born 27 Aug. 1700, died 5 July 1785, a great patron of the turf, and conspicuous in London society by the magnificence of his equipages. The peerage became extinct on the death of the fourth earl in 1835.

[Macky's Memoirs; Douglas's Scotch Peerage (Wood), ii. 371–2.] T. F. H.

COLYNGHAM, THOMAS (*fl.* 1387), Cistercian monk, attended the university of Paris, where he proceeded to the degree of doctor, presumably in theology. He was the author of a treatise 'De Eucharistia,' which is stated to have been published at Paris by John Cheyneus in 1592, from a manuscript in the library of the monastery of St. Victor, but of the printed work no copy is known to exist.

[Dempster's Historia Ecclesiastica Gentis Scotorum, iii. 326, p. 185; Tanner's Bibl. Brit. p. 193.] R. L. P.

COMBE, ANDREW, M.D. (1797–1847), physiologist and phrenologist, the fifteenth child and seventh son of an Edinburgh brewer, was born in Edinburgh on 27 Oct. 1797. Notwithstanding the Calvinistic rigour of his home, he grew up humorous and lively, though very shy. After some years' attendance at the Edinburgh High School and University, making little progress owing to the inferiority of his teachers, he became a surgeon's pupil in 1812, residing during most of the time with his elder brother George Combe [q. v.], and obtaining his diploma at Surgeons' Hall on 2 Feb. 1817. Up to 1814, as he himself expressed it (*Life*, p. 42), he was so well drilled to humility by being called blockhead at home, that he never felt encouraged to take a higher view of his own capabilities; but his brother George gradually opened his mind to more ambitious thoughts. In October 1817 he went to Paris to complete his medical studies, working especially at anatomy, and carefully investigating the brain under Spurzheim's influence in 1818–19. After a visit to Switzerland, he returned to Edinburgh in 1819, intending to commence practice there. But he was attacked by symptoms of lung disease which compelled him to spend the next two winters in the south of France and Italy. In 1823 he began to practise in Edinburgh. He had already contributed thoughtful essays to the newly established Phrenological Society. The first of these that was published was 'On the Effects of Injuries of the Brain upon the Manifestations of the Mind,' read on 9 Jan. 1823 (*Transactions of the Phrenological Society*, 1824). It confuted the dictum of Rennell, the christian advocate at Cambridge, that portions of the brain had been found entirely disorganised, when no single power of the patient's mind had been impaired to the day of death. In the same year he also answered Dr. Barclay's attack on phrenology in his 'Life and Organisation' (*ib.* p. 393). Combe's essay was so clearly written that a subsequent opponent of phrenology alluded to its 'satanic logic.' In 1823 he joined his brother and others in establishing the 'Phrenological Journal,' continuing a proprietor till 1837, and a contributor till the year before his death. A memorable discussion on phrenology, initiated by an essay by Andrew Combe, took place at the Royal Medical Society on 21 and 25 Nov. 1823, which on the last-named night lasted till nearly four the next morning. The essay was published in the 'Phrenological Journal,' i. 337; the discussion was suppressed owing to an injunction obtained by the society from the court of session. In 1825 Combe graduated M.D. at Edinburgh. His practice grew considerable, largely owing to his carefulness to enlist the reason and the sympathies of patients in aid of their cure; he avoided mystery, and he saved much alarm and prevented many evils by explanations and forecasts. In 1827 he was elected president of the Phrenological Society.

Combe had been consulted in many cases of insanity and nervous disease, and on 6 Feb. 1830 wrote an article in the 'Scotsman' commenting unfavourably on the verdict of the jury in the Davies case in 1829. The doctors who had declared Davies insane were proved by the event to be quite right. Encouraged by his success, Combe published in 1831 'Observations on Mental Derangement,' which was very successful, but was not reprinted owing to want of time and health to re-edit it. His health forced him to spend the winter of 1831–2 abroad, but by great care he recovered sufficiently to begin writing his work on 'Physiology applied to Health and Education.' This was published in 1834 and at once became popular. The fourth impression of the twelfth edition appeared in 1843. At the time of his death 28,000 copies had been sold in this country besides numerous editions in the United States.

Combe's health only permitted him to resume practice to a limited extent in 1833-5. Early in 1836 he received the appointment of physician to King Leopold of Belgium, by Dr. (afterwards Sir James) Clark's [q. v.] recommendation, and removed to Brussels; but his health again failed, and he returned to Edinburgh in the same year. He soon completed and published his 'Physiology of Digestion' (1836), which reached a ninth edition in 1849. A very considerable practice now tasked his energies, and in 1838 he was appointed physician extraordinary to the queen in Scotland. In 1840 he published his last, and he considered his best book, 'The Physiological and Moral Management of Infancy.' The sixth edition appeared in 1847. During his later years the disease under which he had long suffered, pulmonary consumption, made serious advances, combated by unremittingly careful hygiene. Two winters in Madeira and a voyage to the United States failed to restore him, and he died while on a visit to a nephew at Gorgie, near Edinburgh, on 9 Aug. 1847. A long letter on ship-fever, written just before his death, appeared in the 'Times' of 17 Sept. 1847, and was reprinted in the 'Journal of Public Health,' No. v. March 1848. Several of its suggestions were afterwards made imperative on owners of emigrant ships. Combe was never married.

A list of Combe's very numerous contributions to the 'Phrenological Journal,' some of which were reprinted in a volume of selections in 1836, is given in his 'Life,' pp. 553-7. His contributions to the 'British and Foreign Medical Review' are enumerated, *ib.* p. 560. Many additional writings and letters are included in the 'Life.'

'The popularity of Combe's writings depends on their simplicity, their practicality, and their tone of good sense. He has recorded that most of his writings were directly founded on or extracted from his correspondence in medical consultation, and thus related to actual cases under observation. Mingled with a few errors common to phrenologists was a great amount of sound physiology, both mental and general, and his principal works are still read with pleasure and profit. It is singular that the publishers to whom he applied would not risk publishing his books, and that Murray even declined the 'Physiology' when the third edition was already being printed. Thus, fortunately for himself, Combe retained the copyright in all his books; and he had the discernment to know that he wrote best when 'not fettered by another person's design or time.' He frequently states that he had not a versatile mind, and that writing was a great labour to him. But he was animated by a sincere desire to improve both knowledge and practice in regard to health, and a strong belief that the laws of nature were the expression of divine wisdom, and ought to be studied by every human being.

In person Combe was six feet two inches in height, very slender, and he stooped much in later years. His face was remarkable for its keen and beaming eyes and earnest expression. A good portrait of him was painted by Macnee in 1836. He is described as a quick and penetrating judge of character, a model of temperance, benevolent, independent and impartial, but fond of mirth, especially with children.

[Life, by George Combe, 1850; Memoir by R. Cox, Phrenological Journal, xx. 373, reprinted with additions for private circulation; Scotsman, 21 Aug. 1847; Harriet Martineau in Once a Week, iv. (1861), 575.] G. T. B.

COMBE, CHARLES, M.D. (1743-1817), physician and numismatist, was born on 23 Sept. 1743, in Southampton Street, Bloomsbury, where his father, John Combe, carried on business as an apothecary. He was educated at Harrow, and among his schoolfellows were Sir William Jones (with whom he afterwards continued to be intimate) and Dr. Parr. He rose to the sixth form, but did not proceed to the university. Coming to London, he studied medicine, and on his father's death in 1768 succeeded to his business. In 1783 the degree of doctor of medicine was conferred on him by the university of Glasgow, and he began to practise as an obstetric physician. On 5 April 1784 he was admitted by the College of Physicians a licentiate in midwifery; on 30 June he was nominated a governor of St. Bartholomew's Hospital. In 1789 he was chosen physician to the British Lying-in-Hospital in Brownlow Street, and on resigning the post in 1810 was appointed consulting physician to the institution. He had also some considerable private practice, and made a valuable collection in materia medica, which was purchased by the College of Physicians shortly after his death. He died, after a short illness, at his house in Vernon Place, Bloomsbury Square, on 18 March 1817, in the seventy-fourth year of his age, and was buried in Bloomsbury cemetery, Brunswick Square. A portrait of Combe was painted by Medley, and engraved by N. Branwhite. He married, in 1769, Arthey, only daughter of Henry Taylor, by whom he had four children. His eldest son was Taylor Combe, the numismatist and archæologist [q. v.]

Combe had a taste for classical studies,

and especially for numismatics. He was elected a fellow of the Society of Antiquaries on 10 Jan. 1771, and of the Royal Society on 11 Jan. 1776. In 1773, or earlier, he made the acquaintance of William Hunter, the anatomist. He always continued on intimate terms with him, and greatly aided him in getting together his fine collection of coins. Hunter's manuscript account of the sums expended on his collection shows that he not infrequently purchased from Combe coins of all classes. The largest payment made to him is 185*l.* (in 1777), 'for weights and large brass (Roman coins),' which had been collected by Combe himself. Combe contemplated a complete catalogue of the Hunter coin collection, but only published one instalment—his well-known work entitled 'Nummorum veterum Populorum et Urbium qui in Museo Gulielmi Hunter asservantur Descriptio, figuris illustrata,' London, 1782, 4to. A Latin preface gives the history of the Hunter collection. The illustrations, contained in sixty-eight engraved plates, are poor as works of art; but Combe took care that they should be more faithful to the original coins than the illustrations in previous numismatic works. Eckhel pronounced the text of the work to be compiled 'erudite, nitide et adcurate.' (For rectifications see Dr. J. Friedlaender, in the *Numismatische Zeitschrift*, 1870, pp. 321–8, and Dr. Imhoof-Blumer in *Zeitschrift für Numismatik*, 1874, i. 321–7.) Combe was appointed one of the three trustees to whom Hunter (who died in 1783) left the use of his museum for thirty years, after which the collection passed to the Glasgow University. In 1788 Combe began to work in conjunction with Mr. Henry Homer, fellow of Emmanuel College, Cambridge, upon an edition of Horace, with variorum notes. Dr. Parr was also originally to have taken part in the work. Combe's colleague died before the first volume was completed, and he finished the work alone, which was published as 'Q. Horatii Flacci Opera cum variis lectionibus, notis variorum et indice completissimo,' 2 vols. 1792–3, 4to. It was a fine specimen of typography, but some errors, especially in the Greek quotations in the notes, were severely commented on by Dr. Parr in the 'British Critic.' Combe replied with 'A Statement of Facts,' &c., and was answered by Parr in 'Remarks on the Statement of Dr. Charles Combe,' 1795, 8vo. Combe also published a work on 'large brass' coins, entitled 'Index nummorum omnium imperatorum, Augustorum et Cæsarum . . . ,' London, 1773, 4to. It only extends to the reign of Domitian. He wrote the memoirs prefixed to the sale catalogue of the Rev. Richard Southgate's library (Nichols, *Lit. Anecd.* vi. 359), and contributed to the appendix to Vertue's 'Medals of Thomas Simon,' 2nd edit. 1780 (*ib.* viii. 75). Besides coins he collected some rare books, especially editions of the Bible, some of which were purchased by the British Museum.

[Gent. Mag. vol. lxxxvii. pt. i. (1817), pp. 375, 467–8; Annual Biography and Obituary for 1818, ii. 298–305; Munk's Coll. of Phys. ii. 337–8; Rose's Biog. Dict.; Eckhel's Doctrina Num. Vet. i. p. clxx; Hunter's manuscript Account of My Purchases in Medals (a transcript of it by T. Combe is in the Library of the Department of Antiquities, British Museum); Nichols's Lit. Anecd. iii. 162, 163, vi. 359, viii. 75; Brit. Mus. Cat.] W. W.

COMBE, GEORGE (1788–1858), phrenologist, was born in Edinburgh on 21 Oct. 1788. He was one of the seventeen children of George Comb, a brewer (who wrote his name thus), by his wife, Marion Newton. The education of both parents had been scanty. George had a dangerous illness in infancy, which left a permanent delicacy, increased by the unwholesome surroundings of his home. He was sent to the parish school of St. Cuthbert's about 1794 or 1795, and in October 1797 to the high school of Edinburgh. His impressions of school were painful; for his first four years he was under a cruel master; lessons were learnt by rote, under terror of the tawse, and his intellect was undeveloped. At home, though his parents, from a consciousness of their educational defects, never talked of religion, they drilled their children by mechanically instilling the catechism and by long attendances at church. Combe received gloomy impressions of religion, learnt little, and afterwards strongly condemned the whole system. From 1802 to 1804 he attended classes in the university, where the laxity of the discipline had the advantage of giving a rest to his brain. In the spring of 1804 he was articled to Messrs. Higgins & Dallas, writers to the signet. The only other clerk was George Hogarth, whose daughter, many years later, married Charles Dickens. Hogarth was a man of intelligence, and helped Combe in his efforts to improve his education. Combe himself became the chief adviser and teacher of his brothers and sisters. In 1810 he became clerk to Peter Cowper, W.S., and in leisure moments read Cobbett and the 'Edinburgh Review,' kept a diary, wrote essays, and belonged to a debating society called the 'Forum.' On 31 Jan. 1812 he was admitted writer to the signet, and started business on his own account. Cowper helped him by becoming security for a cash credit, and Combe was afterwards

able to return his kindness. The elder Comb died 29 Sept. 1815. George Combe was extending his law business, and for some years took charge also of the brewery. He helped his brothers, especially Dr. (Andrew) Combe [q. v.], who through life was his most confidential friend. His elder sister, Jean, kept house for him in Edinburgh till her death in 1831, and their younger brother, Andrew, lived with them from 1812. Their mother died 18 May 1819. The family affections were as warm between the Combes as between the Carlyles. In June 1815 Dr. John Gordon attacked Gall and Spurzheim in the 'Edinburgh Review.' Spurzheim immediately came from Dublin to Edinburgh to defend himself in a course of lectures. Combe attended them, was greatly impressed, and says that 'after three years' study' (*Introduction to American Lectures*, 1838) he became an ardent disciple and then the most prominent expositor of the doctrine. The conversion was probably quicker. He visited Spurzheim at Paris in 1817, and appears to have come back a thorough believer. Others, especially Sir George Stewart Mackenzie of Coul, gathered round him. In the beginning of 1818 he began a series of essays in the 'Literary and Statistical Magazine' in support of phrenology. He gave lectures twice a week at his own house, and collected casts of heads. He wrote 'Essays on Phrenology,' published at Edinburgh in 1819. It sold fairly, and attracted friends and converts. In February 1820 the Combes, with David Welsh and others, formed the Phrenological Society, which in December 1823 started the 'Phrenological Journal.' Interest in the new theories increased rapidly, and Combe became convinced that they supplied the key to all philosophical and social problems. His interest in such questions led him to visit Owen's mills at New Lanark in 1820. He foresaw their failure, but his brother Abram was ultimately ruined by trying a similar experiment at Orbiston, Lanarkshire, dying, after much vexation and over-excitement, in August 1827. Combe began to lecture at Edinburgh in 1822, and published a manual called Elements of Phrenology' in June 1824. Converts came in, new societies sprang up, and controversies became warm. The first draft of his 'Essay on the Constitution of Man' was the substance of his lectures in the winter of 1826–7, and was afterwards privately printed. A second edition of the 'Elements,' 1825, was attacked by Jeffrey in the 'Edinburgh Review' for September 1825. Combe replied in a pamphlet and in the journal. Sir William Hamilton delivered addresses to the Royal Society of Edinburgh in 1826 and 1827 attacking the phrenologists. A sharp controversy followed, including challenges to public disputes and mutual charges of misrepresentation, in which Spurzheim took part. The correspondence is published in the fourth and fifth volumes of the 'Phrenological Journal.'

Spurzheim visited Edinburgh in the beginning of 1828. In the following June was published Combe's best known work, the 'Essay on the Constitution of Man.' The book made a great impression, though the sale was not at first rapid. In 1832 a bequest of over 5,000*l.* came into the hands of trustees by the death of William Ramsay Henderson. The income was partly applied, in accordance with the testator's desire, to lowering the price of the essay. A 'people's' edition was also published, and between 1835 and 1838 over 50,000 copies were printed; further aid from the fund being needless after 1835. In 1843 it was still selling at a rate of 2,500 copies a year, and was then appearing in Polish. The book gave great offence; many religious members left the society, and Combe was denounced as an infidel, a materialist, and an atheist. He incurred general unpopularity at Edinburgh, though the religious objection seems to have been heightened by his personal qualities. He was sincere and simple-minded, but rigid, tiresome, and unpleasantly didactic. Whatever the logical consequences of his teaching, Combe was a sincere and zealous theist through life, though his position in regard to immortality was purely sceptical. Dr. Welsh withdrew from the society in 1831 on account of their refusal to permit theological discussions.

On 25 Sept. 1833 Combe married Cecilia (born 5 July 1794), daughter of the famous Mrs. Siddons. The lady had a fortune of 15,000*l.*, and was six years his junior. He examined her head and took Spurzheim's advice as to his own fitness for a married life. Her 'anterior lobe was large; her Benevolence, Conscientiousness, Firmness, Self-esteem, and Love of Approbation amply developed; whilst her Veneration and Wonder were equally moderate with his own' (*Life*, i. 298); and the marriage was thoroughly happy.

In 1836 Combe was a candidate for the chair of logic at Edinburgh, but ultimately eighteen votes were given to his old opponent, Sir W. Hamilton, against fourteen to Isaac Taylor. Soon afterwards Combe resolved to retire from business. His own fortune with his wife's amounted to 800*l.* a year, and he could make 200*l.* or 300*l.* more by his books and lectures. He took cheerfully some loss of income caused by injudicious American investments. The rest of his life was chiefly devoted to the propagation of his principles

by writing and lecturing. In September 1838 he sailed for America, where he had been frequently invited to lecture, and he made a tour through the United States and Canada, lecturing, arguing, and making friends with various Americans, especially Dr. Channing and Horace Mann, well known as an educationist, until June 1840, when he returned to Europe. He was exhausted by his labours, but in September presided over the third meeting of the General Association of Phrenologists at Glasgow. He took a house called 'Gorgie Cottage' at Slateford, near Edinburgh. Phrenologists were now quarrelling among themselves. Two-thirds of the members of the association resigned on account of a profession of Dr. Engledue at the London meeting in 1841 that phrenology was based upon materialism. Combe had escaped these troubles by going to Germany in May, and in 1842 he gave a series of lectures upon phrenology at Heidelberg, studying German for the purpose under a teacher who translated his lectures for him. His health was declining, and he was advised to give up lecturing. He now bought a house, 45 Melville Street, Edinburgh, which was his headquarters for the rest of his life. He continued to write on various topics connected with his main subject, and to carry on a large correspondence. Among his friends were Robert Chambers, Cobden, and Miss Evans ('George Eliot'). Miss Evans spent a fortnight with him in 1852, and found him agreeable. In January 1849 Combe published a life of his brother Andrew, who died in 1847, and some heterodox sentiments increased his alienation from Edinburgh society. In politics Combe sympathised with Cobden, though disapproving his friend's extreme peace principles. His chief interest was in education. He wrote pamphlets advocating a system of national secular education, leaving religious instruction to the separate churches. He found an ally in William Ellis, author of 'Outlines of Social Economy,' and helped to support a school set up on his principles at Edinburgh, where he gave some lessons on physiology and phrenology. During his last years he was much occupied with the question of the relations between religion and science. He published a pamphlet upon the subject in 1847, which was expanded into a book, described as the fourth edition of the pamphlet, in 1857. His health had long been breaking, and he died 14 Aug. 1858; he left no children. His wife died 19 Feb. 1868. Combe's portrait was painted by Sir Daniel Macnee in 1836 and Sir John Watson Gordon in 1857. Engravings are given in his life. Combe was remarkably even-tempered and mildly persistent; he was thoroughly amiable in all his family relations, and liberal in cases of need, though his formality and love of giving advice exposed him to some ridicule. He was essentially a man of one idea. His want of scientific training predisposed him to accept with implicit confidence the crude solution of enormously complex and delicate problems propounded by the phrenologists, and for the rest of his life he propagated the doctrine with the zeal of a religious missionary. His writings were for many years extremely popular with the half-educated, and though his theories have fallen into complete discredit he did something, like his friend Chambers, to excite an interest in science and a belief in the importance of applying scientific method in moral questions.

Combe's chief works are: 1. 'Essays on Phrenology,' 1819; in later editions, 1825 to 1853, called a 'System of Phrenology.' 2. 'Elements of Phrenology,' 1824, eighth edition 1855; translated into French by J. Fossati, 1836. 3. 'The Constitution of Man considered in relation to External Objects,' 1828, and many later editions. 4. 'Lectures on Popular Education delivered to the Edinburgh Association,' 1833. 5. 'Outlines of Phrenology,' reprinted in 1824 from 'Transactions of the Phrenological Society' for 1823; ninth edition 1854. 6. 'Lectures on Moral Philosophy before the Edinburgh Philosophical Society,' Boston, 1836. 7. 'Moral Philosophy, or the Duties of Man considered in his Individual, Social, and Domestic Capacities,' 1840, 1841, and 1846. 8. 'Notes on the United States . . . during a Phrenological Visit in 1838–40,' 3 vols., 1841. 9. 'On the Relation between Religion and Science,' 1847; enlarged in fourth edition as 'Relation between Science and Religion,' 1857. This last includes also 'An Enquiry into Natural Religion,' privately printed in 1853. 10. 'Life and Correspondence of Andrew Combe,' 1850. Besides these Combe published many pamphlets in controversy with Jeffrey and Hamilton and others, and upon minor points: upon capital punishment, 1847; national education, 1847; secular education, 1851 and 1852; on criminal legislation, 1854; and on the currency question, 1858. In 1859 was published 'Phrenological Development of Robert Burns,' edited by R. Cox.

[Life of George Combe, ed. Charles Gibbon, 2 vols., 1878; Life of Andrew Combe, 1850; George Eliot's Life, vol. i.; Reminiscences of Spurzheim and Combe, ed. R. Capen, 1881; Frances Kemble's Record of a Girlhood, 1879, i. 251–5.] L. S.

COMBE, TAYLOR (1774–1826), numismatist and archæologist, was born in 1774,

and was the eldest son of Dr. Charles Combe, the physician and numismatist [q. v.] He was educated at Harrow and at Oriel College, Oxford, where he graduated B.A. on 5 June 1795, M.A. 10 July 1798 (*Catal. Oxf. Grad.*) In 1803 he obtained an appointment in the British Museum, and superintended the collection of coins and medals. In 1807 he became keeper of the department of antiquities, the coins still remaining in his charge. In 1814 he was sent to Zante, to carry out the purchase of the Phigaleian marbles. Combe held his keepership till his death, which took place, after a long illness, at the British Museum on 7 July 1826. He was buried on 14 July, in the family vault in the Bloomsbury burial-ground. The writer of the obituary in the 'Gentleman's Magazine' speaks of him as 'strict in his principles, warm in his friendships, and kind to those who sought information.' Combe's extensive library of classical and numismatic books, together with a collection of prints and some of his manuscripts, was sold by auction at Sotheby's on 7 Dec. 1826 and eleven following days. The sum realised was 1,879*l.* 15*s.* 6*d.* A medal of Combe, by Pistrucci and W. J. Taylor, was struck after his death: obverse, bust of Combe, to left; reverse, inscription within wreath. A specimen in copper is in the British Museum. Combe married, in 1808, Elizabeth, daughter of Dr. Edward Whitaker Gray.

As a numismatist and archæologist Combe did much useful and accurate work, which is chiefly embodied in the following publications, issued officially by the Museum trustees: 1. 'Veterum populorum et regum numi qui in Museo Britannico adservantur,' London, 1814, 4to. This catalogue of the Museum Greek coins is now being gradually superseded by the new 'Catalogue of Greek Coins in the British Museum,' begun in 1873 and still in progress. Some rectifications in Combe's catalogue are made by Dr. Imhoof-Blumer in the 'Zeitschrift für Numismatik,' i. 328. 2. 'Description of the Anglo-Gallic Coins in the British Museum,' London, 1826, 4to, with engraved plates. The volume was edited and published after his death by Mr. Edward Hawkins. 3. 'A Description of the Collection of Ancient Terracottas in the British Museum,' London, 1810, 4to, with forty engraved plates. 4. 'A Description of the Collection of Ancient Marbles in the British Museum,' London, 4to—parts i–iv. (1812-20), and a considerable portion of part v. (1826), which was completed and published after his death by E. Hawkins. The 'Description of the Ancient Marbles' was carried on by Hawkins, Cockerell, and Birch (parts vi–xi. 1830-61).

Combe was elected a fellow of the Royal Society in 1806, and was secretary to it from 1812 to 1824, during which period he edited the 'Philosophical Transactions.' He joined the Society of Antiquaries in 1796, became its director in 1813, and superintended the publication of the latter portions of the 'Vetusta Monumenta.' He contributed many articles to the 'Archæologia.'

[Gent. Mag. vol. xcvi. pt. ii. (1826), pp. 181–182; Combe's Works and Manuscripts in British Museum; Edwards's Lives of the Founders of the British Museum, 392, 399; Priced Sale Catalogue of Combe's Library, 1826.] W. W.

COMBE, THOMAS (1797–1872), director of the Clarendon Press, the son of a bookseller in Leicester, was born in 1797. His connection with the Clarendon Press began about 1837. As chief manager he displayed some enterprise and much financial ability. On the determination of the monopoly which the press possessed in the matter of printing bibles he took at his own risk a paper mill at Wolvercott in order to enable the press to meet the increased competition with greater ease. The venture proved successful. He supplied the funds for the addition of a chapel to the infirmary and the erection of the church, St. Barnabas, in the low quarter lying between Worcester College and Port Meadow. He gave Mr. Millais in 1852 the commission for the 'Return of the Dove to the Ark.' He was also the owner of Mr. Holman Hunt's 'Light of the World and Persecution of Christian Missionaries by the Druids.' He was an honorary M.A. of the university of Oxford. He died suddenly on 30 June 1872 at the Clarendon Press.

[Athenæum, 9 Nov. 1872.] J. M. R.

COMBE, WILLIAM (1741–1823), author of 'Doctor Syntax,' was born at Bristol in 1741. He went to Eton, where he was a contemporary of Lord Lyttelton, Fox, and Beckford; and to Oxford about 1760 or 1761, where he gave himself up to dissipation, and left without taking a degree. He had a legacy of 2,000*l.* and an annuity of 50*l.* to the age of twenty-four from his 'godfather,' Alderman William Alexander (*d.* 1762), who is believed to have been a nearer relation (see *Notes and Queries*, 4th ser. iii. 547); and after passing a few months in town travelled for some years in France and Italy. In the latter country he met Sterne, then making the second tour described in the 'Sentimental Journey.' Combe returned to England and took up the profession of the law, but whether as solicitor or barrister is not clear. He lived at an expensive rate in Bury

Street, St. James's, and was a visitor at the 'Coterie,' a fashionable and exclusive assembly-room of the day. He was to be seen at watering-places, and, says a contemporary, writing after his death, 'came to Bristol Hotwells about the year 1768. He was tall and handsome in person, an elegant scholar, and highly accomplished in his manners and behaviour. He lived in a most princely style, and, though a bachelor, kept two carriages, several horses, and a large retinue of servants. . . . He was generally recognised by the appellation of Count Combe' (*Bristol Observer*, 16 July 1823). With an indifferent reputation for honesty (DYCE, *Recollections of the Table Talk of Samuel Rogers*, 1856, p. 116), embarrassed by debt, his fortunes were now at the lowest ebb, and he is said to have been successively a common soldier, a waiter at Swansea, a teacher of elocution, a cook at Douai College, and a private in the French army. He returned to England about 1771 or 1772, and tried authorship as a profession. The 'Heroic Epistle to Sir Wm. Chambers' of William Mason has been sometimes attributed to Combe, whose first known publication was 'A Description of Patagonia' (1774), compiled from the papers of the jesuit Father Falkner. He also wrote 'The Flattering Milliner, or a Modern Half Hour,' represented at the Bristol Theatre, 11 Sept. 1775, for the benefit of Mr. Henderson, but not printed. He is stated to have married about this time the mistress of Simon, lord Irnham, 'who promised him an annuity with her, but cheated him; and in revenge he wrote a spirited satire' (CAMPBELL, *Life of Mrs. Siddons*, i. 42). This was 'The Diaboliad, a poem, dedicated to the worst man in His Majesty's dominions' (1776), published at eighteenpence. It passed through several editions; a second part was issued in 1778. Its popularity caused Combe to follow with 'Diabo-lady,' 'Anti-Diabolady,' and a number of other versified satires, published in 1777 and 1778. The early intimacy with Sterne gave rise to 'Letters supposed to have been written by Yorick and Eliza,' printed in 1779. He had been obliged to live within the 'rules' of the King's Bench prison before 1780, when he published 'The Fast Day: a Lambeth Eclogue.' In the same year appeared the first volume of the spurious 'Letters of the late Lord Lyttelton,' being those of Thomas, the second baron, famous as 'the wicked Lord Lyttelton,' and as the hero of a well-known ghost story. A writer in the 'Quarterly Review' (December 1851) contends for the genuineness of these letters, and partly bases upon them an argument identifying Junius as Lord Lyttelton. They are admirably written, and are in a much more elevated strain of thought than most of Combe's compositions. Moore (*Memoirs*, ii. 201) and Campbell (*op. cit.* i. 41) tell, in somewhat different terms, the story of a quarrel between Lyttelton and Combe with reference to a Lady Archer. During the next eight or nine years Combe produced nothing of importance with the exception of a new edition (enlarged and almost rewritten) of Anderson's 'Origin of Commerce.' In 1789 he made his first appearance as a political pamphleteer in a 'Letter from a Country Gentleman to a Member of Parliament,' with an answer by the writer himself, showing how speedily he had taken up the stock tricks of his new calling. His connection with Pitt and pension of 200*l.* may have commenced at this period. Other party pamphlets followed, besides Meares's 'Voyages' (1790), and 'The Devil upon Two Sticks in England,' a prose tale, which was very successful. Between 1794 and 1796 Boydell produced two stately volumes on the Thames, to which the letterpress (six hundred pages) was contributed by Combe. He edited a number of publications, which are mentioned at the end of this article, and about 1803 became engaged on the staff of the 'Times,' losing his pension on the entry of the Addington ministry into power. 'Letters of Valerius,' contributed to that newspaper, were published in 1804. For the next five or six years he appears to have been fully occupied with journalism, and in 'Letters to Marianne' there are constant references to late hours at the office. 'There is another person belonging to this period [1809],' says Crabb Robinson, 'who is a character certainly worth writing about; indeed I have known few to be compared with him. It was on my first acquaintance with Walter that I used to notice in his parlour a remarkably fine old gentleman. He was tall, with a stately figure and handsome face. He did not appear to work much with the pen, but was chiefly a consulting man. When Walter was away he used to be more at the office, and to decide in the *dernier ressort*. His name was W. Combe' (*Diary*, i. 292). On the death of Pitt, Combe's pay was again stopped, and he addressed a long letter (in March 1806, from 12 Lambeth Road) to Lord Mulgrave, offering, without success, his venal services to the new administration (*Gent. Mag.* May 1852). Between 1809 and 1811 Ackermann [q. v.] produced his 'Poetical Magazine,' for which Rowlandson offered him a series of plates depicting the varied fortunes of a touring schoolmaster. Ackermann applied to Combe to supply the letterpress to the illustrations, and this led to a connection between the author and artist which may be said to form

the chief event of Combe's literary career. The 'Schoolmaster's Tour' made the fortune of the magazine, and was reprinted by Ackermann in 1812 as the 'Tour of Doctor Syntax in Search of the Picturesque,' a royal octavo volume, price one guinea. In the preface to the second edition the author states: 'An etching or a drawing was sent to me every month, and I composed a certain proportion of pages in verse, in which of course the subject of the design was included; the rest depended upon what would be the subject of the second, and in this manner in a great measure the artist continued designing and I continued writing till a work containing near ten thousand lines was produced, the artist and the writer having no personal communication with or knowledge of each other.' A writer in the 'London Cyclopædia' (1829, vi. 427) who had known Combe states that he used 'regularly to pin up the sketch against a screen of his apartment in the King's Bench and write off his verses as the printer wanted them.' The title took the public fancy. Many imitations appeared, among them: 'Tour of Dr. Syntax through London,' 1820, 8vo; 'Dr. Syntax in Paris,' 1820, 8vo; and 'The Adventures of Dr. Comicus' [1825?], a parody, with burlesques of Rowlandson's engravings. It is doubtful whether Syntax would ever have attained much popularity without Rowlandson's plates, from which we best remember the doctor and his horse Grizzle. Much of Combe's verse is sad doggerel, and Syntax, in spite of considerable humour and kindliness, is apt to tire with his endless moralisings. Combe also wrote the text for three of Ackermann's finest and best known publications, the histories of Westminster Abbey, of Oxford, and of Cambridge. The success of Dr. Syntax led to further collaboration between Combe and Rowlandson in the 'Dance of Death' (1814–16) and 'Dance of Life.' The 'Dance of Death' contains some of Combe's best verse. Mrs. Syntax having been duly put to death at the end of the first 'Tour,' a 'Second Tour in Search of Consolation,' in similar style to the first, was brought out in the 'Poetical Magazine' and completed in 1820. A 'Third Tour in Search of a Wife' was completed in 1821. Both of these passed through several editions, but never became so popular as the first 'Tour,' to which they are distinctly inferior both in point and interest. 'Johnny Quæ Genus,' the history of the foundling left at the doctor's door (see 37th canto), is the last and poorest of the series. The 'Life of Napoleon' (1815) and 'All the Talents' have been wrongfully ascribed to Combe.

Combe's first wife is said to have died in January 1814, when he is said to have married Charlotte Hadfield, the sister of Mrs. Cosway. The second wife lived apart from her husband (Hotten, *Life of Combe*, pp. xxix-xxxi). The 'Letters to Marianne' suggest that Combe was only once married. He appears to have had no legitimate children, and an adopted son offended him by marrying Olivia Serres, the so-called 'Princess Olive of Cumberland.' For over forty years Combe lived 'within the rules of the bench,' and does not seem to have greatly cared to change his situation. He died at Lambeth 19 June 1823, in his eighty-second year. A few weeks after his death a small volume entitled 'Letters to Marianne' (1823) appeared, consisting of letters and sonnets addressed to a Miss Brooke. They are dull billets-doux, written by a platonic lover of seventy to a young girl. The incidental circumstances of this attachment are described in 'Notes and Queries' (4th ser. iii. 570, &c.) In his prime Combe was remarkable for a graceful person, elegant manners, and a wide circle of acquaintances. Poverty lost him the latter, and increasing age deprived him of something of his former distinguished appearance, but to the end of his life he retained the charms of an engaging address and attractive conversation. He was a water-drinker in days when such eccentricity was rare. His honesty has been questioned, he was sparing of the truth, he had a fine gentleman's indifference to debt, and his ideas of the rights of man in dealing with women were not severe. It may be said in his favour that his pen was free from vice. The following list shows how very extensive were his literary productions, but it is remarkable that during his life nothing appeared under his name. His numerous compilations include much good literary journeyman-work. Besides many contributions to the periodical press, he wrote over two hundred biographical sketches, seventy-three sermons, some of which were printed, and the following papers to Ackermann's 'Repository of Arts,' &c.; the 'Modern Spectator,' 1811–1815; the 'Cogitations of Joannes Scriblerus,' 1814–16; the 'Female Tatler,' 1816–21; and the 'Adviser,' 1817–22. 'Amelia's Letters' appeared in the same periodical between 1809 and 1811, and were republished after his death as 'Letters between Amelia in London and her Mother in the Country,' 1824, as a kind of set-off against the 'Letters of Marianne,' which gave much offence to all his friends.

Combe's works are: 1. 'A Description of Patagonia and the adjoining parts of South America, by T. Falkner,' Hereford, 1774, 4to (compiled from Father Falkner's appendix). 2. 'The Diaboliad, a poem, dedicated to the

worst man in His Majesty's Dominions,' London, 1776, 4to (also 1777, 1778). 3. 'Additions to the Diaboliad,' London, 1777, 4to. 4. 'The Diabo-lady; or, a Match in Hell, a Poem, dedicated to the worst woman in Her Majesty's Dominions,' London, 1777, 4to (several editions). 5. 'Anti-Diabo-lady,' London, 1777, 4to. 6. 'The First of April, or the Triumph of Folly, a Poem, dedicated to a celebrated Duchess,' London, 1777, 4to (also in 1782). 7. 'A Dialogue in the Shades, between an unfortunate Divine [Dr. Dodd] and a Welch Member of Parliament, lately deceased [Chase Price],' London, 1777, 4to. 8. 'Observations on the case of Dr. Dodd,' London, 1777, 8vo. 9. 'Heroic Epistle to a noble D——,' London, 1777, 4to. 10. 'A Poetical Epistle to Sir Joshua Reynolds,' London, 1777, 4to. 11. 'A Letter to her Grace the Duchess of Devonshire,' London, 1777, 4to (on female education). 12. 'A second Letter to the Duchess of Devonshire,' London, 1777, 4to. 13. 'Interesting Letters of Pope Clement XIV [Ganganelli], to which are prefixed Anecdotes of his Life, &c., translated from the French,' London, 1777, 4 vols. 12mo (spurious; see QUÉRARD, *Supercheries*, i. 753). 14. 'The Duchess of Devonshire's Cow, a Poem,' London, 1777, 4to (two editions). 15. 'An Heroic Epistle to the "Noble Author" of "The Duchess of Devonshire's Cow,"' London, 1777, 4to. 16. 'The Royal Register; or, Observations on the Principal Characters of the Church, State, Court, &c., male and female, with annotations by another hand,' London, 1777–84, 9 vols. 12mo (satirical sketches, with the names indicated by initials). 17. 'Perfection; a Poetical Epistle, calmly addressed to the greatest Hypocrite [John Wesley] in England,' London, 1778, 4to (on methodist love-feasts and the doctrine of perfection). 18. 'The Diaboliad,' pt. ii. London, 1778, 4to (several editions). 19. 'The Justification, a poem,' London, 1778, 4to, and 'The Refutation' of the same, London, 1778, 4to. 20. 'The Auction; a Town Eclogue, by the Hon. Mr. ——,' London, 1778, 4to. 21. 'An interesting Letter to the Duchess of Devonshire,' London, 1778, 4to. 22. 'An Heroic Epistle to Sir James Wright,' London, 1778, 4to. 23. 'An Heroic Epistle to an unfortunate Monarch, by Peregrine the Elder,' London, 1778, 4to (in praise of George III and the colonial war). 24. 'The Philosopher in Bristol,' London, 1778, 2 vols. sm. 8vo. 25. 'Letters supposed to have been written by Yorick and Eliza,' London, 1779, 2 vols. 12mo (Dyce (p. 117) describes Rogers as telling a scandalous story of the intimate relations between Combe and Eliza). 26. 'The World as it goes, a Poem,' London, 1779, 4to (see Walpole to Mason, 21 Oct. 1779, Cunningham's ed., vii. 262). 27. 'The Fast Day; a Lambeth Eclogue,' London, 1780, 4to. 28. 'Letters of the late Lord Lyttelton,' London, 1780–2, 2 vols. 8vo (spurious; also 1807, 1816). 29. 'The Traitor, a Poem,' London, 1781, 4to. 30. 'Fashionable Follies, a Novel containing the History of a Puritan Family,' London, 1784, 2 vols. small 8vo (written by Thomas Vaughan; a third, which is said to have appeared some time afterwards, was by Combe). 31. 'Authentic and interesting Memoirs of Miss Anne Sheldon [afterwards Mrs. Archer],' London, 1787, 4 vols. 12mo (see J. SMITH, *Comic Miscellanies*, i. 17). 32. 'Letters between a Lady of Quality and a Person of Inferior Rank,' London, 1785, 2 vols. 12mo. 33. 'The Origin of Commerce from the Earliest Times, by Adam Anderson, carefully revised, corrected, and continued,' London, 1787–1801, 4 vols. 4to (Anderson's first edition appeared in 1764). 34. 'Letter from a Country Gentleman to a Member of Parliament on the Present State of the Nation,' London, 1789, 8vo (five editions). 35. 'An Answer to "A Country Gentleman's Letter,"' London, 1789, 8vo (also by the versatile Combe). 36. 'The Royal Interview, a Fragment,' London, 1789, 8vo (several editions). 37. 'Voyages made in 1788 and 1789 from China to the North-west Coast of Africa, by Lieutenant John Meares,' London, 1790, 4to (compiled from Lieutenant Meares's papers; an edition in 2 vols. was published in 1796. There was a controversy between Meares and Captain G. Dixon on the work). 38. 'The Devil upon Two Sticks in England, being a continuation of "Le Diable Boiteux" of Le Sage,' London, 1790, 4 vols. 12mo (second edition 1791, third edition, enlarged, 1810, 6 vols. 12mo). 39. 'The Royal Dream; or, the P—— in a Panic, an Eclogue,' London, 1791, 4to. 40. 'Considerations on the Approaching Dissolution of Parliament,' London, 1791, 4to. 41. 'A Word in Season to the Traders, Manufacturers,' &c., London, 1792, 4to. 42. 'A Critique on the Exhibition of the Royal Academy,' London, 1794, 4to. 43. 'The Schola Salerni, or Economy of Health,' London, 1794, 8vo. 44. 'The History of the River Thames,' London, Boydell, 1794–6, 2 vols. folio (coloured plates from drawings by J. Farington, R.A., with letterpress by Combe). 45. 'Narrative of the British Embassy [of Lord Macartney] to China in 1792–4, by Æneas Anderson,' London, 1795, 4to (compiled from Anderson's notes, also abridged, 1795, 8vo). 46. 'Letter to a Retired Officer on the Court-martial held 27 Nov. 1795, &c., for the trial of Colonel J. F. Caw-

thorne,' London, 1795, 4to. 47. 'Two Words of Counsel and one of Comfort,' London, 1795, 4to. 48. 'Carmen Seculare; an Ode inscribed to the President and Members of the Royal Academy,' London, 1796, 8vo. 49. 'Voyage to the South Atlantic and round Cape Horn into the Pacific Ocean, by Captain James Colnett,' London, 1798, 4to (compiled from Captain Colnett's notes). 50. 'History of the Campaigns of Count Alexander Suwarow Rymniski, by F. Anthing, transl. from the German,' London, 1799, 2 vols. 8vo. 51. 'Memoir of the Operations of the Army of the Danube under the command of General Jourdan, transl. from the French,' London, 1799, 8vo. 52. 'Official Correspondence to the period of the Dissolution of the Congress of Rastadt, with an English translation,' London, 1800, 8vo. 53. 'Report of the Commission of Arts to the First Consul Bonaparte on the Antiquities of Upper Egypt, by L. M. Ripault, transl. from the French,' London, 1800, 8vo. 54. 'Travels in Upper and Lower Egypt by C. S. Sonnini, transl. from the French,' London, 1800, 4to. 55. 'Voyages from Montreal through the continent of North America, 1789–93, by A. Mackenzie,' London, 1801, 4to (compiled from Sir Alex. Mackenzie's notes). 56. 'The History of the Mauritius, composed principally from the papers of Baron Grant, by his son, C. Grant,' London, 1801, 4to (compiled by Combe). 57. 'The Life, Opinions, and Adventures of G. Hanger, written by himself,' London, 1801, 2 vols. 8vo (compiled from Captain Hanger's papers and suggestions). 58. 'Letter to Wm. Pitt on the Influence of the Stoppage of Issues in Specie; on the Prices of Provisions and other Commodities,' London, 1801, 8vo (Combe claims to have written this, which bears the name of Walter Boyd [q. v.]) 59. 'Plain Thoughts submitted to Plain Understandings upon a prevalent Custom dangerous to the Establishment,' London, 1801, 8vo. 60. 'Journal of the Forces which sailed from the Downs in April 1800 on a Secret Expedition under Lieutenant-general Pigot, by Æneas Anderson,' London, 1802, 4to (compiled from Anderson's materials). 61. 'Clifton, a Poem, in imitation of Spenser,' Bristol, 1803, 4to. 62. 'The Pic-nic,' London, 1803, folio (a periodical; see J. Smith, *Miscellanies*, i. 17). 63. 'The Letters of Valerius on the State of Parties, the War, &c., originally published in the "Times,"' London, 1804, 8vo. 64. 'Translation of General Gordon's Defence of his Conduct during the French Revolution,' London, 1804, 8vo. 65. 'Fragments after Sterne, by Isaac Brandon' [pseud.], London, 1808, 12mo. 66. 'A Review of an important period involving the State Proceedings on the late King's first illness,' London, 1809, 8vo. 67. 'The Microcosm of London, or London in Miniature,' London, Ackermann, 1809–10, 3 vols. 4to (104 coloured plates by Rowlandson and Pugin, text of the first two volumes by W. H. Pyne, and of the third by Combe). 68. 'The Thames, or Graphic Illustrations by W. B. Cooke, from original drawings by Samuel Owen,' London, Ackermann, 1811, 2 vols. royal 8vo (letterpress by Combe). 69. 'The Life of Arthur Murphy, by Jesse Foot,' London, 1811, 4to (compiled from the papers, &c., of Foot). 70. 'The History of the Abbey Church of St. Peter's, Westminster,' London, 1812, 2 vols. 4to (with eighty-four coloured plates after Pugin, Huett, and Mackenzie). 71. 'The Tour of Dr. Syntax in search of the Picturesque,' London, Ackermann, 1812, royal 8vo (first separate publication with thirty-one coloured plates by Rowlandson. The original illustrations were re-etched. Five editions were issued between 1812 and 1813; the ninth in 1819. One with illustrations (poor imitations of Rowlandson) by Alfred Crowquill (A. H. Forrester), published by Ackermann in 1838. A Dutch translation (by K. L. Rahbek) appeared in 1820, one in French, 'Le Don Quichotte Romantique,' in 1821, and a German one at Berlin in 1822). 72. 'Six Poems, illustrative of engravings by H.R.H. the Princess Elizabeth,' London, 1813, 4to. 73. 'Poetical Sketches of Scarborough,' London, 1813, 8vo (twenty-one plates, after James Green; text by J. P. Papworth, Wrangham, and Combe). 74. 'A History of the University of Oxford,' London, Ackermann, 1814, 2 vols. large 4to (with coloured plates). 75. 'A History of the University of Cambridge,' London, Ackermann, 1815, 2 vols. large 4to (coloured plates). 76. 'The English Dance of Death, from the designs of T. Rowlandson, with metrical illustrations,' London, 1815–16, 2 vols. 8vo (first brought out in the 'Repository of Arts;' Rowlandson sent in the plates within the first fortnight, and Combe supplied the verse before the end of the month). 77. 'The History of the Colleges of Winchester, Eton, and Westminster, with the Charter House, the Free Schools of St. Paul's, Merchant Taylors', Harrow, Rugby, and the School of Christ's Hospital,' London, 1816–1817, 4to (originally produced in twelve monthly parts at 12*s.*, with coloured illustrations; Combe wrote all the letterpress with the exception of the accounts of Winchester, Eton, and Harrow). 78. 'The Dance of Life, a Poem,' London, 1816, 8vo (with twenty-six illustrations by Rowlandson, first issued in the 'Repository'). 79. 'Narrative of a Voyage in H.M.'s late ship Alceste along the Coast

of Corea to the Island of Loochoo by John McLeod,' London, 1817, 8vo (see *Memoirs of Thomas Moore*, ii. 201). 80. 'The Antiquities of York, drawn and etched by H. Cave,' London, 1818, large 4to. 81. 'The Second Tour of Dr. Syntax in search of Consolation, a Poem,' London, 1820, royal 8vo (with twenty-four coloured plates by Rowlandson). 82. 'The Third Tour of Dr. Syntax in search of a Wife, a Poem,' London, 1821, royal 8vo (with twenty-four coloured plates by Rowlandson. Like the second Tour, first issued in monthly parts, neither passed through so many editions as the first Tour. The 'Three Tours,' with Rowlandson's eighty plates reduced, were issued by Ackermann in 1826, 3 vols. 16mo, at a guinea; frequently reprinted). 83. 'A History of Madeira,' with twenty-seven coloured engravings, London, 1821, 4to. 84. 'Johnny Quæ Genus, or the Little Foundling,' London, 1822, royal 8vo (with twenty-four coloured plates by Rowlandson, first issued in monthly parts like the Tours). 85. 'Letters to "Marianne," by William Combe,' London, 1823, 12mo (with silhouette portrait of William Combe and facsimile of his handwriting. The copy in the British Museum is that described in 'Notes and Queries' (4th ser. iii. 570, &c.) as having belonged to one who knew all the persons mentioned in it, and who added names to the initials. It includes autographs of Combe in a neat and elegant writing, cuttings from newspapers, and other interesting memoranda). 86. 'Letters between Amelia in London and her Mother in the Country, by the late Wm. Combe,' London, 1824, 16mo.

[Biographies in the Times, 20 June 1823; Ackermann's Repository of Arts (1823), 3rd ser. ii. 87; Gent. Mag. August 1823. J. C. Hotten contributed a life to his edition of Dr. Syntax's Three Tours (1869), small 8vo, severely criticised in Notes and Queries, 4th ser. iii. 545–8, 569–73, and 589. The volume also contains a useful bibliography, based upon Combe's own list, given in Gent. Mag., May 1852. See also Adolphus's Memoirs of John Bannister, i. 290; Note on the Suppression of Memoirs by Sir E. Brydges, Paris, 1825, 8vo; J. Grego's Rowlandson the Caricaturist, 1880, 2 vols. 4to; and Notes and Queries, 4th ser. ii. 547, iv. 14, 15, 86, 90, 111, 129, 201, vi. 90; 5th ser. i. 153.] H. R. T.

COMBER, THOMAS, D.D. (1575–1654), master of Trinity College, Cambridge, and dean of Carlisle, was born at Shermanbury, Sussex, on 1 Jan. 1575, being the twelfth child of his father, who was a barrister-at-law. From a public school at Horsham he was sent to Trinity College, Cambridge, where he was elected to a scholarship in 1593, and to a fellowship in 1597. He graduated M.A. in 1598. For three years he lived in France, in the house of the learned protestant, Du Moulin. On his return from that country he was appointed chaplain to James I, by whose command he disputed publicly at St. Andrews with some Scotch divines. On 26 June 1615 he was instituted to the rectory of Worplesdon, Surrey; on 28 Aug. 1629 he was presented to the deanery of Carlisle; and on 12 Oct. 1631 admitted master of Trinity College, Cambridge. In the latter part of 1631, and again in 1636, he was vice-chancellor of the university. He was ejected from all his preferments and imprisoned for assisting in sending the university plate to the king, and for refusing the covenant. He died on 28 Feb. 1653–4, and was buried, on 3 March, in St. Botolph's Church, Cambridge, without any sepulchral monument. His funeral sermon was preached in Trinity College Chapel by Robert Boreman, B.D., and published under the title of 'The Triumph of Faith over Death, or the Just Man's Memoriall,' London, 1654, 4to.

Comber was skilled in the Hebrew, Arabic, Coptic, Samaritan, Syriac, Chaldee, Persian, Greek, and Latin languages, and he had besides a colloquial knowledge of French, Spanish, and Italian. He was the author of: 1. Greek and Latin verses on the death of Dr. William Whitaker, printed with that divine's 'Opera Theologica' (1610), i. 711. 2. 'Epistola reverendo admodum doctissimoque viro D. J. Morino, Congregationis Oratorii presbytero, de Exemplari quodam MS. Pentateuch Samaritani quod erat in Anglia,' dated from Trinity College, Cambridge, 25 April 1633. In 'Antiquitates Ecclesiæ Orientalis' (London, 1682), 193.

[Funeral Sermon by Boreman; Addit. MSS. 5826 f. 120 *b*, 5865 f. 32; Carter's Cambridge, 331; Cole's MSS. xlv. 238, 239, 257; Comber's Memoirs of Dr. T. Comber, Dean of Durham, 7, 12, 13, 393, 395; Cooper's Annals of Cambridge, iii. 378; Lansdowne MS. 985, f. 98; Le Neve's Fasti (Hardy), iii. 247, 606, 699; Lloyd's Memoirs (1677), 447; Manning and Bray's Surrey, iii. 101; Nicolson and Burn's Westmoreland and Cumberland, ii. 304; Plume's Life of Bishop Hacket (1865), 13; Querela Cantabrigiensis (1647), 29; Walker's Sufferings of the Clergy, ii. 9, 10; Welch's Alumni Westmon. (Phillimore), 20; Willis's Survey of the Cathedrals, i. 304; Wood's Fasti (Bliss), i. 408.] T. C.

COMBER, THOMAS, D.D. (1645–1699), dean of Durham, was descended from an ancient family at Barcombe, Sussex. His father, James Comber, was the fourth son of John Comber, who was uncle to Thomas Comber

[q. v.], dean of Carlisle. His mother was Mary, daughter of Bryan Burton of Westerham, Kent, and widow of Edward Hampden. Thomas was born at Westerham on 19 March 1644–5, and was the last child baptised in the parish church before the rebels suppressed the Anglican service; a daughter of his half-sister being the first christened by the restored form in 1660. In the rebellion his father was driven to take refuge in Flanders for four years, during which time his son was left entirely under the care of his mother. His father returned to Westerham in 1649, and in the following year Comber was placed under the tuition of the Rev. Thomas Walter. He could read and write Greek before he was ten years old.

On 18 April 1659, after some changes of school, he was admitted of Sidney Sussex College, Cambridge, under Edmund Matthews, B.D., senior fellow and president of the college. He studied experimental philosophy, geometry, astronomy, music, painting, and the oriental tongues, besides learning an excellent method of common-place for philosophy and divinity.

His family was poor, but he procured an annual exhibition of 10*l.*, and received 5*l.* a year from a relative of Dr. Richard Minshall, master of the college. This help 'enabled him to live very well,' and from this time he put his parents to no other expense but that of providing him with clothes and books. On 18 Jan. 1662–3 he was chosen scholar of the house, with a pension of 5*l.* per annum, and three days later he was admitted to the degree of B.A. Hopes of a fellowship were not realised, and as the exhibition of 10*l.* was withdrawn, he was compelled to return to his father's house at Westerham. He received help from many friends, and was able to decline offers from Mr. John Holney of Edenbridge, his father's particular friend, who had discovered his merit.

Early in 1663 he was invited to the house of one of his preceptors, Mr. Holland, now rector of All Hallows Staining, London; and having been ordained deacon on 18 Aug. by dispensation, he read prayers on Sundays for Mr. Holland, and studied on weekdays in the library of Sion College. Soon afterwards he became curate to the Rev. Gilbert Bennet, rector of Stonegrave, Yorkshire. He was ordained priest in York Minster by Archbishop Sterne on 20 Sept. 1664, at the irregular age of twenty. When this ordination was long afterwards objected to, the archbishop said 'I have found no reason to repent.' In May 1666 he performed the exercise for his degree of M.A.; but as the commencement was postponed in consequence of the plague breaking out, he was admitted to the degree by proxy. He was appointed chaplain to John, lord Frescheville, baron of Staveley. While he was curate of Stonegrave he was invited to reside with William Thornton of East Newton, Yorkshire, and he afterwards married one of his daughters. Here he wrote various theological pieces, and amused himself with poetical compositions. In 1669 Comber was inducted to the rectory of Stonegrave on Bennet's resignation.

In 1672 appeared the first instalment of his most famous work, the 'Companion to the Temple,' intended to reconcile protestant dissenters to the church of England. On 5 July 1677 he was installed prebendary of Holme in the church of York, and on 10 Jan. 1677–8 he was presented, by Sir Hugh Cholmeley, to the living of Thornton, ten miles from Stonegrave. He obtained a dispensation to hold both livings from the archbishop of Canterbury, who created him D.D. by patent on 28 June 1678. He obtained the prebend of Fenton in the church of York in 1681, and in the following year he was nominated one of the chaplains to the Princess Anne. In 1683 he resigned the prebend of Fenton, and on 19 Oct. in that year he was instituted precentor of York and prebendary of Driffield. Soon afterwards he went into residence at York, and was put into the commission of the peace. He was also chosen one of the proctors of the chapter of York in the convocation of the northern province.

In the troubled reign of James II he became conspicuous as a champion of the cause of protestantism. He refused to attend the chapter held on 25 Aug. 1688 for the suspension of the Rev. Mr. Lawson, in compliance with an order of the High Commission Court. When the king sent a silver crozier to York, and a *congé d'élire* with a recommendation of Dr. Smith, a Roman catholic, the precentor determined to accept the invitation formerly given him by the Princess of Orange to take refuge with her. When William and Mary were proclaimed at York, he preached in the cathedral to a crowded audience. He was an earnest supporter of the new order, and published two pamphlets in defence of the government, viz. 'A modest Vindication of the Protestants of England who joined with the Prince of Orange' and 'An Apology for the Oath of Allegiance.' King William restored him to the office of justice of the peace after a year's suspension, and on 19 July 1689 he took the necessary oaths. His old friend Tillotson procured for him the deanery of Durham, in succession to Dr. Dennis Grenville, who had refused the oaths. He was installed on 9 May 1691. When the French invasion was pro-

jected in 1692, he published a pamphlet called 'The Pretences of the French Invasion examined for the information of the People of England;' and in the preface to a new edition of King's 'Present State of the Protestants of Ireland' he undertook to show that James II carried on the design of destroying liberty, property, and protestantism.

He died on 25 Nov. 1699 at East Newton, and was buried in Stonegrave church. He married in 1668 Alice, eldest daughter of William Thornton, esq., of East Newton, by Alice his wife, daughter of Sir Christopher Wandesford of Kirklington. By this lady, who died on 20 Jan. 1720, aged 87, he had four sons and two daughters.

His works, in addition to those already mentioned and some occasional sermons, are: 1. 'A Companion to the Temple and Closet; or a help to publick and private devotion, in an Essay upon the daily Offices of the Church,' 2 parts, London, 1672–6, 8vo; 2nd edition, with additions, 2 parts, London, 1676–9, 8vo; 4 parts, London, 1684 and 1688, fol.; 4th edition, 1701–2, fol. A new edition was published at the Clarendon Press (7 vols., Oxford, 1841, 8vo) without addition of any kind, and omitting the preface to Comber's later editions. This is the most complete book extant on the Book of Common Prayer, abounding in learned references to authorities. All succeeding writers on the subject are deeply indebted to it, particularly Wheatley. 2. 'Roman Forgeries in the Councils during the first four centuries' (with appendix), 1673, 8vo, 2 parts; London, 1689, 4to. Reprinted in Gibson's 'Preservative against Popery,' xv. 89. 3. 'Friendly and Seasonable Advice to the Roman Catholics of England,' 1674 (anon.) To the 4th edition (1685) the author prefixed his name. A new edition, with an appendix and notes by Walter Farquhar Hook, appeared in 1836 and elicited a reply from 'Julius Vindex' entitled 'A Letter to the Rev. W. F. Hook, proving the truth of the Roman Catholic Religion from Protestant authority alone,' London [1847]. 4. 'A Discourse on the Offices for the V of November, XXXth of January, and XXIXth of May,' London, 1696, 8vo.

It seems doubtful whether the 'Christus Triumphans, Comœdia Apocalyptica' by John Foxe the martyrologist, which appeared in 1672, was published by him. His great-grandson, the Rev. Thomas Comber, published 'Memoirs of the Life and Writings of Thomas Comber, D.D., sometime Dean of Durham, in which is introduced a candid view of the scope and execution of the several works of Dr. Comber, as well printed and MS.; also a fair account of his literary correspondence,' London, 1799, 8vo (with portrait).

[Memoirs by his grandson; Biog. Brit.; Addit. MS. 29674, f. 218 *b*; Jones's Popery Tracts, pp. 164, 233, 286, 327, 430; Birch's Life of Tillotson, pp. 49, 393, 394; Note by Sir F. Madden in Birch MS. 4221, f. 340 *b*; Ayscough's Cat. of MSS. pp. 731, 794; Le Neve's Fasti (Hardy), iii. 157, 186, 193, 300; Darling's Cycl. T. C.

COMBERFORD, COMERFORD, or QUEMERFORD, NICHOLAS, D.D. (1544?–1599), jesuit, was born in the city of Waterford in Ireland about 1544, and took the degree of B.A. at Oxford in 1562, after he had spent at least four years in that university 'in pecking and hewing at logic and philosophy' (Wood, *Athenæ Oxon.* ed. Bliss, i. 459; *Fasti*, i. 161; Boase, *Register of the Univ. of Oxford*, i. 250). After completing his degree by determination he returned to Ireland, was ordained priest, and obtained some ecclesiastical preferment from which he was ejected on account of his religion. Repairing to the university of Louvain, he was promoted to the degree of D.D. on 23 June or October 1575, on which occasion his fellow-countryman, Peter Lombard, who that year was 'primus in scholâ artium,' wrote 'Carmen Heroicum in Doctoratum Nicolai Quemerfordi' (Oliver, *Jesuit Collections*, p. 262). He entered the Society of Jesus about 1578 (Hogan, *Ibernia Ignatiana*, p. 58). He died in Spain about 1599 (Hogan, *Cat. of Irish Jesuits*, p. 6).

He wrote in English 'a pithy and learned treatise, very exquisitely penned,' entitled 'Answers to certain Questions propounded by the Citizens of Waterford;' also some sermons; and, it is said, 'divers other things.'

[Authorities cited above; also Foley's Records, vol. vii. pt. i. p. 52; Ware's Writers of Ireland, ed. Harris, p. 96; Backer's Bibl. des Écrivains de la Compagnie de Jésus (1872), ii. 2205; Catholic Miscellany, ix. 140.] T. C.

COMBERMERE, Viscount. [See Cotton, Sir Stapleton, 1773–1865.]

COMERFORD, JOHN (1762?–1832?), miniature-painter, the son of a flax-dresser, was born at Kilkenny. He gained some knowledge of art from copying the pictures in the collection of the Marquis of Ormonde. He went early in life to Dublin, and entered as a student in the art schools of the Dublin Society. He exhibited in London at the Royal Academy in 1804 and 1809. He was very successful and gained a high reputation as a miniature-painter in Dublin, and had a large and lucrative practice in his art. He particularly excelled in his male portraits, which were carefully finished, well expressed, and quiet in colour. Some examples of his work were exhibited at the Special Exhibition of Portrait Miniatures in 1865, including portraits of Lady Sarah Lennox, Mr. Burgoyne, and Mr. William Fletcher, the latter in college dress. There is a miniature by him of an English military officer in the South Kensington Museum. In 1819 the Dublin Society of Artists, which had been for some years torn by internal dissensions, applied for a charter of incorporation. This was actively opposed, and Comerford was selected by the opposers, as being a man of good repute and much respected, to write to Sir Robert Peel, then chief secretary for Ireland, explaining the reason for opposition. The controversy ended in the complete defeat of Comerford and his friends, and the society obtained their charter in 1821. He died in Dublin of apoplexy in 1832 or 1833, aged between sixty and seventy years. He drew for Sir Jonah Barrington [q. v.] many portraits of leading Irishmen, which were engraved by J. Heath in Barrington's 'Historic Anecdotes, and Secret Memoirs relative to the Legislative Union between Great Britain and Ireland.'

[Redgrave's Dict. of English Artists; Graves's Dict. of Artists, 1760–1880; Sarsfield Taylor's Fine Arts in Great Britain and Ireland; Catalogue of the Special Exhibition of Portrait Miniatures, 1865; Royal Academy Catalogues.] L. C.

COMGALL, Saint (6th cent.), the founder of the great monastery of Bangor on Carrickfergus Bay in Ireland, is first mentioned in Jonas's 'Life of Columbanus' (written about 620 A.D. and still preserved in a ninth-century manuscript). From this almost contemporary work we learn that Columbanus, before his journey to Gaul, was educated at Bangor under Comgall, with whom he seems to have spent several years (Jonas ap. *A.SS.O.B.* ii. 9). Notker (*fl.* 850), who seems to have preserved the genuine traditions of the monastery of St. Gall, founded by Columbanus's brother, makes Comgall the disciple of St. Columba and the instructor of Columbanus and St. Gall (*Martyr.* 9 June). Adamnan, however (about 700 A.D.), while recognising the intimacy of Comgall and Columba, has not a word to indicate any such relationship between the two. In a very ancient hymn dating from the seventh or eighth century, and still preserved at Milan, the name of Comgall comes first in the list of the abbots of Bangor (see the hymn quoted by Whitley Stokes, who assigns the manuscript to the eighth century in *Academy*, December 1885).

Comgall's name appears in what is probably the earliest Irish martyrology extant, the 'Feilire of Oengus the Culdee' (lxxix.) In this work, which Mr. Stokes assigns to the tenth century, he is entered on 10 May, a day which he keeps in most of the other martyrologies. A still earlier document, Celtic by origin, but Latin in language, known as Tirechan's 'Catalogue,' &c., composed 'certainly not later than the middle of the viiith century' (Warren, *Lit. of Celt. Ch.* p. xiv),

makes Comgall belong to the 'catholic priests,' or second order of the Celtic church: that is, to the period of St. Columba and the Brendans, 543–99 A.D. (TIRECHAN ap. Haddan and Stubbs, ii. pt. ii. 292–3). Comgall's name occurs at the same date in the Drummond Missal (11th or 12th cent. ?), but, strangely enough, it is omitted in several of the calendars published by Bishop Forbes (WARREN, *Lit. of Celt. Ch.* pref. pp. ii, iv, 14; FORBES, *Cal. of Scot. Saints ad diem*). On the other hand, this saint is entered in the Stowe Missal (early 11th century), and in the martyrology of Tamlacht (*Stowe Missal*, ap. WARREN, pp. 98, 238, 240; *A.SS.* 579).

Comgall must thus have lived in the latter half of the sixth century, and his memory was preserved in every century from the seventh to the twelfth. At this last date his monastery of Bangor was in ruins, but St. Bernard even then knew that Comgall had founded it, and that St. Columbanus had been one of his disciples here. Jocelin, a few years later, commemorates a still more striking tradition, which he may have derived from the 'Acta Comgalli' to which he refers (BERNARD in *Vit. Mal.* c. 6; JOCELIN in *Vit. Patricii*, cxi. 561, ap. *A.SS.* March 17). The handwriting of the earliest manuscript life of Comgall seems to date from the next century, the thirteenth, but there can be little doubt that the legends or history contained in this life reach back to a much earlier period. (HARDY, *Catalogue*, i. 164).

According to his anonymous biographers, Comgall was a native of Dalraidia in Ulster. 'Hence,' says Dr. Reeves, 'he was a Pict by birth.' His father's name was Sethna, one of the prince of Dalraidia's warriors; his mother's Brigh or Briga. According to the testimony of almost all the Irish annals, his birth must be placed between 510 and 520. His birth (at Magheramorne in Antrim), according to the current legend, was foretold by Macnesius, bishop of Connor (ap. BOLL. 3 Sept. 10 May). His early days were spent in military service, from which, however, he was soon released by the prince of Dalraidia, who perceived his call to a spiritual life (*Vit.* ii. ap. BOLL.) After studying letters in his own neighbourhood for a time, he withdrew to the monastery of St. Finian at Clonenagh, who, however, seems to have been born later than his illustrious pupil (*ib.* i. and ii. with which cf. *Dict. of Chr. Biog.* ii. 519, according to which Clonenagh was founded about 548 A.D.) Here he stayed for several years before passing on to St. Ciaran's foundation at Clonmacnois, where he likewise remained some time (*Vit.* ii.) As St. Ciaran died in 549, we are here involved in a chronological difficulty, more especially if we may trust Dr. Reeves's statement that Comgall, in company with St. Columba and St. Cainnech, was a pupil of St. Finnian's at Clonard, and of Mobhi Clairenach at Glasnevin in or before 544 A.D. (*Life of St. Columba*, pref. xxxv).

On leaving St. Ciaran, Comgall returned to his own country, was ordained deacon and priest by a bishop named Lugidus, and perambulated his native land preaching. He is next found on an island 'quæ dicitur custodiaria' on Lough Erne with a few companions, many of whom the strictness of his rule killed. He was dissuaded from passing over to Britain by the prayers of Lugidus and others, and was content to satisfy his zeal for religion by the foundation of many cells or monasteries in his own country. Of these the most famous was that of Bangor, near the bay of Carrickfergus (*Vita*, i. ii.) According to the Irish Annals, this latter must have been founded about 552 A.D. or earlier. Ussher, however, would refer this event to 555 A.D. or 559 A.D., and most modern scholars have practically accepted his decision (558 A.D.) (USSHER, 494–5; with which cf. the various annals sub 602, 601, &c.) From Adamnan we learn that St. Columba and Comgall used to pay each other frequent visits, and that the latter was acquainted with St. Cainnech, St. Brendan, and St. Cormac, in whose company he received the Eucharist from Columba in Henba (*Vita Col.* i. c. 85, iii. cc. 14, 18). In the second life of Comgall we find that he was Columba's companion on his famous visit to the Pictish king Brude (cf. ADAMNAN, ii. c. 36). Other friends were Finbarr of Moyville (*Vita*, ii. 26), St. Lugidus of Clonfert, whom Comgall called from feeding the flocks (*A.SS.* 4 Aug.), and St. Coemgen (3 June). To this list the 'Dictionary of Christian Biography' adds many other names (i. 608–9). A distinguished penitent who came to spend his last days with Comgall at Bangor was Cormac, the son of Diarmed, king of Kinsellach (south-east of Leinster) (*Vita Com.* ii. 40; cf. *Vit. Fintan*, 17 Feb. c. 20). On two occasions we find Comgall practising a very ancient Irish custom: 'Then came St. Comgall to the fort Trachin, and fasted there against the king that night' (*Vit.* ii. 42, with which cf. 44, and SIR H. MAINE, *Early Institutions*, p. 41, &c.) Towards the close of his life Comgall is said to have suffered extreme tortures. He received the Eucharist from St. Fiachra, and died on 10 May (*Vita* i.), in the eightieth year of his age, according to the author of 'Vita ii.' The Irish Annals are all agreed in making him die on this day of the month, but they differ as regards the year. The

authority of Tighernach and the 'Chronicon Scotorum' is generally preferred (602 A.D.); the Annals of Inisfallen give 597 A.D. All the authorities admit that he ruled Bangor for fifty years (*Annals of Tighernach, Inisfallen,* and the *Four Masters*; *Chron. Scot.*)

It is said that at one period there was a discord between Columba and Comgall, which led to the battle Cul-Raithain (Coleraine or Culdrenny); but it has been suggested that this was a tribal rather than a personal dispute (*Dict. of Chr. Biog.* i. 608–9). Comgall's other foundations are said to have been Cambas on the Ban (ADAMNAN), Rathwulfig (CAMERARIUS, ap. Forbes, 12 May), Saynkill (USSHER, pp. 494–5), and a church in Hethar Tiree (REEVES, *Adamnan*, p. 226 note). To these Bishop Forbes adds Drumcongal or Dercongal (i.e. Holywood in Galloway) from the Breviary of Aberdeen and Durris in Kincardine. Jocelin has preserved the tradition that Luan, one of his disciples, founded one hundred monasteries, and the monks under Comgall's government are said to have been numbered by thousands (*Vit. Pat.* c. 11; *Vit. Comg.*) Comgall was one of the greatest fathers of Irish monasticism. His was one of the 'eight great orders of Erin, according to the life of St. Ciaran' the carpenter; and Ussher 'mentions four rules written in the most ancient Irish, and in our days almost unintelligible,' i.e. those of 'Columkille, Comghal, Mochuda, and Ailbe' (FORBES, pp. 308–310). A so-called 'rule of Comgall' is still extant. It is written in Irish, but, though of great age, was probably not composed by this saint. It consists of thirty-six quatrains (*Ulster Journal of Archæology*, i. 171). It was doubtless a modification of this rule that St. Columbanus and St. Gall took over with them to Gaul and Italy, and which became the foundation of the discipline at Luxeuil, Bobbio, and St. Gall. An ancient antiphonary preserved at Milan contains an alphabetical hymn in honour of this saint (*Dict. of Chr. Biog.*); Columbanus has quoted a few lines from his old master in his second instruction (*Ulst. Journ.* i. 171). In 822 Bangor was plundered by the Danes, and the relics of Comgall scattered in accordance with the saint's poetical prophecy (REEVES, *Eccles. Antiq.* 278). Comgall is sometimes known by the Latin name of Faustus; but another translation makes it equivalent to 'pulchrum pignus' (NOTKER, *Martyr.* 5 Id. June; USSHER, p. 526).

[MS. Lives of St. Comgall are in the Bodleian MS. Rawlinson, B 505 (early 15th cent.), 485, *ib.*; in the British Museum, MS. Harley 6576 (15th cent.); in the Liber Kilkenniensis (Dublin, 13th cent.) Two lives of this saint are published in Bollandus, Acta Sanctorum (A.SS.), 10 May, 579–88; Annals of Tighernach, Inisfallen, the Four Masters, and of Ulster in vols. ii. iii. and iv. of O'Conor's Scriptores Rerum Hibernicarum; Lanigan's Ecclesiast. Hist. of Ireland, ii. 20, 61, iv. 568; Chronicon Scotorum (ed. Hennessy in Rolls Series); Bollandi Acta Sanctorum (A.SS.); Acta Sanctorum Ord. Benedict. (A.SS.O.B.), ii.; Notker's Martyrology, ap. COMIN, COMINES, or **CUMIN, ROBERT DE, EARL OF NORTHUMBERLAND** (*d.* 1069), was apparently a native of Flanders to judge from his name. He was one of the barons who followed William I in his invasion of England, and so commended himself to the king by his military skill that he was chosen at the end of 1068 for the difficult task of reducing the north of England to obedience. William I conferred on him the earldom of Northumberland, vacant by the flight of Gospatric; and in January 1069 Comin set out from Gloucester with forces which are variously estimated at five hundred, seven hundred, and nine hundred men. The winter was severe, and Comin advanced unopposed to the city of Durham. The bishop of Durham, Ethelwin, advanced to meet him, and warned him of the ill-will of the men of the bishopric; he advised him not to enter the city. Comin disregarded his warning, and Ethelwin did all he could to protect him from the results of his rashness by lodging him and his chief knights in his own house next to the cathedral. The Normans treated Durham as a captured town, and the news of their doings spread into Northumberland. The men of the Tyne rose, forced the gates of Durham in the night, and massacred the Norman soldiers. Comin vainly took refuge in the bishop's house; it was set on fire, and he was slaughtered. The failure of this expedition was William I's first experience of the intractability of the northern folk, and was one of the causes of his severity in the 'harrying of the north.' Comin was the founder of the family of Comyn, many of whom played an important part in the history of Scotland [see COMYN].

[Ordericus Vitalis, Hist. Eccl. 512 *c*; Simeon of Durham, Historia Regum, *s.* a. 1069, and Hist. Eccl. Dunelmensis, iii. 15; Anglo-Saxon Chronicle, *s.* a. 1068; Freeman's Norman Conquest, iv. 234–40.] M. C.

COMMAN of Ross-Commain, SAINT (*fl.* 550), was son of Faelchu and descendant of Fiacha Araidhe, of the family of Rudhraighe, and race of Ir, king of Ulster, A.D. 236. He was one of the students at the famous school of Finnian of Clonard in the county of Meath. St. Finnian sent him to Connaught to evangelise the heathen inhabitants. Here his labours were crowned with success. The king of the territory seeing his devoted life bestowed on him the fertile valley of Ross. In a short time he constructed a monastery, after the temporary fashion of the country, which was soon filled with zealous monks, and was named from him Ross-Commain (Roscommon). Another church founded by him was that of Ceann Mara, now Kinvarra, in the barony of Kiltartan and county of Galway. In the ancient tale of the 'Navigation of the sons of Ui Corra' a passage occurs relative to this church and St. Comman. The Ui Corra were three brothers who with several other desperate characters plundered and destroyed the churches of Connaught and slew the clergy. Terrified by a vision of hell which one of them beheld, they abandoned their evil life and sought admission to Clonard, where, after a period of probation, they were pardoned by St. Finnian. He imposed on them, however, the duty of rebuilding all the churches they had destroyed. When they returned to St. Finnian he asked them if they had finished their work. They answered that they had repaired all the churches but that of Kinvarra. 'Alas!' said the saint, 'that was the first church you ought to have repaired—the church of the holy old man Comman of Kinvarra. Return now and repair all the damage you have done in that place.' They obeyed, and on completing the work took counsel with St. Comman, and by his advice built a great curach, or canoe, covered with hides three deep and capable of carrying nine people, in which they went forth on their famous navigation from the port of Kinvarra, celebrated by Mocholmog in a poem beginning, 'The Ui Corras of Connaught, undismayed by mountain waves, over the profound howling ocean sought the lands of the marvellous.' St. Comman has been confounded with St. Coeman of Annatrim in Upper Ossory, but their pedigrees are different. Again, in an entry in a later hand, in the 'Annals of the Four Masters,' he is mistaken for another Comman who died A.D. 746.

The 'Calendar of Oengus' notices him under the name of Commoc. 'Let us pray to bless us my Commoc with splendour: a fair sun that warms thousands.' The names of Irish saints undergo many changes owing to the habit of adding particles expressive of affection or dignity to them, such as the prefix *mo*, my, and the termination *an*, noble, and *oc* or *og*, young, a term of endearment. In the present case the name Commai becomes Comm-an or Comm-oc, according to the fancy of the writer. St. Comman belonged to the second order of Irish saints. His day is 26 Dec.

[O'Curry's Manuscript Materials of Irish History, pp. 289–92; Annals of the Four Masters, A.D. 746; Calendar of Oengus at 26 Dec.; Martyrology of Donegal, p. 349; Ussher's Works, vi. 532, 533.] T. O.

COMMIUS (*fl.* B.C. 57–51), ambassador from Julius Cæsar to the Britons, and probably a chieftain of southern Britain, was apparently a native of Belgic Gaul. He first comes into notice after the battle of the Sambre (B.C. 57), when Julius Cæsar conferred upon him the sovereignty of the Atrebates, a Belgic tribe defeated in that engagement, and one to which Commius himself probably belonged. Cæsar recognised in him a man of valour and judgment, and granted him various privileges. Commius was known to possess great influence over the inhabitants of southern Britain, and in B.C. 55 was accordingly chosen by Cæsar (who was then in Belgium among the Morini) as his ambassador to the Britons, and was directed to announce the intended visit of Cæsar and to urge the Britons to remain faithful to the Romans. Commius went back with the British legates who had been sent to Cæsar, and took with him a small force of about thirty horsemen. On attempting to deliver his message he was seized and thrown into chains; but when Cæsar landed in Britain in the same year he was given up to him by the natives. Commius was still in Britain in B.C. 54, and it was through him that Cassivellaunus tendered his submission to Cæsar. In B.C. 53, when the great revolt of Gallic chieftains against the Romans began already to threaten, Cæsar gave Commius the command of a troop of horsemen stationed to keep watch over the Menapii. In the following year (B.C. 52) the Gaulish revolt took place, and Commius deserted to the side of his fellow-countrymen. He commanded, besides his own Atrebates, a contingent of the Bellovaci consisting of two thousand men, and was one of the chieftains in supreme military authority. With the other leaders he marched to the relief of Alesia. In the same year, and probably before these events, he became an object of suspicion to the Romans. Caius Volusenus Quadratus induced him to come to what he pretended was a friendly conference, but the centurion commissioned by Volusenus to kill Commius only struck him a blow with his sword, and

the latter escaped with his life. In B.C. 51 the war against Cæsar was renewed by the Bellovaci, Atrebates, and other tribes. Commius, who was again one of the chief commanders, went over to the Germani for help, and came back with five hundred horsemen. On the defeat and submission of the Gaulish tribes, he retired for a time to his friends among the Germani. In the winter of the same year (B.C. 51) he returned, and was still anxious to head a revolt; but his own tribe had now submitted, and he had to content himself with the leadership of a band of predatory horsemen who intercepted the supplies intended for the winter quarters of the Romans in Belgium. Marc Antony, who was now in command in that part of the country, sent Caius Volusenus Quadratus, his prefect of horse, in pursuit of Commius. Some fighting took place, and on one occasion Volusenus, who was eager to attack his old enemy in person, received a wound in the thigh from the lance of Commius. The latter mounted on a swift horse evaded the pursuit of the Romans. In the same year (B.C. 51) Commius tendered his submission to Antony, declaring (it is said) that he would do anything that was required of him, provided only that he should never again be brought into the presence of a Roman. These words, according to the colouring given them by Hirtius (viii. 48), were expressive of abject terror on the part of Commius; more probably they were an expression of contempt and disgust (cf. viii. 23). Frontinus relates a curious incident, difficult to date and perhaps not worthy of credit, namely that Commius once fled from Gaul to Britain, and induced Cæsar, who was following him at a distance, to desist from the pursuit by the stratagem of hoisting his sails before he was actually out at sea. According to De Saulcy (*Annuaire*) and Hucher (*Rev. Num.*), certain Gaulish silver coins (obverse, helmeted head; reverse, free horse) inscribed with the words COMMIOS or COMIOS were issued by Commius when chieftain of the Atrebates (see the engraving in HUCHER, *L'art gaulois*, pl. 62, 2; *Rev. Num.* 1863, pl. xvi. 9; and specimens in Brit. Mus.) Numismatic evidence renders it probable that after his submission to Antony Commius retired to Britain and there acquired the sovereign power over several tribes. Three British chieftains, Tinc[ommius] (ruler in Hampshire and Sussex), Verica (king in Sussex and Surrey), and Eppillus (ruler in Kent), severally issued gold coins inscribed with their individual names accompanied by the title 'son of Commius' (on this interpretation—now quite certain—of C. F., COMMI F., &c., see WILLETT in *Num. Chron.* vol. xvii., N.S. (1877), p. 315), in all probability this Commius. Evans conjectures that he acquired dominion over the tribes of Hampshire, Sussex, Kent, and Surrey, and that after his death his kingdom was broken up and divided among his three sons. To Commius himself there are no coins which can be attributed with certainty, though gold pieces of the type engraved by Evans, pl. i. 10, p. 157 (cf. WILLETT, *Anc. Brit. Coins of Sussex*, pp. 51, 52), may possibly be his.

W.

COMPOTISTA or COMPUTISTA, ROGER (*fl.* 1360?), was a monk of Bury St. Edmund's, of which abbey he ultimately became prior. He is known chiefly through his compilation of a biblical dictionary, which appears to have enjoyed a wide popularity, and is preserved in several manuscripts. Two are in the Bodleian Library (*Cod. Bodl.* 238, ff. 200 *b*, col. 1—262 *a*, col. 1, and *Cod. Laud.* 176) and one at Magdalen College, Oxford (Cod. cxii. f. 172; H. O. COXE, *Catalogue of Oxford Manuscripts*, Magdalen College, pp. 58 *b*, 59 *a*). The title of this book is 'Expositiones vocabulorum Bibliæ' (or 'de singulis libris Bibliæ'); and the prologue states that it was compiled for the use of novices by Roger Compotista, and 'corrected' or edited by his brother-monk, Reginald of Walsingham, to whom the prologue is addressed (*Cod. Bodl.* 238, f. 213 *b*, col. 1).

Bale says that Roger was the author of three other works, 'Postillationes Evangeliorum,' 'De Excommunicatione maiori,' and 'Constitutiones Cantuarienses,' all of which he says he found at Magdalen College. The Magdalen manuscript of the 'Expositiones vocabulorum' contains a fragment of a 'Liber Constitutionum Cantuariensium,' but separated from it by other matter, and without the least indication that it is by Roger Compotista except the fact that it is included in the same volume with a genuine work by him. Of the other two works ascribed to him no traces are known to exist.

Pits (*De Anglicæ Scriptoribus*, 393, p. 488) states that Roger flourished in 1360, but this date is plainly derived from Bale's conjecture, for there is no positive evidence to support it, that he lived under Edward III.

[Manuscripts as above; Bale's Script. Brit. Cat. vi. 16, pp. 464 et seq.] R. L. P.

COMPTON, HENRY (1632–1713), bishop of London, born at Compton Wynyates, Warwickshire, in 1632, was the sixth and youngest son of Spencer Compton [q. v.], second earl of Northampton, by his wife Mary, daughter of Sir Francis Beaumont. His father was killed at Hopton Heath in 1643, and he himself told James II in 1688 that he had 'formerly drawn his sword in defence of the constitution,' which would imply that as a youth he took some part in the civil wars. He entered Queen's College, Oxford, as a nobleman in 1649, and remained in residence till 1652. After a short time spent in retirement with his mother at Grendon, Northamptonshire, he subsequently travelled abroad, visiting Italy, studying the civil and ecclesiastical constitutions of foreign countries, and, according to a common rumour, 'trailing a pike' at one time under the Duke of York in Flanders. He did not return to England until the Restoration, when he received a cornet's commission in the royal horse guards under the command of Aubrey de Vere, earl of Oxford. Although he never seems to have altogether divested himself of a military bearing, the profession of a soldier proved distasteful to him after a few months' trial, and he determined to transfer himself to the service of the church. He went to Cambridge, where he was admitted M.A. in 1661; in the following year took holy orders; early in 1666 entered Christ Church, Oxford, as a canon commoner by the advice of Dean Fell; on 7 April was incorporated M.A. of Oxford; became rector of Cottenham, Cambridgeshire; and was granted a reversion to the next vacant canonry at Christ Church. In 1667 he was appointed master of the hospital of St. Cross at Winchester; on 24 May 1669 was installed canon of Christ Church on the death of Dr. Richard Heylin; and proceeded B.D. (26 May) and D.D. (28 June) in the same year. On 11 July following Compton was 'inceptor in theology' at the first 'commemoration' held in the new Sheldonian theatre, and on 17 April 1673 Evelyn heard him preach at court. 'This worthy person's talent,' the diarist added, 'is not preaching, but he is like to make a grave and serious good man.' On 6 Dec. 1674 Compton was consecrated bishop of Oxford at Lambeth, in July 1675 became dean of the Chapel Royal, and in December of the same year was translated to the see of London. His rapid promotion was attributed by some to his bold avowal of hostility to the papists, and by others to the influence of his intimate friend, the Earl of Danby. His high birth will probably account for much. Almost his first act as bishop of London was to confiscate the writings of Joannes Lyserus, a renowned champion of polygamy, and to insist on the author's expulsion from the country (February 1675–6). On 22 Jan. 1675-6 Compton was sworn of the privy council, and he was reinstated in the position on the creation of the new privy council in April 1679. On the death of Archbishop Sheldon in 1677 Danby was popularly credited with endeavouring to secure the archbishopric for Compton; but on this, as on two other occasions, the dignity was peremptorily denied him. The bishop's 'forwardness in persecuting the Roman catholics' earned for him the distrust of James, duke of York, and this was stated at the time to be the cause of Compton's neglect. The compiler of James II's 'Memoirs' argues that it was due to the fact that Compton 'was married and his wife alive.' It is usually stated that Compton never married, and the contrary assertion is unconfirmed.

Compton exercised much personal influence at Charles II's court. The religious education of the king's nieces, the Princesses Mary and Anne, daughters of James, duke of York, was entrusted to him, and he carefully indoctrinated them in protestant principles. He thus acquired large powers in James's household, and in November 1677 compelled the duke to dismiss his wife's Roman catholic secretary, Edward Coleman [q. v.], on account of his alleged proselytising activity. Nevertheless Compton consistently opposed the Exclusion Bill. The bishop confirmed his royal pupils on 23 Jan. 1675–6, and performed the marriage ceremony when Princess Mary married William of Orange (4 Nov. 1677), and when Princess Anne married Prince George of Denmark (28 July 1683). The two princesses, each of whom was in turn queen of England, always regarded Compton with affection. Compton christened Charlotte Mary, daughter of the Duke of York (15 Aug. 1682); Charles (afterwards second duke of Grafton), Charles II's grandson (30 Oct. 1683), and Mary, daughter of Princess Anne of Denmark (1 June 1685).

From 1678 onwards Compton held frequent conferences with the clergy of his diocese, in which the practices and doctrines of the established church were fully discussed. He embodied his own addresses in a 'Letter to the Clergy' (London, 25 April 1679), maintaining

the Anglican position with regard to baptism, the Lord's supper, and the catechising of young persons; and in a 'Second Letter to the Clergy of the Diocese of London concerning (1) The Half Communion, (2) Prayers in an Unknown Tongue, (3) Prayers to the Saints' (London, 6 July 1680). Other letters followed, the last being dated April 1685. A collected edition appeared under the title of 'Episcopalia' in 1686. By such means Compton thought to minimise the points of difference between himself and the protestant dissenters at the same time as he held Roman catholicism in check. With a like aim he corresponded with many French protestants, and elicited some independent opinion in favour of the reunion of the dissenters with the establishment. M. le Moyne, professor at Leyden, M. de l'Angle, preacher at Charenton, and M. Claude vindicated the Anglican church in letters to Compton, and these were published in the appendix to Stillingfleet's 'Unreasonableness of Separation' in 1681. In that year Compton set on foot subscription lists for the relief of persecuted French protestants. His conciliatory attitude to the protestant dissenters was, however, not very popular. The half-crazy rector of All Saints, Colchester, Edmund Hickeringill [q. v.], who, although once a nonconformist, was now opposed to nonconformity, attacked Compton for his liberality so scurrilously that the bishop deemed it prudent to proceed against him for libel at the Colchester assizes (8 March 1681-2), and the defendant was ordered to pay 2,000*l.*; but the fine was remitted (27 Jan. 1684) on his publicly confessing his offence in the court of the dean of arches. A friend of Hickeringill (Sol. Shawe) published a full account of the whole proceedings in 1682 under the title of 'Scandalum Magnatum, or the Great Trial at Chelmsford Assizes,' in which Compton was very harshly used. The quarrel was renewed in 1705, when Compton cited Hickeringill again before the ecclesiastical courts for writing a pamphlet called 'The Vileness of the Earth.' Luttrell reports that on 10 Jan. 1682-3 a cry was raised by some over-zealous Anglicans for the suspension of Compton on account of his friendliness to the dissenters. In July 1684 Compton consecrated the new church of St. James's, Piccadilly, London. He was at Charles II's deathbed, but the dying king made no remark when the bishop offered him consolation, which 'was imputed partly to the bishop's cold way of speaking, and partly to the ill opinion they had of him at court as too busy in opposition to popery' (Burnet). Nevertheless, at the close of the reign Compton was held 'in great credit and esteem' by the majority of the clergy and laity of the diocese (Hearne).

The accession of James II altered his position, and an attitude of open hostility to the government was soon forced upon him. In a debate in the House of Lords on the king's claim to dispense with the Test Act (18 Nov. 1685) he boldly declared that the civil and ecclesiastical constitution of the kingdom was in danger, and asserted that he spoke in the name of the whole bench of bishops. Parliament was prorogued next day; Compton was dismissed from the privy council, and on 16 Dec. 1685 he ceased to be dean of the Chapel Royal. On 5 March in the following year James II sent letters to the Archbishops of Canterbury and York, prohibiting controversial sermons. A well-known clergyman in Compton's diocese, Dr. John Sharp, dean of Norwich and rector of St. Giles's-in-the-Fields (afterwards archbishop of York), replied in June to the new orders by a vigorous attack from the pulpit on Roman catholicism. Compton was thereupon directed to 'suspend Dr. Sharp from further preaching in any parish church or chapel within his diocese until he had given the king satisfaction.' As far as he conscientiously could, Compton appears to have avoided a personal conflict with the crown. He humbly represented to the king (in a letter to the Earl of Sunderland) that Dr. Sharp had offended against no law of the land, and privately requested Sharp to abstain from preaching for the present; but declined to inhibit him. This failed to satisfy James. Compton's contumacy was made the occasion of reviving the old high court of ecclesiastical commission, and on 11 Aug. the bishop was cited before the tribunal to answer a charge of disobeying the royal command. Lord-chancellor Jeffreys presided, and bluntly refused Compton's request for a copy of the directions given to the commissioners and of the accusations brought against him. 'I demand of you,' said Jeffreys, 'a direct and positive answer. Why did you not suspend Dr. Sharp? . . . The question is a plain one. Why did you disobey the king?' An application to consult counsel was allowed; a week's adjournment was granted, and this was subsequently extended for another fortnight. On 31 Aug. Compton denied the court's competency, and declared that 'as a bishop he had a right to be tried before his metropolitan precedently to any other court whatsoever;' but this plea was peremptorily overruled and no discussion upon it permitted. The registrar of the court read out the bishop's statement of the action he took on receiving the king's order; his counsel, Dr. Oldys, Dr. Hodges, Dr. Price, and Dr. Newton, advanced some purely

legal objections to the court's procedure, and the proceedings closed. On 6 Sept. the commissioners pronounced sentence of suspension from the exercise of all episcopal functions. Three of the six commissioners, Lord Rochester, Lord-chief-justice Herbert, and Bishop Sprat of Rochester, were ready to acquit Compton, but the king's personal influence induced Rochester to change his mind, and thus a majority was formed in favour of Compton's conviction. Two of the commissioners, Bishops Sprat of Rochester and Crewe of Durham, together with Thomas White, bishop of Peterborough, were appointed to administer Compton's see. His revenues were left untouched. The temporalities of a see were, according to the common law, the bishop's freehold; Compton had the right to demand protection of his interest in them from the king's bench, and the attitude of Lord-chief-justice Herbert made it obvious to the government that the common law courts would not sanction a sequestration. Popular opinion, too, ran high in Compton's favour. 'This was thought,' writes Evelyn, 'a very extraordinary way of proceeding, and was universally resented.' The Prince of Orange at once expressed his sympathy with the bishop, and his wife not only wrote to Compton in the same sense, but appealed to her father, James II, in his behalf. James replied by warning his daughter against interference in matters of state. A full account in Dutch of the proceedings was circulated in Holland before the end of 1686.

Compton retired to Fulham and threw himself with ardour into his favourite botanical pursuits. But he was not inclined to submit in silence to his indignities, and on 20 March 1686-7 petitioned for the restitution of his see. He was informed that his request was referred to the ecclesiastical commission, and he heard no more of it. As one of the governors of the Charterhouse he refused, during his inhibition, to admit a papist named Andrew Popham as pensioner. Under date 10 Dec. 1686 he addressed a letter to his clergy severely criticising the order about controversial preaching issued in the former year, but suggesting a moderate course of action. He had already stated his views on the topic at a conference with his clergy held just before his suspension, and his address was published in 1690 and reissued in 1710. 'His clergy,' according to Burnet, 'for all the suspension, were really more governed by the secret intimations of his pleasure than they had been by his authority before.' When Dykvelt, the Prince of Orange's agent, arrived in England (1687), Compton willingly put himself into communication with him, and soon undertook in the prince's behalf to manage the clergy whenever a constitutional crisis should arise. He was at Lambeth on 18 May 1688, when Archbishop Sancroft and the six bishops resolved to refuse to allow the Declaration of Indulgence to be read in the churches. In June, Danby suggested to Compton to join the revolutionary committee which was then in active correspondence with William of Orange, and he was thenceforth regularly in attendance at the meetings held at the Earl of Shrewsbury's house. On 30 June he was one of the seven, and the only bishop, who signed the invitation to William to occupy the English throne. In the declaration which William issued forthwith, the seventh article dealt with the persecution to which Compton had been subjected. On 28 Sept. James II reversed his suspension, but the time for conciliation was passed. On 3 Oct. Compton waited on James with other ecclesiastics and protested against the proceedings at Magdalen College, Oxford, the maintenance of the high commission court, and the continued vacancy of the archbishopric of York. On 2 Nov. he was summoned to a private interview with the king, and was questioned as to his knowledge of the invitation to William, but he equivocated and gave James no information. Four days later he again appeared before James with other bishops and maintained the same attitude. On 16 Nov. the king directed Compton to collect money to relieve the poor of his diocese. Early in the next month he was in frequent communication with his old pupil, Princess Anne, who was residing at Whitehall, and, in order to detach her from her father and her father's fortunes, readily agreed to assist in her secret flight from London. With the Earl of Dorset he conveyed her in a carriage to his official residence, London House in Aldersgate Street, and thence with forty horsemen rode with her to Nottingham. There the Earl of Devonshire offered her an escort of two hundred volunteers, and Compton readily accepted the offer of the colonelcy of the regiment. In full military costume he marched at the head of his little army to Oxford, where he made his appearance, to the consternation of the inhabitants, 'in a blue coat and naked sword,' preceded by a standard bearing the motto 'Nolumus leges Angliæ mutari' (Burnet; Hearne; Duchess of Marlborough, *Account*, 16–18; Hickes, *Memoir of Kettlewell*, 52). But James's flight rendered active hostilities needless. On 21 Dec. Compton waited on William at St. James's Palace with his clergy, and was promised full protection. On 30 Dec. he administered the sacrament to the new ruler,

On 31 Jan. 1688–9 he ordered the clergy to omit prayers for the Prince of Wales, and only to mention the king (without naming him) and all the royal family. On 29 Jan., when the House of Lords in grand committee debated whether, 'the throne being vacant, a regent or a king should fill it,' Compton and Trelawny of Bristol were the only bishops who voted with the majority for a king. Compton was reinstated as a privy councillor and dean of chapel royal on 14 Feb.; on 31 March he consecrated Burnet bishop of Salisbury, and on 11 April crowned the king and queen at Westminster. In August, Sancroft, who declined to recognise William III, was suspended, and in the following February he was deprived. The primacy was thus vacant, and Compton, as one of the commissioners appointed to exercise its functions, had vast responsibility thrown upon him. On 20 Nov. he was chosen president of the upper house of convocation, and helped to revise the liturgy. He was afterwards appointed a commissioner of trade and plantations chiefly to superintend the colonial churches.

In the debate on the question of administering an oath abjuring James II, in 1690, Compton spoke at great length, and amused the house by stating that although there were obvious objections to multiplying oaths, 'he did not speak for himself: there was not nor could be made an oath to the present government that he would not take.' In 1691, when the Toleration and Comprehension Bills were before parliament, Compton enthusiastically supported them. 'These are two great works,' he wrote to Sancroft, who had shut himself up at Lambeth, 'in which the being of our church is concerned' (*Tanner MS.* xxvii. f. 41, printed in *Notes and Queries*, 2nd ser. i. 90–1). In January 1690–1 he attended William III, at his own expense, at the congress which met at the Hague to consolidate an alliance against France. The appointment of Tillotson to the primacy in August 1691 disappointed Compton, and in 1695 he was again overlooked, when Tenison succeeded Tillotson. This neglect soured him; he gradually alienated himself from the whigs, and in the closing years of his life acted with the tories. On the death of Queen Mary in 1694 he presented the king with an address of condolence, and on 6 Dec. 1697 he preached the sermon at St. Paul's on thanksgiving day. In 1699 he was the only bishop who resisted the parliamentary motion to deprive Thomas Watson of the bishopric of St. David's for simony.

At the opening of Anne's reign the queen showed Compton much attention, and 'the bishop always supported those measures which were most agreeable to her majesty's own inclination and principles' (Birch, *Life of Tillotson*). She made him lord almoner in the place of the Bishop of Worcester, in November 1702, and in the following January ordered the Bishop of Salisbury's lodgings at St. James's to be handed over to him. He was in the commission for the union of Scotland in 1704, but was not reappointed when the commission was reorganised in April 1706. He was reappointed permanent commissioner of trades and plantations in January 1704–5, at a salary of 1,000*l.* a year. Compton supported the bill against occasional conformity, and spoke in favour of the motion that the church was in danger in 1705. In 1706 he apologised to the church of Geneva for some reflections cast upon it at Oxford, aided Sacheverell by speech and vote in 1710, and welcomed the change of ministry which took place in that year. He explained this decisive avowal of toryism in a letter to his clergy, but his abandonment of his former political attitude called forth a clever pamphlet, in which quotations from his early publications were relied upon to convict him of the grossest inconsistency ('A Letter concerning Allegiance, 1710,' reprinted in *Somers Tracts*, xii. 322 et seq.) In his later years Compton suffered from the gout and stone. Early in 1711 he was dangerously ill. He died at Fulham on 7 July 1713, aged 81, and was buried on 15 July outside Fulham Church, in accordance with his special direction. Dr. Thomas Gooch preached a funeral sermon at St. Paul's Cathedral on 26 July 1713. His charities and his hospitality were there especially commended. He spent all his fortune in helping Irish protestants, Scottish episcopalians, and refugees who fled to England from the persecution of foreign countries. He paid for the education of poor children, and among his protégés was George Psalmanazar [q. v.], the literary impostor, whom he sent to Oxford and treated with invariable kindness (Psalmanazar, *Memoirs*, 1764, pp. 179, 187, et seq.) Compton liberally contributed to funds for rebuilding churches and hospitals, and vigorously promoted Queen Anne's Bounty Fund. His benevolence greatly diminished his private fortune, and he died a poor man.

Compton translated the 'Life of Donna Olympia Maldachini' from the Italian, 1667, the 'Jesuits' Intrigues' from the French, and 'Treatise of the Holy Communion,' 1677, from André Lortie's 'Traité de la Sainte Cène,' pt. i. (*Notes and Queries*, 5th ser. x. 85). Besides the letters issued to the clergy of London under the title of 'Episcopalia'

(1686 and republished in 1706, and with an introduction by S. W. Cornish in 1842), Compton published his charges in 1694, 1696, and 1701. He also drew up a prayer-book for Christ's Hospital (1705). Three letters addressed by Compton to Strype are printed from Cole's MS. (lii. 479–85) in the Camden Society's 'Letters of Eminent Literary Men,' 190–2; the first, dated 21 Feb. 1684–5, communicates the form of an address for the London clergy to present to James II on his accession; the second, dated January 1689, bids the clergy to lay before the people the blessings of the revolution; and the third, dated 20 Nov. 1701, strongly recommends to the electors of Essex two ardent protestant candidates, Sir Charles Barrington and Mr. Bullock. Others of Compton's letters are printed in Macpherson's 'Original Papers' and in Dalrymple's 'Memoirs.'

Compton has some claim to rank as a botanist. He planted his grounds at Fulham with 'a greater variety of curious exotic plants and trees than had at the time been collected in any garden in England' (Watson). John Ray, in his 'History of Plants' (1688), chap. xi., describes fifteen rare plants from Compton's specimens; and Plukenet, Petiver, Hermann, and Commelin all acknowledged Compton's assistance in botanical investigation. Petiver engraved many specimens from Fulham, and quotes in his 'Museum' from a book in his possession which he calls 'Codex Comptoniensis.' In 1751 Sir William Watson published in the 'Philosophical Transactions,' xlvii. 241–7, an account of Compton's garden, and describes thirty-three of his exotics. Compton obtained most of his rare plants from correspondents in North America (Pulteney, *Botanical Sketches*, ii. 105–7, 302).

Burnet always writes of Compton as a weak man and easily influenced by others. 'His preaching,' he says, 'was without much life or learning, for he had not gone through his studies with that exactness which was fitting.' Hearne and Evelyn were of the same opinion. James II complained that his military training unfitted him for the clerical profession, and that 'he talked more like a colonel than a bishop.' He was not a great prelate. He was always ambitious of preferment, and disappointments on this score were capable of influencing his political partisanship. His protestant zeal proved at a great crisis superior to his private interests, but neither the tolerance he displayed in his dealings with protestant dissenters nor his practical benevolence ever quite concealed his defects of temper and intellect.

Four engraved portraits of Compton are known. One by D. Loggan is dated 1679, and another, after Hargrave, by J. Simon, appeared in 1710. A third portrait by Riley was engraved by Becket.

[An anonymous (and fairly complete) life [? by N. Salmon] was published shortly after Compton's death in 1713. Gooch's funeral sermon (1713), together with another by John Cockburn, D.D., preached at St. Martin's-in-the-Fields 19 July 1713, and a third by William Whitfield, preached at St. Martin's, Ludgate, 11 Aug. 1713, adds few details. Many pamphlets recording the proceedings of 1687 were published in that and the succeeding years. See also Wood's Athenæ Oxon. (Bliss); Le Neve's Fasti (Hardy); Kennet's Complete Hist.; Biog. Brit. Hist.; Bromley's Cat. of Portraits; Brit. Mus. Cat.] S. L.

COMPTON, HENRY (1805–1877), comedian, whose real name was Charles Mackenzie, was born 22 March 1805 at Huntingdon. He was the sixth child of John and Elizabeth Mackenzie, the former a member of a family which has contributed to medicine one or two well-known professors, and the latter a Mrs. Symonds of Worcester. After an education at Huntingdon, and at a boarding-school at Little Baddow in Essex, he was placed in a house of business in Aldermanbury, belonging to his uncle Symonds, from which he twice ran away. His earliest histrionic attempts consisted of imitations of the 'At Homes' of Charles Mathews, with which, as with the acting of Liston, he was impressed. His first engagement, obtained through an agent, was at Lewes. He then played at Leicester as Richmond and Macduff, and after appearing at Cromer was for twelve months, under the name of Compton, which was that of a wife of his grandfather, a member of the Bedford circuit. In 1828 he is heard of in Daventry, and shortly afterwards he appeared at Hammersmith, where he sang a not very brilliant 'local song' of his own composition. Three years' experience on the Lincoln circuit was followed by a long and successful engagement on the York circuit. In Leeds he was a special favourite. His first appearance in London was at the English Opera House (Lyceum), under Bunn's management, on 24 July 1837, as Robin in the 'Waterman.' After playing successfully several parts of no great importance, he was

transferred on 7 Oct. 1837 to Drury Lane, where his Master Slender gave full promise of the reputation he was subsequently to earn in Shakespeare. Tony Lumpkin, Gnatbrain in 'Black-eyed Susan,' Silky in the 'Road to Ruin,' Bailie Nicol Jarvie, and the First Gravedigger in 'Hamlet' followed. The chief successes of this period of his life at the Lyceum or at Drury Lane were, however, Mawworm in the 'Hypocrite,' Marrall in 'A New Way to pay Old Debts,' and Dr. Ollapod in the 'Poor Gentleman.' After the disastrous termination of Hammond's season at Drury Lane, Compton went in 1840 to the Theatre Royal, Dublin, whence he returned on 10 Dec. 1841 with the reputation, subsequently maintained, of the best Shakespearean clown of his epoch. Engaged by Macready he appeared at Drury Lane in 1843–4, and after visiting Manchester, Liverpool, and Dublin he transferred his services to the Princess's, where he appeared as Touchstone on 11 Nov. 1844. Here he remained three years. In 1847 he was at the Olympic, where also he remained three years. Polonius, Sir Peter Teazle, Launcelot Gobbo, Foresight in 'Love for Love,' were among the parts taken at Drury Lane; at the Princess's and Olympic he played a round of 'legitimate' characters. When the Olympic was burnt Compton migrated to the Strand. In 1853 he began at the Haymarket with Buckstone his longest and best remembered engagement. During his stay at this house, besides repeating many favourite characters, he 'created,' among many other parts, Blenkinsop in Tom Taylor's 'Unequal Match,' and Sir Solomon Frazer in the same author's 'Overland Route,' De Vaudray in Dr. Westland Marston's 'Hero of Romance,' and Captain Mountraffe in Robertson's 'Home.' In 1848 Compton married Miss Emmeline Montague, a pleasing actress who, after her union to him, retired from the stage. His first residence after marriage was at 16 Charing Cross, where most of his numerous family were born. He quitted the Haymarket to play at the Princess's Theatre, Manchester, on 15 Aug. 1870, and afterwards at the Olympic on 3 Sept. 1870, in Tom Taylor's 'Handsome is that Handsome does,' and on 7 Oct. 1871 made a great success as Muggles in Byron's 'Partners for Life,' with which Montague opened the Globe Theatre. In the noteworthy revival of 'Hamlet' at the Lyceum on 30 Oct. 1874 he resumed his old character of the Gravedigger. This, with the exception of some performances at so-called 'matinées,' was his last appearance in London. With the 'Vezin-Chippendale' company he played in the country many of his old characters. His last appearance on the stage was at the Prince of Wales's Theatre, Liverpool, on 14 July 1877, as Mawworm in the 'Hypocrite,' and Pangloss in two acts of the 'Heir-at-Law.' After a long illness, in which he received many marks of public estimation, including very productive benefits at Drury Lane and in Manchester, he died of cancer on 15 Sept. 1877, in a house built by himself in Kensington, and named Seaforth House, after the head of the Mackenzie family, which he regarded as his clan. Within certain limits Compton was an admirable actor. In pathos and in unction he was alike deficient. He had, however, a dry quaint humour, the effect of which was not to be resisted. His reputation as a Shakespearean clown was well earned, and whenever a prosy, dogmatic, or phlegmatic character had to be presented, he was at home. His range was wider than might have been supposed from the special nature of his gifts, and within that range he was unsurpassed. In life as in art he was temperate, little given to social pleasures, and fond almost to the end of athletic exercise. He was greatly respected in London, and, except to a circle narrow for an actor, little known.

[Memoir of Henry Compton, edit. by Charles and Edward Compton, 1879; Tallis's Dramatic Magazine; Theatrical Times; Era Almanack; Athenæum; The Players, London, 1860; personal recollections.] J. K.

COMPTON, Sir HERBERT ABINGDON DRAPER (1770–1846), judge, was the son of Walter Abingdon Compton of Gloucestershire. Early in life he entered the army and served with his regiment in India, but returning to England he spent some time in writing for the newspapers, especially for the 'Pilot,' and in studying law; and having been called to the bar at Lincoln's Inn on 22 Nov. 1808, he went to India and joined the bar at Fort St. George. There he was successively appointed to the posts of advocate-general at Madras, and afterwards at Calcutta, and in 1831 of chief justice of Bombay, on which occasion he was knighted by letters patent. Having won the goodwill of all parties, and received many testimonials from natives as well as English, he returned to England and died at his house in Hyde Park Gardens on 14 Jan. 1846. He was twice married: first in 1798 to a daughter of Dr. Canne, a surgeon in the East India Company's service at Madras, and afterwards to a daughter of Mr. Edward Mullins of Calcutta. There is a portrait of Compton in the Oriental Club, Hanover Square.

[Gent. Mag. new ser. xxv. 207; Ann. Reg. 1846.] J. A. H.

COMPTON, SPENCER, second EARL OF NORTHAMPTON (1601–1648), son of William, first earl, was born May 1601, and married, some time after 20 Oct. 1621, Mary, daughter of Sir Francis Beaumont (DOYLE). Compton was educated at St. John's College, Cambridge, was created knight of the Bath on 3 Nov. 1616, and represented Ludlow in the parliament of 1621–2. On 1 March 1622 he was appointed master of the robes to Prince Charles, and accompanied him to Spain next year. According to Sir Richard Wynne, Compton fell ill at Burgos, and did not reach Madrid (apud *Diary of Sir S. D'Ewes*, ii 428). On the accession of Charles I he was reappointed to the post of master of the robes, which office he held till June 1628; he was also summoned to the House of Lords as Baron Compton on 1 April 1626, and succeeded his father as second earl of Northampton on 14 June 1630. He was lord-lieutenant of Warwickshire from 1630 till death. During the two Scotch wars he ardently supported the king, and in the council of peers which met at York in September 1640 strongly opposed the payment of any contribution for the support of the Scotch army during the treaty of Ripon (HARDWICKE, *State Papers*, ii. 242–58). At the same time he supported the summoning of a parliament; that one word of four syllables, said he, was 'like the dew of heaven' (*ib.* ii. 210). On the breach between Charles and the parliament the Earl of Northampton followed the king to York, was one of the nine lords impeached for refusing to obey the summons of parliament to return, signed the engagement of 13 June to defend the king, and finally undertook the task of executing the commission of array in Warwickshire (July 1642). At Coleshill, near Coventry, he first put the commission of array in execution, and then endeavoured to surprise Warwick Castle (BULSTRODE, *Memoirs*, 73). Though he failed in this, he succeeded in obstructing the passage of the ordnance Lord Brooke was sending down to fortify the castle, attacked Banbury, and succeeded in carrying off the guns himself (8 Aug.) On 23 Aug. he was defeated by Hampden and Ballard at Southam, and on 22 Sept. took part with his troop of gentlemen in the victory gained by Prince Rupert at Worcester. This troop, which consisted of a hundred gentlemen of quality, became part of the Prince of Wales's regiment of horse, and fought in that capacity at Edgehill (*ib.* 75). In November 1642, after the king's return to Oxford, 'he gave Banbury and that part of the country to the Earl of Northampton, who was commanded to raise a regiment of horse, which was given to the Lord Compton, his eldest son, and Sir Charles, his second son, was made lieutenant-colonel of it; to Sir William Compton, his third son, was given the castle of Banbury' (*ib.* 93). On 22 Dec. the parliament forces from Northampton occupied the town, and assaulted the castle, but Rupert's approach the next day relieved the earl from danger (TWYNE, *Musterings*, apud HEARNE, *Dunstable*, 760). Still his forces were so weak that he was ordered by the king to burn Banbury if seriously attacked (WARBURTON, *Prince Rupert*, ii. 91). Early in March 1643, Lord Northampton made an expedition from Banbury to relieve Lichfield (*ib.* ii. 132), but arriving too late to succeed in that object, he turned towards Stafford to succour the royalists besieged there, and established himself in the town. A few days later Sir John Gell and Sir William Brereton advanced against them, and the earl marched out and met them on Hopton Heath (19 March 1643). In the battle which ensued Northampton successfully routed the enemy's cavalry and captured eight guns; but their foot stood firm, and he was himself killed while too eagerly pursuing, and scornfully refusing to surrender to 'base rogues and rebels.' Clarendon, who describes the circumstances of his death, sums up the results of the battle by saying that 'a greater victory had been an unequal recompense for a less loss. He was a person of great courage, honour, and fidelity, and not well known till his evening; having in the ease and plenty and luxury of that too happy time indulged to himself with that license which was then thought necessary to great fortunes; but from the beginning of these distractions, as if he had been awakened out of a lethargy, he never proceeded with a lukewarm temper. . . . All distresses he bore like a common man, and all wants and hardnesses as if he had never known plenty or ease; most prodigal of his person to danger, and would often say, "that if he outlived these wars, he was certain never to have so noble a death"' (*Rebellion*, vi. 283). When the young Earl of Northampton sought the body of his father for burial, the parliamentary commanders refused to surrender it except in exchange for the captured guns. His sons William and Henry are separately noticed.

[Letters by the Earl of Northampton are to be found in Warburton's Prince Rupert and the Calendar of Domestic State Papers. Elegies on his death are contained in Cleveland's Poems and Sir Francis Wortley's Characters and Elegies. The pamphlets entitled Proceedings at Banbury since the Ordnance came down (1642) and the Battaile on Hopton Heath (1643). Other

authorities: Doyle's Official Baronage; Clarendon's Rebellion; Bulstrode's Memoirs; Lloyd's Memoirs of Excellent Personages.] C. H. F.

COMPTON, SPENCER, EARL OF WILMINGTON (1673?–1743), was the third son of James, third earl of Northampton, by his second wife, Mary, daughter and heiress of Baptist, third viscount Campden. He became commoner of Trinity College, Oxford, in 1690 and contested East Grinstead unsuccessfully 1695. While abroad in June 1698 he was returned for Eye, and represented that borough in the six following parliaments. At an early period he deserted the tory principles of his family, and in 1705 the whigs appointed him chairman of the committee of privileges and elections, a post to which he was elected annually for five years in succession. In 1707 he was appointed treasurer and receiver to George, prince of Denmark, and paymaster of the queen's pensioners, and in December 1709 was nominated one of the committee appointed to draw up the articles of impeachment against Sacheverell (*Journals of the House of Commons*, xvi. 241). Though not returned to parliament at the general election of 1710, he was in August 1713 elected as one of the members for the borough of East Grinstead. At the next general election Compton was returned both for East Grinstead and Sussex, but chose to represent the county. When the new parliament assembled on 17 March 1715, the house unanimously elected him speaker (*Parl. Hist.* vii. cols. 38–42), and though, in his speech on being presented to the king, Compton declared that he had 'neither memory to retain, judgment to collect, nor skill to guide their debates,' his majesty stated that he was perfectly well satisfied, and confirmed the choice of the House of Commons. He was sworn a member of the privy council on 6 July in the following year. In 1722 he was again chosen member both for East Grinstead and Sussex, and again elected to sit for the latter. He was re-elected speaker on 9 Oct. of that year (*ib.* viii. cols. 21–5), and continued to occupy the chair until the dissolution of parliament in July 1727. From 1722 to 1730 he held the lucrative office of paymaster-general, and was made a knight of the Bath upon the revival of that order in 1725. On the accession of George II to the throne Compton was commanded to draw up the king's first declaration to the council. This he found himself quite unable to do, owing to his ignorance of the proper forms of expression used on such occasions. Walpole, who had brought the king's message, at his request wrote it for him, and Compton took it to the king at Leicester Fields.

Though George had intended that his favourite Compton was to be his prime minister, Walpole, through the influence of the queen and Cardinal Fleury, retained his place, and Compton after some delay confessed 'his incapacity to undertake so arduous a task.' In August 1727 he was again returned for the county of Sussex, but before parliament met he was created Baron Wilmington, by letters patent dated 11 Jan. 1728, as a recompense for his recent self-abnegation. On 8 May 1730 he was appointed lord privy seal in Walpole's administration, and six days afterwards was raised to the rank of Viscount Pevensey and Earl of Wilmington. On 31 Dec. in the same year he succeeded Lord Trevor in the post of lord president of the council, having also succeeded that nobleman in his former office of lord privy seal. He was installed a knight of the Garter on 22 Aug. 1733, upon his resignation of the ensigns of the Bath.

After the queen's death he once more aspired to the office which he had thrown away when it was already in his grasp. When, in 1739, the cabinet became greatly divided on the question of war with Spain, Wilmington, who took every opportunity of supporting the king's views, declared strongly in favour of war. As Walpole's unpopularity increased, differences of opinion between the ministers became more frequent and the intrigues against the premier more numerous and conflicting. Though holding office under the government, Wilmington did not vote against Lord Carteret's motion for the removal of Sir Robert Walpole in February 1741. Writing to Wilmington on 25 Jan. 1742, Bubb Doddington, after reminding him how dear his over-caution fourteen years ago cost the country, begs him to throw over Walpole, and concludes by saying: 'You, and you only, have all the talents and all the requisites that this critical time demands to effectuate this great event, and save your country, if it is to be saved' (COXE, *Walpole*, iii. 759). Three days after this was written Walpole was defeated in the House of Commons on the Chippenham election petition. Pulteney was sent for by the king to form an administration, and on 16 Feb. Wilmington was appointed first lord of the treasury. But with the Duke of Newcastle and Carteret as secretaries of state, and Pulteney without office in the cabinet, Wilmington was prime minister in name only. By the public as well as by his subordinates he was regarded as a mere cipher. Wanting in decision, and possessing but very ordinary abilities, he was neither suited to become a leader of men nor a framer of measures. He seldom spoke either

in the House of Lords or at the council-table. He was the butt of the satirists and caricaturists of the day. Sir C. H. Williams, in his 'New Ode to a Great Number of Great Men newly made' (*Works*, 1822, i. 139), thus describes him:

> See yon old, dull, important lord,
> Who at the long'd-for money-board
> Sits first, but does not lead;
> His younger brethren all things make;
> So that the Treasury's like a snake,
> And the tail moves the head.

As speaker of the House of Commons Wilmington was much more successful, his solemn manner and sonorous voice helping him to secure the respect of the members. On ceremonial occasions he was especially effective, as his speech on returning the thanks of the house to the managers of the impeachment of the Earl of Macclesfield bears witness. His notions as to the duty of the speaker to maintain order in the house were, however, somewhat inadequate. According to Hatsell, it was 'reported of Sir Spencer Compton that when he was speaker he used to answer to a member who called upon him to make the house quiet, for that he had a right to be heard, "No, sir, you have a right to speak, but the house have a right to judge whether they will hear you"' (*Precedents of Proceedings in the House of Commons*, 1818, ii. 108). He was created a D.C.L. by the university of Oxford on 5 Aug. 1730. Thomson dedicated to him the poem of 'Winter,' which appeared alone in 1756, before the other parts of the 'Seasons.' It, however, attracted no regard from him until 'Aaron Hill awakened his attention by some verses addressed to Thomson and published in one of the newspapers, which censured the great for their neglect of ingenious men. Thomson then received a present of twenty guineas' (Johnson, *Works*, 1810, xi. 223). These verses of Hill's, 'addressed to Mr. James Thompson, on his asking my advice to what patron he should address his poem called "Winter,"' will be found in the 'Works of the late Aaron Hill' (1754), iii. 77-9. Young also dedicated his fourth satire to Compton when speaker of the House of Commons. Wilmington's one bon mot is still remembered, though the author's name is almost forgotten. It was he who said, in describing the Duke of Newcastle, that 'he always loses half an hour in the morning which he is running after the rest of the day without being able to overtake it.' Wilmington died unmarried on 2 July 1743, aged 70, and was buried at Compton Wynyates, Warwickshire. His titles became extinct on his death, and his estates passed by his will to his brother George, fourth earl of Northampton, whose great-granddaughter, Lady Elizabeth, in 1782 married Lord George Cavendish, afterwards Earl of Burlington. By this marriage the Wilmington estates passed into the possession of the Cavendish family. The barony of Wilmington was revived on 7 Sept. 1812, when the ninth earl of Northampton was raised to the rank of a marquis. Wilmington was a member of the Kit-Cat Club, and his portrait, painted by Kneller, was exhibited in the second loan collection of national portraits, 1867 (No. 122). It was engraved by Faber in 1734.

COMPTON, SPENCER JOSHUA ALWYNE, second Marquis of Northampton (1790–1851), second son of Charles Compton, ninth earl and first marquis of Northampton, by Mary, only daughter of Joshua Smith, M.P. for Devizes, was born at Stoke Park, Wiltshire, one of the residences of his maternal grandfather, on 1 Jan. 1790. He was educated at Trinity College, Cambridge, where he graduated M.A. 1810, and was created LL.D. in 1835.

On 26 May 1812, soon after the assassination of Spencer Perceval, Compton was chosen to succeed him as the member for Northampton, and sat until his defeat at the general election in 1820.

His immediate relatives were all of high tory politics, but he soon showed an honest independence, and was often called impracticable and crotchety. He was in favour of direct rather than of indirect taxation, and incurred the unpopularity of opposing the repeal of the property tax in 1816. He soon after associated himself with Wilberforce and the band of men who devoted themselves to the cause of Africa. He was also connected with Sir James Mackintosh as a criminal law reformer, and his conduct on the case of Parga, on the Alien Act, and on the amendments which he proposed in the Seditious Meetings Act in 1819 showed how far he

had advanced beyond the policy of his party. Lord Castlereagh charged him with 'turning his back on himself.' On 24 July 1815 he married Miss Margaret Maclean Clephane, eldest daughter and heiress of Major-general Douglas Maclean Clephane. She was intimate with Sir Walter Scott. Though her poem 'Irene' was printed for the sake of her family and friends, it was never given to the world, but her minor poems appeared in some of the 'Miscellanies.' After 1820 Compton took up his residence in Italy, where his house became a centre of attraction, and his influence was exercised in favour of many of the unfortunate victims of despotic authority both in Lombardy and in Naples. On 24 May 1828 he succeeded his father as second marquis of Northampton, and two years afterwards, on the death of his wife at Rome, 2 April 1830, he returned to England.

In 1832 he proposed in parliament that the law in respect to vacating seats on acceptance of office should be abolished, but his bill on this matter, although favourably received, was not carried. His name will be chiefly remembered for his taste in literature and the fine arts, and for his devotion to science. He was one of the earliest presidents of the Geological Society, and also presided at the meeting of the British Association at Bristol in 1836, and at Swansea in 1848. On the retirement of the Duke of Sussex in 1838 he was chosen president of the Royal Society, which office he held until 1848. He took the liveliest interest in the Archæological Association, founded in 1844, and in presiding at the meeting at Winchester in 1845, after the rupture, he proposed that the designation should be altered to the Archæological Institute of Great Britain and Ireland. He was not unknown as a poet, and he edited and published, for the benefit of the family of the Rev. Edward Smedley, a volume entitled 'The Tribute,' which, in addition to his own verses, contained contributions from the majority of the best known poets of the day.

On the morning of 17 Jan. 1851 the marquis was discovered dead in his bed, and was buried at Castle Ashby on 25 Jan.

He was the author or editor of: 1. 'Irene,' a poem, in six cantos. Miscellaneous poems, by Margaret, marchioness of Northampton, ed. by the Marquis of Northampton, 1833, not published. 2. 'Observations on the Motion of Sir R. Heron, respecting Vacating Seats in Parliament on the Acceptance of Office,' 1835. 3. 'The Tribute,' a collection of miscellaneous unpublished poems, by various authors, ed. by Lord Northampton, 1837.

[Robinson's Vitruvius Britannicus (1841), pt. iii. pp. 1–24; Drummond's Noble British Families (1846), i. 12–16; Gent. Mag. April 1851, pp. 425–9; Times, 22 Jan. 1851, p. 5, said to be by Lord Monteagle; Illust. London News, 25 Jan. 1851, p. 59, with portrait; Doyle's Baronage (1886), ii. 631, with portrait.] G. C. B.

COMPTON, alias CARLETON, THOMAS (1593?–1666), jesuit, was a native of Cambridgeshire. He entered the Society of Jesus in 1617, being then in the twenty-fourth year of his age (Southwell, *Bibl. Soc. Jesu*, p. 761). Having been ordained priest at Douay in 1622, he was sent to England in 1625 and was professed of the four vows 21 May 1628 (Foley, *Records*, vii. 154). He taught rhetoric and belles lettres in the English college at St. Omer, and philosophy and theology for many years at Liège, where he was also for a long time prefect of studies. He died at Liège on 24 March 1665–6. Oliver states he was deservedly admired for his classic taste and his skill in philosophical and theological science (*Jesuit Collections*, p. 72).

He wrote: 1. 'Philosophia Universa,' Antwerp, 1649, 1664, fol. The title-page is a fine engraving by Wenceslaus Hollar, representing the author's patron, Maximilian, duke of Bavaria, seated on his throne. 2. 'Prometheus Christianus, seu liber Moralium in quo Philosophiæ finis aperitur. Simulque media quibus in homine formando in hominem utitur declarantur: ex antiquorum Philosophorum monumentis deducta,' Antwerp, 1652, 8vo. 3. 'Cursus Theologici tomus prior,' Liège, 1658, fol., tomus posterior 1664. Other editions of the 'Cursus Theologici,' 2 vols. Liège, 1659–64, Antwerp, 1624, 1634, 1684, 1710, fol. 4. 'Disputationes Physicæ, ubi etiam de Generatione et Corruptione,' Salamanca, 1676, 4to; founded on the works of Aristotle. 5. 'Disputationes in universam Aristotelis Logicam,' Salamanca, 1716, 4to.

[Authorities cited above; Backer's Bibl. des Écrivains de la Compagnie de Jésus (1869), i. 1348; Cat. of Printed Books in Brit. Mus.; Gillow's Bibl. Dict. i. 546; Dodd's Church Hist. iii. 311.] T. C.

COMPTON, Sir WILLIAM (1482?–1528), soldier, only son of Edmund Compton of Compton in Warwickshire, must have been born about 1482, as his age was eleven years 'and more' when his father died in 1493. Henry VII, whose ward he then became, appointed him page to Prince Henry, duke of York. In 1509 Prince Henry became King Henry VIII, and Compton was rapidly appointed groom of the bedchamber, chief gentleman of the bedchamber, groom of the stole, constable of Sudeley and Gloucester

castles, and to many other offices. On 7 Nov. 1512 he received 'honourable augmentation of arms,' viz.: 'a lion passant gardant or,' with the crest 'a demi dragon crazed gules within a coronet of gold upon a torse argent and vert.' On 4 Feb. 1512–13 he was appointed usher of the black rod in Windsor Castle (*Pat.* 4 *Hen. VIII*, ii. 11). In the French campaign of 1513 he seems to have been in the main body or 'middle warde' of the army (*Calendar Hen. VIII*, i. 4314); Hall, however, says he commanded the rear guard (*Chron.* f. 26). He and forty-four others were rewarded for their exertions by the honour of knighthood, conferred on them by the king at Tournay on 25 Sept. The chancellorship of Ireland with power to act by deputy was given him on 6 Nov. 1513; but he did not keep it long, for it went to the archbishop of Dublin on 24 March 1516 (*Pat.* 5 *Hen. VIII*, ii. 2, and 7 *Hen. VIII*, iii. 24). The university of Cambridge, on 5 Feb. 1513–14, granted 'letters of confraternity' to him and his wife. He attended the king to the Field of the Cloth of Gold and to the subsequent interview with the emperor at Gravelines in 1520. Compton served on the borders under the Earl of Surrey in the Scotch war of 1523, and this seems to have been the only time he ever removed far from the court. Some thought that his rival Wolsey contrived his being sent thither, hoping in his absence to injure his credit with the king (Polydor Vergil, ed. 1557, p. 1714). A fragment of a grant, dated 22 Feb. 18 Henry VIII, enrolled on the 'Patent Roll' of that year (1526–7), gives him leave to wear his hat in the king's presence; the enrolment, however, is cancelled. He died on 30 June 1528 (*Escheators' Inquisitions*) of the sweating sickness, leaving an only son, Peter, aged six, who became the ward of Cardinal Wolsey. Peter died a minor, leaving a son who was created Baron Compton by Queen Elizabeth, and whose son was made Earl of Northampton by King James. Compton married Werburga, daughter and heiress of Sir John Brereton, and widow of Sir Francis Cheyney, and she, the year after his death, had license to marry Walter Walsh of the privy chamber (*Pat.* 21 *Hen. VIII*, ii. 24, in which she is called 'Elizabeth'). Compton had apparently made unsuccessful suit for leave to marry the Countess of Salisbury after her lands were restored to her in 1513 (*Calendar Hen. VIII*, iv. 4654). He died immensely rich, leaving property in eighteen counties. He was sheriff of Worcestershire for life by a grant in 1516, and before that had been sheriff of Hampshire, 1512–13, and of Somersetshire and Dorsetshire, 1513–14. Portraits of him on glass were at Compton Hall and in Balliol College, Oxford.

Brit.; Testamenta Vetusta, p. 591; State Papers Henry VIII; Report of Deputy-Keeper of Public Records, ii. App. ii. 196, x. App. ii. 220; Hall's Chronicle; Strype's Memorials, I. i. 112.] R. H. B.

COMPTON, Sir WILLIAM (1625–1663), royalist, the third son of Spencer Compton, second earl of Northampton [q. v.], was born in 1625. In his eighteenth year he was directed by his father to take up arms for Charles I; he at once joined his father's regiment, with which he rendered signal service to the royal cause at the taking of Banbury. He led his men on to three attacks, and had two horses shot under him. Upon the surrender of the town and castle he was made lieutenant-governor under his father, and brought over many to the king's interest. He received the honour of knighthood at Oxford on 12 Dec. 1643. When the parliament forces of Northamptonshire, Warwick, and Coventry, who were aggrieved by Compton's continual incursions, came before the town of Banbury on 19 July 1644, he returned answer to their summons 'that he kept the castle for his majesty, and, as long as one man was left alive in it, willed them not to expect to have it delivered.' Afterwards they sent another summons, to which he replied 'that he had formerly answered them, and wondered they would send again.' So vigilant was he that he countermined the enemy eleven times, and during the siege, which lasted thirteen weeks, never went to bed, but by his example so animated the garrison that they would never suffer another summons to be sent to them. At length on 26 Oct. his brother, the Earl of Northampton, raised the siege. Compton continued governor of Banbury till the king left Oxford, and when the whole kingdom was submitting to the parliament he, on 8 May 1646, surrendered upon honourable terms, 'all officers being allowed their horses, swords, goods, money, and passes, with a safe-conduct whither they pleased, without any arrest or molestation.'

In 1648 he served the king in the Kentish expedition, and in the absence of the Earl of Norwich commanded as general at Greenwich. As major-general of the king's forces at Colchester, when that town was besieged by General Fairfax, he, by his instructions and example, kept the garrison in some competent order while they were enduring the greatest privations, for before they surrendered on 28 Aug. 1648 they were reduced to eating

not only dogs and horses, but the very draff and grains for the preservation of their lives. Compton, after being confined for some time, was set at liberty. He was so much taken notice of for his admirable behaviour, that Oliver Cromwell called him 'the sober young man, and the godly cavalier.' He, with the Earl of Oxford, John, lord Bellasis, Sir John Grenville, Sir John Russell, and Sir Richard Willis, were called the 'sealed knot,' from the privacy of their councils in managing all the eight attempts made for the restoration of Charles II from 1652 to 1659. Compton was in prison in 1655, and was again arrested in 1658.

After the Restoration he was returned to parliament for the borough of Cambridge 11 March 1660–1, and Charles II appointed him master of the ordnance. He died suddenly in Drury Lane, London, on 18 Oct. 1663, and was buried at Compton-Wynyates, Warwickshire, where a monument was erected to his memory.

He married Elizabeth, widow of William, lord Alington of Horseheath, Cambridgeshire.

T. C.

COMRIE, ALEXANDER (1708–1774), theological writer, was born in Scotland, and when a young man went over to Holland, where he was placed in a mercantile house. In his twentieth year when crossing a lake not far from Leyden, he was shipwrecked; but swimming ashore near Woubrugge, and observing a light in a neighbouring farmhouse, he found shelter for the night, and found likewise in the farmer a congenial friend, who encouraged his desire to study for the church, and got for him the means of taking his course at the universities of Groningen and Leyden.

In 1734 he took at Leyden the degrees of master of arts and doctor of philosophy, and immediately after he was elected minister of the parish of Woubrugge, where he had found shelter and friendship after his shipwreck. He remained minister there till 1773, the year before his death, discharging his pastoral duties with singular assiduity among a people who appreciated in the highest degree his high character and his fervent zeal for the old Calvinistic doctrines.

It was in Comrie's time that some of the ministers, professors, and theological writers of Holland began to maintain rationalist views; in Comrie they found one of their most unflinching opponents. In two ways Comrie opposed the rising tide: he wrote original controversial treatises, and he translated for popular use some of the ablest works in practical and devotional theology that were appearing in his native country.

The names of his opponents, Schultens, Van den Os, Alberti, and Jan van den Honert, are now nearly forgotten even in Holland. Van den Os, as minister of Zwolle, had declared that no church articles could have power to decide in matters of faith, for the holy scriptures were admitted to be the true rule, and each man was at liberty to receive them according to his individual interpretation; also that the synod of Dort did not mean to set forth what was to be received as the truth for all time, but only for the time then being and till further light should be obtained. Van den Honert raised questions respecting the fundamental doctrine of justification by faith, which seemed to Comrie to involve the surrender of all that had been taught on that subject by Luther and Calvin. Notwithstanding the strenuous opposition of Comrie and his friends, the cause of rationalism advanced steadily among the clergy and in the universities. But the attachment of the people of Holland to that gospel of which he was a champion continued to prevail to a very large extent. It is in that class that the name of Comrie still lives, and the books which he wrote are still a power.

The following is a translated list of the principal writings of Comrie published in the Dutch language, as recently compiled by Professor Kuyper, D.D., of Amsterdam:—
1. 'The A B C of Faith, an Exposition of Scripture Similitudes, illustrating Faith.' 2. 'On the Properties of a Saving Faith,' 2 vols. 3. 'On Justification by Direct Imputation.' 4. 'On Justification by Faith wrought in us by Grace.' 5. 'On the Languishing Condition of Faith in the heart of the Believer,' 2 vols. 6. 'Exposition of the Heidelberg Catechism.' 7. Examination of the Proposition of General Toleration in order to reconcile Calvinism to Arminianism,' 2 vols. The following are among the books which he translated or edited: 1. Voetius, 'The Mystic Power of Godliness.' 2. Shepherd, 'The Ten Virgins.' 3. Marshall, 'The Doctrine of Sanctification.' 4. Boston, 'The

Covenant of Grace.' 5. Chauncy, 'The Westminster Catechism illustrated.'

W. G. B.

COMYN, ALEXANDER, second EARL OF BUCHAN (*d.* 1289), constable of Scotland, was the son of William Comyn, earl of Buchan, the founder of Deer Abbey, and of Marjory, his second wife, who brought the title into the Comyn family. His father's death, in 1233, was soon succeeded by that of his mother, which put him into complete possession of the earldom. One of his earliest acts probably was the confirmation of some grants of his parents to the canons of St. Andrews, to whom they had on several occasions been benefactors (*Registrum Prioratus S. Andree*, p. 282, Bannatyne Club). He also confirmed grants of theirs to Arbroath (*Liber S. Thome de Aberbrothoc*, pars i. pp. 265–6, Bannatyne Club). In 1244 he was in the royal council, and in the same year was one of the guarantors of the peace with England (*Acts Parl. Scot.* i. 403; *Fœdera*, i. 257). He rose into power with the rise of his brother, the Earl of Menteith, during the minority of Alexander III. He became, like his father, justiciary of Scotland, and though removed from court with the rest of his family in 1255, regained power in 1257 as the result of the capture of the young king at Kinross. He signed the convention with the Welsh (*Fœdera*, i. 370). In 1258 Menteith's death made him the practical chief of the great Comyn family. In 1260 he appears among the parties to the agreement under which the Queen of Scots visited her father's court for her confinement (*ib.* i. 402). In 1264 he was sent with Durward and Mar, after the battle of Largs, to reduce the western islands that had taken sides with Haco, the Norse king. There they 'slew the Norwegian traitors and got great plunder' (FORDUN, ed. Skene, i. 301). In 1264 the death of his father-in-law, the Earl of Winchester, gave him great additional possessions, both in England and Scotland. Earlier than 1266 he became sheriff of Wigton (*Exchequer Rolls of Scotland*, i. 22), so that with the Quincy estates in Galloway he must have been very powerful in south-west Scotland. He was also bailiff of Dingwall and Inverary (*ib.* i. 18–19). In 1270 the renunciation of the claims of his elder sister-in-law, Margaret, countess of Derby, made him Winchester's undisputed successor in the office of constable of Scotland (*Acts Parl. Scot.* i. 115). In 1281 he took part in negotiating the marriage of Margaret, daughter of King Alexander, with Eric of Norway (*Fœdera*, i. 596). In 1282 he was sent on an important mission to the northern islands, 'propter quædam ardua negotia nos et regnum nostrum tangentia.' On this account he requested to be excused from personal service with King Edward in Wales, and sent his son Roger instead with his contingent (*ib.* i. 611). King Alexander supported his request (*ib.* 610), which was doubtless granted. In 1283 he was the first mentioned of the grandees who at the parliament of Scone bound themselves to maintain the succession of the Maid of Norway (*ib.* i. 638; *Acts Parl. Scot.* i. 424), and on Alexander's death, in March 1286, he became one of the six regents during the absence and minority of the infant queen. He was one of the three appointed for the government of the north. He and his colleagues are described as 'custodes regni Scotiæ de communi consilio constituti,' and as 'per communitatem regni electi' (STEVENSON, *Documents illustrative of Hist. of Scotland*, i. 25–6). He died in the summer of 1289, just before the critical times began. His last official signature as regent is on 10 July at Linlithgow; the next document, of 5 Aug., only contains the names of the other regents (*ib.* i. 95–6). He had married Elizabeth, sometimes called Isabella, the second of the three daughters and coheiresses of Roger de Quincy, earl of Winchester, by the sister of Devorguilla and coheiress of Alan of Galloway (FORDUN, i. 316). He had a large family, including four sons, namely, John and Alexander, who successively succeeded him to the title, William and Roger, who fought against Llewelyn in 1282. His five daughters were all married to men of position. Wyntoun, however (bk. viii. lines 1120 sq.), makes the five ladies, and also John and Alexander, children of William and grandchildren of Alexander. Documentary evidence, however, proves John to have been son of Alexander (*Cal. Doc. Scot.* v. ii. No. 369).

COMYN, JOHN (*d.* 1212), archbishop of Dublin, was in his early life a trusted official and chaplain of Henry II. His devotion to his master's service is shown by his employ-

ment on several important embassies during the quarrel between Henry and Archbishop Thomas, against the latter of whom he showed such zeal that he ultimately incurred the penalty of excommunication (ROBERTSON, *Materials for the History of Thomas Becket*, vi. 602, Rolls Ser.) In 1163 he was sent on a mission to the court of the emperor, and the length of his stay alarmed both Becket and Pope Alexander III (*ib.* v. 59). In 1166, when the king appealed from Becket's sentence to the pope, Comyn was sent with John of Oxford and Ralph of Tamworth to the Curia, and succeeded in obtaining the appointment of two cardinal legates to hear and determine in England the quarrel of king and archbishop (*ib.* vi. 68, 84, 147; HOVEDEN, i. 276, ed. Stubbs). He left Rome early in 1167, but was accused soon after of showing to the antipope the secrets of Becket's correspondence, and Alexander ordered the legates to punish him strictly if his guilt could be satisfactorily established (ROBERTSON, vi. 200). In connection with this may be put a letter of Alexander to Comyn himself, ordering him to abandon the archdeaconry of Bath obtained through lay patronage (*ib.* vi. 422). But he failed to satisfy the archbishop at least, who bitterly complained to the pope that Comyn was wandering through France and Burgundy, loudly boasting that he had succeeded in withdrawing France from Becket's side, and proclaiming that if he only dared reveal the secrets of the papal court he would convince every one that Thomas would soon be overthrown (*ib.* vii. 237). This must have been during his journey to Rome on a second embassy, for we find him again there at the time of Becket's murder, an event which suspended all relations between him and the pope, and ruined the negotiations for a settlement which his dexterity had almost brought to a successful issue. His last important embassy was in 1177 to Alfonso of Castile and Sancho of Navarre, at the time when they were referring their dispute to the mediation of Henry II (BENEDICTUS ABBAS, i. 157, ed. Stubbs). On this occasion his name is mentioned first among the commissioners sent by the king. Comyn had, however, other employments at home. In 1169 and following years he served as justice itinerant in the south-western counties. In 1179 he was one of the six justices to carry out the new fourfold circuits into which Henry II then divided the country. His work lay in the northern division (HOVEDEN, ii. 191). Of ecclesiastical preferment, though he had never received priest's orders, he had already held the canonry of Hoxton in St. Paul's (LE NEVE, ed. Hardy, ii. 397), besides the unlucky archdeaconry of Bath, and in 1170 the custody of two vacant bishoprics. But early in 1181 the death of the famous Irish saint, Lawrence O'Toole (Lorcan O'Tuathal), left vacant the archbishopric of Dublin. Henry determined to make that see for the future a pillar of English rule in Ireland. He at once seized upon the possessions of the archbishopric, and on 6 Sept. some of the clergy of the cathedral appeared before a great council at Evesham, where the king's influence soon procured from them the election of John Comyn as the new archbishop, with a semblance of canonical form (BENEDICTUS ABBAS, i. 280; HOVEDEN, ii. 263; GIRALDUS CAMBRENSIS, *Expugnatio Hiberniæ* in *Opera* v. 358–9, Rolls Ser.) Comyn proceeded to Rome for the pallium. He was well received by Lucius III, who on 13 March 1182 ordained him priest at Velletri, and on Palm Sunday consecrated him bishop. According to some contemporary authorities, Lucius also made him a cardinal (GIRALDUS, v. 358; BENEDICTUS ABBAS, i. 287). But it would be more than unusual in the twelfth century for a cardinal to reside elsewhere than at Rome, and in all his official acts there is no trace of Comyn claiming the title. He left Rome in time to be present at the Christmas court of Henry II at Caen (BENEDICTUS ABBAS, i. 273), and in August 1184 was present at a council at Reading which in vain endeavoured to elect an archbishop of Canterbury (*ib.* i. 317). Immediately after he proceeded to Ireland for the first time, in order to prepare the way for the arrival of Earl John, to whom his father had already assigned the government of the new dependency (September 1184). In April 1185 he received John on his arrival, and with the other English colonists swore fealty to him (*ib.* i. 339), but he was unable to prevent the complete failure of the new ruler. He was accused, however, of surreptitiously obtaining from John a charter investing him with very extensive legal privileges (GILBERT, *Viceroys of Ireland*, p. 50). Next year Comyn was again in England, was present at Henry's Christmas court at Guildford (BEN. ABB. ii. 3), and was sent by the king to meet the cardinal Octavian, who had been sent from Rome to be legate of Ireland, and to crown John king of that island; but Archbishop Baldwin persuaded Henry to send the legate back his mission unaccomplished (*ib.* ii. 4). A little later Comyn seems to have attached himself to Henry's revolted sons, and in June 1188 went on a mission from Richard in Aquitaine to his father. In September 1189 he was present at Richard's coronation at Winchester (HOVEDEN, iii. 8), and also at the series of councils held by the new king before his

departure for the crusade (*ib.* iii. 8, 14, 15, 24).

The next few years were mainly passed by Comyn in Ireland, in carrying out the policy which had been foreshadowed by his appointment. Politically he made the archbishops of paramount importance in the colonial government, so that they often enjoyed more power and more confidence with the king than the viceroys themselves (GILBERT, *Viceroys*, i. 45 sq.) Legally his acceptance of the estates of his see as a barony, and the charters of immunities which further dignified his position, mark an important step in the feudalisation of Ireland. Ecclesiastically he aimed at the extirpation of the last remnants of the local usages of the Celtic church in favour of the newest patterns of Roman orthodoxy. But though the champion of England and Rome, he was a zealous defender of the rights of his see as he conceived them, and a magnificent and bountiful benefactor of the church. This is shown by the large number of his grants still preserved in such collections as the cartularies of St. Mary's Abbey, by his refoundation of the convent of nuns at Grâce Dieu (ARCHDALL, *Monasticon Hibernicum*, new ed. ii. 84), and endowing it with the church of St. Audoen in Dublin (GILBERT, *Hist. Dublin*, i. 277), by his obtaining possession of the Arroasian priory of All Saints from the bishops of Louth (BUTLER, *Reg. Prior. Omnium SS. juxta Dublin*, Irish Archæological Society), by his enlargement of the choir of the cathedral church of the Holy Trinity (now Christ Church), which St. Lawrence had already made Arroasian (GILBERT, *Hist. Dub.* i. 101), and above all by his great foundation of St. Patrick's, which a successor in the archbishopric raised to the dignity of a second cathedral. In 1190 he demolished an ancient parish church in the southern suburbs of the city, the legend about whose foundation went back to St. Patrick himself, and erected in its place a college for thirteen prebendaries of holy life and sound knowledge of literature, to spread 'the light of learning, which was more wanting in Ireland than in any other part of Christendom.' With that object any prebendary who went beyond sea for study was allowed, despite his non-residence, to retain his emoluments and commons. All the liberties enjoyed by the canons of Salisbury were secured by charter to the canons of St. Patrick's. Earl John himself founded an additional prebend. On St. Patrick's day 1191 the church was consecrated with great pomp (MASON, *History of St. Patrick's*, with appendices containing the foundation charters). Comyn was also a benefactor of the city of Dublin (GILBERT, *Hist. and Municipal Documents of Ireland*, pref. xxv, Rolls Ser.)

Comyn was as vigorous in the management of his see as splendid in his foundations. Soon after his consecration he got a bull from Lucius III (13 April 1182) that no archbishop or bishop should hold a synod within his province without his consent. From this sprang a controversy of centuries in duration between the archbishops of Dublin and Armagh with reference to the primacy of the latter and their right to bear their crosier erect within the province of Dublin. In 1184 he got from Earl John a charter allowing him to hold courts all over Ireland, 'as well in cities as in exterior lands' (SWEETMAN, *Cal. Irish State Papers*, 1171–1251, No. 1789), and in 1185 the union of the impoverished see of Glendalough with the archbishopric was secured at the next vacancy. In 1186 a provincial synod was held and a large number of canons passed, with the object of repressing the characteristic irregularities of the Irish clergy. Another synod was held at Dublin in 1192. In 1195 he rescued the body of Hugh de Lacy from the natives and buried it at Bective.

In 1197 Comyn had a serious quarrel with Earl John's deputy, Hamon of Valognes. Indignant at the viceroy's usurpations of ecclesiastical property, the archbishop excommunicated him and his followers, put the archbishopric under an interdict, and sought safety from Hamon's vengeance in exile. His property was seized, but extraordinary miracles showed that heaven favoured the cause of the persecuted prelate. Yet Comyn could for a long time get no justice either from John or from King Richard, and was himself put into prison in Normandy. At last Innocent III interfered, and in a bull, dated Perugia, 18 Sept. 1198, reprimanded John and secured the bishop's return (BALUZE, *Ep. In. III*, i. 215–16). Valognes purchased back favour by a grant of lands to the archbishopric (HOVEDEN, iv. 29; cf. GILBERT, *Viceroys*, p. 57), and gave John one thousand marks to have peace touching his Irish account (*Cal. Irish Doc.* No. 91). The reconciliation between John and the archbishop must have been complete, as in May 1199 the latter was present at the former's coronation at London (HOVEDEN, iv. 89). Next year Comyn assisted (23 Nov.) at St. Hugh's funeral at Lincoln (*Magna Vita S. Hugonis*, p. 353, Rolls Ser.) In 1201 he was at the coronation of Queen Isabella at Canterbury (*An. Burton* in *An. Monast.* i. 206). In 1203 he returned to Ireland, and in 1204 he again quarrelled with John about the acts of foresters and other royal officers, and was

summoned from his see to answer the charges brought against him. But in 1205 a reconciliation was effected, and the viceroy, Meyler Fitz Henry, was directed to restore and protect Comyn in all his lands and liberties (*Cal. Irish Doc.* 1171–1251, Nos. 202, 276). Little is heard of Comyn's acts for the rest of his life. He died at an advanced age on 25 Oct. 1212, and was buried in the choir of his cathedral of Christ Church (*Annals of St. Mary's, Dublin*, ii. 279, 312, Rolls Ser.) Giraldus (*Expug. Hib.* in *Opera*, v. 358, Rolls Ser.) praises him for his cultured eloquence, his zeal for justice and the rights of his church, but complains of the tyranny of the secular arm to which he was subjected. He is said to have written some epistles and a discourse on the sacraments of the church, besides drawing up the canons summarised in Ware (Tanner, *Bibliotheca Britannico-Hibernica*, p. 212). There is nothing improbable in his belonging to the great family of Comyn, which later in the thirteenth century attained such importance in Scotland, and which in his time was more Northumbrian than Scottish; but there seems to be no direct evidence to substantiate the statements in Dempster (*Hist. Eccles. Gentis Scotorum*, iii. 348).

[Hoveden; Benedictus Abbas; Giraldus Cambrensis; Robertson's Materials for the History of Thomas à Becket; Gilbert's Historical and Municipal Documents of Ireland and Chartularies of St. Mary's Abbey, all in Rolls Series; Sweetman's Calendar of State Papers (Irish Series), 1171–1251; modern accounts are in Harris's Ware, i. 314–18; Foss's Judges of England (for his judicial career), i. 229–30; Gilbert's Viceroys of Ireland, i. 45–7; Mason's History of St. Patrick's.] T. F. T.

COMYN, JOHN (*d.* 1274), justiciar of Galloway, was the son of Richard Comyn and nephew of the powerful Walter Comyn, earl of Menteith [q. v.], and the hardly less important Alexander Comyn, earl of Buchan [q. v.] In 1248 he is mentioned as present at the courts of Alexander II at Berwick and Stirling (*Acts Parl. Scot.* i. 404 *a*, 409 *a*). He also attested several Melrose charters during the latter part of the same reign (*Liber S. Marie de Melros*, i. 191, 212, 214, Bannatyne Club). In 1250 he granted to the monks of Melrose the right of passage through his lands of Dalswinton and Duncol in Nithsdale (*ib.* i. 280–1). In this valley and in Tyndale his property chiefly lay; so that he was a powerful man on both sides of the border. In Scotland he fully shared in the prosperity of his house during the early years of the reign of Alexander III. In close association with his two uncles, he took a prominent part in the government of the regency between 1249 and 1255, and fell like them in the latter year, when the personal intervention of Henry III transferred power to a new regency, better affected towards the English sovereign (*Fœdera*, i. 329; *Acts Parl. Scot.* i. 419 *a*; *Chron. de Mailros*; Wyntoun). Next year the jury of Corbridge presented him for levying new tolls on King Henry's men on his Northumberland estates (*Cal. Doc. Scot.* i. 396). In 1257 he shared with his uncles in the capture of the young king at Kinross, which resulted in their return to power (*Fœdera*, i. 353; Fordun, i. 298). In 1258 he appears, with the new title of justice of Galloway (*Fœdera*, i. 370), as joining in the confederation of the Scottish nobles with Llewelyn of Wales against Henry III. But on peace being restored between Henry and the Comyns he became in 1260 one of those to whom Henry swore that he would not unnecessarily detain his daughter, the Queen of Scots, about to visit his court for her confinement (*ib.* i. 402). In August of the same year he received license from Henry to go through England to Canterbury, and thence beyond sea (*Cal. Doc. Scot.* vol. i. No. 2196). In January 1262 he again received a safe-conduct from the English king (*ib.* No. 2284), and during his stay at Henry's court obtained a confirmation of King David's grants to his great-grandfather of his Tyndale estates; a grant of 50*l.* for expenses during his residence at court; and license to hunt in the royal forests during his return home (*ib.* Nos. 2287, 2291, 2300). So completely was his former policy reversed that in 1263 he, along with John Baliol and Robert Bruce, led a band of Scottish troops to help Henry against the revolted barons. He was present at the capture of Northampton by Henry (Walt. Hem., i. 309, Eng. Hist. Soc.), and in 1264 was captured at Lewes and confined in gaol in London (Fordun, ed. Skene, i. 302; Shirley, *Royal Letters*, ii. 255). The triumph of Henry in 1265 brought him signal benefits, grants of lands for his laudable services, limited rights of hunting in the king's forests, and of free warren over his Lincolnshire estates, to which was added leave to crenellate his new manor house at Tyrsete in Northumberland (*Cal. Doc. Scot.* 2431, 2446, 2462). In 1268 some of his retainers were slain by the citizens of York, and his favour with Henry and Alexander procured a successful termination of the feud thence arising. The city agreed to pay him 300*l.* compensation, and to perpetually maintain two priests to pray for the souls of the slaughtered servants upon the bridge over the Ouse, where the affray had occurred

(LELAND, *Collectanea*, i. 27). The end of his life was not eventful. He died in 1274.

Comyn is described by Fordun as 'a man prone to robbery and rashness.' Wyntoun, who calls him 'Red Jhon Cwmyn,' speaks of him as 'a knycht of gret renown.' He was twice married, and left a large family, who after his death could not settle his heritage without disputes (*Cal. Doc. Scot.* ii. 51). William, his eldest son, who died early, engaged in an ineffectual struggle to obtain the earldom of Menteith. Of the two sons named John, the elder became lord of Badenoch and a claimant to the Scottish throne [see COMYN, JOHN, LORD OF BADENOCH]. Alexander and Robert, the two youngest, were both taken prisoners at Dunbar, while Robert was slain with the Red Comyn at Dumfries. His four daughters all married into noble houses.

[Calendar of Documents relating to Scotland, vols. i. and ii.; Rymer's Fœdera, Record edit., vol. i.; Acts of Parliament of Scotland, vol. i.; Fordun's Chronicon Gentis Scotorum, ed. Skene, i. 298, 302; Wyntoun's Chronykil of Scotland, ed. Laing, bk. viii. line 1161 sq., who gives a full account of his family; Douglas's Peerage of Scotland, i. 161–2; Mrs. Cumming Bruce's Bruce and Comyns, pp. 404–6. Dugdale, Baronage of England, i. 685, confuses John Comyn with his son the competitor.] T. F. T.

COMYN, JOHN, the elder (*d.* 1300?), of Badenoch, 'claimant to the Scottish throne,' was the second son of John Comyn, justiciar of Galloway [q. v.], and succeeded to the estates of his branch of his family on the death of his elder brother, William Comyn, without issue. His lordship of Badenoch came from his uncle, Walter Comyn, earl of Menteith [q.v.] In 1281 he was at the convention at Roxburgh, when the marriage was settled of Margaret, daughter of Alexander III, with King Eric of Norway (*Fœdera*, i. 595). In 1284 he agreed to uphold the title of Margaret, the Maid of Norway, the fruit of this union, to the throne on her grandfather Alexander's death. In 1286 he became one of the six guardians of the realm, being one of three in charge of the lands south of the Forth (FORDUN, i. 310). At Michaelmas 1289 he, with the bishops of St. Andrews and Glasgow, his fellow regents, and others, signed at Salisbury the treaty by which the young Queen of Scots was to be married to the eldest son of the English king (STEVENSON, *Documents*, i. 106). In March 1290 he was at the parliament of Brigham, which confirmed the treaty of Salisbury (*ib.* i. 129). In August of that year Comyn and others signed a new agreement with Edward at Northampton which confirmed the treaty of Brigham (*ib.* i. 173). But the death of Margaret at once gave Scottish affairs a new aspect. The regency was for a time continued, even although Comyn himself became one of the claimants for the vacant throne. His somewhat fantastic claim was derived from Donaldbane, whose granddaughter Hexilda was the mother of Comyn's great-grandfather (*Fœdera*, i. 776). Along with the other competitors he made his submission to Edward I as liege lord of Scotland (*ib.* i. 755), as the only condition of obtaining him as arbitrator (June 1291). But though his claim was presented, it was hardly seriously urged. During the protracted negotiations which preceded and accompanied the great trial he appears as one of the guardians of Scotland rather than as a pretender to its throne. He and the other guardians were compelled to surrender their trust into Edward's hands, but almost immediately a new commission of regency, in which one fresh name only was added, restored them to power. But while previously styling themselves the elected of the commons of Scotland, they were now 'custodes regni per Edwardum supremum dominum Scotiæ constituti' (STEVENSON, *Documents*, i. 243, 278). In the contest for the succession Comyn used all his great influence in favour of his brother-in-law, John Baliol; and the whole Comyn family took up the same side (WYNTOUN, bk. viii. line 1903). He was associated with Baliol in naming forty arbitrators to join with the forty appointed by Bruce and the twenty-four Englishmen of Edward's choice, in the further proceedings of the suit ('Magnus Rotulus Scotiæ,' in *Fœdera*, i. 762 sq.) But he soon practically withdrew his own claims, and was ultimately neither present himself at the court nor represented by attorney. The decision which in November 1292 made John Baliol king of Scots brought his seven years' regency to an end. On 28 Nov. Comyn and his son were exempted from the common summons to attend common pleas in the liberty of Tyndale. After King John's accession to the throne Comyn adhered to his royal brother-in-law, and incurred the hostility of Edward by continuing his friend even after the Scottish king had broken from his grasping overlord. His eldest son, John Comyn, the younger [q. v.], took a prominent part on the patriotic side, and was taken prisoner at Dunbar. The elder Comyn made his submission to Edward in July 1296 at Montrose (STEVENSON, *Documents*, ii. 63), and was sent with other Scottish magnates to live in England south of the Trent until quieter times came. In his exile at Geddington his family was allowed to join him, and permission to hunt in the

royal forests was given him (*ib.* ii. 113). But the revolt of Wallace soon induced Edward to release Comyn, in the hopes of his exerting his great influence against the turbulent patriot. In June 1297 Comyn received a safe-conduct to proceed to Scotland, and his estates were restored (*Rotuli Scotiæ*, i. 43 *b*). In July he acted as a surety for his son, then set at liberty. He was alive in November 1299, but died soon after at his castle of Lochindorb (WYNTOUN, bk. viii. line 1167). He married Marjory or Margery, daughter of John Baliol of Barnard Castle and Devorguilla, his wife, by whom he had one son, John Comyn [q. v.], his successor (FORDUN, i. 316), and one daughter, who married David, earl of Atholl. He was surnamed the Black Comyn (WYNTOUN, bk. viii. line 1221).

[Stevenson's Documents illustrative of History of Scotland, 1286–1306; Calendar of Documents relating to Scotland, vols. i. and ii.; Rymer's Fœdera, Record edit., vol. i. pt. ii.; Rotuli Scotiæ, vol. i.; Acts of Parliament of Scotland, vol. i.; Fordun's Scotichronicon, ed. Skene; Wyntoun's Chronykil, ed. Laing; Rishanger, Rolls Series; Douglas's Peerage of Scotland, i. 162; Mrs. Cumming Bruce's Bruces and Comyns, pp. 407–9.] T. F. T.

COMYN, JOHN, the younger (*d.* 1306), of Badenoch, surnamed THE RED, was the son and heir of John Comyn the elder [q. v.], one of the competitors for the crown of Scotland in 1291. His mother was Margery, the eldest sister of John Balliol (*Scala-Chron.* p. 121). In 1292 he and his father were exempted from attending at the common pleas in the liberty of Tynedale (*Illustr. Doc.* i. 373). In 1295 a John Comyn de Scotia 'valletus' was committed to the Fleet and the Tower of London for striking one of the exchequer doorkeepers (*ib.* p. 431). Next year (26 March 1296) his wife Joan, who is described as a kinswoman of Edward I, was given letters of safe-conduct to London (*ib.* p. 272). This journey is probably to be ascribed to the fact that John Comyn the younger, who had already been knighted by Balliol, was in open rebellion; for on this very day he was with the seven counts of Scotland in their invasion of England and futile attack on Carlisle (RISHANGER, Rolls Ser., p. 155). A fortnight later he was present at the burning of Hexham Priory, but was driven back with his associates by the rumour of Edward's approach (*ib.*; MATT. WEST.; WALT. HEM. ii. 99). Immediately after this he helped to seize the castle of Dunbar (22 April); but was delivered as a hostage to the king on the day previous to the surrender of this fortress on 28 April (MATT. WEST. p. 427). The captive Scotch nobles were distributed over various castles in England; but within two years he was liberated (30 July 1297), on condition that he would serve Edward beyond the sea, or, according to Robert of Brunne, on his promising to go on a pilgrimage (WALT. HEM. ii. 105; RYMER, ii. 776; *Wallace Papers*, p. 80). Meanwhile Wallace had risen in rebellion (May 1297), and Edward was attempting to stifle the insurrection by the help of the elder John Comyn, who had sworn fealty to him in July 1296 (WALT. HEM. ii. 131; TRIVET, p. 321; BAIN, p. 194). The rhyming English chroniclers charge the released lords with breaking their word and fleeing to the king of France, who, however, refused to assist them. But, according to Rishanger, they left Edward as he was returning from Flanders to England, towards the beginning of 1298. From France Comyn seems to have gone to Scotland, where, however, he was probably not present at the battle of Stirling (11 Sept.) (ROB. BRUNNE; PETER LANGTOFT ap. *Wallace Papers*). John Comyn the younger was probably at the battle of Falkirk (22 July). The current story, that Wallace owed his defeat to the treachery of the Comyns, cannot be traced back earlier than Fordun (about 1363), from whose pages Wyntoun and Bower seem to have borrowed their account (FORDUN, p. 331; WYNTOUN, ii. 346). Indeed, as Lord Hailes remarks, it is inconceivable, had the accusation been true, that the Scots would have appointed Comyn guardian of the realm almost immediately after this disaster.

From the battle of Falkirk till the beginning of 1304 John Comyn the younger seems to have been the most prominent man in Scotland (FORDUN, p. 331). He does not appear, however, to have been sole guardian during the whole of this time. In November and December 1299 he held the office in concert with Bishop Lamberton of St. Andrews and Robert Bruce the elder, and if we may trust Bain's conjectural dating, these three were irregularly appointed at Peebles in August 1299 (RYMER, ii. 859; BAIN, No. 1978). Fordun adds that Balliol gave him John de Soulis for a colleague at some period (p. 331). We may perhaps infer from his words that the relations of these two guardians were not very friendly, and that Comyn was not a party to the Scotch intrigues with Boniface VIII in 1300. In the same year Comyn seems to have had an interview with Edward near Kirkcudbright, shortly after the capture of Caerlaverock (i.e. after 12 July). When his petition that Balliol might be restored, and that the Scotch lords might retain their lands, was refused, he departed with threats of war, and made an ineffectual attempt to oppose Edward's passage of the 'Swyna' on 8 Aug. (RISHANGER, p. 440). On

6 April (1302 ?), according to Wyntoun, he deposed all the English sheriffs and bailiffs in the south of Scotland. This overt act of rebellion may have led Edward to appoint John de Segrave guardian of Scotland, and despatch him north (about November) with an army (TRIVET, p. 397). Early next year (26 Feb. 1303) Comyn defeated his English rival at the battle of Roslin. According to the earliest Scotch account he was victorious in three several engagements upon this day; but the contemporary English historian shows that the Scotch success was by no means so decided (FORDUN, p. 334, with which cf. TRIVET, p. 400).

About Whitsuntide (27 May) Edward mustered his army at Roxburgh (TRIVET, p. 401), and while he was at Dryburgh Comyn, who according to Bower was then chief guardian of the realm, cut off Sir Hugh Audley's party at Melrose (*Scala-Chron.* pp. 126–7), but was unable to offer any effectual resistance during the king's progress to Caithness (RISHANGER, p. 215). Lord Hailes says that he attempted to relieve Stirling Castle, and we learn from Trivet (pp. 401–2) that as Edward was returning from the north Comyn opposed his passage of the Forth, but without success. Shortly after his lands were ravaged by the king (TRIVET). It seems probable that in the winter of this year, while Edward was resting at Dunfermline, Comyn and Fraser were, as Robert of Brunne says, 'living at thieves, law, and robbing everywhere.' Comyn opened negotiations with the Earl of Ulster, the royal commander in West Scotland (9 Feb. 1304), and at last agreed to do fealty to Edward on the condition that he should preserve his lands. At the same time he was bound to go into exile for a year—a clause, however, which does not seem to have been enforced (see documents in PALGRAVE, pp. 279–288; RILEY, p. 371; *Rot. Parl.* i. p. 212). A year and a half later (15 Oct. 1305) it was definitely settled that Comyn should pay a fine to the value of the rental of his estates for three years (RYMER, ii. 968).

According to Lord Hailes Edward neglected Comyn's claims to preferment in the establishment of 1304 in favour of Robert Bruce; but Palgrave has preserved a document from which it appears that he was nominated a member of John de Bretagne's council when (26 Oct. 1305) that noble was appointed guardian of Scotland (PALGRAVE, pp. 292–3). It is extremely difficult to reconcile the conflicting statements of the events that led up to Comyn's murder in 1306; but it seems highly probable that Comyn, who, since his uncle Balliol's renunciation of the Scottish crown, might be considered the rightful heir, was regarded as a rival by Bruce. The current story of the ride from Stirling, in which Bruce proposes to Comyn that one of them should resign his claim to the throne in return for the other's estates, makes its first appearance in Fordun (about 1363) and Barbour (about 1375), who, however, both make Comyn take the initiative (FORDUN, p. 337; BARBOUR, i. 19–28). To this legend several details were added by Wyntoun (ii. 364–9) and Bower (ii. 225–8). Then follows the tale of the indenture, of Comyn's treachery, Edward's investigation, and Bruce's escape to Scotland. The really contemporary English writers tell a very different tale; and this has led many modern historians to doubt the whole story of Comyn's treachery. It must be remembered, nevertheless, that one almost contemporary chronicler shows clearly that, according to the current report of his day, Bruce did bring some such charge against Comyn: 'Cœpit improperare ei de seditione sua quod eum accusaverat apud regem Angliæ et suam conditionem deterioraverat in damnum ipsius' (WALT. HEM. pp. 245–6). It is perhaps safer on the whole to accept the strictly contemporary accounts of Matthew of Westminster (p. 453), Trivet (p. 407), and the Lanercost chronicler (p. 203), who all agree that Comyn was murdered because he would not assent to Bruce's plan of insurrection. According to Fordun it was Comyn that accused Bruce of treachery, and was answered with the words 'For thou liest' and a deadly stab (p. 340).

The details of the murder vary as much as the statement of the causes to which it is assigned. The interview probably took place, not in the Franciscan church at Dumfries, but in the cloisters (WALT. HEM.), when Bruce, getting angry, smote Comyn, who was unarmed, on the head, perhaps with the flat of his sword (MATT. WEST.), on which Comyn closed with his adversary, but was thrown (*ib.*) Bruce's followers then came in, and probably stabbed Comyn; yet not so severely, but that he could flee into the church for protection. Here he was pursued and left for dead on the altar pavement (*ib.*; WALT. HEM.); but the brethren carried him into the vestibule for attendance and confession (*ib.*) From this retreat he was haled a little later and slain on the altar steps by the followers of Bruce, though perhaps not by Bruce's orders (*ib.*) Comyn's uncle, Sir Robert Comyn, perished at the same time. There does not seem to be any reason to suppose that the murder was carefully planned beforehand, as the author of the 'Scala-Chronicon' relates (p. 130), though Walter of Hemingford's

narrative may perhaps lend some colour to his story.

The horror with which this murder was heard is reflected in the chronicles of the age. When the news reached Edward at Whitsuntide he swore a solemn oath of vengeance (TRIVET, p. 408). About Michaelmas he had an inquiry made as to all Bruce's associates in this crime, and had executed Sir Christopher Seton before the close of the year (MATT. WEST. p. 456). On Passion Sunday (12 March 1307) all the accomplices in the murder were solemnly excommunicated by the papal legate in Carlisle Cathedral (*Chron. of Lanercost*, p. 206), and Edward's last expedition was viewed by the king himself as partaking somewhat of the nature of a crusade (TRIVET, p. 408).

John Comyn the younger seems to have succeeded to his father's estates not earlier than 13 Nov. 1299, the date of what is probably the last document in which he is called 'John Comyn the son' (RYMER, ii. 859; cf. DOUGLAS, i. 162). He is, however, described in the same or a similar way by historians at a later period. He left a son, John Comyn, who was brought up with Edward's own children on his father's death, and accompanied Edward II to Bannockburn, where he was slain (*Chron. of Lanercost*, 226; BAIN, doc. 1790). He was connected by marriage with the lords of Lorne, and to his murder may be partly ascribed their enmity to Bruce (BARBOUR, iii. l. 48 and note). He married Johanna, daughter of William de Valence, earl of Pembroke, and cousin to Edward I (BAIN, *Documents*, docc. 724, 976). His third daughter married Alexander, lord of Lorne (see *Lord of the Isles*, canto i. and the note based on Winton).

[The contemporary authorities for 1296–1306 are almost solely English writers, whose statements may to some little extent be supplemented by a few Scotch documents. The Scotch accounts, even when earliest, are removed by more than fifty years from the events they relate. Rishanger, ed. Luard (Rolls Series); Walter of Hemingborough, ed. Hamilton for Engl. Hist. Soc.; Trivet, ed. Hog (Engl. Hist. Soc.); Matthew of Westminster (Frankfort, 1601); Chronicon of Lanercost, ed. Stevenson (Maitland Club). Scotch writers: Fordun, ed. Skene; Barbour's Bruce, ed. Skeat (Early Engl. Text Soc.); Winton's Chronicle, ed. Laing (Historians of Scotland); Bower's Scotichronicon, ed. Goodall (1759). Langtoft and Robert of Brunne are quoted from Stevenson's Wallace Papers (Maitland Club); Stevenson's Illustrated Documents; Palgrave's Affairs of Scotland; Bain's Calendar of Documents relating to Scotland, vol. ii.; Exchequer Rolls of Scotland, ed. Burnett and Stuart, vol. i.; Hailes's Annals, vol. i.; Burton's History of Scotland.] T. A. A.

COMYN, JOHN, third EARL OF BUCHAN of his family, and constable of Scotland (*d.* 1313?), was the son of Alexander Comyn, earl of Buchan [q. v.], and his wife, Elizabeth de Quincy. He succeeded to the title and estates at his father's death in 1289, being then over thirty years of age (*Cal. Doc. Scot.* vol. ii. No. 369). In 1290 he was at the parliament of Brigham among the magnates confirming the treaty of Salisbury. Next year he was one of those who authenticated the petitions of the competitors to the Scottish throne, and swore fealty to Edward. In 1292 his fidelity was rewarded by license to dig for lead in the Calf of Man, for his castle of Crigeltone in Galloway, and in 1293 he received from Edward the grant of a yearly fair and weekly market for his manor of Whitwick in Leicestershire. In that year he attended at the English court. In 1294 he was summoned to perform military services in Gascony both for his English and Scottish estates (*Parl. Writs*, i. 547), and in the same year his heavy relief of 120*l.*, which he had several times been allowed to postpone, was still not paid, and he was permitted to settle it by moieties. But in 1296 he adhered to King John's resistance to Edward, and led an expedition to the north of England, which besieged but failed to capture Carlisle (WYNTOUN, bk. viii. line 2000 sq.; FORDUN, i. 328; RISHANGER, p. 156; *Chron. Lanercost*, 161, 162, Bannatyne Club). In July the collapse of the Scottish opposition led to his submission to Edward at Montrose, with Balliol and the other chief nobles of Scotland. He was now compelled to take up his residence in England, south of the Trent. In June 1297 he swore to serve King Edward against France. In July, however, he was allowed to return to Scotland, where he employed his great influence against the formidable rising of Wallace. He personally assisted in putting down the insurrection in Moray. His hostility to Wallace was embittered by the latter having compelled the chapter of St. Andrews to quash the election of his brother, William Comyn, in favour of William Lamberton, who succeeded in permanently securing the bishopric (PALGRAVE, p. 338). But after Falkirk Buchan again became hostile to England. In 1299 he was present at the great meeting of insurgent magnates at Peebles. In alliance with his cousin, the Red Comyn of Badenoch [q. v.], he almost came to blows with Robert Bruce and his old foe Bishop Lamberton. But in the end it was agreed that Comyn of Badenoch, Bruce, and the bishop should be guardians of Scotland. The union of the Bruces and the Comyns was a strong one. In 1300

Buchan acted with his namesake as envoy to Edward, and was defeated by that monarch in battle (*An. Ed. I* in RISHANGER, pp. 440–1). In 1303 he was sent by the guardians on a mission to France, and strongly exhorted the government to resist England if it refused to join the French truce. Such disobedience to Edward resulted in his English lands being forfeited, and granted to Henry de Percy, in March 1304. But in May his lands were again restored to him (PALGRAVE, p. 288), he was made a member of the council of the new English governor, John of Brittany (*ib.* p. 293), and in September 1305 he was one of the Scottish commissioners who appeared at the union parliament at Westminster to accept Edward's great ordinance for the government of Scotland. Next year came the decisive breach between Bruce and the house of Comyn. The tragedy of Dumfries made Bruce king over Scotland, but Buchan took arms to avenge his cousin's murder and champion the cause of Edward. His wife, however, strongly adhered to the patriotic side. This lady was Isabella, daughter of Duncan, earl of Fife. The house of Macduff had long claimed the right of crowning the Scottish kings as an hereditary privilege; but her brother, the then Earl of Fife, was absent in England. Her husband was Bruce's bitter enemy; but she stole away from him secretly and hurried with the best horses in his stables to Scone, where she arrived just in time to place the crown on King Robert's head, as the nearest available representative of her house. Within a year she was captured by the English, and was kept closely confined in a latticed cage within a turret of Berwick Castle (*Fœdera*, i. 995, gives little countenance to the sensational details in RISHANGER, p. 229). Her husband was as signally unlucky in his diametrically opposite policy. Beaten in 1307 at Slaines, he suffered a crushing defeat at Inverury on the Don in the succeeding year. Bruce, who had risen from a sick bed to fight the battle, was restored to health through excitement and pleasure. The heirship or harrying of Buchan, the earl's own patrimony, followed his discomfiture (FORDUN, i. 348; BARBOUR, *Bruce*, bk. ix. lines 294–300). Comyn fled to England and lost his Scottish estates. He died about 1313, leaving no issue. His wife, who was released from her cage in 1310 for a milder custody in a religious house in Berwick, was soon after his death set free altogether (*Rotuli Scotiæ*, i. 85 *b*; *Fœdera*, ii. 209). The Scottish estates of the house were seized by King Robert. In the days of Robert II they were granted along with Badenoch to the new line of earls of Buchan of the house of Stewart. Even in England Buchan's estates were taken possession of by Edward II, as his heiresses, daughters of his brother, Alexander Comyn, who had died before him, were under age. But Alice the elder's husband, Henry de Beaumont, received a grant of Whitwick in 1327. Down to his death Beaumont styled himself earl of Buchan (*Cal. Inq. post Mortem*, ii. 93), but he never won back any of the Scottish estates that had once belonged to the fallen house of Comyn.

[The Calendar of Documents relating to Scotland, vol. ii. gives an abstract of the chief documentary authorities. Many of the more important papers are printed in extenso in Rymer's Fœdera, Record edition, vols. i. and ii.; Stevenson's Documents illustrative of the History of Scotland, 1286–1306, and Palgrave's Documents and Records relating to Scotland; Fordun's Scotichronicon, ed. Skene; Wyntoun's Chronykil, ed. Laing; Barbour's Bruce; Rishanger, Rolls Series; Rotuli Scotiæ, vol. i.; Acts of Parl. of Scotland vol. i.; Douglas's Peerage of Scotland, i. 263–4; the earlier edition of Douglas is very confused.]

T. F. T.

COMYN, SIR ROBERT BUCKLEY (1792–1853), judge, third son of the Rev. Thomas Comyn, vicar of Tottenham, Middlesex, by his wife Harriet Charlotte Stables, was born there on 26 Oct. 1792. He was educated at Merchant Taylors' School, and became a commoner of St. John's College, Oxford, in 1809, where he graduated B.A. on 10 April 1813, and M.A. on 27 May 1815. He decided to adopt the profession of his grandfather, Mr. Stephen Comyn, and was called to the bar at Lincoln's Inn on 24 Nov. 1814. After some years of practice he was in January 1825 appointed a puisne judge of the supreme court of Madras, and knighted on 9 Feb., and in December 1835 was appointed chief justice of Madras. In 1842 he resigned and returned to England, and on 8 June 1842 received the degree of D.C.L. at Oxford, and was in 1844 elected a bencher of the Middle Temple. He died at his house in New Street, Spring Gardens, on 23 May 1853. He was the author of three works: a 'Treatise on Usury' in 1817, a 'Treatise on the Law of Landlord and Tenant' in 1830, and a 'History of Western Europe from Charlemagne to Charles V,' composed in India and published in 1841.

[Gent. Mag. new ser. xl. 91; Ann. Reg. 1853; Robinson's Merchant Taylors' School Register, ii. 183.]

J. A. H.

COMYN, WALTER, EARL OF MENTEITH (*d.* 1258), was the second son by his first marriage of William Comyn, earl of Buchan, and half-brother of Alexander Comyn, earl of Buchan [q. v.] In 1221 he was at York

at the marriage of Alexander II with Joan of England (*Fœdera*, i. 161). In 1223 he attended that king's court, and in 1227 witnessed several of his charters (*Acts of Parl. of Scotland*, i. 405 *b*, 407 *b*). In 1229 he seems to have got possession of Badenoch, after his father's suppression of Gillescop's revolt, as in his composition with Bishop Andrew of Moray he is plainly recognised as in full possession of that district (*Registrum Episcopatus Moraviensis*, pp. 82–4, Bannatyne Club; the instrument, undated, is referred by Douglas to the period before 1230, *Peerage*, ii. 223). Comyn also gave the monks of Scone a yearly grant of a stone of wax or of four shillings (*Liber Ecclesie S. Trinitatis de Scon*, p. 63, Bannatyne Club). About 1230 he married one of the two daughters and coheiresses of Maurice, earl of Menteith, and succeeded in obtaining that earldom. In 1234 he made another composition with the Bishop of Moray, with reference to his lands of Kincardine (*Reg. Ep. Morav.* pp. 98–9). In 1235 he was appointed to keep order in Galloway, and, soon after, his erection of two formidable castles in that county and in Lothian were enough to provoke King Henry to a Scottish expedition, but peace was soon made at York, to which Comyn was himself a party. In 1244 he swore again to keep the terms of that treaty (*Fœdera*, i. 233; *Cal. Scottish Doc.* i. Nos. 1358, 1654, 2671; Matt. Paris, ed. Luard, iv. 380, 382; *Chron. de Mailros*, s. a. 1235). The accession of the infant Alexander III gave the powerful house of Comyn supreme authority in Scotland. It was Menteith's influence that in 1249 procured the young king's coronation, despite the sophistical objections of Alan Durward. In 1251 he succeeded in overcoming all his enemies, and from then to 1255 he was supreme ruler of Scotland. Fordun gives a black account of his government, but the chronicler of Melrose and Andrew Wyntoun apparently regard the Comyns as the leaders of the party opposed to the English influence. In 1255 Henry III appeared at Kelso and upset the rule of the Comyns; but in 1257 Menteith managed to steal the young king from his bed at Kinross and convey him with the great seal to Stirling. The support of the church further strengthened his hands (*Chron. de Mailros*, 183), though Alan Durward, with England at his back, was still formidable. At last, in 1258, a compromise was agreed upon, and the consent of King Henry obtained to a joint regency that included Menteith and Durward and the other leaders of both parties (*Fœdera*, i. 378). In the same year Menteith died, of a fall from his horse according to Matthew Paris, but the later Scottish accounts accuse his wife of poisoning him. But the anxiety of Walter Stewart, who had married her younger sister, to obtain the earldom, and the indignation of the Scottish nobles at her hasty marriage with a low-born English knight, are enough to account for this accusation. Comyn left no direct heirs (Wyntoun, cf. Introd. to *Cal. of Documents relating to Scotland*, ii. lvi, and No. 466). His lands of Badenoch passed to his grand-nephew, John Comyn; but the efforts of William Comyn, another grand-nephew, to obtain the earldom of Menteith failed, and the dignity passed to the Stewarts. Fordun describes Earl Walter as 'a man of foresight and shrewdness in council.' He was certainly the wealthiest and most powerful Scottish earl of his time.

Skene, i. 293 sq.; Wyntoun's Chronykil, ed. Laing, bk. vii. line 3255, bk. viii. lines 1116 sq.; Chronicon de Mailros, Bannatyne Club, pp. 146, 181, 183; Acts of Parliament of Scotland, vol. i.; Douglas's Peerage of Scotland, ii. 223–4, cf. i. 161.]

T. F. T.

COMYNS, Sir JOHN (*d.* 1740), judge, was son of William Comyns of Lincoln's Inn, barrister-at-law, by Elizabeth, daughter of Matthew Rudd, of Little Baddow, Essex. He was admitted a student at Lincoln's Inn in May 1683, was called to the bar in 1690, and took the degree of serjeant-at-law on 8 June 1705. He sat in the House of Commons as junior member for Maldon from 1701 to 1708, and from 1710 to 1715. In 1711–12 he acted as temporary chairman of the elections committee. He travelled the home circuit. The only case of public interest in which he was engaged was tried at the Rochester assizes in the summer of 1719. In August of the preceding year fifty children belonging to the charity school of St. Anne's, Aldersgate, had been brought by the master and some of the trustees to hear a sermon preached on behalf of the charity at Chislehurst. The clergyman, the schoolmaster, and the trustees were apprehended, and subsequently indicted as rioters and vagrants. The defendants, for whom Comyns appeared, pleading the authority of the incumbent and of the bishop of Rochester (Atterbury), Sir Lyttleton Powys, who tried the case, was 'a little suspicious that Mr. Hendley (the clergyman) had Cardinal Alberoni's leave as well as the bishop of Rochester's to carry on worse designs under the specious colour of

advancing charity;' and, the jury returning a verdict of guilty, the defendants were fined 6*s.* 8*d.* each. In 1722 Comyns was again returned to parliament for Maldon. In 1726 (7 Sept.) he was sworn a baron of the exchequer in the place of Sir Francis Page, and knighted. In January 1735–6 he was transferred to the common pleas, and two years later (July 1738) he was appointed lord chief baron of the exchequer by Lord Hardwicke. He died on 13 Nov. 1740, and was buried in the parish church of Writtle near Chelmsford. He married thrice, but left no issue. His estate of Highlands, near Chelmsford, passed to his nephew, John Comyns. Comyns is the author of two legal works of great authority, viz.: 1. 'Reports of Cases adjudged in the Courts of King's Bench, Common Pleas, and Exchequer.' 2. 'A Digest of the Laws of England.' Both works were written in 'law French.' The 'Reports' were translated by the judge's nephew, J. Comyns of the Inner Temple, and published in one volume in 1744, with the sanction and approbation of the judges. They were re-edited in 1792 by Samuel Rose. A translation of the 'Digest' was issued in five instalments between 1762–7 (inclusive), and a supplement in one volume was added by 'a gentleman of the Inner Temple' in 1776. The work was re-edited and issued in 5 vols. 8vo by Samuel Rose in 1800, and by Anthony Hammond, with considerable additions, in 8 vols. 8vo in 1822. A reprint of this, which is known as the fifth edition, edited by Thomas Day, and incorporating American decisions, was published in New York and Philadelphia in 1824–6, also in 8 vols. 8vo. The authority of Comyns has been treated with signal respect by some of the most eminent of his successors on the bench. Thus Lord Kenyon observed that 'his opinion alone was of great authority, since he was considered by his contemporaries as the most able lawyer in Westminster Hall;' Lord Ellenborough described the 'Digest' as a 'book of very excellent authority;' and Lord-chief-justice Best thought himself 'warranted in saying that we cannot have a better authority than that eminent writer.'

CONÆUS. [See CONN, GEORGE.]

CONANT, JOHN (1608–1694), rector of Exeter College, Oxford, son of Robert and Elizabeth Conant, was born at Yettington in the parish of Bicton, Devonshire, on 18 Oct. 1608. As a child he showed signs of genius, and accordingly his uncle, John Conant, rector of Limington, Somerset, put him to the free school at Ilchester, where he remained until he was eighteen, and then, on 18 Feb. 1626–7, he matriculated as a commoner of Exeter, having Lawrence Bodley, nephew of Sir Thomas Bodley, as his tutor. He was distinguished for his ability, and Dr. Prideaux, the rector of the college, used to say of him, 'Conanti nihil difficile.' He proceeded B.A. 26 May 1631, and incepted M.A. 12 Jan. 1634. Thoroughly master of Greek he disputed several times publicly in the schools in that language, and he not only understood Hebrew, but had a considerable knowledge of Arabic, Syriac, and other oriental languages. On 30 June 1632 he was chosen probationer, and was admitted actual fellow on 3 July 1633. He entered deacon's orders, and remained at the college taking pupils until 1642, when the outbreak of the civil war scattered his pupils. He left Oxford, and, as he hoped before long to be able to return, did not take his books with him; they were of considerable value, and he never regained them. He went down to Limington, intending to remain with his uncle, who had evidently acted as a kind of guardian to him. The rector, however, appears to have already left the parish; he was a prominent puritan, and had had some difficulties with Piers, his bishop. Conant stayed for a while at Limington and preached there every week. When in April the commons voted that an assembly of godly divines should be called to reform the church, the two ministers selected for Somerset were Samuel Crooke [q. v.] of Wrington, and Conant of Limington (*A Catalogue of Names approved*), and it has been asserted that this was the young fellow of Exeter (PRINCE, *Worthies of Devon*, 224, who confuses the Somerset village with the town of the same name in Hampshire; CALAMY, i. 229; CHALMERS, *Biog. Dict.* x. 131). It is certain, however, that the selected divine was Conant's uncle, the rector, for Conant himself never took the covenant (see Bliss's note to WOOD'S *Athenæ*, iv. 398). After he had for a time taken his uncle's place he was forced to flee, for on one occasion he had been seized by some soldiers, and taken some way with them in the hope of extorting ransom (CONANT, *Life*, 6). He accordingly joined his uncle, who was then ministering at St. Botolph's,

Aldersgate, and acted as his assistant. Before long he was engaged as domestic chaplain to Lord Chandos, and took up his residence at Harefield, near Uxbridge. While he was there Lady Chandos paid him 80*l.* a year, an unusually large salary, the greater part of which he spent on enabling the poor of the neighbourhood to send their children to school, and to buy bibles. Besides performing his duties at Harefield he voluntarily undertook a week-day lecture at Uxbridge, which was thronged with hearers. This led to an offer of a living made him by a Mr. Duke, a gentleman of Devonshire. Conant, however, declined it, because he could not conscientiously agree to the doctrines of the dominant faction. For the same reason, when, in 1647, the covenant was pressed on all members of colleges, he resigned his fellowship at Exeter, by a letter dated from Harefield 27 Sept. It seems, therefore, that Wood must be in error when he says (*Hist. and Antiq.*) that he was one of the fellows who accused the sub-rector Tozer to the parliamentary visitors, for the inquiry was not held until 21 March 1647–8, six months after he had resigned his fellowship, and as he had not been in Oxford since he left in 1642, he could not have been acquainted with the facts of the case (*Life*, 8; *Biog. Brit.* iii. 1435).

On the death of Hakewill, the rector of Exeter, in 1649, the fellows of the college on 7 June elected Conant as his successor; and, as the college had suffered greatly from the absence of the last rector, they pressed him to accept the office, knowing that if he did so he would reside among them. Conant agreed, and was admitted on the 29th of the same month (Boase, *Register of Exeter*). He restored the discipline of the college. He enforced regular attendance at chapel, and preached himself every Sunday morning. Once a week he held a catechetical lecture for undergraduates, in which he went over Piscator's 'Aphorisms' and Wollebius's 'Compendium;' he also taught a divinity class in his own lodgings, going through the prophetical books of the bible with more advanced students. He used to visit the chambers and studies of the young scholars, and if he found any reading a modern book would 'send him to Tully.' Exeter flourished greatly under his rule; there were more students than could be lodged within the college walls, and many came from beyond sea to enter the college (*ib.*; *Life*). Conant did not sign the engagement without some scruples, and when he did so he appended certain provisos which eased his conscience (Prince). With the rectorship he held the living of Kidlington, near Oxford, where he preached twice on Sundays; he also gave lectures at the churches of All Saints, St. Michael, and St. Mary Magdalen in Oxford. In August 1651 he married Elizabeth, youngest daughter of Dr. Edward Reynolds, then rector of Braunston, Northamptonshire (afterwards bishop of Norwich). He took what answered to priest's orders at Salisbury on 28 Oct. 1652, and on 29 May 1654 he received the D.D. degree, and 'answered the doctors at the act with great applause.' In December of the same year, on the death of Dr. Hoyle, he was made professor of divinity, and read two lectures each week on the Annotations of Grotius. When the parliament expelled Dr. Sanderson from the divinity professorship, the royal endowment was taken away from the chair. In order to make up for this loss the Protector in 1657 gave Conant the impropriate rectory of Abergele, Denbighshire. On 9 Oct. of this year Conant was admitted vice-chancellor, and held the office until August 1660. He was exceedingly popular in the university. He reversed the policy of his predecessor Owen, who had tried to put down the wearing of caps and hoods, as badges of popery. He opposed Cromwell's plan of granting a charter constituting Durham College a university, and he quashed a mischievous scheme for petitioning Richard Cromwell and the parliament to appoint local visitors for the different colleges in place of the episcopal and other non-resident ex-officio visitors. In the matter of discipline he appears to have exercised proctorial authority in his own person, taking 'his rounds at late hours to ferret the young students from public and other suspected houses' (*Life*).

Conant advocated the restoration, and on 15 June 1660 attended the court with the proctors and others to congratulate the king, and to offer the book of verses entitled 'Britannia Rediviva,' composed for the occasion by members of the university. As Abergele rectory belonged to the bishopric of St. Asaph, he resigned it voluntarily, though he had received a grant of it from the crown, and he also lost his professorship, as the chair was again taken by its rightful occupant, Sanderson. In March 1661 the king invited him to take part in the Savoy Conference. As no change was made in the liturgy that was satisfactory to the men with whom he was used to act, he decided to refuse conformity, and accordingly on 2 Sept. 1662 he was deprived of the rectorship of the college (Boase). After staying some while in Oxford he settled at Northampton. He refused to form a separatist congregation, and applied himself to the study of the doctrines of the church of England. Finally he decided to conform, and

on 20 Sept. 1670 he received priest's orders from his father-in-law. On 18 Dec. following he was elected minister of St. Mary, Aldermanbury, by the vestry, but preferring to remain at Northampton he exchanged with the vicar of All Saints, and was instituted to that church on 15 Feb. 1670–1; and, although the living was worth only 100*l.* a year, he refused to leave it for other preferments which were offered him. These offers were especially made when his church, together with a large part of the town, was destroyed by fire on 20 Sept. 1675, a calamity of which he has left an account in a letter printed by his son. His charities were large, and he was much beloved, being very successful in bringing over nonconformists to the church. On 8 June 1676 he was made archdeacon of Norwich in succession to his wife's uncle, and on 3 Dec. 1681, on the intercession of the earl of Radnor, he received a prebend in Worcester Cathedral. For some years his sight gradually grew weaker, and in 1686 he became totally blind. He died on 12 March 1693–4, at the age of eighty-five, and was buried in his church at Northampton, where there is an epitaph recording the principal events of his life (*Gent. Mag.* lxxv. 210).

Six volumes of Conant's sermons have been published: the first in 1693, while he was still alive, by Dr. John Williams; the second, third, fourth, and fifth, in 1697, 1698, 1703, and 1708, by the same when bishop of Chichester; and the sixth, at the request of Conant's son, Dr. John Conant, in 1722, by Digby Coates, principal of Magdalen Hall, Oxford. Besides these his only other extant piece is his copy of verses in Latin and English, printed in the 'Biographia Britannica.' One or two letters of his have been printed (Hutchins, *Dorsetshire*, iii. 25, 26). By his wife, Elizabeth, he had six sons and six daughters. His family is now represented by the Conants of Lyndon Hall, Rutlandshire, who are descended from a younger son.

John Conant (*d.* 1723), eldest son of John Conant, rector of Exeter, wrote a life of his father, which was published by the Rev. W. Staunton in 1823. He was elected fellow of Merton College, Oxford, in 1676, took the degree of LL.D., and became a member of Gray's Inn. He settled in London and practised successfully at Doctors' Commons. In 1693 he was one of three who were presented to the visitor of Merton for the wardenship, but was not selected. About this time he married Mary, daughter of John West, of the manor of Hampton Poyle in the county of Oxford, and widow of Henry Street of Kidlington. By the death of his father-in-law in 1696 he succeeded to the Hampton Poyle property in right of his wife, and was engaged in some lawsuits connected with the succession. When compelled by failing health to retire from practice he resided at Kidlington, and appears to have died there on 23 Aug. 1723 (Nichols, *Herald and Genealogist*, iii. 296–9; Brodrick, *History of Merton College*, 122, 295; Wood's *Life*, cxi; *Fasti Oxon.* (Bliss), ii. 387).

Life of John Conant; Boase's Register of Exeter College, xxx, 64, 69, 70; Wood's Fasti Oxon. ii. 183, Athenæ Oxon. iv. 397 (Bliss), Hist. and Antiq. ii. 294, pt. ii. 645, 846, Colleges and Halls, 108 (Gutch); Kennet's Historical Register, 180, 843; Calamy's Nonconf. Memorial, i. 229–34, has a hopeless confusion of persons; A Catalogue of Names approved (Somerset); Prince's Worthies of Devon (1701), 223; Bibl. Brit. (1750), iii. 1433–9; Chalmers's Biog. Dict. x. 130–4; Gent. Mag. lxxv. 210.] W. H.

CONCANEN, MATTHEW (1701–1749), miscellaneous writer, was born in Ireland in 1701, and deserted the law for literature. In 1721 he brought out a comedy called 'Wexford Wells.' In the same year he published a mock-heroic poem called 'A Match at Football,' and in 1722 'Poems on Several Occasions.' He came to London with J. Sterling, author of two tragedies (1722 and 1736), and afterwards a clergyman in Maryland. They took to hackwork in literature, and decided (Cibber, *Lives*) by the toss of a halfpenny that Concanen should defend the ministry, while Sterling was to be in opposition. Concanen published a collection of 'Miscellaneous Poems' 'by several hands' in 1724. He took part in the 'London Journal,' and in a paper called the 'Speculatist,' published in 1730. In 1726 Warburton, then a young clergyman in search of preferment, visited London and made the acquaintance of Concanen, Theobald, the Shakespearean critic, and other authors by profession. Warburton says that he gave Concanen money 'for many a dinner,' and presented him with the copy of his youthful essay on 'Prodigies and Miracles' (1727), which Concanen sold to the booksellers for 'more money than you (Hurd) would think.' Concanen had introduced some Shakespearean criticisms of Theobald's, published in the 'London Journal,' by some suitable remarks. He also wrote to Warburton for some Shakespearean annotations promised to Theobald, and Warburton replied in a letter (dated 2 Jan. 1727), in which he was unlucky enough to remark that Pope 'borrowed for want of genius.' When Warburton had become famous as Pope's literary confidant and advocate, this letter was published by Akenside in a note to his 'Ode to the late Thomas Edwards' in

1766, having been discovered in 1750 by Gawin Knight, the first librarian to the British Museum (it was afterwards republished by Malone in his supplement to 'Shakespeare,' i. 222, and will be found in Nichols's 'Illustrations,' ii. 195). The first edition of the 'Dunciad,' of which Theobald was the hero, was published 28 May 1728. Concanen took up the cudgels against Pope in the preface to a 'Collection of all Verses, Essays . . . occasioned by Mr. Pope and Swift's Miscellanies,' and a pamphlet called 'A Supplement to the Profund,' in which Pope's method of quoting faulty passages from his enemies is turned with some point against himself. In the authorised edition of the 'Dunciad' of 1729 a passage previously applied to Roome and Whatley was altered to an attack upon Concanen, who takes part in the diving match as 'A cold, long-winded native of the deep' (*Dunciad*, ii. 299–304).

In a note of 1736 Pope adds that Concanen afterwards became 'a hired scribbler in the "Daily Courant,"' where he 'poured forth much Billingsgate against Lord Bolingbroke and others.' Concanen succeeded in commending himself to the government, especially to Sir W. Yonge, through whose interest and that of the Duke of Newcastle he was appointed attorney-general in Jamaica 30 Jan. 1732. He filled the office creditably. He married a planter's daughter and returned to England with a fortune in 1743 (successor appointed 24 Dec. 1743). He died of consumption, 22 Jan. 1749. Besides the above works Concanen published in 1731 a miscellany called 'The Flowerpiece.' He was concerned with Roome and Sir William Yonge (MS. note by Isaac Reed in copy of Cibber's 'Lives' at Brit. Mus.) in altering Broome's 'Jovial Crew' into a ballad opera, and has some songs in the 'Musical Miscellany,' 1729.

CONCHES, WILLIAM DE (*d.* 1154), natural philosopher. [See WILLIAM.]

CONDÉ, JOHN (*fl.* 1785–1800), engraver, is sometimes called an Englishman, but on an engraving of the Chevalier d'Éon, published in 1791, he styles himself a French artist. Condé is well known from the many engravings he executed from the elegant portraits drawn by Richard Cosway [q. v.] These he engraved in pale delicate tints, using stipple, sanguine, or aquatint, and sometimes enhanced their elegance by enclosing them in framelike borders, called 'glomisages,' from the French engraver Glomy, who first designed them. Among the portraits thus engraved were Mrs. Fitzherbert, Mrs. Tickell, Mrs. Bouverie, Madame du Barry, Mr. Horace Beckford, and others. He engraved portraits of celebrities for the 'European' and other magazines, and also portraits of actors after De Wilde, or from the life, for the 'Thespian Magazine.' Among other works of his may be noticed a portrait of Lord-Chancellor Thurlow, after S. Collings, and a print called 'The Hobby Horse,' from his own design. He was doubtless father of Peter Condé, who engraved portraits of J. L. Dussek and Caleb Whitefoord, after Cosway, and also painted portraits, exhibiting at the Royal Academy from 1806 to 1824.

[Leblanc's Manuel de l'Amateur d'Estampes; Nagler's Künstler-Lexikon; Portalis et Beraldi's Les Graveurs du Dix-huitième Siècle; Bromley's Catalogue of British Portraits; Graves's Dict. of Artists, 1760–1880.] L. C.

CONDELL, HENRY (*d.* 1627), actor and one of the two editors of the first folio edition of Shakespeare's plays, was one of the ten 'principal comedians' performing in Ben Jonson's 'Every Man in his Humour,' 1598, and 'Every Man out of his Humour,' 1599. The names only of the actors in these plays, and not the parts played by each, are supplied by the old lists; but Mr. J. P. Collier has suggested that Condell created the part of Captain Bobadil. In the 'plat,' or programme (dating before 1589), of Tarleton's 'Second Part of the Seven Deadly Sins' [see TARLETON, RICHARD] the rôle of Ferrex is assigned to 'Harry,' and Steevens identified the actor with Condell. Although this identification is highly doubtful, the fact of Condell's appearance in Jonson's comedies is proof that he had many years' experience as an actor at the close of the sixteenth century. A statement made in 1729 that Condell was originally a printer is entirely unconfirmed by contemporary evidence. With Shakespeare and Burbage, Condell was a member of the company of players known as the lord chamberlain's men at the end of Elizabeth's reign; and when in May 1603 this company was formally enrolled as 'the king's servants,' Condell's name stood sixth on the list of members. In 1599 Richard Burbage [q. v.] and his brother Cuthbert built the Globe Theatre. Condell became 'a partner in the profits' of that theatre, and his prominence in the lord chamberlain's company also secured for him an important share in the profits of the Blackfriars Theatre. In 1604 Condell acted in Marston's 'Malcontent;' in Webster's 'Induction' to that play he is brought on the

stage, together with Burbage, Lowin, and other actors, under his own name, and several speeches are assigned him. He acted in Ben Jonson's 'Sejanus,' 1603, in his 'Volpone,' 1605, in his 'Alchemist,' 1610, and in his 'Catiline,' 1611, and his name appears in the lists of actors who took leading parts in Shakespeare's and Beaumont and Fletcher's chief plays. In 1613 he was acting at the Globe in 'All is True' (probably identical with 'Henry VIII') when the playhouse caught fire. In the ballad issued to commemorate the event, the two lines—

The riprobates, thoughe drunk on Munday,
Pray'd for the foole and Henry Condye—

refer to Condell. The rôle of the Cardinal in Webster's 'Duchess of Malfi' was frequently filled by him before 1623. On 27 March 1618-19 a new patent to his company places his name third on the list, John Heming [q.v.] and Richard Burbage (then just dead) alone preceding it. When Charles I renewed the company's privileges on his accession to the throne in 1625, Condell is the second actor named. Condell is traditionally associated with leading comic parts, but it is probable that he occasionally appeared in tragedy.

Condell's theatrical engagements brought him into close relations with Shakespeare. In the great dramatist's will, dated 5 March 1615-16, 26*s.* 8*d.* is bequeathed to 'my fellowes, John Hemynges, Richard Burbage, and Henry Cundell . . . to buy them ringes.' In 1623 Heming and Condell combined to do their friend's memory the justice of publishing the first collected edition of his plays. They both sign the dedication to the brothers, William, earl of Pembroke, and Philip, earl of Montgomery. 'We have but collected them [i.e. the plays],' they write, 'and done an office to the dead to procure his orphans guardians, without ambition otherwise of selfe-profit, only to keepe the memory of so worthy a friend and fellow alive, as was our Shakespeare, by humble offer of his playes to your most noble patronage.' An address 'to the great variety of readers,' signed by both Heming and Condell, follows; here they express regret that Shakespeare had not lived to supervise the printing of his work, and remark that the manuscripts, which are in their keeping, have 'scarce . . . a blot' or erasure upon them. Their full recognition of Shakespeare's pre-eminence is the most remarkable characteristic of their compositions.

Condell was prosperous in his profession, and while actively engaged in it lived in a house of his own in the parish of St. Mary Aldermanbury. He was 'sidesman' there in 1606. About 1623 he retired from the stage. In 1625, while the plague was raging in London, Thomas Dekker issued a biting prose satire on those who had fled from the infection, entitled 'A Rod for Run-aways.' An anonymous reply was issued immediately; entitled 'The Run-aways' Answer,' with a dedication 'to our much respected and very worthy friend, Mr. H. Condell, at his country house at Fulham.' The writers, whose initials only are appended to the dedication, state that they are actors who have been assailed by Dekker with especial fury, that they left London on a professional tour, and not from fear of the plague, and that Condell, whom they beg to arbitrate between themselves and Dekker, entertained them royally before their departure. Condell remained at his country house at Fulham till his death, which took place in December 1627. He was buried in the church of St. Mary Aldermanbury on 29 Dec. According to his will, where he styles himself 'gentleman' and spells his name Cundell, he owned, besides his shares in the Blackfriars and Globe theatres and his dwelling-houses at Fulham and Aldermanbury, land and tenements in Helmet Court, Strand, in the parish of St. Bride, Fleet Street, and in the parish of St. Mary Aldermanbury; John Heming and Cuthbert Burbage were two of the overseers of his will. His widow was executrix and chief legatee.

Condell married before 1599. Nothing is known of his wife except that her name was Elizabeth, and that she was buried at St. Mary Aldermanbury on 3 Oct. 1635. Entries in the registers of St. Mary's Church show that Condell had nine children baptised there between 27 Feb. 1598[9] and 22 Aug. 1614, but only three, Henry, William, and Elizabeth, survived their father. The daughter married Herbert Finch, and Henry died in March 1629-30.

Boswell, 1821, iii.; Fleay's Actor Lists in Transactions of Royal Historical Society, ix.; Halliwell-Phillipps's Outlines of Life of Shakespeare; John Marston's Works, ed. Bullen, i.] S. L.

CONDELL, HENRY (1757-1824), violinist and composer, was born in 1757. Nothing is known of his parentage or early life, but about the beginning of the century he was a prominent member of the orchestras of the King's Theatre, Drury Lane, and Covent Garden. In 1803 he wrote an overture to Dimond's historical play 'The Hero of the North' (produced at Drury Lane 19 Feb. 1803), and in 1804 for Fawcett's ballet 'The Enchanted Island' (played at the Haymarket). In 1808 he set the musical farce

'Who wins, or the Widow's Choice' (Covent Garden, 25 Feb.), and in 1810 wrote music for F. Reynolds's 'Bridal Ring' (Covent Garden, 16 Oct.) In the same year 'Transformation,' ascribed to Allingham, with music by Condell, was produced by the Drury Lane company at the Lyceum (30 Nov.) In 1811 he gained a prize at the Catch Club for his glee 'Loud blowe the wyndes.' Condell also wrote the overture to 'The House to be sold,' probably the opera by Michael Kelly [q. v.], which was played at Drury Lane on 17 Nov. 1802; the libretto was a clumsy translation by James Cobb [q. v.] from the French of Duval's 'Maison à Vendre' which had been produced in Paris two years before. Condell similarly supplied the overture to 'Love laughs at Locksmiths,' an adaptation by George Colman the younger of a French operatic piece 'Une Folie' by Bouilly; Michael Kelly again wrote the music for the English version, which was produced by Colman at the Haymarket on 25 July 1803. Condell contributed some incidental music in 'Aladdin,' performed at Covent Garden, a set of six songs dedicated to Lady Lake, and a few harpsichord duets. He died at Cave House, Battersea, after a severe and lingering illness, on 24 June 1824.

[Grove's Dict. of Music, i. 389 *b*; Baker's Biographia Dramatica, vol. iii.; Gent. Mag. for 1814, 199, and 1824, 645; European Mag., June 1824.]
W. B. S.

CONDER, JAMES (1763–1823), numismatist, was the youngest son of John Conder, D.D. [q. v.], pastor of the congregational meeting of protestant dissenters on the Pavement, Moorfields, London, and divinity professor in the dissenting academy at Homerton. He was born at Mile End and educated in the dissenters' school at Ware. For many years he was a haberdasher at Ipswich, where he died on 22 March 1823.

Conder possessed an extensive numismatic collection, and his series of provincial coins was probably unique. He long meditated the publication of a 'History of the Dissenting Establishments in Suffolk,' but this design was not executed. His name is honourably recorded for assistance received in the prefaces to Wilson's 'Dissenting Churches' and Brook's 'Lives of the Puritans.'

Conder's chief claim to notice consists in his publication of a work of great utility to the provincial jeton collector, entitled 'An Arrangement of Provincial Coins, Tokens, and Medalets, issued in Great Britain, Ireland, and the Colonies, within the last twenty years, from the farthing to the penny size,' 2 vols. Ipswich, 1798, 4to, also printed on one side of the paper only, 2 vols. 1798–9, and on both sides in 1 vol. 1799, 8vo.

In the British Museum there is a copy of the first edition of Conder's volumes, interleaved, with engraved specimens and copious manuscript notes by W. Young.

[Suffolk Biography, by J. F.; Cat. of Printed Books in Brit. Mus.; Gent. Mag. xciii. (i.), 648–50; Davy's Athenæ Suffolcienses, iii. 129; Clarke's Ipswich, p. 458; Biog. Dict. of Living Authors (1816); Nichols's Illustr. of Lit. vi. 331–4.]
T. C.

CONDER, JOHN, D.D. (1714–1781), congregationalist minister and tutor, was born 3 June 1714, at Wimpole, Cambridgeshire, and came of an old nonconformist stock in that county. On leaving school he was taken up by the 'King's Head Society,' instituted in aid of the education of dissenting ministers, and studied first in the London academy of which he afterwards became the head, and which ultimately was settled at Homerton; afterwards in another London academy, for the benefit of the instructions of John Eames, F.R.S., described by Isaac Watts as 'the most learned man I ever knew.'

Conder inaugurated his ministerial career at Cambridge, being invited to the congregational church, Hog Hill, on 23 Nov. 1738, and ordained there on 27 Sept. 1739. He restored harmony in a congregation which had been unhappy in its pastors, and remained at Cambridge till 13 Oct. 1754, when he removed to London to fill the place of Zephaniah Marryat, D.D. (*d.* September 1754), as theological tutor in the academy which had previously been conducted at Plasterers' Hall. It was moved to Mile End in 1755, and in 1772 to Homerton. Conder continued at the head of the academy until his death. He was elected one of the preachers at the Merchants' lecture in Pinners' Hall on 3 Oct. 1759. On 21 May 1760 he became assistant to the venerable Thomas Hall, minister at Little Moorfields, afterwards the Pavement, whose funeral sermon he preached in 1762. Succeeding Hall as pastor, Conder enjoyed marked repute in the pulpit as well as in the theological chair. William Bennet was his assistant at the Pavement from 1778. Conder was disabled by a paralytic stroke, which he survived but a few weeks, dying at Homerton on 30 May 1781. He was buried at Bunhill Fields; his epitaph, composed by himself, concludes thus: 'Peccavi. Resipui. Confidi. Amavi. Requiesco. Resurgam. Et ex gratia Christi, ut ut indignus, regnabo.'

Conder married in 1744 a daughter of John Flindel of Ipswich, by whom he had James [q. v.] and six elder sons. He published

'A Serious Address . . . on the important subject of a Gospel Ministry,' 1753, 8vo (anon.); and eight single sermons, including 'Exhortation' at ordination of R. Winter (1759, 8vo), funeral sermons for John Guyse, D.D. (1761, 8vo), and T. Hall (1762, 8vo), and sermon at ordination of T. Saunders at Cambridge (1768, 8vo). He prefixed a preface to 'Living Christianity delineated in the Diaries of . . . Hugh Bryan and Mary Hutson,' &c., 1760, 8vo; and a recommendation to W. Cooper's 'Predestination explained,' 1765, 12mo. He edited S. Harrison's 'Songs in the Night,' 1781, 8vo.

Some catalogue-makers have confounded him with John Conder of Hare Court, who at the Salters' Hall conference in 1719 'sign'd on both sides.'

[Funeral Sermon by James Webb, 1781; Middleton's Biographia Evangelica, 1786, iv. 488 (gives list of Conder's works, and biographical particulars from a manuscript by his son, T. Conder); Monthly Repos. 1810, p. 626 (account of Cambridgeshire dissent by Robert Robinson and Josiah Thompson); Bogue and Bennett's Hist. of Dissenters, 2nd ed. 1833, ii. 222, 517.] A. G.

CONDER, JOSIAH (1789–1855), bookseller and author, was born in Falcon Street, Aldersgate, London, on 17 Sept. 1789. His father, Thomas Conder, a map engraver and bookseller, died in June 1831, aged 84. Josiah in 1795 was attacked by small-pox, and the severity of the disease entirely destroyed his right eye. He was educated under the Rev. Mr. Palmer at Hackney, and at the early age of ten contributed essays to the 'Monthly Preceptor,' and was rewarded with two silver medals for his papers. At thirteen he left school, and entered the bookselling business of his father, at 30 Bucklersbury, city of London, where in his leisure he carried out a system of self-education. To the eleventh number of the 'Athenæum' (1806), edited by Dr. Aikin, he contributed some lines entitled 'The Withered Oak,' and about this time he formed the acquaintance of James Montgomery and of Miss Ann Taylor. His poetical contributions to various periodicals being well received, he in 1810 published an anonymous volume, entitled 'The Associate Minstrels,' to which Ann and Jane Taylor and others contributed. It reached a second edition within three years. In the autumn of 1811 his father's health obliged him to retire from the business, to which the son then succeeded. On 8 Feb. 1815 he married Joan Elizabeth, second daughter of Roger Thomas of Southgate, Middlesex, and granddaughter on her mother's side of Louis François Roubillac, the sculptor. He brought his bride home to his new shop at 18 St. Paul's Churchyard, and here he resided until 1819, when he disposed of the business to B. J. Holdsworth. He had become proprietor of the 'Eclectic Review' in 1814, and he retained the management of this periodical until 1837, when he transferred it to Dr. Thomas Price, having during his editorship rendered much service to the dissenting interest. He was a great letter writer, and kept up a correspondence with James Montgomery, Robert Southey, Rev. Robert Hall, Rev. John Foster, and other literary men of the day. In 1818 he brought out a work 'On Protestant Nonconformity,' in two volumes, of which a second edition appeared in 1822. In 1824 he entered into an engagement with James Duncan of Paternoster Row to edit the afterwards well-known series of the 'Modern Traveller,' undertaking in the first instance to furnish the volume on Palestine only. Ultimately he compiled the whole set, having assistance in but one or two volumes. This work is comprised in thirty volumes (1825–9), and, although written by a person who never left his native land, constitutes one of the most accurate, faithful, and laborious compilations ever published respecting nearly all parts of the world. On the establishment of the 'Patriot' newspaper in 1832, to represent the principles of evangelical nonconformity, Conder was induced to become the editor, an office which he held with honour for twenty-three years. The labours of his pen were uninterrupted until 9 Nov. 1855, when he had an attack of jaundice, from which he never recovered. He died at his residence, 28 Belsize Road, St. John's Wood, London, on 27 Dec. 1855, and was buried in Abney Park cemetery on 3 Jan. 1856. He was one of the most industrious of men. Throughout his life he had daily to work long hours for the support of himself and his family, yet he found time to act as a preacher, and to keep up an extensive correspondence on religious and literary topics. Besides the works already mentioned, he was the author, editor, or compiler of the following: 1. 'Gloria in Excelsis Deo,' a poem, 1812. 2. 'The Village Lecturer,' 1821. 3. 'Thomas Johnson's Reasons for Dissent,' 1821. 4. 'Memoirs of Pious Women, by Gibbons and Burder,' 1823. 5. 'The Star in the East,' with other poems, 1824. 6. 'Remarks on the Controversy respecting the Apocrypha,' 1825. 7. 'The Law of the Sabbath,' 1830, new edit. 1852. 8. 'Italy,' 1831, 3 vols. 9. 'Wages or the Whip,' an essay on free and slave labour, 1833. 10. 'A Dictionary of Geography,' 1834. 11. 'The Epistle to the Hebrews, a new translation, with notes,' 1834. 12. 'The Evangelical Almanac,' 1834.

13. 'The Congregational Hymn-book,' 1834, another edit. 1836. 14. 'Narrative of a Residence in South Africa, by T. Pringle, with a sketch of the author,' 1835. 15. 'Illustrations of the Pilgrim's Progress, with a Sketch of the Author,' 1836. 16. 'The Choir and the Oratory, or Praise and Prayer,' 1837. 17. 'The Pilgrim's Progress, with a Life of the Author,' 1838. 18. 'An Analytical Sketch of all Religions,' 1838. 19. 'The Literary History of the New Testament,' 1845. 20. 'The Harmony of History with Prophecy, an Explanation of the Apocalypse,' 1849. 21. 'The Psalms of David imitated by I. Watts, revised by J. Conder,' 1851. 22. 'The Poet of the Sanctuary, I. Watts,' 1851. 23. 'Hymns of Prayer and Praise, by J. Conder, edited by Eustace R. Conder,' 1856.

[E. R. Conder's Josiah Conder, a memoir, 1857; The Divine Net, a Discourse on the Death of J. Conder, by J. Harris, D.D., 1856; Gent. Mag. February 1856, pp. 205–6; Eclectic Review, September 1857, p. 244.] G. C. B.

CONDLAED OF KILDARE (*d.* 520), bishop and saint, according to the pedigree in the 'Book of Leinster' and other authorities, was descended from Cucorb, king of Leinster, and through him from Ugaine Mor, monarch of Ireland, who was also the ancestor of St. Brigid [q. v.] in another line. His original name was Ronchend, and he is first heard of as a 'solitary adorned with every virtue' who dwelt in the south of the plain of the Liffey. At this time Brigid had determined to erect here the famous monastery of Kildare. This establishment comprehended both sexes, and Brigid thought it necessary to have 'a high priest to consecrate churches and to settle the ecclesiastical degrees (i.e. to ordain clergy) in them.' Sending for her relative Condlaed from his 'desert,' as the abodes of those hermit saints were called, she engaged him to 'govern the church with her in episcopal dignity that nothing of sacerdotal order might be wanting in her churches.' He had the episcopal chair, she the virginal chair (*cathedra puellaris*), and he was pre-eminent among the bishops of all Ireland as she was among the abbesses of the Scots, in 'happy succession and perpetual order.' It is in vain that Colgan and Lanigan endeavour to bring these facts into harmony with the ecclesiastical usages of later times. Condlaed was, in fact, a monastic bishop under the orders of the head of the establishment, who might be a presbyter, as in the Columbian monasteries, or a woman as here. In the life of St. Brigid by Cogitosus, from which these facts are taken, Condlaed is termed 'archbishop of the Irish bishops.' There were no archbishops at that time, but Dr. Todd has shown that the writers of both the lives in which it occurs were Irish, and used the term as the nearest translation of '*ard-epscop*,' the vernacular word used by the scholiast on the 'Hymn of Fiacc.' Its real meaning is 'eminent bishop,' and it refers only to his personal distinction, and conveys no idea of jurisdiction. Condlaed once, at least, had travelled abroad, visiting a country called 'Leatha.' Colgan and others took this to mean Italy, while Dr. O'Donovan supposed it to mean Armorica. It appears that the name was applied to both, but in its earliest sense meant Armorica (ZIMMER). This fact, and the known connection of the Irish church with that of Gaul, make it probable that Armorica is its meaning here. In his absence in Leatha, Brigid impulsively gave away to the poor 'certain transmarine and foreign vestments' belonging to him which he only used on great festivals. According to Broccán's 'Hymn,' a miracle was wrought to avert the consequences. 'When there was danger to her, her Son [Christ] rendered the event propitious. He brought [like] raiment in a coffer of sealskin in a chariot of two wheels.'

On the last occasion of his setting out on his travels he wished to visit Rome, but Brigid, in the exercise of her authority, objected, and when he disregarded her wishes she prayed, according to a legend of later times, that he might come to a sudden death; and accordingly, before he had gone more than eleven or twelve miles from home, he was devoured by wolves at a place near Dunlavin in the county of Wicklow. His desire to visit Rome was perhaps not unconnected with his love of art, for he is described as 'Brigid's brazier,' or, according to the 'Calendar' of Œngus, her 'chief artist.' The word denotes a worker in gold, silver, or other metal, a maker of those bells, croziers, and shrines of which so many still exist. The only specimen of his art remaining is the crozier of St. Finbarr of Termonbarry in Connaught now in the museum of the Royal Irish Academy in Dublin.

In the curious description given by Cogitosus of the church of Kildare, as it existed before A.D. 835, when it was ravaged by the Danes, he says: 'The bodies of Bishop Condlaed and the holy virgin St. Brigid are on the right and left of the decorated altar deposited in monuments adorned with various embellishments of gold and silver, and gems and precious stones, with crowns of gold and silver depending from above.' This has been thought improbable, but it derives confirmation from the independent authority of the

'Annals of Ulster,' where, at the year 799, the entry is: 'The placing of the relics of Condlaed in a shrine of gold and silver.'

In the 'Calendar' of Œngus his death is recorded thus: 'The death of Condlaed, a fair pillar,' and the scholiast understands the name to mean 'Ædh (or Hugh) the friendly.' In the third and fourth lives in Colgan his name appears as Conlianus, which is a latinised form of Condlaed. In these lives he is referred to as 'the bishop and prophet of God.' Nothing is recorded of any prophecies of his, and it seems highly probable that the latter term has reference rather to the expounding of the holy scriptures, in which sense it is used in the earliest Irish glosses. It was misunderstood in later times, like many other terms, and hence the many spurious prophecies attributed to famous Irish saints. Condlaed's day is 3 May.

CONDUITT, JOHN (1688–1737), master of the mint, of Cranbury Park in Hampshire, nephew by marriage of Sir Isaac Newton, in all probability the son of Leonard and Sarah Conduitt, was baptised at St. Paul's, Covent Garden, 8 March 1688. He was admitted into Westminster School in June 1701, and in June 1705 was elected to Trinity College, Cambridge. After leaving the university he travelled for some time upon the continent. In 1711 he was judge-advocate with the British forces in Portugal, and in the following year was made captain in a regiment of dragoons serving in that country. In June 1721 he was elected, on petition, whig member for Whitchurch, Hampshire, and continued to sit until, in 1734, he was returned for Southampton. On 26 Aug. 1717 he was married to Mrs. Katherine Barton, Newton's niece. The circumstances of this lady's acquaintance with Halifax belong more properly to the biography of the latter [see MONTAGUE, CHARLES, EARL HALIFAX]. They have been minutely investigated by Professor De Morgan in a special monograph (*Newton, his Friend and his Niece*, 1885). The marriage appears to have been a very happy one, and Conduitt manifested an exemplary affection and respect for his great relative. Upon Newton's death on 20 March 1727, Conduitt succeeded him as master of the mint, having already, according to Hutton, relieved his uncle of the more onerous duties of the post for several years. It had nevertheless been offered to Dr. Samuel Clarke, who refused it as incompatible with his clerical duties. Conduitt appears to have procured a place in the mint for a relation of Clarke's, but Whiston emphatically contradicts the rumour that he paid a portion of his salary to the latter as a compensation for waiving his claim. Conduitt's fitness for the office was shown by his 'Observations on the Present State of our Gold and Silver Coins,' an essay commended by Jevons as 'luminous, sound, and masterly.' It was written in 1730, and first published in 1774 from a manuscript copy formerly in the possession of Swift. The chief objects of the memoir, drawn up at a time when gold was falling in value and silver rising, were to advocate the coinage of the latter metal in preference to the former, and to recommend a reduction in the weight of the silver currency. It was also proposed to legalise the exportation of coin, on condition of the exporter having imported a corresponding quantity of bullion. The tract evinces great knowledge of the history of the currency, and much care in experimental assaying. Swift had no doubt procured a copy on account of his interest in Irish currency matters, then and long afterwards a fertile source of anxiety to government. Archbishop Boulter's letters make frequent mention of Conduitt, especially of his plan for remedying the dearth of small change in Ireland by a copper coinage. Next to his labours as a financier and economist, Conduitt's chief title to remembrance is his contribution to the biography of his illustrious uncle. Shortly after Newton's death Conduitt drew up a memorial sketch for the use of Fontenelle, whose duty it was to pronounce Newton's eulogium as an associate of the French Academy of Sciences. It is published in Turnor's 'Collections for the History of the Town and Soke of Grantham' (1806). The use made of it by Fontenelle was by no means satisfactory to Conduitt. 'I fear,' says he, 'he had neither abilities nor inclination to do justice to that great man, who has eclipsed the glory of their hero, Descartes.' He accordingly resolved to write Newton's life himself, and sent round a circular letter soliciting information, from which the above sentence is an extract. Eighteen months afterwards, however, he only says in a letter that he has some thoughts of writing Newton's biography. 'That he made the attempt,' says Sir David Brewster, 'appears from an indigested mass of manuscript which he has left behind him, and which does not lead us to regret much that he abandoned his design. The materials, however, which he obtained from Mrs. Conduitt and from the friends of Newton then alive are of great value.' They

are still in the possession of his descendants, the family of the Earl of Portsmouth, and were used by Brewster for his biography of Newton. We have to thank Conduitt among other things for having preserved Newton's famous comparison of himself to 'a boy playing on the sea-shore and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, while the great ocean of truth lay all undiscovered before me.' Turnor's book also contains Conduitt's minute of a remarkable conversation with Newton on the exhaustion of the fuel of the sun, and its possible renovation by comets, which shows the interest he himself took in such questions. Conduitt died 23 May 1737, and was buried in Westminster Abbey on the right-hand side of Sir Isaac Newton. His only child, a daughter, married on 8 July 1740 Viscount Lymington, eldest son of the first Earl of Portsmouth. Their son succeeded as second Earl of Portsmouth.

CONDY or CUNDY, NICHOLAS (1793?–1857), painter, is supposed to have been born at Torpoint, in the parish of Antony East, Cornwall, in 1793, but no entry of his baptism is to be found in the register kept at Antony Church. He was gazetted to the 43rd regiment as an ensign on 9 May 1811, and served in the Peninsula; became lieutenant on 24 Feb. 1818, and was thenceforth on half-pay during the remainder of his life. From 1818 he devoted his attention to art, and became a professional painter at Plymouth. He chiefly produced small water-colours on tinted paper, about eight inches by five inches, which he sold at prices ranging from fifteen shillings to one guinea each. Between 1830 and 1845 he exhibited at the Royal Academy two landscapes, at the British Institution four, and at the Suffolk Street Gallery one. His best known painting is entitled 'The Old Hall at Cotehele on a Rent-day,' and is in the possession of the Earl of Mount-Edgcumbe at Mount-Edgcumbe. He brought out a work called 'Cotehele, on the Banks of the Tamar, the ancient seat of the Right Hon. the Earl of Mount-Edgcumbe, by N. Condy, with a descriptive account written by the Rev. F. V. J. Arundell, 17 plates, London, published by the author, at 17 Gate Street, Lincoln's Inn Fields.' He died at 10 Mount Pleasant Terrace, Plymouth, on 8 Jan. 1857, aged 64, and was buried in St. Andrew's churchyard. By his wife Ann Trevanion Pyle (1792–1860), daughter of Capt. Mark Oates of the marines, he was father of NICHOLAS MATTHEWS CONDY, who has often been confused with him. He was born at Union Street, Plymouth, in 1818, and having been educated at Exeter was intended for the army or navy, but preferred becoming a professor of painting in his native town. He exhibited three sea-pieces at the Royal Academy from 1842 to 1845, which gave hopes of his becoming a distinguished artist; but he died suddenly and prematurely at the Grove, Plymouth, on 20 May 1851, when aged only thirty-three. He married Flora Ross, third daughter of Major John Lockhart Gallie, of the 28th regiment.

CONEY, JOHN (1786–1833), draughtsman and engraver, was born in Ratcliff Highway, London, in 1786. He was apprenticed to an architect, but never followed the profession. Among his early studies were pencil drawings of the interior of Westminster Abbey; these he sold principally to dealers. In 1805 he exhibited at the Royal Academy a 'Perspective View of Lambeth Palace,' and resided at 39 Craven Street, Strand. Coney's first publication was a work entitled 'A Series of Views representing the Exterior and Interior of Warwick Castle . . . with an accurate plan and brief account of that . . . example of British Architecture,' London, fol., 1815. The plates were drawn and etched by himself. He was next employed for fourteen years by Harding to draw and engrave a series of exterior and interior views of the cathedrals and abbey churches of England, intended to illustrate the new edition of Sir William Dugdale's 'Monasticon,' edited by Sir Henry Ellis, &c., 8 vols., London, fol., 1846. In 1829 he commenced the engravings of the cathedrals, hôtels de ville, town halls, &c., in France, Holland, Germany, and Italy, with descriptions in four languages. These were published in an imperial folio, 32 plates, London, 1832. The next important work, also engraved and designed by himself, was 'The Beauties of Continental Architecture,' 28 plates and 50 vignettes, fol., London, 1843. Cockerell, the eminent architect [q. v.], employed Coney to engrave a large view of Rome, and he also engraved some drawings of the Law Courts, Westminster, for Sir John Soane. Coney died of an enlargement of the heart in Leicester Place, Camberwell, on 15 Aug. 1833.

In addition to the above-mentioned works he was the author of 'English Ecclesiastical

Edifices of the Olden Time,' 2 vols. large fol., London, 1842 (the plates in this book previously used in Dugdale's 'Monasticon'), and 'Original Drawings of London Churches,' London, 8vo, 1820. There is in the department of prints and drawings in the British Museum a fine set of Coney's etched and engraved works, besides several original drawings. He exhibited at the Royal Academy ten works between 1805 and 1821.

[Redgrave's Dictionary of Artists of the English School, 1878; manuscript notes in the British Museum.] L. F.

CONGALLUS I, CONALL, son of Domangart, son of Fergus Mor Mac Earc, king of the Scots of Dalriada (511–535 ?), according to the chronology of Father Innes and Mr. Skene, was the third king of this race who ruled in Argyll and the Isles, but is reckoned as the forty-fourth according to the fictitious chronology of the older historians, Fordun, Boece, and Buchanan, who date the origin of this kingdom from Fergus I, son of Ferchard, in the fourth century B.C.

[Robertson's Scotland under her Early Kings; Skene's Celtic Scotland; tables in Innes's Essay on Ancient Inhabitants of Scotland, vol. i.] Æ. M.

CONGALLUS II, CONALL, son of Congallus I, king of the Scots of Dalriada (557–574), according to the chronology of Innes and Skene, is redeemed from the obscurity of the early kings and brought within the pale of history by the brief notice of Tighernach, the Irish annalist, who states the year of his death, and adds that he gave the island of Iona to Columkille (St. Columba). Bede attributes the grant to Brude, the Pictish king, whom Columba visited and converted at his fort on Loch Ness, but the discrepancy is ingeniously, if not certainly, reconciled by the hypothesis of Dr. Reeves, that Conall gave and Brude confirmed the grant as a superior king, or perhaps because Iona lay on the confines of the Pictish territory. On the death of Conall, Columba ordained Aidan, the son of Gabran (the king who preceded Conall), as his successor, apparently in conformity with the law of tanistry. In the year of Conall's death a battle, recorded by Tighernach, had been fought at Delgin in Kintyre, in which Duncan, son of Conall, and many of the kin of Gabran were killed, probably by the Picts, who were endeavouring to crush the rise of the Dalriad kingdom.

[Reeves; Adamnan's Life of Columba; Robertson and Skene.] Æ. M.

CONGALLUS III, CONALL CRANDONNA, son of Eocha Buidhe, king of Scottish Dalriada (642–660), succeeded as king of Dalriada on the death of his brother, Donald Brec, who was killed in a battle on the Carron by Owen, a British king (*d.* 642 ?), and reigned till 660 (TIGHERNACH), during part of the time in conjunction with another king, Donald, who is supposed to have belonged to another race and not to have been descended from Aidan. This is a period of great darkness in the annals of Dalriada, and Mr. Skene's explanation may be given as the best conjecture of the cause: 'During the remainder of this century we find no descendant of Aidan recorded bearing the title of king of Dalriada; and it is probable from Adamnan's remark, that "from that day, i.e. the death of Donald Brec, to this they have been trodden down by strangers," that the Britons now exercised a rule over them' (*Celtic Scotland*, i. 250).

[Robertson and Skene.] Æ. M.

CONGLETON, first BARON. [See PARNELL, HENRY BROOKE, 1776–1842.]

CONGREVE, WILLIAM (1670–1729), dramatist, was born at Bardsey, near Leeds, where he was baptised on 10 Feb. 1669–70—a fact first ascertained by Malone (*Life of Dryden*, i. 225). He was the son of William Congreve; his mother's maiden name was Browning. His grandfather, Richard Congreve, was a cavalier named for the order of the Royal Oak, whose wife was Anne Fitz-Herbert. The family had been long settled at Stretton in Staffordshire. Congreve's father was an officer, who soon after the son's birth was appointed to command the garrison at Youghal, where he also became agent for the estates of the Earl of Cork, and ultimately moved to Lismore. Congreve was educated at Kilkenny school, where he was a schoolfellow of Swift, his senior by two years. He was entered at Trinity College, Dublin, on 5 April 1685, where, like Swift, he was a pupil of St. George Ashe [q. v.] Swift, who took his B.A. on 13 Feb. 1686, resided at Dublin till the revolution. They were therefore contemporaries at college, and formed an enduring friendship.

Congreve, on leaving Dublin, entered the Middle Temple, but soon deserted law for literature. His first publication was a poor novel called 'Incognita, or Love and Duty reconciled,' by Cleophil, written 'in the idler hours of a fortnight's time.' His first play, the 'Old Bachelor,' was brought out in January 1692–3. It was written, as he says in the dedication, nearly four years previously, in order (reply to Collier) to 'amuse himself in a slow recovery from a fit of sickness.' Dryden pronounced it to be the best first play he had

ever seen; and the players, to whom he had at first read it so badly that they almost rejected it, soon changed their opinion. The manager granted him the 'privilege of the house' for six months before it was acted, a then unprecedented compliment. Its great success prompted him to produce the 'Double Dealer,' first performed in November 1693. This met with some opposition, and some ladies were scandalised. Queen Mary, however, came to see it, and was afterwards present at a new performance of the 'Old Bachelor,' when Congreve wrote a new prologue for the occasion. Dryden had generously welcomed Congreve, who helped him in the translation of Juvenal (1692), and to Congreve Dryden now addressed a famous epistle, in which he declares Congreve to be the equal of Shakespeare, and pathetically bequeaths his memory to the care of the 'dear friend' who is to succeed to his laurels, a bequest acknowledged by Congreve in his preface to Dryden's plays (1718). Dryden also acknowledges (in 1697) Congreve's services in revising the translation of Virgil, in which he was also helped by Addison and Walsh.

Betterton [q. v.] and other players revolted from Drury Lane, and obtained permission to open a new theatre at Lincoln's Inn Fields. It was opened on 30 April 1695, the first performance being Congreve's 'Love for Love.' The brilliant success of this comedy was acknowledged by a share in the house, Congreve promising to produce a new play every year. On 12 July 1695 Charles Montagu, afterwards earl of Halifax, made Congreve 'commissioner for licensing hackney coaches'; he held this small office till Dec. 1705, when he became commissioner of wine licenses. His next production was the 'Mourning Bride,' acted at Lincoln's Inn Fields, 'for thirteen days without interruption,' in 1697. The success saved the company, though the tragedy is generally regarded as an unlucky excursion into an uncongenial field. Johnson maintained that the description of a cathedral in this play (act ii. sc. 1) was superior to anything in Shakespeare (Boswell, 16 Oct. 1769, and *Life of Congreve*). In the same year Congreve was attacked by Jeremy Collier [q. v.] in a 'View of the Immorality and Profaneness of the English Stage.' He replied in a pamphlet called 'Amendment of Mr. Collier's False and Imperfect Citations' (from his four plays). Although the critical principles laid down by Collier are not such as would be now admitted, he was generally thought to have the best both of the argument and of the wit. Nor can it be doubted that he was attacking a serious evil. Congreve felt the blow. His last play, the 'Way of the World,' was produced, again at Lincoln's Inn Fields, in 1700. Congreve declares in the dedication that he did not expect success, as he had not written to suit the prevailing taste. The play was coolly received, and it is said that Congreve told the audience to their faces that they need not take the trouble to disapprove, as he meant to write no more. The play succeeded better after a time; but Congreve abandoned his career. In 1705 a new theatre was built for the same company by Vanbrugh, and Congreve was for a time Vanbrugh's colleague in the management. He did nothing, however, beyond writing 'a prologue or so, and one or two miserable bits of operas' (Leigh Hunt) (the 'Judgment of Paris,' a masque, and 'Semele, an Opera,' neither performed).

From this time he lived at his ease. In 1710 he published the first collected edition of his works, in three vols. octavo. A promise of Tonson to pay him twenty guineas on publication is in the British Museum (*Addit. MS.* 28275, f. 12). He was commissioner of wine licenses from December 1705 till December 1714. At the last date he became secretary for Jamaica. According to the 'General Dictionary,' Lord Halifax gave him a 'place in the pipe-office,' a 'patent place in the customs of 600*l.* a year,' and the Jamaica secretaryship, worth 700*l.* a year. He is said to have been latterly in receipt of 1,200*l.* a year. Swift, in his verses on 'Dr. Delany and Dr. Carteret,' says that

> Congreve spent on writing plays
> And one poor office half his days.

But Swift when writing satire did not stick to prosaic accuracy. Congreve, at any rate, was universally flattered and admired. He is always spoken of by contemporaries as a leader of literature, and had the wisdom or the good feeling to keep on terms with rival authors. He never, it is said, hurt anybody's feelings in conversation. Swift, while at Sir W. Temple's in 1693, addressed a remarkable poem to his more prosperous friend, and always speaks of him with special kindliness. Many meetings are noticed in the 'Journal to Stella.' It is odd that Congreve was almost solitary in disliking the 'Tale of a Tub' (Monck Berkeley, *Literary Relics*, p. 340). Steele dedicated his miscellanies to him, and when assailed by Tickell in 1722 addressed his vindication (prefixed to the 'Drummer') to Congreve as the natural arbiter in a point of literary honour. Pope paid him a higher compliment, by concluding the translation of the 'Iliad' with a dedication to him. Pope was anxious to avoid committing himself to either party, and Congreve's fame was

sufficient to make him a worthy representative of national literature. Swift (letter to Pope, 10 Jan. 1721) repeats the famous reply of Harley to Halifax when Congreve was afraid of being turned out by the tories in 1711—

Non obtusa adeo gestamus pectora Pœni,
Nec tam aversus equos Tyriâ Sol jungit ab urbe.

Voltaire visited him in his last years, and was disgusted by his affectation of desiring to be regarded as a gentleman instead of an author, a sentiment which is susceptible of more than one explanation (*Lettres sur les Anglais*). Congreve was a member of the Kit-Cat Club (Spence, *Anecdotes*, p. 338), and according to Pope and Tonson, he, Garth, and Vanbrugh were the 'three most honest-hearted real good men' of the poetical members (*ib.* p. 46). Lady Mary W. Montagu addressed a poem to him of rather questionable delicacy.

Congreve was evidently a man of pleasure, and petted in good society. His relations to Mrs. Bracegirdle [q. v.], who always acted his heroines, and spoke a prologue or epilogue in his plays, were ambiguous, but in any case very intimate. He became in later years the special favourite of the second Duchess of Marlborough, and was constantly at her house. He had, according to Swift (to Pope, 13 Feb. 1729), 'squandered away a very good constitution in his younger days.' In 1710, as we learn from the 'Journal to Stella,' he was nearly blind from cataract, and he suffered much from gout. Probably his bad health helped to weaken his literary activity. Like Byron, he seems to have combined epicurean tastes with the 'good old gentlemanly vice,' avarice. An attack of gout in the stomach was nearly fatal in the summer of 1726 (Arbuthnot to Swift, 20 Sept. 1726). He had gone to drink the waters at Bath in the summer of 1728 with the Duchess of Marlborough and Gay. He there received some internal injury from the upsetting of his carriage, and died at his house, in Surrey Street, Strand, on 19 Jan. 1728-9.

The body lay in state in the Jerusalem Chamber and was buried with great pomp in Westminster Abbey. A monument was erected in the abbey by the Duchess of Marlborough, with an inscription of her own writing, and a hideous cenotaph was erected at Stowe by Lord Cobham. It was reported that the duchess afterwards had a figure of ivory or wax made in his likeness, which was placed at her table, addressed as if alive, served with food, and treated for 'an imaginary sore on its leg.' The story, if it has any foundation, would imply partial insanity. Congreve left 10,000*l.*, the bulk of his fortune, to the duchess, a legacy of 200*l.* to Mrs. Bracegirdle, and an annuity of 20*l.* to Anne Jellatt, besides a few small sums to his relations. Young says (Spence, p. 376) that the duchess showed him a diamond necklace which she had bought for 7,000*l.* from Congreve's bequest, and remarks that it would have been better if the money had been left to Mrs. Bracegirdle.

Besides his plays, Congreve wrote minor poems, congratulatory and facetious, which Johnson (followed by Leigh Hunt) declares to be generally 'despicable.' He wrote a letter upon humour in comedy, published in the works of Dennis, to whom it was first addressed. He contributed to the 'Tatler' the character of Lady Elizabeth Hastings (the famous phrase, 'To love her is a liberal education'—attributed to Congreve by Leigh Hunt—occurs in No. 49, by Steele). Congreve has been excellently criticised by Hazlitt, 'Lectures on the Comic Writers,' Charles Lamb, 'On the Artificial Comedy of the last Century,' and by Leigh Hunt, in whose essay the others are reprinted. Hazlitt's judgment that Congreve's is 'the highest model of comic dialogue' has been generally accepted, with the occasional deduction that the strain of his perpetual epigrams becomes tiresome. Hunt, a sympathetic and acute critic, admits that Lamb's famous defence of Congreve against the charge of immorality is more ingenious than sound. The characters, instead of being mere creations of fancy, are only too faithful portraits of the men (and women) of the town in his day. Congreve's defects are to be sought not so much in the external blemishes pointed out by Collier as in the absence of real refinement of feeling. His characters, as Voltaire observes, talk like men of fashion, while their actions are those of knaves. Lamb's audacious praise of him for excluding any pretensions to good feeling in his persons might be accepted if it implied (as he urges) a mere 'privation of moral light.' But, although a 'single gush of moral feeling' would, as Lamb says, be felt as a discord, a perpetual gush of cynical sentiment is quite in harmony. His wit is saturnine, and a perpetual exposition of the baser kind of what passes for worldly wisdom. The atmosphere of his plays is asphyxiating. There is consequently an absence of real gaiety from his scenes and of true charm in his characters, while the teasing intricacy of his plots makes it (as Hunt observes) impossible to remember them even though just read and noted for the purpose. It is therefore almost cruel to suggest a comparison between Congreve and Molière, the model of the true comic spirit. The faults are sufficient to account for the neglect of Congreve

by modern readers in spite of the exalted eulogies—not too exalted for the purely literary merits of his pointed and vigorous dialogue—bestowed upon him by the best judges of his own time and by some over-generous critics of the present day.

CONGREVE, Sir WILLIAM (1772-1828), the inventor of the Congreve rocket, was the eldest son of Sir William Congreve, lieutenant-general, colonel commandant of the royal artillery, comptroller of the Royal Laboratory at Woolwich, and superintendent of military machines, who was created a baronet on 7 Dec. 1812. His mother, his father's first wife, was Rebecca, daughter of Fleet Elmstone, R.N. Born 20 May 1772, after passing through the Royal Academy at Woolwich he was in 1791 attached to the Royal Laboratory at Woolwich, of which his father was comptroller, and after many experiments there he succeeded in inventing the celebrated Congreve rocket in 1808. The war office and board of ordnance, influenced doubtless by his father's strong recommendations, determined to make use of this invention for military purposes, and highly applauded its inventor. The first trial of its efficacy was made at sea, in Lord Cochrane's attempt to burn the French fleet in the Basque roads in 1809. Its success was not so great as had been expected, but its value was perceived, and the ingenious inventor was largely recompensed and allowed to raise and organise two rocket companies in connection with the corps of royal artillery. He was chosen a fellow of the Royal Society, and elected M.P. for Gatton in 1812, and in the December of the same year his father was created a baronet. In the following year he was ordered with one of his rocket companies to the continent, and served at the battle of Leipzig. His rockets there did not do much actual damage to the enemy, but their noise and bright glare had a great effect in frightening the French and throwing them into confusion, and the czar of Russia showed his appreciation of the inventor by making him a knight of the order of St. Anne. They had the same negative effect in the passage of the Bidassoa, where, Napier remarks, they did little real damage, but caused terror by their novelty. In April 1814 he succeeded his father as second baronet, and also as comptroller of the Royal Laboratory and superintendent of military machines, a post which he held until his death. He was a great personal favourite with George IV, who on his accession to the throne made him one of his equerries, and also held a high position in scientific circles. He wrote many economical and scientific works, and sat as M.P. for Plymouth from 1818 until his death at Toulouse on 16 May 1828. The following is a list of Congreve's published works: 1. 'A Concise Account of the Origin and Progress of the Rocket System,' 1807. 2. 'Description of the Hydro-pneumatic Lock, invented by Colonel Congreve,' 1814. 3. 'Of the Impracticability of the Resumption of Cash Payments,' 1819. 4. 'Principles on which it appears that a more Perfect System of Currency may be formed either in the Precious or Non-Precious Metals,' 1819. 5. 'A Short Account of a Patent lately taken out by Sir William Congreve for a New Principle of Steam Engine,' 1819. 6. 'A Treatise on the General Principles, Powers, and Facility of Application of the Congreve Rocket System, as compared with Artillery,' 1827.

[Gent. Mag. July 1828; Duncan's History of the Royal Artillery, for the services of the rocket company at Leipzig; Congreve's pamphlets.] H. M. S.

CONINGHAM, JAMES (1670-1716), presbyterian divine, was born in 1670 in England and educated at Edinburgh, where he graduated M.A. on 27 Feb. 1694. The same year he became minister of the presbyterian congregation at Penrith. Here he employed himself in educating students for the ministry, probably with the concurrence of the 'provincial meeting' of Cumberland and Westmoreland. In 1700 he was chosen as colleague to John Chorlton [q. v.] at Cross Street Chapel, Manchester. He shared with Chorlton the tutorial work of the Manchester academy, and on Chorlton's death (1705) carried it on for seven years without assistance. His most distinguished pupils were Samuel Bourn the younger [q. v.] and John

Turner of Preston, famous for his warlike exertions against the rebel army in 1715. During the reign of Anne, Coningham was several times prosecuted for keeping an academy; and though a man who combined strict orthodoxy with a catholic spirit, he was not strong enough to cope with the divergences of theological opinion in his flock. He left Manchester for London in 1712, being called to succeed Richard Stretton, M.A. (*d.* 3 July 1712, aged 80), at Haberdashers' Hall. His health was broken, and he died on 1 Sept. 1716, leaving the remembrance of a graceful person and an amiable character.

Coningham published three sermons, 1705, 1714, and 1715, and wrote a preface to the second edition of Henry Pendlebury's 'Invisible Realities,' originally published 1696, 12mo.

[Wright's Funeral Sermon, 1716; Toulmin's Hist. View, 1814, p. 246; Calamy's Hist. Acc. of my own Life, 2nd ed. 1830, ii. 31 sq. 257, 523; Cat. of Edinburgh Graduates (Bannatyne Club), 1858; Baker's Mem. of a Diss. Chapel, 1884, pp. 19, 61, 140; Extracts from records of the Presbyterian Fund, per W. D. Jeremy.]

A. G.

CONINGSBURGH, EDMUND, LL.D. (*fl.* 1479), archbishop of Armagh, in all probability received his education at Cambridge, where he took the degrees of bachelor and doctor of laws. He became rector of St. Leonard, Foster Lane, London, 12 Jan. 1447–1448, vicar of South Weald, Essex, 13 Oct. 1450, and rector of Copford in the same county, 3 Nov. 1451 (Newcourt, *Repertorium*, i. 394, ii. 192, 645). In 1455 and frequently afterwards he was employed in university business at Cambridge. He was one of the syndics for building the philosophical and law schools in 1457. It appears that he was a proctor in the Bishop of Ely's court. If he were not originally a member of Benet (now Corpus Christi) College, he occupied chambers there as early as 1469, when he and Walter Buck, M.A., had a joint commission from Bishop Gray of Ely to visit, as that prelate's proxies, the holy see and 'limina apostolorum.' He became rector of St. James, Colchester, 1 Jan. 1469–70 (Newcourt, ii. 169). On 10 Aug. 1471 Edward IV addressed a letter of congratulation to Sixtus IV on his being elected pope, and sent his councillor, James Goldwell, bishop of Norwich, and Coningsburgh to Rome, to beseech his holiness to grant them certain things concerning his honour and dignity (*Calendar of State Papers*, Venetian, i. 130). In 1472 Coningsburgh styles himself president, that is, representative of the chancellor, of the university of Cambridge (*Cole's MSS.* xii. 168).

In 1477 he was promoted to the archbishopric of Armagh (Cotton, *Fasti Eccl. Hibern.* iii. 17, v. 196), and on 3 July in that year he obtained the custodium of all the temporalities of the see then in the king's hands. On 1 Jan. 1477-8 he and Alvared Connesburgh, esquire of the body to Edward IV, had a commission from the king to hear and determine all controversies, suits, and debates depending between any of the great men or peers of Ireland (Rymer, *Fœdera*, edit. 1711, xii. 44, 45, 58). But although the king had engaged to support him, and laid an injunction (2 May 1478) upon the lord deputy and all his subjects not to admit any other person to the see, yet the pope having been against his promotion, and being desirous of displacing him, appointed Octavian de Palatio administrator-general of the see, both in spirituals and temporals, on the pretence that the payment of the fees for the papal bulls had been neglected (Ware, *Bishops of Ireland*, ed. Harris, pp. 87, 88). This not only gave Coningsburgh much uneasiness, but kept him so poor that in 1479 he was glad to resign after having covenanted with the administrator, who was his successor, for the discharge of all the debts contracted at Rome, and for an annual pension of fifty marks during his life. Of his subsequent career nothing is known (Masters, *Corpus Christi College*, ii. 272; Cole, *Athenæ Cantab.* C. p. 230).

[Authorities cited above.] T. C.

CONINGSBY, Sir HARRY (*fl.* 1664), translator, was son of Thomas Coningsby of North Mimms, Hertfordshire. The family was descended from John, third son of Sir Humphrey Coningsby, a judge under Henry VIII [see Coningsby, Sir William]. John Coningsby married Elizabeth, daughter and coheiress of Henry Frowick of North Mimms. Sir Harry's grandfather was Sir Ralph, who was sheriff of Hertfordshire in 1596. His father, Thomas, born in 1591, was high sheriff of Hertfordshire in 1638 and in 1642; avowed himself a supporter of Charles I; was arrested by the parliamentarians at St. Albans early in 1643, while endeavouring to execute a commission of array; was imprisoned first in London House, and afterwards in the Tower; was deprived of most of his property; was released from the Tower after seven years' suffering in 1650; translated into English Justus Lipsius's 'Discourse on Constancy,' of which nothing has survived; and died on 1 Oct. 1654. Harry, Thomas's only son, sold the North Mimms estate to Sir Nicholas Hide in 1658, retired with his mother to Weild or Wold Hall, Shenley, Hertfordshire, married Hester Cambell, and was knighted

at the Restoration. He devoted his leisure to the compilation of an essay on his father's sad career, and to a free verse translation of Boethius's 'Consolation of Philosophy.' These works were printed together, apparently for private distribution, in 1664. The British Museum copy, which formerly belonged to the Rev. Thomas Corser, contains a manuscript letter addressed by Coningsby (30 March 1665) to Sir Thomas Hide, the son of the purchaser of North Mimms, requesting Sir Thomas to 'allow this little booke a little roome' in the house which was so nearly associated with the 'glorious and honest deportment of my most dear father.'

[Corser's Collectanea, iv. 427–31; Chauncy's Hertfordshire, 462–3; Clutterbuck's Hertfordshire, i. 444; Brit. Mus. Cat.; Preface to Coningsby's Consolation.] S. L.

CONINGSBY, SIR THOMAS (*d.* 1625), soldier, was son and heir of Humphrey Coningsby, esq., of Hampton Court, Herefordshire, by Anne, daughter of Sir Thomas Inglefield, judge of the common pleas. His father was gentleman-treasurer to Queen Elizabeth. Coningsby visited Italy with Sir Philip Sidney in 1573, and he was intimate with Sidney until Sir Philip's death, although their friendship was severely strained on their Italian journey by an unfounded charge of robbery brought by Sidney against Coningsby. Coningsby went to Normandy in attendance on the Earl of Essex in 1591, and took part in the siege of Rouen, fighting against the forces of the league. He acted as muster-master to the English detachment, had much intercourse with Henri of Navarre before Rouen, and was knighted by Essex 8 Oct. 1591 (*Harl. MS.* 6063, art. 26). Coningsby was M.P. for Herefordshire in 1593, 1597, and 1601, and sheriff of the county in 1598. On 12 Nov. 1617 he joined the council of Wales under the presidency of William, lord Compton. In 1614 Coningsby founded a hospital in the suburbs of Hereford for superannuated soldiers and servants called 'Coningsby's Company of Old Servitors,' and died on 30 May 1625. John Davies of Hereford addressed a sonnet to him. A portrait of him with his favourite dog is at Cashiobury House, Hertfordshire, in the possession of the Earl of Essex. He married Philippa, second daughter of Sir William Fitzwilliam of Melton, near Peterborough, and Sir Philip Sidney's cousin, by whom he had six sons and three daughters. All his sons except one, Fitzwilliam, died before him. Fitzwilliam married Cicely, daughter of Henry, seventh lord Abergavenny, and their son, Humphrey, was father of Thomas, earl Coningsby [q. v.] Of his daughters, Katharine married Francis Smallman of Kinnersley Castle, Herefordshire; Elizabeth married Sir Humphrey Baskerville of Erdesley Castle, Herefordshire, and Anne married Sir Richard Tracy of Hatfield, Hertfordshire.

Coningsby is the author of an interesting diary of the action of the English troops in France in 1591. It proceeds day by day through two periods, 13 Aug. to 6 Sept., and 3 Oct. to 24 Dec., when it abruptly terminates. The original manuscript is numbered 288 (ff. 253–79) among the 'Harleian MSS.' at the British Museum. It was first printed and carefully edited by Mr. J. G. Nichols in the first volume of the Camden Society's 'Miscellanies' (1847). Internal evidence alone gives the clue to the authorship.

[J. G. Nichols's Introduction to the Camd. Soc. Miscell. i. pt. ii.; Clutterbuck's Hertfordshire, i. 444; Duncumb's Collections for Herefordshire, i. 405; Price's Hist. Acc. of Hereford, 213; Fox-Bourne's Life of Sir Philip Sidney, pp. 69–70; John Davies's Works, ed. Grosart.] S. L.

CONINGSBY, THOMAS, EARL (1656?–1729), born about 1656, was great-grandson of Sir Thomas Coningsby [q. v.], and the son of Humphrey Coningsby, by Lettice, eldest daughter of Sir Arthur Loftus of Rathfarnham, Ireland. Ferdinando Gorges, of Eye in Herefordshire, a merchant from Barbados, contrived to possess himself of some of the Coningsby estates, and to marry his eldest daughter Barbara to Thomas Coningsby when a lad. The marriage license was applied for to the vicar-general of the Archbishop of Canterbury on 18 Feb. 1674–5, when Coningsby was described as aged about nineteen, and Barbara Gorges was stated to be about eighteen years old (*Marriage Licences*, 1558–1690, Harl. Soc. xxiii. 237). The misdeeds of Ferdinando, who is sometimes styled Captain Gorges, were productive of ruinous loss to his son-in-law, from which he could never succeed in extracting himself. Coningsby entered upon parliamentary life in 1679, being returned for the borough of Leominster in Herefordshire, a constituency which he represented continuously from that time to 1710, and from 1715 until his elevation to the English peerage. He was an ardent supporter of the revolution of 1688, and throughout his life resolutely resisted, sometimes with more zeal than discretion, the aims of the Jacobite faction. He went with William III to Ireland, and was with the king when he was wounded at the battle of the Boyne. He was appointed joint receiver and paymaster-general of the forces employed in the reduction of Ireland, was (1689–90) commissioner of appeals in the excise, and from 1690 to 1692 junior of the three lords-

justices of Ireland, the treaty of Limerick, so it is said, having been arranged through his skill. His political opponents accused him of having used his position to gratify his greed. The embezzlement of stores, the appropriation of the estates of rebels, the sale of pardons, and dealings in illicit trade were among the offences imputed to him; but such charges were of slight moment so long as the royal influence was at his back. Through the king's favour he was created Baron Coningsby of Clanbrassil in Ireland on 17 April 1692, sworn as privy councillor on 13 April 1693, and pardoned under the great seal in May 1694 for any transgressions which he might have committed while in office in Ireland. He was vice-treasurer from Jan. 1692–3 until deprived of the office in 1710. From 1695 to his death he was chief steward of the city of Hereford; he fought a duel with Lord Chandos, another claimant of the post, 'but no mischief was done.' In April 1697 he received a grant under the privy seal of several of the crown manors in England, and in October 1698 he was created paymaster of the forces in Ireland. During Queen Anne's reign he acted consistently with the whigs, but his services received slight acknowledgment even when his friends were in office. All that Godolphin did was to write a civil letter or two complimenting Lord Coningsby on 'his judgment and experience' in parliamentary affairs, and it was not until October 1708 that Coningsby was sworn of Anne's privy council. He was one of the managers of Sacheverell's trial, and, like most of the prominent whigs, he lost his seat in parliament through the tory reaction which ensued. With the accession of George I he resumed his old position in public life, and once more basked in court favour. He was included in the select committee of twenty-one appointed to inquire into the negotiations for the treaty of Utrecht, and, according to Prior, was one of the three most inquisitive members of that body. As a result of their investigations, the impeachment of Bolingbroke was moved by Walpole, that of Harley by Coningsby—a family feud had long existed between the two Herefordshire families of Harley and Coningsby—and Ormonde's by Stanhope. Two years later Harley was unanimously discharged, but this concord of opinion was only obtained by Coningsby and some others withdrawing from the proceedings. For his zeal in behalf of the Hanoverian succession he was well rewarded. The lord-lieutenancy of Herefordshire was conferred on him in November 1714, and in the following month he obtained the same pre-eminency in Radnorshire. A barony in the English peerage was granted to him on 18 June 1716, and he was raised to the higher dignity of Earl Coningsby on 30 April 1719. Coningsby's later life was troubled. He was a widower, without any male heir, and with innumerable lawsuits. For some severe reflections on Lord Harcourt, the lord chancellor, in connection with these legal worries, he was committed to the Tower on 27 Feb. 1720–1. He resigned his two lord-lieutenancies in 1721, and was dismissed from the privy council Nov. 1724. After much ill-health he died at the family seat of Hampton, near Leominster, on 1 May 1729. By his first wife, Barbara Gorges, whom he married in February 1674–5, and from whom he was divorced, he had four daughters and three sons, and his grandson by this marriage succeeded to the Irish barony, but died without issue on 18 Dec. 1729. His second wife, whom he married in April 1698, was Lady Frances Jones, daughter of Richard, earl of Ranelagh, by whom he had one son, Richard, who died at Hampton on 2 April 1708 when two years old, choked by a cherrystone; and two daughters, Margaret and Frances. The second countess was buried at Hope-under-Dinmore on 23 Feb. 1714–15, aged 42; and Lord Coningsby was buried in the same church in 1729, under a handsome marble monument, on which the child's death is depicted in striking realism. The grant of his English peerage contained a remainder for the eldest daughter of his second marriage. Her issue male, John, the only child of this daughter, Margaret, countess of Coningsby, by her husband, Sir Michael Newton, died an infant, the victim of an accidental fall, said to have been caused through the fright of its nurse at seeing an ape, and on the mother's death in 1761 the title became extinct. The younger daughter of Lord Coningsby married Sir Charles Hanbury Williams, the well-known satirical poet, and was buried in the chapel of St. Erasmus, Westminster Abbey, in December 1781.

Coningsby's troubles in law arose from his purchase of the manors of Leominster and Marden. After elaborate investigations, he convinced himself that the lord's rights had in many instances been trespassed upon by the copyhold tenants. He caused ejectments to be brought against many persons for being in possession of estates as freehold which he claimed to be copyhold, and as these claims were resisted by the persons in possession, his last days were embittered by constant strife. His collections concerning Marden were printed in 1722–7 in a bulky tome, without any title-page, and with pagination of great irregularity, but were never pub-

lished. When his right to the Marden property was disputed, all the copies of this work but a few were destroyed, and these now fetch a high price in the book-market. Some proofs of his irritable disposition have been already mentioned. Through his sharpness of temper he was exposed to the caustic sallies of Atterbury in the House of Lords, and to the satires of Swift and Pope in their writings. His speech to the mayor and common council of the city of Hereford in 1718 on their presumed attachment to the Pretender, a speech not infrequently mixed with oaths, is printed in Richard Johnson's 'Ancient Customs of Hereford' (1882), pp. 225–6. A portrait of Coningsby and his two daughters, Margaret and Frances, was painted by Kneller in 1722, and engraved by Vertue in 1723. The peer's coat-of-arms is on the left hand, and a roll of Magna Charta is in his hand. His two daughters are dressed in riding habits, and with a greyhound and King Charles's spaniel. He was also painted by Kneller singly, and there is a whole-length of him in 1709 in his robe as vice-treasurer of Ireland. Numerous letters and papers relating to him are preserved in public and private collections, but especially among the manuscripts of Lord de Ros, his descendant (*Hist. MSS. Comm.* 4th Rep.), and the Marquis of Ormonde and the Rev. T. W. Webb of Hardwick Vicarage, Herefordshire (*ib.* 7th Rep.)

[Chester's Registers of Westminster Abbey, p. 433; Robinson's Mansions of Herefordshire, 146–9; Townsend's Leominster, 134–281; Luttrell's Relation of State Affairs (1857), passim; Pope's Works (viii. ed. 1872), p. 323; Private Corresp. of Duchess of Marlborough, i. 166, 174, ii. 85, 87, 251, 389; Duncumb's Herefordshire, ii. 130–1; Swift's Works (1883), xvi. 282, 351, 353; Burke's Extinct Baronage, iii. 203–5; Case of Earl Coningsby to Five Hundreds in Hereford, passim; Doyle's Official Baronage.]

W. P. C.

CONINGSBY, SIR WILLIAM (*d.* 1540?), judge, second son of SIR HUMPHREY CONINGSBY (who figures as a pleader in the Year-books from 1480, was appointed serjeant-at-law on 9 Sept. 1495, king's serjeant on 30 Oct. 1500, a puisne judge of the king's bench on 21 May 1509, was knighted then or shortly afterwards, and died in 1535—will completed 2 June and proved 26 Nov.), was born in London and educated at Eton and King's College, Cambridge, into which he was elected in 1497 and of which he became a fellow, though he left the university without taking a degree, was Lent reader at the Inner Temple in 1519, treasurer of the same inn in 1525–6, reader again in 1526, one of the commissioners appointed to hear causes in chancery in relief of Wolsey in 1529, and one of the governors of the Inner Temple in 1533–4, 1536–7, and 1538–9. In 1539–40 he was arraigned in the Star-chamber and sent to the Tower for advising Sir John Skelton to make a will upon a secret trust, in contravention of the Statute of Uses (27 Hen. VIII, c. 10). He was released after ten days' confinement, but lost the offices of prothonotary of the king's bench and attorney of the duchy of Lancaster, which he then held. On 5 July of the same year he was appointed to a puisne judgeship in the king's bench, and was knighted; but as his name is not included in the writ of summons to parliament in the next year, it would seem that he died or retired soon after his appointment. Coningsby was also recorder of Lynn in Norfolk, in which county his seat, Eston Hall, near Wallington, was situate. His daughter Margaret married, first, Sir Robert Alyngton of Horseheath, Cambridgeshire, and secondly, Thomas Pledgeor of Bottisham in the same county. Coningsby is said to have been descended from Roger de Coningsby, lord of Coningsby in Lincolnshire in the reign of John.

J. M. R.

CONINGTON, FRANCIS THIRKILL (1826–1863), chemist, was a younger brother of Professor John Conington [q. v.] He was educated at Corpus Christi College, Oxford, graduated B.A., taking a second class in classics in 1850, was elected a fellow of his college, and afterwards proceeded M.A. For some time he was scientific examiner in the university. He devoted himself chiefly to chemistry, and his 'Handbook of Chemical Analysis,' Lond. 1858, 8vo, based on Heinrich Will's 'Anleitung zur chemischen Analyse,' has taken its place among the text-books on the subject. He died at Boston, Lincolnshire, on 20 Nov. 1863, aged 35.

[Gent. Mag. ccxvi. 130; Cat. of Printed Books in Brit. Mus.; Oxford Ten Year Book (1872), p. 478.]

T. C.

CONINGTON, JOHN (1825–1869), classical scholar, born 10 Aug. 1825, was the eldest son of the Rev. Richard Conington of Boston in Lincolnshire. In 1836 he was sent to the grammar school at Beverley, and two years afterwards to Rugby, where he was placed in the house of G. E. L. Cotton [q. v.], afterwards

successively head-master of Marlborough College and bishop of Calcutta. On 30 June 1843 Conington matriculated at University College, Oxford, but immediately afterwards obtained a demyship at Magdalen. He went into residence in October 1843, and in the Lent term of the following year carried off the Hertford and Ireland university scholarships. Having but little prospect of a lay fellowship at Magdalen, and having determined not to take holy orders, he returned in 1846 to University College, where he was elected to a scholarship. In December 1846 he obtained a first class in the school of 'litteræ humaniores.' In 1847 he won the chancellor's prize for Latin verse, and in 1848 that for an English essay. In the same year he was elected to a fellowship at University, and obtained the chancellor's prize for a Latin essay in 1849.

He was a layman, and to all appearance cut off from any hope of an academical career. He determined, therefore, to try his chances at the bar, and accordingly in 1849 applied for and obtained the Eldon law scholarship. As Eldon scholar he was required to keep his terms regularly at the Inns of Court, and devote himself *bonâ fide* to the study of law. Finding residence in London and the study of law insupportable, Conington resigned the Eldon after six months and returned to Oxford. After more than three years of a somewhat unsettled existence, he was, in 1854, elected to fill the newly founded chair of the Latin language and literature. This professorship he held until he died at his native town, Boston, after a few days' illness, on 23 Oct. 1869.

Some of Conington's earliest and unpublished writings seem to show that he had the ordinary ambition of a clever Englishman to make a figure in the world. Literature was, no doubt, his real love, yet he never ceased to keep his eye upon public affairs, and was even supposed to have all through his life a secret but forlorn hope of one day becoming a member of parliament. But the bias of his intellect was peculiar, and necessarily drove him away from public life to books. He combined with a fondness for books, and especially for poetry, an extraordinary verbal memory. Before he was eight years old he repeated to his father a thousand lines of Virgil. At the age of thirteen, when at Beverley school, he wrote a poem on the Witch of Endor, and spent 1*l.* 15*s.* on a copy of Sotheby's 'Homer.'

Before leaving Rugby in 1843 (aged 18) Conington felt a strong inclination to go to Oxford. He was probably attracted by the prospect of an active and exciting intellectual life. It is curious that his judgment, which he did not follow, drew him in the direction of Cambridge. Cambridge, he thought, insisted upon a valuable preparatory training, whereas 'Oxford men, without any such preparation, which they affect to despise, proceed to speculate on great moral questions before they have first practised themselves with lower and less dangerous studies. And this, I look upon it, is the cause of the theological novelties at Oxford.' To Oxford, however, he went, and read with the eminent scholar Linwood, who had the same passion for Greek plays as his pupil, and something of the same powers of memory. After his brilliant success in gaining the Hertford and the Ireland in one term Conington betook himself to the ordinary course of Oxford reading, the central point of which was the study of ancient history and philosophy. For history and metaphysics Conington had little taste; for Aristotle and Plato he hardly cared at all.

His interest in religious and moral questions was much deeper, and for the discussion of these he then, as always, had a strong taste. He took an active part in the debates of the Union Society, of which he was secretary in 1845, president in 1846, and librarian in 1847. These debates were at that time, says Professor Smith, 'in great favour, and it was quite the fashion to attend them. . . . Conington had some personal difficulties to contend against, among which his near sight, and an occasional hesitation in speaking, were not the least. But, in spite of them, he soon established for himself a good position with his audience, and obtained as much control over them as any of his contemporaries. There was sense and sound reasoning even in his most unprepared speeches, and he always, in speaking no less than in writing, had at his command a copious supply of polished language. His delivery was never free from embarrassment; but notwithstanding this there was something fine and classical in his way of speaking.' That he should have been touched by the enthusiasm of the Anglican movement, and with another enthusiasm sometimes combined with it, that of political radicalism, during these years is only natural. He was indeed, for a few years after he took his degree, considered by the Oxford tory party as a dangerous innovator. Others saw a little further. 'Conington,' some one is reported to have said, 'write about the working classes! They are only a large generalisation from his scout.'

In the summer of 1847 he went to Dresden with his friends, Mr. Goldwin Smith and Mr. Philpot, and had an interview at Leipzig

with Godfrey Hermann. He did not visit Germany again, nor did his stay there produce any appreciable intellectual result. While in London (1849–1850) he contributed regularly to the 'Morning Chronicle,' in which he wrote the articles relating to university reform. He probably wrote on the same subject in other periodicals between 1850 and 1854, when the scheme of the Oxford University commission came into operation. Certainly he threw his whole force into the movement of reform. The opening of close fellowships, the restriction of the number of clerical fellowships, the foundation of new professorships, the augmentation of the number and value of scholarships, the new power given to congregation; all these measures had his warm approval. When, some years later, the liberals went on to move for the repeal of all religious tests, Conington was willing to relax the test, but only within the limits of received christianity. This attitude caused some estrangement between Conington and the liberal party in Oxford. Nothing, however, discouraged him from taking an active part, whenever an opportunity was open to him, in university business.

The beginning of his career as a scholar was full of brilliant promise. He had always a special fondness for the Greek tragedians, and especially for Æschylus, whose plays he knew by heart. In his twenty-fourth year he edited the 'Agamemnon' with a spirited verse translation and notes (1848). The notes, though slight, contained one brilliant emendation, λέοντος ἴνιν for λέοντα σῖνιν (v. 696). Conington was in later years very severe upon this little book; but it was for a long time, and very justly, popular with clever undergraduates. In his 'Epistola Critica,' addressed to Gaisford (1852), he proposed emendations in the fragments of Æschylus, some of which have been accepted as certain by later editors. In a paper in the 'Rheinisches Museum' of 1861, subsequently expanded into an article for the 'Edinburgh Review,' and now printed in both forms in his 'Miscellaneous Writings,' he exploded the spurious second part of the 'Fables of Babrius,' the manuscript of which had, in 1857, been sold as genuine to the British Museum, and had imposed upon Sir George Lewis.

In 1852 he began, in conjunction with Mr. Goldwin Smith, his edition of 'Virgil.' Mr. Goldwin Smith was soon obliged, by the pressure of his occupations as secretary to the university commission, to give up the work. Conington was occupied upon it, with various interruptions, for the rest of his life.

In 1857 he published an admirable edition of the 'Choëphoroe' of Æschylus. In this work a growing caution and distrust of conjectural emendation may be observed. This habit of mind was strengthened as he worked upon 'Virgil.' He formed the conviction that the text of Virgil was exceptionally well established by manuscript evidence, and, as a rule, regarded with something like horror any attempt to depart from the fourth-century copies. It is true that the manuscripts and ancient commentators on Virgil preserve so many variants that the chances of modern conjecture helping the text are very small. There is also much in Virgil's style which is peculiar to himself, and which suggests that, in the ruined state of Latin literature, we have lost the data for understanding him. But Conington was wrong if he supposed that the text of Virgil is certainly established. This it is not, and in all likelihood never will be, if it be the fact, as it probably is, that the numerous ancient manuscripts are derived from one copy, itself full of corrections, and in many places corrupted by glosses, as the text of a widely read poet was certain in the course of time to become.

Conington's general view of the study of ancient literature cannot be better expressed than in the language of his own inaugural lecture (*Miscellaneous Writings*, i. 220): 'The way to study Latin literature is to study the authors who gave it its characters; the way to study those authors is to study them individually in their individual works, and to study each work, so far as may be, in its minutest details. . . . The peculiar training which is sought from the study of literature is only to be obtained, in anything like its true fulness, by attending, not merely to each paragraph and each sentence, but to each word, not merely to the general force of an expression, but to the various constituents which make up the effect produced by it on a thoroughly intelligent reader.'

Width of knowledge, however, and largeness of conception, as well as minuteness of observation, are essential to the making of a true student of ancient literature. Conington, without any useful result, chose to limit the range of his classical reading. For Cicero, Cæsar, and Livy he did not care much, nor had he any great sympathy even with Lucretius.

The edition of 'Virgil,' as originally conceived and executed by him, was a characteristic monument both of his strength and his weakness. The essays introductory to the 'Bucolics,' 'Georgics,' and 'Æneid' are careful and solid, if not exhaustive, pieces of literary criticism. They abound in delicate perceptions, and unquestionably opened up

new aspects of Virgil's poetical genius. The commentary was full of ability, subtle analysis, and solid sense. But, unlike his contemporary Munro, at Cambridge, Conington was contented with a side view of the advances which were being made in Latin scholarship on the continent, and showed at the same time a curious indifference to points of history and antiquities.

It must, however, be said that the general feeling in Oxford, and indeed in England, at this time, was singularly apathetic in regard to such matters. The party of progress in Oxford took more interest in reforms of organisation than in the advancement of knowledge. Conington from circumstances and temperament was essentially one of them. He was anxious always to address the general public, and to interest it in what interested himself. But, making all these deductions, there can be no doubt that during the fifteen years of his professorship Conington based the study of Latin in Oxford on a new foundation. Not only by his written works, but by the sympathetic contact which he was careful to keep up with the most promising undergraduates, he gave a powerful stimulus to the progress of learning and literary culture in England.

Conington had always had a great love for translation, believing strongly in its efficacy as a means of bringing out the meaning of the original. Haupt remarked that 'translation was the death of understanding,' meaning that it is very seldom that a modern word is an exact equivalent for a Greek or Latin one. But Conington had his own theory of translation. Inaccurate he could not be, but he would add something in the English which was not strictly in the Latin, in order to produce the effect which he thought the Latin suggested. Early in the years of his professoriate he had translated Persius, for the benefit of his class, into prose; and he did the same with Virgil while lecturing and commenting on that author, reading his rendering book by book in the form of public lectures. During the last six years of his life he devoted himself much more seriously to translation than he had ever done before. In 1863 he published a verse translation of the 'Odes of Horace,' and in 1866 the 'Æneid' in the ballad metre of Scott. In the same year the death of his friend Mr. Worsley, the author of the admirable 'Odyssey' in Spenserian measure, turned his attention to a new field. Worsley had completed a version of the first twelve books of the 'Iliad,' and Conington, with the full approval of his dying friend, undertook to finish the work. The completed 'Iliad' was published in 1868, and in 1869, almost at the time of Conington's death, appeared the 'Satires,' 'Epistles,' and 'Ars Poetica' of Horace, done into the Popian couplet.

These translations were, as a rule, executed with great rapidity. Conington learnt long passages by heart, and often translated them at odd moments, during walks or in bed, only transcribing them when ready for press. He had great rhetorical facility, and his translations always show vigour, ability, and ready command of good English, often, too, much feeling for poetry; but he was not a poet, and the creative touch is wanting in his work. Again, he wrote too quickly for perfection, and was content to leave unexpunged a good deal of prosy and commonplace English.

Of these versions, the ballad translation of the 'Æneid,' a very questionable though very clever *tour de force*, was by far the most popular. The 'Odes of Horace' won the approval of many men of taste and scholarship; but probably the best, the most finished, and most poetical was the last, the 'Satires' and 'Epistles' of Horace. Taken as a whole, there can be no doubt that these translations increased the public interest in Latin literature.

The translations formed the most attractive part of his professorial lectures; but they were far from being the most valuable part of his instruction to those who wished to learn. His most important courses were upon Persius, on Plautus, on Virgil, and on Latin prose and verse. His 'Persius' was published after his death by the Clarendon Press (1872). In the learning and analytic power of his commentaries the students found stores of information and ample matter for thought. His lectures on Latin verse deserve special notice on account of the thoroughness of their method. He always began with an analysis of the piece of English set, comparing it sentence by sentence with any passages of the Latin classics which occurred to him as similar either in spirit or expression, and taking special care to point out anything modern or unclassical, and to show the nearest approximation to it which was likely to have occurred to a Roman poet. The remainder of the hour he took up with reading out and criticising a selection of the best pieces sent in by the pupils; the whole concluding with a dictation of his own rendering. The last part of the lecture, though dry, was serviceable; but the pre-eminently original and suggestive portion was the preliminary analysis. To a student fresh from school it was a new light to have set before him, by one whose memory was stored with reminiscences of the best Latin and English

literature, and who touched all poetry with an innate tact and sense of its meaning, a comparison in detail between modern and ancient poetical feeling and modes of utterance.

The 'public lectures,' two of which are exacted by statute annually from the Latin professor, were, in his hands, either literary essays on Latin authors, or prose translations of Virgil. Most of them have long been before the world, either in his published editions of 'Virgil' and 'Persius,' or in the collection of his 'Miscellaneous Writings.' One of the best, perhaps, is the comparison of the style of Lucretius and Catullus with that of Virgil and Horace, 1867 (*Miscellaneous Writings*, i. 256).

After his appointment to the professorship he seldom left the field of Latin literature. His edition of the 'Choëphoroe' (1857) had no doubt, in great part, been written before 1854; for the rest, all that need be mentioned here is the essay on Pope (*Oxford Essays*, 1858), and some slighter papers in the 'Contemporary Review' in 1868, reprinted in the first volume of the 'Miscellaneous Writings.' He had intended, after finishing his 'Virgil,' to write a 'History of the Latin Poetry of the Silver Age.' Two of his public lectures, one on Statius, the other on the tragedies of Seneca, may perhaps be regarded as preliminary studies for this work. He had also hopes of one day undertaking an edition of Tacitus, on whose English translators he once gave an interesting public lecture.

But all these plans were extinguished by his premature death, which robbed Oxford of a lofty character and an imposing personality. For Conington was a man whose personality impressed itself on those who knew him in a way which those who did not would find it hard to realise. His flow of conversation, his most characteristic humour, enhanced by a slight hesitation in utterance, his transparent sincerity and childlike simplicity, made him a delightful companion. One or two quaint peculiarities heightened the general impression. His numerous friends were classed according to degrees of intimacy; and to each of those who had been promoted to the inner circle a certain day in the week was allotted for an afternoon walk. To miss this engagement on short (still more without any) notice was a high crime and misdemeanor. The reading parties, on which, during part of the long vacation, he used to gather a few promising men, were great events. Conington, who was very short-sighted, had hardly any appreciation of the wonders or beauties of nature. Of the comet of 1858 he said that he did not think 'that phenomenon ought to be encouraged.' This characteristic trait drew from him a great deal of humour at his own expense. There was, indeed, a kind of sublime detachment in the way in which, while his young friends would be earnestly expatiating on the beauties of a country, Conington would tramp vigorously along the high road, refusing to be allured by any blandishments to the right hand or the left.

The real secret of his influence in Oxford lay in his unbounded powers of sympathy, his desire of making friends, and his singleminded determination to be of use to all the students whom he had any reasonable hope of benefiting. All this won him many devoted friends and pupils, not a few of whom were without any special interest in his own pursuits, and perhaps disagreed with his opinions. But again, behind this there was a moral dignity and seriousness in him which was rooted in a deeply religious nature. His speculative religious opinions were for the greater part of his life those of an evangelical christian. Criticism of an illustrative or exegetical kind he was always ready to welcome, but he had no sympathy with rationalism. He seems in 1854 to have gone through a mental and moral crisis, in which what before had been an intellectual assent was transformed into an absorbing practical conviction. The result of this was that Conington was not only what is commonly described as 'a good christian man,' but that he set himself to mould all details of conduct and observance according to his belief. Thus his natural simplicity and warm affections were deepened into an invincible goodness, which was, perhaps, of all his characteristics, that which was the most superficially obvious to those with whom he came into contact. When he died, it was felt that Oxford had lost a man unlike others, of remarkable powers, who set himself a noble and disinterested work in life, and never abandoned it.

[Memoir by Professor H. J. S. Smith, prefixed to the Miscellaneous Writings of John Conington; personal knowledge.] H. N.

CONN OF THE HUNDRED BATTLES (*d.* 157), king of Ireland, was son of King Fedlimid, Reichtmar or the Lawgiver. There is a strange story that 'on the night of his birth were discovered five principal roads leading to Tara which were never observed till then.' The names of the roads are given, and most of them have been identified. The explanation of Dr. O'Donovan is that these roads were finished by the king on his son's birthday. On the death of King Fedlimid he was

succeeded by Cathaeir Mor, a distant relative. Conn, who seems to have held the command of the *fianna*, or military force, during his father's reign, continued to occupy the same position under Cathaeir, having as second in command a brave warrior named Cumhal. This officer, having incurred the displeasure of Conn, fled to Scotland, where he remained in exile for some years. After a brief reign of three years Cathaeir was killed in the battle of Magh Agha (near Tailtin, co. Meath) by Conn, who then succeeded to the throne, A.D. 123. One of his earliest acts was to bestow the kingdom of Leinster on his tutor, Crimthann Culbuidhe, or 'of the yellow hair,' a member of the race to which he belonged himself. Cumhal returned from Scotland, and laid claim to the kingdom of Leinster, asserting that he had as much right to it as Crimthann. To vindicate his authority as sovereign Conn summoned to his aid Conall, king of Connaught, and Aedh Mac Morna, captain of the *fianna* of Connaught. On the other hand, Cumhal formed an alliance with Mogh Neid, king of Munster, Mac Niadh, son of Lughaidh, his nephew, and Conaire II, both then princes and tanists of that province. The Munster chieftains, accompanied by Eogan Mor, son and heir of Mogh Neid, having marched to his aid, Cumhal gave battle to Conn at Cnucha (Castleknock, near Dublin), where the Leinster men and their allies were defeated by Conn, and Cumhal was killed; he was father to the famous warrior Finn Mac Cumhail (Finn Mac Coole).

The union of the Munster forces was only temporary, and on their return after the battle of Cnucha dissensions broke out among them. There were at the time three races in the province. The line descended, as supposed, from Eber, son of Miledh or Milesius, and represented by Mogh Neid, the ruling king; the race of Ith, who had settled in south Munster along with and under Eber, and who were represented by Mac Niadh, son of Lughaidh; and the Ultonian race descended from Ir, and represented by Conaire, son of Mogh Lamha. A colony of the latter, who were called Euronn or Ernaidhe, from an ancestor, Ailill Euronn, driven from Uladh by the Clanna Rudhraidhe, according to the Saltair of Cashel, settled in middle Munster in the time of Duach Dalta Deaghaidh, about the end of the second century B.C. These Ernaidhe, forming an alliance with the race of Ith, in course of time drove the old Eberean tribes back to the western coasts and islands of Munster. This compact was broken up by Dergthine, grandfather of Mogh Neid, and when his son Eogan Mor (better known by his appellation of Mogh Nuadat) succeeded, the power of the Ebereans had so increased that he determined to assert his right to the sovereignty of Munster. Finding himself unequal to the task without allies, he applied to Daire Barrach, king of Leinster, his foster father, who supplied him with troops, upon which he attacked and defeated Aengus, one of his adversaries, at Ui Liathain (Castlelyons, co. Cork). Aengus then sought the assistance of Conn, who sent him five battalions of chosen troops, with which he renewed the contest, but was again worsted at the battle of Ard-neimhedh (the Great Island, co. Cork). Conn then appears to have entered into direct conflict with Mogh Nuadat, but after many defeats was obliged to submit to a division of Ireland between himself and his adversary. The boundary line agreed on was the Eiscir Riada, a gravel ridge running from Dublin to Clarin Bridge in the county of Galway. Thenceforth the north of Ireland was known as Leth Cuinn, 'Conn's half,' and the south as Leth Mogha, 'Mogh's half,' from which is said to have been derived the name of Munster. The early and continuous use of these names in Irish literature attests the historical reality of the event. The year after the partition of the kingdom war was again renewed between them, owing, according to the 'Annals of Clonmacnois,' to the ambition of Mogh Nuadat, who demanded a division of 'the customs of the shipping of Dublin,' which Conn having refused, each side prepared for battle; but this story evidently belongs to a later age. The war was carried on during fourteen years, when it was finally brought to a close by the battle of Magh Lena (Moylena in the parish of Kilbride, King's County), in which Mogh Nuadat was killed. He had been married to a daughter of the king of Castile, and on this occasion is said to have been assisted by a body of Spanish troops led by the king's son, who was also killed. He and Mogh Nuadat were buried 'in two little hillocks, now to be seen at the said plain, which, as some say, are the tombs of the said Owen and Fregus' (*An. Clonmacnois*).

Conn now became once more king of all Ireland, and after a reign of thirty-five years was slain by Tiobraide Tireach, king of Uladh, at Tuath Amrois, near Tara, A.D. 157, as he was preparing to celebrate the *feis* or festival of Tara. He was buried at Brugh na Boinne, the cemetery of the pagan kings of Ireland, and his monument, a stone cairn, is mentioned among the tombs enumerated in the 'Dinnsenchus.'

An ancient treatise attributed to him, and quoted so early as in the 'Tripartite Life of St. Patrick,' is in existence, entitled 'Baile

Chuinn-Ched-Chathaigh,' 'The Ecstasy (or Prophecy) of Conn of the Hundred Battles,' and another entitled 'Bailé an Scáil,' or 'The Champion's Ecstasy,' said to have been delivered to him; but the ascription of these compositions to his age only proves his celebrity at the period in which they were written. He was termed 'Cead Cathach,' generally translated 'of the hundred battles,' because, according to the 'Annals of Clonmacnois,' he fought exactly that number, but *cathach* is an adjective which Colgan elsewhere translates *præliator*. The true meaning, therefore, is 'the hundred battler,' or fighter of hundreds of battles; and this is borne out by a poem quoted by Keating, in which 260 battles are attributed to him.

The dates followed for the accession and death of Conn are those of the 'Four Masters.' According to Dr. O'Donovan the 'Annals' are much antedated at this period, but the authorities vary so much that it seems hopeless to arrive at an exact chronology of events, which, nevertheless, as there is reason to believe, belong to the domain of history in their general outline.

[Keating's Hist. of Ireland, Reign of Conn Cead Cathach; Annals of the Four Masters, A.D. 123; Petrie's Round Towers, p. 102; the Battle of Magh Lena, Dublin, 1855 (Celtic Society); O'Curry's MS. Materials, p. 385.] T. O.

CONN-NA-MBOCHT (*d.* 1059), 'Conn of the Paupers,' was head of the Culdees and bishop of Clonmacnois. The term Culdee is the English form of the vernacular *Céle de*, 'companion of God,' which, though not a translation, was suggested by the Latin 'servus Dei,' as applied in a technical sense to a monk. One of the earliest instances of the use of the term *Céle de* is in the 'Life of St. Findan,' compiled shortly after A.D. 800. The latest mention of the term is in the 'Annals of the Four Masters' at A.D. 1595. During this period of nearly eight hundred years it was used with a large variety of application. If we may credit certain Irish records, it is found at the close of the eighth century in a definite sense and in local connection with a religious class or institution. St. Maelruain of Tamlacht (now Tallaght, near Dublin) (*d.* 792), abbot and bishop, gathered round him a fraternity, for whom he composed a religious rule, called the Rule of the Culdees, the term being employed in the sense of 'ascetics' or 'clergy of stricter observance.' They appear also to have had the care of the sick, as may be gathered from the vision of St. Moling of Ferns (*d.* 697). In that legend, when Satan, assuming the form of an angel of light, appears to the saint and assures him he is Christ, St. Moling refuses to believe it, for 'when Christ came to converse with the Culdees it was not in royal apparel he appeared, but in the forms of the unhappy, viz. the sick and the lepers.' They had also the conduct of divine service, and in later times the charge of the fabric of the church. On the rise of the great monastic orders the term Culdee came to mean an old-fashioned Scotic monk living under a less strictly defined discipline.

It had not yet lost its original meaning at the time when Conn-na-mbocht was proud of the name of Conn of the Paupers. The origin of this title is thus given in the 'Annals of the Four Masters:' 'He was the first who invited a party of the poor of Clonmacnois at Iseal Chiarain and presented them with twenty cows of his own.' In other words he endowed the institution at Iseal Chiarain in the only way possible in that age, that is by stocking the land with cattle and making them over to it. The land so termed, 'the low ground of St. Ciaran,' as the meaning is, had been under tillage in the founder's time when the excellence of the crops is referred to. It afterwards became the name of the hospital established there under the auspices of Conn, the first instance of such a foundation and endowment in Ireland for the maintenance and care of the poor, and perhaps also of the sick and lepers. There was a church attached to the hospital, in which it may be presumed the Culdees ministered to those under their charge. The moral effect of this charitable act seemed so great in that age that a poet quoted by the 'Four Masters' says: 'O Conn! O Head of dignity, it will not be easy to plunder thy church.' In 1072, however, the 'Annals' record that 'a forcible refection was taken by Murchadh, son of Conchobar O Maeleachlainn, king of Meath, at Iseal Chiarain, and from the Culdees, so that the superintendent of the poor was killed there, for which Magh Nura was given to the poor.' At that period a refection or entertainment of the king and his followers corresponded to the rent payable in later times. Looking at it in this view it is possible that there may have been a question of title here, as we find that in 1089, seventeen years after, Cormac, son of Conna-mbocht, purchased Iseal Chiarain for ever from the king of Meath, that is the successor of the king who had plundered it.

The descendants of Conn considered his title so honourable that it became a family designation, and they were known as the Meic-Conn-na-mbocht. He himself was descended from a long line of ancestors, all of whom held some office at Clonmacnois, from Torbach,

an abbot of Armagh, who died in 812, and who was the son of Gorman, an abbot of Louth, who died on a pilgrimage at Clonmacnois in 798. Joseph, the father of Conn, was *Aumchara*, or spiritual adviser in the monastery. Conn himself had five sons: Maelfinnen, whose son Cormac became abbot; Maelchiarain, who was abbot; Cormac, who was reversionary abbot; Ceilechair, whose son Maelmuire was the writer of the well-known manuscript Lebar na h-Uidhre; and lastly Gillacrist, who died in 1085. They were a family of eminent piety and practical benevolence, and continued to take a warm interest in the hospital. Maelchiarain, who was abbot at the time of the outrage on the Culdees, was also guardian of the hospital, and the Culdees are called in the 'Annals of Clonmacnois' 'the family of Maelchiarain,' and it was Cormac, another son of Conn, who, as we have seen, purchased the fee of Iseal Chiarain. From the instances of Maelchiarain and Conn himself, whom O'Curry strangely terms 'a lay religious,' as well as those of SS. Maelruain and Moling, who were bishops and abbots, there does not seem any foundation for that writer's assertion that the Culdees were a lay order.

The fame of this foundation enhanced the celebrity of Clonmacnois. Tidings of it reached even to Scotland, as we are informed by the poet already referred to. Conn himself was accounted 'the glory and dignity of Clonmacnois,' while his son, the Abbot Maelchiarain, was also 'the glory and veneration of Clonmacnois in his time.'

[The Annals of the Four Masters, A.D. 1031, 1059, 1079; Bishop Reeves on the Culdees in the Transactions of the Royal Irish Academy, vol. xxiv.; O'Curry's MS. Materials, p. 184; Martyrology of Donegal, p. 241; Chronicon Scotorum, Rolls ed., p. 209.] T. O.

CONN (CONÆUS), GEORGE (*d.* 1640), was brought up as a catholic by his father, Patrick Conn of Auchry, near Turriff. His mother was Isabella Chyn of Esselmont. He was sent when very young to be educated at Douay, from which he passed in succession to the Scots College at Paris and at Rome. He completed his education at the university of Bologna, where he attracted the notice of the Duke of Mirandola, who made him tutor to his son. In order to devote himself to an ecclesiastical life he went to Rome in the summer of 1623, where he was admitted into the household of Cardinal Montalto, who bequeathed him a handsome legacy at his death six months afterwards. Conn transferred his services as secretary to Cardinal Barberini, the nephew of Pope Urban VIII, and accompanied him when he went as nuncio to France (Dempster, *Hist. Eccl. Gentis Scotorum*, 170; Gordon, *Eccles. Chronicle for Scotland*, iv. 536). Gordon further states that Conn was subsequently 'made canon of St. Lawrence in Damaso and enriched with other benefices.' He also became 'secretary to the congregation of rites, and domestic prelate to the pope' (Gordon, iv. 537). In the dedication of his life of Mary Stuart, published in 1624, the letters F.P. appear after his name, and it may therefore be taken for granted that he had become a Dominican friar before that date.

Conn's historical importance arises from his mission to England to fill the place of papal agent at the court of Henrietta Maria, which was vacated by Panzani's return to Italy. Panzani had been engaged in a vain attempt to encourage those Englishmen who wished to effect a union between the church of England and that of Rome, with the object of obtaining the complete submission of the former to the latter. Conn, who landed at Rye on 17–27 July 1636, was content to win over individual converts, and to make use of the favour in which he stood at court to ameliorate the lot of the English Roman catholics. In both these aims he succeeded beyond expectation. He stirred up the queen, who had before been sluggish in the matter, to give an active support to the propagation of her religion, and especially in soothing her husband whenever he was irritated by conspicuous additions to the roll of converts. In October 1637 the conversion of Lady Newport brought matters to a crisis. The king was urged by Laud to enforce the laws, but the queen, kept to her work by Conn, pleaded against Laud, and in the end, though a proclamation was issued to restrain conversion, its terms were so mild that they did not provoke any further objection from the queen herself. Conn, no doubt, owed the success of his intervention in part to his personal influence with the king. Agreeable and well informed, with charming manners and diplomatic skill, Charles found in him a companion such as he dearly loved. A hearty dislike of puritanism was common to both. Conn remained in England till the summer of 1639, the letter in which he announces that he had introduced his successor, Rossetti, and had received the passports which would enable him to leave the country, being dated 30 Aug.–9 Sept. in that year.

Conn had long been in weak health, and his death took place at Rome, according to the monument erected to his memory in the church of St. Lawrence in Damaso by his

patron Cardinal Barberini, on 10 Jan. 1640 N.S. (*ib.* p. 537).

[In addition to the works quoted above, reference may be made for full information on Conn's proceedings in England to his own despatches. Most of them are to be found in the transcripts in the British Museum, Add. MSS. 15389–92. Transcripts of others are in the Public Record Office. Dempster states that while he was still at Bologna, that is to say before 1623, he planned ('est meditatus') a work called Institutio Principis and also an attack on the enemies of the Scots under the name of Præmetiæ. Of the former no copy exists in the British Museum Library or the Bodleian, and it is not mentioned by Brunet. Possibly, therefore, it was never published or even completed. The latter work was published at Bologna in 1621 under the title of Præmetiæ sive Calumniæ Hirlandorum indicatæ, et Epos; Deipara Virgo Bononiensis ad Xenodochium vitæ. Conn's next work was Vita Mariæ Stuartæ, published at Rome in 1624, another edition being published in the same year at Würzburg; followed by De duplici Statu Religionis apud Scotos libri duo, also published at Rome in 1628. Assertionum Catholicarum libri tres, published at Rome in 1629, is in the Bodleian but not in the British Museum Library.] S. R. G.

CONNELL, Sir JOHN (1765?–1831), lawyer, son of Arthur Connell, merchant in Glasgow, and lord provost of that city, was educated at the university there, and admitted a member of the Faculty of Advocates in 1788. He married a daughter of Sir Islay Campbell of Succoth, bart., lord president of the court of session. In 1795 he was appointed sheriff depute of Renfrewshire, and in 1805–6 he was chosen procurator, or law adviser, for the church of Scotland, and enjoyed an extensive practice in church causes. In 1816 he was appointed judge of the court of admiralty, and held this office till 1830, when that court was abolished. Some time before 1821 he received the honour of knighthood. He died suddenly in April 1831 at Garscube, the seat of his brother-in-law, Sir Archibald Campbell. He was the author of two books: 1. 'A Treatise on the Law of Scotland respecting Tithes and the Stipends of the Parochial Clergy,' 3 vols. 1815, of which a second edition in two vols. appeared in 1830. 2. 'A Treatise on the Law of Scotland respecting the erection, union, and disjunction of parishes, the manors and glebes of the parochial clergy, and the patronage of churches,' 1818. To this a supplement was added in 1823.

[Kay's Edinburgh Portraits, vol. ii.; MS. Minutes of the Faculty of Advocates; private information.] W. G. B.

CONNELLAN, OWEN (1800–1869), Irish scholar, a native of co. Sligo and son of a farmer who claimed descent from the chiefs of Bunnyconnellan in Mayo, and through them from Laoghaire MacNeill, king of Ireland, was born in 1800. He studied Irish literature, and obtained employment as a scribe in the Royal Irish Academy, where he worked for more than twenty years, and copied a great part of the large collections of Irish writings known as the Books of Lecan and of Ballymote. After George IV's visit to Ireland he was appointed Irish historiographer to the king, a post which he also held throughout the reign of William IV. Shortly after the establishment of queen's colleges Connellan was made professor of Irish at Cork, and held the chair till his death, which took place in Dublin in 1869. He published in 1830 a 'Grammatical Interlineary Version of the Gospel of St. John,' 'Grammatical Praxis on the Gospel of St. Matthew,' 'Dissertation on Irish Grammar,' 1834, and compiled the 'Annals of Dublin' in Pettigrew and Oulton's 'Directory' for 1835. In 1844 he published a 'Practical Grammar of the Irish Language.' He admired Sir William Betham, whose 'Etruria Celtica' had, he thought, proved the identity of the Irish and Etruscan languages; but the grammar is nevertheless of value as preserving the idiom and pronunciation of Irish in the north of Connaught. In 1846 he published, in a large quarto volume, 'The Annals of Ireland, translated from the Original Irish of the Four Masters.' This creditable work was superseded by the publication of the full Irish text of the 'Annals,' with a translation by O'Donovan. In 1860 Connellan's most important work appeared—a text with translations and notes of the interesting 'Imtheacht na Tromdhaimhe,' an ancient tale, which relates how the 'Tain Bo Cuailgne,' the most famous story of the Irish bards, was recovered in the time of St. Ciaran.

[Works; information from Connellan Grésaidhe Piobaire, his relative.] N. M.

CONNELLAN, THADDEUS (*d.* 1854), Irish scholar, published an Irish-English dictionary (1814), Irish grammars (1824–5), and translations of parts of the Bible. He died at Sligo, 25 July 1854.

[Cooper's Biog. Dict.]

CONNOR or O'CONNOR, BERNARD, M.D. (1666?–1698), physician and historian, descended from an ancient Irish family, was born in the county of Kerry about 1666. Being brought up as a catholic he was unable to receive a university education in his native country, but he was thoroughly instructed by private tutors. With the intention of

adopting the medical profession he went to France about 1686, and studied at the universities of Montpelier and Paris, but took the degree of M.D. at Rheims on 18 Sept. 1691 (Munk, *Coll. of Phys.* 2nd edit. i. 514). He became highly distinguished in his profession, and was particularly skilled in anatomy and chemistry. When the two sons of the high chancellor of Poland were on the point of returning to their own country, it was arranged that they should be accompanied by Connor. He first conducted them to Venice, where he cured the Hon. William Legge, afterwards Earl of Dartmouth, of a fever. He then proceeded to Padua, and thence, through the Tyrol, Bavaria, and Austria, to Vienna. After some stay at the court of the Emperor Leopold he passed through Moravia and Silesia to Cracow and Warsaw. He was appointed physician at the court of King John Sobieski in consequence of letters of recommendation addressed to Hieronimo Alberto de Conti, the Venetian minister, whose wife was the Lady Margaret Paston, eldest daughter of Robert and sister to William, earl of Yarmouth. His reputation was increased by the decided opinion he gave, that the king's only sister, the Duchess of Radzevil, was suffering not from ague as other physicians maintained, but from an abscess in the liver. A post-mortem examination proved the correctness of Connor's diagnosis. In 1694 he was appointed to attend the king of Poland's only daughter, the Princess Teresa Cunigunda, who was to travel from Warsaw to Brussels to marry the elector of Bavaria. He set out with the princess on 11 Nov. 1694, and they arrived at Brussels on 12 Jan. 1694–5. Having resigned his charge to Dr. Pistorini, the elector's physician, he came in February to London and took up his residence in Bow Street, Covent Garden.

Soon afterwards he visited Oxford, where he lectured with great credit upon the discoveries of Malpighi, Bellini, Redi, and other celebrated scientific men whom he had known abroad. In 1695 he published 'Dissertationes Medico-Physicæ. De Antris Lethiferis. De Montis Vesuvii Incendio. De Stupendo Ossium Coalitu. De Immani Hypogastrii Sarcomate,' Oxford, 1695, 8vo. The above treatises, which are printed separately with distinct title-pages, show their author to have been a man of much thought and observation, as well as of great reading and general knowledge. He returned in the summer of 1695 to London, where in the ensuing winter he gave another course of lectures. On 27 Nov. 1695 he was elected a fellow of the Royal Society (Thomson, *List of Fellows of the Royal Soc.* p. xxix). On 6 April 1696 he was admitted a licentiate of the College of Physicians. In the latter year he lectured at Cambridge.

In 1697 he published his 'Evangelium Medici; seu medicina mystica de suspensis naturæ legibus, sive de miraculis; reliquisque ἐν τοῖς βιβλίοις memoratis, quæ medicæ indagini subjici possunt,' London, 8vo (two editions in the same year), reprinted at Amsterdam 1699. In this work he endeavours to show that the miraculous cures performed by our Lord and his apostles may be accounted for on natural principles. Its appearance made a great sensation, and the orthodoxy of the writer, who, after his settlement in London, had conformed to the established church, was impugned. He had taken the precaution, prior to the publication of the book, to obtain the license of the College of Physicians. In the British Museum there are two letters from Connor, each printed on a single sheet, defending himself from the charge of heterodoxy. One of these letters is addressed to the archbishop of Canterbury. As a further attestation of his sincerity he received the sacrament in the church of St. Martin-in-the-Fields.

The election of a successor to King John Sobieski having drawn public attention to the affairs of Poland, Connor was desired to publish what he knew about that country. He accordingly wrote hurriedly 'The History of Poland, in several letters to persons of quality, giving an account of the ancient and present state of that kingdom,' 2 vols. London, 1698, 8vo. In preparing this work he had the assistance of a Mr. Savage, who wrote almost the whole of the second volume. It contained much new and interesting information, and was for a long time regarded as the best work on the subject. From it the account of Poland in Dr. Harris's 'Collection of Travels,' vol. ii. (1748), was principally derived.

Connor was attacked by a fever, of which he died in October 1698. He was buried at St. Giles's-in-the-Fields on the 30th, when his funeral sermon was preached by William Hayley, D.D. Hayley, who regarded him as a true and penitent member of the church of England, attended him in his last illness and gave him the sacrament, but almost immediately afterwards a catholic priest visited the dying man, gave him absolution, and it is supposed administered the last rites of the Roman church.

Besides the above-mentioned works, he wrote: 1. 'Lettre écrite à Monsieur le Chevalier Guillaume de Waldegrave, premier medecin de sa Majesté Britannique. Con-

tenant une Dissertation Physique sur la continuité de plusieurs os, à l'occasion d'une fabrique surprenante d'un tronc de Squelette humain, ou les vertebres, les côtes, l'os Sacrum, & les os des Iles, qui naturellement sont distincts & separez, ne font qu'un seul os continu & inseparable,' Paris, 1691, 4to. 2. 'Ζωοθανάσιον θαυμαστόν, seu Mirabilis Viventium Interitus in Charonea Neapolitana Crypta. Dissertatio Physica Romæ in Academia ill. D. Ciampini proposita,' Cologne, 1694. On the title-page of this and the previous work the author's name appears to have been originally printed 'O'Connor,' but the letter 'O' has been carefully cut out.

[Funeral Sermon by Hayley; Biog. Brit. (Kippis); Sloane MS. 4041; MacGee's Irish Writers of the Seventeenth Century, p. 213; Cat. of Printed Books in Brit. Mus.; Lowndes's Bibl. Man. (Bohn), 511; Wilford's Memorials, p. 345.] T. C.

CONNOR, CHARLES (*d.* 1826), comedian, was a native of Ireland, and was educated at Trinity College, Dublin. He is said in the 'Gentleman's Magazine' for December 1826 to have played at school Euphrasia in the 'Grecian Daughter,' to have made his first appearance as an actor at Bath as Fitzharding in the 'Curfew,' and to have been the original Lothair. These statements must be taken with reserve. The original Lothair of 'Adelgitha' was Elliston, and that of the 'Miller and his Men' was Abbott, and the first appearance in London of Connor did not take place until 18 Sept. 1816, two years after the first production of the latter, and nine after that of the earlier piece. Of his Bath performances, moreover, no record exists. His first London character was Sir Patrick McGuire in the 'Sleep Walker' of Oulton. From this period until 14 June 1826, when as Kenrick in the 'Heir-at-Law' he took a benefit and made his last recorded appearance, he played at Covent Garden a round of characters. These consisted of Irish characters, servants, villains, and the like, the most prominent being Sir Callaghan in Macklin's 'Love à la Mode,' Foigard in the 'Beaux' Stratagem,' Sir William Davison in an adaptation of Schiller's 'Mary Stuart,' Julio in Barry Cornwall's 'Mirandola,' Dennis Brulgruddery in the younger Colman's 'John Bull,' and Filch in the 'Beggar's Opera.' He also played characters in various adaptations of Scott's novels. The original characters assigned him included Terry O'Rourke, otherwise Dr. O'Toole, in the 'Irish Tutor,' written expressly for him, Cheltenham 12 July 1822, Covent Garden 28 Oct. 1822; and Dr. O'Rafferty in 'Cent. per Cent.,' 29 May 1823. He is said to have played Sir Lucius O'Trigger in the 'Rivals.' Connor had a good face, figure, and voice, and was fairly popular. His career in London cannot be regarded as a great success, seeing that he made no advance. He died suddenly of heart disease on 7 Oct. 1826 while crossing St. James's Park to his home in Pimlico, and was buried on 13 Oct. 1826 at the New Church, Chelsea. Connor was a Roman catholic. He left two children and a wife who had been on the stage.

Mrs. Connor is said to have acted at the Haymarket as Grace Gaylove in the 'Review.' She played at Covent Garden on 22 May 1820 Manse Headrigg in the 'Battle of Bothwell Brigg,' in which her husband was Graham of Claverhouse, Servia in 'Virginius' to her husband's Appius, Covent Garden, December 1821, and Duchess of York in 'Richard III,' Covent Garden, 12 March 1821. A benefit was given her at the English Opera House (Lyceum) after her husband's death.

CONNOR, GEORGE HENRY (1822–1883), dean of Windsor, eldest son of George Connor, master in chancery in Ireland, born in 1822, was educated at Trinity College, Dublin, where he graduated B.A. in 1845, and proceeded M.A. in 1851. He was ordained deacon in 1846 and priest in the following year. After officiating for some time at St. Thomas's Chapel, Newport, Isle of Wight, he held a cure of souls at St. Jude's, Southsea, and subsequently at Wareham, Dorset. He was appointed vicar of Newport in 1852. Here it was due to his initiative and energy that the parish church was rebuilt at a cost of 22,000*l.* The foundation-stone was laid by the prince consort. He also built a vicarage and some almshouses, and effected some improvements in the schools. He was for some years honorary chaplain and chaplain in ordinary to the queen, chaplain to the governor of the Isle of Wight, and official and commissary of the archdeaconry of Wight. He was gazetted to the deanery of Windsor in October 1882. He left Newport amidst the general regret of his parishioners. He had no sooner entered on his new duties than his health broke down. He preached once in St. George's Chapel, and several times in the private chapel. It taxed his strength severely to be present on the occasion of the christening of the Princess Alice of Albany on 26 March. He died on 1 May 1883. Connor married in 1852 Maude Worthington, eldest daughter of John

Worthington of Kent House, Southsea, by whom he had two sons and some daughters. His daughter Emily Henrietta married Ernest Wilberforce, successively bishop of Newcastle and Chichester. Connor published a volume entitled 'Ordination and Hospital Sermons.'

[Times, 2 May 1883, p. 10; Cat. Grad. Univ. Dublin.] J. M. R.

CONNY, ROBERT (1645?–1713), physician, son of John Conny, surgeon, and twice mayor of Rochester, was born in or about 1645. He was a member of Magdalen College, Oxford, and proceeded B.A. on 8 June 1676, M.A. 3 May 1679, M.B. 2 May 1682, and M.D. 9 July 1685, on which occasion he 'denied and protested,' because the vice-chancellor caused one Bullard, of New College, to be presented LL.B. before him. In 1692 he was employed by the admiralty as physician to the sick and wounded landed at Deal. He married Frances, daughter of Richard Manley. He contributed a paper, in the form of a letter to Dr. Plot, 'On a Shower of Fishes,' to the 'Philosophical Transactions,' xx., and is said to have been a successful physician, and to have improved the practice of lithotomy. He died on 25 May 1713, at the age of sixty-eight, and was buried in Rochester Cathedral. His portrait is in the Bodleian picture gallery and in the lodgings of the president of Magdalen College.

[Munk's Coll. of Phys. i. 497–8; Wood's Life, xcv; Wood's Fasti Oxon. (Bliss), ii. 397; Hist. and Antiq. of Oxford (Gutch), II. ii. 964.]

CONOLLY, ARTHUR (1807–1842?), captain in the East India Company's service, was one of the six sons of Valentine Conolly of 37 Portland Place, London, who made a rapid fortune in India at the close of the last century, and who died on 2 Dec. 1819, three days after his wife (*Gent. Mag.* lxxxix. (ii.) 569, 570). Arthur, the third son, was born on 2 July 1807, and on 1 July 1820 was entered at Rugby School by his uncle, the Rev. Mr. Wake of Angley House, Cranbrook, Kent. Among his schoolfellows were Lord Sidney Godolphin Osborne, Bishop Claughton, and Generals Horatio Shirley and Sir Charles Trollope (*Rugby School Registers*, 1881). A shy, sensitive boy, Conolly was unfit for public-school life, and often referred in after years to his sufferings at Rugby (Kaye, *Lives of Indian Officers*, vol. ii.) Leaving Rugby, he entered Addiscombe Seminary 3 May 1822, but resigned on receiving a cavalry cadetship. He proceeded to Bengal the same year, a fellow-passenger with Bishop Heber, and in January 1823 was made cornet in the 6th Bengal native light cavalry, to which his brother, Edward Barry Conolly, was appointed later. Arthur became lieutenant in the regiment 13 May 1825, and captain 30 July 1838. Being in England on sick leave in 1829, he obtained leave to return to India through Central Asia. He left London 10 Aug. 1829, travelled through France and Germany to Hamburg, thence by sea to St. Petersburg, where he stayed a month, and then proceeded by Tiflis and Teheran to Astrabad. There he assumed the guise of a native merchant and laid in a stock of furs and shawls, in the hope of penetrating to Khiva. He left Astrabad for the Turcoman steppes on 26 April 1830, but when the little caravan to which he attached himself was about halfway between Krasnovodsk and Kizil Arvat he was seized by some treacherous nomads and plundered. For days his life hung in a balance, the Turcomans being undecided whether to kill him or sell him into slavery. Tribal jealousies in the end secured his release, and he returned to Astrabad 22 May 1830, whence he continued his journey to India by way of Meshed, Herat, and Candahar, visiting Scinde, and finally crossing the Indian frontier in January 1831. A lively narrative of the journey—reflecting Conolly's bright, hopeful temperament—was published by him under the title 'A Journey to Northern India,' &c. 2 vols. 8vo, London, 1834. Conolly also contributed papers on 'The Overland Journey to India' to 'Gleanings in Science,' 1831, i. 346–57, 389–98, and on a 'Journey to Northern India' to 'J. R. Geog. Soc.,' iv. 278–317. After an interview with Lord William Bentinck at Delhi, Conolly rejoined his regiment, and when stationed at Cawnpore appears to have acquired the lasting friendship of the eccentric Jewish convert, Dr. Joseph Wolff, then travelling as a missionary in India. In 1834 he was appointed assistant to the government agent in Rajpootana, and in 1838 returned home on furlough. Seriously disappointed in love, Conolly sought relief in further professional activity (*ib.*) Russian movements in Central Asia were beginning to cause anxiety in England, and Conolly proposed to the home government to remove the not unreasonable pretext for Russian advances in that quarter by negotiating with the principal Usbeg chiefs, so as to put a stop to the carrying off of Russian and Persian subjects into slavery. He was furnished with letters of recommendation to Lord Auckland, then governor-general of India, together with 500*l.* to pay the expenses of an overland journey. Conolly left London 11 Feb. 1839, visited Vienna

(where he had an interview with Prince Metternich), Constantinople, and Bagdad, where he first met Major (now Sir Henry) Rawlinson, and reached Bombay in November 1839, thence proceeding to Calcutta. The moment appeared propitious, and Conolly was sent on to Cabul, where in the spring of 1840 he joined the staff of Sir William Hay Macnaghten, the British envoy with Shah Soojah in Afghanistan. One of Macnaghten's brothers had married Conolly's sister (see BURKE, *Baronetage*, under 'Macnaghten'). A paper written by Conolly when in Afghanistan at this time, on 'The White-haired Angora Goat, . . . and another resembling the Thibet Shawl Goat,' appeared in 'Journ. Asiat. Soc.' vi. (1841) 159–78.

At the beginning of 1840 Shah Soojah had been replaced on the throne of Cabul, and the failure of the Russian expedition under Perovsky to Khiva was still unknown in India. The openly expressed views of the envoy, Macnaghten, then were that the British troops in Afghanistan should be pushed on to Balkh, and possibly to Bokhara, with the threefold object of reconstituting the authority of Shah Soojah over the petty tribes between Cabul and Balkh; of effecting the release of Colonel Stoddart, who had been despatched by the British envoy in Persia in 1838 on a special mission to Bokhara, where he had been detained and repeatedly imprisoned by the ameer; and of making a sort of counter-demonstration against the Russian advance. There appears to have been some intention of sending Major Rawlinson and Arthur Conolly on a special mission to the Russian army (*Calcutta Review*, vol. xv.) Later in the year the Russian disasters became known, and Conolly was despatched as envoy to Khiva, with directions to carry out certain objects at Khiva and Khokand, and, conditionally, to visit Bokhara. These objects are stated to have been 'sanctioned in a private letter from authority,' so that the mission could not be considered an amateur one, although Lord Ellenborough always insisted on so regarding it (*ib.*) Ardent and enthusiastic by nature, cherishing views and hopes, which he himself allowed to be somewhat 'visionary,' of the political regeneration of Central Asia, and the ultimate 'conversion' of its warring tribes 'to the pure faith of Jesus Christ' (*ib.*), Conolly started, full of heart and hope, in September 1840. Joining the 35th Bengal native infantry, part of the Bhameean reinforcement, he was present with it in the brilliant action of 18 Sept. under Brigadier Dennie, afterwards proceeding to Merv, and thence, by the route followed and described by Sir Richmond Shakespeare, to Khiva. His speculations regarding the future of Merv and his fruitless interviews with the khan of Khiva are detailed in a notice of his manuscript remains in the 'Calcutta Review,' 1851 (vol. xv.) Subsequently he proceeded to Khokand and Bokhara, where he was arrested and imprisoned, it is believed, in the third week in December 1841 (KAYE, ii. 142). Conolly was a voluminous and rapid writer. When not in the saddle he had nearly always a pen in his hand, and on his travels was wont to note down minutely all he said and did in his journal, a practice he appears to have kept up even in his dungeon at Bokhara. Five letters, all written in February and March 1842, forming the main portion of Conolly's prison journal, are now in possession of Mr. George Pritchard, London and County Bank, Paddington, W., and are full of harrowing details. The latest direct tidings of him alive were contained in a letter sent by him to his brother, then a hostage at Cabul, early in 1842, in which he describes the sufferings of Stoddart and himself. For four months they had no change of raiment; their dungeon was in a most foul and unwholesome state, teeming with vermin to a degree that made life burdensome. Stoddart was reduced to a skeleton. They had with difficulty persuaded one of their keepers to represent their wretched condition to the ameer, and were then awaiting his reply, having committed themselves to God in the full belief that unless quickly released death must soon terminate their sufferings (letter from Sir V. Eyre in *Calcutta Review*, vol. xv.) The British government appearing unwilling to take action, a committee was formed in London in 1842, at the instance of Captain John Grover, F.R.S., for effecting the release of the Bokhara captives, and a sum of 500*l.* so collected furnished the funds for Dr. Wolff's mission to Bokhara. An account of the transaction, with a roll of the subscribers appended, was published by Captain Grover, under the title 'The Bokhara Victims,' and conveys a painful impression of official procrastination and the cross purposes of many of the parties concerned. The results of Wolff's perilous investigations at Bokhara were that Conolly, with Stoddart and other victims, 'after enduring agonies in prison of a most fearful character . . . were cruelly slaughtered some time in 1843' (1259 Hegira), and that the instigator of the foul deed was the pretended friend of the English, Abdul Samut Khan, nayeb or prime minister of Nasir Ulla Bahadoor, ameer of Bokhara (see preface to Wolff's narrative, 7th ed.) The military records in the India

Office give the probable date of his death, on the authority of Wolff, as 1842. Wolff appears to have afterwards thought this too early; but Kaye, after a careful review of all the evidence attainable, considered that Conolly and Stoddart were most probably executed on 17 June 1842 (KAYE, ii. 139).

Many years after, Conolly's prayer-book, wherein he had entered a last record of his sufferings and aspirations when a prisoner at Bokhara, was left at his sister's house in London by a mysterious foreigner, who simply left word that he came from Russia. The details there furnished are given in full in Kaye's account of Conolly.

Three of Conolly's brothers lost their lives in the Indian service, viz.:—

CONOLLY, EDWARD BARRY (1808-1840), captain 6th Bengal light cavalry, who at the time of his death was in command of the escort of the British envoy at Cabul. He was killed by a shot from the fort of Tootumdurrah, in the Kohat, north of Cabul, when acting as a volunteer with Sir Robert Sale, in an attack on that place on 29 Sept. 1840 (see *Journal Asiat. Soc. of Bengal*, vol. ix. pt. i.) The following papers from his pen appeared in the 'Journal of the Asiatic Society of Bengal:' 'Observations on the Past and Present Condition of Orijein or Ujjayana,' vol. vi.; 'Discoveries of Gems from Candahar,' 'Sketch of Physical Geography of Seistan,' 'Notes on the Eusofzye Tribes of Afghanistan,' vol. ix.; 'Journal kept while Travelling in Seistan,' vol. x.; 'On Gems and Coins,' vol. xi.

CONOLLY, JOHN BALFOUR (*d.* 1842), lieutenant 20th Bengal native infantry, a cadet of 1833, was afterwards attached to the Cabul embassy. He died of fever while a hostage in the Bala Hissar, Cabul, on 7 Aug. 1842 (see *Lady Sale's Journal*, p. 392).

CONOLLY, HENRY VALENTINE (1806-1855), Madras civil service, was entered at Rugby School in the same year as his brother Arthur, and was appointed a writer on the Madras establishment on 19 May 1824. He became assistant to the principal collector at Bellary in 1826, and after holding various posts—as deputy secretary to the military department, Canarese translator to the government, cashier of the government bank, additional government commissioner for the settlement of Carnatic claims, &c.—he was appointed magistrate and collector at Malabar, a post he held for many years. Conolly, who was married, was murdered in his own house on 11 Sept. 1855, by some Mopla fanatics, in revenge for the active share he had taken in the outlawry of their 'Thungai,' or saint, a religious vagabond who had been deported to Jeddah a few years before on account of his seditious acts. Shortly before his death Conolly was made a provisional member of the council of the Madras government (*Overland Bombay Times*, 12 Sept. to 5 Oct. 1855). There is a monument to him in the cathedral, Madras, and a scholarship was founded in his memory at the Madras University.

[The most authentic particulars of Arthur Conolly will be found in the biography in Kaye's Lives of Indian Officers, vol. ii., and in Calcutta Review, vol. xv. Much information respecting the military services of Arthur and Edward Barry Conolly is contained in the Service Army Lists kept at the India Office. Accessory information will be found in Rugby School Registers, Annotated (Rugby, 1881); A. Conolly's Journey to Northern India, 2 vols. (London, 1834); in various historical and biographical works bearing on the first Afghan war; in Captain John Grover's Bokhara Victims (London, 1845, 8vo); and in Dr. Joseph Wolff's Mission to Bokhara, 7th ed. (Edinburgh, 1852).] H. M. C.

CONOLLY, ERSKINE (1796-1843), Scotch poet, was born at Crail, Fifeshire, on 12 June 1796. He was educated at the burgh school of his native town, and afterwards apprenticed to a bookseller at Anstruther. Subsequently he began business on his own account in Colinsburgh, but not succeeding to his satisfaction went to Edinburgh, where, after serving for some time as clerk to a writer to the signet, he obtained a partnership with a solicitor, and after his partner's death succeeded to the whole business. He died at Edinburgh on 7 Jan. 1843. Among the best known of his songs is 'Mary Macneil,' which appeared in the 'Edinburgh Intelligencer,' 23 Dec. 1840. He never made any collection of his poems.

[Conolly's Dictionary of Eminent Men of Fife, p. 126; Charles Roger's Modern Scottish Minstrel, pp. 247-8; Grant-Wilson's Poets and Poetry of Scotland, ii. 175-6.] T. F. H.

CONOLLY, JOHN (1794-1866), physician, was born at Market Rasen in Lincolnshire on 27 May 1794. His father was a member of a well-known Irish family, the Conollys of Castletown. Readers of Swift will remember the whimsical passage in which the Drapier refers to the proverbial wealth and importance of Squire Conolly. Little, if any, of this wealth descended to John Conolly's father, who came to England to seek his fortune, settled in Lincolnshire, and remained without definite profession or calling. He married a lady named Tennyson, cousin-german to George Tennyson, grandfather to the poet laureate. Mrs. Conolly appears to have been a woman of consider-

able ability and force of character, which were displayed under the trying circumstances of an early widowhood with narrow means. Soon after his father's death, Conolly, then in his sixth year, was sent to live with his mother's friends at Hedon, where there was a grammar school. He has left among his posthumous papers a somewhat bitter description of the quiet little village and the dull school where everything seemed to slumber except the cane. In after years he wondered at the folly of pedagogues who try to feed the infant mind with the philosophic and elaborately elegant compositions of Horace. After seven years spent at Hedon he rejoined his mother at Hull, where his schooling was completed. Mrs. Conolly had married again, her second husband being a French émigré. From him Conolly acquired a good knowledge of the French language. In after life his acquaintance with the literature of France was extensive, and its study formed the favourite amusement of his leisure. At the age of eighteen he became an ensign in the Cambridgeshire militia, and travelled through various parts of Scotland and Ireland with his regiment. To the last he retained a pleasing recollection of his experiences as a soldier. A year after Waterloo Conolly relinquished soldiering and married, when but twenty-two, the daughter of Sir John Collins, a naval captain. His brother, Dr. William Conolly, was at that time practising in Tours. John spent the first year of his married life near his brother, in a cottage beautifully situated on the banks of the Loire, called 'La Grenadière,' afterwards the home of Béranger, who has celebrated it in a song, 'Les Oiseaux de la Grenadière.' The exhaustion of his scanty fortune and the birth of a child turned Conolly's attention to the need of working. He returned home in 1817, and entered upon the study of medicine in the university of Edinburgh. He threw himself into the pursuit of medical knowledge with characteristic ardour. He was a keen debater in the medical society of the university, and obtained the coveted honour of being one of its vice-presidents. 'There are few,' he says, writing in 1834, 'who, looking back on those studious, temperate, happy years, can say that time has brought them anything more valuable.' He graduated as doctor in 1821, when his inaugural thesis was a dissertation 'de Statu Mentis in Insaniâ et Melancholiâ.' Having paid a short visit to Paris to complete his studies, he began to practise medicine in Lewes, whence he removed in a few months to Chichester. Dr. (afterwards Sir John) Forbes was then in practice in Chichester, and the young men formed a strong and lasting friendship; but the district did not afford sufficient employment for both, and in a year's time Conolly moved again to Stratford-on-Avon. Here he remained about five years, and appears to have achieved as great a measure of success as his capacities for the general practice of his profession permitted. He did a good deal of miscellaneous literary work. Associated with his friend, Dr. Darwall, he assisted Dr. James Copland [q. v.] in editing 'The London Medical Repository.' 'We endeavoured,' he says, 'especially to call attention to the numerous valuable medical books then appearing in France and Germany, and also to the still more neglected older medical writers of the profession.' Copland and Darwall wished Conolly to join them in preparing a dictionary of medicine. Conolly doubted the accomplishment of so laborious a task by three men. It was subsequently undertaken by Copland alone. While at Stratford Conolly took a prominent part in the affairs of the town, was alderman and twice mayor of the borough. He interested himself in every movement for the public good, was enthusiastic for 'sanitation,' and took much trouble, both by writing and personally, to instruct his neighbours in physiological matters usually neglected. He was more popular than reformers generally are, and till very recently many old people about Stratford recollected him with affection. His professional income, however, did not exceed 400*l.* per annum. In 1827 he moved to London, and in the following year was appointed professor of the practice of medicine in University College. While he held that chair he published his work on the 'Indications of Insanity.' At the same time he unavailingly endeavoured to induce the London University authorities to introduce clinical instruction in insanity into their curriculum. About this period he was an active member of the Society for the Diffusion of Useful Knowledge, for which he wrote several papers. In spite of the friendship of Lord Brougham, Lord John Russell, and many other very influential men, Conolly failed in practice as a London physician, nor does it appear that his professorial duties were performed with any distinguished ability. In 1830 he left London and went to Warwick. Here he again held the post of inspecting physician to the asylums in Warwickshire, which he had occupied while at Stratford. He continued to write a good deal. He assisted his friend Forbes in editing the 'British and Foreign Medical Review' and the 'Cyclopædia of Practical Medicine,' to which he contributed several articles. One of these on hysteria is judiciously written, and shows considerable reading. It has been absurdly

said to have been written in one evening in the intervals of conversation with his brother editors. The length of the article and the number of the extracts and references contained in it deprive it of any claim to this supposed merit. While living at Warwick, Conolly maintained his interest in the neighbouring town of Stratford-on-Avon, was chairman of a committee formed to restore the chancel of Stratford church, and was active in organising the successful opposition made by the inhabitants of that town to the removal of the dust of Shakespeare from its resting-place. About this period he co-operated with Hastings and Forbes in the foundation of a medical society which afterwards became well known as the British Medical Association. In 1838 he moved to Birmingham. In 1839 he was appointed resident physician to the Middlesex Asylum at Hanwell, then the largest institution of the kind in England. About a year previously he had competed unsuccessfully for the same post. Others had already laboured to introduce a humane and rational method of treating the insane. In France, Pinel was the first, in 1792 or 1793, to boldly advocate and practise the treatment of lunatics without chains and stripes. In this country the projection by William Tuke, in 1792, of the celebrated 'Retreat' at York, which was practically under his management although the property of the Society of Friends, inaugurated the new system. That institution was the first in Great Britain established not only with the avowed object of providing a place for the kindly care of the mentally afflicted, but one in which it was actually carried out. When Conolly entered on his labours, it had for more than a quarter of a century been known to the world through Samuel Tuke's 'Description of the Retreat,' and humane principles had begun to leaven the practice of asylum physicians. Dr. Charlesworth and Mr. Gardiner Hill, at the Lincoln Asylum, had even gone so far as to dispense altogether with instrumental, or, as it is called, mechanical restraint, in the management of their patients. Conolly warmly adopted the most advanced practice of his predecessors. He took charge of the Hanwell Asylum on 1 June 1839. From 21 Sept. of the same year every form of mechanical restraint was absolutely discontinued. The whole armoury of strait-waistcoats, straps, restraint-chairs, &c., was laid aside. The experiment became the subject of much discussion. It had never before been tried on so large a scale nor in any place where it could arouse much attention. Within the twelve years during which he was supreme at Hanwell a revolution was effected throughout the country in the management of the insane. The enthusiasm of Conolly overcame every difficulty. He adhered firmly to the principles he had laid down for himself, and by dint of intense earnestness, combined with very considerable eloquence, educated the public in an incredibly short space of time, and excited in minds akin to his own a fervour for reform which soon secured its universal triumph. Conolly was by no means original in the ideas to the execution and exposition of which he devoted the remainder of his life. He generously acknowledged his obligations to his predecessors, and always truly referred the reform in the treatment of the insane in England to the foundation of the York Retreat. He described himself as one of those 'who followed in the path of William and Samuel Tuke,' and spoke 'gratefully of the extent of our debt to them.' Their system differed from that of Gardiner Hill and Conolly merely in this, that they reduced restraint to the smallest point which they conceived compatible with the advantage and safety of the patient, without laying down any absolute and inflexible rule for all cases; while Conolly maintained positively that 'there is no asylum in the world in which mechanical restraint may not be abolished not only with safety, but with incalculable advantage.' Although this formula was probably too unqualified, a great work was undoubtedly accomplished by Conolly. He maintained that non-restraint was but one feature in his system. Its importance lay in the fact that it rendered possible, nay necessary, the entire adoption of a humane method of dealing with the insane. Yet non-restraint, if but one stone in the edifice, was the keystone. Indirectly science has gained by the reformed methods, for the study of insanity as a disease commenced when asylums ceased to be prisons; but the attitude taken up by Conolly in the matter was essentially an unscientific one. 'Non-restraint' was a shibboleth with him. Some of the best of his literary labour he unfortunately devoted to mere destructive criticism of the older system of asylum management. Though apt to entertain broad and enlightened views on medical subjects, he had little natural taste for merely medical work. He was rather a great administrator than a great physician. Minute investigation, patient research, or judicious weighing of evidence did not constitute his strength. His talents were literary more than scientific. He inherited some of the Irish peculiarities of ardent sentimentalism and fondness for the rhetorical in expression, though these were balanced by an extensive knowledge of

the world, together with a width of general culture and a steadiness of purpose. In 1844 Conolly ceased to reside in the Hanwell Asylum, but retained medical control as visiting physician till 1852, when his connection with the institution practically ceased, though he was still consultant. At this time he lived in the village of Hanwell, where he owned a private asylum. He had a very large consulting practice in cases of mental disease. His best works belong to the later period of his life: 'On the Construction and Government of Lunatic Asylums,' 1847 (the most valuable and characteristic production of his pen); 'The Treatment of the Insane without Mechanical Restraints,' 1856: a short 'Essay on Hamlet,' 1863; and 'Clinical Lectures' delivered at Hanwell and printed in the 'Lancet,' 1845–6. The style of his later books is always easy and sometimes highly eloquent. His earlier writing is apt to be turgid. Only by practice did he attain the polish which characterises his mature work. His laboured memoir of Dr. Darwall, though published when he was forty years old, can at best be called promising. Among the many honours which he received two may be specially mentioned. When the British Medical Association met at Oxford the university bestowed upon Conolly the honorary degree of D.C.L. On the occasion of his resignation of the post of visiting physician to the Middlesex Asylum, a great public testimonial was conferred upon him, in the shape of 'a handsome piece of plate emblematic of the work in which he had been so long engaged, and a portrait of himself by Sir Watson Gordon.' The presentation was made amid imposing ceremony by Lord Shaftesbury, chairman of the Lunacy Commission.

Throughout life Conolly's health was never robust. During the years of his greatest activity he was tormented by a chronic cutaneous affection. He suffered much from rheumatic fever, which left traces of heart disease. In 1862 he lost a favourite grandchild, and being always a man of the warmest family affections, he spent an hour the day before the funeral weeping over the child's coffin. Next night he was seized with convulsions, which were followed by paralysis of the right side; he partially recovered, but had repeated similar attacks. After a severe recurrence of such seizures he died in his house at Hanwell on 5 March 1866.

[Sir James Clark's Memoir of Conolly; Maudsley's Memoir in Journal of Mental Science; obituary notices in Lancet (by Conolly's son-in-law, Dr. Harrington Tuke), and in Brit. Med. Journal; various works of Conolly; also Dr. Hack Tuke's Hist. of the Insane in the British Isles.] C. N.

CONOLLY, THOMAS (1738–1803), Irish politician, only son of William Conolly, M.P. for Ballyshannon from 1727 till his death in 1753, by Lady Anne Wentworth, eldest daughter of Thomas Wentworth, first earl of Strafford of the second creation, was born in 1738. The fortunes of the Conolly family in Ireland had been founded by William Conolly (*d.* 1729) [q. v.], who was uncle to Thomas Conolly's father, and made his nephew heir to his property. Thomas had four sisters, the Countess of Rosse, the Viscountess Howe, the Countess of Buckinghamshire, whose daughter married Lord Castlereagh, and Anne Byng, whose son eventually succeeded to the Strafford estates, and whose grandson, Field-marshal Sir John Byng [q. v.], was made first Earl of Strafford of the third creation. In 1758 Thomas Conolly married Lady Louisa Lennox, third daughter of Charles, second Duke of Richmond, and in 1759 he was elected M.P. for Malmesbury in the English House of Commons, and in 1761 for Londonderry co. in the Irish House of Commons, which seat he held until May 1800, resigning just before the union. He showed little ability in either house, but from his wealth and connections possessed influence in Ireland, where he held various offices, such as lord of the treasury, commissioner of trade, and lord-lieutenant of the county of Londonderry, and where he was sworn of the privy council in 1784. After sitting for Malmesbury until 1768, and for Chichester through the influence of his father-in-law, from 1768 to 1780, in the English House of Commons, he gave up his seat in that house, and took up his residence permanently at Castletown. In 1788 he was one of the leaders in the revolt of the Irish House of Commons against the English ministry, and was one of the members deputed to offer the Prince of Wales the regency without any restrictions whatever. This independence lost him his seat at the board of trade, but his influence remained so great, that he was one of the ten chief persons in Ireland to whom Cornwallis broached the first idea of a legislative union with England in 1798. Cornwallis, in his despatch of 27 Nov. 1798, writes that he had consulted seven leading peers, the attorney- and solicitor-general, and Conolly on the subject, and says that 'Mr. Conolly had always been a decided friend to an union, and was ready to give it his best assistance' (*Cornwallis Correspondence*, ii. 450). Conolly threw himself warmly into the debates on the question, doubtless under the influence of Castlereagh, who had married his niece Lady Amelia Hobart, and several times spoke in favour of the measure, which,

however, extinguished his own political importance. The passing of the union decided him to abandon politics, for, though he might easily have been returned for Londonderry to the united parliament, he preferred to hand over the seat to Colonel Charles Stewart, Castlereagh's brother, and retired altogether to Castletown, where he died on 27 April 1803. His widow, Lady Louisa Conolly, survived him for some years. Her sister Sarah married Colonel George Napier, and Lady Louisa helped to educate the young Napiers, her nephews, who resided near Castletown with their mother and father. A character of her by Mrs. Richard Napier is published in Bruce's 'Life of Sir William Napier,' ii. 493–6. Sir Jonah Barrington, in his 'Historic Anecdotes of the Union,' devotes some pages (ed. 1809, pp. 265–7) to Conolly, in which he criticises his attitude to the union rather unfavourably, and thus analyses the causes of his influence: 'Mr. Conolly had the largest connection of any individual in the commons house. He fancied he was a whig because he was not professedly a tory; bad as a statesman, worse as an orator, he was as a sportsman pre-eminent. . . . He was nearly allied to the Irish minister at the time of the discussion of the union, and he followed his lordship's fortune, surrendered his country, lost his own importance, died in comparative obscurity, and in his person ended the pedigree of one of the most respectable English families ever resident in Ireland.'

[Gent. Mag. June 1803; Burke's Commoners; Cornwallis Correspondence; Barrington's Historic Anecdotes of the Union; Bruce's Life of Sir William Napier; Sir W. Napier's Life of Sir Charles James Napier.] H. M. S.

CONOLLY, WILLIAM (*d.* 1729), speaker of the Irish House of Commons, was the son of either a publican or a blacksmith. After some success at the bar, he distinguished himself in the Irish House of Commons, sitting for Donegal borough 1692–3 and 1695–9, and Londonderry co. 1703 till death. He was chosen speaker 12 Nov. 1715. He continued to hold this post until his resignation through failure of health, 12 Oct. 1729, only a few days before he died. He was likewise a member of the privy council; was ten times a lord justice of Ireland between 1716 and 1729, during the absence of successive viceroys; and was chief commissioner of the Irish revenues 1709–10 and from 1714 till death. Swift says that Wharton, when lord-lieutenant, sold this place to Conolly for 3,000*l.* He married Catherine, daughter of Sir Albert Conyngham, knt., lieutenant-general of the ordnance in Ireland, and sister of Henry, first earl Conyngham; and dying without issue 30 Oct. 1729, he was buried in Celbridge church, co. Kildare, being succeeded in his large estates by his nephew, the Right Hon. William Conolly, M.P., of Stratton Hall, Staffordshire. Archbishop Boulter, in a letter from Dublin of the above date, thus refers to Conolly's death, and to the consequent official changes: 'After his death being expected for several days, Mr. Conolly died this morning about one o'clock. He has left behind him a very great fortune, some talk of 17,000*l.* per ann. As his death makes a vacancy among the commissioners of the revenue, my lord chancellor and I have been talking with my lord-lieutenant on that subject, and we all agree it will be for his majesty's service that a native succeed him; and as Sir Ralph Gore, the new speaker, does not care to quit the post of chancellor of the exchequer, which he is already possessed of, and which by an addition made to the place by his late majesty is worth better than 800*l.* per ann., and is for life, to be made one of the commissioners, we join in our opinion that the most proper person here to succeed Mr. Conolly is Dr. Coghill, who is already a person of weight, and has done service in the parliament. It is worthy of note that the plan which still prevails in Ireland of wearing linen scarfs at funerals, established with the view of encouraging the linen manufacture, was observed for the first time at Conolly's funeral.

Hist. of England, iii. 188; Lodge's Peerage of Ireland (Archdall), vii. 184; Archbishop Boulter's Letters, i. 334; Warburton, Whitelaw, and Walsh's Hist. of Dublin, i. 37; Gilbert's Hist. of Dublin, iii. 370; Swift's Works (Scott), ii. 27, 179, 467, iv. 28, xviii. 251.] B. H. B.

CONQUEST, JOHN TRICKER, M.D. (1789–1866), man-midwife, was born in 1789. He graduated M.D. at Edinburgh in 1813, and became a licentiate of the College of Physicians of London in December 1819. In 1820 he published 'Outlines of Midwifery,' of which a second edition appeared in 1821. He used to give four courses of lectures on midwifery in each year at his own house, 4 Aldermanbury Postern, London, and charged three guineas to each student attending. The lectures included remarks on the diseases of children and on forensic medicine. In a few years he moved into Finsbury Square, became lecturer on midwifery in the medical school of St. Bartholomew's Hospital (1825), and attained considerable practice. In 1830 he published an address to the Hunterian Society on puerperal inflammation (16 pp. 8vo), and in 1848 'Letters to a Mother on

the Management of herself and her children in Health and Disease.' This work reached a fourth edition in 1852, but is written in a sickly style, and has no scientific or practical merit. A physician who remembered the men-midwives of Conquest's period of practice used to relate that they were divided into two classes by their conversation: one section quoted texts whenever they spoke, the other section poured forth stories which were more indecent than the drama of the Restoration. Never was midwifery, as a special branch of practice, less worthily represented. Conquest did not rise above the level of his fellows, but it must at least be admitted that his 'Letters to a Mother,' if tainted with cant, are free from indecency. He retired from practice, and after several years of a melancholy decay died at Shooter's Hill on 24 Oct. 1866.

[Conquest's Prospectus of Lectures, 1820; Munk's Coll. of Phys. 1878, iii. 204.] N. M.

CONRY, FLORENCE (1561–1629), archbishop of Tuam, whose name in Irish is Flathri O'Moelchonaire, was a native of Connaught. After receiving a suitable education in Spain and the Netherlands he became a Franciscan friar of the Strict Observance at Salamanca, and he was for some time provincial of his order in Ireland (Sbaralea, *Supplementum et Castigatio*, p. 238). He was commanded by Clement VIII to return to his native country, to assist by his counsels the army which Philip II had sent to Ireland in support of the rebellious catholics. On the suppression of the rebellion he was proscribed by the English, but he effected his escape to the Low Countries and thence proceeded to Spain (Ware, *Writers of Ireland*, p. 111). In 1602 he acted as spiritual director to Hugh Roe O'Donnell, prince of Tyrconnel, who died at Simancas in September that year (Moran, *Spicilegium Ossoriense*, i. 161; *Annals of the Four Masters*, ed. O'Donovan, vi. 2297). He was nominated by Pope Paul V to the archiepiscopal see of Tuam 30 March 1609, and was consecrated the same year by Cardinal Maffei Barberini, protector of Ireland, afterwards Urban VIII (Brady, *Episcopal Succession*, ii. 138).

At Conry's solicitation Philip III founded for the Irish a college at Louvain under the invocation of St. Anthony of Padua, of which the first stone was laid in 1616 (O'Curry, *Manuscript Materials of Irish History*, pp. 644, 645). During his long banishment Conry devoted himself entirely to the study of the works of St. Augustine (Wadding, *Scriptores Ordinis Minorum*, ed. 1806, p. 74). He died in a Franciscan convent at Madrid on 18 Nov. 1629, greatly respected by the people of that country. The friars of the Irish college at Louvain translated his bones thither from Spain in 1654, and erected a monument to his memory with a Latin inscription (which is printed by Sir James Ware) on the gospel side of the high altar in their church.

His works, which display great erudition, are: 1. 'Emanuel. Leabhar ina bhfuil modh irrata agus fhaghala fhorbhtheachda na bethadh riaghaltha, ar attugadh drong airighthe Sgáthan an chrábhaidh, drong oile Desiderius. Ar na chur anosa a ngaoidhilg, le brathair airidhe dórd S. Fpronsias F.C.,' Louvain, 1616, 8vo. This is a translation from the Spanish work entitled 'Tratado llamado el Desseoso, y por otro nombre Espejo de religiosos.' 2. 'De S. Augustini Sensu circa B. Mariæ Conceptionem,' Antwerp, 1619. 3. 'Tractatus de statu Parvulorum sine Baptismo decedentium ex hac vita, juxta sensum B. Augustini,' Louvain, 1624, 1625, 1641, 4to; Rouen, 1643. It was also printed at the end of vol. iii. of Jansenius's 'Augustinus,' 1643 and 1652. 4. 'Scathán an Chrabhuidh,' or 'Mirror of Religion,' a catechism in Irish, Louvain, 1626, 8vo (O'Reilly, *Irish Writers*, p. clxxxii). 5. 'Peregrinus Jerichuntinus, hoc est de natura humana, feliciter instituta, infeliciter lapsa, miserabiliter vulnerata, misericorditer restaurata,' Paris, 1641, 4to, edited by Thady Macnamara, B.D., and dedicated to Urban VIII. 6. 'Compendium Doctrinæ S. Augustini circa Gratiam,' Paris, 1644 and 1646, 4to. 7. 'De Flagellis Justorum juxta mentem S. Augustini,' Paris, 1644. 8. An epistle in Spanish, concerning the severities used towards some of the chief catholic gentlemen of Ireland by the House of Commons. Latin translation in Philip O'Sullivan's 'Historiæ Catholicæ Iberniæ Compendium,' tom. iv. lib. ii. cap. ix. p. 255.

CONST, FRANCIS (1751–1839), legal writer, was called to the bar at the Middle Temple on 7 Feb. 1783. He wrote some epilogues and prologues, and numbered among his convivial companions Henderson, John Kemble, Stephen Storace, Twiss, Porson, Dr. Burney, and Sheridan. He edited several editions of J. T. Pratt's 'Laws relating to the Poor,' and was chairman of the Middlesex magistrates and the Westminster sessions, holding the latter office till his death on 16 Dec. 1839. By extreme parsimony and skilful speculations he amassed a fortune of

150,000*l.*, and left legacies to many of his friends.

[Gent. Mag. new ser. xiii. 212.]

CONSTABLE, ARCHIBALD (1774–1827), Scottish publisher, son of Thomas Constable, land steward to the Earl of Kellie, was born at Carnbee, Fifeshire, 24 Feb. 1774. He received his education at the parish school of Carnbee. The attractions of a stationer's shop at Pittenweem having incited his desire to enter that trade, he was in February 1778 apprenticed to Peter Hill of Edinburgh, the friend and correspondent of Burns, who after being assistant to Creech had opened a shop of his own in the Parliament Close. As Constable was frequently employed by Hill in collecting books at auctions and elsewhere, he had an early opportunity of acquiring a knowledge of this branch of the trade. After remaining six years with Hill, he, in January 1795, set up in business on his own account in a small shop on the north side of the High Street, having previously married Mary Willison, daughter of David Willison, printer. A few weeks after his marriage he went to London to obtain introductions to the principal publishers and inform himself of 'the state of bookselling in the metropolis.' He inscribed over his door 'Scarce Old Books,' and as in London and during an excursion to Fifeshire and Perth he had purchased a considerable number of valuable works, his shop soon 'became a place of daily resort for the book collectors of Edinburgh.' The acquaintance he thus formed was of great value in assisting him to establish himself as a publisher. His earliest publications were theological and political pamphlets, the expenses of which were paid by the authors. The first sum paid by him, amounting to 20*l.*, was in 1798 to John Graham Dalyell for editing 'Fragments of Scottish History,' and his first purchase of a copyright was a volume of sermons by Dr. Erskine. In 1800 he commenced the 'Farmer's Magazine,' a quarterly publication, and the following year he made an important advance, by becoming proprietor of the 'Scots Magazine.'

It is, however, with the publication of the 'Edinburgh Review,' the first number of which appeared in October 1802, that Constable came into prominence as one of the principal publishers of his time. To the success of that periodical his business sagacity and wide and liberal views contributed almost as much as did the smart and truculent method of writing adopted by its original projectors. Soon after its commencement he raised the average remuneration to twenty or twenty-five guineas a sheet, a rate up to this time without precedent. It was the union of bold liberality with an extraordinary sagacity in predicting the chances of success or failure in any given variety of publication that enabled Constable virtually to transform the business of publishing. 'Abandoning,' says Lord Cockburn, 'the timid and grudging system, he stood out as general patron and payer of all promising publications, and confounded not merely his rivals in trade, but his very authors by his unheard-of prices' (*Memorials*, p. 168). The same year in which the 'Edinburgh Review' was started saw the beginning of his connection with Scott, his name appearing in the title-page of the 'Minstrelsy of the Scottish Border,' to a share in the copyright of which he was admitted by Messrs. Longman & Rees. In 1804 he admitted as partner Alexander Gibson Hunter, upon which the firm assumed the title of Archibald Constable & Co. He had a share with Messrs. Longman & Co. in the publication of the 'Lay of the Last Minstrel' in 1805, and published for Scott the 'Memoirs of Sir Henry Slingsby' in 1806. Possibly with the view, as Lockhart suggests, 'of outstripping the calculations of more established dealers,' Constable, in 1807, offered Scott for 'Marmion' a thousand guineas in advance, a sum which Constable's biographer states 'startled the literary world,' and in 1808 he offered him 1,500*l.* for an edition of the 'Life and Works of Jonathan Swift.' In the latter year, however, serious differences arose between Scott and Constable, which Lockhart ascribes chiefly to the intemperate language of Constable's partner, Alexander Gibson Hunter, and to the suggestions of James Ballantyne [q. v.], with whom, and his brother John, Scott now determined to set up a new publishing business under the name of John Ballantyne & Co.

In December of the same year Constable and his partner joined Charles Hunter and John Park in establishing a bookselling business in London under the name of Constable, Hunter, Park, & Hunter, which was continued till 1811. On the separation of Alexander Gibson Hunter from the Edinburgh firm in 1811, Robert Cathcart and Robert Cadell were admitted partners, and on the death of Cathcart in 1812 Cadell remained the sole partner with Constable. Early in 1812 the firm purchased the copyright and stock of the 'Encyclopædia Britannica' for between 13,000*l.* and 14,000*l.*; and as the issue of the fifth edition was already begun, Constable, to make good its deficiencies, resolved to prepare a supplement, consisting of extended 'Dissertations' on the more important subjects, Professor Dugald Stewart being paid for

his 'Dissertations' what was then regarded as the enormous sum of 1,600*l.* In 1813 Scott, on account of the embarrassments of the firm of John Ballantyne & Co., was forced to open negotiations with Constable, who, Lockhart states, 'did a great deal more than prudence would have warranted in taking on himself the results of unhappy adventures, and by his sagacious advice enabled the partners to procure similar assistance at the hands of others.' In 1814 the opening chapters of 'Waverley' were shown to Constable, who at once detected the author, and arranged to publish it by dividing the profits with Scott. By the advice of John Ballantyne, Scott afterwards occasionally deserted Constable for other publishers, but this led to no open breach in their friendly relations. On the failure in 1826 of Hurst, Robinson, & Co., the London agents of Constable & Co., the latter firm became insolvent, as did also that of James Ballantyne & Co., printers, Sir Walter Scott being involved in the failure of the two latter firms to the amount of 120,000*l.* Possibly the business of Constable & Co. might again have recovered had not a breach occurred between the partners. On their separation Scott continued his connection with Cadell on the ground, according to Lockhart, that Constable 'had acted in such a manner by him, especially in urging him to borrow large sums of money for his support after all chance of recovery was over, that he had more than forfeited all claims on his confidence.' Scott's judgment was probably more severe than the facts warranted. In any case, he admitted in reference to Constable's house that 'never did there exist so intelligent and so liberal an establishment.' Previous to his bankruptcy Constable had been meditating a series of cheap original publications by authors of repute issued monthly, which in a glowing interview with Scott he affirmed 'must and shall sell not by thousands or tens of thousands, but by hundreds of thousands—aye by millions.' This scheme his bankruptcy prevented him carrying out on the gigantic scale on which it was originally planned, but a modification of the original project was at once commenced by him in 1827, under the title of 'Constable's Miscellany of Original and Selected Works in Literature, Art, and Science.' Already, however, the dropsical symptoms with which he had been threatened for some time developed with alarming rapidity, and the 'portly man became wasted and feeble' (*Archibald Constable and his Correspondents*, iii. 447). 'Constable's spirit,' says Lockhart in his 'Life of Scott,' 'had been effectually broken by his downfall. To stoop from being primus absque secundo among the Edinburgh booksellers, to be the occupant of an obscure closet of a shop, without capital, without credit, all his mighty undertakings abandoned or gone into other hands, except, indeed, his "Miscellany," which he had no resources for pushing on in the fashion he once contemplated, this reverse was too much for that proud heart. He no longer opposed a determined mind to the ailments of the body, and sunk on the 21st of this month [July 1827], having, as I am told, looked, long ere he took to bed, at least ten years older than he was. He died in his fifty-fourth year; but into that space he had crowded vastly more than the usual average of zeal and energy, of hilarity and triumph, and perhaps of anxiety and misery.' His first wife having died in 1814, Constable in 1818 married Miss Charlotte Neale. He had several children by both wives. His portrait was painted by Sir Henry Raeburn. He edited in 1810 the 'Chronicle of Fife, being the diary of John Lamont of Newton from 1649 to 1672,' and was the author of a 'Memoir of George Heriot, Jeweller to King James, containing an Account of the Hospital founded by him at Edinburgh.'

CONSTABLE, CUTHBERT, M.D. (*d.* 1746), antiquary, son of Francis Tunstall, esq., of Wycliffe Hall and Scargill Castle, Yorkshire, by Cicely, daughter of John Constable, second viscount Dunbar, was educated in the English college at Douay, which he entered in 1700, and afterwards took the degree of M.D. in the university of Montpellier. In 1718 he inherited from his uncle, the last Viscount Dunbar, the estate of Burton Constable, near Hull, Yorkshire, and in consequence assumed the name of Constable. He has been styled the 'catholic Mæcenas of his age.' He was an accomplished scholar, and corresponded with the most eminent literary men of the kingdom, particularly with the antiquary Thomas Hearne. He rendered great assistance to Bishop Challoner in the compilation of the 'Memoirs of Missionary Priests,' and contributed to the cost of publishing Dodd's 'Church History.' At Burton Constable he formed an extensive library, enriched with valuable manuscripts. Among the latter was a biography by himself of Abraham Woodhead; his correspondence with Francis Nicholson, formerly of University College, Oxford, in reference to Woodhead; and a volume of his correspondence with Hearne. Constable died 27 March 1746.

[Dr. Kirk's Biographical MSS. quoted in Gillow's Bibl. Dict. i. 548; Catholic Miscellany (1830), 135.] T. C.

CONSTABLE, HENRY (1562–1613), poet, was son of Sir Robert Constable of Newark, by Christiana, daughter of John Dabridgecourt of Astley or Langdon Hall, Warwickshire, and widow of Anthony Forster. A niece of his mother, also called Christiana Daubridgcourt, married William Belchier, and was mother of Daubridgcourt Belchier [q. v.] His father, the grandson of Sir Marmaduke Constable (1480–1545) [q. v.], and son of Sir Robert Constable of Everingham, by Catharine, sister of Thomas Manners, earl of Rutland, was knighted by the Earl of Essex while serving with the English army in Scotland in 1570; a letter from him to his wife's kinsman, the Earl of Shrewsbury, dated in the same year, describes some military operations (Lodge, *Illustrations*, ii. 42). Subsequently he became one of Queen Elizabeth's pensioners, and in 1576 drew up a treatise on the 'Ordering of a Camp,' two copies of which remain in manuscript at the British Museum (Harl. MSS. 836, 837). He was marshal of Berwick from 1576 to 1578, and died in 1591.

Henry was born in 1562 and matriculated at the age of sixteen as a fellow-commoner of St. John's College, Cambridge. On 15 Jan. 1579–80 he proceeded B.A. by a special grace of the senate. Wood appears to be in error in asserting that Constable 'spent some time among the Oxonian muses' (*Athenæ Oxon.* ed. Bliss, i. 14). There is much obscurity about Constable's later life. At an early age he became a Roman catholic, and took up his residence in Paris. Verse by him was meanwhile circulated, apparently in manuscript, among his English friends and gave him a literary reputation. Letters of his addressed to Sir Francis Walsingham from Paris in July 1584 and April 1585 point to his employment for a short time in the spy-service of the English government. In 1595 and the following year he was in communication with Anthony Bacon, Essex's secretary, and his correspondent admitted that his religion was the only thing to his discredit. He was clearly anxious at this period to stand well with Essex, probably with a view to returning home. In a letter addressed to the earl (6 Oct. 1595) he denied that he wished the restitution of Roman catholicism in England at the risk of submitting his country to foreign tyranny, and begged for an introduction from Essex to the king of France, or for some employment in Essex's service. In October 1597 he had definitely thrown in his lot with the French government. 'One Constable, a fine poetical wit, who resides in Paris,' wrote an English agent from Liège (21 Oct. 1597), 'has in his head a plot to draw the queen to be a catholic.' A few months later Constable wrote to Essex that he was endeavouring to detach English catholics from their unpatriotic dependence on Spain. In 1598 Constable was agitating for the formation of a new English catholic college in Paris, and was maturing a scheme by which the catholic powers were to assure King James of Scotland his succession to the English throne, on the understanding that he would relieve the English catholics of their existing disabilities. In March 1598–9 Constable arrived in Edinburgh armed with a commission from the pope; but his request for an interview with James I was refused. He entered into negotiations, however, with the Scottish government in behalf of the papacy, and remained in Scotland till September. After his return to Paris Constable declared that James preferred to rely on the English puritans, and that he had no further interest in the king's cause. He made James a present of a book, apparently his poems, in July 1600. Meanwhile Constable became a pensioner of the king of France, but on James I's accession in England he resolved to risk returning to his own country. He wrote without result (11 June 1603) for the necessary permission to Sir Robert Cecil; came to London nevertheless, and in June of the following year was lodged in the Tower. He petitioned Cecil to procure his release; protested his loyalty, and before December 1604 was set free (Winwood, *Memoriall*, ii. 36). Nothing is known of his later history except that he died at Liège on 9 Oct. 1613. Constable was the friend of Sir Philip Sidney (cf. *Apologie for Poetry*, 1595), of Sir John Harington (cf. *Orlando Furioso*, p. xxxiv), and of Edmund Bolton.

On 22 Sept. 1592 there was entered in the Stationers' Company Registers a book by Constable entitled 'Diana.' This work, containing twenty-three sonnets, was published in the same year, but only one copy, in the possession of Mr. Christie Miller of Britwell, is now known to be extant. Its full title runs: 'Diana. The praises of his Mistres in certaine sweete Sonnets, by H. C. London, printed by I. C. for Richard Smith, 1592.' The book opens with a sonnet to his absent Diana, and is followed by a brief prose address 'To the Gentlemen Readers' (not reprinted). Each of the next twenty sonnets is headed sonnetto primo, secundo, and so on. The last sonnet but one is entitled 'A Calculation upon the Birth of an Honourable Lady's Daughter; born in the year 1588 and

on a Friday,' and the final poem is headed 'Ultimo Sonnetto.' In 1594 appeared a second edition, under the title of 'Diana, or the excellent conceitful sonnets of H. C. Augmented with divers Quatorzains of honourable and learned personages. Divided into viii. Decades,' London (by James Roberts for Richard Smith). A perfect copy is at the Bodleian; an imperfect one at the British Museum. The date on the title-page is in most copies misprinted 1584 for 1594. The collection includes all the sonnets which had appeared in the first edition except the opening one, 'To his absent Diana,' but they are mingled with new matter, and no attempt is made to preserve the original order. The edition is prefaced by a sonnet, signed Richard Smith, 'Unto her Majesty's sacred honourable Maids,' and includes seventy-six sonnets in all, the eighth decade including only five, while on the last page is printed the unnumbered sonnet from the first edition dated 1588. Seven sonnets in 'the third decade' and one in the fourth were rightly printed as Sir Philip Sidney's compositions in the appendix to the third edition of the 'Arcadia' in 1598. The volume was doubtless a bookseller's venture in which many poets besides Constable are represented. Other editions are referred by bibliographers to 1604 and 1607, but no copy of either is known. Two facsimiles of the second edition were issued in 1818 (one by the Roxburghe Club); it was reprinted in Arber's 'English Garner' (1877), ii. 225–64, and in 'Elizabethan Sonnets,' ed. Sidney Lee, 1904, ii. 75–114.

Whether 'Diana,' the reputed inspirer of Constable's verse, is more than a poet's fiction or an ideal personage—the outcome of many experiences—is very doubtful. Critics have pointed to Constable's cousin, Mary, countess of Shrewsbury (her husband was Constable's second cousin on his mother's side), as the lady whom the poet addressed; one or two sonnets, on the other hand, confirm the theory that Penelope, lady Rich, Sir Philip Sidney's 'Stella,' is the subject of the verse, but the difficulty of determining the authorship of any particular sonnet renders these suggestions of little service to Constable's biographer. Todd discovered another small collection of sonnets in manuscript at Canterbury, bearing Constable's name, and Park printed these in the supplement to the 'Harleian Miscellany' (1813), ix. 491. They are addressed to various noble ladies of the writer's acquaintance, including Mary, countess of Pembroke; Anne, countess of Warwick; Margaret, countess of Cumberland; Penelope, lady Rich; and Mary, countess of Shrewsbury. In Park's 'Heliconia' were published for the first time sixteen other sonnets attributed to Constable, entitled 'Spirituall Sonnettes to the Honour of God and hys Sayntes, by H. C.,' printed from the Harleian MS. No. 7553. Constable contributed a sonnet that was very famous in its day to King James's 'Poetical Exercises,' 1591; four sonnets ('To Sir Philip Sidney's Soule') to the 1595 edition of Sidney's 'Apologie for Poetry;' four pastoral poems to 'England's Helicon' (1600), one of which—'The Shepheard's Song of Venus and Adonis'—(according to Malone) suggested Shakespeare's 'Venus and Adonis;' and a sonnet to Bolton's 'Elements of Armoury,' 1610. Constable's works were collected and edited by Mr. W. C. Hazlitt in 1859.

Constable's sonnets are too full of quaint conceits to be read nowadays with much pleasure, but his vocabulary and imagery often indicate real passion and poetic feeling. The 'Spirituall Sonnettes' breathe genuine religious fervour. His pastoral lyrics are less laboured, and their fresh melody has the true Elizabethan ring. In his own day Constable's poems were curiously popular. Francis Meres (*Palladis Tamia*, 1598) and Edmund Bolton (*Hypercritica*, in Haslewood, *Critical Essays*, ii. 250) are very loud in their praises, but the surest sign of his popularity are the lines placed in the mouth of one of the characters in the 'Returne from Pernassus' (ed. Macray, p. 85):

> Sweate *Constable* doth take the wandring eare
> And layes it up in willing prisonment.

L.

CONSTABLE, HENRY, Viscount Dunbar (*d.* 1645), was son of Henry Constable of Burton and Halsham in the West Riding of Yorkshire, sheriff of the county in 1556 and M.P. for Heydon 1585–8 and 1603–8, by Margaret, daughter of Sir William Dormer of Winthorp, Buckinghamshire (Drake, *Eboracum*, p. 354; Willis, *Not. Parl.*) His mother was reputed an obstinate recusant. (Strype, *Annals*, fol. iii. ii. 179 ad fin.) Constable became commoner of Trinity college, Oxford, in 1596. On the death of his father in 1608 he succeeded to the family estates. He was knighted at the Tower

of London on 14 March 1614, and created Baron Constable and Viscount Dunbar in the peerage of Scotland by patent dated at Newmarket 14 Nov. 1620. About the same time he was appointed deputy-justice in eyre for Galtres Forest (*Cal. State Papers*, Dom. 1623–5, p. 219). He was charged with recusancy to the extent of not frequenting church in 1629, but obtained a stay of process and a letter of immunity from the king (*ib.* 1628–9, p. 522, 1635, p. 141). He was apparently much addicted to gaming, losing on one occasion 3,000*l.* at a sitting (*ib.* 1635–6, p. 462). He died in 1645. Constable married Mary, second daughter of Sir John Tufton of Hothfield, Kent. He was succeeded in the title and estates by his son John.

CONSTABLE, JOHN (*fl.* 1520), epigrammatist, son of Roger and Isabel Constable of London, was educated at St. Paul's School during the mastership of William Lilly. Thence he went to Oxford and entered Byham Hall, of which John Plaisted was head. This hall stood in Merton Street, opposite the college church, and its site is now in the possession of Corpus Christi College. Constable took the degrees of B.A. in 1511, and M.A. in 1515, when, according to Anthony à Wood, he left the university with the reputation of a great rhetorician and poet. The titles of two books by him are known, but only one, it is believed, is now extant. 'Joannis Constablii Londinensis et artium professoris epigrammata. Apud inclytam Londini Urbem. MDXX.,' printed by Ric. Pynson. The epigrams are addressed to contemporary personages of note, among whom are Henry VIII and Catherine of Aragon, Sir Thomas More, Hugh Latimer, Lilly, his old schoolmaster, and others. A brother Richard and sister Martha are also mentioned. Wood prints two as specimens, one addressed to Plaisted, the master of Byham Hall, and the other to Constable's Oxford friends. This volume hardly justifies his reputation as a poet, as the epigrams are dull and pointless, though the versification is correct. There is a copy of this book in the Bodleian Library, which formerly belonged to Robert Burton, author of the 'Anatomy of Melancholy' [q. v.] His other work was entitled 'Querela Veritatis,' but nothing is known of it except that the first words were 'Destinavimus tibi hunc nostrum.' There was another John Constable, his contemporary, who was dean of Lincoln 1514–28, but he belonged to the well-known Yorkshire family, being the fourth son of Sir Robert Constable of Flamborough [q. v.] (see COOPER, *Athenæ Cantabrigienses*, i. 35, 527).

[Wood's Athenæ Oxon. i. 27, Fasti, i. 32, 43; Pits's Scriptores Angliæ.] C. T. M.

CONSTABLE, JOHN (1676?–1744), jesuit, was born in Lincolnshire on 10 Nov. 1676 or 1678, and entered as a scholar at the college of St. Omer about 1689, under the assumed name of Lacey, which was perhaps the family name of his mother. He was admitted into the Society of Jesus at Watten in September 1695, and was professed of the four vows on 2 Feb. 1713–14. For many years he was priest at Swinnerton in Staffordshire, the residence of the Fitzherbert family. He was also declared rector of the jesuit 'college' or district of St. Chad on 16 July 1735 (FOLEY, *Records*, vii. 159). In the parish register of Swinnerton is this entry:—'1743-4, March 28, buried Mr. John Constable, from Mr. Fitzherbert's' (*ib.* iii. 207). In Oliver's opinion Constable is unquestionably entitled to rank among the ablest and best informed men in the English province.

His works are: 1. 'Remarks upon F. le Courayer's book in Defence of the English Ordinations,' &c., 8vo, pp. 384, no place or date (JONES, *Popery Tracts*, 215). 2. 'The Stratagem discovered, or an Essay of an Apology for F. le Courayer's late work in 4 vols. entitled "Défense de la Dissertation," &c.; wherein strong instances are produced to show that he writes "Booty," and is only a sham defender of these Ordinations, while he very much confirms the judgment of their invalidity. By Clerophilus Alethes,' 1727, 8vo. 3. 'The Convocation Controvertist advised against pursuing wrong methods in his endeavours to reduce Dissenters and convince Catholics. To which is annexed a Letter in the name of the Church of England to Mr. Trapp upon his strange Libel entitled "Popery Stated." By Clerophilus Alethes,' 1729, 8vo. This is in reply to Joseph Trapp, D.D. 4. 'Reflections upon Accuracy of Style. In five dialogues,' Lond. 1734, 8vo, 1738, 12mo. 5. 'The Doctrine of Antiquity concerning the most blessed Eucharist plainly shewed in remarks upon Johnson's "Unbloody Sacrifice." By Clerophilus Alethes,' Lond. 1736, 8vo. 6. 'The Conversation of Gentlemen considered. In six dialogues,' Lond. 1738, 12mo. 7. 'Deism and Christianity fairly consider'd, in four dialogues. To which is added a fifth upon Latitudinarian Christianity, and two letters to a friend upon a Book [by T. Morgan] entitled "The Moral Philosopher,"' London, 1739, 12mo (anon.)

8. 'A Specimen of Amendments, candidly proposed to the compiler of a work which he calls "The Church History of England." By Clerophilus Alethes,' Lond. 1741, 12mo. This is a sharp attack on the Rev. Charles Dodd [q. v.], the catholic church historian, with special reference to the manner in which he speaks of the jesuits and their policy. Dodd replied in 'An Apology for the Church History of England,' 1742. 9. 'Advice to the Author of the Church History of England,' manuscript preserved at Stonyhurst. This treats of the second volume of the History, and includes also a reply to the 'Apology.' It is said to be 'searching, smart, and acute,' but it was not deemed advisable to publish it, because the author 'was not solicitous enough to keep the unity of the spirit in the bond of peace' (Oliver, *Jesuit Collections*, p. 73).

[Authorities cited above; also Panzani's Memoirs, pref. p. 10; Backer's Bibl. des Écrivains de la Compagnie de Jésus; Cat. of Printed Books in Brit. Mus.; Notes and Queries, 3rd ser. ix. 38; Gillow's Bibl. Dict. i. 552; Lowndes's Bibl. Man. (Bohn), 654, 655.] T. C.

CONSTABLE, JOHN (1776–1837), landscape-painter, was born at East Bergholt in Suffolk on 11 June 1776. His father, Golding Constable, was the grandson of a Yorkshire farmer who had settled at Bures, a village on the Essex side of the Stour, some eight or nine miles west of East Bergholt, where Golding Constable built himself a house of sufficient importance to be mentioned in 'The Beauties of England and Wales.' Golding Constable inherited a considerable property from a rich uncle, including the watermill at Flatford. To this he added, by purchase, the watermill at Dedham, a village in Essex, near to East Bergholt, and two windmills near the latter place, to which he moved in 1774. Here John Constable, the second child, was born, and he was so weakly at his birth that he was baptised the same day. He developed, however, into a strong healthy boy, and when about seven he was sent to a boarding-school and then to a school at Lavenham, where there was a tyrannical usher. Thence he was removed to the grammar school at Dedham, where he had a very kind master, Dr. Grimwood, from whom he gained some knowledge of Latin, to which he afterwards added a little French. His father at first intended him for the church, and afterwards wished him to be a miller, but his artistic proclivities were too strong to be repressed, and eventually he was left to follow his natural bent. His attempt to pursue the business of a miller began when he was about eighteen, and he is said to have performed his duties carefully and well, but it lasted about a year only, during which time he earned for himself in the neighbourhood the name of 'the handsome miller.' Other accounts say that he spent most of this time in observing the effects of nature, in sketching in the fields, and copying drawings by Girtin lent him by Sir George Beaumont of Coleorton [q. v.], whose mother lived at Dedham. Sir George also showed Constable that favourite Claude which he used to carry about in his carriage, and allowed him to copy it. His first encouragement in art thus appears to have been given him by the strong adherent of the conventional school of landscape, the apostle of the 'brown tree,' the most noted champion, in fact, of those canons of landscape art against which Constable was to lead the first signal revolt. As Turner had his Girtin, and Crome his Ladbrooke, Constable in like manner had a fellow-student of nature; his name was Dunthorne, the village plumber and glazier, who roamed and studied nature with him in the fields, and remained his friend through life. They used also to paint at Dunthorne's cottage, which was close to Constable's home, and also at a room they hired for the purpose in the village.

Sir George Beaumont, for all his dilettanteism, had a fine discernment, and was a true lover of art, and he used his influence to persuade Constable's parents to allow him to go to London to study art, which he did for the first time in 1795. Here he met with encouragement from Joseph Farington, R.A., and made acquaintance with J. T. Smith, the author of 'Nollekens and his Times,' &c., who appears to have etched one or two of Constable's sketches (contained in letters from Constable) in his series of picturesque cottages. From Smith Constable received some instruction in etching, and there are two small etchings by Constable in the British Museum. At the end of 1797 he went home to take the place of his father's old clerk who had died, but in 1799 he returned to the metropolis, and on 4 Feb. was admitted as a student of the Royal Academy. His studies were assisted by Farington and Reinagle, and he commenced his artistic life as a portrait-painter with an occasional attempt at historical painting. His desire for independence soon shows itself in his letters to Dunthorne. J. T. Smith has offered to sell his drawings in his shop, and he hopes thereby to clear his rent (1799). He was not without resources though, for he and Reinagle club 70*l.* together to buy a Ruysdael, which he copies. He goes about too a little; he is at Ipswich in 1799, at Helmingham in 1800, in Derbyshire in 1801. In

London he changes his lodgings from Cecil Street (1799) to 50 Rathbone Place (1802). It was not till this year that he exhibited at the Royal Academy, and the work that he sent was a landscape. West was president of the Royal Academy at this time, and gave Constable kind encouragement. Constable used to say that the best lesson he ever had was from West, who told him to remember 'that light and shadow never stand still.' Another good piece of advice given him by the president, who himself occasionally tried landscape, was 'Your darks should look like darks of silver, and not of lead or slate.' After this he devoted himself to the study of nature and landscape art, and spent the summer months in the country, 'living nearly always in the fields and seeing nobody but field labourers.' After this, with the exception of two altar-pieces, painted for churches in Suffolk at Brantham (1804), 'Christ blessing Little Children,' and Nayland (1809), 'Christ blessing the Bread and Wine,' and an occasional portrait, there is no record of his again leaving that path of art which appears to have been marked out for him by nature herself.

The result of the exhibition appears to have fixed his principles in art and the rules of his conduct for life. 'In the last two years,' he writes, 'I have been running after pictures and seeking truth at second-hand. I have not endeavoured to represent nature with the same elevation of mind with which I set out, but have rather tried to make my performances look like the work of other men. I am come to a determination to make no idle visits this summer nor to give up any time to commonplace people. I shall return to Bergholt, where I shall endeavour to get a pure and unaffected manner of representing the scenes that may employ me. There is little or nothing in the exhibition worth looking up to. There is room enough for a natural painter. The great vice of the present day is *bravura*, an attempt to do something beyond the truth. Fashion always had and always will have its day, but truth in all things only will last, and can only have just claims on posterity. I have reaped considerable benefit from exhibiting; it shows me where I am, and, in fact, tells me what nothing else could.' This year he was offered, through Dr. John Fisher, rector of Langham, Suffolk, a situation as drawing-master at a school, but he, by the advice and with the assistance of West, refused it without hurting the feelings of his patron. This Fisher was soon afterwards made bishop, first of Exeter and then of Salisbury. He was introduced to Constable by the Hurlocks, and was always a good friend to the artist till his death. He must not, however, be confounded with the Rev. John Fisher, his nephew, Constable's more intimate friend and enthusiastic admirer, who afterwards became the bishop's chaplain and archdeacon of Berkshire. A year later (1803) Constable attained complete confidence in his powers, and writes: 'I feel more than ever a decided conviction that I shall some time or other make some good pictures—pictures that shall be valuable to posterity if I do not reap the benefit of them.' He was unfortunately almost alone in this conviction. He was endeavouring to do what had never been done before, to paint English landscape without 'fal-de-lal or fiddle-de-dee,' as he expressed it. He was altogether too original and too English to succeed. Wilson's art had been based upon Claude, and Gainsborough's on the Dutch school, and connoisseurs who had not bought their landscapes when they were alive were beginning to pay good prices for them now. But Constable followed nobody, not even in method—he painted effects which had never been painted before in a style unassociated with the name of any great painter. Moreover, his subjects were humble, no lakes or castles, mountains or temples, and it was scarcely yet recognised that the daily beauties of ordinary English scenery were worthy subjects for a great artist, and worthy possessions for men of taste. So Constable had to content himself with his own opinions and feelings, and to go on steadily in a path which he knew was the right and only one for him. His enthusiasm and patience were equal to the great occasion, and they were not altogether without sympathy. His friend, the Rev. John Fisher (sixteen years his junior), believed in him, and bought as many of his pictures as he could afford, and his maternal uncle, David Pyke Watts, was kind and liberal to him. He could also soon reckon as his friends several eminent artists, among whom, besides those already mentioned, were Jackson and Wilkie (to whom he sat for the head of the physician in 'The Sick Lady,' and again later in life for another physician in Wilkie's picture of Columbus) and Stothard, with whom he used to take long walks. Nevertheless he did not sell a single picture to a stranger till 1814. When he was thirty-eight years old, what little money he earned came from portraits and copies of pictures. Several of the latter were copies of portraits by Sir Joshua Reynolds, painted for the Earl of Dysart. He did not strive to make a show. His pictures at the Academy were not large or striking in subject, and were generally described in the catalogue by such simple titles as 'Landscape' or 'Study from Nature.' The only work he ever exhibited with a subject

and title calculated to appeal to the popular mind was a drawing of 'H.M.S. Victory—Captain E. Harvey—at Trafalgar,' which he sent to the Academy in 1806. In 1803 he had taken a trip from London to Deal in an East Indiaman, the Coutts, and made about 130 sketches. These included three of the Victory, then just fresh from the dock at Chatham. In 1807 he sent three drawings of the lake country, to which he had paid a visit the previous year, but he never painted a picture from the numerous sketches he took during the tour. His mind was not constituted, as his friend Leslie admits, to enjoy the sublimer scenery of nature. He was essentially a pastoral painter with an intense affection to the familiar scenes of his boyhood, like the poet Clare. His power was in a great measure due to his recognition of his natural limits and his complete contentment with them. He did not aspire to be a universal painter, desiring only to paint well those things he knew and loved well. He said, 'I imagine myself to be driving a nail. I have driven it some way, and by persevering I may drive it home; by quitting it to attack others, though I may amuse myself, I do not advance beyond the first, while the particular nail stands still.' In 1812 he writes to Miss Maria Bicknell: 'I have now a path marked out very distinctly for myself, and I am desirous of pursuing it uninterruptedly.'

His health had been affected in the previous year (1811) from his love of this lady, whom he had known when a boy. His love was returned by Miss Bicknell, but not approved by the family. Her father was solicitor to the admiralty, and afterwards to the prince regent; and her grandfather was the Rev. Dr. Rhudde, rector of East Bergholt, his native village. A millowner's son and an unsuccessful painter was not an eligible match. Dr. Rhudde did not know Constable, and Mr. Bicknell, though he knew and apparently always liked him personally, did not wish to offend Dr. Rhudde, from whom his daughter had expectations. The lovers were driven to correspondence, which lasted for five years. The extracts from it in Leslie's 'Life' are well worth reading. Artless and without extravagance the letters breathe a spirit of quiet deep affection and perfect constancy. The lovers do not go into raptures and do not quarrel, have never anything of much importance to say, nor any great thoughts to communicate, but they are always brave and patient and faithful. At first Miss Bicknell's duty seems to have a little the better of her love, but the 'Dear sir' soon ripens into 'Dearest John,' and writing, which has hitherto been disagreeable to her, becomes her greatest pleasure. In 1812 he tells her of a fire at his lodgings, and how he saved a poor woman's money which she had left in her bed. In 1813 he speaks of the success of his picture at the Academy, 'Landscape—Boys Fishing,' and of his growing reputation as a portrait-painter. He gets fifteen guineas a head, has painted full-lengths of Lady Heathcote and her mother. For the first time his pockets are full of money. He is free from debt, and has had no assistance from his father. He dines at the Royal Academy, and is a good deal entertained with Turner, who sits next to him. 'I alway expected to find him what I did; he has a wonderful range of mind.' Next year sees improvement in his prospects as a landscape-painter. His 'Windmill' is given to John Landseer to engrave, and he sells two pictures—one to Mr. Allnutt and another to Mr. James Carpenter. In 1815 Constable is permitted to visit Miss Bicknell at her father's house at Spring Gardens, which makes Dr. Rhudde very angry, and he says that he considers Maria no longer his granddaughter. In this year the mothers of both the lovers died, and in the next Constable's father also. Miss Bicknell was now twenty-nine and Constable forty, and they agreed to wait no longer. His friend, the Rev. J. Fisher, seems to have suggested their marriage, and himself performed the ceremony at St. Martin's Church on 2 Oct. 1816. His portrait by Constable appeared in the next year's Academy. The father of Miss Bicknell was soon reconciled, and the grandfather, though it is not recorded whether he relented during his life, left Mrs. Constable 4,000*l.* at his death three years after.

The newly married couple took up their abode at 63 Charlotte Street, Fitzroy Square, where Constable had lived for some years; thence they moved, in 1817 or 1818, to 1 Keppel Street. In 1822 their address was 8 Keppel Street, and in this year they moved to 35 Upper Charlotte Street, Fitzroy Square (Farington's old house), where he remained till his death. He also for some years had a supplementary residence at Hampstead. In 1821 it was 2 Lower Terrace, but he does not appear to have taken a house there till 1826, when he took a small one in Well Walk, and let a great part of his house in Charlotte Street, reserving his studio and a few other rooms, and going backwards and forwards every day. In 1819 he was elected an associate of the Royal Academy, and exhibited one of his finest pictures, now generally known as 'The White Horse,' but called in the catalogue 'A Scene on the River Stour.' This was purchased by his friend Fisher, now archdeacon. He was now forty-three years of

age, and he owed his election, not to any favouritism or even popularity, but, as Fisher wrote, 'solely to his own unsupported, unpatronised merits.' His house was full of unsold pictures, and he advertised for the public to come to see them gratis. Whether this invitation was largely accepted or not does not appear, but there is no doubt that, in spite of the opportunities afforded to the public of seeing his pictures on the walls of the National Gallery and the British Gallery, and in his own house, he never attained any great measure of popularity or success in his own country during his life. The first breeze of real fame came from France. In 1821 he exhibited at the Royal Academy a picture called 'A Landscape—Noon,' which is now known as 'The Hay Wain,' presented by Mr. Henry Vaughan to the National Gallery in 1886. Its first purchaser was a Frenchman, who bought it and two other pictures for 250*l.* The purchaser sent it to the Salon in 1824, together with a view on the Thames at the opening of Waterloo Bridge, called by Constable the 'small Waterloo,' to distinguish it from the larger picture, then projected but not finished for many years after. What is called the romantic school of France had then begun. It was a revolt against the habitual conventionalism, the pseudo-classicism, and the falseness of the school of the empire headed by David. The revolt was headed by Baron Gros, Géricault, and Delacroix among the figure painters, and by Paul Huet in landscape. Constable's pictures revealed to them a fresh and natural way of observing and recording natural effects. Their profound influence on the modern school of French landscape is fully acknowledged by French critics (see BURGER in *Histoire des Peintres*, article 'Constable,' and CHESNEAU in *La Peinture Anglaise*). Delacroix himself was so impressed with Constable's landscapes, that he painted his own 'Massacre de Scio' entirely over again in four days. After being exhibited a few weeks they were removed from their original situations to a post of honour, 'two prime places in the principal room.' Constable writes: 'They acknowledge the richness of texture and the surface of things. They are struck with their vivacity and freshness, things unknown to their own pictures.' Constable was awarded a gold medal by the king of France (Charles X). Medals were also given to Bonington [q. v.] and Copley Fielding, and Sir Thomas Lawrence was created a knight of the Legion of Honour. The effect of Constable's 'White Horse' at the exhibition at Lille in 1825 was equally great and produced another gold medal.

No such recognition was accorded him in England. Things had improved a little down to 1825. In 1822 he writes that 'several cheering things have happened to me professionally. I am certain my reputation rises as a landscape-painter and that my style of art, as Farington always said it would, is fast becoming a distinct feature.' This year Bishop Fisher commissioned Constable to paint a picture of Salisbury Cathedral from his grounds, as a present to his daughter on her marriage, but ill-health prevented the artist from finishing it till 1823. This, now in the South Kensington Museum, is one of the most beautiful of his pictures; but it did not quite please the bishop, and Constable painted him another, with a slight alteration, which is now in the possession of the bishop's descendants. In 1824 he sold his large picture of 'A Boat passing a Lock' to Mr. Morrison for a hundred and fifty guineas (including frame), but he was not so successful with 'The Jumping Horse' of next year, nor with the 'Cornfield' of the year after, which is now in the National Gallery. During these years his family had been increasing, and in 1828 his seventh and last child (Lionel) was born. Though since the legacy of Dr. Rhudde and the death of his own father his income appears to have been sufficient for his wants, it is evident that he was sometimes hard pushed and had to employ much of the time he would have devoted to landscapes in copying pictures and making portraits. Now, however, all strain of the kind was ended by the death of Mr. Bicknell, who left the Constables 20,000*l.* 'This,' he wrote, 'I will settle on my wife and children, and I shall then be able to stand before a six-foot canvas with a mind at ease, thank God!' But a greater misfortune than poverty was at hand. His wife, always consumptive, died towards the end of the year, leaving him with seven children, the youngest not a year old.

He bore up bravely against the bereavement, but when he next year (1829) was at length elected an Academician he felt the tardy honour had come too late. 'It has been delayed,' he said, 'too long, and I cannot impart it.' It was also accompanied by much bitterness against Sir Thomas Lawrence, the president, who told him he ought to consider himself fortunate at being elected. This seems to have been also the opinion of the public, who did not seem to appreciate him any more after his election. But he went on bravely working, though saddened, till his death in 1837. In 1831 appeared his grand 'Salisbury Cathedral from the Meadows,' and in 1832 his long-delayed 'Waterloo Bridge,' called in the catalogue 'White-

hall Stairs, June 18th, 1817.' Though of extraordinary brilliance in its lighting and colour, it achieved no success at its exhibition. Notwithstanding the years taken in its execution it was judged unfinished even by his friend Stothard. In this picture Constable carried his suppression of detail in order to gain general truth and power of effect to an extreme if not excess. It was almost entirely executed with the palette knife, and was probably the cause of the artist's writing to Leslie in 1833: 'I have laid it (the palette knife) down, but not till I had cut my throat with it.' In 1835 was exhibited 'The Valley Farm,' which was purchased by Mr. Vernon and is now in the National Gallery. In 1832 he lost his friend Archdeacon Fisher, and in the same year died John Dunthorne (the son of his older friend of the same name), who had for many years worked as his assistant in London, and had been set up by him as a picture-cleaner. He found some new and valuable friends in Mr. Evans, his medical adviser, Mr. Purton of Hampstead, and Mr. George Constable of Arundel (a namesake but no relation), and he seems to have found also a new source of inspiration in the scenery round Arundel. He wrote to Mr. G. Constable: 'I have never seen such scenery as your country affords; I prefer it to any other for my pictures.' He was engaged on a picture of 'Arundel Mill and Castle,' which he meant to be his best work, when he died. In these later years (1830–7), marked by numerous fine pictures besides those already mentioned, e.g. 'The Mound of the City of Old Sarum' (1834) and 'The Cenotaph to the memory of Sir Joshua Reynolds at Coleorton' (1836), he was also much interested in a series of twenty mezzotint engravings from his works by David Lucas, which were brought out in five parts and published in 1833 with the following title: 'Various subjects of Landscape characteristic of English Scenery, principally intended to display the Phenomena of the Chiar' oscuro of Nature from Pictures by John Constable, R.A., engraved by David Lucas.' In the preface Constable describes the aims of his art and speaks of the 'rich and feeling manner' in which Lucas had engraved his work. This praise was well deserved. Seldom has a painter found so sympathetic an interpreter as Constable in David Lucas. The work did not sell, however, and the plates were used to illustrate the first edition of Leslie's life of the artist. Besides this series there was another called 'English Landscape,' which contained fifteen plates, and both series were included with some others (forty in all) in a volume published by H. G. Bohn in 1855, called 'English Landscape Scenery.' Lucas's large plates after Constable, such as 'The Lock,' 'The Cornfield,' 'Dedham Vale,' 'The Young Waltonians,' and 'Salisbury Cathedral from the Meadows,' are masterpieces of the art of mezzotint applied to landscape. His pleasure in his art and in his children, to whom he was a devoted father, never seems to have failed, but the health of his eldest son John gave him anxiety, and his own was not good. He had at least two serious illnesses before his last, and he suffered much from depression. He wrote in 1834 that his life and occupation were useless, but to the end he filled it with work and duty. In 1836 he delivered some lectures on 'Landscape Art' at the Royal Institution, and he had previously in 1833 given one or two at Hampstead. The notes of these, preserved at the end of Leslie's 'Life,' are full of good sense and fine observation. His death was sudden. On 30 March 1837 he walked home from a meeting of the Royal Academy with Leslie, and next day he worked at his picture of 'Arundel Mill and Castle,' and in the evening went out on a charitable errand in connection with the Artists' Benevolent Association, of which he was president. In the night he was taken ill and died. A post-mortem examination was held, but it practically left the cause of death undecided, for it revealed no traces of disease except indigestion. He was buried at Hampstead in the same grave with his wife.

After his death a few friends bought his 'Cornfield' from his executors and presented it to the National Gallery, which now possesses three of his finest and largest works—'The Cornfield,' 'The Valley Farm,' and 'The Hay Wain.' At the South Kensington Museum are eight pictures, six of them left by Mr. Sheepshanks. They include the 'Salisbury Cathedral' of 1823 already mentioned, 'Dedham Mill,' two views of 'Hampstead Heath' (one, No. 36, painted 1827, remarkable for its beauty), 'Boat-building,' and 'Water Meadows near Salisbury,' of singular delicacy and freshness. At South Kensington are also some studies from the nude and a drawing of Stoke, and in the British Museum are one or two water-colour drawings and pencil sketches, including a beautiful sketch (in colour) of a waterfall. Though Constable never attained the same skill in water-colour as in oils, his sketches in this medium are always powerful and direct records of impressions, executed with extraordinary promptness and success.

So much has been said about his art in the course of this notice that it is unnecessary to add much more, and his character was so

simple and noble that it may be dismissed with a few words. He was above all things faithful —faithful to one clear idea of art, faithful to one dearly loved woman. Except a certain sarcastic humour and a brusque independence not agreeable to all, no one has noted any defect in his conduct and disposition, which evidently endeared him unusually to all who knew him. No neglected genius ever bore the disappointments of life more bravely and patiently. Of his genius there can be no doubt. If its range was narrow it was eminently sincere and original. In these qualities few artists can compare with him. He was the first to paint the greenness and moisture of his native country, the first to paint the noon sunshine with its white light pouring down through the leaves and sparkling in the foliage and the grass (an effect which gave rise to the expression of 'Constable's snow'), the first to paint truly the sun-shot clouds of a showery sky, the first to represent faithfully the rich colours of an English summer landscape, the first to abandon the old brown grounding of the Dutch school and to lay his tints at once fresh and fair in exact imitation of nature, the first to paint so strongly the volume of trees and clouds, the body and substance of the earth, the first to suggest so fully not only the sights but the sounds of nature, the gurgle of the water, the rustle of the trees. Other painters have made us see nature at a distance or through a window; he alone has planted our feet in her midst. Fuseli's often misquoted remark, that Constable 'makes me call for my great coat and umbrella,' was no slight tribute to his originality and skill; and Blake once said of one of his sketches, 'This is not drawing, but inspiration.' Much has been written about Constable's art; it has been unjustly depreciated by some (including Ruskin); but his claim to be considered the founder of the school of faithful landscape is now widely recognised at home and abroad, and the artist himself would scarcely have wished for a higher title to immortality.

C. M.

CONSTABLE, SIR MARMADUKE (1455 ?–1518), of Flamborough, is known as 'Little Sir Marmaduke.' His life is summed up in the following inscription on a brass tablet in Flamborough church (the spelling is modernised):—

Here lieth Marmaduke Constable of Flaymburght, knight,
Who made adventure into France for the right of the same;
Passed over with King Edward the Fourth, that noble knight,
And also with noble King Harry the Seventh of that name.
He was also at Barwik at the winning of the same,
And by King Edward chosen captain there first of any one,
And ruled and governed there his time without blame,
But for all that, as ye see, he lieth under this stone.

At Brankiston Field, where the King of Scots was slain,
He then being of the age of threescore and ten,
With the good Duke of Norfolk that journey he hath ta'en,
And couragely advanced himself among other there and then,
The king being in France with great number of English men.
He, nothing heeding his age there, but jeoparde him as one
With his sons, brethren, servants, and kinsmen,
But now, as ye see, he lieth under this stone.

The family of Constable take their name from the office of constable of Chester, to which Hugh d'Avranches, earl of Chester in the Conqueror's time, appointed his kinsman Nigel, baron of Haulton. Nigel's descendant John, constable of Chester under Richard I, assumed the name and claimed the lands of Lacy, baron of Pontefract. Roger de Lacy, son of this John (and father of John de Lacy, earl of Lincoln), gave the lordship of Flamborough to his brother Robert, surnamed Le Constable, founder of the house of Flamborough, who died in 1216. The following is taken from the diary of a Spanish envoy to England and Scotland in 1535 (WEGENER, *Aarsberetninger*, iii. 243): 'He (Sir John Campbell, a Scottish courtier) said likewise that in England there was a noble family, Constable, who received their fief from a former king of the Danes. Even now the custom is that each year at Christmas the head of the family goes to the sea shore and looking towards the north calls out three times that if any one will receive the rent in the name of the king of the Danes he is ready to give it. And then he fixes a coin into an arrow and shoots it as far as he can out into the sea. Camwel (Campbell) said

he had been in England on Christmas day in the house of Marmaduke Constable and had seen this done. Marmaduke himself said his grant (*litteras pheudatarias*) required this ceremony, if he neglected it he could be deprived of his fief, and showed letters commanding it. Four years ago Doctor (*sic*) Marmaduke Constable told me the same, but instead of a coin he said a rose was shot into the sea, and not at Christmas but on St. John Baptist's day.'

Marmaduke Constable, son of Sir Robert Constable of Flamborough, and Agnes, daughter of Sir Philip Wentworth of Suffolk, was the eldest of a family of eleven, five sons and six daughters. His epitaph says his age was seventy at Brankiston (i.e. Flodden) Field in 1513. This would place his birth about 1443; but the 'Escheators' Inquisitions,' taken after the death of his father in 1488, and of his mother in 1496, give his age respectively as over thirty-one and over forty, from which we may infer that he was born about 1455, a more likely date, as his son Robert was born about 1478, when he would be twenty-three, and heirs to property then married young. His wars in France must have been in 1475 with Edward IV, and 1492 with Henry VII. The latter ended with the treaty of Estaples, and we find Constable named among the gentlemen appointed to receive the French delegates who ratified it. Berwick was surrendered to the Duke of Gloucester in 1482. Under that duke, when king as Richard III, Constable held the important stewardship of the honour of Tutbury in Staffordshire. Henry VII, however, pardoned his adherence to King Richard (*Pat.* 1 *Hen. VII*, p. 2, m. 22) and received him into favour. The first three years of Henry's reign were disturbed by repeated risings in the north. Humphrey Stafford, Constable's brother-in-law, was hanged for his share in that of 1486 (Lord Lovel's), and in another the Earl of Northumberland was murdered by a Yorkshire mob on 28 April 1489. Constable was then sheriff of Staffordshire, 1486–7, and of Yorkshire, 1487–8; in the latter year he received 'by way of reward' 340*l.* He also obtained the stewardship of some of Northumberland's lands during the minority of the young earl (*Pat.* 5 *Hen. VII*, p. 1, m. 21). His father dying in 1488 he became Sir Marmaduke Constable of Flamborough, having previously been known as of Someretby in Lincolnshire. He was a knight of the body to Henry VII, and was at the reception of Catherine of Aragon in 1501. In 1509 Henry VIII sent him to Scotland, with Sir Robert Drury and Dr. John Batemanson, to negotiate the treaty which was signed at Edinburgh on 29 Nov. 1509, and in the following year he and Drury were commissioned to treat for the redress of grievances. He was then, 1509–10, sheriff of Yorkshire. On 9 Dec. 1510 he obtained an exemption from serving on juries, &c. (*Pat.* 2 *Hen. VIII*, p. 2, m. 9). To the battle of Flodden in 1513 he accompanied the Earl of Surrey with a powerful band. The ballad of Flodden Field describing the muster has it:—

> Sir Marmaduke Constable stout
> Accompanied with his seemly sons,
> Sir William Bulmer with his rout,
> Lord Clifford with his clapping guns.

He was one of those who signed the challenge sent, 7 Sept., by Surrey to the king of Scots. On the 9th, the day of the battle, 'the captain of the left wing was old Sir Marmaduke Constable, and with him was Master William Percy, his son-in-law, William Constable, his brother, Sir Robert Constable, Marmaduke Constable, William Constable, his sons, and Sir John Constable of Holderness, with divers his kinsmen, allies, and other gentlemen of Yorkshire and Northumberland' (contemporary news-letter printed by Ric. Fawkes; reprint, Garret, 1822). His two sons, his brother, and William Percy were among those knighted after the battle. Henry VIII acknowledged his services on that day by a letter of thanks dated Windsor, 26 Nov. 1514 (Prickett, *Bridlington*, p. 186; *Notes and Queries*, 3rd ser. ii. 208), in which he refers to the royal license already granted to him on account of his 'great age and impotency' to take his 'ease and liberty,' and addresses him as knight of the body, Sir Marmaduke Constable, the elder, 'called the little.' In July 1515 he received a charter of liberties constituting Flamborough a sanctuary for felons and debtors, &c. (*Pat.* 7 *Hen. VIII*, p. 1, m. 29). In the Record Office are two orders, one dated 18 Jan. 1518, by Lord Darcy to a servant, to deliver wethers and kids to Constable. They are curious as written on the backs of playing cards (*Cal. Hen. VIII*, vol. ii. app. 43). He died on 20 Nov. 1518 (*Esch. Inq.* 11 Hen. VIII). His brother, John Constable, dean of Lincoln, and brother-in-law, Sir William Tirwhit, executors of his will (dated 1 May, and proved at York on 27 April 1520), afterwards, by deed 4 July 1522, in his name founded four scholarships in St. John's College, Cambridge. His tomb in Flamborough church is described by a writer in the 'Gentleman's Magazine' of 1753 (p. 456): 'This epitaph' (quoted above) 'is written on a copper plate fixed into a large stone, which is placed upon

a large stone coffin or chest in which the body was reposited, and beside it is the upper part of a skeleton in stone; the ribs project greatly and the breast is laid open, in the inner side of which appears what by tradition is held to be a toad at the heart (of which he was supposed to die), but it bears little or no resemblance of a toad.' The brass has now been separated from the coffin and skeleton, and their connection with each other forgotten (PRICKETT, *Bridlington*, p. 187). By his first wife, Joyce, daughter of Sir Humphrey Stafford of Grafton, he left issue Sir Robert Constable [q. v.], Sir Marmaduke Constable, Sir William Constable of Hatfield in Holderness, Sir John Constable of Kinalton, Agnes, wife of Sir Henry Ughtred, and Eleanor, wife, first of John Ingelby, afterwards of Thomas, lord Berkeley. By his second wife, Margery, daughter of William, lord FitzHugh, and widow of Sir John Hilton of Swine, he left no issue.

CONSTABLE, SIR MARMADUKE (1480?–1545), second son of the above, by his marriage with Barbara, daughter and heiress of Sir John Sotehill of Everingham, founded the family of Constables of Everingham. He fought under his father at Flodden, and was knighted after the battle as Sir Marmaduke Constable of Everingham, 9 Sept. 1513. In 1520 he went to France to the Field of the Cloth of Gold, and was present at the subsequent meeting of Henry VIII and the emperor at Gravelines. He took an active part in the Scotch wars of 1522 and 1523, and in the latter year distinguished himself at the capture of Jedburgh (23 Sept.) and Fernieherst (27 Sept.) In the parliament of 1529 he sat for Yorkshire, and in that of 1544–5 for Warwickshire. On the establishment of the council of the north in 1537 Constable was appointed to it and continued an active member till his death in 1545. He had been sheriff of Lincolnshire in 1513–14, and of Yorkshire in 1532–3. His share in the spoil of the monasteries was the priory of Drax in Yorkshire of which he had a grant, 22 July 1538 (*Pat. Roll*, 30 Henry VIII, p. 3, m. 12).

CONSTABLE, SIR ROBERT (1478?–1537), one of the leaders of the Pilgrimage of Grace, born about 1478, was eldest son of Sir Marmaduke Constable (1455?–1518) [q. v.] of Flamborough. In his youth he carried off a ward of chancery, and tried to marry her to one of his retainers (FROUDE, iii. 166). In the reign of Henry VII he was of signal service to the crown upon the commotion of Lord Audley and the Cornishmen, who marched on London and were defeated at Blackheath in 1497. Constable was one of the knights bannerets that were created at Blackheath by the king after his victory (BACON, *Henry VII*). In the following reign, on the outbreak of the great Yorkshire rising, known as the Pilgrimage of Grace, caused by the beginning of the destruction of monasteries in 1536, he took the leading part, along with Aske the captain and Lord Darcy. He was with the rebellious host on their entry into York; and after their advance on Pontefract, which became their headquarters, he was among those who received the royal herald with extreme haughtiness (*State Papers*, i. 486). He then threw himself into Hull, and urged that the most resolute measures should be taken; that negotiation should be refused until they were strong enough to defend themselves, that the whole country northward from the Trent should be closed, and the rising of Lancashire and Cheshire expected. If this counsel had been followed, the revolt would have been more serious. But the advance on Doncaster followed, and the fatal parley there with the king's forces, and Constable was among those who afterwards rode over the bridge, took off their badges, made their submission, and received their pardon. At the beginning of the next year, January 1537, when Sir Francis Bigod [q. v.] rashly attempted to renew the insurrection, Constable exerted himself to keep the country quiet (see his letter to the commons, FROUDE, iii. 196). When this last commotion was over, he, like the other leaders, was invited by the king to proceed to London. This he refused, and at the same time removed for safety from his usual place of abode to a dwelling thirty miles away. Hereupon the powerful minister Thomas Cromwell caused the Duke of Norfolk, the king's general in the north, to send him up with a sergeant-at-arms on 3 March (HARDWICK, i. 38). He with Aske and Darcy was committed to the Tower till they should be tried, and meantime Norfolk was directed to say in the north that they were imprisoned, not for their former offences, but for treasons committed since their pardon. What those treasons were the duke was conveniently forbidden to say. There was 'no speciality to be touched or spoken of,' but

all 'conveyed in a mass together' (*ib.* i. 457). True bills were returned against them, and after their condemnation it seemed to the king 'not amiss' that some of them should be remitted to their county for execution, 'as well for example as to see who would groan' (*State Papers*, i. 555). Constable and Aske were therefore sent down to Yorkshire, exhibited as traitors in the towns through which they passed, and Constable was hanged in chains at Hull in June. He married Jane, daughter of Sir William Ingloby, by whom he had eight children (FOSTER, *Yorkshire Pedigrees*).

[Authorities cited above.] R. W. D.

CONSTABLE, THOMAS (1812–1881), printer and publisher, youngest son of Archibald Constable [q. v.] by his first marriage to Mary, daughter of David Willison, was born at Craigcrook, near Edinburgh, 29 June 1812. He learned the business of a printer with Mr. C. Richards in St. Martin's Lane, London, and commencing on his own account in Edinburgh soon occupied a position of prominence. On 7 Sept. 1839 he was appointed her majesty's printer and publisher in Edinburgh. Shortly after the death of Dr. Chalmers in 1847 he purchased the copyright of Dr. Chalmers's works, and of the 'Life' by Dr. Hanna, for 10,000*l.* Although the undertaking resulted in loss, it did not deter him from further publishing enterprises. About 1854 he began to issue the series of schoolbooks still known as 'Constable's Educational Series,' among the more notable books of the series being Morell's 'English Grammar' and Clyde's 'Geography.' In the same year he published the first volume of the complete edition of Dugald Stewart's 'Works,' edited by Sir William Hamilton and extending to ten volumes. About 1865 he projected 'Constable's Foreign Miscellany,' consisting of translations of important foreign works in general literature. The series was continued for several years, but was not remarkably successful. Among other publications of Constable were Calvin's 'Commentaries,' the novels of Giovanni Ruffini, and the earlier works of Dr. John Brown, author of 'Rab and his Friends.' In 1860 he discontinued the publishing business, his stock being chiefly disposed of to Messrs. Edmonston & Douglas. In his later years Constable devoted his leisure to literary occupation. His life of his father, published under the title 'Archibald Constable and his Literary Correspondents,' 1873, while of permanent interest from the valuable materials he had at his disposal, displays both sound judgment and considerable literary skill. He was also the author of 'Memoir of Lewis D. B. Gordon, F.R.S.E., Professor of Civil Engineering and Mechanics in the University of Glasgow,' printed for private circulation, Edinburgh, 1877, and of a 'Memoir of the Rev. Charles A. Chastel de Boinville,' London, 1880. He died 26 May 1881. By his wife Lucia Anne, daughter of Alexander Cowan, papermaker, Valleyfield, near Edinburgh, he had issue. His son Archibald became partner with him in 1865, and received the appointment of printer to her majesty in 1869, the business being carried on under the designation of 'Thomas & Archibald Constable, printers to the queen and to the university of Edinburgh.'

[Notice in Scotsman by Dr. Walter C. Smith, 28 May 1881; private information.] T. F. H.

CONSTABLE, SIR THOMAS HUGH CLIFFORD (1762–1823), topographer and botanist, was the eldest son of Thomas Clifford (fourth son of Hugh, third Lord Clifford of Chudleigh), and Barbara Aston, youngest daughter and coheiress of James, fifth lord Aston of Forfar. His parents being catholics sent him to be educated in the academy opened at Liège by the English ex-jesuits after their expulsion from Bruges (GILLOW, *Bibl. Dict. of the English Catholics*, i. 556); and he continued his studies at the college of Navarre, in Paris, after which he travelled on foot over Switzerland. Having lost his mother in 1786, and his father in 1787, he settled at Tixall in Staffordshire, the estate of the Astons, which he inherited from his mother; and he married in 1791 Mary Macdonald, second daughter of John Chichester of Arlington, Devonshire. During his residence at Bath he gave a cordial welcome to the French emigrants, and when Louis XVIII visited that city in 1813, a few months before the Restoration, he twice invited him to his table (*Annuaire Nécrologique*, 1824, p. 337). By patent dated 22 May 1815 Clifford was created a baronet at the particular request of Louis XVIII. In 1821 he succeeded to the estates of Francis Constable, esq., of Burton Constable and Wycliffe Hall (*Gent. Mag.* 1823, i. 470), and two years later he was, by royal sign-manual, allowed to take the name of Constable only. He died at Ghent on 25 Feb. 1823.

Of his extensive knowledge of botany he has left a proof in the 'Flora Tixalliana,' appended to the 'Historical and Topographical Description of the Parish of Tixall' (Paris, 1817, 4to, privately printed), which he composed in conjunction with his brother, Arthur Clifford [q. v.], and to which he furnished almost all the materials (*Gent. Mag.* 1830, i. 274). One copy of this work was

printed on elephant folio, for the purpose of illustration; in the embellishment of which Sir Thomas was employed at the time of his death (MARTIN, *Privately Printed Books*, pp. 156, 157). He projected a 'History of the Normans' and made considerable progress with it; he translated La Fontaine's 'Fables' into English verse; and in his later years he completed a new metrical version of the Psalms. He produced also a work in French entitled 'L'Évangile Médité.' From this he extracted forty 'Meditations on the Divinity and Passion of Christ,' which he translated into English and published at his own expense (NICHOLS, *Illustr. of Lit.* v. 511*).

[Authorities cited above; Addit. MS. 24867, ff. 115, 122.] T. C.

CONSTABLE, SIR WILLIAM (*d.* 1655), regicide, son of Sir Robert Constable of Flamborough and Holme, Yorkshire, served in Ireland under the Earl of Essex, and was knighted by him at Dublin on 12 July 1599 (PHILLIPS, *Catalogue of Knights*). He was involved in Essex's plot, but never tried, and on 20 March 1601 the queen, by warrant to Chief-justice Popham, directed him to be admitted to bail (FOSTER, *Yorkshire Pedigrees*). He married on 15 Feb. 1608, at Newton Kyme, Dorothy, daughter of Thomas, first lord Fairfax (*ib.*), and on 29 June 1611 was created a baronet (*Forty-seventh Report of the Deputy-Keeper of Public Records*, p. 126). Several of Constable's letters are printed in the 'Fairfax Correspondence.' In one letter, dated 19 July 1627, Constable gives an account of his summons before the council for refusing to pay the forced loan levied in that year (i. 68). Others relate to the marriage between Thomas Fairfax and Ann Vere, which was negotiated by him (*ib.* i. 276, 297, 302). In 1626 Constable represented the county of York in parliament, in 1628 the town of Scarborough, and in the Long parliament he sat for Knaresborough, being declared elected on 19 March 1642, although he had only received 13 against 33 votes given for his opponent (*Commons' Journals*; *Fairfax Corr.* ii. 260). During these years Constable's debts had obliged him to sell his manors of Holme (1633) and Flamborough (1636) (FOSTER); nevertheless, in spite of his embarrassments, he was able to raise a regiment of foot for the parliament. At the battle of Edgehill his bluecoats completed the rout of the king's red regiment, and one of his ensigns had the honour of taking the king's standard (VICARS, *Parl. Chron.* i. 193, 199). His greatest exploits, however, took place in the spring of 1644. In February he took Burlington, assisted in the capture of Whitby, retook the town of Scarborough and shut up Sir Hugh Cholmley in the castle, and defeated Newcastle's forces at Driffield and Malton (*ib.* iii. 154–60). In March he also captured Tadcaster and Stamford Bridge (*ib.* iii. 171–3). Excluded from active service by the self-denying ordinance, he still continued to adhere to the independent party, and was one of the members who joined the army in 1647. In January 1648 he was commissioned to assist Colonel Hammond in the guard of the king at Carisbrook, and given by vote of the House of Commons on 5 Jan. power with Hammond to remove any attendants, and take any measures necessary for the security of the king's person (RUSHWORTH, vii. 955). In the same month he was appointed governor of Gloucester, and was in command there three years later, when Charles II marched to Worcester (*Bibliotheca Gloucestrensis*, p. cxvii). The House of Commons appointed Constable one of the king's judges, and he attended with great assiduity nearly every sitting of the court, and also signed the warrant for the execution of Charles (NALSON, *Trial of Charles I*). During the existence of the republic he was elected member of the first, second, and fourth councils of state, and twice was appointed president of the fourth council. He died on 15 June 1655 in London, and was interred in Henry VII's Chapel in Westminster Abbey on 21 June (*Mercurius Politicus*). His wife, Lady Dorothy Constable, died on 9 March following, and was buried on 11 March 1656 at Bishophill Elder, York (FOSTER). At the Restoration Constable was one of the twenty-one dead regicides whose estates parliament resolved to confiscate (1 July), and on 14 Sept. in the same year his body was removed from Westminster Abbey.

CONSTANTIIS, WALTER DE (*d.* 1207). [See COUTANCES, WALTER DE.]

CONSTANTINE I (*d.* 879), son of Kenneth Macalpine, king of Scotland or Alba, the country north of the Forth and Clyde, whose chief seat was Scone, succeeded his uncle Donald in 863. His reign was one of the first when the attacks of the Normans attained a formidable height, threatening the destruction of the Celtic and Saxon kingdoms. Two years after his accession Olaf the White, king of Dublin, wanted the country of the Picts, and occupied it from the Kalends of January to the feast of St. Patrick, i.e. 17 March. According to the Pictish Chro-

nicle, Olaf was slain by Constantine when on a raid in the following year, but the 'Annals of Ulster' relate that he destroyed Alrhyth (Dumbarton), after a four months' siege, in 870, and retired in 871 to Dublin with two hundred ships and a great body of men, Anglo-Britons and Picts. After this he disappears from the Irish annals, so that his death may possibly have been antedated by some years in the account of the Pictish Chronicle. Ivar, another of the Norse Vikings of Dublin, who had fought along with Olaf, died about the same time, but Scotland was still exposed to incursions from other leaders of the same race. Thorstein the Red, a son of Olaf, by Audur, the wealthy daughter of Ketill Flatnore, attacked the northern districts, and, according to the 'Icelandic Landnamabok,' conquered 'Katanes and Suderland, Ross and Norway, and more than half Scotland.' But his kingdom, which, perhaps, was acquiesced in by Constantine, who had slight hold of the northern parts, was brief, and he was slain by the men of Alba by a stratagem or treachery in 875. In the South Halfdane the Danish leader who led the northern of the two bands (Guthrum, Alfred's opponent commanded the other), into which the formerly united host of that people was divided, ravaged the east coast of Britain, laid waste Northumbria, and destroyed the Picts (of Galloway?) and the people of Strathclyde.

Two years later another band of Danes, the Irish Dubhgall, or Black Strangers, having been driven from Ireland by the Fingall, or White Strangers, made a sudden descent on Scotland by way of the Clyde and, penetrating into the interior, defeated the Scots at Dollar, from which they passed to Inverdovat, in the parish of Forgan in Fife, where Constantine was slain (877). Tradition points to the long black cave, near Crail, as the scene of his death.

[Robertson's Scotland under her Early Kings; Skene's Celtic Scotland.] Æ. M.

CONSTANTINE II (*d.* 952), son of Ædh, king of Scotland or Alba, one of the most important monarchs of the race of Kenneth Macalpine, as is indicated by the length of his reign. He succeeded his cousin Donald VI, son of Constantine I, who was a brother of Ædh, in 900. In the third year of his reign the northmen plundered Dunkeld, but were defeated in the following year in Strathearn, when their leader, Ivar of the Hy Ivar (i.e. tribe of Ivar), or perhaps grandson of its founder, the first Ivar, was slain by the men of Fortrenn, the central district of Scotland, fighting under the protection of the Cathbuaidh, the crozier of Columba. In his sixth year an assembly at the Moot Hill of Scone, presided over by Constantine and Kellach, the bishop of Kilrymouth (St. Andrews), agreed that 'the laws and discipline of the faith and the rights of the churches and gospels should be preserved equally with the Scots.' By this obscure reference we are probably to understand that the Pictish and Scottish churches, both long before then christian, were united on a footing of equality under the Bishop of St. Andrews, and that the Dunkeld supremacy which had succeeded that of Iona came to an end. In 908 the death of Donald, the last British king of Strathclyde, a district now almost confined to Galloway, Ayr, and Dumfries, gave Constantine the opportunity of procuring what is usually called the election of his brother Donald to the throne of that kingdom, which remained in a condition of subjection, ruled over by a prince of the Macalpine family until its complete union to Scotland in the reign of Malcolm II. This peaceful addition to his kingdom was followed by a period during which Constantine had to maintain a fierce contest with the Danish pirates led by Regnwald (Reginald), a descendant of Ivar, son of Ragnar Lodbrog. In 912, along with Ottir the jarl and Oswyl Gracaban, Reginald ravaged Dunblane (Lappenberg, *Anglo-Saxon Kings*, ii. 114, but other writers understand by the passage in Symeon of Durham, 'Historia Regum,' Dublin and not Dunblane, Arnold, *Introduction to Symeon*, ii. xxv). He then seems to have transferred the scene of his operations to the Isle of Man and the south coast of Ireland, making a descent on Waterford, but in 918 he again invaded Scotland from the south, but having in view specially the conquest of Northumberland. Eldred, lord of Bamborough, called in the aid of Constantine to repulse the Danish invader, and at the memorable though apparently indecisive battle of Corbridge-on-the-Tyne three of the four divisions of the Danish army were defeated by Constantine, and Earls Ottir and Gracaban slain. Reginald with the fourth division then attacked the Scots in rear, but night put an end to the battle, in which many Scots, but none of their chiefs, were slain. The victory was claimed by both sides, but Reginald succeeded in making his way east and taking for a time possession of Bernicia, the northern part of Northumbria. This view, which is that of Mr. Skene, appears on the whole a more probable and consistent account of these transactions than the view of Mr. Hinde, followed with modifications by Mr. Arnold, in his edition of Symeon of Durham, that there were two battles, one in 913–914, in which Reginald was victor, and drove

Ealdred to take refuge with the Scotch king, and another in 918, fought in (Alba) Scotland, which was indecisive; but we must admit with Mr. Arnold, 'The truest form of the occurrence is unrecoverable.'

After the battle of Corbridge the northmen desisted for upwards of a century making any descent on Scotland. The kingdoms of Britain were becoming consolidated and too powerful for the attacks of mere piratical leaders. When the contest was renewed it was between the kings of united Scotland and united Norway. The remainder of Constantine's reign was occupied with a more formidable foe, the Saxon kings of Wessex, who had been advancing slowly but steadily northward since Alfred had, in the last century, driven off the Danes in the south, amalgamating all England under their sceptre as they progressed. Æthelstan, the son of Eadward the Elder, who succeeded in 925, was the first king who really attempted the annexation of Northumbria, for the statement of the 'Anglo-Saxon Chronicle' that in 924 Eadward the Elder 'was chosen for father and lord by the king of the Scots and the Scots, by King Regnall (i.e. Reginald) and the Northumbrians, and also by the king of the Strathclyde Welsh and all the Strath Clyde Welsh,' if interpreted to mean anything more than a nominal subjection, is inconsistent with the fact that he is said in the same year to have erected a fort at Bakewell in the Peakland of Derbyshire, showing the limits of his real advance. Reginald, the Danish earl, one of those said to have submitted, died three years before 924. But with Æthelstan, the attack on Northumbria, which was not to be finally subdued till after the Norman Conquest, truly began.

He is said by the 'Anglo-Saxon Chronicle' to have subjugated in 926 'all the kings who were in this island,' but some discredit attaches to this statement, which is probably an exaggeration of real victories by the addition in the same authority that Houre, king of the west Welsh, and Constantine, king of the Scots, two of those who submitted to him, 'renounced every kind of idolatry,' for they were already undoubtedly christian kings. In 933–4 it is recorded that Æthelstan went into Scotland with a land force and a ship force and ravaged a great part of it, reaching Dunottar by land and Caithness with his fleet (Symeon, *Historia Regum*, ii. 124). Four years later a powerful league was formed to resist his further advance. Constantine and his son-in-law, Olaf Cuaran, the son of Sihtric, led their forces by land and sea on the east coast, while the Strathclyde Britons crossed the hills which divided them from the Angles, and another Olaf, the son of Godfrey, came with a fleet from Dublin. Æthelstan on his side had a powerful ally in Egil, the son of Skalagrim, the hero of the Norse Saga. The decisive battle was fought at Brunanburh, perhaps near Brough-on-the-Humber, or, according to Mr. Skene's conjecture, Aldburgh, near Boroughbridge, sixteen miles from York ('Wendune alio nomine et brunnanwerk vel Brunnanbyrig,' Symeon of Durham, i. 76), and resulted in favour of the Wessex king. Olaf and Constantine were driven back to their ships. Five kings and seven earls and countless shipmen and Scots are said to have been slain in the famed Anglo-Saxon war-song which celebrated the victory. No greater slaughter had been known

> Since hither from the East
> Angles and Saxons came to land,—
> O'er the broad seas
> Britain sought:
> Proud war smiths
> The Welsh overcame.

Æthelstan died three years after the battle, but before his death he had established the Norse jarl, Eric Bloody-axe, a son of Harold Haarfagr (Fairhaired), as ruler of Northumbria. In 943 Constantine resigned the crown to Malcolm, the son of his predecessor, Donald, and became a monk in the Culdee monastery of St. Andrews, where he died in 952. He retained his political interest notwithstanding his retirement, and in 949 incited Malcolm to join his son-in-law Olaf in an expedition against Northumbria, which Olaf wrested from Eric Bloody Axe and held for three years. Eric was then restored for ten years, when it finally submitted to the West-Saxon king, Eadred, and became an earldom under him and his successors. While Constantine was thus unsuccessful in his contest with the Wessex kings and Northumbria remained under Anglo-Saxon rulers, he was in all other respects a fortunate king, laying the foundation for the annexation of Strathclyde to Scotland and putting a stop to the incursions of the northmen. In 954 his son Indulph succeeded, after the short reign of Donald, to the throne. His reign was marked by the evacuation of Edinburgh by the Angles, the first step towards the acquisition of Lothian by Scotland.

[Anglo-Saxon Chronicle; Symeon of Durham; Chronicles of the Picts and Scots; Robertson's and Skene's Histories, ut supra.] Æ. M.

CONSTANTINE III (*d.* 997), was son of Colin, king of Scotland. He succeeded after the murder of Kenneth II, son of Malcolm I, at Fettercairn, in 995, but his short reign of two years, when he was himself slain by another

Kenneth, perhaps an illegitimate son of Malcolm I, has left no event on record. The place of his death is said to have been Rathinver Almond, but whether the Perthshire Almond (*Chronicles of the Picts and Scots*, pp. 175–289) or the Almond in West Lothian (FORDUN, *Chronicle*, ii. 168) is uncertain. He was succeeded by Kenneth, son of Dubh, and grandson of Malcolm I.

[Robertson's and Skene's Histories.] Æ. M.

CONSTANTINE MAC FERGUS (*d.* 820), king of the Picts, acquired the monarchy by the defeat of Conall Mac Taidg (Teige), who was assassinated in 807 by another Conall, son of Aidan, a Dalriad king in Kintyre. After this date there is a blank in the Irish annals of the names of any separate kings of the Dalriad Scots, and Mr. Skene conjectures that Constantine ruled over them for some years (*Celtic Scotland*, i. 302). The reign of this monarch was the era of the first advent of the Norsemen, who in 793 attacked Lindisfarne, the holy island on the east coast of Northumbria, and almost simultaneously the Hebrides, in 794 according to the 'Annals of Ulster.' In 801, and again in 806, Iona was ravaged by them, their object at this period of their raids being to spoil the monasteries. The plunder of Iona and the slaughter of the monks led to the removal of some of the relics to Kells in Meath, and of others to Dunkeld, where Constantine founded a monastic church. He died in 820, and was succeeded by his brother Angus. Constantine has usually been deemed the last of the Pictish kings, but the recurrence of his name in three monarchs of the united kingdom of the Picts and Scots, the fact that Donald, son of the first of these Constantines, is the first king called 'Ri (king of) Alban' in the Irish annals, while his predecessors are called kings of the Picts (with the exception of Kenneth Macalpine, who is denominated the first of the Scots who ruled in Pictavia), appear to justify Mr. Skene's hypothesis that Pictish blood still continued to flow in the veins of the sovereigns of the united monarchy, probably through their mothers. If so, it appears to follow that the statement that the Picts were almost exterminated by Kenneth is an exaggeration, and the union may have been of a more pacific character than is often supposed. But all this belongs to the dark period of hypothesis and conjecture in Scottish history. The name of Constantine, of which Constantine Mac Fergus is the first bearer, is remarkable, and, being equivalent to no known Celtic word, it would seem to have been adopted, perhaps at baptism, in imitation of the great emperor, as that of Gregory may have been taken from the great pope.

[Robertson's Scotland under her Early Kings; Skene's Celtic Scotland.] Æ. M.

CONSTANTINE, GEORGE (1501?–1559), protestant reformer, born about 1501, was first brought up as a surgeon (FOXE, *Acts and Monuments*, ed. Townsend, vii. 753; ANDERSON, *Annals of the English Bible*, i. 188). He received his education in the university of Cambridge, and was bachelor of canon law in 1524 (COOPER, *Athenæ Cantab.* i. 205). Adopting the reformed doctrines he went to Antwerp, where he assisted Tyndal and Joye in the translation of the New Testament, and in the compilation of various books against the Roman church (STRYPE, *Cranmer*, p. 81, fol.) While in Brabant he practised for a year as a surgeon. About 1530 he was seized on a visit he made to England for the dispersion of prohibited books. He was placed in the custody of the lord chancellor, Sir Thomas More, and in order to escape punishment for heresy he made disclosures as to his associates abroad, and gave the names of 'the shipmen who brought over many of these books, and the marks of the fardles, by which means the books were afterwards taken and burnt' (STRYPE, *Eccl. Memorials*, i. 166, fol.) The chancellor is represented by one manuscript as having put his prisoner in the stocks, but a subsequent letter shows that this was another way of expressing that he was in irons (ANDERSON, i. 308). Constantine succeeded, however, in making his escape, and arrived at Antwerp on 6 Dec. 1531.

Venturing to return to London after More's death he entered into the service of Sir Henry Norris, who suffered on the scaffold with Queen Anne Boleyn. He next entered the ministry of the church of England, having obtained the vicarage of Lawhaden or Llanhuadairne, three miles north-west of Narberth, Pembrokeshire, under William Barlow, bishop of St. David's. About 1546 he became registrar of the diocese of St. David's, and in 1549 archdeacon of Carmarthen. Anticipating the public articles on the subject, he in 1549 pulled down the altar and set up a table in the middle of his church. This proceeding caused much murmuring among the people, and gave offence to the bishop, Robert Ferrar, who had not been consulted, and who commanded the vicar to place the communion-table on the spot formerly occupied by the altar. This was subsequently made one of the articles of accusation against Ferrar by Constantine and his son-in-law, Thomas Young (STRYPE, *Eccl. Memorials*, ii. 227, 228). They both sought for and obtained forgiveness

from the bishop shortly before he was burnt for heresy in 1555 (*ib.* iii. 254, 256, 258, App. 138, 143, 144 ; Foxe, vii. 4, 10–14, 17, 23, 25, 27, 753 ; Strype, *Cranmer*, p. 184). In 1559 Constantine became archdeacon of Brecon, which office was vacated the same year by his death (Jones and Freeman, *St. David's*, p. 360).

He was married and had a daughter, who became the wife of Thomas Young, afterwards bishop of St. David's, and ultimately archbishop of York.

He was author of: 1. 'Instructions for my Lord Privey Seale as towchinge the whole communication betwixt John Barlow, Deane of Westbury, Thomas Barlow, Prebendary there, clerkys, and George Constantine of Lawhaden, in their journey from Westbury unto Slebech in Sowthwales' (1539); in 'Archæologia,' xxiii. 56–78. 2. Translation of a sermon by John Wycliffe, 'De Hominis Villicatione' (Bale, *Scriptt. Brit. Cat.* i. 732 ; Tanner, *Bibl. Brit.* p. 196). 3. 'The Examination of Master William Thorpe, priest, of heresy, before Thomas Arundell, Archbishop of Canterbury, the year of our Lord mccc. and seven.' See Sir Thomas More's 'English Works,' p. 342. This appears to be the tract which is reprinted in Arber's 'English Garner,' 1883, vi. 41.

[Authorities cited above.] T. C.

CONWAY, ANNE, Viscountess Conway (*d.* 1679), metaphysician, was the daughter of Sir Henry Finch [q. v.], recorder of London and speaker of the House of Commons. Besides the usual accomplishments of her sex she was taught the learned tongues; she eagerly perused the works of Plato and Plotinus, Philo Judæus, and the 'Kabbala Denudata;' and her ruling passion was for the most abstruse treatises on theosophy and mysticism. On 11 Feb. 1651 she was married to Edward Conway, who was created Earl of Conway in 1679 (Lysons, *Environs*, iii. 206). She suffered from a severe headache, which never left her, night or day, till her death. On one occasion she went to France in order that her cranium might be opened, but the French surgeons declined the operation, though they are said to have made incisions in the jugular arteries (Ward, *Life of Dr. Henry More*, p. 206). During her latter years frequent fits increased her torments; and Valentine Greatrakes [q. v.], the renowned Irish 'stroker,' exerted his art upon her in vain. In spite of her ailments she studied metaphysical science with extraordinary assiduity. In this she was greatly encouraged by her physician, Francis Mercury van Helmont, who resided with her at Ragley Castle. Her most distinguished friend was Dr. Henry More, with whom she kept up a regular correspondence on theological subjects (Worthington, *Diary*, i. 140). After much hesitation she adopted the opinions held by the Society of Friends, with the chief founders of which, Fox, Penn, and Barclay, she had held earnest conferences. In spite of More's remonstrances, she adhered steadily to her new belief, in which she died on 23 Feb. 1678–9. Her husband was absent in Ireland at the time of her decease, but in order that he might have a last look at her features Van Helmont preserved the body in spirits of wine, and placed it in a coffin with a glass over the face (*Once a Week*, xii. 220; *Rawdon Papers*, pp. 215, 265). She was buried at Arrow, Warwickshire, on the 17th of the following April.

She wrote numerous works, but only one of them has been printed. In 1690 a collection of philosophical treatises appeared in Latin at Amsterdam, the first being a translation of a work by a certain English countess 'learned beyond her sex.' Leibnitz, in a German literary journal, ascribes the authorship to the Countess of Conway on the information of Van Helmont (Walpole, *Royal and Noble Authors*, ed. Park, iii. 211; *Gent. Mag.* liv. 728, 806, 972). This treatise was retranslated and published with the title: 'The Principles of the most Ancient and Modern Philosophy, concerning God, Christ, and the Creatures, viz. of Spirit and Matter in general; whereby may be resolved all those Problems or Difficulties, which neither by the School nor Common Modern Philosophy, nor by the Cartesian, Hobbesian, or Spinosian could be discussed. Being a little Treatise published since the Author's Death, translated out of the English into Latin, with Annotations taken from the Ancient Philosophy of the Hebrews ; and now again made English. By I.C. Medicinæ Professor,' London, 1692, 8vo. Probably Jodocus Crull was the translator. Dr. Henry More wrote, under the name of Van Helmont, a preface to Lady Conway's 'Remains,' but the projected work was never printed (Ward, *Life of Dr. Henry More*, pp. 202–9). Her correspondence with More was in the possession of James Crossley of Manchester [q. v.]

[Authorities cited above.] T. C.

CONWAY, EDWARD, Viscount Conway (*d.* 1631), was son and heir of Sir John Conway, knight [q. v.], by Ellen or Eleanor, daughter of Sir Fulke Greville of Beauchamp's Court, Warwickshire. He was knighted by the Earl of Essex at the sacking of Cadiz (1596), where he commanded a regiment of foot. Afterwards he served in the Nether-

lands as governor of the Brill (CHAMBERLAIN, *Letters during the Reign of Elizabeth*, p. 173). In the first parliament held in the reign of James I he sat as member for Penryn (WILLIS, *Notitia Parliamentaria*, iii. pt. ii. p. 158). When Brill was delivered up to the States of Holland (1616), he received a pension of 500*l.* per annum (LORD CAREW, *Letters to Sir T. Roe*, p. 35). On 30 Jan. 1622–3 he was made one of the principal secretaries of state, and he was continued in that office after the accession of Charles I (THOMAS, *Hist. Notes*, ii. 497, 569; HACKMAN, *Cat. of Tanner MSS.* p. 88*a*). He was returned for Evesham to the parliament which assembled on 19 Feb. 1623–4 (WILLIS, p. 196), and on 22 March 1624–5 he was created Baron Conway of Ragley in the county of Warwick. On 8 Dec. 1625 he was constituted captain of the Isle of Wight. In 2 Car. I he was created Viscount Killultagh of Killultagh, county Antrim, Ireland (LODGE, *Illustr. of British Hist.* ed. 1838, ii. 553), and on 6 June 1627 Viscount Conway of Conway Castle in Carnarvonshire (DUGDALE, *Baronage*, ii. 453). He became lord president of the council in Dec. 1628, and was ambassador to Prague (1623–1625). He died in St. Martin's Lane, London, on 3 Jan. 1630–1.

By his wife Dorothy, daughter of Sir John Tracy of Tedington, Gloucestershire, and widow of Edmund Bray, he had three sons and four daughters. His eldest son, Edward, succeeded to the family honours.

CONWAY, FRANCIS SEYMOUR, MARQUIS OF HERTFORD (1719–1794), born in 1719, was son and heir of Francis Seymour, first lord Conway (who assumed the name of Conway), by his third wife, Charlotte, granddaughter of Sir John Shorter, lord mayor of London, and sister of the first wife of Sir Robert Walpole [q.v.] Succeeding his father as second baron Conway in 1732, he, on 3 Aug. 1750, was created Viscount Beauchamp and Earl of Hertford, titles recently extinct by the death of Algernon, seventh duke of Somerset. He became a lord of the bedchamber and K.G. in 1757; privy councillor in 1763; afterwards ambassador extraordinary to France; lord-lieutenant of Ireland in 1765; lord chamberlain 1766–82 and again April-Dec. 1783 in the coalition ministry; lord-lieutenant of Warwickshire from 1757 till death. On 3 July 1793 he was created Earl of Yarmouth, co. Norfolk, and Marquis of Hertford. He died on 14 June 1794.

He married (1741) Isabella, daughter of Charles Fitzroy, second duke of Grafton, by whom he had seven sons and six daughters. His eldest son, Francis (Ingram) Seymour [q. v.], succeeded to the titles.

[Sharpe's Peerage (1830); Nicolas's Synopsis, ed. Courthope; Gent. Mag. lxiv. pt. i. p. 581; Bromley's Cat. of Engraved Portraits, p. 330.] T. C.

CONWAY, HENRY SEYMOUR (1721–1795), field-marshal, second son of Francis Seymour, first lord Conway, by his third wife, Charlotte, daughter of Sir John Shorter, lord mayor of London, and sister of Catherine, wife of Sir Robert Walpole, earl of Orford, was born in 1721 and entered the army at an early age. During the spring of 1740 he was in Paris (WALPOLE, *Letters*, i. 39), and spent the summer of that year in London, applying himself diligently to the study of mathematics, fortification, and drawing (*Rockingham Memoirs*, i. 374). The projected marriage, which took place in May 1741, of his brother, Francis Seymour Conway [q. v.], afterwards earl and marquis of Hertford, to Isabella, daughter of Charles, second duke of Grafton, led to a fruitless negotiation for his return as member for the duke's borough of Thetford. On 19 Oct. 1741 Conway was returned to the Irish parliament for Antrim, which he represented until 1761. On 28 Dec. 1741 he was returned to the parliament of Great Britain as member for Higham Ferrers, Northamptonshire, and, with the exception of ten months (1774–5), sat in successive parliaments until the dissolution in 1784, being returned for Penryn, Cornwall, 1 July 1747; for St. Mawes, in the same county, 19 April 1754; for Thetford, Norfolk, 28 April 1761; and for Bury St. Edmunds, Suffolk, 27 March 1775 and 12 Sept. 1780, in each case representing a close constituency. In 1741 Conway was promoted captain-lieutenant of the 1st regiment of footguards, with the rank of lieutenant-colonel, and in the spring of the following year joined the army in Flanders. Greatly to his disgust he found himself condemned to inactivity and spent the summer at Ghent, employing himself better than his brother officers generally by reading 'both morning and evening' (*ib.* 383). As the States refused to allow their troops to march with the British to the Rhine, Conway, in common with all other officers who were members of parliament, received leave to return to England for the session which opened in November, and formed one of the majority against a vote for disbanding the army in Flanders. In May 1743 he rejoined his regiment near Frankfort, and was present at the battle of Dettingen on 27 June; but to his mortification the brigade of guards was hindered by Baron Ilton, the Hanoverian general, from taking

part in the engagement. He returned to England and attended parliament in the autumn. Early the next year he obtained the appointment of aide-de-camp to Marshal Wade, who succeeded Lord Stair in the command of the army in Germany, and in May joined the marshal at Ghent. The campaign of 1744 was inglorious, and Conway returned to England disheartened (*Rockingham Memoirs*, i. 395). He was at this time in love with Lady Caroline Fitzroy (the Lady Petersham and Countess of Harrington of Walpole's 'Letters'), the sister of his brother's wife, but his means were small, and Horace Walpole persuaded him not to make her an offer (*ib.* 402; WALPOLE, *Letters*, i. 312). Between Conway and Walpole there existed a strong and lifelong attachment, and Conway figures largely both in the correspondence and memoirs of his cousin. He was by no means so remarkable a man as Walpole makes him out. His personal advantages were great; he was singularly handsome, his voice was sweet, and his manner, though reserved, was gracious. No man of his time was so generally liked. While he was a man of fashion his tastes were cultivated and his habits respectable. In a period marked by political intrigue and corruption he was conspicuous for integrity and a delicate sense of honour. His talents were not brilliant: he lacked decision and insight, and he was easily swayed both by his emotions and his friends. He had not the ability either to form or carry out a plan for himself, and he unconsciously allowed Walpole to use him as a means of gratifying his spite and his caprices (RUSSELL, *Life of C. J. Fox*, i. 283; LORD E. FITZMAURICE, *Life of Shelburne*, ii. 55). Of his personal courage there is no doubt; he was a better soldier than he was a general, a better general than a statesman.

When, in 1745, the Duke of Cumberland replaced Wade in the command of the army in Germany, he appointed Conway one of his aides-de-camp. The appointment had some influence on his political life. Discontented with the way in which the war was carried on, he had provoked the king and the duke by some votes he had given on the subject. The renewal of activity delighted him; he became a chief favourite with the duke, and defended the war on all occasions (WALPOLE, *Memoirs of George II*, i. 35). He joined the army just in time to take part in the battle of Fontenoy on 11 May, where he distinguished himself by his personal bravery. In the autumn he accompanied the duke to the north, received the command of the 48th regiment of foot on 6 April 1746, and on the 16th took part in the battle of Culloden. He served with the duke in Flanders in 1747, and was present at the defeat of the allied army at Lauffeld, in front of Maestricht, on 2 July; here he was overpowered, and barely escaped being stabbed when on the ground by a French hussar (WALPOLE, *Letters*, ii. 91). He was made prisoner, but was released on parole. He returned home, and on 19 Dec. married Caroline, widow of Charles, earl of Aylesbury, and daughter of Lieutenant-general John Campbell, afterwards Duke of Argyll, by whom he had one daughter, Anne Seymour, who married John Damer, son of Lord Milton, afterwards Earl of Dorchester. From 24 July 1749 he commanded for two years the 34th regiment. On his marriage he lived at Latimers, Buckinghamshire, which he hired for three years. In Aug. 1751 he was ordered to join his regiment in Minorca and visited Italy on his way. Receiving the command of the 13th dragoons in December he returned home early the next year, and bought Park Place, near Henley-on-Thames. He had scarcely had time to settle there before he was ordered to Ireland. Thither Lady Aylesbury accompanied him, leaving her daughter, then three years old, in charge of Horace Walpole. They were quartered at Sligo, and returned home in the summer of 1753, in which year he received a legacy of 5,000*l.*, as joint heir of his uncle, Captain Erasmus Shorter. In 1754 he seconded the address to the crown and took part in the debates on military matters. He was colonel of the 8th horse (now 7th dragoon guards) 1754–9. On the appointment of Lord Hartington, afterwards Duke of Devonshire, to the lord-lieutenancy of Ireland, he insisted on having Conway as secretary. Conway went to Ireland in March 1755, and his conciliatory temper did much to pacify the country. His tenure of office ended the next year. Although the place was one of great profit, he was a loser by the employment, for his expenses were large, and he did not have the opportunity of reimbursing himself by the second or 'fallow' year, during which, as a matter of course, both the lord-lieutenant and the secretary absented themselves.

Conway's association with the Duke of Devonshire continued after his return to England, and in the autumn of 1756 Walpole employed him to use his influence with the duke to accept the treasury without conditions, and allowing Pitt full liberty of action in the formation of the ministry. Conway was successful in his endeavour, and thus on 3 Nov. defeated a cabal formed by Fox and the Bedford party (*Memoirs of George II*, ii. 99–103). In parliament Conway was in constant rivalry with

Lord George Sackville. His desire to smooth matters over is illustrated by the suggestion he made on 26 Feb. 1757, in the course of the debate on the breach of privilege contained in the king's message on Admiral Byng's case, that it was not necessary to enter the whole message in the journals of the house, a course which the speaker refused to adopt. In April he received the appointment of groom of the bedchamber. In the summer Conway, who had been promoted major-general in the January of the previous year, was summoned from Dorsetshire, where he was with his regiment, and, in conjunction with Sir John Mordaunt, received the command of an expedition, planned by Pitt, which was to surprise Rochfort and burn the ships in the Charente. Pitt at first intended to give Conway the sole command, but the king considered that he was too young. Although he thought badly of the plan, he accepted the command, and the expedition sailed on 8 Sept., the fleet being under Sir Edward Hawke, with Knowles, Howe, and Rodney, while Cornwallis and Wolfe held military commands. On the 20th the ships appeared off Oleron, and after some debate the little island of Aix was reduced on the 22nd. Conway then proposed to advance up the river and attack Rochfort. A council of war was held, and it was decided that it was impracticable to take the town by surprise. Unwilling to accomplish nothing, he then proposed to attack Fouras, in the hope of being able to burn the French ships and magazines. Some days were wasted, and then an attack was made which failed. Conway wished to renew it, and Mordaunt offered to agree if he would take the sole responsibility. This he would not do, though he was willing to make the attempt if some one of the other officers in command would advise him to do so. At last Hawke declared that he would not keep his ships longer at sea at that season, and the expedition set sail on the 29th, arriving in England on 3 Oct. without having done anything. Great indignation was felt at this failure. Military men generally blamed the plan of the expedition, the ministers and the public blamed its commanders. A court of inquiry was held, which reported that no sufficient ground existed for abandoning the enterprise. Conway's conduct was allowed to pass, and a court-martial held on Mordaunt ended in an acquittal. In the course of the expedition Conway showed considerable indifference to personal danger. Associated, however, as he was with Mordaunt, whose powers were shattered by ill-health, his indecision was fatal. Nor was he altogether fitted in other ways for an enterprise of this sort, for his shy and reserved manner prevented his subordinate officers from feeling any enthusiasm for him, and he is accused by his detractors of having learned from the Duke of Cumberland to be a martinet to his men. The king received him coldly, and struck his name out of the list of the staff; and Pitt was indignant with him. Lord George Sackville made the worst of the matter, an ill-turn which Conway was too generous to repay when Lord George himself fell into far deeper disgrace. The question was debated in pamphlets entitled 'Military Arguments . . . fully considered by an Officer,' 'Reply of the Country Gentleman, by Thomas Potter,' and 'The Officer's Answer to the Reply,' all in 1758, the 'Officer' probably being Conway himself. In consequence of the failure of the Rochfort expedition he failed in obtaining a command in America, and when Ligonier told the king how eager he was for employment, adding that 'he had tried to do something,' George answered, 'Yes, après dîner la moutarde' (*Memoirs of George II*, ii. 235–45, 277; *Grenville Papers*, i. 217–29; *Chatham Correspondence*, i. 277; *Annual Register*, i. 19).

Although Conway was restored to the staff and promoted lieutenant-general on 30 March 1759, receiving the command of the 1st or royal regiment of dragoons on 5 Sept. following, and was employed on some military duty, he was not allowed to go on active service until March 1761, when he was sent to join the British army serving with Prince Ferdinand of Brunswick. On 15 June the prince occupied a strong position near the village of Kirch-Denkern, his centre being commanded by Conway and his left by the Marquis of Granby, when Granby's wing was attacked first by De Broglie and the next day by Soubise. The French were repulsed with heavy loss. On Granby's return to England Conway was left in charge of the English army, and took up his winter quarters at Osnaburg, where he was joined by his wife. Early the next summer he gained some credit by taking the castle of Waldeck by stratagem, and on the conclusion of the peace of Paris, signed 10 Feb. 1763, brought back the army to England. When Conway returned he found Grenville's government engaged in their attempt to crush Wilkes, and though he did not formally join any party of opposition, he acted with the whigs in resisting the arbitrary measures adopted by the ministers. His conduct enraged George III, who, as early as 16 Nov., proposed to Grenville that he should be dismissed from all his civil and military employ-

ments. Grenville hesitated, and advised the king to wait until the Christmas recess. On the 24th Conway voted against the government on the question of Wilkes's privilege. In the hope of smoothing matters over and keeping him from joining the opposition Grenville arranged a meeting with him on 4 Dec., which, by Conway's demand, took place in the presence of the Duke of Richmond. Conway refused to give any pledge of support to the government, and on 14 and 17 Feb. spoke and voted against the legality of 'general warrants.' For this offence the king and the minister not only dismissed him from his post in the household, but deprived him of his regiment (*Grenville Papers*, ii. 162, 166, 229, 321–7). Other officers were treated in the same high-handed fashion. Conway's dismissal was not made known until the house rose in April. The loss of income caused him considerable inconvenience. Walpole at once offered him 6,000*l.*, and shortly afterwards the Duke of Devonshire wished him to accept 1,000*l.* a year until he was restored to his command. He refused both offers, and the duke, who died shortly afterwards, left him a legacy of 5,000*l.* The case for the government appears to have been stated in an 'Address to the Public on the Dismission of a General Officer' in the 'Gazetteer' of 9 May. This was answered, though without much ability, by H. Walpole in 'A Counter-Address,' &c., published 12 Aug., which called forth a singularly poor answer entitled 'A Reply to the Counter-Address,' all in 1764. The case roused a determined spirit of resistance in the whigs, and Lord Rockingham went down to Hayes in the hope of inducing Pitt to take part in this opposition. Pitt condemned the dismissal, but 'considered the question touched too near upon prerogative' (*Rockingham Memoirs*, i. 180).

On 8 July 1765 the king was forced to accept the administration formed by the Marquis of Rockingham, in which Conway was secretary of state, in conjunction with the Duke of Grafton, and leader of the House of Commons. Conway accepted office somewhat unwillingly at the command of the Duke of Cumberland; he took the southern department, and employed William Burke [q. v.] as his private secretary. The accession of the Rockingham ministry to office 'abolished the dangerous and unconstitutional practice of removing military officers for their votes in parliament' (Burke, *Short Account*). In order to allay the irritation of the American colonies the government determined on the repeal of the Stamp Act, seeking at the same time to save the honour of the country by an act declaratory of the rights of parliament. Conway moved the repeal in February 1766, and, in spite of the intrigues of the king and the opposition of the late ministry, succeeded in gaining a majority. Referring to his triumph on this occasion, Burke in after years said: 'I stood near him, and his face, to use the expression of the Scriptures of the first martyr, his face was as it were the face of an angel' ('On American Taxation,' *Works*, iii. 206). On every account the king disliked the Rockingham administration, and on 7 July he acquainted the ministers severally that he had sent for Pitt. On the 13th Pitt, who had undertaken to form an administration with Grafton as first lord of the treasury and himself as privy seal, with the title of the Earl of Chatham, offered Conway the post of secretary of state for the northern department (instead of for the southern department of which he was secretary already) with the leadership of the house. The Duke of Richmond tried to dissuade him from accepting the offer. The strength of the Rockingham whigs, such as it was, consisted to no small extent in the fact that their party was founded on a strict aristocratic alliance, and this the king and Pitt, each from a different motive, were determined to break. The duke pointed out that Conway's acceptance would further this design, hinting at his obligation to the late Duke of Devonshire. On the other hand, it was probable that, if he refused, the leadership of the house would go to Grenville, and to prevent this Walpole urged him to accept: he did so, and with seven others of Rockingham's followers, continued in office under the new administration. His conduct cannot be judged by the unwritten laws which regulate the party politics of the present day. The question presented to him was not one of measures, and the separation between the whig sections was as yet rather a matter of cabal than of party. Rockingham appears to have felt some soreness, not so much at Conway's acceptance, but because he did not consider that he made a stand for his followers, many of whom, like himself, were displaced by Chatham. Conway was still held to belong to the Rockingham whigs, and formed 'the connecting link between the two parties' (*Rockingham Memoirs*, ii. 18). He soon grew discontented with the violent measures adopted by Chatham for 'the breaking-up of parties,' and especially at the dismissal of Lord Edgcumbe, one of the old whigs who had four boroughs at his disposal, from the treasurership of the household, and in November had an interview with Rockingham on the subject. Rockingham pointed out that it was evident that Chatham disre-

garded Conway's 'public honour to his party,' and even his private honour to his friend, and urged him to resign. The Duke of Portland and four other members of the late government threw up their places. Unfortunately for his character, Conway, though 'very uneasy, perplexed himself with his refinements' and stayed in (*ib.* 19–25). All intercourse between him and Chatham now ceased (*Memoirs of George III*, ii. 385; *Chatham Correspondence*, iii. 126–30). A vague project is said to have been concocted by the king and Lord Hertford in January 1767 for placing Conway at the head of a reformed administration. 'True to the principles he had upheld under Rockingham,' Conway was in favour of lenient measures towards the American colonies, and on 13 March stood alone in resisting the scheme of the government for suspending the legislative powers of the New York assembly (*Life of Shelburne*, ii. 55), but he was powerless to check Townshend's headlong policy, and, as he still held office, was forced to follow the administration. He also objected to Chatham's oppression of the East India Company, holding that they had a right to their conquests. At last on 30 May he signified to the king his wish to retire from office, 'without any view of entering into faction' (*Grenville Papers*, iv. 26; *Chatham Correspondence*, iii. 260). The king, however, persuaded him at least to delay his resignation. In the preceding year Conway, in compliance with a request from David Hume, procured a pension of 100*l.* a year for Rousseau, who was then settled at Wooton in Derbyshire, and when Burke ceased to be his secretary he gave the place to Hume. In July negotiations were entered into between Rockingham and Bedford for a union, but were broken off because the marquis insisted on the condition that Conway should be the leader of the commons, and to this Bedford and Rigby refused to agree. Rockingham's hopes were disappointed, and in January 1768 the Bedford party joined the government. This put an end to Conway's long-continued state of indecision, and he resigned office on 20 Jan.

Conway now returned to military life, which was far more to his taste than political office. He had been appointed lieutenant-general of ordnance on 8 Sept. 1767, and as he drew the income of that office as well as full colonel's pay, he had refused the salary of secretary of state from the date of his appointment, because he was afraid that the Rockingham party might accuse him of remaining in the administration from interested motives. In February 1768 he received the command of the 4th regiment of dragoons, and took active steps to secure the preservation of peace and the safety of the royal palace during the Wilkes riots (*Junius*, Letter xi.) When for political reasons Lord Granby resigned the post of master of the ordnance in 1770, the king offered it to Conway. As, however, he too felt dissatisfied with the government, he refused it, adding that 'he would take none of Lord Granby's spoils' (*Chatham Correspondence*, iii. 399). In October 1770, on Granby's death, he received the command of the royal regiment of horse guards. He took great interest in his work at the ordnance, and effected large economic reforms. To his annoyance he found that George Townshend, who retired from the lord-lieutenancy of Ireland in 1772, was to be appointed master-general, and he refused to serve under him. In the debate on the Royal Marriage Act in March of this year, he had annoyed the king by declaring that though he approved the principle of the bill he believed that the crown claimed too much; he attacked the bill in committee, and offended Lord North, who was then prime minister, by his remarks. The king remonstrated with Lord Hertford on his brother's course, and as Conway considered that his brother tried to dictate to him on the matter he became more determined. Nevertheless he could ill spare the pay he received as lieutenant-general of ordnance, and Walpole interfered on his behalf. The king was mollified by being told that Conway would not visit the Duke and Duchess of Gloucester, and, on his resignation of his post, appointed him governor and captain of the isle of Jersey on 21 Oct., an appointment worth about 1,200*l.* a year (Walpole, *Last Memoirs*, i. 44, 158; Beatson, *Political Register*). During the summer of 1774 Conway, who had been promoted general 26 May 1772, made a tour on the continent for the purpose of witnessing the Prussian and Austrian annual reviews. He was accompanied, though they frequently parted company, by Sir Robert Murray Keith, minister at Dresden.

At Brunswick he was kindly received by his old commander Ferdinand, he visited the divorced queen of Denmark, King George's sister, at Zell, was entertained at Potsdam by Marischal Keith, and had 'a most flattering gracious audience' from the king. He then visited the Austrian camp and the gold and silver mines of Chemnitz, and at the end of August came through Vienna to the Prussian camp at Schmelwitz near Breslau (Keith, *Memoirs and Correspondence*, ii. 21; Carlyle, *Frederick the Great*, x. 106). He reached Paris in October, and spent the winter there with his wife and his daughter, Mrs. Damer. At the general

election held in November the Duke of Grafton deprived him of his seat for Thetford, and he remained out of parliament until a seat was found for him at Bury St. Edmunds, vacant by the succession of Augustus Hervey to the earldom of Bristol. On his return to parliament he opposed the policy pursued by the government towards the American colonies, he voted against the address on the ground that it approved of the war, and spoke against the bill for restraining trade with the southern colonies. In July 1776 he was laid up with an attack of facial paralysis. This was partly brought on by domestic trouble. His daughter's marriage in 1767 had greatly pleased him; it was a grand match, for Mr. Damer's father, Lord Milton, was very rich. Mr. and Mrs. Damer received an income of 5,000*l.* a year, the settlements were 22,000*l.*, and Conway settled 10,000*l.*, the whole of his fortune, upon his daughter. In spite, however, of this provision, the Damers had incurred debts to the amount of 70,000*l.* Conway's attack passed off without leaving any ill effects (Walpole, *Letters*, vi. 360). From 1778 to 1781 he was constantly engaged in the affairs of Jersey, staying there four and even seven months in one year. This was rendered necessary by the war with France, for in May 1779 and January 1781 the island was invaded. On hearing of the second invasion Conway at once sailed from Portsmouth, and encountered a violent storm, which occasioned the loss of a transport with sixty men, and obliged him, after two days' beating about in the Channel, to put into Plymouth. There he heard of the defeat of the invasion and returned home, where he was laid up with a severe illness brought on by exposure. Before he had recovered he received peremptory letters from Lord Hillsborough implying that he was loitering, and treating his absence from Jersey as a matter of leave. This caused him considerable annoyance, and Lord Hertford interfered on his behalf, for the office was not residentiary (*ib.* vii. 494–503). The successful defence of the island was due, to some extent at least, to the preparations he had made, he was exceedingly popular with the inhabitants, and some years later the council presented him with a 'Druidic temple' that had been discovered there, with an inscription in French verse praising his watchfulness and military skill (*ib.* vi. 151).

Meanwhile, as the war with America, which he had consistently opposed, grew constantly more disastrous to our arms, Conway began to take a prominent part in the attacks made on North's administration. On 5 May 1780, in bringing forward a bill for the pacification of the colonies, he reflected severely on the conduct of the bishops who supported a policy that entailed useless bloodshed. In the course of this summer the king is said to have proposed that he should undertake the reconstruction of the government, entering as commander-in-chief, and retaining certain members of the existing administration. The scheme was wholly impracticable, and it is doubtful whether the proposal was made with full authority. On 14 Dec. 1781 Conway made a spirited attack on the mismanagement of the government which had reduced us to the necessity of peace. Wraxall in noticing the speeches he delivered at this period says that 'his enunciation was embarrassed and involved' (*Historical Memoirs*, ii. 44); while they certainly do not evince any particular power of oratory, they read well and clearly. On 22 Feb. following he moved an address urging the king to renounce any further attempts to reduce America by force, in the course of which he made a vigorous attack on Welbore Ellis, the new colonial secretary. 'The effect of his speech,' Walpole says, 'was incredible.' On the division the ministers were left with a majority of only one. He renewed the attack on the 27th, and taunted Dundas and Rigby with possessing the 'gift of tongues—double tongues.' He was now 'completely master of the deliberations of the house on the subject of America' (*ib.* ii. 203), and on 4 March gained another victory. On the 20th North at last obtained permission to resign. In the ministry formed by Rockingham, which entered office on the 27th, Conway was commander-in-chief with a seat in the cabinet. It was formed out of a combination of the parties of Rockingham and of Shelburne, who was a secretary of state. When Rockingham died on 1 July following the king made Shelburne prime minister. Fox, Burke, and some others resigned; Conway, the Duke of Richmond, and other members of the party retained their offices. Although it has been stated that some jarring took place on account of Shelburne's refusal to accede to the wish of Conway and Pitt that Fox should be brought into the cabinet (*Memorials of Fox*, ii. 30), it is certain that Shelburne would have admitted him, and that Fox absolutely refused to act with him (Sir G. C. Lewis, *Administrations*, 57). On 9 July Conway defended the government from the attacks of Fox, denying that there was any division in the cabinet or any departure from its original policy in the matter of the peace. Burke ridiculed him for serving under Shelburne, declaring that he was like Little Red Ridinghood, who 'didn't know a wolf from her grandmother.' He disliked the treaties with France and Spain, and was not alto-

gether easy in the cabinet, especially after the retirement of Keppel in January 1783. The ministry resigned on 24 Feb. following.

During the prolonged crisis that ensued on Pitt's acceptance of office, Conway, ever swayed by those around him, was infected by the prevailing violence. On the defeat of Pitt's East India Bill in January 1784, he taunted the minister with his silence, pressed him to state his intentions, declared that the conduct of the government was corrupt, and on 1 March supported Fox's motion for an address to the crown for Pitt's dismissal. Parliament was dissolved on the 25th, and Conway's political life ended. He resigned his military command, and retired to Park Place, keeping his governorship and occasionally visiting Jersey. The remainder of his life was pleasantly spent; he enjoyed the beauty of his place, where, among other pursuits, he propagated trees, raising poplars from a cutting brought from Lombardy by Lord Rochford. In 1778 he gave Crabbe [q. v.], the poet, a work on botany, along with other books: all through his life he appears to have been friendly with men of genius. His taste was good, and he has left an enduring monument of it in the bridge at Henley-on-Thames, about which he was busied in 1787 (Walpole, *Letters*, ix. 118). Before his retirement he invented a furnace for the use of brewers and distillers, for which he afterwards took out a patent. Part of the leisure of his last years was moreover devoted to literary work. In 1789 he sent Walpole a tale which his friend described as 'very easy and genteel:' it was evidently in verse. He wrote and printed a prologue to the play 'The Way to keep him,' acted by amateurs at the private theatre at Richmond House, in April 1787, and 'altered from the French,' the original being 'Dehors Trompeurs' of Louis de Boissy, a comedy entitled 'False Appearances,' which was first performed at Richmond House, and then published in 1789 with a long dedication to Miss Farren, who acted in it at Drury Lane; the prologue is by the author, the epilogue by Lieutenant-general Burgoyne. Conway's pamphlets in defence of his conduct of the Rochfort expedition have been already noticed. His speech on American affairs, delivered 5 May 1780, was published separately 1781. A collection of his private letters was made by C. Knight, with the intention of publishing a memoir of him, which was never carried out. This collection appears to be in private hands. Several letters to Walpole from 1740 to 1746 are in an appendix to the 'Rockingham Memoirs,' i., two or three of later dates are included in the 'Letters' of H. Walpole, and some extracts of letters written from Germany in 1774 are in Carlyle's 'Frederick the Great,' x. Several drafts and letters belonging to his official correspondence are in the British Museum, especially Addit. MSS. 12440 and 17497–8. On 12 Oct. 1793 he was appointed field-marshal. He died at Park Place on 9 July 1795, in his seventy-fifth year. His picture, painted by Eckardt in 1746 (he refers to it in a letter written to Walpole during the campaign in Scotland, *Rockingham Memoirs*, i. 447), is engraved by Greatbatch, and is given in Cunningham's edition of Walpole's 'Letters,' i. 38.

CONWAY, Sir JOHN (*d.* 1603), governor of Ostend, was the son and heir of Sir John Conway, knight-banneret of Arrow, Warwickshire, by Katherine, daughter of Sir Ralph Verney (Lipscomb, *Buckinghamshire*, i. 179). He was knighted in 1559 (*Addit. MS.* 32102, f. 122 *a*). As he was walking in the streets of London in 1578, Ludovic Grevil came suddenly upon him, and struck him on the head with a cudgel, felling him to the ground, and then attacked him with a sword so fiercely that, but for the intervention of a servant, who warded off the blow, he would have cut off his legs. The privy council sent for Grevil, and committed him to the Marshalsea. The outrage occasioned much excitement, because on the same day Lord Rich was also violently attacked in the streets (Strype, *Annals*, ii. 547, folio). In December 1583 he seems to have been imprisoned in connection with the Somerville-Arden case, and it was probably during this imprisonment that he wrote his 'Meditations and Praiers' (see below). Conway was made governor of Ostend on 29 Dec. 1586 by Robert, earl of Leicester, who was then general of the English auxiliaries in the United Provinces (Thomas, *Hist. Notes*, i. 408, 436). For some reason he was made a prisoner, as ap-

pears from an original letter addressed by him to Sir Francis Walsingham, dated at Ostend 8 Sept. 1588, concerning his imprisonment and the uses which might be made of one Berney, a spy, who had great credit with the prince of Parma (*Harl. MS.* 287, f. 102; *Notes and Queries*, 1st series, xi. 48). In July 1590 he was licensed to return to England, and the office of governor of Ostend was granted to Sir Edward Norreys (MURDIN, *State Papers*, p. 794). He died on 4 Oct. 1603, and was buried in Arrow church, where a monument, with a Latin inscription, was erected to his memory (DUGDALE, *Warwickshire*, ed. 1730, p. 852). By his wife Ellen, or Eleanor, daughter of Sir Fulke Greville of Beauchamp's Court, Warwickshire, he had four sons: Edward, who was created Viscount Conway [q. v.] (BIRCH, *Elizabeth*, ii. 98); Fulke, John, and Thomas; and four daughters, Elizabeth, Katherine, Mary, and Frances (DUGDALE, *Warwickshire*, p. 850; LIPSCOMB, *Buckinghamshire*, i. 268).

He wrote: 1. 'Meditations and Praiers, gathered out of the sacred Letters and vertuous Writers; disposed in Fourme of the Alphabet of the Queene, her most excellent Maiesties Name; whereunto are added, comfortable Consolations (drawn out of the Latin) to afflicted Mindes,' Lond. (printed by Henry Wykes), undated. Another edition, also undated, was printed by William How (AMES, *Typogr. Antiq.* ed. Herbert, p. 1038). 2. 'Poesie of floured Praiers,' 8vo, Lond. 1611 (LOWNDES, *Bibl. Man.* ed. Bohn, p. 514; *Cat. Lib. Impress. Bibl. Bodl.* ed. 1851, iv. 225). 3. Commendatory verses prefixed to Geoffrey Fenton's 'Certaine Tragicall Discourses,' 1567 (AMES, *Typogr. Antiq.* ed. Herbert, p. 856).

[Authorities cited above; Cal. State Papers; Watt's Bibl. Brit.; Hackman's Cat. of Tanner MSS. 880; Collier's Extracts from Registers of Stationers' Company, i. 165; Burke's Dormant and Extinct Peerages (1883), 133.] T. C.

CONWAY, ROGER OF (*d.* 1360), Franciscan, was a native of Conway in North Wales. He entered the Franciscan order, and studied at the university of Oxford, where he became doctor of divinity. He was afterwards the twenty-second provincial of his order in England (*Monumenta Franciscana*, pp. 538, 561, ed. Brewer). He is known chiefly through the share he took in the controversy which had long agitated the Franciscan body relative to the doctrine of evangelical poverty. In 1356 Richard FitzRalph, archbishop of Armagh, visited London on the affairs of his diocese, and found a discussion raging about the question whether or not Christ and the primitive Christians possessed any property (see his 'Defensio Curatorum' in GOLDAST'S *Monarchia Sancti Romani Imperii*, iii. 1392, ed. Frankfort, 1621; cf. WHARTON'S appendix to CAVE'S *Historia Literaria*, p. 47 *b*). The archbishop in his sermons strongly advocated the affirmative position, and was in consequence, through the influence of some of the friars, cited to appear before Innocent VI at Avignon, where (8 Nov. 1357) he preached a sermon defending his view, which has been often printed under the title of 'Defensio Curatorum.' To this sermon Conway wrote a reply. According to the 'Vitæ Pontificum' of William Rede, bishop of Chichester (manuscript cited by TANNER, *Bibl. Brit.* p. 197), it was in 1359 that Conway preached in London on the subject. He was opposed, it is added, by Richard of Kylmetone (or Kylmington), dean of St. Paul's, and by Richard FitzRalph. If this notice be correct, Conway was evidently one of the doctors whose disputations roused the archbishop into preaching against them, and in this case the date must be not 1359 but 1356. Be this as it may, Conway's existing treatise, 'De Confessionibus per regulares audiendis, contra informationes Armachani' (as it is entitled in manuscript, e.g. C.C.C. Oxon., Cod. clxxxii.; COXE'S *Catalogue of Oxford MSS.*, Corpus Christi College, p. 72 *b*), or, as the printed editions give it, 'Defensio Mendicantium,' is a professed reply to the 'Defensio Curatorum.' It cannot have been written long after 1357, since the archbishop returned to the controversy and wrote a rejoinder, of which a manuscript once existed in the possession of Baluze (see L. E. DU PIN, *New Ecclesiastical History*, xii. 71, English translation, 1699), and FitzRalph died at Avignon in December 1359. On the other hand, a portion of Conway's tract seems to have been written as early as 1352, since in chapter vii. he speaks of Clement VI as the present pope, while in chapter v. he mentions Innocent VI. The work was printed with FitzRalph's by John Trechsel at Lyons (not, as is usually stated, at Paris; see PANZER, *Annales Typographici*, i. 549) in 1496. It was reprinted at Paris in 1511, and is generally accessible in Goldast's 'Monarchia,' iii. 1410 et seq. Conway was also, according to Bale, the author of a work 'De Extravagantis Intellectione,' which may be in part identical with the treatise already mentioned. Another work, 'De Christi Paupertate et Dominio temporali,' is also named as having been formerly in Wadding's possession (WADDING, *Scriptores Ordinis Minorum*, p. 212, ed. Rome, 1806). Besides these, Bale enumerates sermons, lectures, 'Quæstiones theologicæ,' and 'Determinationes scholasticæ;' but not one of these is known to be now in existence. Conway died

at London in 1360, and was buried in the choir of the Minorite church. His name appears in the printed edition latinised as 'Chonnoe.' 'Connovius' is simply an invention of later biographers.

[Notices in Conway's own Defensio Mendicantium; Leland's Commentarii de Scriptoribus Britannicis, clxiii. p. 377; Bale's Scriptt. Brit. Cat. vi. 7, pp. 459 et seq.; Wharton, in Appendix to Cave's Historia Literaria, p. 53 *b*; Sbaralea, supplement to Wadding's Scriptores Ordinis Minorum, p. 647.] R. L. P.

CONWAY, WILLIAM AUGUSTUS (1789–1828), actor, whose real name was Rugg, was born in 1789 in Henrietta Street, Cavendish Square, London, and was educated under a clergyman named Payne in Barbados, whither he had been sent to live with friends of his mother. He returned to England in weak health at the age of eighteen. Upon viewing for the first time in Bath a theatrical representation, he contracted a longing for the stage strong enough to triumph over domestic objections. He appeared accordingly at Chester as Zanga in Young's tragedy 'The Revenge,' with so much success as to induce the manager, Macready, to offer him an engagement. After playing in many northern and midland towns as Macbeth, Glen Alvon in 'Douglas,' &c., he accepted in 1812 an engagement to appear at the Crow Street Theatre, Dublin, in the characters vacated by Holman, who had gone to America. He there formed, it is said, a violent but unavailing passion for Miss O'Neill, with whom he acted, and met Charles Mathews, who recommended him to Covent Garden, where he came out on 4 Oct. 1813 as Alexander the Great in a piece of that name altered from Lee's 'Rival Queens.' On the 7th he played Othello, on the 21st Jaffier in 'Venice Preserved,' and on the 25th Romeo. Henry V, Coriolanus, Norval in 'Douglas,' Juba in 'Cato,' Antony in 'Julius Cæsar,' Petruchio, Orlando, Richmond in 'Richard III,' Alonzo in the 'Revenge,' and the Prince of Wales in 'Henry IV, Part I.' &c., with one or two other characters, were played in the course of the dramatic season which terminated on 15 June 1814. Rolla in 'Pizarro,' Wellborn in 'A New Way to pay Old Debts,' Faulconbridge, Macduff, Comus, and other parts of importance were assigned him, though, as the company at Covent Garden included Young and Kemble, he had occasionally to take secondary rôles. He was the original Prince Zerbino (7 April 1815) in the 'Noble Outlaw,' an operatic adaptation of Beaumont and Fletcher's 'Pilgrim.' The season of 1815–16 added to his list of characters Macbeth, Theseus in 'Midsummer Night's Dream,' Beverley in the 'Gamester,' Posthumus, Henry V in Garrick's 'Jubilee,' acted 23 April 1816 for the Shakespeare bicentenary, and other parts. He then disappears from Covent Garden, and is next heard of in Bath, where he enacted on 6 March 1817 King Charles II in the 'Royal Oak,' and 29 March Joseph in the 'School for Scandal.' He remained in Bath until 1820, playing a round of characters in tragedy and comedy, and on 5 July 1821 appeared at the Haymarket as Lord Townley in the 'Provoked Husband.' Here he remained during the season, at the end of which he withdrew from the English stage. A malignant attack upon him, said to be by Theodore Hook, was the cause of his retirement. In December 1822 the manager of the Bath theatre, going to Clifton to engage Conway, obtained the answer that he would prefer breaking stones on the road to returning to the most brilliant engagement. At the close of 1823 he started for America, and appeared on 12 Jan. 1824 in New York, where he played Coriolanus, Lord Townley, Beverley, Petruchio, &c., with complete success. Subsequently he delivered in New York some religious discourses. Early in 1828 he took a passage to Charleston. When the vessel arrived off Charleston bar, Conway threw himself overboard, and was drowned. A curious circumstance in his life is the infatuation for him shown on his appearance in London by Mrs. Piozzi, then almost eighty years of age. It is stated in the 'New Monthly Magazine' for April 1861, on the authority of 'a distinguished man of letters,' that Conway showed the late Charles Mathews a letter from her offering him marriage. More sensible conduct is, however, generally assigned her, and the authenticity of 'The Love Letters of Mrs. Piozzi, written when she was eighty, to Aug. W. Conway,' London, 1843, 8vo, is disputed. Conway's conduct, at least, appears to have been manly and honourable. Macready (*Reminiscences*, i. 111) says that 'a few days before her death she (Mrs. Piozzi) sent him a cheque on her bankers for 500*l.*, which on her decease he enclosed to her heir and administrator,' and adds that at the time Conway was in pecuniary straits. In the sale of his effects in New York after his death figured a copy of Young's 'Night Thoughts,' on which was written 'Presented to me by my dearly attached friend, the celebrated Mrs. Piozzi.' Conway was a good actor. Genest, a severe judge, speaks well of him, and a writer in the 'New Monthly Magazine' for August 1821, probably Talfourd, says: 'Conway has a noble person, a strain of brilliant declamation, and no small power of depicting agony and

sorrow.' He was, however, self-conscious, ill at ease, and fantastic in movement. Macready, after stating that he was deservedly a favourite, says: 'But unfortunately the tendency of his study was by isolated and startling effects to surprise an audience into applause' (*Reminiscences*, i. 41). The knowledge of his height (six feet) preyed upon him. Hazlitt, in his 'View of the English Stage,' 1818, dealing with Miss O'Neill's Juliet, has a passage, omitted from the following editions, on Conway's Romeo. 'He bestrides the stage like a Colossus, throws his arms like the sails of a windmill, and his motion is as unwieldy as that of a young elephant; his voice breaks as thunder on the ear like Gargantua's, but when he pleases to be soft, he is "the very beadle to an amorous sigh."' This criticism he ends with the significant addition, 'Query, why does he not marry?' For this and other attacks upon Conway Hazlitt made a public apology. An account of Conway's fate, showing that he was mad, and a touching letter to his mother indicating his intention, if possible, to take holy orders, appear in the 'Dramatic Magazine' for December 1830. A portrait of Conway by Dewilde is in the Mathews collection in the Garrick Club.

CONY, WILLIAM (*d.* 1707), captain in the navy, attained that rank on 1 April 1704, when he was appointed to command the Sorlings frigate. In September 1705 he was sent, in company with Captains Foljambe, of the Pendennis, and Martin, of the Blackwall, to convoy the trade to the Baltic. On the return voyage they fell in on 20 Oct. with a squadron of five French ships, four of them of fifty guns, commanded by the Chevalier de Saint-Pol, and having five privateers in company. The privateers captured the merchant ships, thus permitting the ships of war to devote themselves to the three ships of the escort. After a stubborn fight they took them all three, Foljambe and Martin being slain and Cony dangerously wounded. On the part of the French, De Cayeux, one of the captains, lost an arm, and Saint-Pol was killed —a loss which, in the opinion of the French, was poorly compensated for by the successful issue of the combat (Guérin, *Histoire Maritime*, ii. 242). 'I would,' the French king is reported to have said, 'that the English ships were safe at home if I had but Saint-Pol back again.' Cony, while still a prisoner in France, was tried by court-martial for the loss of his ship, and very honourably acquitted on 20 Jan. 1705–6; and the court further reporting that he had particularly distinguished himself in the action, and had received several dangerous wounds, recommended him to his royal highness's favour. He was accordingly shortly afterwards appointed to the Romney of 50 guns, and commanded her in the Mediterranean under the orders of Sir Clowdisley Shovell. He seems to have been successfully engaged in cruising against the enemy's privateers in the Straits, and was returning home the following year, when, in company with the Association [see Shovell, Sir Clowdisley], the Romney and all in her were lost among the Scilly Islands on 22 Oct. 1707.

[Minutes of the Court-martial and letters in the Public Record Office; Charnock's Biog. Nav. iii. 167, 289, ii. 413.] J. K. L.

CONYBEARE, JOHN (1692-1755), bishop of Bristol, was born 31 Jan. 1691-2 at Pinhoe, near Exeter, of which place his father was vicar. He was educated at the Exeter free school. His father's vicarage was wrecked by the famous storm of 1703, and the father died about 1706 of a disorder caught on that occasion. Friends helped Conybeare to continue his education, and he was admitted at Exeter College, Oxford, 22 March 1707-8. He was elected a probationary fellow of his college June 1710, full fellow 14 July 1711. He graduated as B.A. 17 July 1713, and on 30 June 1714 was appointed prælector in philosophy by his college. On 19 Dec. 1714 he was ordained deacon, and 27 May 1716 priest. After holding a curacy for a short time at Fetcham, Surrey, he returned to Oxford, became tutor of his college, and soon obtained reputation as a preacher. St. Mary's was crowded when he was in the pulpit. A sermon on 'Miracles' published in 1722 went through four editions, and was followed by another on the 'Mysteries' in 1724. Bishop Gibson appointed him one of the king's preachers at Whitehall; and in May 1724 Lord-chancellor Macclesfield presented him to the small rectory of St. Clement's, Oxford. He was proctor 1725, B.D. June 1728, and D.D. Jan. 1729. Among Conybeare's pupils were two sons of Charles Talbot, then solicitor-general. Conybeare dedicated two sermons to the solicitor-general and his father, the bishop of Durham. His chances of preferment were injured by the death of the bishop in 1730. In the same year, however, he was elected rector of Exeter College. Tindal's 'Christianity as old as the Creation'

was published in 1730, and excited a keen controversy. Conybeare's 'Defence of Revealed Religion against the Exceptions of [Tindal]' appeared in 1732, and was praised as one of the four ablest books produced on the occasion, the others being those of James Foster, Leland, and Simon Browne. Warburton called it 'one of the best-reasoned books in the world.' Conybeare is a temperate and able writer, but there is little in his book to distinguish it from expositions of the same argument by other contemporary divines of the average type. The Exeter rectorship was a poor one, and soon afterwards Bishop Gibson exerted himself successfully to procure Conybeare's appointment to the deanery of Christ Church. He was installed in January 1733, and on 6 June following married Jemima, daughter of William Juckes of Hoxton Square, London. At Exeter Conybeare effected many reforms, putting a stop to the sale of servants' places and restoring lectures. In 1734 he entertained the Prince of Orange at the deanery. Conybeare seems to have been energetic at Christ Church. In 1735 he published 'Calumny Refuted, in answer to the personal slander of Dr. Richard Newton,' who was endeavouring to obtain a charter for Hart Hall, a plan opposed by Conybeare. He afterwards published a few sermons. His hopes of a bishopric were lowered by the death of Charles Talbot, while lord chancellor, in 1737, and by Bishop Gibson's loss of influence at court. In 1750, however, he was appointed to the see of Bristol, in succession to Joseph Butler, translated to Durham. With the bishopric he held the Christ Church deanery. His health was broken by gout. He died 13 July 1755, and was buried in Bristol cathedral.

Mrs. Conybeare died 29 Oct. 1747. Two of five children survived him, Jemima (died 1785) and William, afterwards D.D. and rector of St. Botolph's, Bishopsgate. They were left without much provision, and two volumes of sermons were published by subscription for their benefit in 1757. As there were 4,600 subscribers, many of whom took more than one copy, the results must have been satisfactory. A pension of 100*l.* a year was bestowed upon his daughter Jemima.

[Life in Biog. Brit. on information from Conybeare's son William; Leland's Deistical Writers (1776), i. 124–6; Boase's Register of Exeter Coll. xxxv, lxiv, 62, 88, 94, 97; Wood's Antiq. Oxford (Gutch), iii. 442, 516; Reliquiæ Hearnianæ, ii. 771, 773, 845; Wordsworth's English Universities (1874), 61, 304.] L S.

CONYBEARE, JOHN JOSIAS (1779–1824), geologist and scholar, was the elder son of Dr. William Conybeare, the rector of Bishopsgate, who was the son of Bishop (John) Conybeare [q. v.] The younger son was William Daniel Conybeare [q. v.]

John Josias, born in 1779, entered Christ Church, Oxford, in 1797. He won the university Latin verse prize in 1800. In due course he became vicar of Batheaston, Somerset. From 1803 till his death he was prebendary of York. He was elected to the Anglo-Saxon professorship in 1808, and became the professor of poetry at Oxford in 1812. In 1824 he delivered the Bampton lectures, and published a volume on the 'Interpretation of Scripture.' His versatility was remarkable. Notwithstanding his strict attention to his clerical duties, he gave some time to chemistry, and in 1822–3 published a paper 'On Greek Fire,' another on 'Plumbago found in Gas Retorts,' and an examination of 'Hatchettin, or Mineral Tallow, a Fossil Resin found in the Coal Measures of Glamorganshire.' In 1817 he began to publish upon geology; his first paper being 'Memoranda relative to Clovelly;' his second, which appeared in the Geological Society's 'Transactions,' being 'On the Porphyritic Veins (locally Elvans) of St. Agnes, Cornwall.' In 1821 he published a memoir 'On the Geology of the neighbourhood of Okehampton,' in 1822 one 'On the Geology of the Malvern Hills,' in 1823 another 'On the Geology of Devon and Cornwall,' and in 1824 he was associated with Buckland in 'Observations on the South-west Coal-field of England.' In June 1824 he died. His devotion to the literature of the Anglo-Saxons was very earnest, and his taste in poetry most refined. In 1826, after his death, his brother, Dean Conybeare, edited and published 'Illustrations of Anglo-Saxon Poetry, translated by the Vicar of Batheaston,' which contains large portions of the 'Song of the Traveller' and 'Beowulf.'

[Royal Society's Catalogue of Scientific Papers; Geological Society's Transactions; Thomson's Annals, 1821–2–3; Gent. Mag. 1824, ii. 187, 376, 482.] R. H–T.

CONYBEARE, WILLIAM DANIEL (1787–1857), geologist and divine, younger brother of John Josias Conybeare [q. v.], was born in June 1787, and educated at Westminster and Christ Church. At Oxford he was in the same year as Sir Robert Peel, with whom he took a first in classics and a second in mathematics, being classed with Archbishop Whately. Conybeare continued to reside at the university until he took his M.A. degree.

Among the students of science at the university at the commencement of the 19th century the two brothers Conybeare, Dr.

Buckland, and a few others devoted themselves to geology. Some of the early members of the Geological Society of London were in the habit of paying an annual visit in Whitsun week to the university, and with the club they explored the geology of the neighbourhood of Oxford. Buckland said that Conybeare would have been the fitting person to fill the office of lecturer on geology. Professor Sedgwick stated that he looked upon Conybeare as his early master in geology.

In 1814 Conybeare married and retired from the university to a country curacy, and nine years afterwards he removed to the vicarage of Sully in Glamorganshire. He subsequently held the curacy of Banbury and lectureship of Brislington, near Bristol. In connection with Sir Henry de la Beche he founded the Bristol Philosophical Institution and Museum. At this time he was visited by Elie de Beaumont and Dufresnoy, who were desirous of acquiring a knowledge of the secondary rocks of England. On their return to France they co-operated with Cuvier in obtaining the election of Conybeare as a corresponding member of the Institute for geology. In 1836 Conybeare presented himself to his family living of Axminster, and while there preached, at the request of the university of Oxford, the Bampton lecture for 1839. In 1844 he resigned this living, and became dean of Llandaff, where he carried on the work of restoration with zeal and success. Conybeare left Llandaff to attend the deathbed of his eldest son, William John [q. v.] At the house of another son he was stricken with apoplexy, and died on the morning of 12 Aug. 1857. Conybeare's versatility is strikingly illustrated by one of his early contributions to palæontological science in 1814, which appears in the second volume of the 'Transactions of the Geological Society,' entitled 'On the Origin of a remarkable Class of Organic Impressions occurring in Nodules of Flint.' He arrived at the conclusion that 'these cellules were the work of animalcules preying on shells, and on the vermes inhabiting them,' and Dr. Buckland fully confirmed these conclusions.

Conybeare's examination of the landslip at Culverhole Point, near Axmouth, in 1839, also illustrates his knowledge of physical science. His paper on the 'Hydrographical Basin of the Thames,' written with a view to determine the causes which had operated in forming the valley of the Thames, and his examination of Elie de Beaumont's 'Theory of Mountain Chains,' are proofs of the philosophical views which he brought to bear on his favourite science. Conybeare's paper on the 'Ichthyosaurus' established in the most satisfactory manner the propriety of creating a new genus of reptilia, forming an intermediate link between the 'Ichthyosaurus' and crocodile, to which he gave the name of 'Plesiosaurus.' Sir Henry de la Beche was associated with Conybeare in this inquiry. He allows Sir Henry every praise for his assistance in working out the geological details, but the osteological details and reasonings must be ascribed to Conybeare. When obliged to undertake a voyage to Madeira on account of the health of his youngest son, Conybeare visited the peak of Teneriffe, and studied the volcanic phenomena of the neighbouring islands.

These labours were fully recognised by the illustrious Cuvier, who, as already stated, advocated his admission to the French Academy as a corresponding member for the science of geology. He became a fellow of the Royal Society in 1832, and of the Geological Society of London in 1821. In 1842 Conybeare presented to the meeting of the British Association at Oxford a 'Report on the Progress, Actual State, and Ulterior Prospects of Geological Science,' in which he displayed the combined powers of the scholar and the man of science.

[Royal Society's Catalogue of Scientific Papers; Geological Society's Transactions; Thomson's Annals; Philosophical Magazine, 1830–4; Edinburgh Philosophical Journal, 1840; Lyell's Principles of Geology.] R. H–r.

CONYBEARE, WILLIAM JOHN (1815–1857), divine and author, eldest son of the Rev. William Daniel Conybeare [q. v.], afterwards dean of Llandaff, and well known as one of the earliest pioneers of geology in England, was born on 1 Aug. 1815. He was educated at Westminster and Trinity College, Cambridge, of which he became a fellow. He took his degree in 1837, being fifteenth wrangler and third classic. In 1841 he took orders, and was appointed Whitehall preacher. In 1842 he was appointed first principal of the newly founded Liverpool Collegiate Institution, and married the same year Miss Eliza Rose, daughter of the late vicar of Rothley, Leicestershire. Failure of health obliged him in 1848 to resign his post at Liverpool, and he succeeded his father as vicar of Axminster, Devonshire, being followed as principal of the college by his friend and fellow-worker, the Rev. J. S. Howson (afterwards dean of Chester), in conjunction with whom he brought out the 'Life and Epistles of S. Paul' in 1851. His other works are: 'Essays Ecclesiastical and Social,' published in 1856, consisting of articles contributed to the 'Edinburgh Review' (one of which, 'Church

furnished the dramatic and theatrical lives in letter A to the first and second volumes. He died suddenly of heart disease on 11 Sept. 1883, and was buried in Highgate cemetery on 15 Sept. He married, on 20 Aug. 1874, Linda Scates (second daughter of Joseph Scates), a pupil of the Royal Academy of Music and a well-known pianist, by whom he left one daughter, named Sylvia after the heroine of her father's first novel. He was the writer of the following works: 1. 'Paul Foster's Daughter,' 1861. 2. 'Leo,' 1863. 3. 'A Prodigal Son,' 1863. 4. 'The Trials of the Tredgolds,' 1864. 5. 'Sir Felix Foy, Bart.,' 1865. 6. 'Hobson's Choice,' 1867. 7. 'Dr. Muspratt's Patients, and other Stories,' 1868. 8. 'Over Head and Ears,' 1868. 9. 'Art in England, Notes and Studies,' 1869. 10. 'Young Mrs. Nightingale,' 1874. 11. 'The Banns of Marriage,' 1875. 12. 'A Book of the Play: Studies and Illustrations of Histrionic Story, Life, and Character,' 1876, three editions. 13. 'Doubleday's Children,' 1877. 14. 'Hours with the Players,' 1881 15. 'Nights at the Play, a view of the English Stage,' 1883. 16. 'On the Stage: Studies of Theatrical History and the Actor's Art,' 1883.

COOK, GEORGE (1772–1845), leader of the 'moderate' party in the church of Scotland on the question of the Veto Act, which led to the disruption and the formation of the Free Church by the 'evangelical' party, was the second son of the Rev. John Cook, professor of moral philosophy in the university of St. Andrews, and Janet, daughter of the Rev. John Hill, minister of St. Andrews. He was born in December 1772, and entering the United College, St. Andrews, obtained his M.A. degree in 1790. After attending the divinity classes at St. Mary's College he was licensed a preacher of the church of Scotland by the St. Andrews presbytery, 30 April 1795. In the following June he was presented by the principal and masters of St. Mary's College to the living of Laurencekirk, where he was ordained 3 Sept. and remained till 1829. In 1808 he published 'An Illustration of the General Evidence establishing the Reality of Christ's Resurrection,' and the same year received the degree of D.D. from St. Andrews University. Subsequently he devoted his leisure specially to the study of the constitution and history of the church of Scotland, and in 1811 published 'History of the Reformation in Scotland,' 3 vols., which was followed in 1815 by the 'History of the Church of Scotland,' in 3 vols., embracing the period from the regency of Moray to the revolution. His style of narrative is somewhat cold and frigid, but it is generally characterised by lucidity and accuracy. In 1820 he published the 'Life of Principal Hill,' who was his maternal uncle, and in 1822 a 'General and Historical View of Christianity.'

From an early period Cook took a prominent part in the deliberations of the general assembly, and on the death of his uncle, Principal Hill, in 1819, virtually succeeded him as leader of the 'moderate' party. Having, however, in opposition to the general views of the party, taken a decided stand against 'pluralities' and 'non-residence'—regarding which he published in 1816 the substance of a speech delivered in the general assembly—he was for some time viewed by many of the party with considerable distrust, and when he was proposed as moderator in 1821 and 1822, he was defeated on both occasions by large majorities. Nevertheless he was unanimously elected in 1825, and from this time was accepted as the unchallenged leader of the party, guiding both privately and publicly their policy in regard to the constitutional questions arising out of the Veto Act of 1834, passed in opposition to his party against intrusion. In 1829 Cook demitted his charge at Laurencekirk on being chosen professor of moral philosophy in the United College, St. Andrews, but this made no change in his relation to the church of Scotland, and he was annually chosen a representative to the general assembly. In 1834 he published 'A few plain Observations on the Enactments of the General Assembly of 1834 relating to Patronage and Calls,' and in the ten years' conflict on the subject which followed gave a persistent and strenuous opposition to the policy of the 'evangelical' party led by Chalmers. Though unable to cope with Chalmers and others in brilliant or popular oratory, he possessed great readiness of reply, while his calm judgment, clear and logical exposition and accurate knowledge of the laws and constitution of the church enabled him to hold his own, so far as technical argument, apart from appeal to sentiment and popular feelings, was concerned. He did not long survive the disruption of 1843. Shortly after the assembly of 1844 he was attacked by heart disease, and he died suddenly at St. Andrews 13 May 1845. By his marriage to Diana, eldest daughter of the Rev. Alexander Shank, minister of St. Cyrus, he had seven children, of whom four sons and one daughter survived him. His eldest son, John

Cook (1807–1874), minister at Haddington, has a separate notice.

COOK, HENRY (1642–1700), painter, is stated to have been the son of another painter of the same name, who in 1640 was employed by the Ironmongers' Company to paint portraits for their hall, and to copy others of former benefactors; but it is difficult to reconcile this with the accounts of the company, which record payments for these pictures to Edward Cocke, painter. Henry Cook the younger was born in 1642, and is stated to have been of good education and accomplishments, and to have been at Cambridge University. He went to Italy and became a pupil of Salvator Rosa, and during his residence there copied many famous works of art of the Italian school. Returning home to England, he met with no success, and lived in obscurity until he obtained an introduction from Edward Lutterel to Sir Godfrey Copley, who was so much pleased with his work that he took him up to Yorkshire and employed him to paint the decorations of his new house there, paying him 150*l.* for his services. Subsequently he lived for some time with Theodore Russel, a pupil of Vandyck; but Cook, quarrelling one day with a man about a woman with whom he was then living and afterwards married, killed his rival, and was obliged to flee to Italy to escape justice. Here he resided again for seven years, at the expiration of which he returned to England, where his offence seems to have been forgotten. William III employed him to repair Raphael's cartoons, which remained cut up in slips ever since they had been copied at Mortlake under Francis Clein [q. v.] Cook reunited these and laid them down on canvas, and placed them in a gallery at Hampton Court specially destined to receive them. He also made copies, using turpentine oil in drawing them, a process which he is said to have introduced into England. Cook was also employed to finish the large equestrian portrait of Charles II, commenced by Verrio, which hangs at Chelsea Hospital. He also painted an altar-piece for New College, Oxford (which seems to have disappeared), and as a decorative artist painted the staircases at Ranelagh House and at Lord Carlisle's house in Soho Square, and the ceiling of the great room at the Waterworks at Islington. James Elsum wrote an epigram on a picture of 'The Listening Faun' by him, and Vertue records a picture of 'Charity,' with life-size figures. Cook also tried portrait-painting, but does not seem to have persevered with it. A portrait of Thomas Mace of Cambridge by him was engraved by W. Faithorne in 1676, as a frontispiece to his 'Musick's Monuments.' A small oval portrait of Cook, painted by himself, 'in his own hair,' was in the possession of his family, and was bought by Vertue at Colonel Seymor's sale. It was subsequently in the collection of Horace Walpole, for whom it was engraved by Bannerman in the 'Anecdotes of Painting.' Cook had a large collection of pictures and drawings, which were sold 26 March 1700. He died 18 Nov. following. He was buried on 22 Nov. in the churchyard of St. Giles-in-the-Fields. One of the chief promoters of the Academy of Painting, established in 1711 in Great Queen Street, was Henry Cooke; but it is uncertain if he was related to the above.

COOK, JAMES (*d.* 1611), divine, was a native of Chale in the Isle of Wight, and received his education at Winchester school, whence he was elected to New College, Oxford, of which he became perpetual fellow Jan. 1592–3. On 29 Oct. 1597 he was admitted B.C.L. at Oxford, and he was incorporated in that degree at Cambridge in 1607. He was created D.C.L. at Oxford on 16 April 1608, about which time he was rector of Houghton in Hampshire, and chaplain to Bilson, bishop of Winchester. It is said that he was also archdeacon of Winton, but this statement is probably erroneous. He died in 1611.

He was author of: 1. 'Juridica trium Quæstionum ad Majestatem pertinentium Determinatio, in quarum prima et ultima Processus judicialis contra H. Garnettum institutus ex Jure Civili et Canonico defenditur, &c.,' Oxford, 1608, 4to; dedicated to Bishop Bilson. 2. Poemata varia.

COOK, JAMES (1728–1779), circumnavigator, the son of an agricultural labourer, was born at Marton in Cleveland in November 1728, and having, in the intervals of

crow-tending, received some little education in the village school, was at the age of twelve bound apprentice to the shopkeeper in Staithes, a fishing village about ten miles north of Whitby. After some disagreement with his master his indentures were cancelled and he was bound anew to Messrs. Walker, shipowners of Whitby, with whom he served for several years in the Newcastle, Norway, and Baltic trades. In 1755, at the beginning of the war with France, he was mate of a vessel lying in the Thames, and resolved to forestall the active press by volunteering for the king's service. He was accordingly entered as able seaman on board the Eagle of 60 guns, to the command of which ship Captain Hugh Pallisser [q. v.] was appointed in October. Pallisser, himself a Yorkshireman, took notice of his young countryman, who is said to have been also recommended to him by Mr. Osbaldeston, member for Scarborough, and four years later obtained for him a warrant as master. On 15 May 1759 Cook was appointed master of the Mercury, in which he sailed for North America, where he was employed during the operations in the St. Lawrence in surveying the channel of the river and in piloting the vessels and boats of the fleet. It is said that he furnished the admiral with an exact chart of the soundings, although it was his first essay in work of that kind. This is probably an exaggeration; but it appears certain that Cook did attract the notice of Sir Charles Saunders, and that, when Sir Charles returned to England, the senior officer, Lord Colville, appointed Cook as master of his own ship, the Northumberland. While laid up for the following winter at Halifax, Cook applied himself to the study of mathematics, with, it is said, singularly good results, and certainly attained a sound practical knowledge of astronomical navigation. In the summer of 1762, being still master of the Northumberland, he was present at the operations in Newfoundland (Beatson, *Memoirs*, ii. 577–81, iii. 409), and carried out a survey of the harbour of Placentia, which, on the appointment of Captain Pallisser in the following year to be governor of Newfoundland, led to Cook's being appointed 'marine surveyor of the coast of Newfoundland and Labrador.' For the prosecution of this service he was entrusted with the command of the Grenville schooner, which he continued to hold till 1767, returning occasionally to England for the winter months, with a view to forwarding the publication of his results. These were brought out as volumes of sailing directions (4to, 1766–8), which have maintained, even to the present day, a singular reputation for exact accuracy, and give fair grounds for the belief that he might, under other circumstances, have proved himself as eminent as a surveyor as he actually did as an explorer.

Shortly after his return home the admiralty, at the instance of the Royal Society, determined to despatch an expedition to the Pacific to observe the transit of Venus, and on the refusal of Sir Edward Hawke to appoint Alexander Dalrymple [q. v.], the nominee of the Royal Society, to a naval command, Stephens, the secretary of the admiralty, brought forward Cook's name, and suggested that Pallisser should be consulted. This led to Cook's receiving a commission as lieutenant, 25 May 1768, and his being appointed to command the Endeavour for the purposes of the expedition. The Endeavour sailed from Plymouth on 25 Aug. 1768, having on board, besides the officers and ship's company, Mr. (afterwards Sir Joseph) Banks [q.v.], Dr. Solander, the botanist, Mr. Buchan, a landscape artist, who died on the voyage, and Mr. Sydney Parkinson, a painter of natural history. Cook himself was also a qualified observer.

Having touched at Madeira and Rio Janeiro and doubled Cape Horn, the Endeavour arrived on 13 April 1769 at Tahiti, where the transit was successfully observed on 3 June. On the homeward voyage six months were spent on the coast of New Zealand, which was for the first time sailed round, examined, and charted with some approach to accuracy. Further west, the whole east coast of Australia was examined in a similar way. New South Wales was so called by Cook from a fancied resemblance to the northern shores of the Bristol Channel; Botany Bay still bears the name which the naturalists of the expedition conferred on it; and further north the name of Endeavour Straits is still in evidence of the circumstances under which it was first established 'beyond all controversy' that New Guinea was not an outlying part of New Holland (Hawkesworth, *Voyages*, iii. 660; Bougainville, *Voyage autour du Monde*, 4to, 1771, p. 259. In the copy in the British Museum (c. 28, l. 10) the map at p. 19 shows the Endeavour's track, drawn in by Cook himself). After a stay of more than two months at Batavia, the Endeavour pursued her voyage to the Cape of Good Hope and England, and anchored in the Downs on 12 June 1771. In her voyage of nearly three years she had lost thirty men out of a complement of eighty-five; and though such a mortality was not at that time considered excessive or even great, it must have given rise, in Cook's mind, to very

serious reflections, which afterwards bore most noble fruit.

The success of the voyage and the importance of the discoveries were, however, universally recognised. Cook was promoted to commander's rank, 19 Aug. 1771, and was appointed to the command of a new expedition for the exploration of the Pacific, which sailed from Plymouth on 13 July 1772. This expedition consisted of two ships—the Resolution of 460 tons, of which Cook had the immediate command, and the Adventure of 330 tons, commanded by Captain Tobias Furneaux [q. v.]—and carried a competent staff of astronomers, naturalists, and artists, including Dr. Johann Reinhold Forster and his son Georg. Reversing the order of all previous circumnavigations, it touched, in the outward voyage, at the Cape of Good Hope, and sailed thence eastwards on 22 Nov. The primary object of the expedition was to verify the reports of a great southern continent, and with this view the ships were kept along the edge of the ice, passing the Antarctic circle for the first time on 16 Jan. 1773. In the fogs of the high latitudes the two ships were separated (8 Feb.), and the Resolution arrived alone at New Zealand, having traversed nearly four thousand leagues without seeing land. After resting and refreshing his ship's company in Dusky Bay, Cook proceeded to Queen Charlotte's Sound, where on 18 May he fortunately fell in with the Adventure; but after a cruise to Tahiti, in the course of which the position of numerous islands was noted or rectified, on returning to New Zealand the ships were again and finally separated (30 Oct.) Sailing, then, alone once more to the south, the Resolution fell in with the ice in lat. 62° 10′ S., passed the Antarctic circle for the second time in long. 147° 46′ W., and on 27 Jan. 1774 attained her highest southern latitude, 71° 10′, in long. 106° 54′ W. All attempts to penetrate further to the south were vain, and as the season advanced, Cook, turning north, reached Easter Island, having been 104 days out of sight of land. The months of the southern winter were spent in intertropical cruising, in the course of which the New Hebrides were explored and New Caledonia was discovered. In October the Resolution arrived again at New Zealand, and Cook determined, as the last chance of finding a southern continent, to examine the high latitudes south of Cape Horn and the Atlantic Ocean. In the course of this cruise he discovered or rediscovered the large island which he named Southern Georgia, on 14 Jan. 1775, and some days later he sighted Sandwich Land. On 21 March the Resolution anchored in Table Bay, and arrived at Plymouth on 29 July. The Adventure had preceded her by more than a year.

The geographical discoveries made by Cook in this voyage were both numerous and important; and by proving the non-existence of the great southern continent, which had for so long been a favoured myth, he established our knowledge of the Southern Pacific on a sound basis. In fact the maps of that part of the world still remain essentially as he left them, though, of course, much has been done in perfecting the details. But the most important discovery of all was the possibility of keeping a ship's company at sea without serious loss from sickness and death. When we read the accounts of the older voyages, those of Anson, of Carteret, or even of Cook himself, and notice that in this second voyage only one man died of disease out of a complement of 118, and that notwithstanding the great length, duration, and hardships of the several cruises, we shall the more fully realise the value of Cook's discovery. The men throughout the voyage were remarkably free from scurvy, and the dreaded fever was unknown. Of the measures and precautions adopted to attain this result a detailed account was read before the Royal Society (7 March 1776), which acknowledged the addition thus made to hygienic science, as well as the important service to the maritime world and humanity, by the award of the Copley gold medal. The paper is printed in 'Phil. Trans.' (vol. lxvi. appendix, p. 39).

Within a few days of his return (9 Aug. 1775) Cook was promoted to the rank of captain, and received an appointment to Greenwich Hospital. But it being shortly afterwards determined to send an expedition into the North Pacific to search for a passage round the north of America, he at once offered himself to go in command of it. The offer was gladly accepted, and Cook, again in the Resolution, sailed from Plymouth on 12 July 1776, followed on 1 Aug. by the Discovery, under the command of Captain Charles Clerke [q. v.], which joined the Resolution at the Cape of Good Hope on 10 Nov. The two ships sailed together from the Cape on 30 Nov., touched at Van Diemen's Land and New Zealand, and spent the following year among the islands of the South Pacific. On 22 Dec. 1777 they crossed the line, and, discovering the Sandwich Islands on their way, made the west coast of America, in lat. 44° 55′ N., on 7 March 1778. They then turned to the north, along the coast, making a nearly continuous running survey as far north as Icy Cape, from which, unable to penetrate further, they turned back on 29 Aug.;

and, after examining the islands and shores of these advanced regions, went to the Sandwich Islands, which Cook proposed to survey in greater detail during the winter months. The ships anchored in Karakakoa Bay, in Hawaii, on 17 Jan. 1779, and remained there for upwards of a fortnight, during which time their people were well received by the natives, Cook himself being treated with an extreme respect that has been described as worship and adoration. On 4 Feb. the ships put to sea, but getting into bad weather, the Resolution sprung her foremast, and they returned to their former anchorage on the 11th. The demeanour of the natives seemed changed; thievish they had been all along; they were now surly and insolent, and their robberies were bolder and more persistent. On the 13th one of them was flogged on board the Discovery for stealing the armourer's tongs; but the same afternoon another again stole the tongs, jumped overboard with them, and swam towards the shore. A boat was sent in pursuit, but the thief was picked up by a canoe and landed. The officer in command of the boat insisted that the thief should be given up, and attempted to seize the canoe as a guarantee, a step which brought on a severe skirmish, out of which the English escaped with difficulty. The same night the Discovery's cutter, lying at her anchor buoy, was taken away, and so quietly that nothing was known of the loss till the following morning. On its being reported to Cook he went on shore with an escort of marines, intending to bring the native king off as a friendly hostage. The king readily consented to go on board, but his family and the islanders generally prevented him; they began to arm; they assembled in great numbers; and Cook, wishing to avoid a conflict, retreated to the boats. At the waterside the boats and the marines fired on the crowd; Cook called out to cease firing, and to the boats to close in. One only obeyed the order; the marines having discharged their muskets were driven into the sea before they could reload, and four of them were killed. Cook, left alone on the shore, attempted also to make for the boat. As his back was turned a native stunned him by a blow on the head; he sank on his knees, and another stabbed him with a dagger. He fell into the water, where he was held down by the seething crowd; but having struggled to land, was again beaten over the head with clubs and stabbed repeatedly, the islanders 'snatching the daggers out of each other's hands to have the horrid satisfaction of piercing the fallen victim of their barbarous rage.' The inshore boat was, meantime, so crowded with the fugitives and in such a state of confusion that it was unable to offer any assistance; the other, commanded by Lieutenant John Williamson, lay off, a passive spectator, and finally returned on board, leaving Cook's dead body in the hands of the savages. 'The complaints and censures that fell on the conduct of the lieutenant were so loud as to oblige Captain Clerke publicly to notice them, and to take the depositions of his accusers down in writing. It is supposed that Clerke's bad state of health and approaching dissolution induced him to destroy these papers a short time before his death' (SAMWELL, *Narrative*, &c.) Justice, however, though tardy, eventually overtook the miserable man, and nineteen years later he was cashiered for cowardice and misconduct in the battle of Camperdown — a sentence which Nelson thought ought rather to have been capital (*Nelson Despatches*, iii. 2). Cook's body was partly burnt by the savages, but the most of it was given up a day or two afterwards and duly buried. In November 1874 an obelisk to his memory was erected in the immediate neighbourhood of the spot where he fell, but the truest and best memorial is the map of the Pacific.

There is no reason to suppose that Cook's death was anything more than a sudden outburst of savage fury, following on the ill-will caused by the sharp punishment inflicted on the thieves. But the mere fact that this case was one of the first on record was sufficient to call more particular attention to it; and the exceptional character of the principal victim seemed to distinguish the tragedy from all others. Hence divers stories have been invented and circulated, which are at variance with the well-established facts and with the testimony of those who were either eye-witnesses of the murder, or received their knowledge from eye-witnesses. As compared with these, we cannot accept the story said to be current among the natives, that Cook was put to death for breaking the tapù, or giving orders to pull down a temple (*Athenæum*, 16 Aug. 1884). Another idea is that he had passed himself off as a god, accepting and requiring divine honours (*Athenæum, in loc. cit.*; COWPER, *Letters*, 9 Oct. 1784 (Bohn's edit.), iii. 136). But the allegation seems quite unfounded, and in any case had nothing to do with the attack and the massacre.

On 21 Dec. 1762 Cook married Miss Batts at Barking, and had by her six children, three of whom died in infancy. Of the others, Nathaniel, aged sixteen, was lost in the Thunderer in the West Indies 3 Oct. 1780; Hugh died at Cambridge, aged seventeen; James, the eldest, commander of the Spitfire sloop,

was drowned in attempting to go off to his ship in a heavy gale 25 Jan. 1794. The widow long survived her family, and died on 13 May 1835 at the age of ninety-three. She was buried by the side of her sons, Hugh and James, in the church of St. Andrew-the-Great, Cambridge. As, according to her recorded age, she was only fourteen years younger than her husband, and as Cook at the age of fourteen was either in the village shop or on board a North-Sea collier, the story that he was his future wife's godfather may be dismissed as an idle yarn. His portrait, by Nathaniel Dance, is in the Painted Hall at Greenwich, to which it was presented by the executors of Sir Joseph Banks.

[Life, by Kippis, in Biog. Brit. The bibliography of Cook's voyages is very extensive; the following are the principal works which may be considered as original: An Account of a Voyage round the World in the years 1768–71, by Lieutenant James Cook, commander of his Majesty's bark Endeavour (vols. ii. and iii. of Hawkesworth's Voyages, 4to, 1773); A Voyage towards the South Pole and round the World, performed in his Majesty's ships Resolution and Adventure in the years 1772–5, written by James Cook, commander of the Resolution (with maps, charts, portraits, and views), 2 vols. 4to, 1777; A Voyage round the World in H.B.M. sloop Resolution, commanded by Captain Cook, during the years 1772–5, by George Forster, F.R.S., 2 vols. 4to, 1777; Remarks on Mr. Forster's Account of Captain Cook's last Voyage round the World, by William Wales, F.R.S., 8vo, 1778; A Voyage to the Pacific Ocean, undertaken by the command of his Majesty for making discoveries in the Northern Hemisphere to determine the position and extent of the west side of North America, its distance from Asia, and the practicability of a northern passage to Europe, performed under the direction of Captains Cook, Clerke, and Gore in his Majesty's ships Resolution and Discovery in the years 1776–80, vols. i. and ii. written by Captain James Cook, F.R.S., vol. iii. by Captain James King, LL.D. and F.R.S., 3 vols. 4to, and atlas in fol., 1784; The Original Astronomical Observations made in the course of a Voyage towards the South Pole and round the World in his Majesty's ships Resolution and Adventure in the years 1772–5, by William Wales and William Bayly, published by order of the Board of Longitude, 4to, 1777; The Original Astronomical Observations made in the course of a voyage to the Northern Pacific Ocean for the discovery of a North-East or North-West passage . . . in the years 1776–80, by Captain James Cook, commander of the Resolution, and Lieutenant James King and Mr. William Bayly, late assistant at the Royal Observatory, published by order of the Commissioners of Longitude, 4to, 1782; A Narrative of the Death of Captain James Cook, to which are added some particulars concerning his Life and Character, . . . by David Samwell, surgeon of the Discovery, 4to, 1786. Many of Cook's original manuscripts are in the British Museum; among others, the holograph journal of his last voyage, posted up to 6 Jan. 1779, is Egerton MS. 2177 A.] J. K. L.

COOK, JOHN (*d.* 1660), regicide, is stated in a royalist newspaper of 1649 (*Mercurius Elencticus*, No. 56) to have been employed in Ireland by Strafford, and this seems to be confirmed by a letter of Cook's to Strafford during the trial of the latter. Ludlow states that Cook had in his younger years seen the best part of Europe, spent some time at Rome, and lived several months at Geneva in the house of Diodati (*Memoirs*, p. 366). Occasional references to his travels in Cook's own pamphlets bear out this statement. Like Bradshaw and several other leading republicans, Cook was a member of Gray's Inn. In February 1646 he acted in conjunction with Bradshaw as one of the counsel representing Lilburn on the reversal of the Star-chamber sentence against the latter by the House of Lords (*A True Relation of Lieutenant-colonel Lilburn's Sufferings*). On 8 Jan. 1649 the high court of justice chose Cook one of the counsel to be employed against Charles I, and on 10 Jan. he was appointed solicitor for the Commonwealth, and ordered to prepare the charge. Owing to the absence, through illness, of Steele, the attorney-general, the conduct of the prosecution fell chiefly to his lot. On 20 Jan. Cook brought forward the charge. As he began to speak 'the prisoner, having a staff in his hand, held it up, and softly laid it upon the said Mr. Cook's shoulder, bidding him hold; nevertheless, the lord president bidding him to go on, Mr. Cook did accordingly' (Nalson, *Journal of the High Court of Justice*, p. 28). On 23 Jan., as the king continued contesting the jurisdiction of the court, and refusing to plead, Cook prayed the court either to oblige him to plead, or to pronounce sentence against him (p. 55). The charge drawn up against the king was printed under the title of 'A Charge of High Treason and other high crimes exhibited to the High Court of Justice by John Cook, Esq., solicitor-general appointed by the said Court, for and on behalf of the people of England, against Charles Stuart, King of England.' It is reprinted by Nalson (*Trial of Charles I*, p. 29). There was also published immediately after the trial, 'King Charles his Case, or an appeal to all rational men concerning his trial in the High Court of Justice, being for the most part that which was intended to have been delivered at the bar if the king had pleaded to the charge.' This tract (with an answer to it attributed to Butler, but more probably by Birkenhead) is reprinted

in the fifth volume of Scott's edition of the 'Somers Tracts.' It is a very scurrilous production, comparing the king to Cain, Machiavelli, and Richard III, and accusing him among other things of complicity in the death of his father and in the Irish rebellion. In it he says that when called to this service he 'went cheerfully about it as to a wedding, and I hope it is meat and drink to good men to have justice done, and recreation to think what benefit the nation will receive by it.' Cook was rewarded for his services by being made master of the hospital of St. Cross (WHITELOCKE, 30 June 1649). In the following December he was further appointed chief justice of Munster, and has left a very curious account of the dangers of his passage to Ireland. 'It almost split my heart,' he says, 'to think what the malignants would say in England when they heard that we were drowned' (*A True Relation of Mr. Justice Cook's Passage by Sea from Wexford to Kinsale, etc.* See also *Mrs. Cook's Meditations, etc., composed by herself at her unexpected safe arrival at Cork*). In 'Several Proceedings' for 10–17 April 1651 a letter from Ireland describes Cook as 'a most sweet man and very painful, and doth much good,' and about the same time Cromwell affirmed to Ludlow that Cook, 'by proceeding in a summary and expeditious way, determined more causes in a week than Westminster Hall in a year' (LUDLOW, *Memoirs*, p. 123). By the Act of Satisfaction of Adventurers and Soldiers, passed 26 Sept. 1653, Cook was confirmed in possession of a house at Waterford, and lands at Kilbarry near that city, and Barnahely in the county of Cork (SCOBELL, *Acts*, ii. 250). On 13 June 1655 the council of state appointed Cook a justice of the court of upper bench in Ireland (*Cal. State Papers*, Dom. 1655). In April 1657 he crossed over to England, whence he writes to Henry Cromwell in February 1659, apologising for his long absence (*Thurloe State Papers*, vii. 610). But having returned to Ireland he was arrested by Sir Charles Coote, who was anxious to make his peace with the royalists, and sent over to England in the spring of 1660. As he had been excluded by name from the Act of Indemnity, he was tried on 13 Oct. 1660, and condemned to death. The sentence was executed on 16 Oct. A full account of his behaviour during his imprisonment, and letters to his wife and her daughter Freelove Cook, is contained in 'A Complete Collection of the Lives and Speeches of those persons lately executed, by a person of quality,' 1661. He exhibited great courage and cheerfulness on his way to execution and on the scaffold.

Besides the pamphlets mentioned above Cook was the author of the following works: 1. 'A Vindication of the Professors and Profession of the Law,' 1646, republished with alterations and additions in 1652. 2. 'What the Independents would have, or a character declaring some of their tenets and desires, to disabuse those who speak ill of that they know not,' 1647. 3. 'Redintegratio Amoris, or a union of hearts between the King's most excellent Majesty, the Lords and Commons, Sir Thomas Fairfax and the Army under his command, the Assembly, and every honest man that desires a sound and durable peace,' 1647. 4. 'Unum Necessarium, or the Poor Man's Case: being an expedient to make provision for all poor people in the Kingdom,' 1648. An article is devoted to this tract in the second volume of the 'Retrospective Review,' ser. iii. 5. 'Monarchy no Creature of God's making, wherein is proved by Scripture and Reason that Monarchical Government is against the Mind of God, and that the execution of the late King was one of the fattest Sacrifices that ever Queen Justice had,' Waterford, 1652. The preface contains a character of Ireton and an account of the legal reforms carried out by Cook in Ireland.

[Ludlow's Memoirs, ed. 1751; Thurloe State Papers; Domestic State Papers; Nalson's Trial of Charles I; State Trials.] C. H. F.

COOK, JOHN, D.D. (1771–1824), professor of Hebrew, eldest son of the Rev. John Cook, professor of moral philosophy at St. Andrews, by Janet, daughter of the Rev. John Hill, was born 24 Nov. 1771. He graduated at St. Andrews in 1788. On 19 Sept. 1792 he was licensed for the ministry of the church of Scotland, and was ordained minister of Kilmany on 9 May 1793. He held this charge until 12 Oct. 1802; his immediate successor was Dr. Chalmers. Cook left Kilmany to fill the Hebrew and divinity chair in St. Mary's College, St. Andrews, a position which he occupied until his death. On 16 May 1816 he was moderator of the general assembly. He died on 28 Nov. 1824. He published 'Inquiry into the Authenticity of the Books of the New Testament,' Edin. 1821, 8vo (the substance of a course of lectures, on Bishop Marsh's plan).

[Hew Scott's Fasti Eccles. Scot.; Anderson's Scottish Nation, 1870, i. 680.] A. G.

COOK, JOHN, D.D. (1808–1869), professor of ecclesiastical history, was the eldest son of John Cook (1771–1824) [q. v.] He graduated A.M. at St. Andrews in 1823. In 1824 he was factor to St. Mary's College. He was licensed for the ministry of the

church of Scotland on 13 Aug. 1828, and ordained minister of Laurencekirk, Kincardineshire, on 3 Sept. 1829. From this charge he was translated to St. Leonard's at St. Andrews, on 11 Sept. 1845 (admitted 2 Oct.) On 9 Dec. 1848 he was made D.D. at St. Andrews; and on 19 June 1860 he was appointed to the chair of divinity and ecclesiastical history in that university, which he held until 30 July 1868, having resigned his pastoral charge on 30 Sept. 1863, on becoming one of the deans of the chapel royal. Cook was an excellent man of business, and an able pamphleteer on church affairs. The general assembly (of which he was elected moderator 19 May 1859) made him convener of many of its important committees, e.g. on education (1849), improving the condition of parish schoolmasters (1850), aids to devotion (1857), army and navy chaplains (1859). In 1859 he was chosen an assessor to the university court of St. Andrews, under the new constitution of the Scottish universities. He died on 17 April 1869 in his sixty-second year. On 9 May 1837 he married Rachel Susan, daughter of William Farquar, by whom he had five daughters. A painted window to his memory is placed in the college church at St. Andrews. Hew Scott enumerates thirteen publications by Cook, the earliest being 1. 'Evidence on Church Patronage,' Edin. 1838, 8vo; and the most important, 2. 'Six Lectures on the Christian Evidences,' Edin. 1852, 8vo. The others are speeches, statistical pamphlets, a catechism (1845), a farewell sermon (1845), &c.

[Hew Scott's Fasti Eccles. Scot.] A. G.

COOK, JOHN, D.D. (1807–1874), Scottish divine, born 12 Sept. 1807, was the eldest son of George Cook [q. v.], by Diana, eldest daughter of Rev. Alexander Shank. In 1823 he graduated A.M. at St. Andrews. He was licensed for the ministry of the Scottish church by the presbytery of Fordoun on 17 Sept. 1828, and ordained minister of Cults, Fifeshire, on 1 June 1832. He was translated to the second charge at Haddington on 26 Nov. 1833 (admitted 19 Dec.); and ten years later was translated to the first charge in the same place (admitted 20 June 1843). In common with other members of the ecclesiastical family of Cook, he was a strong supporter of the moderate party in the Scottish church. A sentence of deposition having been passed by the general assembly (May 1841) on seven ministers of Strathbogie, who in a case of patronage upheld a decree of the court of session in opposition to the authority of the assembly, Cook was, on 10 May 1842, suspended by the assembly from judicial functions for nine months, for taking part in sacramental communion with the deposed ministers. His promotion to the first charge at Haddington immediately followed the disruption of 1843. In the same year the degree of D.D. was conferred on him by his university. He was a strong and persuasive speaker, and was looked up to as a trusted leader in church courts. The assembly made him in 1854 convener of its committee for increasing the means of education and religious instruction in Scotland. He was elected sub-clerk of assembly on 25 May 1859, principal clerk on 22 May 1862, and was raised on 24 May 1866 to the moderator's chair. Cook was a man of much public force and great geniality of character. His position as a leader of the moderates in ecclesiastical politics was unattended by any latitudinarian tendencies in matter of doctrine. He died on 11 Sept. 1874. He married (14 July 1840) a daughter of Henry Davidson; his wife died 3 Jan. 1850, leaving three daughters. He published: 1. 'Styles of Writs and Forms of Procedure in the Church Courts of Scotland,' Edin. 1850, 8vo. 2. 'Letter . . . on the Parochial Schools of Scotland,' Edin. 1854, 8vo. 3. 'Speech on . . . Scotch Education Bill,' 1871, 8vo.

[Hew Scott's Fasti Eccles. Scot.; information from Rev. R. N. Smith, Haddington.] A. G.

COOK, JOHN DOUGLAS (1808?–1868), editor of the 'Saturday Review,' was born at Banchory-Ternan in Aberdeenshire, probably in 1808, though, according to his own belief, he was born in 1811. At an early age he obtained an appointment in India, probably through an uncle, one of the Sir George Roses. He quarrelled with his employers in India, returned, as he used to relate, on foot for a great part of the way, and found himself in destitution in London. He tried literature, and at last sent an article without his name to the 'Times.' Upon its acceptance he made himself known, and became a friend of Walter, the proprietor. He was also known to Murray, for whom he indexed the early volumes of the 'Quarterly Review,' and through Murray he became known to the fifth Lord Stanhope. When Walter was elected for Nottingham as a tory in 1841, Cook accompanied him to help in the election. He there made acquaintance with Lord Lincoln (afterwards fifth duke of Newcastle), who became chief commissioner of woods and forests in Peel's administration. Lord Lincoln sent a commission into Cornwall to inquire into the revenues of the duchy, and made Cook its secretary. The work came to an end about 1848. Some of the 'Peelite' party, to which Lincoln belonged, had bought

the 'Morning Chronicle' to be their organ, and Cook was appointed to the editorship. He showed great ability, and spent money lavishly. The paper, though of the highest character, did not pay; and in 1854 Cook ceased to be editor on its sale to other proprietors. He had collected many able contributors, who supported him in the 'Saturday Review,' started in November 1855 on a new plan. The 'Saturday Review' under his editorship almost immediately took the first place among weekly papers, and in some respects the first place in periodical literature. Many of the contributors have since become eminent in various directions. Though not possessed of much literary culture, Cook had a singular instinct for recognising ability in others and judgment in directing them, which made him one of the most efficient editors of his day. In his later years he had a house at Boscastle, Cornwall, where he spent brief vacations; but he was seldom absent from London. He continued to edit the 'Saturday Review' till his death, 10 Aug. 1868.

[Information from the Right Hon. A. J. B. Beresford Hope.]

COOK, RICHARD (1784–1857), historical painter, was born in London in 1784. He obtained admission into the schools of the Royal Academy when sixteen years of age, and received the Society of Arts gold medal in 1832. He first exhibited at the Royal Academy 'A Landscape,' in 1808. At that period he resided at 41 North Audley Street, Grosvenor Square; in the same year he sent to the British Institution 'The Agony of Christ' and 'Hector reproving Paris.' In 1814 he had in the Royal Academy a portrait of Mr. G. F. Cooke, and 'Acis and Galatea,' afterwards engraved by W. Taylor. He now lived at 12 Greek Street, Soho Square. In 1816, being elected an associate, he sent from 50 Upper Marylebone Street five pictures, viz.: four from the 'Lady of the Lake,' and 'Ceres, disconsolate for the loss of Proserpine, rejects the solicitation of Iris, sent to her by Jupiter.' In 1822, Cook was elected a full academician, and from that time forward he almost seems to have relinquished his profession. He married a lady with fortune, which enabled him to entertain liberally his brother artists. He died in Cumberland Place, Hyde Park, on 11 March 1857. A sale of his pictures, sketches, prints, &c., took place at Christie & Manson's 1 June 1857. Among the lots there was Stothard's 'George III and Queen, sitting, surrounded by a family of boys and girls.' In the department of prints and drawings, British Museum, are preserved several drawings, chiefly studies for book illustrations, executed in 1806; a large study for the 'Lady of the Lake'; a charming portrait of Mrs. Cook, seen full face, three-quarter length, executed in pencil and slightly tinted; and an interesting folio volume containing numerous carefully drawn figures, furniture, arms, &c., eighth to fifteenth centuries. Cook illustrated the following works: Sharpe's 'Classics,' Fénelon's 'Telemachus,' 'The Grecian Daughter,' 'Apollonius Rhodius,' Miller's 'Shakespeare,' Homer's 'Iliad' and 'Odyssey,' Goldsmith's 'Miscellaneous and Poetical Works,' Churchill's 'Poems,' 'Ovid's Metamorphoses' by Dr. Garth, Dryden's 'Virgil,' Tasso's 'Jerusalem Delivered,' by Hoole, &c.

[Redgrave's Dict. of Artists of the English School, Lond. 8vo, 1878; manuscript notes in the British Museum.] L. F.

COOK, ROBERT (*d.* 1593?), herald, is supposed to have been the son of a tanner and to have been brought up in the household of Sir Edmund Brudenell, an ardent genealogist. That he was of low birth is probable because he obtained a grant of arms as late as 4 March 1577. Matriculating as a pensioner in St. John's College, Cambridge, 10 Nov. 1553, he proceeded B.A. there in 1557–8 and commenced M.A. in 1561. He was appointed successively Rose Blanche pursuivant extraordinary, 25 Jan. 1561–2; Chester herald four days later (*Pat.* 4 Eliz. pt. 5); and Clarencieux king of arms, 21 May 1567 (*Pat.* 9 Eliz. pt. 10). On 24 March 1567–8 he obtained a special commission to visit his province. During the interval between the death of Sir Gilbert (3 Oct. 1584) and the appointment of William Dethick [q.v.] (21 April 1586) Cook exercised the office of Garter king of arms. In that capacity he accompanied the Earl of Derby to France in 1585, carrying the garter to Henry III, who rewarded him with a present of two gold chains worth over 120*l.* apiece. At this period there seems to have been some talk of uniting the offices of Garter and Clarencieux. Cook gave 20*l.* and a bond for 80*l.* to George Bentall, servant of Shrewsbury, the earl marshal, to obtain him the office of Garter, but his suit was unsuccessful. Bentall nevertheless sued him for the 80*l.* He appealed to chancery, and the last we know of the cause is that on 24 Oct. 1588 Sir Christopher Hatton made an order referring it to Richard Swale, LL.D., one of the masters. He died about 1592, and was buried at Hanworth, leaving a daughter Catharine, wife of John Woodnote of Shavington in Cheshire. Cook was an industrious herald, and made visitations in most of the counties of his pro-

vince. An inventory (*Lansd. MSS.* vol. lxxv. No. 31) of papers in his house in London, which Dethick proposed should be bought for the Heralds' College, was taken after his death by order of the privy council; it is dated 11 Oct. 1593, and signed by the sheriff in presence of Dethick Garter, Lee Richmond, and John Woodnote. Cook was also a painter, and it has been supposed that he painted the portraits of Henry VII, Henry VIII, Queen Catherine, the Duke of Suffolk, Sir Anthony Wingfield, and Sir Robert Wingfield and his family at Cockfield Hall in Yoxford, Suffolk; but this seems doubtful. Cook's portrait has been engraved by T. Tovey. The accusations laid against him by his enemy, Dethick, jun., are perhaps not worthy of much credit. They are that he was son of a tanner, ignorant of languages, unable to speak French, dissolute, had married another man's wife, had granted arms to unworthy persons in taverns in exchange for the cheer they made him, &c., &c.

Cook wrote: 1. 'An English Baronage' (Harl. MSS. 214, 1163, 1966, 4223, 7382; Addit. MSS. 4958–9, 5504, 5581, 12448; MSS. Coll. Regin. Oxon. 73, 133, 136; Arund. MS. in Coll. Arm. 34; Royal MS. 18 C. 17; MSS. Phillipp. 111, 196). 2. 'Heraldic Rudiments' (Harl. MS. 1407, art. 3). 3. 'An Ordinary of Arms' (MS. Phillipp. 7357). 4. 'A Treatise on the Granting of Arms' (Lansd. MS. 255, f. 219). All remain in manuscript. Upon one (Harl. MS. 214) Sir Symond d'Ewes has written a title concluding 'in which are a world of errors, *ergo caveat lector.*'

[Harl. MSS.; Addit. MSS.; Cat. Arund. MSS. in Coll. Arm.; Ayscough's Cat.; Coxe's Cat. of Oxford MSS.; Lansd. MSS.; MSS. Phillipp.; Smith's Cat. of Caius Coll. MSS.; Cal. of Chanc. Proc. Eliz. iii. 186; Cooper's Athenæ Cantab.; Dallaway's Heraldry, pp. 163–7, 264, 296, pl. 11, 12; Lemon's Cal. of State Papers; Leycester Corresp. p. 32; Lodge's Illustr. ii. 143, 349; Monro's Acta Cancellariæ, p. 586; Nichols's Progr. Eliz.; Noble's Coll. of Arms, pp. 169, 177, 188, App. F; Rymer, xv. 668, 672; Strype's Annals, i. 558; Walpole's Painters, ed. Wornum, p. 105.] R. H. B.

COOK, ROBERT (1646?–1726?), vegetarian, son of Robert Cook, esq., of Cappoquin, co. Waterford, was born about 1646. He was a very rich and eccentric gentleman, and generally went by the name of 'Linen Cook,' because he wore only linen garments, and used linen generally for other purposes. During the troubles in the reign of James II he fled to England and resided for some time at Ipswich (*Addit. MS.* 19166, f. 64). During his absence the parliament held at Dublin on 7 May 1689 declared him to be attainted as a traitor if he failed to return to Ireland by 1 Sept. following. His first wife was a Bristol lady, and in consequence of his visits to that city he caused a pile of stones to be erected on a rock in the Bristol Channel, which, after him, was called 'Cook's Folly.' By his second wife, whose name was Cecilia or Cicily, he had three sons and two daughters (Burke, *Patrician*, iv. 64). He died about 1726, and by his will directed that his body should be interred in the cathedral or church called 'Tempul' at Youghal, and that his shroud should be made 'of linen.'

Cook was 'a kind of Pythagorean philosopher, and for many years neither eat fish, flesh, butter, &c., nor drank any kind of fermented liquor, nor wore woollen clothes, or any other produce of an animal, but linen' (C. Smith, *Ancient and Present State of Waterford*, edit. 1774, p. 371). In 1691 he published a paper (reprinted in Smith's 'Waterford'), giving an explanation of his peculiar religious principles. The Athenian Society wrote an answer to his paper and refuted his notions.

[Authorities cited above.] T. C.

COOK, SAMUEL (1806–1859), water-colour painter, was born in 1806 at Camelford, Cornwall. His mother kept a bakehouse, and under the same roof there was a small school, which he attended early in life, learning there reading and writing. He did not obtain any further education, as at the age of nine he was apprenticed to a firm of woollen manufacturers at Camelford, his duty being to feed a machine called a 'scribbler' with wool. During the intervals of his labour he used to amuse himself by drawing with chalk on the floor to the annoyance of the foreman, who said that he would never be fit for anything but a limner. His talents gained him employment in painting signboards and scenes for itinerant showmen, and in graining wood. On the termination of his apprenticeship he went to Plymouth, and became assistant to a painter and glazier there, subsequently setting up business in that line on his own account. Every hour he could spare he devoted to sketching, especially by the seaside and on the quays at Plymouth. As his sketches showed increasing merit, they attracted the attention of resident connoisseurs, and found many generous and wealthy patrons. Encouraged by them, he sent, about 1830, some of his drawings to the New Water-colour Society, and was immediately admitted a member. From that time he was a regular contributor to the gallery in Pall Mall till his death, which took place 7 June 1859. His pictures were

very much admired, though not numerous, as he never relinquished his trade. They were chiefly coast scenes, rather weak in colour, especially his early works, but they possessed quiet simplicity and truth and real artistic feeling. There is a view of Stonehouse, Plymouth, in the South Kensington Museum.

[Redgrave's Dict. of English Artists; Art Journal, 1861; Bryan's Dictionary of Painters and Engravers (ed. Graves).] L. C.

COOK, SAMUEL EDWARD (*d.* 1856), writer on Spain. [See WIDDRINGTON.]

COOK, THOMAS (1744?–1818), engraver, of London, was a pupil of Simon François Ravenet, the well-known French engraver, when resident in London. Cook was very industrious, and, soon reaching a high position in his art, was employed by Boydell and other art publishers on works which had a large circulation. He is best known from having copied the complete engraved work of Hogarth, to which he devoted the years 1795–1803, and which was published in 1806 under the title of 'Hogarth Restored.' This is a very valuable collection, as many of Hogarth's prints were of great rarity, and had not been made public before. He was employed also in engraving portraits, history, architecture, plates for magazines, &c. Among his best known works are 'Jupiter and Semele' and 'Jupiter and Europa,' after Benjamin West; 'The English Setter,' after J. Milton, engraved with S. Smith in 1770 as a pendant to 'The Spanish Pointer,' by Woollett; 'The Wandering Musicians,' a copy of Wille's engraving, after Dietrich; 'St. Cecilia,' after Westall, and several views after Paul Sandby for the 'Copperplate Magazine.' He engraved many portraits, especially for the 'Gentleman's Magazine' and others, and as frontispieces. Among the persons engraved in this way were Thomas Howard, earl of Arundel; George Washington, Samuel Johnson, Oliver Goldsmith, Charles Churchill, John Cunningham, William Harvey, David Hume, Joseph Spence, and others. Cook executed a reduced set of his Hogarth engravings for Nichol and Stevens's edition of Hogarth's works. He died in London in 1818, aged 74.

[Redgrave's Dict. of Artists; Nagler's Künstler-Lexikon; Gent. Mag. (1818) lxxxviii. 475; Bromley's Catalogue of Engraved Portraits.] L. C.

COOK, WILLIAM (*d.* 1824), dramatist and miscellaneous writer, was descended from an old family originally from Cheshire, but for some time settled in Cork. He was educated at Cork grammar school, and afterwards by a private tutor. At the age of nineteen he married a lady of considerable fortune, but squandered a large portion of it in pleasure, and lost nearly all the remainder in his business, that of a woollen manufacturer. In 1766 he left Cork for London with strong recommendations to the Duke of Richmond, the Marquis of Lansdowne, Edmund Burke, and Dr. Goldsmith, whose friendship he retained through life. He was called to the bar at the Middle Temple in 1777, and for one or two years went on the home circuit, but already occupied himself chiefly with literature. His earliest publication was a poem on 'The Art of Living in London,' which met with some success, and in 1807 he published another of greater pretension, entitled 'Conversation,' in the 4th edition of which, published in 1815, he introduced the characters of several of the members of the well-known literary club in Gerrard Street, Soho, such as Burke, Johnson, Sir Joshua Reynolds, and Goldsmith. He was also the author of 'Elements of Dramatic Criticism,' 1775; 'Memoirs of Hildebrand Freeman, Esquire,' n. d.; 'The Capricious Lady,' a comedy, altered from Beaumont and Fletcher's 'Scornful Lady,' 1783; 'Memoirs of C. Macklin,' the actor, including a history of the stage during Macklin's lifetime; 'Memoirs of Samuel Foote, with some of his Writings,' 1805, in three volumes. He died at his house in Piccadilly 3 April 1824 at a very advanced age.

[Gent. Mag. xciv. pt. i. 374–5; Annual Register, lxvi. 218; Biographia Dramatica, i. 147–8; Dict. of Living Authors, 74.] T. F. H.

COOKE. [See also COKE and COOK.]

COOKE, ALEXANDER (1564–1632), vicar of Leeds, Yorkshire, was the son of William Gale, *alias* Cooke, of Beeston in that parish, where he was baptised on 3 Sept. 1564 (THORESBY, *Ducatus Leodiensis*, ed. 1816, p. 209). After studying at Leeds grammar school he was admitted a member of Brasenose College, Oxford, in Michaelmas term 1581, and after graduating B.A. in 1585 he was elected to a Percy fellowship at University College in 1587. In the following year he commenced M.A., and he took the degree of B.D. in 1596 (WOOD, *Fasti*, ed. Bliss, i. 230, 243, 273). On 5 Feb. 1600-1 he was inducted into the vicarage of Louth, Lincolnshire, by virtue of letters mandatory from the bishop on the presentation of the queen (*Lansd. MS.* 984, f. 120). On the death of his brother, Robert Cooke [q. v.], he was collated, upon lapse, to the vicarage of Leeds, by Tobie Mathew, archbishop of York, on 30 May 1615 (HOBART, *Reports*, ed. 1724, p. 197). He was buried in Leeds church on

23 June 1632 (THORESBY, *Vicaria Leodiensis*, pp. 71–9).

Wood says that 'he left behind him the character of a good and learned man, a man abounding in charity and exemplary in his life and conversation, yet hated by the R. Catholicks who lived near Leeds and in Yorkshire, and indeed by all elsewhere who had read his works' (*Athenæ Oxon.* ed. Bliss, ii. 536). Cole observes, however, that there is 'no great sign of abundance of charity in his letter to Archbishop Ussher, 1626, in which he tells him that the dean of Winchester had offered 15,000*l.* for that bishopric, and calls Dr. Laud and Bishop Francis White men of corrupt minds; with a deal of other puritan leaven.' Cooke was married and left several children. His daughter Anne became the first wife of Samuel Pulleyne, archbishop of Tuam.

He was author of: 1. 'Pope Joane. A dialogue betweene a Protestant and a Papist, manifestly proving that a woman called Joane was Pope of Rome,' London, 1610, 1625, 4to. Reprinted in the 'Harleian Miscellany,' ed. Park, iv. 63. A French translation, by J. de la Montagne, appeared at Sedan, 1663, 8vo. 2. Letter to James Usher, dated Leeds, 1612, to prove that the two treatises ascribed to St. Ambrose, viz. 'De iis qui Sacris initiantur' and 'De Sacramentis,' as also that of Athanasius, 'De Vita Antonii,' are not genuine. Harleian MS. 822, f. 464. 3. 'Work for a Mass-Priest,' London, 1617, 4to; entitled in successive amplified editions 'More Work for a Mass-Priest' (1621); 'Yet more Worke for a Mass-Priest' (1622); 'Worke, more Worke, and yet a little more Worke for a Mass-Priest' (1628, 1630). 4. 'St. Austins Religion: wherein is manifestly proued out of the Workes of that learned Father that he dissented from Poperie,' London, 1624, 4to. Baker ascribes to Cooke the authorship of this treatise, although William Crompton is generally credited with it [see ANDERTON, JAMES]. 5. 'The Abatement of Popish Brags, pretending Scripture to be theirs,' London, 1625, 4to. 6. 'The Weathercocke of Romes Religion, with her severall Changes. Or, the World turn'd topsie-turvie by Papists,' London, 1625, 4to.

[Authorities cited above.] T. C.

COOKE, SIR ANTHONY (1504–1576), tutor to Edward VI and politician, born in 1504, was the son of John Cooke of Gidea Hall, Essex, by Alice Saunders, and great-grandson of Sir Thomas Cooke [q. v.], lord mayor of London in 1462. He was privately educated, and rapidly acquired, according to his panegyrist Lloyd, vast learning in Latin, Greek, poetry, history, and mathematics. He lived a retired and studious life in youth; married Anne, daughter of Sir William Fitzwilliam of Milton, Northamptonshire, and Gains Park, Essex, and was by her the father of a large family. To the education of his children he directed all his energies. His daughters Mildred, subsequently wife of Lord Burghley, and Ann, subsequently wife of Sir Nicholas Bacon [see BACON, ANN, LADY], became, under his instruction, the most learned women in England. His success as a teacher in his own family, with whom the son of Lord Seymour was for a time educated, led to his appointment as tutor to Prince Edward (afterwards Edward VI). At his pupil's coronation Cooke was made knight of the Bath. On 8 Nov. 1547 he was returned to parliament for Lewes, and in the same year was one of the visitors commissioned by the crown to inspect the dioceses of London, Westminster, Norwich, and Ely; the injunctions drawn up by him and his companions are printed in Foxe's 'Acts and Monuments.' Two years later he served on two ecclesiastical commissions, of markedly protestant tendencies. In November and December 1551 he attended the discussion held between Roman catholics and protestants at the houses of Sir William Cecil and Sir Richard Morysone, and his public services were rewarded (27 Oct. 1552) with a grant of land. On 27 July 1553 he was committed to the Tower on suspicion of complicity in Lady Jane Grey's movement, but in May 1554 arrived in Strasburg and attended Peter Martyr's lectures there. He stayed at Strasburg, where he became intimate with the scholar Sturm, for the following four years, and regularly corresponded with his son-in-law Cecil (*Hatfield Calendar*, i. 140–146). On Elizabeth's accession he returned home; was elected M.P. for Essex (23 Jan. 1558–9, and 11 Jan. 1562–3), and carried the Act of Uniformity to the House of Lords. In the discussion of this bill Cooke differed from all his friends. He 'defends,' wrote Bishop Jewel to Peter Martyr, 'a scheme of his own, and is very angry with all of us' (*Zurich Letters*, Parker Soc. 32). Cooke was nominated a commissioner for visiting Cambridge University (20 June 1559), the dioceses of Norwich and Ely (21 Aug. 1559), and Eton College (September 1561), and for receiving the oaths of ecclesiastics (20 Oct. 1559). In 1565 he was steward of the liberty of Havering-atte-Bower, and three years later received Queen Elizabeth at Gidea Hall, the rebuilding of which, begun by his great-grandfather, he had then just completed. The house was pulled down early in the 18th century. In

July 1572 he was associated with the lord mayor in the government of London in the temporary absence of Elizabeth, and was commissioner of oyer and terminer for Essex (20 Oct. 1573) and an ecclesiastical commissioner (23 April 1576). Cooke died 11 June 1576, and was buried in the church of Romford, Essex, where many other members of his family were buried. An elaborate monument, inscribed with Latin and English verse, was erected there to his memory. By his wife he had four sons, Anthony, Richard, Edward (M.A. Cambridge 1564), William (M.A. Cambridge 1564), and five daughters. The eldest daughter, Mildred, became second wife of William Cecil, lord Burghley; Ann was second wife of Sir Nicholas Bacon; Margaret was wife of Sir Ralph Rowlett, and was buried on 3 Aug. 1558 at St. Mary Staining, London; Elizabeth was wife first of Sir Thomas Hoby, and secondly of John, lord Russell, son of Francis, second earl of Bedford; and Katharine was wife of Sir Henry Killigrew. Cooke's executors under his will, dated 22 May 1576, and proved 5 March 1576–7, were his sons-in-law Bacon and Burghley and his two surviving sons Richard and William. The heir, Richard, steward of the liberty of Havering-atte-Bower, born in 1531, died 3 Oct. 1579, and was succeeded by his son Anthony (1559–1604), with the death of whose third son, William, in 1650, the male line of the family became extinct (*Notes and Queries*, 2nd ser. xii. 480).

A Latin translation, dated 1560, of Gregory Nazianzen's 'Theophania,' attributed to Cooke, is in the British Museum (MS. Royal 5 E. xvii). He contributed Latin verses to the collections published on the deaths of Martin Bucer, Catherine and Margaret Neville, and to Carr's translation of 'Demosthenes.' The 'Diallacticon de veritate natura atque substantia corporis et sanguinis Christi in Eucharistia,' edited by Cooke and first published in 1557, is not by him, but by his friend John Ponet or Poynet, bishop successively of Rochester and Winchester, whose library came into Cooke's possession on the bishop's death in 1556. Peter Martyr's 'Commentary on the Epistle to the Romans,' 1558, was dedicated to Cooke. Five letters addressed by Sturm, Cooke's Strasburg friend, to Cooke between 1565 and 1567 are printed with 'Roger Ascham's Letters' (ed. 1864, ii. 93, 116, 121, 162, 164). They are chiefly requests for protection in behalf of foreign scholars visiting England.

Brewer; Camden's Annals; Lloyd's Worthies; Fuller's Worthies. A pedigree of the family has been compiled from original sources by Mr. E. J. Sage of Stoke Newington.] S. L.

COOKE, BENJAMIN (1734–1793), Mus. Doc., born in 1734, was the son of Benjamin Cooke, who kept a music-shop in New Street, Covent Garden. His mother's maiden name was Eliza Wayet, and she was a member of a Nottinghamshire family. The elder Cooke died before his son was nine years old, but the boy had been already placed under Dr. Pepusch, with whom he made such progress that at the age of twelve he was appointed deputy to Robinson, the organist of Westminster Abbey. In 1749 he succeeded Howard as librarian of the Academy of Ancient Music, and three years later took Pepusch's place as conductor. In September 1757 he was appointed master of the choristers at Westminster Abbey, and on 27 Jan. 1758 he became a lay vicar of the same church. On 2 Nov. 1760 Cooke was elected a member of the Royal Society of Musicians, and on 1 July 1762 he succeeded Robinson as organist of the abbey. He became a member of the Catch Club on 6 April 1767, and of the Madrigal Society on 9 Aug. 1769, and in 1775 he took the degree of Mus. Doc. at Cambridge, where his name was entered at Trinity College. His exercise for this occasion was an anthem, 'Behold how good and joyful,' which had been originally written in 1772 for the installation of the Duke of York as a knight of the Bath. In 1782 Cooke received the honorary degree of Mus. Doc. at Oxford, and in the same year was elected organist of St. Martin's-in-the-Fields, after a severe contest, in which Burney was his chief opponent. Cooke was an assistant director at the Handel Festival in 1784, and received one of the medals which George III caused to be struck to commemorate that event. In 1789 changes in the constitution of the Academy of Ancient Music caused him to resign the conductorship, a step which he felt so strongly that for some time he refused to belong to a small musical club known as the 'Graduates Meeting,' as he objected to meet his successor, Dr. Arnold. Cooke for many years had suffered from gout. He spent the summers of 1790–3 at Ramsgate, Brighton, Oxford, and Windsor, but was attacked at the latter place by his old malady, and shortly after his return died at his house in Dorset Court, Westminster, 14 Sept. 1793. He was buried on 21 Sept. in the west cloister of the abbey, where a monument was erected

to him bearing an inscription written by T. J. Mathias, and a canon of his own composition. In person Cooke was 'middle-sized, latterly rather corpulent, though when young extremely thin; he had a fine face, a soft concealed eye, and he was most strongly affected by music; showed great change of feelings, proceeding from a kind of creeping in the skin and hair, as he described it.' A contemporary describes him as 'one of the worthiest and best-tempered men,' and he must have been an admirable teacher, numbering among his pupils such musicians as Parsons, Crosdill, Greatorex, the two Knyvetts, Hindle, Bartleman, Walmisley, Beale, and Spofforth. His principal compositions were written for the Academy of Ancient Music; his services, anthems, and numerous odes are now forgotten, but his glees, catches, and canons are still sung, and the library of the Royal College of Music possesses a large collection of his manuscript music.

Cooke was married (22 May 1758) to Miss Mary Jackson, who died 19 March 1784. According to her son, 'she was a most amiable and affectionate woman, and possessed good property; was sister to Charles Jackson, esq., comptroller at the Foreign Office, General Post Office.' By her he had ten children, five of whom died in infancy. Benjamin, his eldest son, a boy of great promise, was born 13 Aug. 1761, and died 25 Jan. 1772. Some manuscript compositions by him are preserved at the Royal College of Music. The other children who survived were Mary (*b.* 28 July 1762, died unmarried 28 Feb. 1819); Amelia (*b.* 7 Oct. 1768, died unmarried 16 May 1845); Robert [q. v.], and Henry. The latter was for many years in the General Post Office. He edited two books of organ pieces, and a set of nine glees and two duets by his father; he also wrote a little music which is extant in manuscript, and published a short biography of Dr. Cooke, and 'Some Remarks on the Greek Theory of Tuning Instruments.' He died at 2 Little Smith Street, Westminster, 30 Sept. 1840, aged 74.

Hawkins's Anecdotes, i. 225–35; Burney's Account of the Handel Festival in 1784; European Mag. xxiv. 239; Add. MSS. 27669, 27691, 27693; Cat. of the Library of the Royal Coll. of Music; Chester's Westminster Abbey Registers.] W. B. S.

COOKE, EDWARD (*fl.* 1678), dramatic poet, was the author of 'Love's Triumph, or the Royal Union,' a tragedy, never represented on the stage, in five acts and in verse, Lond. 1678, 4to, with a dedication to the Princess of Orange. Probably he is the same person who translated 'The Divine Epicurus, or the Empire of Pleasure over the Vertues. Compos'd by that most renown'd philosopher, Mr. A. Le Grand,' Lond. 1676.

Another Edward Cooke wrote the poem 'Bartas Junior; or the World's Epitome: Man, set forth in his, 1. Generation, 2 Degeneration, 3. Regeneration,' Lond. 1631, 8vo. 'It is almost 12 yeares since I finished this subject (says the author), and now, by the importunity of a learned friend, divulged.'

Langbaine's Dramatic Poets, p. 25; Addit. MS. 24492, f. 128 *b*; Baker's Biog. Dram. (1812), i. 147, ii. 397.] T. C.

COOKE, EDWARD (1772–1799), captain in the royal navy, born 14 April, 1772, was son of Colonel Cooke of Harefield, and brother of General Sir George Cooke, who commanded the first division and lost his right arm at Waterloo; also of Major-Gen. Sir Henry Frederick Cooke, private secretary to the Duke of York. His mother, Penelope, daughter of Sir William Bowyer and sister of Admiral Sir George Bowyer [q.v.], after Colonel Cooke's death married General Edward Smith, uncle of Admiral Sir W. Sidney Smith. Cooke was made lieutenant on 14 Sept. 1790, and in 1793 was appointed to the Victory, going out to the Mediterranean as Lord Hood's flagship. In August he was entrusted with the negotiations with the royalist inhabitants of Toulon, a service which he conducted with equal skill and boldness (James, *Nav. Hist.*, 1860, i. 75), and which resulted in Lord Hood's obtaining possession of the town and arsenal. Cooke was then appointed lieutenant-governor of the town, Captain Elphinstone (afterwards Lord Keith) being governor. He continued in this post till the evacuation of Toulon in the end of December. His services were rewarded by promotion, and on 12 April 1794 he was advanced to the rank of post captain. In June he had charge of the landing for the siege of Calvi, and took an active part in the subsequent operations, his zeal drawing forth the warm encomiums of Nelson, under whose immediate orders he was serving (*Nelson Despatches*, i. 409, 410, 413, 416, 476). In the following year he was appointed to the Sibylle, a fine 40-gun 18-pounder frigate, recently captured from the French, and in her went out to the Cape of Good Hope, whence he was sent on to the East Indies. Towards the end of 1797 he was at Macao, and sailed on 5 Jan. 1798 in company with Captain Malcolm of the Fox, designing to reconnoitre the Spanish force in the Philippines and, if

possible, to capture two richly laden ships reported as ready to sail from Manila. As they neared the islands it occurred to Cooke that they might pass themselves off as French. The Sibylle, a French-built ship, was easily disguised, and he himself spoke French fluently, an officer of the Fox spoke French and Spanish, and a little paint enabled both frigates to pass muster. On 14 Jan. they were off Manila. No suspicion was excited, the guardboats came alongside, the officers were taken down to the cabin and hospitably entertained, while in the foremost part of the ship the Spanish seamen were stripped, and English sailors dressed in their clothes were sent away in the guardboats to capture what they could. They thus took entirely by surprise and brought off three large gunboats. By the time the townsmen and the garrison realised that the two frigates were English, Cooke and Malcolm, in friendly talk with the Spanish officers, had learned all that there was to learn. They then sent them on shore as well as all the prisoners, to the number of two hundred, and, with the three gunboats in tow, stood out of the bay (James, ii. 237). The carrying off the gunboats under cover of a false flag was a transgression of the recognised rules of naval war; but they seem to have considered the thing almost in the light of a practical joke, and the Spaniards, who had been liberally entertained, bore no grudge against their captors.

In February 1799 the Sibylle was lying at Madras when Cooke learned that the French frigate Forte was in the Bay of Bengal, and on the 19th he put to sea in quest of her. On the evening of the 28th the Sibylle was off the Sand-heads; about nine o'clock she made out three ships, which she understood to be the Forte and two Indiamen just captured. The Forte supposed that the Sibylle was another country ship, and, as she came within hail, fired a gun and ordered her to strike. The Sibylle closed at once, and, with her main yard between the enemy's main and mizen masts, poured in a broadside and shower of musketry with deadly effect. The Forte was, in a measure, taken by surprise; the terrible broadside was the first intimation that she had to do with the largest English frigate on the station. For nearly an hour the two ships lay broadside to broadside at a distance seldom greater than pistol shot. About half-past one Cooke's shoulder and breast were shattered by grape shot, but the action was stoutly maintained by Mr. Lucius Hardyman, the first lieutenant. At half-past two the Forte, being entirely dismasted, and having lost a hundred and fifty men killed and wounded, struck her colours. She was at the time the largest and most heavily armed frigate afloat; was about one-third larger than the Sibylle, and carried 24-pounders on her main deck, as against the Sibylle's 18-pounders. And yet the Sibylle's loss was comparatively slight. The darkness of the night, which rendered still more marked the very superior discipline and training of the Sibylle's men, must be held to account for the extraordinary result of this, one of the most brilliant frigate actions on record. Lieutenant Hardyman was immediately promoted to be commander, and, in January 1800, to be captain of the Forte. But Cooke's terrible wounds proved mortal. After lingering for some months in extreme agony he died at Calcutta on 25 May. He was buried with the highest military honours, and a monument erected to his memory by the directors of the East India Company.

[James's Naval History (1860), ii. 365; Naval Chronicle, ii. 261, 378, 643.] J. K. L.

COOKE, EDWARD (1755–1820), under-secretary of state, born 1755, was the third son of Dr. William Cooke, provost of King's College, Cambridge [q. v.] He was educated at Eton and King's College, Cambridge; B.A. 1777, M.A. 1785. About 1778 he went to Ireland as private secretary to Sir Richard Heron, chief secretary to the lord-lieutenant; and in 1786 he was appointed second clerk to the Irish House of Commons. In 1789 he was nominated under-secretary to the military department, and was M.P. for Lifford 1789–90 and for old Leighlin borough from 1790 till the union in 1801. In 1795 he was removed from office by Lord Fitzwilliam, with whose policy he did not sympathise, and to whom, moreover, he proved personally objectionable. He was offered a pension, which, according to Fitzwilliam, he rejected, thinking 'a retreat upon 1,200*l.* a year an inadequate recompense for the magnitude and importance of his services' (*A Letter from Earl Fitzwilliam to the Earl of Carlisle*, 1795). There are conflicting statements as to the value of the compensation, which it appears took account of services only, and not of Cooke's losses in being 'removed from a station of much advantage and opportunity' (*Observations on the Letters of Lord Fitz — m to Lord Carlisle*, 1795; *A Letter to a Venerated Nobleman lately retired from this Kingdom*, Dublin, 1795; *Memoirs of the Court and Cabinet of George III*, 1853, ii. 331). This dismissal was among the causes that led to Fitzwilliam's recall. Cooke was reinstated by Lord Camden, and in 1796 he was appointed under-secretary in the civil department. He was

thus brought into intimate relations with Lord Castlereagh, the chief secretary, an association which was maintained and strengthened in later years.

In 1798 he published, anonymously, 'Arguments for and against an Union between Great Britain and Ireland considered.' This pamphlet, which was taken to represent views held in higher quarters, called forth many replies. It is a temperate examination of the problem, resting the case for the union on grounds conciliatory to all classes of the Irish people. Large concessions to the Roman catholics are foreshadowed as the natural sequel to a measure which, in other ways, the writer did much to forward. He was the intermediary in most of the transactions, questionable and otherwise, by which legislative support was obtained for the Union Act. Sir Jonah Barrington describes a scene in which, aided by Castlereagh, he bought over in the face of the Irish House of Commons a member who had previously declared against the project, and who pronounced his retractation on the spot (*Rise and Fall of the Irish Nation*, p. 405). Cooke was sent to London to confer with Pitt and others on the question, and his reports to Castlereagh are important documents in the history of the negotiations. On the passing of the act he shared the disappointment of the statesmen responsible for the Irish government caused by the refusal of the concessions promised to the Roman catholics, and in spite of pressure he resigned his appointment. 'I could not embark in an administration founded upon one principle alone, which principle, after mature consideration, I think dangerous and untenable' (*Castlereagh Correspondence*, iv. 28–9). A letter addressed by him to the lord chancellor of Ireland in vindication of the Roman catholic claims is a noteworthy illustration of political sagacity and prevision (*ib.* iv. 41).

Cooke's administrative ability and great knowledge of Irish affairs are attested by many evidences. His influence was not that of a subordinate official, he was felt as a governing power. Fitzwilliam complained that while in Carlisle's time Cooke was a clerk he found him a minister. A later lord-lieutenant, Cornwallis, recognised that he was a man to be reckoned with, and described him as of an unaccommodating temper, and 'much more partial to the old system of government than to the measures I have introduced' (*Cornwallis Correspondence*, iii. 310). This opinion was subsequently modified, and it is clear that Cooke's views on Irish administration were marked by growing liberality (*ib.* iii. 315). Between Cooke and Castlereagh the understanding was complete, and for many years they exchanged views on public affairs on a footing of practical equality. Returning to England, Cooke served as under-secretary for war and the colonies 1804–06 under Lord Camden and 1807–09 under Lord Castlereagh, and under-secretary for foreign affairs 1812–17, again under Castlereagh. He retired from official service in 1817, and died in Park Lane, London, 19 March 1820.

[Gent. Mag. April 1820; Nichols's Lit. Anecd. ix. 630; Coote's History of the Union, 1802; Plowden's Historical Review of the State of Ireland; Sir Jonah Barrington's Rise and Fall of the Irish Nation, Paris, 1833; Brit. Mus. Cat.; authorities cited in text.]

J. M. S.

COOKE, EDWARD WILLIAM (1811–1880), marine painter, son of George Cooke [q.v.], the line engraver, was born at Pentonville, London, 27 March 1811. At an early age he exercised his love for art by copying animals engraved in Barr's edition of Buffon and Bewick's woodcuts. When he was nine years of age he was employed, although at school at Woodford, in drawing upon wood plants from nature, in the nursery grounds of Loddidge's, at Hackney, to illustrate John Loudon's 'Encyclopædia of Plants.' These were soon followed by others, afterwards published in the 'Botanical Cabinet' by Loddidge, whose daughter Cooke married. About 1825 he made the acquaintance of Clarkson Stanfield, R.A., and made sketches of boats, anchors, &c., after him. In order to increase his acquaintance with ships, he studied under Captain Burton of the Thetis. He now tried oil-painting, and in 1825 produced the sign of the 'Old Ship Hotel' at Brighton. He then began to study architecture under Augustus Pugin, but soon gave this up for the study of boats, and etched two series of plates entitled 'Coast Sketches' and 'The British Coast.' In 1826, Cooke was sketching about Cromer. In this year he painted a 'View of Broadstairs'—his first picture—purchased by Mr. James Wodmore, a well-known collector, and at whose sale it realised 78*l.* Several other pictures followed, among which were 'The Isis at Oxford' and 'The Isle of Wight Coast.' Between 1825 and 1831, when the new London Bridge was being constructed, Cooke made seventy drawings of the operations, most of which were engraved and published, with scientific and historical notices of the two bridges, from information contributed by George Rennie (Lond. fol. 1833). About this period he made numerous drawings for Mr. Edward Hawkins of the British Museum, illustrating the various aspects of the Egyptian galleries while the antiquities

were being removed from the old to the new building. In 1830 Cooke went to Normandy, Havre, Rouen, &c., and in 1832 he executed a series of pencil drawings for Earl de Grey. Between 1832 and 1844 he travelled in Belgium, Holland (which he visited sixteen times), France, Scotland, Ireland, and other places. The years 1845 and 1846 he spent in Italy, and subsequently visited Spain, Morocco, Barbary, Germany, Denmark, and Sweden. He was elected an associate of the Royal Academy in 1851, and a full member in 1864. Cooke became a widower early in life, and died at his residence, Glen Andred, Groombridge, near Tunbridge Wells, on 4 Jan. 1880, leaving several sons and daughters. He was a member of various learned and scientific societies, the Alpine Club, honorary associate of the Institute of British Architects, of the Royal Academy of Stockholm, and of the Accademia delle Belle Arti, Venice. He exhibited altogether two hundred and forty-seven pictures; i.e. one hundred and twenty-nine at the Royal Academy, one hundred and fifteen at the British Institution, and three in Suffolk Street. There are by him two pictures in the National Gallery, 'Dutch Boats in Calm,' engraved by I. Jeavons, and 'The Boat-house,' engraved by S. Bradshaw. Among his many works may be mentioned: 'Brighton Sands,' 'Portsmouth Harbour,' 'The Hulks,' 'The Victory,' 'Mount St. Michael,' 'Hastings,' 'The Antiquary Cells,' &c., all in the Sheepshanks collection, South Kensington Museum. To these should be added: 'H.M.S. Terror in the Ice of Frozen Strait,' April 1837; 'French Lugger running into Calais Harbour;' 'The Dogana and Church of Santa Maria della Salute,' Venice; and finally, the 'Goodwin Lightship—Morning after a Gale,' exhibited at the Royal Academy in 1857, and much praised by Mr. Ruskin. In the department of prints and drawings, British Museum, there are two drawings by this master: 'Zuider Zee Fishing-boat,' and 'A Fisherman, with a stag on the opposite bank,' and a collection of his engraved and etched works. Sales of his remaining works, &c., took place at Christie & Manson's, 22 May 1880, and 11 March 1882.

[Art Journal, 1869, p. 253; manuscript notes in the British Museum.] L. F.

COOKE, GEORGE (1781–1834), line engraver, was born in London on 22 Jan. 1781. His father was a native of Frankfort-on-the-Main, who in early life settled in England and became a wholesale confectioner. At the age of fourteen George Cooke was apprenticed to James Basire (1730–1802) [q. v.] About the time of the expiration of his indentures was commenced the publication of Brewer's 'Beauties of England and Wales,' and for that work he executed many plates, some of them in conjunction with his elder brother, William Bernard Cooke. He was afterwards engaged upon the plates for Pinkerton's 'Collection of Voyages and Travels,' during the progress of which his brother William projected the first edition of 'The Thames,' to which George Cooke contributed two plates. This work was followed by 'Picturesque Views on the Southern Coast of England,' from drawings made principally by Turner. It was commenced in 1814 and completed in 1826, and for it George Cooke engraved fifteen plates —nearly one-third of the whole—and some vignettes. Next appeared an improved edition of 'The Thames,' for which he engraved the 'Launch of the Nelson' and the 'Fair on the Thames,' after Luke Clennell, and the 'Opening of Waterloo Bridge,' after Reinagle. Between 1817 and 1833 he produced, in connection with Messrs. Loddiges of Hackney, a number of plates for the 'Botanical Cabinet,' and about the same time he engraved some of the plates after Turner for Hakewill's 'Picturesque Tour of Italy,' 1820, and Sir Walter Scott's 'Provincial Antiquities and Picturesque Scenery of Scotland,' 1826, in which latter work should be especially noted 'Edinburgh from the Calton Hill.' To these were added plates for Allason's 'Antiquities of Pola,' 1819, Stanhope's 'Olympia,' 1824, and D'Oyly and Mant's 'Bible,' as well as some of those for 'Views in the South of France, chiefly on the Rhone,' after De Wint. Besides these he engraved a few plates for the publications of the Dilettanti Society, and for the 'Ancient Marbles in the British Museum,' and the 'Ancient Terracottas' in the same collection, and single plates after Turner of a 'View of Gledhow' for Whitaker's 'Loidis and Elmete,' and 'Wentworth House' for Whitaker's 'History of Richmondshire.' He also engraved the 'Iron Bridge at Sunderland,' from an outline by Blore, for Surtees's 'History of Durham,' and the 'Monument of Sir Francis Bacon' in St. Michael's Church at St. Albans for Clutterbuck's 'History of Hertfordshire.' In 1825 he finished his fine engraving of 'Rotterdam,' from Sir A. W. Callcott's picture belonging to the Earl of Essex, and shortly afterwards he issued a prospectus announcing a series of plates from Callcott's works, of which two, 'Antwerp' and 'Dover,' were begun and considerably advanced when vexation at the loss of the proceeds of his 'Rotterdam,' caused by the failure of his agent, led to their abandonment. He then began in 1826 the 'Views in London and its Vicinity,' engraved from drawings by Callcott,

Stanfield, Roberts, Prout, Stark, Harding Cotman, and Havell, and this, the favourite object of his life, ended with the twelfth number just before his death. Meanwhile in 1833 he produced 'Views of the Old and New London Bridges,' executed conjointly with his son, Edward William Cooke [q. v.], who also made the drawings. He also produced plates for Nash's 'Views in Paris,' Colonel Batty's 'Views of European Cities,' Baron Taylor's 'Spain,' Rhodes's 'Peak Scenery' and 'Yorkshire Scenery,' several for Stark's 'Scenery of the Rivers of Norfolk,' and one of 'Southampton,' after Copley Fielding, for the 'Gallery of the Society of Painters in Water Colours.'

Cooke was one of the original members of the Society of Associated Engravers, who joined together for the purpose of engraving the pictures in the National Gallery, and two plates from his hand were in a forward state at the time of his death. He likewise attempted engraving in mezzotint, and in that style executed a plate of 'Arundel Castle,' after Turner; but it was not a success, and was never published. He died of brain fever 27 Feb. 1834 at Barnes, where he was buried.

[Gent. Mag. 1834, i. 658–61; Athenæum, 8 March 1834; Redgrave's Dict. of Artists of the English School, 1878.] R. E. G.

COOKE, GEORGE (1807–1863), actor, was born in Manchester on 7 March 1807. After performing Othello in amateur theatricals, he quitted the mercantile firm of Hoyle & Co., with which he had been placed, and began in March 1828 his professional career at Walsall. Under Chamberlayne, the manager of the Walsall Theatre, he remained eighteen months, playing in Coventry, Lichfield, and Leamington. He then joined other managements; played at Margate, at Doncaster, September 1832, where he was a success, and appeared in Edinburgh on 16 Oct. 1835 as Old Crumbs in the 'Rent Day.' In 1837 he appeared at the Strand, then under the management of W. J. Hammond, playing on 10 July 1837 Mr. Wardle in Moncrieff's adaptation, 'Sam Weller, or the Pickwickians.' He accompanied Hammond to Drury Lane in October 1839 in his disastrous season at that theatre. Cooke married in 1840 Miss Eliza Stuart, sister of the well-known actor. After playing engagements at Liverpool, Manchester, and Birmingham, he appeared at the Marylebone in 1847, when that theatre was under the management of Mrs. Warner. Here he played the Old Shepherd in the 'Winter's Tale,' Sir Oliver Surface, Colonel Damas, and Major Oakley. Previous to his death, which was by suicide, 4 March 1863, he was playing secondary characters at the Olympic.

[Theatrical Times, 1847–8; Era and Sunday Times newspapers; Literary Gazette.] J. K.

COOKE, GEORGE FREDERICK (1756–1811), actor, was born, according to an account supplied by himself, in Westminster 17 April 1756. Soon after his birth he lost his father, who was in the army, and went with his mother, whose name was Renton, to live in Berwick, where he was educated. Here, after her death, he resided with her two sisters, by whom he was bound apprentice to John Taylor, a Berwick printer. While still a schoolboy he conceived from the performances of travelling companies a strong fancy for the stage, and took part with his fellows in rough and unpretending performances. In 1771 he went to London and afterwards to Holland, probably as a sailor or cabin boy, returning to Berwick in 1772. His first appearance as an actor was in Brentford in the spring of 1776, when he played Dumont in 'Jane Shore.' In 1777 he joined in Hastings a company under a manager named Standen. In the spring of the following year he played in London at the Haymarket, which, out of the season, was opened for a benefit, appearing as Castalio in the 'Orphan.' Between this period and 1779, when he joined Fisher's company at Sudbury in Suffolk, Cooke was seen at the Haymarket during the off-season in more than one character, but failed to attract any attention. After performing in many midland towns he appeared, 2 Jan. 1784, in Manchester as Philotas in the 'Grecian Daughter' of Murphy. In Manchester he stood in high favour, and he met with favourable recognition in Liverpool, Newcastle-on-Tyne, York, and other northern towns. While still young he fell into habits of drinking. After living for some months in sobriety he would disappear to hide himself in the lowest haunts of dissipation or infamy. In Newcastle the admiration for Cooke, according to the rather reluctant testimony of Tate Wilkinson, his manager, amounted to frenzy (*Wandering Patentee*, iii. 23). On his first appearance in York, 29 July 1786, he played Count Baldwin in 'Isabella,' Garrick's alteration of Southerne's 'Fatal Marriage,' to the Isabella of Mrs. Siddons. During the years immediately following Cooke played with various country companies, studying hard when sober, acquiring much experience, and obtaining a reputation as a brilliant and, except in one respect, a trustworthy actor. On 19 Nov. 1794 Cooke made his appearance at Dublin in 'Othello.' He sprang at once to the

front rank in public estimation, and was received in a round of characters of importance with augmenting favour. In March 1795 he quitted the theatre on some frivolous excuse, the real cause being drunkenness. Various mad proceedings in 1766 culminated in his enlisting in a regiment destined for the West Indies. Prevented by sickness from embarking, he spoke, in Portsmouth where he was quartered, to Maxwell, the manager of the theatre. Through the agency of Banks and Ward, his former managers in Manchester, his discharge was bought, and after many relapses, which almost cost him his life, he reappeared in Manchester. While at Chester in 1796 he married Miss Alicia Daniels of the Chester Theatre. Shortly afterwards Mrs. Cooke, who had been engaged in Dublin where Cooke reopened as Iago 20 Nov. 1796, quitted her husband and her engagement. On 4 July 1801 Mrs. Cooke appeared before Sir William Scott in Doctors' Commons to dispute the validity of the marriage, which was pronounced 'null and void.' In Dublin as elsewhere Cooke was in difficulties with debt. His extravagance was so reckless that after in a drunken fit challenging a working man, according to one account a soldier, who, unwilling to hurt him, declined to fight a rich man, he thrust his pocket-book with bank notes to the extent of some hundreds of pounds into the fire, and, declaring he now owned nothing in the world, renewed the invitation to combat. After playing in Cork and Limerick he returned to Dublin. In June 1800 he accepted from Lewis, acting for Thomas Harris, an engagement for Covent Garden. What was practically his first appearance in London took place 31 Oct. 1801 as Richard III. His success was brilliant, though such limitations in his art as want of dignity, and indeed of most humanising traits, were even then noted. Shylock followed, 10 Nov.; Sir Archy McSarcasm in 'Love à la Mode,' 13 Nov.; Iago, 28 Nov.; Macbeth, 5 Dec.; Kitely in 'Every Man in his Humour,' 17 Dec.; the Stranger, for his benefit, 27 Dec.; and for the benefit of Lewis, Sir Giles Overreach, 28 March 1801. During the season he behaved with commendable discretion, and Harris, the manager of Covent Garden, presented him on the occasion of his benefit with the charge (136*l.*) ordinarily made in the case of benefits for expenses. He acted sixty-six times in all, twenty-two of his representations being of Richard III. It was different upon his return. With characteristic recklessness and improvidence he put in no appearance on 14 Sept. 1802, when Covent Garden was announced to open with him as Richard. That night he was playing in Newcastle-on-Tyne. He did not arrive until 19 Oct. 1802, when he played Richard. Public disappointment was the greater, as Kemble, accepting the challenge involved in his appearance in Richard III, had, contrary to theatrical etiquette, announced that play as the opening piece at Drury Lane after it had been advertised for Covent Garden. An apology, which was far from satisfactory, was spoken by Cooke and accepted by the audience. The spell was, however, broken, and worse was behind. On 11 May 1802 he was, for the first time in London, too drunk to continue the performance. Between this period and 1810, when he quitted London, Cooke played among Shakespearean characters: Jaques, King Lear, Falstaff in 'Henry IV,' pts. i. and ii., and in 'Merry Wives of Windsor,' Hamlet, King John, Hubert in 'King John,' Macduff, Ghost in 'Hamlet,' Kent in 'Lear,' Henry VIII, besides principal characters in the tragedies of Otway, Addison, and others, and in the comedies of Sheridan, Colman, and Macklin. His great characters were Sir Pertinax McSycophant, Iago, Richard III, Sir Giles Overreach, Shylock, and Sir Archy McSarcasm, everything indeed in which greed, fierceness, and hypocrisy can be shown. Leigh Hunt disputes on this ground his claim to be a tragedian, saying that much even of his Richard III 'is occupied by the display of a confident dissimulation, which is something very different from the dignity of tragedy' (*Critical Essays*, p. 217). To his Sir Pertinax McSycophant Leigh Hunt gives very high praise. An opinion quoted by Genest (*Account of the Stage*, viii. 197) as that of a very judicious critic is that 'Cooke did not play many parts well, but that he played those which he did play well better than anybody else.' Sir Walter Scott speaks warmly of Cooke's Richard, giving it the preference over that of Kemble. His Hamlet, 27 Sept. 1802, was a failure, and was only once repeated. George III said, when he heard Cooke was going to play Hamlet: 'Won't do, won't do. Lord Thurlow might as well play Hamlet' (*Life and Times of Frederick Reynolds*, 1826, ii. 322). In 1803, while playing in 'Love à la Mode,' Cooke was hissed off the stage for drunkenness, and the curtain was dropped. For this offence on his next appearance he made an apology, which was accepted. The ice once broken his offences became more frequent, and the magazines of the early portion of the nineteenth century which deal with theatrical subjects are occupied with constant stories of his misdeeds. His apologies and references to his old complaint were in time received with 'shouts of laughter.' In 1808 Cooke married a Miss Lamb of Newark. After the destruction by fire of Covent Gar-

den Theatre, 20 Sept. 1808, he went with the Covent Garden Company, 26 Oct. 1808, to the King's Theatre in the Haymarket, and 3 Dec. to the Haymarket. He attempted to act during the period of the O.P. Riots, commencing September 1809. On 5 June as Falstaff in 'Henry IV, Part I.,' he played for the last time in London. In Liverpool, whither he proceeded, he met Thomas Cooper, known as the American Roscius, who offered him an engagement for America of 12,000 dollars and three benefits for forty nights, with the option of renewing the engagement annually for three years. This Cooke accepted. So besotted, however, was his condition, and so under the control was he of men who preyed upon him, that he had to be smuggled away in a manner that belongs rather to a romantic abduction of a heroine than a transaction with a man of fifty-four years. Many accusations, apparently unjust, of having inveigled away Cooke while drunk were brought against Cooper. Cooke embarked at Liverpool 4 Oct. 1810 on board the Columbia. The vessel was almost unprovided with stimulants. What was on board was soon drunk, and Cooke, after a considerable period of enforced abstinence, arrived in New York, 16 Nov. 1810, in better condition than he had been for years. His first appearance in New York took place 21 Nov. 1810 as Richard. The house was crowded to the roof, and his reception was triumphant. His successive performances were enthusiastically followed. He had lost, however, the habit of self-restraint, and on his third appearance he was intoxicated. He visited the principal American cities of the north, an object of mingled admiration and pity, obtaining in his cups indulgence for the most distressing acts of insolence. On 19 July he married his third wife, Mrs. Behn, who remained with him until his death, which took place in New York, in the Mechanic Hall, 26 Sept. 1811, of dropsy, resulting from his irregular life. He acted for the last time in Providence, Rhode Island. On 27 Sept. 1811 his body was placed, in the presence of a large assemblage, in the burying-ground of St. Paul's Church. Upon his visit to America, 1820–1, Kean, who regarded Cooke as the greatest of actors, had the body removed to another spot in the same cemetery and reburied, erecting a monument in honour of Cooke's genius. During the transmission he abstracted one of the toe bones, which he kept as a relic, compelling all visitors to worship it until Mrs. Kean, in disgust, threw it away (see *Life of Kean*, by Bryan Waller Proctor, 1835, ii. 196 et seq.) Cooke had a fine person, though his arms were short, a noble presence, and an intelligent and animated face. His voice was grating, and he had a habit of pitching it high. His position is in the highest rank of his art. He left behind him a diary, which is very fragmentary, and deals principally with his opinions on literary, dramatic, or political subjects. Abundant extracts from this are included in the 'Memoirs of Cooke,' by Dunlap, 2 vols. 8vo, 1813. Portions of it were written while in confinement for debt. Its recommencement is always a sign of attempted reformation. In his drunken moments Cooke boasted of having been the son of an officer, born in Dublin barracks, and having himself served as an ensign in the American war. He pointed out in America the scenes of his own exploits. He also claimed to have been a midshipman. There is more than one hiatus in his life, and it is possible he was a soldier and probable he was a cabin boy. Shortly before his death he stated gravely that he was born in Westminster. The information he supplies is to be received with little credit. Though very quarrelsome, Cooke was burdened with no superfluous courage. Many stories are told of his manner of addressing the public. One which has been frequently repeated, to the effect that when speaking to the Liverpool public which had hissed him he told them there was not a brick in their houses that was not cemented by the blood of a slave, is not too trustworthy. If ever delivered the speech appears at least not to have been impromptu. Cooke, who commenced in London as a rival to Kemble, acted with him and Mrs. Siddons from the season 1803-4 to the end of his London performances. He created at Covent Garden a few original characters, Orsino in 'Monk' Lewis's 'Alfonso,' 15 Jan. 1802; a character unnamed in 'Word of Honour,' attributed to Skeffington, 26 May 1802; Peregrine in the younger Colman's 'John Bull,' 5 March 1803; Sandy MacTab in 'Three per Cents.,' by Reynolds 12 Nov. 1803; a character in Holman's 'Love gives the Alarm,' 23 Feb. 1804; Lord Avondale in Morton's 'School of Reform,' 15 Jan. 1805; Lavensforth in 'To Marry or Not to Marry,' by Mrs. Inchbald, 16 Feb. 1805; Prince of Altenberg in Dimond's 'Adrian and Orrila,' 15 Nov. 1806; and Colonel Vortex in 'Match-making,' ascribed to Mrs. C. Kemble, 24 May 1808. No less than seven portraits of Cooke by different artists are in the Garrick Club. Five of them are in characters.

COOKE, GEORGE LEIGH (1780?-1853), Sedleian professor of natural philosophy in the university of Oxford, son of the Rev. Samuel Cooke, rector of Great Bookham, Surrey, was born about 1780. He entered the university of Oxford in 1797 as a commoner of Balliol College, and was elected the same year a scholar of Corpus Christi, of which he afterwards became fellow and tutor. He graduated B.A. 6 Nov. 1800, M.A. 9 March 1804, and B.D. 12 June 1812. In 1810 he was elected Sedleian professor of natural philosophy. From 1818 to 1826 he was keeper of the archives of the university. He also held the office of public preacher, and was several times public examiner. He was presented to the rectory of Cubbington, Warwickshire, in 1824, and to Wick Risington, Gloucestershire, and Hunningham, Warwickshire, in the same year. He died 29 March 1853. He published in 1850 'The first three sections and part of the seventh section of Newton's "Principia," with a preface recommending a Geometrical course of Mathematical Reading, and an Introduction on the Atomic Constitution of Matter and the Laws of Motion.'

[Gent. Mag. new ser. (1853), vol. xl. pt. ii. p. 94.]

COOKE, GEORGE WINGROVE (1814-1865), man of letters, eldest son of T. H. Cooke of Bristol, a Devonshire man by descent, was born at Bristol in 1814. He received an early training in legal studies under Mr. Amos at London University, and was called to the bar of the Middle Temple in January 1835. He was at the same time completing his classical education at Jesus College, Oxford, where he took his degree of B.A. in 1834. His life was from first to last marked by severe toil. Even while an undergraduate he compiled his 'Memoirs of Lord Bolingbroke,' which was published in 1835, and reissued, when 'revised and corrected by the author,' in 1836. It was cleverly written, but the circumstances under which it was produced were not favourable to the research which the subject demanded, and a life of Bolingbroke is still a desideratum in the English language. Cooke's work being the evident composition of a whig was vehemently denounced by Croker in the pages of the 'Quarterly Review,' and was defended with equal earnestness by its political rivals. Emboldened by the success of this labour he plunged deeper into the history of the last two centuries, and composed a 'History of Party from the Rise of the Whig and Tory factions to the passing of the Reform Bill' (1836-7), which is still worthy of being consulted by the political student, and arranged and edited from the materials collected by Kippis, Martyn, and others, a 'Life of the first Earl Shaftesbury.' For many years after Cooke's settlement in London he was largely employed under the tithe commutation commission in defining the principles and supervising the mechanism for the composition of tithes, and under that kindred body the enclosure commission. These years were marked by the preparation and publication of a number of legal treatises. The first was entitled 'Criminal Trials in England; their Defects and Remedies,' and then followed, 2. 'A Treatise on Law of Defamation,' 1844. 3. 'Act for the Enclosure of Commons. With a Treatise on the Law of Rights of Commons,' 1846, the fourth edition of which appeared in 1864. 4. 'Letter to Lord Denman on the Enactments conferring Jurisdiction upon Commissions to try Legal Rights,' 1849. 5. 'Treatise on the Law and Practice of Agricultural Tenancies,' 1850, new edition in 1882. 6. 'Treatise on the Law and Practice of Copyhold Enfranchisement,' 1853, which was frequently reissued in later years. 7. 'The Law of Hustings and Poll Booths,' 1857. These were the products of his busier hours, but he turned even his holidays to advantage by publishing the narratives of his long vacation rambles. Most of these appeared without his name, but in 1855 he visited the Crimea, and on his return to his own country vividly described what he had seen in a volume entitled 'Inside Sebastopol,' 1856. The managers of the 'Times' newspaper, to which he had long been a frequent contributor, despatched him to China as the special correspondent on the outbreak of the Chinese war in 1857, and his letters to that paper, narrating the progress of the English expedition and the details of life among the Chinese, were incorporated in a volume in 1858. It enjoyed great popularity, and passed through numerous editions, the fifth appearing in 1861. One of his holiday travels took him to Algiers, where he inquired into the intentions of the French, and speculated as to their prospects of colonisation. The results of his investigations appeared in a series of elaborate and instructive letters in the 'Times,' which were in 1860 collected and published under the title of 'Conquest and Colonisation in North Africa.' Cooke was anxious to figure in parliamentary life, but his efforts to enter St. Stephen's were unsuccessful. He stood for Colchester in the liberal interest in 1850, and for Marylebone in 1861, but in neither case was he successful. His labours under the copyhold commission were re-

warded in 1862 by his appointment, without any solicitation on his own part, to a commissionership in that department, and the choice was supported by public opinion and justified by success. He attended to his duties with unremitting zeal, but his protracted exertions had told upon his constitution. On 17 June 1865 he was unable to proceed to his office, and on the morning of 18 June he died from heart disease at his house in Cheyne Walk, Chelsea. Cooke was a facile composer, rarely correcting or retouching what he had written, and the illustrations which he wove into his narrative were often extremely happy. He possessed many gifts, and among them that of inexhaustible energy.

[Times, 20 June 1865, p. 7; Men of the Time, 1862; Gent. Mag. August 1865, p. 256.]

W. P. C.

COOKE, HENRY (*d.* 1672), musician and royalist captain, was educated as a chorister in the Chapel Royal in the reign of Charles I. On the outbreak of the civil war he sided with the royalists, serving in the army in 1642, 'and through inferior offices he became a captain' (Wood, *Bodl. MSS.* 19 D. (4), No. 106). Later under the Commonwealth he seems to have settled in London as a teacher of music; for on 28 Nov. 1655 Evelyn records that during a visit to London there came to visit him 'one Captain Cooke, esteemed the best singer, after the Italian manner, of any in England; he entertained us with his voice and theorbo.' A similar visit is chronicled on 2 Oct. 1656. In the latter year Cooke took part in Sir William Davenant's operatic performances. In collaboration with Dr. Coleman, Lawes, and Hudson, he wrote the music for the 'First Dayes Entertainment at Rutland House,' which took place, according to a contemporary account (*State Papers*, Dom. Series, 1655–6, cxxviii. No. 108), on 23 May 1656, and does not seem to have been very successful, as, though there was room for four hundred admissions at 5*s.* a head, only a hundred and fifty came. In the 'Siege of Rhodes,' which followed the entertainment, Cooke not only played one of the principal characters, that of Solyman, but also composed the music of the second and third acts of the opera [see Coleman, Charles]. On the Restoration, Cooke was appointed master of the children of the Chapel Royal, with a salary of 40*l.* The warrant granting him this post is dated January 1660–1, but he seems to have been already entrusted with the task of reorganising the chapel, for Pepys, on a visit to Whitehall Chapel in August of the previous year, chronicles: 'After sermon a brave anthem of Captain Cooke's, which he himself sung, and the king was well pleased with it;' and again on 7 Oct.: 'A poor dry sermon, but a very good anthem of Captain Cooke's afterwards.' At the coronation of Charles II (23 April 1661) Cooke wrote all the special music performed in Westminster Abbey. In the State Papers for the same year his name is of frequent occurrence. He obtained a grant of 16*l.* 2*s.* 6*d.* for livery, on 25 July another yearly sum of 40*l.* was granted him for the maintenance and instruction of two choristers, and on 14 Oct. the former payment of 15*l.* 4*s.* 2*d.* per boy which he received as master of the children was increased to 30*l.* In 1662 he obtained another augmentation of 30*l.*, and, according to an entry in the Chapel Royal Cheque Book, a third one of the like amount in 1663, but all these entries are somewhat obscure, and probably some of them refer to the same sum. In 1663 his name occurs in the list of the king's musicians in ordinary, and in May 1664 he was appointed 'composer in his majesty's private musick for voyces,' with a salary of 40*l.* At the festival of the knights of the Garter (17 April 1661) a hymn specially composed by Cooke was performed instead of the litany; he also acted as steward at the feast of the gentlemen of the chapel in 1662. On 28 Oct. of the latter year he became an assistant of the Corporation of Musicians, and in the same year appears to have acted as deputy marshal to Nicholas Laniere. On 31 May 1664 Cooke, with Hudson, Hingeston, and John Lilly, were deputed by the corporation to 'meete fower of the musique of the cittie of London to treat upon such matters and things as concerne the good of the said corporation,' and on 21 Jan. 1670 he succeeded Laniere as marshal, a post he held until 24 June 1672, when he requested the corporation to choose a successor, 'he being by reason of sicknesse unable to attend the buysinesse of the said corporation.' He died shortly after, and was buried on 17 July 1672, in the east cloister of Westminster Abbey, near the steps. According to Wood, Cooke 'was esteemed the best of his time to singe to the lute till Pelham Humphrey came up, and then, as 'tis said, the captaine died in discontent and with grief.' This story is probably mere idle gossip, though Cooke, great artist though he must have been, seems to have been a vain and conceited man. But on the other hand it is certain that Humfrey on his return from France made no secret of his contempt for English music and musicians, and the favour which Charles showed the vain young composer was probably galling to his old master. Cooke's merits as a teacher must have been very great, for he taught

nearly all the composers who were the glory of the English school of the Restoration. Blow, Wise, Humfrey, and Purcell were all his pupils, and it must have been from him that they learnt the solid traditions of the Elizabethan school which form the real foundation of their peculiar merits. The notices in Pepys's diary of Cooke are numerous and amusing, but it is sometimes difficult to distinguish him from a Captain Cocke. On 16 Sept. 1662 Pepys at Whitehall 'heard Captain Cooke's new musique. . . and very fine it is. But yet I could discern Captain Cooke to overdo his part at singing, which I never did before.' On 22 Nov. 1661 there is an amusing account of a dinner at the Dolphin, where were 'Captain Cook and his lady, a German lady, but a very great beauty. . . and there we had the best musique and very good songs, and were very merry, and danced, but I was most of all taken with Madam Cook and her little boy. . . . But after all our mirth comes a reckoning of 4*l.*, besides 4*s.* of the musicians, which did trouble us, but it must be paid, and so I took leave.' On 13 Feb. 1666-7 Pepys met Cooke at Dr. Clarke's, 'where, among other vanities, Captain Cooke had the arrogance to say that he was fain to direct Sir W. Davenant in the breaking of his verses into such and such lengths, according as would be fit for musick, and how he used to swear at Davenant, and command him that way, when W. Davenant would be angry, and find fault with this or that note —a vain coxcomb he is, though he sings and composes so well.'

Cooke seems to have died intestate. Of his music very little remains, and that mostly in manuscript. The Music School and Christ Church collections at Oxford contain anthems and other pieces by him, and there are also a few pieces in the British Museum.

B. S.

COOKE, HENRY, D.D. (1788–1868), Irish presbyterian leader, came of a family of puritan settlers in county Down from Devonshire. He was the youngest son of John Cooke, tenant farmer of Grillagh, near Maghera, county Derry, by his second wife, Jane Howie or Howe, of Scottish descent, and was born on 11 May 1788. From his mother he derived his force of character, his remarkable memory, and his powers of sarcasm. A vivid impression, retained through life, of the events of 1798 influenced his political principles. After struggling for an education in rude country schools, he matriculated at Glasgow College in November 1802. Owing to illness he did not graduate, but he completed the arts and divinity courses, not shining as a student, but taking immense pains to qualify himself as a public speaker. Fresh from Glasgow, he appeared before the Ballymena presbytery in the somewhat unclerical attire of blue coat, drab vest, white cord breeches and tops, proved his orthodoxy on trial, and was licensed to preach. His first settlement was at Duneane, near Randalstown, county Antrim, where he was ordained on 10 Nov. 1808, though only twenty years of age, as assistant to Robert Scott, with a pittance of 25*l.* Irish. Here his evangelical fervour met with no sympathy. On 13 Nov. 1810 he resigned the post, and became tutor in the family of Alexander Brown of Kells, near Ballymena. He speedily received a call from Donegore, county Antrim, and was installed there by Templepatrick presbytery on 22 Jan. 1811. This congregation, vacant since 1808, had chafed under an Arian ministry, and had shown its determination to return to the old paths by rejecting the candidature of Henry Montgomery [q. v.] Cooke began at Donegore a systematic course of theological study; and by leave of his presbytery he returned, soon after his marriage, to Glasgow, where he spent the winter sessions 1815–16 and 1816–17, adding chemistry, geology, anatomy, and medicine to his metaphysical studies, and taking lessons in elocution from Vandenhoff. He had been in the habit of giving medical aid to his flock. In 1817–18 he attended classes at Trinity College and the College of Surgeons, Dublin, and walked the hospitals. He was a hard student, but with his studies he combined missionary labours, which resulted in the formation of a congregation at Carlow. Shortly after his return from Dublin, Cooke was called to Killeleagh, county Down, and resigning Donegore on 6 July 1818, he was installed at Killeleagh by Dromore presbytery on 8 Sept. The lord of the manor, and the leading presbyterian at Killeleagh, was the famous Archibald Hamilton Rowan. Rowan's younger son, Captain Rowan, an elder of Killeleagh, was attached to the older theology, and secured the election of Cooke, who was allowed to be 'by no means bigoted in his opinions.' In fact, while at Donegore he had been 'led to join in Arian ordinations,' a laxity which at a later period he sincerely lamented. In 1821 the English uni-

tarians employed John Smethurst of Moreton Hampstead, Devonshire, on a preaching mission in Ulster. Favoured by Rowan (the father) he came to Killeleagh, where Cooke and the younger Rowan confronted him at his lecture in a schoolroom. Wherever Smethurst went Cooke was at hand with a reply, inflicting upon the unitarian mission a series of defeats from which it never recovered. In opposing, later in the same year, the election of an Arian [see BRUCE, WILLIAM, 1790–1868] to the chair of Hebrew and classics in the Belfast Academical Institution, Cooke was unsuccessful, and he was discouraged by the result of his appeal on the subject to the following synod (at Newry, 1822). He preached in the spring of 1824 as a candidate for First Armagh, but was not chosen..

Cooke was elected moderator of the general synod at Moneymore in June 1824. He gave evidence before the royal commission on education in Ireland in January 1824; and before committees of both houses of parliament in April upon the religious bearings of the Irish education question. He described the Belfast Academical Institution as 'a seminary of Arianism.' He maintained that among the protestants of the north there was an increase of feeling opposed to catholic emancipation; it is fair to add that he did not put forward this feeling as his own, but he uttered a warning against undue concessions. The publication of his evidence produced the strongest excitement. He defended himself against bitter attacks with vigour, and rallied the protestant sentiment of Ulster to his call. The resolution of synod (June 1825) in his favour, though cautiously worded, was an omen of triumph for his policy.

The proceedings of the next synod (at Ballymoney, 1826) were not favourable to Cooke. Cooke did not see his way to support a motion for subscription to the Westminster Confession, and his proposal that 'a condensed view' of its doctrines should be drawn up as a standard of orthodoxy was negatived. In the three succeeding synods, at Strabane (1827), Cookstown (1828), and Lurgan (1829), Cooke carried all before him. By the successive steps of exacting from all members of synod a declaration of belief in the Trinity, appointing a select committee for the examination of all candidates for the ministry, and instituting an inquiry into the 'religious tenets' of a recently appointed professor of moral philosophy in the academical institution, he left the Arians no alternative but that of secession, a course which, after presenting a spirited 'remonstrance,' they adopted. Cooke was a strong opponent of the Dissenters' Chapels Act (1844), which secured them in the possession of congregational properties.

At the outset Cooke fought against great odds. He had some able coadjutors, especially Robert Stewart [q. v.] of Broughshane, and the main body of the laity was heartily with him. Among the orthodox ministers an important section, headed by James Carlile (1784–1854) [q. v.], looked with no favour upon Cooke's policy of severance; but the rejection of Carlile as candidate for the moral philosophy chair (though an Arian was not appointed) alienated the moderate party from that of the Arians. The leader of the Arian opposition to Cooke in the synod was Henry Montgomery, an orator of the first rank, and the speeches on both sides may still be read with interest for their ability. Cooke's expulsion of the Arian leaders was followed up by the enactment of unqualified subscription to the Westminster Confession (9 Aug. 1836, extended to elders 8 April 1840), and by the union of the general synod of Ulster with the secession synod, under the name of the 'General Assembly of the Presbyterian Church in Ireland' (10 July 1840); the Munster presbytery, formerly nonsubscribing, was incorporated with the assembly in 1854.

On 12 Oct. 1828 a unanimous call had been forwarded to Cooke from the congregation of Mary's Abbey, Dublin. But his place was in Belfast, and thither he removed to a church specially built for him in May Street, and opened 18 Oct. 1829. From this time to the close of his active pastorate in 1867 his fame as a preacher drew crowds to May Street. The calls upon his pulpit services elsewhere were not infrequent; hence the story, told by Classon Porter, that 'his people once memorialled their presbytery for an occasional hearing of their own minister.' Established in Belfast, he became not merely the presiding spirit of Irish presbyterianism (he was elected moderator of assembly in 1841 and 1862), but the leader and framer of a protestant party in the politics of Ulster. To this consummation his wishes tended, when he purged the synod. The political principles of the Arian chiefs were as dangerous in his estimation as their lax theological notions. Till the election of 1832 Belfast had been a stronghold of liberalism. Cooke turned the tide. So completely did his work transform the relations of parties that even Montgomery, in later life, dropped his political liberalism.

At the Hillsborough meeting (30 Oct. 1834) Cooke, in the presence of forty thousand people, published the banns of a marriage between the established and presbyterian churches of Ireland. The alliance was to be

politico-religious, not ecclesiastical, a union for conserving the interests of protestantism against the political combination of the Roman catholic, 'the Socinian, and the infidel.' Still more thoroughly did he succeed in his political mission by his dealing with O'Connell's visit to Belfast in January 1841. Cooke's challenge to a public discussion of facts and principles was evaded by O'Connell. The anti-repeal meeting which followed O'Connell's abortive demonstration is still famous in Ulster. Almost his last platform appearance was at Hillsborough on 30 Oct. 1867, when, in his eightieth year, Cooke spoke against the threatened disestablishment of protestantism in Ireland. On 5 March 1868 he attended the inaugural meeting of an Ulster protestant defence association. In the same sense was the address (24 Oct. 1868) to the protestant electors of Ireland, penned almost on his deathbed. Cooke's presbyterianism was of the most robust type; he would not rank himself as a 'dissenter,' claiming to be a minister of 'a branch of the church of Scotland.' But he was anxious to support the establishment of protestant christianity as 'the law of the empire.' When, in 1843, the general assembly of his church passed a resolution recommending its members to secure the return of presbyterian representatives to parliament, Cooke formally withdrew from the assembly, and did not return to it until 1847, when the resolution was rescinded. In the non-intrusion controversy which divided the church of Scotland Cooke used all his influence with the government to obtain concessions satisfactory to the liberties of the church, and on the day of the disruption (18 May 1843) gave the encouragement of his presence and voice to the founders of the Free church.

The question of education, especially in its religious bearings, engaged Cooke at an early period. When the scheme for Irish national education was started in October 1831, Cooke at once scented danger to the protestant interest. After many negotiations the synod in 1834 broke off relations with the education board. Cooke explained the views of the synod to the parliamentary committees of inquiry in 1837. In 1839 the synod, under Cooke's guidance, organised an education scheme of its own, and applied to the government for pecuniary aid. The result was that the synod's schools were recognised by the board in 1840 on Cooke's own terms. In September 1844 the general assembly made application to the government for the erection of a college which should provide a full course of education for students for the ministry under the assembly's superintendence and control. The government, however, established the Queen's College 30 Dec. 1846, but endowed four chairs in a theological college at Belfast under the assembly (and two chairs in connection with the non-subscribing presbyterians). It was expected that Cooke would be the first president of the Queen's College; this office was conferred on Rev. P. S. Henry; to Cooke was given the agency for the distribution of *regium donum*, a post worth 320*l.* per annum, and on the opening of the Queen's College in 1849 he was appointed presbyterian dean of residence. Cooke, who from 1835 had been lecturer on ethics to the students of his church, was offered by the assembly (14 Sept. 1847) his choice of the newly endowed chairs of ethics and sacred rhetoric; he chose the latter, and was shortly afterwards made president of the faculty. The assembly's college buildings were opened in 1853. On becoming professor Cooke was compelled by the law of the assembly to resign the pastoral office; but at the urgent desire of his congregation he continued to discharge all its duties, being appointed by his presbytery 'constant supplier' until the election of a successor (his successor, John S. M'Intosh, was installed 4 March 1868). His resignation of congregational emolument was absolute; for twenty years he served his congregation gratuitously.

In 1829 Cooke received the degree of D.D. from Jefferson College, U.S., and in 1837 that of LL.D. from Trinity College, Dublin. On various occasions, especially in 1841 and 1865, public presentations were made to him in recognition of his labours. The sums continually raised by his preaching on special occasions were remarkable tributes to the persuasion of his eloquence. He had a noble presence and thrilling voice; he was a master of the art of stating a case, had an unexpected reply to every argument of an opponent, seldom failed to make an adversary ridiculous, and when he rose to vehemence the strokes of his genius were overwhelming. In the reports of his speeches there is nothing so fine as his elegy on Castlereagh (in the debate on voluntaryism with Dr. Ritchie of Edinburgh, March 1836), a passage imperfectly reported, because it is said the pressmen 'dropped their pencils and sat with eyes riveted on the speaker' (J. L. Porter, p. 264).

Cooke's habits of work would have been impossible without the aid of an iron constitution; he rose at four, needed little sleep, and travelled, spoke, and wrote with incessant energy. In public a dangerous and unsparing (some said an unscrupulous) foe, his private disposition was that of warm-hearted kindness. Relations of personal friendliness between him and his old antagonist, Montgo-

mery, sprang up in their later years. Stern protestant as he was, none was more prompt to render assistance to a Roman catholic neighbour in time of need. A strict disciplinarian, he leaned always to the side of mercy when the courts of his church had to deal with delinquents.

Cooke's biographer quotes from Lord Cairns the saying that for half a century his life 'was a large portion of the religious and public history of Ireland.' Orangemen carry his likeness on their banners (though he was no orangeman), and his statue in Belfast (erected in September 1875) is still the symbol of the protestantism of the north of Ireland.

Cooke died at his residence in Ormeau Road, Belfast, on Sunday, 13 Dec. 1868. A public funeral was voted to him on the motion of the present primate, then bishop of Down and Connor. He was buried in the Balmoral cemetery on 18 Dec. In 1813 he married Ellen Mann of Toome, who died on 30 June 1868; by her he had thirteen children.

Cooke's first publication was a charity sermon preached at Belfast 18 Dec. 1814, which went through three editions in 1815; of this discourse Reid says 'it is remarkable for the absence of evangelical sentiment.' Remarkable also is Cooke's collection of hymns under the title, 'Translations and Paraphrases in Verse . . . for the use of the Presbyterian Church, Killileagh,' Belfast, 1821, 12mo (McCreery speaks of an edition, 1829, 'for the use of presbyterian churches,' not seen by the present writer), with a closely reasoned preface, in which he condemns restriction to the psalms of David in christian worship; in later life he had the strongest antipathy to the public use of any hymnal but the metrical psalms. In 1839 he undertook a new edition of Brown's 'Self-interpreting Bible,' Glasgow, 1855, 4to; second edition [1873], 4to, revised by J. L. Porter. The manuscript of an analytical concordance, begun in 1834 and finished in 1841, which he had taken to London for publication, perished in a fire at his hotel. Sermons, pamphlets, and magazine articles in great abundance flowed from his pen.

[The biography of Cooke by his son-in-law, Josias Ledlie Porter, D.D., now president of Queen's College, Belfast (1st edit. 1871; third, or people's edition, Belfast, 1875), is a sustained eulogy, very ably and thoroughly done from the writer's point of view. A brief but valuable memoir is given in Classon Porter's Irish Presbyterian Biographical Sketches, 1883, p. 39 sq. See also Killen's edition of Reid's Hist. Presb. Ch. in Ireland, 1867, iii. 396 sq.; McCreery's Presb. Ministers of Killileagh, 1875, pp. 225 sq.; and Killen's Hist. of Congregations Presb. Ch. in Ireland, 1886, p. 266 sq. Crozier's Life of H. Montgomery, 1875. i., throws light upon the Arian controversy, but takes a very unfavourable view of Cooke's character. Original authorities will be found in the Minutes of Synod, which are printed in full from 1820; reports of speeches are given in the 'Northern Whig,' a journal strongly biassed against Cooke. Cooke's own organ was the 'Orthodox Presbyterian,' a magazine not established till December 1829; the Arians had the 'Christian Moderator,' 1826–8, and the 'Bible Christian' from February 1830. Smethurst's report is in the 'Christian Reformer,' 1822, p. 217 sq. Worth reading, on the other side, is 'The Thinking Few,' 1828, a satirical poem, by the Rev. Robert Magill of Antrim. For Cooke's encounter with O'Connell see 'The Repealer repulsed,' 1841. Respecting Cooke's second period at Glasgow College, information has been given by a fellow-student, the Rev. S. C. Nelson.] A. G.

COOKE, JO. (*fl.* 1614), dramatist, was the author of an excellent comedy entitled 'Greene's Tu Quoque, or the Cittie Gallant. As it hath beene diuers times acted by the Queenes Maiesties Seruants. Written by Jo. Cooke, Gent.,' 4to, published in 1614, with a preface by Thomas Heywood. Another edition appeared in 1622, 4to, and there is also an undated 4to (1640?). Chetwood mentions an edition of 1599, but no reliance can be placed on Chetwood's statements. Greene, a famous comedian, took the part of Bubble, the Cittie Gallant, who constantly has on his lips the words 'Tu Quoque:' hence the origin of the first title 'Greene's Tu Quoque.' In the 'Stationers' Register,' under date 22 May 1604, we find entered, 'Fyftie epigrams written by J. Cooke, Gent.' Cooke's play has been reprinted in the various editions of Dodsley's 'Old Plays.' ('A Pleasant Comedie: How to chuse a Good Wife from a Bad,' is attributed in a manuscript note on the title-page of a copy of the edition of 1602, preserved in the Garrick collection, to 'Joshua Cooke,' whose name is otherwise unknown.)

[Langbaine's Dramatic Poets; Dodsley's Old Plays, ed. Hazlitt, vols. ix. xi.; Arber's Transcript of Stat. Reg. iii. 261.] A. H. B.

COOKE, SIR JOHN (1666–1710), civilian, son of John Cooke of Whitechapel, London, surveyor of the customs, was born on 29 Aug. 1666, was admitted into Merchant Taylors' School in 1673, and was thence elected to St. John's College, Oxford, in 1684 (WILSON, *Merchant Taylors' School*; ROBINSON, *Register of Merchant Taylors' School*, i. 280). While *in statu pupillari*, being a partisan of William III, he obtained a lieutenant's commission in an infantry regiment, and served in Ireland at the time of the battle of the Boyne. Returning to Oxford he resumed his studies, and graduated B.C.L. in 1691 and D.C.L. in

1694 (*Cat. of Oxford Graduates*, ed. 1851, p. 147). He was admitted a member of the College of Advocates at Doctors' Commons on 23 Oct. in the last-named year (COOTE, *English Civilians*, p. 105). On 21 May 1701 he received the honour of knighthood (*Addit. MS.* 32102, f. 110 *b*). In the following year he was nominated a commissioner to treat of the union between England and Scotland (THOMAS, *Hist. Notes*, ii. 913). Archbishop Tenison, on the death of Dr. George Oxenden in February 1702–3, appointed Cooke dean and official of the court of arches. He was also vicar-general and principal official to the archbishop, and dean and commissary of the peculiars belonging to his grace; and official of the archdeaconry of London. William III appointed him his advocate-general. Cooke's competitor on that occasion was Dr. Thomas Lane, who had been a captain of horse on King James's side at the battle of the Boyne, where he was wounded. His majesty, knowing this, said 'he chose rather to confer the place upon the man who fought for him, than upon the man who fought against him' (*Annals of Queen Anne*, ix. 412). In 1706 Cooke was appointed clerk of the pipe in the exchequer. He died on 31 March 1710, and was buried at St. Mary's, Whitechapel (*Present State of Europe*, xxi. 119).

He married Mary, only daughter of Matthew Bateman of London (she died on 6 Oct. 1709), and left issue one daughter.

He published 'A Summary View of the Articles exhibited against the late Bishop of St. David's [Dr. Watson], and of the Proofs made thereon,' London, 1701, 8vo.

[Authorities quoted above.] T. C.

COOKE, JOHN (1763–1805), captain in the royal navy, entered the navy at the age of thirteen, on board the Eagle, carrying Lord Howe's flag on the North American station, and, having remained in her through her whole commission, was promoted to be lieutenant on 21 Jan. 1779. He was then appointed to the Superb, with Sir Edward Hughes, in the East Indies; and having been obliged to invalid from that station was appointed to the Duke with Captain (afterwards Lord) Gardner, who went out to the West Indies and took a distinguished part in the glorious action off Dominica on 12 April 1782. After the peace Gardner was for some time commodore at Jamaica, Cooke remaining with him as first lieutenant of the Europa. In 1790 he served for some time as a lieutenant of the London, bearing the flag of Vice-admiral Sir Alexander Hood, and in February 1793 was appointed first lieutenant of the Royal George, bearing Sir Alexander's flag. After the battle of 1 June 1794 he was promoted to be commander, and a few days later, 23 June, to be captain. He then served for a year in Newfoundland as flag captain to Sir James Wallace, in the Monarch, and on his return home was appointed, in the spring of 1796, to command the Nymphe, which, in company with the San Fiorenzo, on 9 March 1797, captured the two French frigates Resistance and Constance. These were at the time on their way back to France after landing the band of convicts in Fishguard Bay; in memory of which, the Resistance, a remarkably fine vessel, mounting forty-eight guns, on being brought into the English navy, received the name of Fisgard (JAMES, *Nav. Hist.*, 1860, ii. 91). When the mutiny broke out in April and May, the Nymphe was at Spithead, and her crew joined the mutineers. On Cooke's attempting to give some assistance to Rear-admiral John Colpoys [q. v.], he was ordered by the mutineers to go on shore; nor was it thought expedient for him to rejoin the ship. Two years later he was appointed to the Amethyst, which he commanded in the Channel till the peace. In October 1804 he was invited by Sir William Young, the commander-in-chief at Plymouth, to come as his flag captain; but a few months later, having applied for active service, he was appointed to the Bellerophon, in which he joined the fleet off Cadiz in the beginning of October 1805. To be in a general engagement with Lord Nelson would, he used to say, crown all his military ambition. In the battle of Trafalgar the Bellerophon was the fifth ship of the lee line, and was thus early in action; in the thick of the fight Cooke received two musket-balls in the breast; he fell, and died within a few minutes, saying with his last breath, 'Tell Lieutenant Cumby never to strike.' A monumental tablet to his memory was placed by his widow in the parish church of Donhead in Wiltshire. His portrait, presented by the widow of his brother, Mr. Christopher Cooke, is in the Painted Hall at Greenwich.

[Naval Chronicle, xvii. 354.] J. K. L.

COOKE, JOHN (1731–1810), bookseller, was born in 1731, and began life as assistant to Alexander Hogg, one of the earliest publishers of the cheap 'Paternoster Row numbers,' or standard popular works issued in weekly parts. Cooke started for himself, and made a large fortune in the same way of business. Southwell's (or rather Sanders's) 'Bible with Notes' is said to have brought him 30,000*l.* (*Gent. Mag.* lxxx. pt. i. 386). The sum appears to be scarcely credible.

Leigh Hunt tells us: 'In those days Cooke's edition of the British poets came up. . . How I loved these little sixpenny numbers, containing whole poets! I doted on their size; I doted on their type, on their ornaments, on their wrapper, containing lists of other poets, and on the engravings from Kirk' (*Autobiography*, 1860, p. 76). These editions were published in sixpenny whity-brown-covered weekly parts, fairly well edited and printed. They were divided into three sections—select novels, sacred classics, and select poets. A shilling 'superior edition' was also issued. Cooke died at York Place, Kingsland Road, on 25 March 1810, aged 79. His son Charles succeeded to the business at the Shakspeare's Head, Paternoster Row, but only survived him six years, dying 16 April 1816, aged 56. The son was a liveryman of the Stationers' Company.

[Nichols's Lit. Anecd. iii. 719; Nichols's Illustr. viii. 488; Timperley's Encyclopædia, p. 838; Book Lore, iv. 11.] H. R. T.

COOKE, JOHN (1738–1823), chaplain of Greenwich Hospital, born in 1738, was educated at Trinity College, Cambridge (B.A. 1761, M.A. 1764), and was presented to the rectory of Denton, Buckinghamshire, 2 Aug. 1773. He was also chaplain to Greenwich Hospital, and a commissioner from 1773 till his death on 4 May 1823. He published: 1. 'An Historical Account of the Royal Hospital for Seamen at Greenwich,' 1789, 4to. 2. 'The Preservation of St. Paul from Shipwreck on the Island of Melita.' A sermon preached at the opening of the chapel of the Royal Hospital for Seamen, 20 Sept. 1789. 3. 'A Voyage performed by the late Earl of Sandwich round the Mediterranean. To which are prefixed memoirs of the noble author's life,' 1799, 8vo.

[Gent. Mag. (1823), i. (1773), 415, 572; Brit. Mus. Cat.] J. M. R.

COOKE, JOHN (1756–1838), physician, born in 1756 in Lancashire, was educated by Dr. Doddridge to be a dissenting minister. He preached at Rochdale and at Preston, but preferred medicine, came to study at Guy's Hospital in London, completed his education at Edinburgh and Leyden, and graduated in the latter university. His thesis was on the use of Peruvian bark in cases where there is no rise of temperature. He settled in London and became physician to the Royal General Dispensary in Bartholomew Close. No out-patients were then seen at the neighbouring hospital, so that the dispensary offered a large field of observation. In April 1784 he was elected physician to the London Hospital, which office he held for twenty-three years, and delivered the first clinical lectures ever given in that institution. On 25 June in the same year he was admitted a licentiate of the College of Physicians. In 1799 an alarm of plague was raised in London by the sudden death of two men who had been employed in carrying bales of cotton ashore. Cooke, at the request of the lord mayor, investigated the circumstances, and showed that the alarm was groundless. In 1807 he was elected a fellow of the College of Physicians, and ten years later F.R.S. He delivered the Croonian lectures at the College of Physicians in 1819, 1820, 1821, and the Harveian oration in 1832. In 1820 he began the publication of 'A Treatise on Nervous Diseases,' which was continued in 1821 and completed in 1823, and is usually bound in two volumes. An American edition, in one volume, was published at Boston in 1824. This work is based on his Croonian lectures. It gives an account of the existing knowledge of hemiplegia, paraplegia, paralysis of separate nerves, epilepsy, apoplexy, lethargy, and hydrocephalus internus. It shows considerable clinical acquaintance with the subject and a careful study of old writers, but the imperfect state of knowledge of this part of medicine is illustrated by the fact that apoplexy and hemiplegia are treated as subjects having no relation to one another. Cooke and Dr. Thomas Young were friends, and there is considerable resemblance between the general method of Young's 'Treatise on Phthisis' and Cooke's 'On Nervous Diseases.' Both show careful thought on the subject and much reading, and both are trustworthy as representations of all that was known in their time, while neither contains any important addition to medical knowledge. Cooke was president of the Medico-Chirurgical Society in 1822 and 1823. During his latter years he gave up practice and went little into society. He was a well-read man, and throughout life studied and enjoyed Homer. He died at his house in Gower Street, London, 1 Jan. 1838.

[Munk's Coll. of Phys. iii. 53; Pettigrew's Biographical Memoirs; Curling's Address at the London Hospital, 1846.] N. M.

COOKE, ROBERT (1550–1615), vicar of Leeds, Yorkshire, was the son of William Gale, *alias* Cooke, of Beeston in that parish, where he was baptised on 23 July 1550 (THORESBY, *Ducatus Leodiensis*, ed. 1816, p. 209). He entered as student at Brasenose College in 1567, 'where, with unwearied diligence, travelling through the various classes of logic and philosophy, he became the most noted disputant of his time' (WOOD, *Athenæ*

Oxon. ed. Bliss, ii. 154). On 2 Dec. 1573 he was unanimously elected probationer of his college, and three years afterwards he graduated M.A. In 1582 he was elected one of the proctors of the university (Le Neve, *Fasti*, ed. Hardy, iii. 490). He graduated B.D. in 1584 (Wood, *Fasti*, i. 228), and was instituted to the vicarage of Leeds on 18 Dec. 1590, on the presentation of the parishioners. Thoresby states that the Reformation went on very slowly in Leeds, till 'the deservedly famous Mr. Robert Cooke . . . revived a deep sense of true religion and piety.' Cooke was collated by Dr. William James, bishop of Durham (to whom he dedicated his 'Censura'), to the sixth prebend in that cathedral (Thoresby, *Vicaria Leodiensis*, pp. 55–60; Le Neve, *Fasti*, iii. 314). He died on 1 Jan. 1614–15, and was buried in the church at Leeds (Hobart, *Reports*, ed. 1724, p. 197). His younger brother, Alexander Cooke [q. v.], succeeded him in the vicarage.

His works are: 1. Six Latin orations delivered at Oxford, in a manuscript formerly in the possession of James Crossley. One of these orations was delivered on 10 April 1583, when he resigned the office of proctor. It gives a vivid picture of the state of Oxford at that time, and the difficulties and animosities which he had to encounter in the execution of the duties imposed upon him (*Notes and Queries*, 4th ser. xi. 465, 514). 2. 'A Learned Disputation betwixt Robert Cooke, B.D., and a priest named Cuthbert Johnson, alias William Darrell, before his Majesty's Council and other learned Men at York, an. 1610.' Manuscript formerly in Thoresby's museum at Leeds (*Musæum Thoresbyanum*, ed. 1816, p. 86). 3. 'Censura quorundam Scriptorum, quæ sub nominibus Sanctorum, et veterum Auctorum, à Pontificiis passim in eorum Scriptis, sed potissimum in Quæstionibus hodie controversis citari solent,' Lond. 1614, 1623, 4to.

[Authorities cited above.] T. C.

COOKE, ROBERT (1768–1814), musician, was son of Dr. Benjamin Cooke the organist [q. v.] He became organist of the church of St. Martin's-in-the-Fields on the retirement of his father in 1793. He was elected master of the choir-boys at Westminster in 1806, and appointed organist at the abbey on the death of Dr. Arnold in 1802. He held this post until 1814, when he went mad, and drowned himself in the Thames. The most celebrated works which he left behind him are an 'Ode to Friendship,' which was sung on the first night of the British Concerts, an Evening Service in C, and several songs and glees, of which a collection of eight was published in 1805, and a song in imitation of Purcell, composed expressly for James Bartleman [q. v.]

[Grove's Dict. of Music; A Dictionary of Musicians, 1827, 8vo.] E. H.-A.

COOKE, ROBERT (1820?–1882), catholic divine, was born at Waterford about 1820, and for some time studied medicine, but subsequently, during a visit to France, joined the congregation of Oblates of Mary Immaculate. After his ordination he was stationed at Grace Dieu, Leicestershire. Thence he was sent in 1847 to Everingham Park, Yorkshire, and while there he established missions at Howden and Pocklington. In 1851 he removed to Leeds. He established houses of his order at Inchicore in Ireland, and at Kilburn, London. His last missionary labour was in the east end of London, where he founded the church of the English Martyrs, Tower Hill. He died on 18 June 1882.

His principal works are: 1. 'Catholic Memories of the Tower of London,' Lond. 1875, 8vo, which has been translated into French. 2. 'Sketches of the Life of Mgr. de Mazenod, bishop of Marseilles, and Founder of the Oblates of Mary Immaculate, and of the Missionary Labours of the French Oblates of Mary Immaculate,' 2 vols. Lond. 1879–82, 8vo.

[Tablet, 24 June 1882; Cat. of Printed Books in Brit. Mus.; Gillow's Bibl. Dict. i. 557; Athenæum, 1879, i. 697.] T. C.

COOKE, ROGER (*b.* 1553), astrologer, was born in 1553, and became Dr. Dee's assistant at the age of fourteen. He seems to have shown considerable aptitude; for Dr. Dee instructed him in many of his discoveries. Thus we find in Dr. Dee's 'Diary' in the Ashmolean Library at Oxford, under date 28 Dec. 1579, 'I reveled to Roger Coke the gret secret of the salt *oφ ακετελε ονε υπτον α υνδρεδ*,' and in the Ashmolean MS. 1788, fol. 147, 'he revealed to Roger Cooke the great secret of the Elixar, as he called it, of the salt of metalls, the projection whereof was one upon an hundred.' Cooke would seem to have been a man of morose and often violent temper; but for reasons which do not appear Dr. Dee seems to have been loth to part with him. Thus, we find under date 12 July 1581, 'About 10 of the clock ½ before noone Roger, his incredible doggednes and ingratefulnes agains me to my face, almost redi to lai violent hand on me, major Henrik can partly tel' (the passage is in Greek character). Things culminated in the same year, on 5 Sept., when we read: 'Roger Cook, who had byn with me from his 14 yeres of age till 28, of a melancholik nature, pycking

and divising occasions of just cause to depart on the suddayn, abowt 4 of the clok in the afternone requested of me lycense to depart, wheruppon rose whott words between us; and he imagining with his self that he had on the 12 of July deserved my great displeasure, and finding himself barred from vew of my philosophicall dealing with Mr. Henrik, thowght that he was utterly recist from intended goodnes toward him. Notwithstanding Roger Cook, his unseamly dealing, I promised him, yf he used himself toward me now in his absens, one hundred pounds as sone as of my own clere liability I might spare so much; and moreover, if he used himself well in lif toward God and the world, I promised him some pretty alchemicall experiments, wheruppon he might honestly live.' 'Sept. 7th.—Roger Cook went for altogether from me.' After this Cooke seems to have set up for himself. An almanack for 1585 bears his name, after which all trace of him is lost.

[Dr. Dee's Diary, published by Camden Society; Black's Cat. of MSS. in Ashmolean Library.]

E. H.-A.

COOKE, Sir **THOMAS** (*d.* 1478), lord mayor of London, was the son of Robert Cooke of Lavenham in Suffolk, by Katherine his wife. The family was a long-established one. Hugh, another son, who died in 1443, possessed lands in various parishes of Suffolk (will in Probate Registry, Luffenham, 34). Thomas came to London, became a member of the Drapers' Company, and soon grew rich. The earliest certain mention of him is in 1439, when he appears in the grant of arms to the Drapers' Company as one of the four wardens of the company. He next appears, in June 1450, as agent to Jack Cade, who was encamped on Blackheath, and opened communications with the city. Cooke was requested by the rebels to tax the foreign merchants, to supply 'us the captain' with horses, accoutrements, weapons, and money. Cooke, though in sympathy with the Yorkists, married Elizabeth, daughter and coheiress of Alderman Philip Malpas, one of the leaders of the Lancastrian party within the city. By her he had one daughter and four sons, of whom Philip, the eldest, afterwards knighted, was born in 1454. He became sheriff in 1453, alderman of Vintry ward in 1456 and of Broad Street ward in 1458, and mayor in 1462.

Edward IV, upon the coronation of his queen, Elizabeth, in May 1465, rewarded the leading members of his party in the city, including Cooke, by creating them knights of the order of the Bath. In 1467 Cooke began to build a mansion called Gidea Hall, near Romford in Essex, and obtained a license for fortifying and embattling it; but on account of his subsequent misfortunes he completed only the front, the remaining sides of the quadrangle being built by Sir Anthony Cooke [q. v.] Cooke was in all probability a draper by trade, and had extensive dealings with foreign parts. A curious clause appears in his father-in-law's will (made and proved in 1469), in which Malpas solemnly disavows any responsibility for 'the tarying or taking of Sir Thomas Cooke's ship and goods' when he was last upon the sea, although he was in the ship at the time. Cooke's will shows that he owned at least four brewhouses, taverns, and beerhouses, besides fishing-weirs on the Colne, a large farm at Gidea Hall, and numerous properties and manors in London, Surrey, Essex, and Kent. His residence was in the parish of St. Peter the Poor, Old Broad Street, where he had a 'grete place,' which he afterwards sold to Robert Hardyng, goldsmith.

In 1467 Cooke was impeached of high treason, for lending money to Margaret, the queen of Henry VI. One Hawkins, tortured on the rack, was the only witness against him. Chief-justice Markham directed the jury to find it only misprision of treason, whereby Cooke saved his lands and life, though he was heavily fined and long imprisoned (Fuller, *Worthies*, ii. 207).

While awaiting his trial in the Tower his effects, both at his town house and at Gidea Hall, were seized by Lord Rivers, then treasurer of England, and his wife was committed to the custody of the mayor. On his acquittal he was sent to the Bread Street compter, and afterwards to the king's bench, and was kept there until he paid eight thousand pounds to the king and eight hundred pounds to the queen. Lord Rivers and his wife, the Duchess of Bedford, also obtained the dismissal of Markham from his office for having determined that Cooke was not guilty of treason. In December 1468 Cooke, then alderman of his own ward of Broad Street, was discharged from his office by order of the king, but was reinstated in October of the following year. According to Fabyan, Cooke was a member of the parliament that met 26 Nov. 1470, on the temporary restoration of Henry VI, and he put in a bill for the restoration of certain lands, to the value of twenty-two thousand marks, 'whiche,' says Fabyan, 'he had good comfort to have ben allowyd of King Henry if he had prosperyd. And the rather for y^t^ he was of the comon house, and therwith a man . . . well spoken.' He was elected alderman of Bread Street ward in Oct. 1470 and was deprived next year. Early in 1471 Cooke acted as deputy to the mayor, Sir John Stockton, who, fearing

the return of King Edward, feigned sickness and kept his house. Edward returned in April, and Cooke, attempting to leave this country for France, was taken with his son by a ship of Flanders, where he was kept in prison many days, and was afterwards delivered up to King Edward. Cooke lived seven years after this, and though he was probably again heavily fined, he left a large amount of landed and other property. In 1483, when the Duke of Buckingham addressed the citizens of London in the Guildhall in favour of the pretensions of Richard III to the throne, he referred at length to the sufferings and losses of Cooke as a notable instance of the tyranny of the late king (HOLINSHED, ed. 1808, iii. 391). Cooke died in 1478, and was buried, in compliance with his wish, in the church of the Augustine friars, within the ward of Broad Street in London. His will, dated 15 April, was proved at Lambeth 1 June 1478 (Probate Reg., Wattis, 36). His great-grandson was Sir Anthony Cooke [q. v.]

C. W-H.

COOKE, THOMAS (1703–1756), author, commonly called HESIOD COOKE, born 16 Dec. 1703, was the son of John Cooke, an innkeeper of Braintree, Essex, by his wife Rebeckah (*Braintree Parish Reg.*, kindly communicated by the Rev. J. W. Kenworthy). His father, according to Pope, was a Muggletonian. Cooke was educated at Felstead, and made great progress there in classics. While a lad he obtained an introduction to the Earl of Pembroke, who gave him some employment and encouraged him in his classical studies. In 1722 he came to London to earn his living by his pen; contributed articles to the daily papers, and attached himself to the whigs. He thus came to know Tickell, Philips, Welsted, Steele, and Dennis. His earliest publication was a poem on the death of the Duke of Marlborough (1722); a translation of the poems of Moschus and Bion, and 'Albion, or the Court of Neptune,' a masque, followed in 1724. In 1725 he issued anonymously (in folio) a poem entitled 'The Battle of the Poets,' in which he attacked Pope, Swift, and their friends, and eulogised the writers of his own school. He continued the campaign by publishing in the 'Daily Journal' for 6 April 1728 notes on Pope's version of the Thersites episode in the second book of the 'Iliad,' and proved to his own satisfaction that Pope was no Greek scholar. Pope was intensely irritated, and resolved to pillory Cooke in the 'Dunciad.' News of Pope's intention reached Cooke, and Cooke, taking alarm, sent two letters to Pope (11 Aug. and 16 Sept. 1728) repudiating his connection with the offensive publications. With the second letter he forwarded a copy of his newly issued translation of 'Hesiod.' In letters to Lord Oxford Pope showed some sign of accepting Cooke's denial, but when the 'Dunciad' appeared at the close of the year, Cooke occupied a place in it (ii. 138), and was held up to ridicule in the notes. By way of reply, Cooke reissued his 'Battle of the Poets' and his letters on the Thersites episode, with new and caustic prefaces, in 1729. The volume (dedicated to Lord Carteret) was entitled 'Tales, Epistles, Odes, Fables, &c.,' and contained several other of Cooke's published poems, some translations from the classics, 'proposals for perfecting the English language,' and an essay on grammar. Pope was here described as 'a person who with but a small share of learning and moderate natural endowments has by concurring and uncommon accidents acquired as great a reputation as the most learned and exalted genius could ever hope.' In 1731 Cooke collected a number of letters on the political and literary controversies of the day, which he had contributed under the pseudonym of Atticus to the 'London Journal' in 1729 and 1730, and dedicated the book to Horace Walpole. Letter V. is on 'the controversy betwixt the poets and Mr. Pope.' Pope renewed his attack on Cooke in his 'Epistle to Dr. Arbuthnot,' l. 146 (1735).

Cooke tried his hand with unflagging energy at every kind of literary work. In 1726 he published (1) 'The Bath, or the Knights of the Bath,' a poem suggested by the revival of the order, to which was added 'The Scandalous Chronicle, a Ballad of Characters. Written for the Use of the Poets and proper to be sung at their next Sessions,' which is rarely met with; (2) 'Philander and Cydippe,' a poem, and (3) an edition of Marvell's works, with a memoir. Subsequently he issued separately a long series of odes, with dedications addressed to Lord Chesterfield and other persons of influence. Oldys says that Cooke compiled 'Seymour's Survey of London' in 1734. Five years later he wrote a dull poem entitled 'The Battle of the Sexes.' Another edition of his collected poems appeared in 1742.

By his translations from the classics Cooke achieved a wider and deserved reputation. In 1728 he translated 'Hesiod,' and his early patron, the Earl of Pembroke, and Theobald contributed notes. This book gave him his popular nickname of Hesiod Cooke. It was reissued in Anderson's 'Poets' (1793), vol. xiii.; in F. Lee's 'English Translations from

Greek Authors' (1808) in Chalmers's 'Poets' (1810), vol. xx.; in the 'Works of the Greek and Roman Poets' (1813), vol. v.; and in the 'British Poets' (1822), vol. lxxxviii. An edition of 'Terence,' with an English translation (3 vols.)—probably the best in the language—followed in 1734, and a translation of Cicero's 'De Natura Deorum,' with elaborate critical apparatus, in 1737. In 1741 Cooke produced an edition of Virgil with English notes and a Latin paraphrase, and in 1754 appeared the first and only volume—a translation of the 'Amphitruo'—of a long-promised edition of Plautus. Dr. Johnson said that Cooke was soliciting subscriptions for this book for twenty years, and that the proceeds of his canvass formed his main source of income.

Cooke also wrote for the stage. In 1728 he helped his friend John Mottley with 'Penelope, a dramatic opera.' The 'Triumphs of Love and Honour,' by Cooke, was acted at Drury Lane 18 Aug. 1731, and was published in the same year with an essay 'on the stage, and on the advantages which arise to a nation from the encouragement of the arts.' The essay, which included long criticisms of Shakespeare's 'King Lear' and Addison's 'Rosamond,' was also issued separately. 'The Eunuch, or the Darby Captain,' a musical farce adapted from Terence, was performed at Drury Lane on 17 May 1737, with Charles Macklin in the part of Captain Brag. In 1739 Cooke published a tragedy called 'The Mournful Nuptials,' together with 'some considerations on satire and on the present state of our public entertainments.' It was acted under the title of 'Love the Cause and Cure of Grief, or the Innocent Murderer,' at Drury Lane on 19 Dec. 1743, with a prologue by Sir Robert Henley, and republished in 1744. None of Cooke's pieces reached a second representation. He subsequently wrote songs for Vauxhall and the libretto for Rich's harlequinade. About 1742 Cooke took part in Colley Cibber's theatrical quarrel, and issued, under the pseudonym of 'Scriblerus Quartus,' the 'Bays' Miscellany, or Colley Triumphant,' which included two new satiric dialogues, 'Petty Sessions of the Poets' and 'The Contention of the Laurel as it is now acting at the New Theatre at the Hay-Market,' together with a reprint of the 'Battle of the Poets.' In 1743 an extravagantly eulogistic epistle in verse addressed by Cooke to the Countess of Shaftesbury appeared, together with a prologue and epilogue on Shakespeare, the former 'spoke by Mr. Garrick' at Drury Lane, and the latter by Mrs. Woffington. Cooke formed a fine collection of printed plays, which he sold to Mrs. Oldfield, the actress, and on her death it was purchased (1737) by Queen Caroline for 200*l.*

About 1741 Cooke became editor and author of the well-known 'Craftsman,' in succession to Nicholas Amhurst [q. v.] In 1748 his free criticisms of the Pelham administration led the Duke of Bedford, then secretary of state, to proceed against him for libel, and he was placed under the care of a parliamentary messenger for several weeks, but received no further punishment. Religious discussions interested him, and he approached them from an advanced point of view. In 1742 he published anonymously a letter (addressed before 1732 to Archbishop Wake) 'concerning Persecution for Religion and Freedom of Debate, proving Liberty to be the support of Truth and the natural property of Mankind,' together with 'A Demonstration of the Will of God by the Light of Nature.' This work was dedicated to the third Earl of Shaftesbury, and portions of it criticise the argument of Samuel Clarke (1675–1729) [q. v.], with whom Cooke was for the most part in agreement. In 1756 he supplied Dr. Leonard Howard, rector of St. Saviour's, Southwark, with some unpublished poems and old correspondence as material for the second volume of a collection of 'Ancient Letters.'

Cooke was always in debt, and his difficulties increased with his years. He died in great poverty 20 Dec. 1756 at a small house in Lambeth, which he was in the habit of describing to casual acquaintances as a magnificent mansion. A few literary friends subscribed his funeral expenses, and contributed to the support of his widow, Anne, a sister of Charles Beckingham [q. v.], and his only child, a daughter, Elizabeth. The former died in March 1757, and the daughter took to immoral courses. Cooke, although of a convivial temper, had a cynical humour; he introduced Foote to a club as 'the nephew of the gentleman who was lately hung in chains for murdering his brother.' A friend, Sir Joseph Mawbey, to whom Cooke left his manuscripts, contributed a long anecdotal biography, with copious extracts from his commonplace books, to the 'Gentleman's Magazine' for 1791, 1792, and 1797. Mawbey offered Garrick a manuscript play by Cooke entitled 'Germanicus' (see 11th Rep. *Hist. MSS. Comm.* App. pt. vii. p. 42), but Garrick declined it.

COOKE, THOMAS (1722–1783), an eccentric divine, born 23 Oct. 1722, was the son

of a shoemaker at Hexham in Northumberland. He received his education as king's scholar at Durham School, and afterwards entered at Queen's College, Oxford (22 Feb. 1742–3), where he never took a degree. He obtained the curacy of Embleton, Northumberland, and soon was brought into notoriety by the singularity of his religious notions. He maintained that the Jewish ceremonies were not abrogated by the christian dispensation, and insisted on the necessity of circumcision, supporting his doctrine by his own practice. At this period he assumed the names of Adam Moses Emanuel (Sykes, *Local Records*, ed. 1833, i. 328). On being deprived of his curacy he came to London, preached in the streets, and commenced author; but as his unintelligible jargon did not sell he was reduced to great distress. For two or three years he was confined in Bedlam (Richardson, *Local Historian's Table Book*, historical division, ii. 283). On his release he travelled through Scotland and Ireland. Ultimately he returned to the north of England, and until a few years before his death subsisted on a pension allowed him by the Society of the Sons of the Clergy. His last project was for establishing a grand universal church upon true evangelical principles. His death, which occurred at Newcastle-upon-Tyne on 15 Nov. 1783, is said to have been occasioned by his copying Origen too closely (Baker, *Biog. Dram.*, ed. 1812, i. 146).

He wrote, besides a large number of published sermons: 1. 'The King cannot err,' a comedy, 1762. 2. 'The Hermit converted; or the Maid of Bath married,' a comedy, London, 1771, 8vo. No one but a lunatic could have written the dramatic pieces.

COOKE, THOMAS (1763–1818), writer on physiognomy, was born at Sheffield on 20 March 1763. He was engaged in trade early in life, but when twenty-two years old he began the study of physiognomy, of which 'science' he became a devoted enthusiast and expounder. He died at Manchester on 26 July 1818, and in the following year his papers were collected and published under the title of 'A Practical and Familiar View of the Science of Physiognomy.'

[Memoir prefixed to work cited.] C. W. S.

COOKE, THOMAS (1807–1868), optician, the son of a poor shoemaker, was born at Allerthorpe in the East Riding of Yorkshire on 8 March 1807. His education was limited to two years at the national school, after which he was put to his father's trade. Poring over the narrative of Captain Cook's voyages, he was fired with the desire to emulate them. He studied navigation diligently, and was on the point of engaging himself for a seaman, when his mother's tears persuaded him to seek a less distant livelihood. Renewed application fitted him, at the age of sixteen, to open a school in his native village, which he continued until his removal to York about 1829. There, during seven years, he supported himself by teaching, while his spare moments were devoted to the study of mathematics and practical mechanics. Optics attracted him, and his first effort towards telescope-construction was with one of the reflecting kind. But the requisite metals cost money, and he turned to refractors, finding cheap material in the bottom of a common drinking-glass. Methods of shaping and polishing were gradually contrived, and, after a laborious process of self-initiation, he at length succeeded in producing a tolerable achromatic, afterwards purchased by Professor Phillips of Oxford, his constant friend and patron. He was now induced, by offers of countenance from many quarters, to enter upon business as an optician.

His first important order was from Mr. William Gray, F.R.S., for a 4½-inch equatorial, and so effectually had glass manufacture in England been obstructed by an oppressive excise duty, that the undertaking was then regarded as of no small moment. It was succeeded in 1851 by a commission from Mr. Pattinson of Gateshead for one of seven inches aperture, lent in 1856 to Professor Piazzi Smyth for his celebrated expedition to Teneriffe. Its successful execution added so much to Cooke's reputation and business that an extension of his premises became necessary. He accordingly erected new workshops, afterwards known as the Buckingham Works, in Bishop-hill, York, and removed his establishment thither in 1855. It consisted at that time of five or six workmen and one apprentice; when he died above one hundred persons were in his employment.

The enterprise by which he gained European celebrity was undertaken in September 1863. In the previous year Alvan Clark of Boston had turned out a refractor of 18½-inches aperture. Mr. Newall, a manufacturer of submarine cables at Gateshead, now committed to Cooke the onerous task of producing one of no less than twenty-five inches. So considerable an advance in size involved difficulties overcome only by unremitting patience and ingenuity. The destruction of colour was rendered highly arduous by the magnitude of the lenses, and their weight menaced at every moment the permanence of their figure. The optical part of the commission was com-

pleted early in 1868. A huge object-glass, twenty-five inches across and of the highest quality in form and finish, was ready to be placed in the tube. But its maker, worn out by the anxieties attendant on so vast an undertaking, died on 19 Oct. 1868. The great telescope was mounted in the following year. It is still the largest, and is believed to be the best refractor in the United Kingdom, though its qualities have been obscured by the murky air of Gateshead. Among the novelties introduced in its fittings was that of the illumination, by means of Geissler vacuum-tubes, both of micrometer-wires and circle-graduations. A seven-inch transit-instrument formed an adjunct to it.

Cooke has been called the 'English Fraunhofer.' He restored to this country some portion of its old supremacy in practical optics. He brought the system of equatorial mounting very near to its present perfection. The convenience of observers had never before been so carefully studied as by him, and observation owes to his inventive skill much of its present facility. By his application of steam to the grinding and polishing of lenses their production was rendered easy and cheap and their quality sure. His object-glasses were pronounced by the late Mr. Dawes (perhaps the highest authority then living) 'extremely fine, both in definition and colour' (*Monthly Notices*, xxv. 231). And the facility given by his method to their construction brought comparatively large instruments within the reach of an extensive class of amateur astronomers.

A pair of five-foot transits, constructed by Cooke for the Indian Trigonometrical Survey, were described by Lieutenant-colonel Strange before the Royal Society on 16 Feb. 1867 (*Proc. R. Soc.* xv. 385). They were among the largest portable instruments of their class, the telescopes possessing a clear aperture of five inches.

Cooke invented an automatic engine, of excellent performance, for the graduation of circles, and was the first to devise machinery for engraving figures upon them. He perfected the astronomical clock, and built nearly one hundred turret-clocks for public institutions and churches. Admirable workmanship was combined, in all his instruments, with elegance of form, while the thoroughness characteristic of his methods was exemplified in the practice adopted by him of cutting his own tools and casting his own metals. Simplicity, truthfulness, and modesty distinguished his private character. He was admitted a member of the Royal Astronomical Society in 1859, and contributed to its proceedings a paper, 'On a new Driving-clock for Equatorials' (*Monthly Notices*, xxviii. 210). He left two sons, well qualified to carry on his business.

[Monthly Notices, xxix. 130; Athenæum, 1868, ii. 534; Les Mondes, xviii. 331.] A. M. C.

COOKE, THOMAS POTTER (1786–1864), actor, was born on 23 April 1786, in Titchfield Street, Marylebone, where his father, whom he lost in his seventh year, practised as a surgeon. The sight of a nautical melodrama inspired Cooke with a passion, not for the stage, but for the sea. In 1796, accordingly, he sailed on board H.M.S. Raven to Toulon, in the siege of which port he took part. He was present (1797) at the battle off Cape St. Vincent, and was engaged in other actions. After narrowly escaping drowning off Cuxhaven, where the vessel on which he sailed was lost, and the crew had to take refuge in the rigging, he reached England, only to sail again on board the Prince of Wales, carrying Rear-admiral Sir Robert Calder, to the blockade of Brest. The peace of Amiens, 1802, deprived him of occupation. In January 1804 he made his *début* in an insignificant character at the Royalty Theatre in Wellclose Square. He was then engaged by Astley for the Amphitheatre, where he appeared as Nelson. He subsequently played at the Lyceum, and then joined the company of H. Johnston, who opened a theatre in Peter Street, Dublin. In 1809 he was engaged by Elliston as stage manager of the Surrey Theatre, at which house he remained a favourite. On 19 Oct. 1816 he appeared at Drury Lane as Diego Monez, an officer, in a melodrama attributed to Bell, and called 'Watchword, or the Quito Gate.' His name appears during the one or two following seasons to new characters, chiefly foreigners, such as Monsieur Pas in 'Each for Himself,' Almorad, a Moor, in 'Manuel' by Maturin, Hans Ketzler in Soane's 'Castle Spectre,' &c. On 9 Aug. 1820 Cooke made a great success at the Lyceum as Ruthven, the hero of the 'Vampire,' and in the following year strengthened his reputation as Dirk Hatteraick in the 'Witch of Derncleugh,' a version of 'Guy Mannering,' George in the 'Miller's Maid,' and Frankenstein (1823) in 'Presumption, or the Fate of Frankenstein.' Cooke then joined the Covent Garden company, and played Zenocles in 'Ali Pasha,' by Howard Payne, on 19 Oct. 1822, Richard I in 'Maid Marian' on 3 Dec. 1822, and other parts. When, in 1825, Yates and Terry took the Adelphi, Cooke was engaged and played Long Tom Coffin in Fitzball's drama 'The Pilot.' At the close of the season he visited Paris, and presented 'Le Monstre' (Franken-

stein) eighty successive nights at the Porte-Saint-Martin. In 1827 he was at Edinburgh, where he was frequently seen by Christopher North, who more than once alludes to him in the 'Noctes Ambrosianæ,' speaking of him as 'the best sailor out of all sight and hearing that ever trod the stage,' praise in which all authorities have concurred. In 1828–9 he was again at the Adelphi. His most conspicuous success was obtained at the Surrey, on 6 June 1829, as William in Douglas Jerrold's 'Black-eyed Susan.' After playing it over a hundred nights he was engaged to appear in it at Covent Garden, where he remained until 1834, when Bunn, who managed both theatres, transferred him to Drury Lane. Two years later he returned to Covent Garden, to act under Osbaldistone. In October 1857 he played as a star at the Standard. For the Jerrold Remembrance Night (29 July 1857) he appeared at the Adelphi as William. His last appearance was at Covent Garden, for the benefit of the Dramatic College, on 29 Oct. 1860, when he once more played William in a selection from 'Black-eyed Susan.' He died on 10 April 1864, at 37 Thurloe Square, the house of his son-in-law. After the death of his wife, a few months before his own, he had given up his own houses in Woburn Square and at Ryde. He was buried in Brompton cemetery. By his will he left 2,000*l.* to the master, deputy master, and wardens of the Dramatic College, the interest of which, scarcely adequate to the occasion, was to be paid for a prize nautical drama. In compliance with the terms of the grant, 'True to the Core,' a drama by Mr. Slous, was played on 8 Jan. 1866. Since that time no more has been heard of the bequest. In addition to the characters mentioned, Cooke was seen to advantage as Aubrey in the 'Dog of Montargis,' as Roderick Dhu, as Philip in 'Luke the Labourer,' as Poor Jack, and the Red Rover.

[Genest's Account of the English Stage; Era, 10 April 1864; Cole's Life of Charles Kean, 1859, New Monthly Magazine; Theatrical Times; Sunday Times; Biography of the British Stage, 1824, &c.] J. K.

COOKE, THOMAS SIMPSON (1782–1848), musical composer, was born in Dublin in 1782, and received his first musical instruction from his father. Subsequently he became a pupil of Giordani, and in 1797 was engaged as leader of the band in the Crow Street Theatre. After some years he ventured to appear in a new capacity, as a dramatic singer, choosing for his first appearance the part of the Seraskier in Storace's 'Siege of Belgrade.' His success was such as to warrant his representing the same part in London at the Lyceum Theatre on 13 July 1813. On 14 Sept. 1815 he began his long connection with Drury Lane Theatre, appearing in Linley's 'Duenna.' For many years he held the post of principal tenor, and from about 1821 the direction of the music was placed in his hands. For some time he appeared alternately as a singer and as orchestral leader. He was a member of the Philharmonic Society, and occasionally appeared as leader of the band at its concerts. He belonged also to the Royal Academy of Music, though he was not one of the original members. From 1828 to 1830 he was one of the musical managers of Vauxhall Gardens. For many years he sang in the choir of the Bavarian Chapel, Warwick Street, Regent Street. These various engagements were of course quite subsidiary to his work as musical director of Drury Lane. The arrangement of all the musical compositions produced there during some twenty years was entrusted to him, and in days when the composers' intentions were entirely subordinated to popular effect, such arrangements entailed not a little trouble upon the director. The adaptation of prominently successful foreign operas to the English stage was held to involve as a matter of course the composition of more or less suitable numbers to be inserted according to the exigencies of public taste. Among the mass of operas and plays with incidental music which were produced during his directorship it is extremely hard to disentangle his original compositions from those which he borrowed, with a merely general acknowledgment, from all kinds of sources. The following list, taken with some alterations from Grove's 'Dictionary of Music,' contains the names of the more important productions in which he had a larger or smaller share:—'Frederick the Great,' an operatic anecdote, 1814; 'The King's Proxy,' 1815, both written by S. J. Arnold [q. v.]; 'The Count of Anjou,' 1816; 'A Tale of other Times' (in collaboration with Bochsa), December 1822; 'Abu Hassan,' adapted from Weber's opera of the same name, April 1825; 'The Wager, or The Midnight Hour,' a pasticcio adapted from Mrs. Inchbald's 'Midnight Hour,' November 1825; 'Oberon, or the Charmed Horn,' another adaptation from Weber, 1826; 'Malvina,' February 1826; 'The White Lady,' adapted from Boieldieu, with several interpolated songs, &c., October 1826, i.e. two months before the opera was produced in a more complete form at Covent Garden; 'The Boy of Santillane,' 1827; 'Isidore de Merida,' from Storace, 1828 (an overture and two songs by Cooke); 'The Brigand,' and three songs in 'Peter the

Great,' 1829; 'The Dragon's Gift,' 1830; 'The Ice Witch' and 'Hyder Ali,' 1831; 'St. Patrick's Eve,' 1832. For Macready's productions of 'The Midsummer Night's Dream,' 1840; 'Acis and Galatea,' 1842; 'King Arthur,' 1842, &c., Cooke 'arranged' the incidental music, relying, in the case of the two last, chiefly upon the compositions of Handel and Purcell; in 'King Arthur' he drew upon Purcell's other works to a large extent, sacrificing some of the best numbers in the composer's score. One of his last works for the stage was 'The Follies of a Night' (Planché), 1845. Of all his compositions, one song alone, 'Love's Ritornella' from 'The Brigand,' achieved a lasting success. From about 1830 onwards he had given a good deal of attention to glee composition, and several of his productions in this branch of art gained prizes at the catch and glee clubs. 'Six Glees for Three and Four Voices' were published in 1844, and others singly. As early as 1828 he published a treatise entitled 'Singing exemplified in a Series of Solfeggi and Exercises, progressively arranged,' and he subsequently became a widely popular singing master. Among his many distinguished pupils the most eminent is Mr. Sims Reeves, whose first London appearance was made under Cooke's auspices. In 1846 he was appointed leader at the Concerts of Antient Music, succeeding John Fawcett Loder in that capacity. He died at his house in Great Portland Street, 26 Feb. 1848, and was buried at Kensal Green.

[Grove's Dict. of Music; Gent. Mag. 2nd ser. xxix. 559; Quarterly Musical Mag. x. 371, &c.] J. A. F. M.

COOKE, WILLIAM (*d.* 1553), judge, was born at Chesterton, Cambridgeshire, and educated in the university of Cambridge. He studied law first at Barnard's Inn and subsequently at Gray's Inn, of which he was admitted a member in 1528. He was called to the bar in 1530. In Lent 1544 he was elected reader at Gray's Inn, but in consequence of an outbreak of the plague did not read. On 2 Dec. 1545 he was elected recorder of Cambridge. He was also counsel to King's Hall, and steward of Corpus Christi College, Christ's College, Trinity Hall, and Gonville Hall. In autumn 1546 he was again elected reader at Gray's Inn, having received in the previous Trinity term a writ of summons to take the degree of serjeant. The ceremony took place on 3 Feb. 1545-6, Cooke receiving from Gray's Inn a present of 8*l.* towards the expenses connected therewith. The usual feast was held at the invitation of Lord-chancellor Wriothesley in Lincoln's Inn Hall. He was appointed king's serjeant on 22 Oct. 1550, and on 15 Nov. 1552 received a puisne judgeship in the common pleas. He died on 24 Aug. 1553. He was buried in the church of Milton, Cambridgeshire, where a brass with two Latin inscriptions still preserves his memory.

[Cooper's Annals of Cambridge, i. 429, 435, 452, v. 265; Dugdale's Orig. 117, 137, 293; Chron. Ser. 88, 89; Foss's Lives of the Judges; Cooper's Athenæ Cantab.] J. M. R.

COOKE, WILLIAM (*d.* 1780), a writer on numismatic and antiquarian subjects, was instituted to the vicarage of Enford, Wiltshire, in 1733, and held it until his death. He was also rector of Oldbury and Didmarton, Gloucestershire, and chaplain to the Earl of Suffolk. He published: 1. 'The Works of Sallust translated into English . . .,' 1746, 8vo. 2. 'An Inquiry into the Patriarchal and Druidical Religion, Temples, &c., . . . with an introduction in vindication of the several Hieroglyphical figures described and exhibited in the course of the work,' London, 1754, 4to. 3. Second edition of No. 2, with additions, and the title, 'An Inquiry into Patriarchal and Druidical Religion, Temples, &c., being the substance of some letters to Sir Hildebrand Jacob, Bart., wherein the Primæval Institution and Universality of the Christian Scheme is manifested; the Principles of the Patriarchs and Druids are laid open and shown to correspond entirely with each other, and both with the doctrines of Christianity . . .' Illustrated with copper-plates. Second edition, London, 1755, 4to. 4. Boyse's 'New Pantheon,' sixth edition, revised and corrected by W. C., 1772, 12mo; another edition, 1777, 8vo.

Cooke died at Enford on 25 Feb. 1780. For some time previously he had suffered from ill-health, but managed to compile and send to press a laborious numismatic work, which was corrected and published by his son in 1781, with the title, 'The Medallic History of Imperial Rome, from the first triumvirate . . . to the removal of the Imperial seat by Constantine the Great . . .,' 2 vols., London, 1781, 4to. Cooke applies coins to the illustration of Roman history and the lives of the emperors. The plan of the book is good, but the engravings are very poor. Most of the coins seem to have been previously published in other works.

[Gent. Mag. 25 Feb. 1780, vol. l.; Nichols's Lit. Anecd. ii. 264-7; Hoare's Wiltshire, s. v. 'Enford;' Brit. Mus. Cat.] W. W.

COOKE, WILLIAM (1711-1797), provost of King's College, Cambridge, was born in St. James's, Westminster, 15 Oct. 1711. He was sent to Harrow in 1718, and placed

upon the foundation at Eton in 1721. In 1731 he became a scholar, and in 1734 a fellow, of King's College, Cambridge. He graduated B.A. in 1735, and soon afterwards became an assistant-master at Eton. In May 1743 he was unanimously elected head-master, but found his health too weak for the place, and in 1745 took the college living of Sturminster-Marshall, Dorsetshire. In 1748 he was elected fellow of Eton College, and resigned Sturminster on being presented to the rectory of Denham, Buckinghamshire; he was also bursar of Eton. In 1765 he proceeded D.D., and was appointed chaplain to the Earl of Halifax. In 1768 he accepted the rectory of Stoke Newington. On 25 March 1772 he was unanimously elected provost of King's College, Cambridge. He was vice-chancellor of the university in 1773. In April 1780 he received a prebend in Ely, and on 9 Aug. was appointed to the deanery. He died at Bath 20 Oct. 1797.

He married Catherine, daughter of Richard Sleech, canon of Windsor, in January 1746, and had by her twelve children. His second daughter, Catherine, married Bishop Samuel Hallifax [q. v.], whose epitaph was written by Cooke. Cooke published a few sermons, and in 1732 a small (anonymous) collection of poems called 'Musæ Juveniles,' including a Greek tragedy upon Solomon, called Σοφία Θεήλατος. In one of the sermons (1750) upon the meaning of the expression in the second Epistle of St. Peter, 'a more sure word of prophecy,' he defends Sherlock against Conyers Middleton, and produced a little controversy. He composed an epitaph for himself in a south vestry of King's College Chapel, attributing whatever he had done to the munificence of Henry VI. One of his sons, Edward Cooke [q. v.], became secretary at war in Ireland. Another son, William Cooke, was fellow of King's College, Cambridge, professor of Greek at Cambridge from 1780 to 1792, and rector of Hempstead-with-Lessingham, Norfolk, from 1785 till his death, 3 May 1824. He published an edition of Aristotle's 'Poetics' in 1785, to which was appended the first translation of Gray's 'Elegy' into Greek verse, a performance which had many imitators at the time (Nichols, *Lit. Anecd.* ix. 154–5). Mathias praises Cooke's translation as equal to Bion or Moschus, and calls the author an 'extraordinary genius' (*Pursuits of Literature*, Dial. iii.); but De Quincey in 'Coleridge and Opium Eating' declares that 'scores of modern schoolboys' could do as well. In 1789 he also published 'A Dissertation on the Revelation of St. John,' comparing the Apocalypse to the 'Œdipus Tyrannus' of Sophocles and to Homer. He verified the old saying as to the result of such studies by afterwards becoming deranged (*Gent. Mag.* for 1798, p. 774, and 1824, ii. 183).

[Nichols's Lit. Anecd. ix. 629, 630; Harwood's Alumni Etonenses, p. 50; Le Neve's Fasti, i. 349, 357; Gent. Mag. 1797, ii. 901, 953.] L. S.

COOKE, WILLIAM (1757–1832), legal writer, second son of John Cooke, was born at Calcutta, where his father was a member of the council, in 1757, and was educated at Harrow and Caius College, Cambridge, graduating B.A. in 1776. He was admitted a student of Lincoln's Inn on 19 Nov. 1777. He was called to the bar there in November 1782, and in 1785 published a small treatise on the 'Bankrupt Laws.' He soon obtained a considerable practice in chancery and bankruptcy, and in 1816 was made K.C. and bencher of his inn. In 1818 he was commissioned by Sir John Leach, V.C., to proceed to Milan for the purpose of collecting evidence concerning the conduct of Queen Caroline. He reached Milan in September of that year, and reported the result of his investigations in July 1819. The report, which was forthwith laid before the cabinet, led to the introduction of the celebrated 'Bill of Pains and Penalties against Her Majesty.' About this time Cooke began to be much troubled by frequent attacks of gout, and abandoned court practice. He continued, however, to practise as a chamber counsel until 1825, when he retired from the profession. He was one of the witnesses examined before the commission on chancery procedure in 1824. During the last few years of his life he resided at his house, Wrinsted or Wrensted Court, Frinsted, Kent, where he died on 14 Sept. 1832. His work on the 'Bankrupt Laws' passed through eight editions, and was during his life the standard authority on the subject. It has long been superseded by more modern treatises, and the successive modifications which the law of bankruptcy has undergone during the last fifty years have rendered much of it entirely obsolete. It still, however, retains a certain value for the practitioner as an eminently lucid and virtually exhaustive digest of the earlier law. The fourth edition appeared in 1797, and the eighth and last, revised by George Roots (2 vols. 8vo), in 1823. Cooke is often erroneously credited with the works of William Cook [q. v.], miscellaneous writer.

COOKE, WILLIAM BERNARD (1778–1855), line engraver, was born in London in 1778. He was the elder brother of George Cooke [q. v.], and became a pupil of William Angus, the engraver of the 'Seats of the Nobility and Gentry in Great Britain and Wales.' After the termination of his apprenticeship he obtained employment upon the plates for Brewer's 'Beauties of England and Wales,' and then undertook the publication of 'The Thames,' which was completed in 1811, and for which he engraved almost all the plates. His most important work was the 'Picturesque Views on the Southern Coast of England,' chiefly from drawings by Turner, which he produced between 1814 and 1826, conjointly with his brother, George Cooke, and for which he executed no less than twenty-two plates, besides many vignettes. He also engraved after Turner 'The Source of the Tamar' and 'Plymouth,' and in 1819 five plates of 'Views in Sussex,' which were published with explanatory notices by R. R. Reinagle. Besides these he engraved 'Storm clearing off,' after Copley Fielding, for the 'Gallery of the Society of Painters in Water Colours,' 1833, as well as plates for Rhodes's 'Peak Scenery,' 1818, De Wint's 'Views in the South of France, chiefly on the Rhone,' 1825, Cockburn's 'Pompeii,' 1827, Stanfield's 'Coast Scenery,' 1836, Noel Humphreys's 'Rome and its surrounding Scenery,' 1840, and other works. He likewise published 'A new Picture of the Isle of Wight,' 1812, and 'Twenty-four select Views in Italy,' 1833. He was an engraver of considerable ability, and excelled especially in marine views, but the works which he published did not meet with much success. He died at Camberwell, of heart disease, 2 Aug. 1855, aged 77.

COOKE, SIR WILLIAM FOTHERGILL (1806–1879), electrician, was born at Ealing, Middlesex, in 1806. His father was a surgeon there, but was afterwards appointed professor of anatomy at Durham, to which place the family removed. Cooke was educated at Durham and at the university of Edinburgh, and at the age of twenty entered the Indian army. After five years' service in India he returned home, intending to qualify himself for his father's profession, and passed some time on the continent, studying first at Paris, and subsequently at Heidelberg under Professor Müncke. While with Professor Müncke in 1836 his attention was directed towards electric telegraphy, the probable practicability of which had been previously demonstrated in various quarters in an experimental way. Indeed, the idea of the magnetic needle had, from the early part of the seventeenth century, occupied the minds of scientific men. Dr. Müncke had closely followed the course of discovery, and, for the purpose of illustrating his lectures at the university, had constructed a telegraphic apparatus on the principle introduced by Baron Schilling in 1835. Cooke's genius instantly caught at the prospect that was thus unfolded. Up to that time the electric telegraph had not been experimented upon much beyond the walls of the laboratory and the class-room, and the young medical student conceived the idea of at once putting the invention into practical operation in connection with the various railway systems then rapidly developing. He abandoned medicine, and devoted his mind to the application of the existing knowledge and instruments for telegraphy. Early in 1837 he returned to England, with introductions to Faraday and Roget. By them he was introduced to Professor Wheatstone, who had made electric telegraphy a special study, and had so far back as 1834 laid before the Royal Society an account of important experiments on the velocity of electricity and the duration of electric light. Cooke had already constructed a system of telegraphing with three needles on Schilling's principle, and made designs for a mechanical alarm. He had also made some progress in negotiating with the Liverpool and Manchester Railway Company for the use of his telegraphs. After one or two interviews, in which Wheatstone seems to have frankly revealed to Cooke all he had done towards perfecting the electric telegraph, a partnership was agreed upon between them, and duly entered into in May 1837. Wheatstone had neither taste nor leisure for business details, while Cooke possessed a good practical knowledge, much energy, and business ability of a high order. Wheatstone and Cooke's first patent was taken out in the same month that the partnership was entered into, and was 'for improvements in giving signals and sounding alarms in distant places by means of electric currents transmitted through electric circuits.' Cooke now proceeded to test the utility of the invention, the London and Blackwall, the London and Birmingham, and the Great Western railway companies successively allowing the use of their lines for the experiment. It was found, however, that with five needles and five line wires the expense was too great, and in that form the electric telegraph was given up. In 1838 an improvement was effected whereby the number of needles was reduced to two, and a patent for this was taken

out by Cooke and Wheatstone. Before a parliamentary committee on railways in 1840, Wheatstone stated that he had, conjointly with Cooke, obtained a new patent for a telegraphic arrangement. The new apparatus required only a single pair of wires instead of five, and was greatly simplified. The telegraph was still too costly for general purposes. In 1845, however, Cooke and Wheatstone succeeded in producing the single needle apparatus, which they patented, and from that time the electric telegraph became a practical instrument, and was speedily adopted on all the railway lines of the country. In the meantime a bitter controversy arose between Cooke and Wheatstone, each claiming the chief credit of the invention. Cooke contended that he alone had succeeded in reducing the electric telegraph to practical usefulness at the time he sought Wheatstone's assistance, and on the other hand Wheatstone maintained that Cooke's instrument had never been and could never be practically applied. More of the actual work of invention was no doubt done by Wheatstone than by his partner, though Wheatstone could not altogether withhold from Cooke a certain share of the honour of the invention. He admitted that he could not have succeeded so early without Cooke's 'zeal and perseverance and practical skill,' but held that Cooke could never have succeeded at all without him. An arrangement was come to in 1843 by which the several patents were assigned to Cooke, with the reservation of a mileage royalty to Wheatstone; and in 1846 the Electro-Telegraph Company was formed in conjunction with Cooke, the company paying 120,000*l.* for Cooke and Wheatstone's earlier patents.

For some years Cooke employed himself very actively in the practical work of telegraphy, but does not appear to have achieved much in the way of invention after his separation from Wheatstone. He tried to obtain an extension of the original patents, but the judicial committee of the privy council decided that Cooke and Wheatstone had been sufficiently remunerated, and that the electric telegraph had not been so poor an investment as they had been led to believe by the press, the shareholders having received a bonus of 15*l.* per share, besides the usual dividend of four per cent. on 300,000*l.* The Albert gold medal of the Society of Arts was awarded on equal terms to Cooke and Wheatstone in 1867; and two years later Cooke was knighted, Wheatstone having had the same honour conferred upon him the year before. A civil list pension was granted to Cooke in 1871. He died on 25 June 1879.

COOKE, WILLIAM JOHN (1797–1865), line engraver, was born in Dublin 11 April 1797, but came to England with his parents when only a year old. He was placed under the tuition of his uncle, George Cooke, the engraver, and in 1826 he received from the Society of Arts a gold medal for the great improvements which he made in engraving upon steel. He was employed upon the annuals, Stanfield's 'Coast Scenery,' Daniell's 'Oriental Annual,' and other illustrated publications of that day; but upon their decline about 1840 he left England and settled at Darmstadt, where he died 6 April 1865. His best plates are those after Turner of 'Nottingham' and 'Plymouth' in the 'Views in England and Wales,' 'Newark Castle' in Scott's 'Poetical Works.' Besides these he engraved 'The Thames at Mortlake,' also after Turner, 'Calais Pier,' after David Cox, for the 'Gallery of the Society of Painters in Water Colours,' and 'Returned from his Travels, or the Travelled Monkey,' after Sir Edwin Landseer.

[Bryan's Dict. of Painters and Engravers, ed. Graves, 1886; information from Mrs. Cooke.] R. E. G.

COOKES, SIR THOMAS (*d.* 1701), benefactor of Gloucester Hall, Oxford, belonged to an old Worcestershire family, and resided at Bentley Pauncefot in Worcestershire. He was a liberal patron of Bromsgrove grammar school, and endowed the school of Feckenham. By his will, dated 19 Feb. 1696, and proved in the prerogative court of Canterbury 15 Oct. 1701, he gave 'to the archbishop of Canterbury, the bishops of Oxford, Lichfield, and Gloucester, and to the vice-chancellor and all the heads of colleges and halls in the university of Oxford, for the time being and their successors,' the sum of 10,000*l.* to purchase lands, the profits whereof were to be devoted 'either to build an ornamental pile of buildings in Oxford and endow the same with so many scholars' places and fellowships as they should think the revenue would maintain, or to endow such other college or hall in Oxford with such and so many fellowships and scholars' places as they should think fit.' In the election to fellowships and scholarships preference was to be given to those who had been educated at Bromsgrove or Feckenham. The executors and the law courts kept the bequest unsettled till 1714, when the property was acquired by Glou-

cester Hall, and (by royal letters patent, dated 14 July 1714) the hall was converted into Worcester College. It appears that Cookes had originally intended that the 10,000*l.* should be devoted to building a workhouse in Worcestershire, and that he had abandoned this intention at the instance of Dr. Woodroffe of Gloucester Hall. The Rev. John Baron, fellow of Balliol, in 1699 preached a sermon before Cookes at Feckenham, in the hope of diverting the stream of bounty to Balliol, but the sermon failed to produce the desired effect. Cookes died 8 June 1701.

A. H. B.

COOKESLEY, WILLIAM GIFFORD (1802–1880), classical scholar, was born at Brasted in Kent on 1 Dec. 1802, and was educated at Eton and at King's College, Cambridge, where he graduated B.A. in 1825, M.A. in 1827. He was for many years one of the assistant masters at Eton. In 1857 he was appointed vicar of Hayton, Yorkshire, and became incumbent of St. Peter's, Hammersmith, in 1860, and rector of Tempsford, Bedfordshire, in 1868. He died on 16 Aug. 1880. His publications on classical subjects are: 1. 'Selections from Pindar. With English Notes,' 1838, 8vo. 2. 'Pindari Carmina. Notas quasdam Anglice scriptas adjecit G.G.C.,' 1844, &c., 8vo (another edition, 'pars prima,' 1850, &c., and an edition in 2 vols., 1851). 3. 'Selecta e Catullo' (with notes), 1845, 12mo. 4. 'Account and Map of the Ancient City of Rome,' 1850; and a similar 'Account and Map of Ancient Athens,' 1851, 8vo (also 1852, 8vo). 5. 'Selecta e Propertio' (with notes), 1851, 12mo. 6. 'Eton Selections from Ovid and Tibullus' (with notes), 1859, 12mo (another edition, 1860, 12mo). 7. 'Cæsar's Gallic War' (with English notes), 1861, 12mo. Cookesley also published: 8. 'Sermons,' London, 1843, 12mo; and 'Old Windsor Sermons,' London, 1844, 12mo. 9. 'A revised translation of the New Testament,' 1859, &c., 8vo. 10. 'A few Remarks on some of the more prominent errors contained in Bishop Colenso's Book on the Pentateuch,' London, 1863, 8vo. 11. 'Memorial Sketch of F. J. Cookesley, edited by W. G. C.,' 1867, 12mo. 12. Various pamphlets published between 1845 and 1867 (see *Brit. Mus. Cat.*)

[Men of the Time, 10th ed. 1879, 11th ed. 1884 ('Necrology'); Martin's Handbook of Contemporary Biog. 1870; Athenæum, 21 Aug. 1880, No. 2756, p. 240; Brit. Mus. Cat.]

W. W.

COOKSON, GEORGE (1760–1835), general, sixth son of Captain Thomas Cookson, R.N., and grandson of William Cookson of Wellington, Shropshire, was born at Farnborough, Hampshire, on 29 April 1760. He entered the royal navy in 1773, but after his father's death in 1775 Lord North gave him a cadetship to the Royal Military Academy at Woolwich. He entered the royal artillery as second lieutenant in 1778, and was promoted lieutenant in 1780. His early service was principally in the West Indies, and on one occasion, namely, in 1785, he commanded all the artillery on the Black River until its evacuation. In 1792 he was promoted captain-lieutenant, and in the following year accompanied the Duke of York's army to the Netherlands. He opened the first English battery against the city of Valenciennes, and commanded the English gunners in the trenches and at the storm of that city. On the conclusion of the campaign he was promoted captain and appointed to the command of No. 7 company, 5th battalion, and in 1800 was made major by brevet. In that year he commanded the royal artillery with General Maitland's expedition against Belleisle, which afterwards joined the force sent against Ferrol under Sir James Pulteney, and was eventually incorporated with the artillery under Sir Ralph Abercromby's command in the Mediterranean. Cookson was appointed to manage the landing of the field-pieces in Abercromby's disembarkation on the coast of Egypt, and he was so rapid that the guns were in action almost as soon as the infantry, and did great service in covering the landing of the rest of the army. During the whole Egyptian campaign Cookson greatly distinguished himself, especially at the siege of Alexandria, when for a time he commanded all the fifty-two guns employed at the siege, and in the attack on the castle of Marabout on 22 Aug., when he was publicly thanked by Sir Eyre Coote (1762–1824) [q.v.] On 29 Oct. 1801 he was made commandant of the ancient Pharos, and appointed to command all the artillery in Egypt, and he was afterwards presented with a gold medal by the grand vizier, an honour conferred on no other artillery officer (Duncan, *History of the Royal Artillery*, ii. 132). After his return to England he was promoted lieutenant-colonel, and in September 1804 was appointed to command the artillery in the Dublin district. He had made the acquaintance of Lord Cathcart in the Netherlands, and at that general's special request he was appointed to command all the artillery accompanying the expedition to

Hanover in 1805. The expedition, however, did nothing, and after its failure Cookson returned to Dublin. He was again, upon Lord Cathcart's request, ordered to accompany that general's more important expedition to Denmark in 1807, and commanded the batteries on the right during the bombardment of Copenhagen; but he received no recognition of his services on this occasion, though the officer commanding the artillery, Colonel Blomefield, was made a baronet. In October 1808 he embarked in command of the forty-eight guns and twelve hundred artillerymen ordered to form part of Sir David Baird's army intended for the Peninsula, and when Baird joined Sir John Moore, Cookson took command of all the horse artillery with the combined army. He commanded it with great ability throughout Moore's retreat, and especially distinguished himself at the action off Benevente on 29 Dec. 1808, when General Lefevre-Desnouettes was taken prisoner. At the close of the retreat, when but three miles from Corunna, he successfully blew up two great magazines of powder, containing twelve thousand barrels, to save them from the enemy, but he missed the battle of Corunna, as he had embarked with the horse artillery the night before. In April 1809 he received the command of the artillery in the Sussex district, which he held until 1 Aug. 1814, except in July 1809, when he commanded the artillery in South Beveland during the Walcheren expedition up to the fall of Flushing. Few artillery officers saw more varied service than Cookson, but as he did not happen to serve in the Peninsula or at Waterloo he never even received the C.B. for his services. He was promoted in regular course colonel on 17 March 1812, major-general on 4 June 1814, and lieutenant-general on 22 July 1830. He died at Esher on 12 Aug. 1835. He was married three times, and his eldest son, an officer in the 3rd guards, was killed at the battle of Fuentes de Onoro on 5 May 1811.

[Royal Military Calendar; Duncan's History of the Royal Artillery; Gent. Mag. for October 1835.] H. M. S.

COOKSON, HENRY WILKINSON, D.D. (1810–1876), master of Peterhouse, born 10 April 1810 at Kendal, Westmoreland, was the sixth son of Thomas and Elizabeth Cookson. Wordsworth, for whose poetry he always cherished a reverential admiration, was one of his godfathers. He was educated at Kendal grammar school and at Sedbergh school, then under the head-mastership of the old friend of the family from whom he derived his second baptismal name. In October 1828 he commenced residence at St. Peter's College, as he always preferred to style the most ancient college in the university of Cambridge. His private tutors were Henry Philpott, who as bishop of Worcester pronounced the last words over his grave, and the famous Hopkins of Peterhouse. In due time he was appointed to the tutorship; his pupils included Sir William Thomson (Lord Kelvin). He was proctor in 1842. In 1847 he succeeded Dr. Hodgson as master of his college, and as rector of Glaston in Rutlandshire till 1867, when this rectory was by the new college statutes detached from the headship with which it had hitherto been combined. In 1855 he married Emily Valence, elder daughter of Gilbert Ainslie, D.D., master of Pembroke College, by whom he had one daughter. He died, after an illness of a few days, on 30 Sept. 1876, in Peterhouse Lodge; and, in accordance with a wish expressed by him in writing two months before, he was buried in the churchyard of the college benefice of Cherry Hinton, near Cambridge, a simple academical funeral appropriately closing a university life of great though absolutely unostentatious usefulness.

During a large proportion of the twenty-nine years through which he held his mastership Cookson was one of the most influential, as he was always one of the most active and most conscientious, members of his university. With mathematical acquirements he combined strong scientific sympathies and distinct literary tastes; he was a sound protestant of the least sensational type; in politics his clear-eyed conservatism shrank with unconcealed dislike from the more imaginative phases of party opinion. His services to the Cambridge Philosophical Society, of which he was president 1865–6, were too solid to be forgotten; and he worked with a will when chairman of Mr. Cleasby's committee at the parliamentary election of 1868. It remained no secret that in 1867 he was offered, through Lord Derby, the bishopric of Lichfield, which he declined. He was energetic in his college and the university. Not only was he elected vice-chancellor on five occasions (1848, 1863, 1864, 1872, 1873); but he was almost continuously a member of the council of the senate from the institution of that body in 1856; and there was hardly a syndicate of importance concerned with the organisation or reconstruction of the university studies and examinations from 1851 onwards of which he was not a member. He also contributed very materially to the settlement of the relations between the university and the town of Cambridge, which came under discussion during his vice-chancellorship in 1873. In all the transactions in which

he bore a part he showed the prudence and caution for which his name became proverbial at Cambridge; but he was hardly less distinguished by a genuine zeal for progress, manifesting itself especially in a desire for the extension of the studies of the university, and an increase in the number of its professorial chairs. Thus he delighted in such practical evidence of the success of his endeavours as the augmentation of the Woodwardian Museum, the enlargement of the botanical garden, and the erection of the new museums; and he was one of the first to advocate the application of a proportion of the funds of the colleges to the endowment of new professorships. Altogether, he has no slight share in the extraordinary development reached by Cambridge in the years which immediately preceded the time of his death, and in those which have since ensued. An admirable portrait of Cookson by Lowes Dickinson occupies a place of honour in the college hall at Peterhouse; in the parish church of Cherry Hinton, partially restored in remembrance of him, a mural brass, designed by G. G. Scott, records his deserts and renders justice to his qualities. The inscription was composed by W. M. Gunson of Christ's College.

[Memorial articles in Cambridge Chronicle, 7 Oct., and Saturday Review, 14 Oct. 1876; personal knowledge.] A. W. W.

COOKSON, JAMES (1752–1835), divine, was a native of Martindale, Westmoreland. He received his academical education at Queen's College, Oxford, as a member of which house he proceeded B.A. on 13 June 1781, and M.A. on 13 July 1786. Meanwhile he had been instituted, in September 1775, on his own petition, to the rectory of Colmer with Priors Dean, Hampshire, to which he was inducted the following October. He was also for many years curate of the neighbouring village of Steep, and about 1796 was presented to the vicarage of Harting, Sussex. Popular report says that he was put into the last-named living as a *locum tenens* only, and that when asked to resign he said 'his conscience did not allow him to do so.'

Despite the cares of three parishes some miles apart, Cookson found time for writing. He published, first, 'Thoughts on Polygamy, suggested by the dictates of Scripture, Nature, Reason, and Common-sense; with a description of Marriage and its obligations; a contemplation of our National System of Laws relative thereto; and particularly, an examination of 26 Geo. II, ch. 33, commonly called the Marriage Act. Including remarks on Thelyphthora [by the Rev. Martin Madan] and its scheme, with some hints for the prevention of Prostitution. . . . In two parts,' 8vo, Winchester, 1782. His next work was 'A New Family Prayer-Book. . . . Elucidated with explanatory notes and observations on an entire new plan,' 8vo, Winchester, 1783 (3rd ed. 1786). This was followed by 'The Universal Family Bible . . . illustrated with notes and observations,' fol. London, 1784. Between the appearance of the last two works Cookson had become master of Churcher's College, Petersfield, at which place he died on 6 Jan. 1835, aged 83, and was buried on the 12th in the chancel of Colmer church. He was of eccentric habits, and is said once to have announced in church, 'I have forgotten my sermon, but I will read you a true account of the battle of Waterloo.' In 1814 he was elected a fellow of the Society of Antiquaries.

[Hervey's Hist. of Colmer and Priors Dean, pp. 190–4; information from the vicar of Harting; Gent. Mag. 1835, iii. 441; Brit. Mus. Cat.; Watt's Bibl. Brit.] G. G.

COOKWORTHY, WILLIAM (1705–1780), porcelain-maker, was born at Kingsbridge, Devonshire, in 1705, his mother being left a widow with five sons and some daughters. About the time of the father's death nearly all their property was lost in the South Sea stock speculation. The widow retired to a smaller house, in which she maintained herself and daughters by the most rigid economy. William Cookworthy and his brother eventually started in a small drug business in Plymouth. In this they were so successful that they had their mother to live with them in Nut Street, Plymouth, and were enabled to allow her to be a liberal benefactor to the poor. The brothers appear to have followed the business of wholesale druggists for many years. Although educated by the Society of Friends, Cookworthy did not, until he had reached his thirty-first year, manifest any strong religious feelings. At this time he retired from trade, and after a period of probation he accepted a gift in the ministry, and laboured diligently in the western counties. For about twenty-five years Cookworthy held a meeting in his own house 'every first day evening when at home,' as we are informed by the 'Testimony of Monthly Meeting' for 1781. A Friend of Plymouth thus described him: 'A tall, venerable man, with three-cornered hat and bushy, curly wig, a mild but intellectual countenance, and full of conversation. . . . He used to travel as a wholesale chemist through Cornwall, and at Godolphin was always the guest of Nancarrow, superintendent of mines in that district, who being also

a scientific person, they used to sit up most of the night engaged in their favourite subjects.'

In a letter written on 5 May 1745 Cookworthy says: 'I have lately had with me the person who has discovered the china earth. . . . It was found in the back of Virginia, where he was in quest of mines, and having read Du Halde, he discovered both the *petunze* and *kaolin*.' The first true porcelain manufactured in Europe was made by Böttcher in 1709 at Dresden, and in 1710 he was appointed director of the Meissen factory, and after five years of experiment he succeeded in making the fine porcelain known as 'Dresden china.'

Cookworthy having seen the *kaolin* from Virginia (china clay), and the *petunze* (china stone, or growan stone), he discovered on Tregonning Hill the Cornish china clay, and soon after he noticed that a portion of the granite, or moorstone, of the same district resembled in some respects the *petunze*, and on exposing it to a white heat in a crucible he obtained 'a beautiful semi-diaphanous white substance.' This was the Breage china stone, but, containing black particles which burnt red, it was not fitted for a porcelain glaze. At Carlegges, in St. Stephen's parish, near St. Austell, he found subsequently both the clay and the stone of the desired purity. This appears to have been between 1755 and 1758. The clay and stone found in St. Stephen's was on the property of Lord Camelford, who assisted Cookworthy in his first efforts to make porcelain in Plymouth, the works being established at Coxside. His progress was slow, and it was not until 1768 that he obtained a patent for the exclusive use of Cornish clay and Cornish stone in the manufacture of porcelain. In the Plymouth works from fifty to sixty persons were employed. The company—Lord Camelford being one of the firm—obtained a high-class porcelain painter and enameller from Sèvres. Henry Bone [q. v.] was educated in this pottery.

Cookworthy afterwards sold the patent right to Mr. R. Champion of Bristol, who founded a pottery in that city. Neither the porcelain works in Plymouth nor those in Bristol were profitable, and in 1777 the patent right was sold to a company in Staffordshire. Cookworthy brought his chemical knowledge to bear on the porcelain manufacture, and he appears to have been the first chemist who in this country obtained cobalt-blue direct from the ores. A well-known Staffordshire potter writes of Cookworthy's discovery: 'The greatest service ever conferred by one person on the pottery manufacture is that of making them acquainted with the nature and properties of the materials, and his introduction of "growan stone" for either body or glaze, or both when requisite.' Cookworthy is said to have been a believer in the *dowsing*, or divining rod, for discovering mineral veins, and we learn that he became a disciple of Swedenborg. As a Friend he was universally esteemed by the Society; as a minister he was zealous, engaging, and persuasive; as a lover of science he was much appreciated, as is proved by the fact that Sir Joseph Banks, Dr. Solander, and Captain Cook dined with him at Plymouth before their voyage round the world. Cookworthy died on 16 Oct. 1780, aged 76.

[Prideaux's Relics of William Cookworthy, 1853; Testimony of Monthly Meeting, Plymouth, 1781; Polwhele's History of Cornwall; Burt's Review of Plymouth, 1816; History of Staffordshire Potteries, Hanley, 1827; Price's Treatise on Mining; De la Beche's Catalogue of British Pottery and Porcelain.] R. H–t.

COOLEY, THOMAS (1740–1784), architect, was born in 1740 in England, and originally apprenticed to a carpenter. He obtained a premium at the Society of Arts in 1753, and in 1769 was the successful competitor for building the Royal Exchange in Dublin, which he completed in 1779, and continued to reside in Dublin. He also erected a tower to Armagh Cathedral, and the Newgate prison in Dublin; neither of these was a successful work. He was employed on several other public buildings in Dublin, but died in 1784 while engaged on the Four Courts, having only completed the western wing. From 1765 to 1768 he contributed architectural designs to the exhibitions of the Free Society of Artists.

[Redgrave's Dict. of English Artists; Graves's Dict. of Artists, 1760-1880; Pasquin's Artists of Ireland; Catalogues of the Free Society of Artists.] L. C.

COOLEY, WILLIAM DESBOROUGH (*d.* 1883), geographer, was elected a fellow of the Royal Geographical Society of London in 1830, and was made an honorary free member in 1864 (*Proceedings of Royal Geogr. Soc.* for 1883, p. 233). He wrote for Lardner's 'Cabinet Cyclopædia,' 'The History of Maritime and Inland Discovery,' 3 vols. 1830–1, a work of considerable merit which was translated into French. On the publication of M. Douville's 'Voyage au Congo' in 1832 Cooley wrote a criticism in the 'Foreign Quarterly Review,' in which the fraud practised by that pretended explorer was exposed. After that time his name was chiefly associated with African subjects. In 1852 he

published 'Inner Africa laid open, in an attempt to trace the chief lines of communication across that continent south of the Equator.' In this work, almost exclusively based upon Portuguese and native authorities, he maintained that there existed but one great lake in Central Africa, and that the snowy mountains alleged to have been seen by Krapf and Rehmann were myths. His protest against the existence of snowy mountains was repeated even after Von der Decken and Thornton's return from the Kilimanjaro in 1863, and as late as 1864 he insisted upon the Nyassa and Tanganyika forming one continuous lake. Although the progress of geographical discoveries in Africa upset many of his pet theories, he has the credit of being the first to deal in a scientific spirit with questions which have since been solved by actual observations (*Athenæum*, 10 March 1883, p. 315). In these discussions he distinguished himself by the vigour of his style of writing and his mastery of the literature of African geography. He was also a good linguist, and had perfected his acquaintance with Ki-Swahili, the *lingua franca* of Eastern Africa, by taking lessons from an intelligent native of Zanzibar, whom accident had brought to the port of London.

For many years he lived quite alone in humble lodgings in London, supported almost solely by the civil list pension of 100*l.*, granted to him in 1859. He died on 1 March 1883.

Besides the works already noticed and some treatises on geometry he published: 1. 'The Negroland of the Arabs examined and explained; or, an Inquiry into the early History and Geography of Central Africa,' Lond. 1841, 8vo. 2. An edition of 'Larcher's Notes on Herodotus,' 2 vols. 1844. 3. 'The World surveyed in the XIX Century; or Recent Narratives of Scientific and Exploratory Expeditions translated, and, where necessary, abridged,' 2 vols. Lond. 1845–8, 8vo. 4. 'Sir Francis Drake, his Voyage, 1595, by Thomas Maynarde,' edited from the original manuscripts for the Hakluyt Society, 1849. 5. 'Claudius Ptolemy and the Nile; or an inquiry into that geographer's real merits and speculative errors, his knowledge of Eastern Africa, and the authenticity of the Mountains of the Moon,' Lond. 1854, 8vo. 6. 'Dr. Livingstone's Reise vom Fluss Liambey nach Loanda in 1853–4 kritisch und kommentarisch beleuchtet,' 1855. 7. 'The Memoir on the Lake Regions of East Africa reviewed,' Lond. 1864, 8vo. In reply to Capt. R. Burton's letter in the 'Athenæum,' No. 1899. 8. 'Dr. Livingstone and the Royal Geographical Society,' Lond. 1874, 8vo. 9. 'Physical Geography, or the Terraqueous Globe and its Phenomena,' Lond. 1876, 8vo. A thoroughly original work.

He also contributed several memoirs to the 'Journal of the Royal Geographical Society,' and a series of controversial articles on African subjects to the 'Athenæum' (MARKHAM, *Fifty Years' Work of the Royal Geogr. Soc.* pp. 233).

[Authorities cited above; Cat. of Printed Books in Brit. Mus.] T. C.

COOLING or COLING, RICHARD (*d.* 1697), clerk of the privy council, became secretary to the Earl of Manchester on that nobleman's being appointed lord chamberlain in 1660, and, being with the earl at Oxford when he was incorporated M.A. (8 Sept. 1665), received the same degree from the university. He was apparently on intimate terms with Pepys, to whom when in liquor he was communicative on the subject of the relations of the king with Lady Castlemaine, and other court gossip. He also acted as secretary to the Earl of Arlington during his tenure of the office of lord chamberlain (1674–80). On 21 Feb. 1688–9 he was sworn clerk of the privy council in ordinary. He died on 19 June 1697. Wood says that he 'was originally, as it seems, of All Souls' College.' He is described as Dr. Richard Cooling in the 'Cal. State Papers' (Dom. 1667), p. 28.

[Pepys's Diary, 5 July 1660 and 30 July 1667; Wood's Fasti (Bliss), ii. 285; Luttrell's Relation of State Affairs, i. 504, iv. 241.] J. M. R.

COOMBES, ROBERT (1808–1860), champion sculler, was born at Vauxhall, Surrey, in 1808, and as a waterman at an early age commenced life on the Thames. In height he was about 5 feet 7 inches, and his rowing weight was generally under 9 stone. Constantly matched against men his superiors in strength and size, he by his superior skill, tact, and attentive training almost always proved victorious in the long run. His first public race was for the Duke of Northumberland's purse of sovereigns on 4 July 1836. His principal sculling matches were against Kipping, Kelly, Jack Phelps, Campbell, Tom Mackinning, Henry Clasper, and Tom Cole, and his most important oars' race was rowed with his brother as partner against the two Claspers. In sculling he beat J. Phelps, F. Godfrey, George Campbell, and the majority of the best men. On 3 Oct. 1838 he beat J. Kelly from Westminster to Putney, but the latter meeting with a slight accident, and doubts being expressed as to the nature of the victory, the two men raced again on the following day, when Kelly was beaten easily. This was the first right-

away match without fouling of which there is any record. As an oarsman his achievements were numerous. With J. Phelps he beat W. Pocock and J. Doubledee. He was stroke in the winning four at the Liverpool regatta in 1840, winning against five crews. On 8 Sept. 1842 he beat R. Nowell, Westminster to Putney, for 50*l.* a side; in the following month they rowed again, when Coombes was again the better man, and was presented with a piece of plate in commemoration of his victories. At Newcastle-on-Tyne, 18 Dec. 1844, he staked 100*l.* to 50*l.* and was the winner in a sculling match with H. Clasper. He became the champion of the Thames on 19 Aug. 1846, beating C. Campbell easily. He held the championship longer, and rowed the course, Putney to Mortlake, faster, than any other man of his time; but on 24 May 1852, when aged forty-three, although backed at 2½ to 1 for 200*l.* a side, he was beaten by Thomas Cole, a man half his age, by half a length, in a race lasting 29 minutes 12 seconds, one of the most perfectly contested races ever witnessed. With Wilson he won the pairs at the Thames Regatta in 1845, and with his brother, Tom Coombes, beat Richard and Harry Clasper in a match on the Thames in 1847. As a trainer he was employed by the Cambridge crew in 1852, and in the same year his name is found in connection with a book bearing the following title, 'Aquatic Notes, or Sketches of the Rise and Progress of Racing at Cambridge; by a Member of the C.U.B.C., with a Letter containing hints on Rowing and Training by Robert Coombes, champion sculler,' 1852, 12mo. Although he was sometimes defeated in pair and four oar races, yet he and his crews always came off with credit and stoutly contested the victories with their opponents. In speed and style during his time he was never surpassed, and he rowed many more races than any other man except H. Clasper. After an honourable career, in his later days he fell into poverty. His mind failed, and he was removed nine months before his death to the Kent lunatic asylum at Maidstone, where he died on 25 Feb. 1860, and was buried at the expense of his friends in Brompton cemetery on 7 March, when the leading London watermen followed his remains to the grave.

[Illustrated London News, 29 May 1852, p. 436, with portrait; Field, 3 March 1860, p. 176; Bell's Life in London, 23 Aug. 1846, p. 8, 4 March 1860, p. 6.] G. C. B.

COOMBES, WILLIAM HENRY, D.D. (1767–1850), catholic divine, was born at Meadgate in the parish of Camerton, Somersetshire, on 8 May 1767. At the age of twelve he was sent to Douay College, where he was ordained priest in 1791. During the troubles consequent on the French revolution he and several of his fellow-collegians with difficulty escaped to England. Soon afterwards he was appointed professor of divinity at Old Hall Green. On 12 Dec. 1801 Pope Pius VII created him D.D. In 1810 he accepted the mission of Shepton Mallett, Somersetshire, which he held for thirty-nine years. In 1849 he retired to the Benedictine monastery at Downside, where he died on 15 Nov. 1850.

Coombes, who was an accomplished Greek scholar, published: 1. 'Sacred Eloquence; or, Discourses selected from the Writings of St. Basil the Great and St. John Chrysostom, with the Letters of St. Eucherius to his kinsman, Valerian, on the Contempt of the World,' Lond. 1798, 8vo. 2. 'The Escape from France of the Rev. W. H. Coombes, written by himself, with his Letter on the generous behaviour of the Duke of York to some of the students of Douay who escaped from Doulens,' Lond. 1799, 8vo. Printed also in 'The Laity's Directory for the Church Service' (1800). 3. Letters on catholic affairs under the signature of 'The British Observer,' which appeared in Cobbett's 'Register' in 1804–6. 4. 'Life of St. Francis of Sales,' translated from the French of Marsollier, 2 vols. Shepton Mallett, 1812, 8vo. 5. 'The Spiritual Entertainments of St. Francis de Sales, with an addition of some Sacred Poems,' Taunton, 1814, 12mo, translated from the French. 6. 'The Essence of Religious Controversy,' Lond. 1827 and 1839, 8vo. 7. 'Life of St. Jane Frances de Chantal,' 2 vols. Lond. 1830, and again 1847, 8vo.

[Oliver's Catholic Religion in Cornwall, p. 272; Gillow's Bibl. Dict. i. 558; Cat. of Printed Books in Brit. Mus.] T. C.

COOPER, ABRAHAM (1787–1868), battle and animal painter, was born in Red Lion Street, Holborn, London, 8 Sept. 1787. His father was a tobacconist and afterwards an innkeeper in Holloway, and at one time at Edmonton. At the age of thirteen he found some employment as an assistant at Astley's Theatre. At this period the lad was fond of drawing animals, and produced several portraits of horses for a Mr. Phillips. When he was about twenty-two years of age there was a favourite horse in the possession of Mr. Henry (afterwards Sir Henry) Meux of Ealing. Cooper desired to have a portrait of this horse, but could not afford to pay for it, and when a friend remarked, 'Why not try your own hand on old "Frolic"?' Cooper set to work, and having finished a picture, he showed it

to Sir Henry Meux, who not only purchased it, but became his friend and patron. He now began studying art by making careful copies of horses from engravings published in the 'Sporting Magazine.' These were drawn by Benjamin Marshall, to whom Cooper was introduced by his uncle Davis, the well-known equestrian. Davis wished his nephew to ride at Covent Garden Theatre, then under the management of John Kemble, about 1812–1813. This, however, he declined, but placed himself under Marshall. In 1812 he became a member of the Artists' Fund, and subsequently its chairman. In 1816 he was awarded a premium of 150 guineas by the British Institution for his picture of the 'Battle of Waterloo.' In 1817 he was elected as associate of the Royal Academy, and in 1820 a full member of that body for his picture of 'Marston Moor' (engraved by John Bromley). He retired in 1866. He died at his residence, Woodbine Cottage, Woodlands, Greenwich, on 24 Dec. 1868, and was buried in Highgate cemetery. In this year he had at the Royal Academy a subject from 'Don Quixote.' Cooper's first picture, 'Tam o' Shanter,' engraved by J. Rogers, was exhibited at the British Institution in 1814. It was purchased by the Duke of Marlborough. In 1816 Cooper sent to the same gallery 'Blucher at the Battle of Ligny,' for which he received from the directors of that institution 150 guineas. The picture passed into the collection of the Earl of Egremont. In 1817 he had seven pictures at the Royal Academy. He now resided at No. 6 New Millman Street, near the Foundling Hospital. Many other pictures followed, among which were 'Rupert's Standard,' 'The First Lord Arundell taking a Turkish Standard at the Battle of Strigonium,' 'The Battle of Bosworth Field,' 'William III wounded the day before the Battle of the Boyne,' 'The Gillies' Departure,' 'The Battle of Assaye,' &c. Two small pictures painted in 1818, viz. 'A Donkey and Spaniel' and 'A Grey Horse at a Stable-door,' are in the Sheepshanks collection at South Kensington Museum. As a painter of battle pieces Cooper stands pre-eminent. In the British school he held a somewhat analogous position to that which Peter Hess at one time held in Germany, and Horace Vernet occupied for many years in France. It is said, however, that Cooper could never bear to be compared with his French rival. His knowledge of horses was, from his early training, profound. Among the celebrated racehorses of his day he painted and drew 'Camel,' 'Mango,' 'Galaba,' 'Bloomsbury,' 'Pussy,' 'Amato,' 'Shakespeare,' 'Deception,' 'Phosphorus,' and many more. He largely contributed to the 'New Sporting Magazine.' There is in the department of prints and drawings, British Museum, a folio volume containing numerous engravings after Cooper, who exhibited, between 1812 and 1869, 407 works: 332 at the Royal Academy, 74 at the British Institution, and one in Suffolk Street.

[Sandby's History of the Royal Academy, i. 369; Art Journal, 1869, p. 45; Athenæum, 1869, p. 23; manuscript notes in the British Museum.]

L. F.

COOPER, ALEXANDER (*fl.* 1630–1660), miniature painter, was elder brother of Samuel Cooper [q. v.], and, like his brother, instructed in the art of miniature-painting by their uncle, John Hoskins. Though he never attained the excellence that his brother did, he was very successful, being a good draughtsman, painting both in oil and water colours. Vertue states that a miniature he saw in the possession of Dr. Mead was painted in the style of the Olivers; and there was a miniature of a lady in the Strawberry Hill collection. He settled for some time in Amsterdam, where he met Joachim Sandrart, the painter and biographer, who narrates that Cooper showed him a great quantity of miniatures of the British court done by himself. He subsequently passed into the service of Queen Christina of Sweden, after which further details of his life are wanting. A miniature of this queen was exhibited at the special exhibition of miniatures in 1865. A portrait of William of Orange was engraved after Cooper by Hondius in 1641. It is stated that there was a picture by him at Burghley House, representing the story of Actæon and Diana. This would point to his having painted in other styles than miniature, and landscapes are also recorded as bearing his name.

[Redgrave's Dict. of English Artists; Nagler's Künstler-Lexikon; De Piles's Lives of the Artists; Heineken's Dictionnaire des Artistes; Sandrart's Deutsche Academie, vii. 328; Fiorillo's Geschichte der Mahlerey in Gross-Britannien; Weinwich's Dansk, Norsk, og Svensk Konstner-Lexicon; Catalogue of the Special Exhibition of Miniatures, 1865.]

L. C.

COOPER, ANDREW or ANTHONY (*fl.* 1660), is best known as the author of '*Στρατολογία*, or the History of the English Civil Warrs in English Verse,' London, 1660. The poem, written in lumbering heroics and in behalf of the royalists, contains (in the words of the title-page) 'a brief account of all fights, most skirmishes, stratagems, and sieges in England, from the very first originall of our late warres till the martyrdom of King Charles the First of blessed Memory.' The dedication to 'Conyers Darcy, Lord Dar-

cey, Meynell, and Conyers' is signed 'An. Cooper,' and the title-page bears the initials 'A. C.' The author describes himself as an eye-witness of most of the incidents he details. On these grounds he has been identified with Andrew Cooper, the signature of a news-reporter who was with the king at York in 1642, and who published in London in August of that year 'A Speedy Post, with more news from Hull, York, and Beverley,' 1642. Mr. Corser gave Cooper the christian name of 'Anthony,' but Andrew is doubtless correct.

[Corser's Collectanea, iv. 441–5; Park's Restituta, iii. 331; Brit. Mus. Cat.] S. L.

COOPER, ANTHONY ASHLEY, first Baron Ashley and first Earl of Shaftesbury (1621–1683), was the eldest son of John Cooper of Rockborne in Hampshire, and of Anne, daughter of Sir Anthony Ashley [q. v.] of Wimborne St. Giles in Dorsetshire, in whose house he was born on 22 July 1621, and after whom he was named. He had one brother George, and one sister Philippa, who died in 1701. His parents were both 'of the first rank of gentry in those countries where they lived.' His father, created a baronet in 1622, sat for Poole in the parliaments of 1625 and 1628. Lady Cooper died in July 1628, and Sir J. Cooper, who married again, in March 1631. At ten years of age, therefore, Anthony Ashley Cooper became a king's ward, and the extensive estates which he inherited in Hampshire, Wiltshire, Dorsetshire, and Somersetshire came under the control of the court of wards, then excessively corrupt. His father had left considerable debts, and through the agency of his great uncle, Sir Francis Ashley, then king's serjeant-at-law, a collusive order of sale was obtained, by which several properties were sold below their fair value to Sir Francis himself and to some of the commissioners, in spite of the prolonged resistance of the trustees appointed by Sir John Cooper. From further injury at the same hands the lad was saved in 1634 by his own helpfulness. He went in person to claim the help of Noy, the king's attorney, who had drawn up the settlement which was now attacked, and, in his own words, performed his part 'with that pertness that he told me he would defend my cause though he lost his place.' He afterwards reckoned his losses at 20,000*l.*; but his rental is stated at over 7,000*l.* a year, and he was always a wealthy man (*Shaftesbury Papers*, Public Record Office). He had also plantations in Barbadoes, and a quarter share in a ship, the Rose, engaged in the Guinea trade.

After the death of his father, Sir Anthony Ashley Cooper, along with his brother and sister, lived with Sir Daniel Norton, one of his trustees, at Southwick, near Portsmouth, and was educated by various tutors. Upon Sir Daniel's death in 1635, the children went to reside with another trustee, Mr. Tooker, at Maddington, near Salisbury. In 1636 he was entered as a gentleman-commoner at Exeter College, Oxford, and went into residence in 1637, but joined Lincoln's Inn in the beginning of 1638. He is said to have made an unusual progress in learning (*Raleigh Redivivus*, p. 7), and appears from his own account to have been recognised as a leader by the freshmen of his college. In his 'Autobiography' he gives most interesting notices of his exploits in that capacity, though in the physical contests which took place he was at a disadvantage from his small stature. On 25 Feb. 1639 Cooper married Margaret, daughter of the lord keeper Thomas Coventry [q. v.] By this marriage he was connected with the two Coventrys, Henry [q. v.] and William [q. v.], and with George Savile, afterwards Lord Halifax, whose father married his wife's sister. The versatility of mind and intellectual eagerness were already strongly developed. He took particular interest in palmistry and astrology, and many expressions in after life make it probable that he was not without some belief in these arts.

After his marriage Cooper lived partly at Coventry's London residences of Durham House in the Strand, and Canonbury House, Islington, and partly at his own Dorsetshire home at Wimborne St. Giles. At Tewkesbury, where he visited, he appears to have made himself so popular, that he was created a freeman of the town, and was chosen member without a contest at the election of March 1640, though his sitting in parliament was contrary to law, as he was not yet of age. There is no mention of any part taken by him in the debates of this parliament. Lord Coventry died on 14 Jan. 1640. Cooper remained with his mother-in-law until Durham House and Canonbury were given up in January 1641, when he went to live with his brother-in-law, the second Lord Coventry, at Dorchester House in Covent Garden.

Cooper failed to obtain a seat in the Long parliament which met on 3 Nov. 1640. He contested Downton in Wiltshire, and a double return was made. In the autobiographical fragment of 1646 he states that the committee of privileges decided in his favour, but that no report was made to the house. The journals record that a day had been fixed in February 1641 for the hearing, but there is no further notice of the matter. Thus the seat remained vacant. It appears that Denzil Holles, who had married the daughter of Sir

Francis Ashley, had a suit against Cooper in the court of wards, and very probably opposed him in this matter.

Cooper does not appear to have taken either side in the contest of king and parliament. He was, however, at Nottingham on a visit to his brother-in-law, William Savile, when the king set up his standard on 25 Aug. 1642, and witnessed the scene; and he was also with the king at Derby. By the spring of 1643 he was a declared adherent of the royal cause, and attended Charles at Oxford with Falkland's introduction on a deputation from the gentry of Dorsetshire, with offers of help if the Marquis of Hertford were sent with a small force into the western counties. By Hertford he was commissioned, with three others, to treat for the surrender of Weymouth and Dorchester, and was made colonel of a regiment of horse and captain of a troop of foot, both raised at his own expense. Hertford also appointed him governor of Weymouth and Portland Isle when they should be taken. These places surrendered in August 1643, but Prince Maurice, who had succeeded Hertford, did not confirm the appointment. Cooper at once applied to Hertford, who pressed the matter upon Charles through Hyde, but in vain. Hyde then went in person to the king, and by urgency obtained the commission for the governorship of Weymouth. This is Clarendon's own account, but Cooper himself does not mention any difficulty or dispute in the matter. Charles, however, expressed to Hertford his hope that Cooper and the person appointed by the latter to Portland would, in view of the importance of the places and of his own inexperience in military matters, shortly resign their offices (*Shaftesbury Papers*). Cooper was at the same time made sheriff and president of the king's council of war for Dorsetshire.

It is difficult to explain the sudden change which now came over Cooper's action. He himself declares that it was through conviction that Charles's aim was destructive to religion and to the state that he gave up, in the beginning of January 1644, all his commissions under the king, and went over to the parliament. Clarendon states that it was from anger at his removal from the government of Weymouth; but there is no evidence that he was removed, and he himself asserts that only a few days before leaving the king's side he received the promise of a peerage and a letter of thanks written by Charles's own hand. It is of course very possible that the knowledge that he was expected shortly to resign his governorship at Weymouth had a good deal to do with his decisions. Clarendon has, too, a long account of Cooper's intention to raise another force called the 'Clubmen,' who were to put down both parties, and to insist on a general amnesty and a fresh parliament. An account by a royalist, Trevor, to Ormonde, however (Christie, *Life of first Earl of Shaftesbury*, i. 52), does not suggest any bad motive; and it must be remembered that the royal cause was at the time uppermost in Dorsetshire, and that Cooper left a large part of his property at the king's mercy (cf. Traill, *Shaftesbury*, English Worthies Series, pp. 20–2). It is worth noticing, in conclusion, that he had shortly before written to Clarendon, then Sir E. Hyde, asking for a license to leave his country, and complaining that the king's forces were weak and ill-paid there, and that his affairs were generally in bad condition (*Clarendon Papers*, 1734, Bodleian Library). On 24 Feb. Cooper presented himself at the parliament's quarters at Hurst Castle, and then went to London, where, on 6 March 1644, he appeared before the committee of both kingdoms, and expressed his conviction of the justice of the parliamentary cause, and his willingness to take the covenant.

On 3 Aug. 1644 Cooper received a commission from the Dorset committee to command a brigade of horse and foot in Dorsetshire with the title of field-marshal. His first service was in the taking of Wareham, the garrison of which capitulated on 10 Aug. On the 14th he was added to the committee for governing the army in Dorsetshire, and upon the recommendation of the committee of sequestration he was allowed to compound for his sequestrated estates by a fine of 500*l.*, which, however, was never paid, and which was discharged by Cromwell in 1657. On 25 Oct. Cooper was appointed by the standing committee at Poole commander-in-chief of the parliamentary forces of fifteen hundred men in Dorsetshire; and in the beginning of November he took by storm, after a desperate action of six hours, in which he showed great courage, the house of Sir John Strangways at Abbotsbury. A vivid illustration of the ferocity of the fighting, and of an unexpected strain of cruelty in Cooper's character, is afforded by his own statement that he not only wished to refuse quarter to the garrison, but did his best to burn them alive in the house (*Autob. Sketch*). He then took Sturminster and Shaftesbury without resistance. In December he assisted, under orders from Major-general Holborne, in relieving Blake at Taunton, then besieged by the royalists. In his 'Autobiographical Sketch' he asserts that he had a commission from Essex to command in chief during this expedition. This, however,

is a misstatement, and, since the sketch was composed in 1645, appears a deliberate one, intended to enhance his self-importance. Essex's commission, dated 31 Oct. (*Shaftesbury Papers*, Record Office), distinctly states that Shaftesbury is to take orders from himself, both houses of parliament, and from the major-general commanding in the west, i.e. Holborne (compare LUDLOW, *Memoirs*, i. 135, and VICARS, *Parl. Chron.* iv. 77). In May 1645 he was appointed to command the forces which were to besiege Corfe Castle, but, troops not being forthcoming, he was unable to accomplish anything. It was in 1645 that he was called upon to bear witness against Denzil Holles on the charge of transactions with Charles. Locke states that Cooper declined to give evidence in a case in which he was at enmity with the person concerned, that he was in consequence threatened with a commitment, and that this conduct brought about a lasting friendship with Holles (LOCKE, *Memoirs*, p. 474). In June he went with his wife to Tunbridge to drink the waters, and in October was again with the committee of the west, of which he was usually chairman. In December he succeeded in obtaining the force necessary to subdue Corfe Castle, which surrendered in April 1646. At the end of the month he was at Oxted in Surrey. His period of military service now came to an end. Though not actually included in the self-denying ordinance, inasmuch as he was not a member of the House of Commons, his connection with the presbyterian element in the parliament, and the strong parliamentary feeling which, joined with that of religious tolerance, was through life his prevailing source of action, doubtless rendered him an object of suspicion to the framers of the model.

In the autumn of 1645 Cooper endeavoured in vain to obtain a confirmation of his election for Downton, being probably disqualified by the ordinance that no one who had been in the king's quarters might sit in either house. Whitelocke, however, records that he 'was now in great favour and trust with the parliament.'

During the next seven years Cooper occupied himself with private and local affairs. His sympathies and political relations were with the presbyterians, not on doctrinal grounds, but as parliamentarians. In December 1646 he was high sheriff for Wiltshire for the parliament, with leave to live out of the county, and was one of the committee for Dorsetshire and Wiltshire for assessing the contributions for the support of Fairfax's army. His wealth and great position in the county are shown by his expenditure when as sheriff he attended the judges at Salisbury: 'I had sixty men in liveries, and kept an ordinary for all gentlemen at Lawes's, four shillings and two shillings for blue men. I paid for all.' In March he 'raised the county twice and beat out the soldiers designed for Ireland who quartered on the county without order, and committed many robberies.'

Cooper's health was never strong. During his youth he had been subject to acute spasmodic pains in the side, and he now was liable to attacks of ague. In February 1648 he ceased to be sheriff of Wiltshire; in July he was made a commissioner in Dorsetshire for carrying out the ordinance of parliament for a rate for Ireland, and one of the commissioners of the Dorsetshire militia. In February 1649 he was appointed justice of the peace for Wiltshire and Dorsetshire, and for the western counties. On 10 July 1649 his wife suddenly died, leaving no children. He appears to have been devotedly attached to her, but on 25 April 1650 he married Lady Frances Cecil, sister of the Earl of Exeter. After the execution of Charles, Cooper was obedient to the supreme power, acted as magistrate, took the 'engagement' on 17 Jan. 1650, and on 29 Jan. sat at Blandford as commissioner for giving it. On 31 Jan. he went to London. At this point his own diary ceases, and we have no further account of him until 17 Jan. 1652, when he was named by the Rump parliament as a non-parliamentary member of the commission for the reform of the laws, of which Matthew Hale was the leading member. On 17 March 1653 he was by the parliament solemnly 'pardoned of all delinquency,' and was 'made capable of all other privileges as any other of the people of this nation are.' On 20 April 1653 Cromwell broke up the Rump parliament, and appointed a council of state; and in June the Barebones parliament was nominated and summoned. Cooper, one of the few gentlemen in it, was nominated for Wiltshire. Among its first proceedings was a request that Cromwell would himself serve in it, and Cooper was head of the deputation which went for that purpose. The council of state was enlarged to the number of thirty, and he was appointed upon it. Cooper was often a teller for the moderate party, and uniformly acted with Cromwell as against the violent root-and-branch section of this assembly. He was the mouthpiece of the council in recommending the house to keep John Lilburne in custody in spite of his acquittal and of the threatening attitude of the masses; and he was deputed by the house to offer Hampton Court to Cromwell, and reported Cromwell's refusal to the house. When, too, a proposal

was made to construct a completely new code of laws on unheard-of principles, Cooper busied himself with passing into law the recommendations of the commission above mentioned for cheapening legal proceedings and facilitating conveyancing. The reform of the court of chancery was not, however, carried, nor was he successful in passing a bill for the repeal of the 'engagement.' In the debate on tithes, the question upon which the Protector determined to break up the Barebones parliament, he supported Cromwell in desiring that they should be continued. On 12 Dec. a vote, moved by one of Cooper's friends, was passed, by which the parliament put an end to its own existence and gave up its powers to Cromwell. According to Burnet, he was one of those who urged Cromwell to accept the crown, and his desire to secure fair representative government makes the statement probable. He had been immediately appointed on the new council of state of fifteen members, but he never received the salary of 1,000*l.* a year attached to the office. In the election to the new parliament, which turned on the contest of moderates against republicans, Cooper was chosen for Wiltshire, Poole, and Tewkesbury, and elected to sit for Wiltshire. This county had ten members, and ten candidates were proposed by the cavaliers, presbyterians, and Cromwellites combined, against ten republicans headed by Ludlow. Cooper and Byfield addressed the electors from Stonehenge, and all the moderates were elected with Cooper at their head. During the eight months previous to the meeting of parliament he took part in the repeal of the engagement, the settlement of the terms of union with Scotland, and the attempted reform of chancery, and acted as one of the commissioners for ejecting unworthy ministers.

The house met on 3 Sept. 1654, and was dissolved on 22 Jan. 1655. On 28 Dec. 1654 Cooper made his last appearance at the privy council. He had acted strongly with Cromwell while he appeared to be trying for genuine parliamentary government, and was probably compelled to break away from him when he saw that the Protector was now disposed to rule alone; but it is curious that as late as 27 Nov. he was, with Richard Cromwell, a teller in one of the divisions. His second wife died in 1654, leaving two sons, of whom one died in childhood, and the other, Anthony Ashley, succeeded him. Ludlow states that the reason of the breach with Cromwell was Cooper's unsuccessful suit to Mary Cromwell (Carlyle, *Letters and Speeches of Cromwell*, iii. 151), but this seems most improbable (Christie, p. 120 *n.*) On 30 Aug. 1655 he was married a third time, to Margaret, daughter of the second Lord Spencer of Wormleighton, and sister of the Earl of Sunderland, who had been killed at Newbury (*Gent. Mag.* 1850, ii. 367). By this wife, who survived him till 1693, Cooper had no children. She was a woman of an intensely devotional character, but they lived on terms of the warmest affection.

When the new parliament met, on 17 Sept. 1656, Cooper appeared in opposition to Cromwell, at the head of a coalition of presbyterians and republicans. He was again elected for Wiltshire, under the provisions of the Instrument of Government. Cromwell, however, taking advantage of the requirements of the Instrument that all members must possess the council's certificate, would not allow him to take his seat. With sixty-four members similarly excluded, he signed a protest to the speaker, which was delivered by Sir G. Booth, a presbyterian royalist. This proving useless, a remonstrance was drawn up in terms of the most uncompromising opposition to Cromwell, and Cooper's name appears among those of the 93 (or, according to Whitelocke, 116) members who signed it. By the petition and advice, passed on 25 May 1657, the Instrument was superseded, and two houses of parliament were again created. Cooper's name did not appear in the list of 'peers.' Cromwell, it is said, declared that no one was so difficult to manage as the little man with three names (Martyn, *Life*, i. 168). And yet there was evidently no great enmity between them; for it was now (January 1658) that the fine of 500*l.*, imposed on Cooper by the Long parliament for delinquency, was discharged by Cromwell on the former's petition; and it is certain that Cooper and Henry Cromwell were on terms of intimacy. When the new parliament met, on 20 Jan. 1658, the former House of Commons being by the terms of the petition and advice still in existence, the members previously excluded, Cooper among them, took their seats. They immediately began a vigorous opposition; they denied the legality of the petition and advice, and they especially refused to admit the claims of Cromwell's House of Lords. In this opposition Cooper took a leading part, speaking frequently and well. He urged the commons first of all to debate the title which the other house should bear. 'Admit lords,' he said, 'and you admit all.' He strongly supported the motion for a grand committee, by which the utmost opportunity can be afforded for obstruction. It was defeated, Cooper being one of the tellers of the 'ayes.' Dissatisfied, however, with the smallness of the majority,

Cromwell (4 Feb. 1658) immediately dissolved the parliament.

In the election to Richard Cromwell's parliament, which met on 27 Jan. 1659, the ancient constitution was restored. Cooper was returned for Wiltshire and for Poole, a double election at the latter place being decided in his favour, and he once more elected to sit for Wiltshire. He was again a constant and leading speaker in opposition. In the discussion on the bill for the recognition of Richard Cromwell's title he strongly supported a resolution saving the rights of the parliament. He defended a certain member, Henry Nevil, who was charged with being disqualified by blasphemy and atheism, on the ground that no hearsay charge could be admitted; and he favoured the release of the Duke of Buckingham in February. He was, however, unsuccessful in trying to induce the house to begin by debating the limits of the Protector's power. He then vigorously opposed the recognition of the other house, and used his utmost efforts to prolong the discussion regarding the right of the Scotch and Irish members to vote, speaking on 9, 18, and 22 March. On the main question he made a vehement and bitterly personal speech on 28 March 1659, regarded at the time by Burton (if indeed this is the speech to which he refers, CHRISTIE, vol. i. app. iv. *n.*) as sheer obstruction, attacking Oliver Cromwell and the government and ridiculing the so-called 'peers.' The question of transacting business was at length carried on 28 March. Cooper, however, continued his opposition on the bill for settling taxes for the life of Richard and for a certain time after his death, and carried a resolution that after the end of the parliament no tax of any sort should be levied under any previous law or ordinance, unless it had been expressly sanctioned by the house. On the meeting of the Rump, on 7 May 1659, Cooper endeavoured to gain admission on his undecided petition for Downton; but for some reason not clear the petition was not allowed. He was, however, one of the ten elected non-parliamentary members of the council of state, and the only presbyterian in the council. From Ludlow's account, great jealousy was expressed of him as being in Charles Stuart's interest (*ib.* app. iii. p. lx). He took the oath of fidelity to the Commonwealth, and there is no evidence for the charge of intriguing for or corresponding with Charles with which on 18 May 1659 both he and Whitelocke were accused by the republican, Thomas Scott. The charge was indignantly denied by both of them before the council. The matter came before the Rump parliament in September, and he was there acquitted. Eighteen years later, appealing to Charles from the Tower, Cooper solemnly denied the correspondence, when it would have given him a claim upon the king's gratitude. In May 1659 Hyde was informed by Brodrick that Cooper had engaged to raise forces for the king; but his evidence is not of weight, and there is no other. On 4 June he was in correspondence, as one of the council of state, with Monck (*Shaftesbury Papers*, Public Record Office). As late as February 1660 he is mentioned by royalist agents as holding presbyterian views, and as working independently of the royalists; while the correspondence between Hyde and Mordaunt (CHRISTIE, i. 182) goes far in the same direction.

Shortly after the unsuccessful rising of Booth, in August 1659, Cooper was arrested in Dorsetshire, upon the evidence of a boy, who stated that he had carried a letter from him to Booth. Cooper was summoned before the council, and a committee was appointed to inquire into the matter. On 12 Sept., after hearing the committee's report, the council unanimously acquitted Cooper.

In October Cooper stood as usual for the parliamentary cause against Lambert. When the council of state was superseded by the committee of safety, on 25 Oct., he was indefatigable in his efforts to overthrow this committee and restore the power of the Rump. Upon the arrival of Monck's commissioners in London, he and Haselrig obtained a meeting with them at the Fleece Tavern, in Covent Garden, on 16 Nov., and endeavoured unsuccessfully to dissuade them from their arrangement with the committee of safety. On 19 Nov. Cooper, with eight other members of the late council, wrote to assure Monck of their co-operation, and a few days later gave him a commission to command in chief all the forces in England and Scotland. Haselrig and Morley went to Portsmouth, and Cooper was left with a commission to command the forces in London, which it was hoped would revolt. Some suspicion arising, he was taken before Fleetwood and questioned. When asked to give his word that he would not act to their prejudice, he refused, and declared his determination to do all in his power to restore the Rump. He was released, but next night an unsuccessful attempt was again made to seize him.

On 16 Dec. he, with three others, wrote to Fleetwood owning an abortive attempt on the Tower (CHRISTIE, vol. i. app. v.) Only eight days later they actually did secure it. A still more important service was that he and two others induced Lawson, with the fleet, to declare for the parliament (CLARENDON,

pp. 704, 705). The parliament was restored on 26 Dec. by the military, and Cooper was appointed one of the temporary commissioners of the army. Until 7 Jan. 1660 he was one of the four to whom the care of the Tower was entrusted. On 2 Jan. a council of state was created, of whom ten were non-parliamentary, and of these he was the first elected. He once more brought up his old claim to sit for Downton, and it was at last allowed. On 7 Jan. he took his seat and subscribed the 'engagement.' He also received the colonelcy of Fleetwood's regiment of horse. It was at this time that he is described by Ludlow as 'a known bitter enemy to the public and to all good men.' Ludlow also speaks of his 'smooth tongue and insinuating carriage' (CHRISTIE, vol. i. app. iii. p. lxii). He at once took a leading part in endeavouring to obtain the restitution of the excluded members. Mordaunt wrote of him to Hyde thus: 'Cooper yet hath his tongue well hung and words at will, and employs his rhetoric to cashier all officers, civil as well as military, that sided with Fleetwood and Lambert.' Upon Monck's arrival Haselrig summoned those members of the council whom he could trust to meet him, and Cooper, with others of Monck's friends, in vain tried to gain admittance; he endeavoured, too, without success to dissuade the general from obeying the orders given him to dismantle the city. When parliament placed the command of the forces under five commissioners, Cooper's name was proposed, but rejected by 30 to 15. He and others still continued to urge the admission of the excluded members, which took place on 21 Feb., Cooper, as colonel of Fleetwood's regiment, commanding the escort. A new council of state, composed of friends of the Restoration, included his name; and upon Monck being made commander-in-chief, he received a commission as captain of foot in the Isle of Wight (*Shaftesbury Papers*). There is no evidence to support Wood's statement that he also received a commission from Monck as governor of the Isle of Wight. Cooper now steadily pursued the design of restoring Charles, and copies are preserved of letters from Charles to him dated 27 March and 8 April (*ib.*) In the Convention parliament he was returned for Wiltshire, and was one of the twelve deputed by the commons to go to Breda to invite Charles to return. On this journey an accident occurred, by the upsetting of his carriage, which caused an internal abscess that was never cured.

Cooper's apparent inconsistencies during the Commonwealth may be explained by his willingness to accept the *de facto* rule, and his desire for a genuine parliamentary government.

Cooper met the king at Canterbury, and on the nomination of Monck was one of twelve who, though they had fought against the king, were yet, 27 May, placed on the privy council. According to Clarendon (*Life*, i. 278), 'it was believed that his slippery humour would be easily restrained and fixed by his uncle,' Southampton the treasurer. At the head of his regiment he appeared among the troops assembled on Blackheath when the king made his entry into London. He received a formal pardon on 27 June, and further pardons on 10 Feb. and 8 June 1661. Almost his first duty was to examine the prisoners of the anabaptist congregations in the Tower. On 3 June he was called upon to repel, with what success we do not hear, an attack by Prynne, who 'fell upon' him for 'putting his hand to the Instrument' (*Hist. MSS. Comm.* 5th Rep. 204 *a*). On 2 July Prynne seconded a motion for compelling all officers of the protectorate to refund their salaries. Cooper closed the debate with saying that 'he might freely speak, because he never received any salary; but he looked upon the proviso as dangerous to the peace of the nation, adding that it reached General Monck and Admiral Montague.' The motion was rejected by 181 to 151. When the debate on religion came on, upon the question of a moderate episcopacy, Cooper, in the court interest, moved and carried that the debate be laid aside, and the committee adjourned for three months. In the debate which followed the third conference between the houses on the Indemnity Bill he urged lenity. On the motion made against Haselrig he 'was for executing nobody but those who were guilty of the king's blood, and said he thought this man not considerable enough; but moved to put him with the rest.' When the question arose, on the Bill of Attainder on 4 Dec., as to whether the legacies of Cromwell, Pride, Bradshaw, and Ireton, who had been attainted, should be paid, he moved to allow settlements before marriage, or as far back as 1647, i.e. before the king's death. According to Mrs. Hutchinson, Cooper had declared that if the king were brought back not a hair of any man's head, nor a penny of any man's estate, should be touched (CHRISTIE, i. 239). He speedily found that to uphold this was impossible, if he were to continue in favour, and he therefore did the next best thing he could. The fact that he was on the special commission for the trial of the regicides has often been quoted against him. Other commissioners were in the same case, and a year before the Restoration Hyde wrote of him in terms that he certainly would not have used had Cooper been in his eyes guilty of complicity in the

death of the king (*Clarendon State Papers*, iii. 512; CHRISTIE; TRAILL, pp. 46, 47).

On the occasion of the coronation, 20 April 1661, Cooper was raised to the peerage as Baron Ashley of Wimborne St. Giles, the title stipulated in his father's marriage settlement, in case he should rise to such an honour (COLLINS, *Peerage*, iii. 419); and on 13 May, Clarendon having given up the chancellorship of the exchequer, he was appointed to that post and the under-treasurership. This latter office he no doubt owed to his connection with Southampton, whose niece he had married as his third wife; and he held it until 1667, when the treasury was put in commission.

In the debate in the House of Lords on the Corporation Act (passed 19 Dec. 1661), which destroyed presbyterianism in the towns, Ashley, according to his biographer, Martyn (i. 255)—and his testimony is confirmed by later events—took a strongly liberal line. He opposed the illiberal provisions of the Act of Uniformity (19 May 1662), which destroyed presbyterianism in the church, and the Militia Act. He joined Bennet and Bristol in advising Charles to issue his first declaration in favour of the dispensing power (26 Dec. 1662); and when on the meeting of parliament, 18 Feb. 1662–3, a bill to turn the declaration into a law was presented by Lord Roberts, he warmly supported it, 'out of his indifference in matters of religion' (CLARENDON, *Life*, ii. 95). Clarendon speaks strongly of the ability shown by Ashley. He 'spake often, and with great sharpness of wit, and had a cadence in his words and pronunciation that drew attention.'

There seems no doubt that Ashley now threw in his lot with the cabal of young men who were opposing Clarendon. His conduct in the matter of Roberts's bill had caused him to rise rapidly in favour. According to Clarendon, he and Roberts now attended the meetings of the cabinet; and Pepys (15 May 1663) mentions him as one of the favourites at court through Bristol's means, and as the probable successor of Southampton at the treasury, 'being a man of great business, and yet of pleasure and drolling too.' The French ambassador, Comminges, declared of him (9 April 1663) that he was the only man that could be set against Clarendon for talent and firmness; and this opinion is confirmed by many witnesses.

As a minister Ashley was evidently very diligent. Papers written by him exist to show his minute care in collecting details as to the exchequer, customs and excise, the navy, merchant companies, manufactures, and revenues. His views on all trade questions were far in advance of his time; he hated monopolies, declaring that the restraining of a general trade was like the damming of increasing waters, which must either swell them to force their boundaries or cause them to putrefy where they are circumscribed. His practice in office delighted the businesslike Pepys (3 June 1667). Ashley was probably not quite free from corruption. Pepys seems fairly to establish at least one case of genuine bribery (20, 21 May 1666). But nothing has been found to justify the words of Pepys's friend that 'my Lord Ashley will rob the devil and the altar, but he will get money if it be to be got' (9 Sept. 1665).

On the outbreak of the Dutch war, which he favoured in opposition to Clarendon, Cooper was appointed treasurer of the prizes, and one of the commissioners to sit upon all appeals against sentences given by the judge of the admiralty (CLARENDON, ii. 87). His appointment contained a proviso that he was to be accountable to the king alone. Clarendon vehemently opposed this proviso, and, in spite of Ashley's insistence, signed it at length only on Charles's express order. Ashley showed great jealousy in keeping the money entirely under Charles's control, and when his brother-in-law, William Coventry, proposed to devote the proceeds to the war, 'my Lord Ashley did snuff and talk as high to him as he used to do to any ordinary man.' Ashley's compliance with the king in this matter can scarcely be regarded as honourable, considering that he was chancellor of the exchequer. On the other hand, no imputation was ever made against him for misappropriation, nor was any charge brought against him when the accounts were inspected by the commission of 1668. From the first Ashley had taken a leading part in colonial affairs. He had been one of the council appointed on 1 Dec. 1660 for foreign plantations, which met for the first time on 7 Jan. 1661, and then constantly throughout the year (*Cal. State Papers*, Col. Series, 1661–8; *Shaftesbury Papers*, Public Record Office). He was also one of the nine to whom Charles had given a grant of Carolina on 24 March 1663, renewed in June 1665. He took a leading part in the management of the colony, and it was at his request that Locke drew up in 1669 a constitution for it, of which, though aristocratic in form, toleration was an important feature (LOCKE, x. 175, ed. 1812). The manuscript copy in Locke's handwriting is preserved in the 'Shaftesbury Papers.' In 1670 another grant of the Bahamas was given to him and five others, and in this charge too he showed the greatest industry. His interest in the Barbadoes and Guinea

has been noticed. In connection with this subject should be mentioned the bill passed by Ashley in March 1670, in obedience to popular outcry, against the practice of 'spiriting away,' or kidnapping, children for the colonies (*Cal. State Papers*, Col. Series, preface, p. 29).

In the Oxford parliament of 1665 Ashley strongly opposed Downing's appropriation proviso to the subsidy bill. The bill was already in the Lords, but at his instance (CLARENDON, *Life*, pp. 792-803) a few of the chief advisers of the crown were summoned to reconsider it, when he 'enforced the objections with great clearness and evidence of reason.' The reasons do not appear; it was probably only to gratify the king that he took this line, supported for once by Clarendon, an unusual agreement noticed by Ruvigny. They differed widely, however, on the iniquitous Five Mile Act, which, with Southampton and Wharton, he vehemently opposed (BURNET, i. 390). In all questions of toleration Ashley was consistently upright. That he was now in favour at court is shown by the fact that in September 1665, while they were staying at Salisbury to be out of reach of the plague, Charles and the queen paid him a visit at St. Giles (*Miscellanea Aulica*, p. 361).

In June 1666 Ashley was again at Oxford, and while there first formed the acquaintance of Locke, who was studying medicine at Christ Church, and who accompanied him as medical attendant to Sunninghill, where he was obliged to take the waters in consequence of the internal swelling which resulted from the accident at Breda. Locke was now taken under Ashley's patronage, was made his secretary on becoming lord chancellor in 1672, and shortly afterwards secretary to the council of trade and plantations, of which Ashley was president from 1672 to 1676. He was tutor both to Ashley's son and grandson, and the friendship lasted until Shaftesbury's death. Locke's testimony is always favourable to Shaftesbury. Ashley now joined Buckingham in the most vehement support of the bill prohibiting the importation of Irish cattle; an act in direct contradiction to his former strongly expressed views on trade. The explanation least to his discredit is that the period was one of great agricultural depression in England, and that both Buckingham and Ashley were large landed proprietors (PEPYS, 9 April 1667, 1 and 31 Jan. 1668). Carte speaks of a 'private combination between Ashley and Lauderdale to monopolise the trade of cattle between England and Scotland' (iv. 264). It is probable that it was but one way of expressing opposition to the high church-and-king party, of which Ormonde, who would have greatly benefited by the importation, was a leading member. Clarendon, indeed, states (*Life*, ii. 332) that Ashley was not ashamed to urge the accession of fortune to Ormonde as itself a good reason for supporting the bill; and Carte describes him (iv. 265) as doing his best in the committee of privileges to hinder the Irish nobility from taking rank in England. Still more strange was Ashley's conduct in opposing the admission into England of the charitable gifts sent from Ireland to London after the fire. The cattle bill gave rise to debates wherein Ormonde's son, Ossory, used expressions for which, on Ashley's complaint, the house compelled him to apologise (CARTE, iv. 272). Carte also mentions a dispute with Conway during which the latter regretted that he had thus injured himself in Irish opinion, since he was so likely to be the next lord-lieutenant. Ashley, in reply, defended himself on the ground of the separation of the countries, expressed his extreme desire for legislative union, and by his professions of friendship to Ireland convinced Conway that his guess at Ashley's ambition was correct (*ib.* iv. 275). It was probably with reference to these affairs that Ashley wrote to Essex in December 1672: 'My stars have not been very propitious as to Irish affairs or governors' (*Essex Papers*, Brit. Mus.)

In May 1667, on the death of Southampton, the treasury was put in commission. Clarendon states that Charles was compelled to place Ashley upon it, but refused to make him one of the necessary quorum; and that Ashley chose to be thus slighted rather than dispute the point. The cause of Charles's dissatisfaction is not clear; but Pepys (16, 19 Jan. 1667) says that it was because Ashley would not obey his orders as to the disposal of prize goods. He soon, however, became the leading man upon the commission, and his efforts were apparently directed to economy; it is mentioned in especial that he was active in cutting off the customary presents of plate to the ambassadors (CHRISTIE, i. 308).

With the fall of Clarendon Ashley had apparently nothing directly to do. It cannot, indeed, have been displeasing to him, and we know that he was one of those who attended Lady Castlemaine's evenings, where the cabal against the minister was carried on. But Pepys (30 Dec. 1667) mentions Charles's anger with Ashley for his constancy to Clarendon, and the chancellor himself declares that Ashley opposed the impeachment; and there is plenty of further evidence practically conclusive on this point (*ib.* i. 312-13).

Upon Clarendon's fall the government fell

chiefly to Buckingham and Arlington. Buckingham's programme was toleration and comprehension of dissent, and Ashley, from a mixture of interest and principle, joined him warmly (PEPYS, 12 Feb. 1669; MIGNET, *Documents inédits*, &c., iii. 58). Ormonde particularly was still the object of their attacks. They promoted an investigation into his Irish administration and proposed an impeachment (CARTE, iv. 339). Under Buckingham's protection Ashley soon recovered his position with Charles; and, if Burnet may be trusted, he strengthened his influence by 'managing for the king one of his mistresses, Miss Roberts' (i. 484). He now assisted Buckingham by a remarkable paper addressed to the king in favour of toleration to all dissenters except Roman catholics and Fifth-monarchy men, as a necessary measure for increase of population and improvement of trade; urging wider naturalisation with the hope of attracting the ablest foreigners to the country, and suggesting with the same object a measure for the registration of titles to land as an infallible security to the purchaser or lender (CHRISTIE, ii. app. i.) His clear and statesmanlike views are still further shown in the advice he gave the king in 1670 (*ib.* p. 9), with its distinction between trade and commerce, which led to the appointment in 1670 of the commission of trade.

The question of the succession to the throne began already to occupy men's minds. Buckingham first suggested the plan of divorce, and afterwards that of legitimising Monmouth. In 1670, in support of the former project, a bill was brought in for enabling Lord Roos to marry again after obtaining a divorce. Ashley vigorously supported the bill, which was warmly favoured by Charles (MARVELL (Grosart), ii. 316). The result was (*ib.* ii. 326) to strengthen his influence at court. Buckingham, Lauderdale, Ashley, Orrery, and Trevor are named as the governing cabal. In the second scheme Ashley appears also to have co-operated (MACPHERSON, *State Papers*, i. 46), and he soon afterwards kept the idea of using Monmouth as a stalking-horse steadily in view (*Lauderdale Papers*, iii. preface).

The celebrated cabal was a toleration cabinet, but its members were at complete variance on any question into which the advantage of catholicism entered. Thus, when the infamous treaty of Dover was concocted in 1669 and 1670, it was necessary to keep from Buckingham and Ashley at least the condition by which Charles bound himself, for a money gift from Louis, to introduce catholicism into England. At the same time their support, and that of Lauderdale, was necessary to compass the other part of the treaty, the declaration of war against Holland. Accordingly Buckingham was permitted to arrange a mock treaty, the conditions of which were otherwise precisely those of the genuine treaty, but in which the objectionable articles were omitted. In this matter he consulted Ashley, who, while urging caution, took a decided part in arranging its conditions; and on 31 Dec. 1670 the latter, with the rest of the cabal, signed this mock treaty, the real treaty having been signed by Arlington, Clifford, Arundel, and Bellinge. Thus, while Ashley is free of all complicity in the catholic plot, he is fully responsible, from this early stage, for the second and iniquitous Dutch war.

As it was not found practicable to begin the war until March 1672, and as it was desirable not to allow it to be known that the engagement between Charles and Louis had lasted so long, the treaty of 31 Dec. 1670 was now replaced by a duplicate, signed on 2 Feb. 1672 by the same ministers as before; and this was produced to parliament as the original and sole treaty. That is, in common with the other members of the cabal, Ashley lent himself to a deliberate fraud. According to Martyn, Ashley had urged Buckingham not to make the treaty, and had endeavoured to persuade Charles also; but, finding this impossible, did his best to make it favourable for England, and especially he urged that the number of ships employed by France should be reduced, and the number of places to be taken by England increased by Worne and Goree; and this is borne out by Burnet (i. 527), who quotes Shaftesbury's own statements. Buckingham also, in his defence before the commons in 1674, declared that Ashley had joined him in urging the duty of consulting parliament before the war was begun. On the whole, having in mind the view then taken of ministerial responsibility, there is little, with the exception of the fraud implied in signing the 1672 duplicate, to blame in his conduct. There is no evidence of his having been bribed; he received nothing more than the formal presents (after the 31 Dec. 1670 treaty) customary on such occasions; Burnet's statement on this point (i. 535) being contradicted by the fact that no such jewelled picture as he refers to had ever been seen or heard of by those who, if it existed, must have known of it.

In 1670 Ashley had shared in the attempt made by the House of Lords to interfere in a money bill, which led to the loss of the intended supplies. Buckingham and Ashley urged in council that parliament should again be summoned to grant supplies, but were

overruled through French influence. To obtain the money rendered necessary by the Dutch war, Charles now had recourse to the stop of the exchequer, a national act of bankruptcy borrowed from the career of Mazarin, by which the government obtained nearly a million and a half of money. Ashley has been accused of complicity in this, and Macaulay ascribes the plan entirely to him. It was in fact proposed to the king by Clifford, and received Ashley's strenuous opposition. It is stated by Martyn that Clifford had proposed it in 1671, and that it had then been withdrawn in consequence of Ashley's objections. When the proposal was renewed, Ashley laid before the king a paper of five reasons against it (Martyn, i. 415; Christie, ii. 59). In this paper he contends that it is contrary both to law and justice; that it violates the king's promises; that it will bring ruin on thousands of innocent persons; and that it will cause an immediate depression of trade, and raise exultation among all enemies of England. He wrote also a letter to Locke on 23 Nov. 1674, in which he admits having known that it was about to take place, but says that of course he had not betrayed the king's secret; and in this letter he asserts his opposition. Temple also, only a few months after the event, 23 May 1672 (*Works*, ii. 184), positively ascribes the step to Clifford; and Evelyn (12 March 1672) calls the latter the sole adviser, 'though some pretend it was Lord Ashley's counsel.' Ormonde and Lord Mohun appear to have borne similar testimony, saying that they were present in the council when Clifford proposed, and Ashley opposed, the measure. The witnesses on the other side consist of Roger North, who was a bitter opponent; of Burnet, who says (i. 561) that 'Shaftesbury was the chief man in the advice;' that he excused the measure to him by the usury and extortion of the bankers; and that, knowing of it beforehand, he took all his money out of the bankers' hands. Lord Dartmouth also says that Ashley warned Sir C. Duncombe of what was to happen (Burnet, i. 561 *n.*) The accusation is also made in Clarke's 'Memoir of James II,' but this, as well as Burnet's book and Roger North's, was written thirty or forty years after the event. The antecedent improbability that a man of Shaftesbury's clear mind and commercial knowledge should propose such a step is so great as to amount to practical certainty.

On 15 March 1672 appeared the declaration of indulgence for dissenters. This had now Ashley's warm approval. He argued that there was no logical distinction between a single or limited dispensing power and a general one, nor between a dispensing power in civil and in ecclesiastical cases; and he pointed out that in civil cases Charles had already exercised the prerogative twice. He declared that the executive ought to be able to suspend laws in the intervals of parliament; and further that it was to the interest of the church that it should live in content, and to that of trade that it should have nothing to do with religion. He thought that the declaration was favourable to the protestants, and that papists should only be disqualified. The second Dutch war was the other of the great cabal schemes which Ashley vigorously supported. He was ignorant, as has been shown, of the ulterior design of introducing popery, and his defence must rest upon the ground which he always held, of the necessity of maintaining England's naval and commercial supremacy.

Ashley was now made Earl of Shaftesbury and Baron Cooper of Pawlet, the patent being dated 23 April 1672. Shortly afterwards he was, as related in Stringer's memoir (Christie, ii. app. iii.), offered the post of lord high treasurer, and appears to have gone to extraordinary pains to avoid it. For this unwillingness the stop of the exchequer would be sufficient reason. It is difficult to disbelieve the memoir, which is extremely circumstantial; Shaftesbury, however, nowhere mentions the offer himself, but, on the contrary, speaks of the stop of the exchequer as 'being the prologue of making the Lord Clifford high treasurer.'

After the great sea battle of June 1672 Shaftesbury and Clifford accompanied Charles to the Nore, and by Shaftesbury's advice the fleet, instead of again putting out to fight De Ruyter, was sent, against the wish of James, who was in command, to endeavour to intercept the Dutch East India fleet. Upon its return in September he seems again to have interfered in exactly the opposite direction, but was this time overruled (Clarke, *Mem. of James II*, pp. 478, 480).

On 27 Sept. 1672 Shaftesbury succeeded the Earl of Sandwich as president of the council of trade and plantation, created chiefly through his advice, with a salary of 800*l.* a year; an office which he retained until April 1676. On 17 Nov. 1672 he was made lord chancellor, 'in regard of his uninterrupted services' (*London Gazette*, 18 Nov.), succeeding Orlando Bridgeman [see Bridgeman, Sir Orlando], and the change was regarded by the French ambassador as very favourable to French interests, since Shaftesbury was sure to follow Charles's wishes implicitly. It is related in Carte (iv. 434) that after giving him the seals Charles asked Or-

monde what he thought of the step, and that Ormonde replied, 'Your majesty doubtless acted very prudently in so doing, if you know how to get them again.' He at once joined the cabal formed by Clifford and Lauderdale to keep Arlington out of power (*Longleat Papers*; CHRISTIE, ii. 98), although at the same time he was on excellent terms with Essex, then viceroy of Ireland, Arlington's intimate friend.

Before parliament met, on 4 Feb. 1673, Shaftesbury had committed an act which gave rise to vehement debates. He had, as chancellor, with the approval of the king, issued thirty-six writs for elections to fill vacancies caused during the long prorogation of nearly two years. That this step was not actually illegal seems proved (*ib.* ii. 124); but it was against late precedents, and at once aroused 'much discourse and some grumbling,' especially when it was noticed that eight of the constituencies lay in the county where Shaftesbury was influential. It was of the utmost importance at the time for the court to secure a majority, and almost all who were chosen were supporters of the court. Shaftesbury had strong personal reasons for wishing for a court majority, since he had been threatened with impeachment for the share he had taken in the declaration of indulgence (*Parl. Hist.* iv. 507–12). Colonel Strangways, whose house Shaftesbury had stormed in 1644, took the lead in opposition; and the result was that the thirty-six members were unseated, fresh writs issued by the speaker, and the important principle finally established that the issuing of writs rested primarily with the house, and not with the lord chancellor.

On 5 Feb. Shaftesbury made a long and florid speech to the houses, which Burnet calls 'a base complying speech.' He first urged the prosecution of the Dutch war, the Dutch being the common enemies of all monarchies, and their only rivals in trade. 'Delenda est Carthago,' he declared, in an outburst of which he is said to have been reminded when, sick and hunted, he landed ten years later at Holland. He then defended, on the ground of ministerial responsibility, the stop of the exchequer, and urged a supply to pay the bankers their promised 6 per cent. Finally he vindicated the declaration of indulgence; of the cancelling of which, however, he had to inform the lords on 7 March. Charles had previously referred the question to the lords, following probably in this a suggestion of Shaftesbury (CHRISTIE, ii. 132). Colbert on 27 Feb. informed Louis that Shaftesbury, Buckingham, and Lauderdale were in favour of maintaining the declaration and dissolving parliament if necessary; but on 17 April he contradicts himself as far as the declaration is concerned. Shaftesbury's conduct was undoubtedly difficult to understand (see North's charges analysed by RALPH, i. 222). Oldmixon describes the address with which he warded off the danger of an impeachment by bribing Sir R. Howard with an auditorship of the exchequer, though Marvel says that Howard had previously ratted to the king's side (ii. 351, 28 Nov. 1670). Shaftesbury's personal safety was in danger in this time of excitement. North says (*Examen*, p. 38): 'Clifford and Shaftesbury looked like high sheriff and under-sheriff. The former held the white staff and had his name to all returns; but all the business, and especially the knavish part, was done by the latter.' It was now that the feud within the cabal suddenly displayed itself. The commons brought in the Test Act, which rendered it impossible for a catholic to hold office. Shaftesbury warmly supported it; a change of front which is probably explained by assuming that Arlington, disappointed at Clifford's promotion to the treasurership over his head, had revealed to Shaftesbury how he had been duped in the matter of the Dover treaty. The Test Act contradicted his own professions regarding toleration as advantageous to trade, as well as the declaration of indulgence which he had supported. Its immediate effects were the resignations of James, Clifford, and other Roman catholics. The forced dismissal of the king's favourite ministers, in a great degree through Shaftesbury's efforts, would naturally have brought about his fall also. Burnet, indeed (ii. 15), says that he had lost Charles's favour, but it was not thought fit to lay him aside yet. Moreover, a protestant ministry was wanted. Arlington and Shaftesbury, henceforward acting together, secured the support of Ormonde, Rupert, and Henry Coventry in opposing the continuance of the French alliance and the Dutch war. Shaftesbury himself now began his course of anti-catholic agitation. A letter from him to the Duke of York urging him to change his religion was circulated in June (CHRISTIE, ii. 150); and whether in real or feigned alarm he now caused his household to be well armed, and kept constant watch in his house throughout the summer.

When parliament met on 20 Oct. the commons were much excited about James's second marriage. To baulk their attack, James was anxious that an immediate prorogation should take place, and Shaftesbury is stated to have purposely retarded this (BURNET, ii. 31). Burnet adds that he gave his advice to Charles to send James away. From a letter of Conway to Essex of 18 Nov. (*Essex Papers*, Brit. Mus.) we learn that 'the king fears and hates the

Duke of York, yet is wholly governed by him.' On Sunday 9 Nov. Shaftesbury was dismissed in as insulting a manner as possible, and Henry Coventry, his wife's brother, was sent to demand the seals, and an order to leave London was twice repeated. Shaftesbury, however, according to Conway (*ib.* 22 Nov.), 'refused to stir.' He is related to have said when Coventry came to him, 'It is only laying down my gown and putting on my sword.'

Shaftesbury had uniformly refused as chancellor to pass grants to the duchesses of Cleveland or Portsmouth. He had incurred the enmity of Lauderdale by encouraging Hamilton and other Scotch nobles to break down the system of personal despotism established in Scotland by that minister, who on 18 Nov. describes to the king the consternation visible on the faces of his opponents when the news of Shaftesbury's disgrace reached Edinburgh (*Lauderdale Papers*, ii. 240, 245, iii. 12). Colbert mentions the joy felt 'on the disgrace of the greatest enemy of France, and I may add without passion of the most knavish, unjust, and dishonest man in England; but a discarded minister, who is very ill conditioned and clever, left perfectly free to act and speak, seems to me much to be feared in this country.' On his dismissal Shaftesbury received the usual protecting pardon from the king (Christie, ii. 158).

Shaftesbury was probably not a great lord chancellor; but North is the only authority for the statement that he was despised, baited, and finally beaten and tamed by the bar; while the famous lines of Dryden demonstrate his unimpeachable character as a judge.

Shaftesbury revived the obsolete custom of riding on horseback with the judges from his residence at Exeter House, which he had inhabited since 15 April 1650 (*Shaftesbury Papers*), to Westminster Hall. North, who makes great ridicule of this, says also that Shaftesbury used to sit 'on the bench in an ash-coloured gown, silver laced and full-ribboned pantaloons displayed, without any black at all in his garb unless it were his hat;' a dress which, though unusual, was perfectly appropriate, since he was a layman. As chancellor he expressed the same objections to the methods of proceeding in the court of chancery as he had formerly done in 1653.

Within a very few days both Charles and the French ambassador were making Shaftesbury the highest offers of money and honours if he would return to office. According to Stringer, Charles sent his regrets through the Earl of Oxford; and Ruvigny visited him with compliments from the two kings and with the offer of ten thousand guineas on Louis's part, and that of a dukedom and any post he might choose from Charles. Shaftesbury thereupon had an interview with Charles at Chiffinch's lodgings, and there distinctly refused the offers. From this moment he shook himself free of all connection with his former colleagues, and placed himself at the head of the parliamentary opposition to the court (*ib.* 180–3).

Parliament met on 7 Jan. 1674. As late as 4 Jan. it seemed probable that Shaftesbury might be again employed. On 8 Jan., however, without disclosing his knowledge of the 1670 treaty, he led the attack in the lords which resulted in an address to the king for a proclamation ordering papists to depart ten miles from London. He began now his extravagant course of exciting popular feeling by the most reckless statements. During the whole session he formed one of a cabal, of which Halifax, Buckingham, Carliale, Salisbury, and Faulconbridge were other leading members, meeting at Lord Holles's house (*Essex Papers*, Brit. Mus.) He took part in preparing the bill for educating the royal children in the church of England, and for preventing the marriage of any member of it with a Roman catholic, supporting a proposal that the penalty should be exclusion. All these measures were stopped by the sudden prorogation of 24 Feb. It stopped, too, a petition with which Shaftesbury had been charged, to the effect that Ireland was in danger from a French invasion (Christie, ii. 192). A bill for a new test, specially aimed at the Duke of York, was, to his great disgust, defeated by two votes. He was at this time reconciled with Buckingham, from whom he had been estranged, and actively assisted him in the proceedings against him regarding his shameful connection with Lady Shrewsbury (*Essex Papers*, 3 Feb. 1674).

Shaftesbury's actions were carefully watched. According to Macpherson (i. 74), he now began to excite the city, and especially the common council, which met once a month, by loudly expressed fears of a catholic rising. On 19 May he was dismissed from the privy council, and ordered to leave London, to prevent his acting in concert with the Dutch ambassador, who lodged in his house (Christie, ii. 198). He was also removed from the lord-lieutenancy of Dorsetshire (*Essex Papers*, 29 May 1674). He now retired to St. Giles. The list of books which he took with him is preserved (*Shaftesbury Papers*), and affords a good idea of the comprehensiveness of his intellectual interests. By successive prorogations parliament was put off until April 1675. Shaftesbury determined that the cry should be for a new parliament.

The court was fully alive to the danger, as is shown by a letter sent to Lord Yarmouth, lieutenant of the county of Norfolk, advising that none of Shaftesbury's party should be named deputy-lieutenants or colonels (*Hist. MSS. Comm.* 6th Rep. 374 *b*). A letter from himself to Lord Carlisle was circulated before the meeting of parliament, and afterwards printed, in which he mentions that a great office with a strange name is preparing for him, but that he will accept no court office so long as the present parliament shall last. This is confirmed by a letter from William Harbord to Essex (*Essex Papers*, 23 Jan. 1675), in which he is mentioned as coming to court again.

Upon the assembling of parliament, Danby brought forward his celebrated Test Bill, imposing an oath of non-resistance. Shaftesbury led the opposition for seventeen days, 'distinguishing himself,' says Burnet, 'more in this session than ever he had done before; he spoke once a whole hour to show the inconvenience of condemning all resistance upon any pretence whatever, and the very ill consequence it might be of to lay such an oath on a parliament.' He had taken the pains to note down a number of reasons against the bill, and spoke to them. He urged, with especial force, that it took away the very object of parliament, which was to make alterations when necessary, and at the same time destroyed the king's supremacy. In committee of the whole house he pertinently asked whether the church was to be regarded as infallible, and what were the bounds of the protestant religion. Upon being gravely informed by the Bishop of Winchester that it was contained in the Thirty-nine Articles, the liturgy, catechism, and homilies, he launched out on the spot into a copious disquisition on all these matters. During one of his speeches he overheard one of the bishops say jeeringly, 'I wonder when he will have done preaching,' and at once replied, 'When I am made a bishop, my lord.' The bill was carried in the lords, but went no further, as a dispute between the two houses as to the right of the lords to interfere in the commons' impeachments, fomented to the utmost by Shaftesbury and his friends, caused such a dead-lock to business that the king was forced to another prorogation. During the debates Shaftesbury made one famous speech, given almost entire by Ralph (i. 293), which exhibits his clearness of view and power of expression more aptly than anything else of his on record.

As against Danby's scheme, the interests of James, Shaftesbury, and the nonconformists were for the while identical; and Shaftesbury threw overboard his violent anti-catholic principles. On 15 June, during the recess, William Howard informed Essex (*Essex Papers*) that there were some 'great designs afoot,' and that Shaftesbury had been with the duke, along with Penn, Owen, and other leading nonconformists. He says, on 19 June: 'The treasurer hath lost ground; the duke is trying to bring in Shaftesbury; he refused a conference with the king, and was three hours alone with Shaftesbury.' On the 26th, Shaftesbury, Cavendish, and Newport were forbid the court. When parliament again met on 13 Oct., Shaftesbury revived and pressed to the uttermost the quarrel between the houses, and carried a motion maintaining the lords' rights (Ranke, iv. 12). Lord Mohun, one of his party, now moved for an address praying for a dissolution, which, through the accession of the Duke of York and the other Roman catholic peers, was defeated by only two votes. Parliament was immediately prorogued, on 22 Nov., for fifteen months. It was no doubt a condition of the new alliance of Shaftesbury and James that nothing should be said about exclusion (Clarke, *Mem. of James II*, i. 505). During the autumn Shaftesbury had had a violent quarrel with Lord Digby on a Dorsetshire election. Digby, in anger, publicly accused him of being against the king and for a commonwealth, and threatened that he 'would have his head next parliament.' Shaftesbury now brought an action against him and obtained 1,000*l.* damages. Digby's father, Bristol, used language to Shaftesbury in the debate on privileges for which he too was compelled to apologise. In February 1676 Shaftesbury was again advised to leave town, a direct message being sent him from the king, but he once more refused. In April the council of trade and plantations, of which he had been president since April 1672, came to an end. In July he left Exeter House, which he had taken on being made chancellor, and rented Thanet House, Aldersgate Street, instead, at 160*l.* a year.

Shaftesbury and his friends now looked about for good ground for an attack on Danby, and for getting rid of the present parliament. They asserted the illegality of a prorogation of more than a year, and they circulated pamphlets arguing that this illegality *ipso facto* dissolved the parliament. On the opening of parliament Buckingham and Shaftesbury at once took up this position. Their motion was rejected, and another at once brought in by the court that Buckingham, Shaftesbury, Salisbury, and Wharton should be called to account for their action. They were ordered to acknowledge their error and to beg pardon of the king and the house. Upon their refusal they were brought to the bar as

delinquents and committed to the Tower during the pleasure of the king and house, kept in separate confinement, and not allowed to receive visitors without the leave of the house. According to Burnet, Shaftesbury and Salisbury, pretending fear of poisoning, made a special request that they might be attended by their own cooks. In this agitation Shaftesbury and his colleagues were so flagrantly wrong (CHRISTIE, ii. 233), that they only did harm to their cause; and the immediate result of this grave political blunder was a great accession of strength to the court, and the entire alienation of the present House of Commons, whose existence they had attacked. The four peers now sent up a joint petition to the king for release, with no result. They then petitioned separately, Shaftesbury's request for leave to go to Dorsetshire (*Hist. MSS. Comm.* 4th Rep. 232 *a*) being presented on 2 May by Henry Coventry (MARVEL, ii. 551). On 23 June he moved the king's bench for a writ of habeas corpus. On the 27th he appeared before the court, and his case was heard on the 29th; he was opposed by the court lawyers, but allowed to speak for himself. In a very powerful argument he admitted the supreme judicature of the lords, but denied their power to commit to indefinite imprisonment on a general warrant. The judges, however, said that they had no jurisdiction in the case, and Shaftesbury was sent back to the Tower. Salisbury was released in June, and Buckingham in July, but Shaftesbury and Wharton were still detained. Shaftesbury, indeed, was for a while laid under still stricter confinement, but this was taken off on his petition alleging that his health was suffering (*Hist. MSS. Comm.* 4th Rep. 232 *a*). He now found relaxation in reading and in studying the war maps of Europe; while at the end of September his friends were allowed to visit him freely. He appeared, too, though troubled with gout, to improve greatly in health through his enforced idleness.

Shaftesbury was not released until 26 Feb. 1678. His petition was presented in the House of Lords by Halifax on 14 Feb. (MARVEL, ii. 580). A long debate on his conduct in appealing to the king's bench was adjourned to the 21st, on which day he made a final petition, admitting that he might have done wrong in this respect, and asking forgiveness. He was allowed to address the house on 25 Feb., when he acknowledged that his maintaining parliament to be dissolved was ill-advised, and he begged pardon for it, as also again for the appeal to the king's bench. In fact, he made a complete submission. Upon this he was released on the 26th, and on the following day took his place in the lords. During Shaftesbury's imprisonment negotiations had been going on between Louis XIV and the leaders of the opposition. There is no doubt that Shaftesbury was cognisant of their schemes, for Russell was a frequent visitor at the Tower during January, and in March Louis was informed by Barillon that Shaftesbury would be fully engaged in the treaty.

The alliance noticed above between James and Shaftesbury appears to have lapsed, and this with Louis to have taken its place. During the spring of 1678 an overture was again made by James (CHRISTIE, ii. 283–5). In James's 'Memoirs,' indeed (i. 513), the exact reverse is said to have occurred, namely, that Russell and others had promised to restore him to the high admiralship if he would concur in Danby's removal. There can be little doubt, however, from a comparison of authorities, that the former is the correct statement, and that Shaftesbury and his friends refused the overtures.

Before the meeting of parliament on 21 Oct. the popish terror had broken out. Shaftesbury is not accused of starting, but of cherishing, the agitation (NORTH, *Examen*, p. 95). He was from the first foremost in his zeal for the plot. The temptation to use this means of avenging himself upon his enemies was probably irresistible; that he could have believed in the plot is impossible. According to Burnet (ii. 164, 171 *n.*) he declared that the evidence must be supported. On 23 Oct. he was one of a committee for drawing up an address for the removal of papists from London and Westminster, and on 26 Oct. on another for examining Coleman and other prisoners. On 30 Oct. he was added to the sub-committee for investigating the murder of Godfrey, and on 16 Nov. was one of the committee for preparing the papers for Coleman's trial. On 4 Nov. the great attack was opened at his instance by Lord Russell in the commons; it was proposed to address the king to remove James from his person and councils. On 20 Nov. he carried a bill in the lords, disabling all Roman catholics from sitting in either house, with a proviso, carried by only two voices in the commons, to except the Duke of York from its operation. On 28 Nov., with two other peers, he protested against a refusal of the lords to concur in the address of the commons to remove the queen, her retinue, and all papists from court. One of the worst acts of Shaftesbury's career was his vote in 1680 for Stafford's death, especially if (*ib.* ii. 272 *n.*) it was because Stafford had named him before the lords as having undertaken to procure toleration for them at

the time of the Duke of York's conversion. Clarke (*Memoirs of James*, i. 546) declares that Shaftesbury went on this course of unscrupulous violence in order to outdo Danby, who, to save himself, also affected belief in the plot. In December, however, Danby was ruined, and on 24 Jan. 1679 parliament was dissolved. It seems probable that Danby had made arrangements with Shaftesbury and the popular leaders for a dissolution on condition that he were not impeached. The new parliament met on 6 March. The chancellor, Finch, opened it with a speech, in which he said that the king 'supported by his favour the creatures of his power.' 'My lords,' said Shaftesbury, 'I think we are all agreed that in this kingdom there are none but creatures of the divine power; the power of the king does not extend further than the laws determine' (RANKE, iv. 77). In the debate as to how to deal with Danby the opposition lords voted for the lesser punishment of banishment, and Shaftesbury, with Essex and the chancellor, drew up the argument for the conference with the commons. He vigorously opposed, too, the right of the bishops to vote in treason cases. Meanwhile Charles thought of reconciling himself with the opposition. On 7 April Barillon reported that Shaftesbury, Halifax, and other chiefs of the country party, were professing good intentions to the king, who showed a desire to satisfy them. In the course of the month Shaftesbury was made president of a newly constituted privy council, with a salary of 4,000*l.* a year and official rank next to that of the chancellor, Charles promising that nothing of importance should be done without the consent of the whole council. Ralph (i. 438) assumes that this was only to buy off his opposition for the time, and Burnet says that the king thought that he was angry only because he was not employed. Ralph's view is probably correct, for on 25 March Shaftesbury had made a violent but eloquent speech on the state of the nation (*ib.* i. 434), referring chiefly to the dangers of protestantism, and especially to the misgovernment of Scotland and Ireland under Lauderdale and Ormonde [see BUTLER, JAMES, first DUKE OF ORMONDE]. The attack on Ormonde, for which he had been at great pains to secure evidence in Ireland (CARTE, iv. 574), was one of the unprincipled actions of Shaftesbury's life, and can be explained only by his anxiety now to catch at any weapons. Ossory, Ormonde's son, replied to Shaftesbury with such warmth that Ormonde a few weeks later wrote to excuse him [see BUTLER, THOMAS, EARL OF OSSORY].

In taking his new office Shaftesbury had relinquished none of his views. On 21 April he took a prominent part in the debate on the question of requiring protestant nonconformists to take the oaths exacted from Roman catholics. The motion, however, was carried against him, and he declared that he would not have taken office had he thought that he could not succeed in such a matter. The new privy council rapidly disclosed two parties on the question of Monmouth's succession, which was favoured by Shaftesbury and opposed by his kinsman Halifax. After James's dismissal to Flanders many meetings of Shaftesbury and Monmouth took place (*ib.* iv. 578). To defeat their design Charles again solemnly declared that he was never married to Monmouth's mother.

On 4 May a resolution was passed in the commons to bring in a bill to exclude James from the throne. Shaftesbury always upheld simple exclusion. Essex and Halifax, on the other hand, favoured the scheme of limitations, which Shaftesbury declared would create a democracy rather than a monarchy. The second reading of the bill was carried on the 21st; but a sudden prorogation on 26 May, at the instance of the Halifax cabal, and in violation of the promise given by Charles, put an end to the bill. Shaftesbury angrily avowed that he would have the heads of the advisers of this step (TEMPLE, *Memoirs*, ii. 519). One great measure, the Habeas Corpus Act, brought in by Shaftesbury, long known as 'Shaftesbury's Act,' was passed during this short session, though apparently only by an amusing trick (CHRISTIE, ii. 335).

The Halifax cabal, joined by Henry Sidney and the Duchess of Portsmouth, now urged the Prince of Orange to come to England, in order to take the position which Shaftesbury desired for Monmouth. Sunderland endeavoured also to bring Shaftesbury himself into the plan; but this was frustrated by the enmity between him and Halifax. In July the king once more unexpectedly dissolved parliament, an act again noticed by Shaftesbury with expressions of the bitterest resentment. Meanwhile the rebellion in Scotland in June had offered Shaftesbury an occasion for putting Monmouth forward, by obtaining for him the command of the troops; but he failed in an attempt to raise guards for the king's person to be commanded by the favourite. At the end of August, when the king fell ill, Sunderland, to frustrate Shaftesbury, sent for James in haste. Both he and Monmouth were again ordered from court upon Charles's recovery; but in October, having effected a money treaty with Louis, Charles was able to take the step of recalling James and dismissing 'Little Sincerity,' the cant name for Shaftesbury used between the king and James, from the

council. It was known that on coming up from the country he had been received with great enthusiasm by the populace (RANKE, iv. 94), and that he had on 5 Oct. called together his friends in the council to induce them to remonstrate against the recall of James. The Meal Tub plot, in which it was asserted that Shaftesbury was implicated, was now discovered. He was fully persuaded that the object of Dangerfield was to assassinate him, and Dangerfield stated this himself (CHRISTIE, ii. 349). Mrs. Cellier is also said to have tried to do the same, and a Portuguese Jew named Faria afterwards declared (*Lords' Journals*, 28 Oct. 1680) that he had been commissioned to do this as early as 1675. Within a month from Shaftesbury's dismissal the first commissionership of the treasury was, on Essex's resignation, offered him. He insisted on the divorce of the queen and the dismissal of James as the conditions of taking office. They were of course refused, and Shaftesbury then, in spite of another attempt, remained in opposition. North notices the growth of clubs as a marked feature of the time, and mentions Shaftesbury as the great prompter-general, especially of the Green Ribbon Club.

Near the end of November Shaftesbury is said to have taken a distinctly treasonable step. Monmouth returned to London without Charles's permission, and, according to Barillon, was concealed for three days in Shaftesbury's house. He took, too, every step to agitate for the reassembling of parliament on 26 Jan. 1680, which it was feared Charles meant to postpone. He was one of the ten peers who presented a petition in this sense, and he probably set on foot the general petitioning which now took place, and which Charles met in December by proclaiming it as illegal, and by immediately proroguing parliament from time to time until 21 Oct. 1680. On 28 Jan. the king declared his intention of sending for James. Shaftesbury thereupon urged his friends in the council by letter to resign, in order that they might justify themselves before the country, hinted at probable attempts to alter religion and government with the help of the French, and besought them, after taking notes of its contents, to burn the letter (CHRISTIE, ii. 357). The next day they followed his advice, Essex and Salisbury alone remaining. In March came news of a catholic plot in Ireland. Shaftesbury at once demanded from the council the appointment of a secret committee. His informants, Irishmen of the lowest character, declared that aid had been asked for from Louis, and that Ormonde and Archbishop Plunket were in the plot. The information was undoubtedly false, and Shaftesbury could not have been its dupe. The court laughed at it; but London, where Shaftesbury's influence was very powerful, sustained him in the agitation. The judicial murder of Plunket a year later must be laid to his door.

A second illness of the king in May put Monmouth's adherents on the alert. Meetings were held at Shaftesbury's house to consider the steps to be taken in case of Charles's death. Lord Grey, in the 'Secret History of the Rye House Plot' (pp. 3-5), states that a rising in the city was determined on, and steps taken in preparation. On 26 June Shaftesbury, with other leaders of the opposition, went to Westminster Hall, and indicted the Duke of York and the Duchess of Portsmouth as popish recusants. A pretence was, however, found for discharging the jury before the bills were presented. Barillon asserts that Shaftesbury's language was most violent, if not actually treasonable, and he continued to keep the city at fever point. There were now two parties at the court, that of Sunderland, Godolphin, and the duchess, who, with the Spanish ambassador, wished to conciliate Shaftesbury (CLARKE, i. 599), and that of Lawrence Hyde and the Duke of York. Towards the end of September Sunderland was in active negotiation with Shaftesbury and Monmouth for satisfying parliament, and Charles was induced to send James to Scotland. In the middle of September Shaftesbury was ill of fever, and his popularity was shown by the crowds who came to inquire. By 9 Oct., however, he had recovered.

On 21 Oct. parliament met; by 15 Nov. a bill for excluding James from the throne had passed the commons and had reached the lords. There, through the ability of Halifax, 'who was much too hard for Shaftesbury, who was never so outdone before' (*Hist. MSS. Comm.* 7th Rep. 18 Nov.), the second reading was rejected by 63 to 30. Shaftesbury of course joined in the protest against the rejection. On the 16th he opened a debate as to the effectual securing of the protestant religion. He declared that as exclusion had been rejected the divorce of the king was the only expedient. Clarendon, he said, had purposely married Charles to a woman incapable of bearing children. He did not, however, persevere in his proposal. In the debate on the king's speech of 15 Dec. he delivered another violent speech (CHRISTIE, ii. app. vi.), which was immediately published, but which was of such a character that after Christmas it was ordered to be burnt by the common hangman. The violent course adopted by the whigs defeated itself. All legislation and all supply were stopped. Charles prorogued parliament on

10 Jan., and eight days later dissolved it, and summoned a fresh one to meet at Oxford, no doubt to avoid the influence of the city. Clarke (i. 651) mentions a design of giving Shaftesbury the freedom of the city and of next day making him alderman and lord mayor, so as to secure the machinery of the city for his purposes.

On 25 Jan. Essex presented a very strongly worded petition to Charles, signed by Shaftesbury, himself, and fourteen other peers, praying that parliament might sit at Westminster. Shaftesbury now prepared instructions to be distributed among the constituencies for the guidance of the members whom they elected (CHRISTIE, ii. app. vii.) viz. (1) to insist on a bill of exclusion of the Duke of York and all popish successors; (2) to insist on an adjustment between the prerogatives of calling, proroguing, and dissolving parliaments, and the people's right to annual parliaments; (3) to get rid of guards and mercenary soldiers; and (4) to stop all supplies unless full security were provided against popery and arbitrary power.

Lodgings were taken by Locke for Shaftesbury at Dr. Wallis's, the Savilian professor; but in the end he was provided for at Balliol College. By the time of the meeting of the Oxford parliament Charles had again succeeded in making a treaty with Louis, which, as regarded money, rendered him free of the necessity of supply. He was thus enabled to open parliament with an uncompromising speech in which he especially declared that on the matter of the succession he would not give way. The commons were equally violent, and debated nothing but exclusion. In the lords Shaftesbury reintroduced a bill for a repeal of the act of 35 Eliz., which imposed penalties on protestant dissenters, and moved for a committee to inquire why it had not been presented to the king for signature along with other bills before the last prorogation. A very unsatisfactory explanation was given (CHRISTIE, ii. 406). A matter leading to a hot quarrel between the houses was the impeachment of Fitzharris, accused of a design of fastening upon Shaftesbury a libel concocted by himself against the king. The commons wished to impeach him, but the lords resolved that he should be left to the common law. Shaftesbury and nineteen other peers protested against the lords' refusal. The commons, too, were furious, but the sudden dissolution on 28 March put an end to the quarrel and to the exclusion agitation. Shaftesbury immediately returned to London. Barillon states (28 March) that a conversation took place between Charles and Shaftesbury in which the king told Shaftesbury that he would never yield on the Monmouth proposal.

The dissolution cut the ground from beneath Shaftesbury's feet. The excessive violence of the whigs, and his signal political blunder in espousing the cause of an illegitimate son of the king, had strengthened the natural tendency to a reaction. Shaftesbury felt his danger clearly; it was rumoured he wished to renounce the peerage that he might have the privilege of being judged by others than peers selected by the king. In anticipation of attack he secured his estate to his family by a careful settlement, and granted copyhold estates for their lives to several of his servants.

In a discussion of the committee of foreign affairs on 21 June, Halifax and Clarendon urged that Shaftesbury should be arrested before parliament should meet again; and early in the morning of 2 July he was seized at Thanet House, Aldersgate Street, and carried to Whitehall, where he was examined at a special meeting of the council in the king's presence. All his papers, too, had been seized without his being allowed to make a list of them as a reasonable precaution (RALPH, i. 611). The witnesses against him were chiefly the very men who had been his informants regarding the pretended Irish plot. Shaftesbury, who had in vain requested to have his accusers face to face (*ib.*), defended himself; he was in the end committed to the Tower on the charge of high treason, in conspiring for the death of the king and overthrow of government. He was taken to the Tower by water, and in the evening was visited there by Monmouth, Grey, and others of that party. It is mentioned, as showing how completely and suddenly his power was gone, that 'he was brought from the heart of the city to his examination by two single messengers, and sent to the Tower, no man taking notice' (*Hist. MSS. Comm.* 7th Rep. 533 *a*). Two days later he was ordered to be kept close prisoner. He and Howard petitioned the judges, under the new Habeas Corpus Act, that they might be brought to trial or bailed; but the judges refused, on the ground that the Tower was out of their jurisdiction. In the Tower he was ill of his old ague, and on 14 July leave was given him to take the air. In the heat of August he was so ill, having had two fits in twenty-four hours, that the lieutenant of the Tower removed him to cooler lodgings. In the meanwhile the court were taking great pains to find evidence sufficient to convict Shaftesbury, and it was widely said that much tampering of witnesses was going on. In the beginning of September, and in October, applications

by Shaftesbury and Howard were again made to the Old Bailey for trial or bail, and again refused, as were those to the magistrates of Middlesex. In the September sessions his indictments against the magistrate who had taken the information leading to his arrest and against the witnesses were not allowed to be presented. While he lay in prison Stephen College [q. v.], one of his followers, was found guilty of treasonable language on the same evidence as that against himself, and executed. On 2 Aug. he instructed his agents at St. Giles to sell his stud, evidently not expecting to escape with his life. In October he petitioned the king, through Arlington, in vain, offering if released to retire to Carolina, of which he was part proprietor. On the 12th his secretary was committed to the Gatehouse on charge of treason. At length on 24 Nov. a special commission was opened for his trial. Shortly before it began a statement was published by Captain Henry Wilkinson of the endeavours made by Booth, one of the witnesses, to suborn him to give false evidence against Shaftesbury, and of his examination by the king himself. The extremely circumstantial narrative has been contradicted (cf. *Sloane MS.* 3371 f. 24). The bill of indictment at the Old Bailey was framed on the statute of 13 Car. II, which made the intention to levy war high treason, and the designing and compassing the king's death high treason, without an overt act. At the close of the chief justice's charge to the grand jury the attorney-general asked that the witnesses might be examined in the presence of the judges, in order that they might thus be overawed, and this was granted, while a request from the jury for a sight of the warrant for Shaftesbury's commitment was refused. On the other hand the grand jury had been selected by sheriffs favourable to Shaftesbury, and had been picked out 'from the very centre of the party,' a mob also being brought down from Wapping to awe the court (North, *Examen*, p. 113). All the sharp practice of the court was of no avail. The witnesses were men of low character, and the grand jury disbelieved the evidence (Ralph, i. 648). 'Immediately the people fell a holloaing and shouting;' the acclamations in court lasted an hour; 'the bells rung, bonfires were made, and such public rejoicing in the city that never such an insolent defiance of authority was seen' (Clarke, i. 714); and Luttrell gives the same account.

A medal was at once struck to celebrate the occasion, a bust of Shaftesbury with the inscription 'Antonio comiti de Shaftesbury' on one side, and on the reverse a picture of the Tower, with the sun emerging from a cloud, the word 'Lætamur,' and the date 24 Nov. 1681. The copper plate of this medal is preserved with the 'Shaftesbury Papers.' But he was unmercifully satirised; Dryden did his worst in 'Absalom and Achitophel' and in the 'Medal;' and Butler in 'Hudibras.' Otway, in 'Venice Preserved,' represents him as the lewdest of debauchees. Duke, an imitator of Dryden, is still worse in his allusions to his abscess kept open by a silver pipe; and in 1685 the same thing was done by Dryden himself in 'Albion and Albanius,' which was illustrated by a huge drawing of 'a man with a long lean pale face, with fiend's wings, and snakes twisted round his body, accompanied by several rebellious fanatical heads, who suck poison from him, which runs out of a tap in his side.' He was called Tapski in derision, and the abscess represented as the result of extreme dissipation (Christie, ii. 428–39). It is to Shaftesbury's credit that he bore all this with such perfect temper as to excite the admiration of even Lady Russell (*ib.* app. viii.) A week after the finding of the grand jury Shaftesbury was admitted to bail, four sureties in 1,500*l.* and himself in 3,000*l.*; Monmouth, to Charles's extreme displeasure, offered himself for bail. The joy at the acquittal extended to many parts of the kingdom; and on 13 Dec. the Skinners' Company, of which Shaftesbury was a member, entertained him with a congratulatory dinner. He was finally released from bail on 13 Feb. 1682. He had meanwhile brought actions of scandalum magnatum and conspiracy against several persons concerned in his late trials. The defendants moved for trial in another county on the ground that it would not be fairly conducted in Middlesex, and the claim was allowed. Shaftesbury refused to go on with the actions under these circumstances. Hitherto his support had lain in the city. He was an intimate friend of one of the sheriffs, Pilkington, the master of the Skinners' Company, who on 17 March gave a great dinner to Monmouth, Shaftesbury, and the other leading men of the party.

But the tide had turned; Charles was no longer dependent on parliament, and all moderate men were against Shaftesbury. Among the papers seized at the time of Shaftesbury's arrest was one, not in his handwriting, and unsigned, containing a project of association for defence of the protestant religion and for preventing the succession of the Duke of York. Another paper regarded with great suspicion was one containing two lists headed respectively 'worthy men,' and 'men worthy,' the latter being construed 'worthy to be hanged.' Magistrates of Shaftesbury's party were now put out of the commission, and

the penal laws against protestant dissenters vigorously executed. To secure the support of the common council for the crown, a false return, carried out with shameless illegality, was made at the midsummer election of sheriffs, two tories being returned in the place of Shaftesbury's friends. He now felt that there was no chance of escape if another indictment were preferred against him, since the sheriffs had the nomination of the juries. On the night of the election he is said to have left his house and to have found a hiding-place in the city (RALPH, i. 710). With Russell, Monmouth, and others, he began to consult as to the possibility of a concerted rebellion in different parts of the country. He and Russell jointly were to make themselves masters of the Tower and manage the city, and Russell the west country; while Monmouth made a progress in Cheshire (CHRISTIE, ii. 445). Burnet gives a different account, declaring that Essex and Russell were opposed to Shaftesbury's views (ii. 349). But in September Monmouth was arrested. Shaftesbury now urged an immediate rising in Cheshire under Russell, while he himself answered for the city, promising Russell to join him with ten thousand brisk boys from Wapping. About Michaelmas day, however, he left Thanet House, 'stept aside, but not before a warrant was signed for his apprehension' (*Hist. MSS. Comm.* 7th Rep. 497 *b*), and was for some weeks concealed in obscure houses in the city and Wapping, busily engaged in fomenting the rising. In the beginning of November, at a meeting in the house of Shepherd, a wine merchant, a report was read from Shaftesbury, and it was arranged by those present to rise a few days later. At a second meeting on 19 Nov., however, it was decided to postpone action for a few weeks. Upon this Shaftesbury, knowing or being told that fresh warrants were out against him, determined to flee at once. It is difficult to believe that the search for Shaftesbury was earnest; it was obviously more to the interest of the crown to frighten him away than to arrest him; and it is probable that the same course was pursued in his case as in that of the Earl of Argyll when he came to London [see CAMPBELL, ARCHIBALD, ninth EARL OF ARGYLL]. Before leaving London Shaftesbury had a meeting with Essex and Salisbury, when 'fear, anger, and disappointment had wrought so much upon him, that Lord Essex told me he was much broken in his thoughts, his notions were wild and impracticable' (BURNET, ii. 350). He reached Harwich in disguise as a presbyterian minister, with his servant Wheelock. Here he was in imminent danger of discovery, but, after waiting some days for a fair wind, was able to leave Harwich for Holland on 28 Nov. 1682. After a stormy passage, during which other vessels in company with his were lost, he reached Amsterdam in the first days of December. Upon his petition he was placed in safety by being admitted a burgher of Amsterdam; one inhabitant welcoming him, it is said, with a pungent reference to his famous speech, 'Carthago nondum est deleta.' For a week he lodged in the house of an English merchant named Abraham Keck, on the Gueldersche Kay, associating chiefly with Brownists. Here, about the end of December, he was seized with gout, which flew to the stomach, and which caused him excruciating pain. On Sunday, 21 Jan. 1683, he died in his servant's arms, between eleven and twelve in the morning. It was stated that his death was hastened by the cessation in the flow from his abscess. The news reached London on 26 Jan.; on 13 Feb. his body left Amsterdam to be taken to Poole in Dorsetshire (*Hist. MSS. Comm.* 7th Rep. 389 *a*). According to Martyn it was met by the principal gentlemen of the county of all shades of opinion, who accompanied the hearse to Wimborne St. Giles, where he was buried.

Shaftesbury was undoubtedly the most eminent politician of his time; Burnet (i. 175) declares that he never knew any man equal to him in the art of governing parties. His subtlety and readiness of resource fitted him especially for a foremost place, under the existing conditions of political life. The leaders, with scarcely an exception, led lives of mystery and intrigue; in Shaftesbury's case the springs of his action can even now be often only guessed at. With the exception of Locke he had no intimate friends; North says that if he were a friend to any human being, besides himself, it was to Charles II (p. 119). That he was a man of keen ambition is very certain, though Ralph's phrases (i. 711) are extravagant. As a statesman he will always remain memorable, because, starting from the conception of tolerance, he opposed the establishment of an Anglican and royalist organisation with decisive success. He seems always to have espoused the doctrines that had the greatest future, and he may be regarded as the principal founder of that great party which opposed the prerogative and uniformity on behalf of political freedom and religious tolerance (RANKE, iv. 166, 167). The extremely modern type of Shaftesbury's character renders him especially interesting as a politician. In him, as is observed by Mr. Traill (*Shaftesbury*, 'English Worthies,' p. 206), are fore-

shadowed the modern demagogue, the modern party leader, and the modern parliamentary debater. As a demagogue he at the same time swayed the judgment of the House of Lords and the passions of the mob. As a party leader, 'while sitting in one house of the legislature he organised the forces and directed the movements of a compact party in the other.' And in him we first meet with 'that combination of technical knowledge, practical shrewdness, argumentative alertness, aptitude in illustration, mastery of pointed expression, and readiness of retort, which distinguish the first-rate debater of the present day.' He was a man of wide accomplishments; he spoke Latin with ease and fluency; he was also well acquainted with Greek and French, and especially with the literature of his own country. Ancient and modern history, and the state of Europe and foreign politics, were also favourite studies. Charles is reported to have said that he had more law than his judges and more divinity than his bishops. He had all the tastes of the English country gentleman: estate management, hunting, horse-breeding, gardening, planting, and the like; and he dabbled in alchemy, palmistry, and the casting of horoscopes. Burnet says that 'he had the dotage of astrology upon him to a high degree,' and that he told him 'how a Dutch doctor had from the stars foretold him the whole series of his life' (i. 175). He was reputed a deist, but the state of his mind is perhaps best represented by the anecdote in Sheffield's memoirs, which represents him as answering the lady who inquired as to his religion, 'Madam, wise men are of but one religion;' and when she further pressed him to tell what that was, 'Madam, wise men never tell.' Shaftesbury's private life was of rare purity for the age; the charge of licentiousness probably arose from the story told by Chesterfield (*Works*, ii. 334, Mahon's ed.), and, in different ways by different authors, that Charles once exclaimed, 'Shaftesbury, you are the wickedest rogue in England,' and that Shaftesbury replied, 'Of a subject, sir, I believe I am.' Christie shows that there is no certainty in the story, and that, even if it be true, there is no reason for thinking that it has the meaning imputed.

[The materials for this article are drawn chiefly from two sources—the Shaftesbury Papers in the Public Record Office, and Mr. Christie's very important work, which is founded mainly upon them. These papers, so far as they are concerned with the first earl, consist of six sections, the contents of which will be found described in detail in the report of Mr. Noel Sainsbury. Besides the original diaries and autobiographies, there is a large collection of letters and papers directly concerning the earl, and extending over his lifetime. There are also a large number of documents connected with the settlement of Carolina, including many of Locke's composition, the draft of the first constitutions of the colony being among them, and with the government of Jamaica, the Barbadoes, and the Bahamas. The diaries, autobiographical fragments, and some of the more important papers have been separately printed by Mr. Christie. His larger work, the 'Life,' in spite of the fact that he evidently holds a brief for Shaftesbury, is of extreme value in sweeping away the misrepresentations which political partisanship or ignorance had allowed to gather about his name, and of which Macaulay and Lord Campbell have been in modern times the chief exponents; and it is only in one or two places that inaccuracies may be detected, or that a tendency is visible to keep out of sight or extenuate really blameworthy actions. Where evidence can be obtained he is indefatigable in procuring it, and he is, on the whole, impartial in weighing it. A few materials have become accessible since Christie wrote, such as the reports of the Hist. MSS. Commission, the Lauderdale and Essex Papers, the Calendar of State Papers, Ranke's History, &c. The latest work on the subject is Mr. Traill's 'Shaftesbury,' in the 'English Worthies' series. Mr. Traill, without sufficient apparent justification, takes as a rule the unfavourable view of his character and conduct. The interesting and valuable part of his book, as noticed in the article, is the account of Shaftesbury as a party leader of the modern type. The leading authorities are all fully referred to in the article.] O. A.

COOPER, ANTHONY ASHLEY, third EARL OF SHAFTESBURY (1671-1713), was born 26 Feb. 1670-1, at Exeter House in London, then the town residence of his grandfather, the first earl [q. v.] He was the son of Lord Ashley, afterwards second earl, by Lady Dorothy Manners, daughter of John, earl of Rutland. Lord Ashley, a man of feeble constitution and understanding, is the 'shapeless lump' of Dryden's famous satire upon the first earl. Locke had acted to some extent as Lord Ashley's tutor, and had taken part in arranging his marriage at the age of seventeen (1669). Locke also attended Lady Ashley on her confinement. In March 1673-4 the guardianship of the infant was formally assigned to his grandfather. Shaftesbury, during his confinement in the Tower in 1677, wrote to Locke, then in France, asking him to discover what books were used for the dauphin's Latin lessons, with a view to procuring them for his grandson. When Locke returned to England in 1680, he superintended the boy's education. In 1674 he had recommended Elizabeth, daughter of a schoolmaster named Birch, to act as governess. She could talk Greek and Latin fluently, and imparted the accom-

plishment to her pupil. A house was taken at Clapham, in which she lived with him, while Locke paid them frequent visits. After the death of the grandfather, the boy was taken out of Locke's charge by the parents, and in November 1683 was sent to Winchester, where he stayed till 1686 (according to his son. Mr. Bourne in 'Life of Locke' (i. 273) gives the date 1688). His schoolfellows, it is said, made him suffer for his grandfather's sins as a politician. He then made a foreign tour in company with Sir John Cropley (his close friend through life) and Mr. Thomas Sclater Bacon, under the tutorship of a Mr. Daniel Denoune. He visited Italy, travelled through Germany, and learned to speak French so perfectly as to be taken for a native. After his return he passed some years in study. He was elected member for Poole in William's second parliament, 21 May 1695; and after the dissolution in the autumn he was again elected (4 Nov. 1695) for the same place.

In November 1695 a bill allowing counsel to prisoners accused of treason came before the house. Lord Ashley, as his son says, made his first speech in its favour, and was so confused as to break down. The house encouraging him to go on, he made a great impression by the ingenious remark: 'If I am so confounded by a first speech that I cannot express my thoughts, what must be the condition of a man pleading for his life without assistance!' (*General Dict.*, where it is said that the story was erroneously applied to Charles Montagu, lord Halifax, in a 'Life' published in 1715; an error repeated by Johnson in 'Lives of the Poets'). His health was unequal to parliamentary labours, and he retired after the dissolution of 1698. He spent a year in Holland, where he lodged, as Locke had done, with Benjamin Furly, a quaker merchant, afterwards his attached friend, and became known to Bayle and Le Clerc. His first book, the 'Inquiry concerning Virtue,' was surreptitiously printed by Toland during his absence. No copy of this, if published, has been found. On 10 Nov. 1699 he became Earl of Shaftesbury upon his father's death. He attended the House of Lords regularly till William's death; but his health limited his participation in political struggles. He was, however, an ardent whig, and was exceedingly keen in supporting the cause. When the great debates upon the partition treaty began in March 1701, he was 'beyond Bridgewater in Somersetshire,' but, on a summons from Lord Somers, posted to London at once, in spite of weakness, and was in the House of Lords next day—a feat then regarded as extraordinary. Somers afterwards held his proxy. His letters show that his zeal never cooled. He boasts that he was at one time alone in urging a dissolution in the last year of William's reign. He did his best to influence elections, and to support the war party. William made offers to him, and it is said desired to make him a secretary of state. The statement that he had a share in William's last speech (31 Dec. 1701) is perhaps due to the fact that he published an anonymous pamphlet called 'Paradoxes of State relating to the present juncture . . . chiefly grounded on His Majesty's princely, pious, and most gracious speech' (1702).

Soon after the accession of Anne he was removed from the vice-admiralty of the county of Dorset, 'held by his family for three generations.' Warrants (preserved in the Record Office), at the end of William's reign and the beginning of Anne's, order him to impress five hundred seamen, and take other military steps in his capacity as vice-admiral. His political activity injured both his health and his fortune. He retired to Holland for a year during 1703–4. He lived on 200*l.* a year, being alarmed, needlessly as it seems from his steward's reports, at the state of his income. Returning in the summer of 1704, he was kept at sea for a month by contrary gales, and came home in a very delicate state of health. He afterwards suffered continually from asthma, and found the smoke of London intolerable. When not residing at his house at Wimborne St. Giles, he was often at Sir J. Cropley's house at Betchworth, near Dorking, and at the time of his marriage took a house at Reigate. He did not venture to stay nearer London than Chelsea, where he had a small house. In 1706 the 'great smoak' forced him to remove from Chelsea to Hampstead. In 1708 his friends, especially Robert, afterwards Viscount, Molesworth, pressed him to marry. After a long and unsuccessful negotiation for a lady whom he admired, he was forced to put up with Jane, daughter of Thomas Ewer of Lee in Hertfordshire. He was married in August 1709. His chief end, he says, was the 'satisfaction of his friends,' who thought his family worth preserving and himself worth nursing; and he scarcely ventures afterwards to make the claim, which would be audacious for any man, that he is 'as happy a man now as ever.' He had not seen the lady till the match was settled, and then found, in spite of previous reports, that she was 'a very great beauty' (to Wheelock 8 Aug. 1709, *Shaftesbury Papers*). His modest anticipations of happiness seem to have been fulfilled; but his health rapidly declined, and in July 1711 he set out with Lady Shaftesbury for Naples to try the warmer climate. He passed through France, and was civilly

received by the Duke of Berwick, then encamped on the frontier of Piedmont. He declined to take advantage of French civility by spending the winter at Montpelier, and therefore went to Naples, where he settled for the rest of his life. He died there 15 Feb. 1713 (4 Feb. 1712–13 according to English reckoning), dying with peaceful resignation, according to the report of an attendant, Mr. Crell. His body was sent to England. He left one son, Anthony Ashley, the fourth earl of Shaftesbury.

Shaftesbury was a man of lofty and ardent character, forced by ill-health to abandon politics for literature. He was liberal, though much fretted by the difficulty of keeping out of debt. He was resolved, as he tells his steward, not to be a slave to his estates, and never again to be 'poorly rich.' He supported several young men of promise at the university or elsewhere. He allowed a pension of 20*l.* a year to the deist Toland, after Toland's surreptitious publication of his papers, though he appears to have dropped it in his fit of economy in 1704. He gives exceedingly careful directions for regulating his domestic affairs during his absence. His letters to his young friends are full of moral and religious advice, and the 'Shaftesbury Papers' show many traces of his practical benevolence to them. He went to church and took the sacrament regularly, respecting religion though he hated the priests. He is a typical example of the whig aristocracy of the time, and with better health might have rivalled his grandfather's fame.

Shaftesbury is a very remarkable figure in the literary history of his time. The 'Characteristics' give unmistakable indications of religious scepticism, especially in allusions to the Old Testament. He was accordingly attacked as a deist by Leland, Warburton, Berkeley, and many other christian apologists. He had been influenced by Bayle, and shares or exaggerates the ordinary dislike of the whig nobles to church principles. His heterodoxy excited the prejudice of many reasoners who might have welcomed him as an ally upon fundamental questions. As a philosopher he had no distinct system, and repudiates metaphysics. He revolted against the teaching of Locke, to which there are some contemptuous references in the 'Advice to an Author' (pt. iii. sect. i.) (the first and eighth of the 'Letters to a Student' give an explicit statement). He was probably much influenced by the 'Cambridge Platonists,' especially Whichcote and Cudworth, and shows many points of affinity to Cumberland. His cosmopolitan and classical training, and the traditional code of honour of his class, are discernible in all his writings. His special idol was Plato, whom he endeavoured to imitate in the 'Moralists.' Hurd and Monboddo are enraptured with his performance as unsurpassed in the language. Opponents, especially the shrewd cynic Mandeville, regarded him as a pretentious and high-flown declaimer; but his real elevation of feeling gives a serious value to his ethical speculations, the most systematic account of which is in the 'Inquiry concerning Virtue.' The phrase 'moral sense' which occurs in that treatise became famous in the Scotch school of philosophy of which Hutcheson, a disciple of Shaftesbury's, was the founder. He influenced in various ways all the chief ethical writers of the century. Butler, in the preface to his sermons, speaks highly of Shaftesbury (the only contemporary to whom he explicitly refers) for showing the 'natural obligation of virtue.' Although, according to Butler's teaching, Shaftesbury's account of the conscience is inadequate, and his theology too vague and optimistic to supply the needed sanction, his attack upon an egoistic utilitarianism falls in with Butler's principles. Shaftesbury, on the other hand, was attacked both by the followers of Clarke's intellectual system, as in John Balguy's 'Letter to a Deist' (1726), and by the thoroughgoing utilitarians, especially Thomas Brown (1778–1820) [q. v.] in his 'Essay upon the Characteristics,' as giving so vague a criterion of morality as to reduce it to a mere matter of taste. Shaftesbury's æsthetical speculations, given chiefly in the 'Notion of the Historical Draught or Tablature of the Judgment of Hercules,' are of some interest, and anticipate some points in Lessing's 'Laokoon' (see Syme, *Lessing*, i. 249, 266).

Shaftesbury's style, always laboured, often bombastic, and curiously contrasted with the simplicity of his contemporary Addison, has led to the neglect of his writings. He was, however, admired by such critics as Hurd and Blair, though Gray (letter to Stonehewer, 18 Aug. 1758) speaks of him with contempt as a writer whose former vogue has become scarcely intelligible. His influence on the continent was remarkable. One of Diderot's first publications was an 'Essai sur le Mérite et la Vertu' (1745), a free translation from Shaftesbury's 'Inquiry concerning Virtue,' and in 1746 he published the 'Pensées Philosophiques,' a development of Shaftesbury's scepticism, which was burnt by the parliament of Paris (see Morley, *Diderot*, i. 42–47). The 'Characteristics' were studied by Mendelssohn, Lessing, and Wieland (see Syme, *Lessing*, i. 115, 187, ii. 296), and influenced the development of German speculation. Leibnitz, to whom Shaftesbury sent a copy of the 'Characteristics,' said that he

found in it almost all his own (still unpublished) 'Théodicée,' 'but more agreeably turned' (Des Maizeaux, *Recueil*, ii. 283; the original in the *Shaftesbury Papers*).

His chief works are collected in the 'Characteristicks of Men, Manners, Opinions, and Times.' The first edition appeared in 1711; the second, corrected and enlarged, in 1714 (Shaftesbury gave elaborate directions for the allegorical designs in this edition, which are preserved in the 'Shaftesbury Papers'); others in 1723, 1732, and Baskerville's handsome edition in 1773. In 1870 one volume of a new edition, edited by the Rev. W. M. Hatch, was published, but the continuation was prevented by the editor's death. The 'Characteristics' include the following treatises, with dates of first publication: (1) 'Letter concerning Enthusiasm,' addressed to Lord Somers (whose name is not given); suggested by the 'French prophets,' dated September 1707 (1708). (2) 'Sensus Communis; an essay concerning Wit and Humour' (May 1709). (3) 'Soliloquy, or Advice to an Author' (1710). (4) 'An Inquiry concerning Virtue,' published by Shaftesbury in 'Characteristics,' 1711; described as 'printed first in 1699' (see above). (5) 'The Moralists: a Philosophical Rhapsody' (January 1709). (6) 'Miscellaneous Reflections;' first published in 'Characteristics,' 1711. (7) 'A Notion of the Historical Draught or Tablature of the Judgment of Hercules' (1713). (8) A 'Letter concerning Design;' suppressed by his executors in 1714, and first added to the 'Characteristics' in 1733. Besides these Shaftesbury published an edition of Whichcote's 'Sermons,' with a characteristic preface, in 1698, and 'Paradoxes of State' in 1702. In 1716 appeared 'Letters to a Student at the University' (Michael Aynsworth, whom he supported at Oxford; the originals of most, with others unpublished, are in the 'Shaftesbury Papers'); and in 1721 'Letters from ... Shaftesbury to Robert, now Viscount, Molesworth,' with an Introduction by the editor (Toland). The last two have been three times reprinted in one volume. The edition of 1758 includes also the preface to Whichcote. In 1830 appeared 'Original Letters of Locke, Algernon Sidney, and Lord Shaftesbury,' edited by T. Forster, a descendant of Furly, to whom Shaftesbury's letters are addressed. The originals are now in the 'Shaftesbury Papers.'

[Shaftesbury's Life by his son appeared in the ninth volume of the 'General Dictionary' (1734–1741). This and the letters noticed above in Toland's introduction are the chief published authorities. A valuable collection of papers relating to Shaftesbury is in Series v. of the Shaftesbury Papers now in the Record Office. They include letters, account books, copies of his works with manuscript corrections, rough copies of the son's memoir, and many interesting documents. Full use has already been made of these in Prof. Fowler's 'Shaftesbury and Hutcheson' in the 'English Philosophers' series (1882); see also monographs on Shaftesbury by Gideon Spicker (1872), and G. von Gizycki (1876) for accounts of his philosophy. An excellent account of Shaftesbury is in Martineau's Types of Ethical Theory (1885), ii. 449–73. Prof. Fowler also refers to Zart's 'Einfluss der englischen Philosophie auf die deutsche Philosophie des 18ten Jahrhunderts' (1881); see also Fox Bourne's Life of Locke; Notes and Queries, 1st ser. iii. 98 (letter to Le Clerc upon Locke); Walpole's Royal and Noble Authors (Park), iv. 55; two interesting letters to Halifax are in Addit. MS. 7121, ff. 59, 63.]

L. S.

COOPER, ANTONY ASHLEY, seventh Earl of Shaftesbury (1801–1885), philanthropist, was the eldest son of the sixth earl, and of Anne, fourth daughter of the third Duke of Marlborough. He was born on 28 April 1801 at 24 Grosvenor Square, London, his father being then a younger brother of the family, but when his father succeeded to the title and estates in 1811 his home was at St. Giles in Dorsetshire, the family seat. He was educated at Harrow, and at Christ Church, Oxford, and obtained a first class in classics in 1822. In 1832 he took his degree of M.A., and in 1841 he was made D.C.L.

He entered parliament as Lord Ashley in 1826 as member for Woodstock, the pocket borough of the Marlborough family, and gave a general support to the governments of Liverpool and Canning. He was returned for Dorchester in 1830 and 1831, and sat for co. Dorset from 1831 to 1846. His first speech was an earnest pleading in favour of a proposed grant to the family of Mr. Canning, after his sudden death. In 1828, under the Duke of Wellington, he obtained the post of a commissioner of the board of control, and in 1834 Sir Robert Peel made him a lord of the admiralty. If he had chosen a political career, his rank, connections, and high abilities and character might have placed the highest offices of the state within his grasp. But he was early fascinated by another object of pursuit—the promotion of philanthropic reform; and in the ardour of his enthusiasm for this line of action he deemed it best to maintain a somewhat independent position in relation to politics.

In 1830 he married Lady Emily Cowper, daughter of Earl and Lady Cowper, and by the subsequent marriage of Lady Cowper to Lord Palmerston he became stepson-in-law to the future premier. In 1851, on the death

of his father, he succeeded to the earldom. Lady Shaftesbury died in 1872, to the deep grief of her much-attached husband. Their children consisted of six sons and four daughters.

The first social abuse that roused the interest of Ashley was the treatment of lunatics. In 1828, Mr. Gordon, a benevolent member of parliament, obtained a committee to inquire into the subject; Ashley's interest was awakened, and he was himself named a member of the committee. Not content with official inquiries, he did much by personal visitation to ascertain the real condition of lunatics in confinement, and saw such distressing evidence of ill-treatment that next year he brought in a bill to amend the law in one particular. All the rest of his life he continued, as one of the commissioners in lunacy, to interest himself in the subject, and before his death he had secured a complete reform of the Lunacy Acts, and effected an untold improvement in the condition of the unfortunate class who had formerly been treated with so much severity and cruelty. This may be ranked as the first of his services to philanthropy.

His next effort was to reform the law relating to the employment of workers in mills and factories. About the time when he entered parliament the condition of the workers in factories, and especially the children, had begun to attract the earnest attention of some. In parliament Mr. M. T. Sadler and Mr. Oastler took up the matter warmly; Mr. Sadler, in particular, as Shaftesbury afterwards said with much generosity, 'maintained the cause in parliament with unrivalled eloquence and energy.' Mr. Sadler having lost his seat at the election in 1833, the charge of the movement was entrusted to Ashley. His proposal that the period of labour should be limited to ten hours a day met at first with the fiercest opposition. A bill which he introduced was so emasculated by the government that he threw it over on them; it was ultimately carried, but was not satisfactory. A deep impression was produced by Ashley in describing visits paid by him to hospitals in Lancashire, where he found many workers who had been crippled and mutilated under the conditions of their work; they presented every variety of distorted form, 'just like a crooked alphabet.' Returning afterwards to the subject, he showed the enormous evils and miseries which the existing system was producing; but the government would not move. So late as 1844 his proposal for a limit of ten hours was rejected. It was not till 1847, when Ashley was out of parliament, that the bill was carried. The operation of the act has proved most satisfactory, and many who at first were most vehement opponents afterwards came to acknowledge the magnitude of the improvement. At many times in the subsequent part of Ashley's life he got the factory acts amended and extended. New industries were brought within their scope. He always maintained that he would never rest till the protection of the law should be extended to the whole mass of workers.

During this struggle collieries and mines engaged his attention. Here, too, the evils brought to light, especially with respect to women and children, were appalling. Many women were found to be working in dismal underground situations, in such a way as tended to degrade them to the level of brutes. Children, sometimes not over four or five years of age, were found toiling in the dark, in some cases so long as eighteen hours a day, dragged from bed at four in the morning, and so utterly wearied out that instruction, either on week days or Sundays, was utterly out of the question. Often they were attached by chain and girdle to trucks which they had to drag on all-fours through the workings to the shaft. The opposition were struck dumb by these revelations. An act was passed in 1842 under Ashley's care abolishing the system of apprenticeship, which had led to fearful abuses, and excluding women and boys under thirteen from employment underground.

The treatment of 'climbing boys,' as the apprentices of chimney-sweepers were called, was another of the abuses which he set himself to remedy. If the evil here was not so glaring as in the factories and pits, it was only because the occupation was more limited. Ashley obtained an act for the protection of the apprentices, and many years afterwards, when some laxity in the administration was discovered, took steps to have it more rigidly enforced.

The country was greatly agitated at this time on the subject of the corn laws. Hitherto Ashley had acted generally with the conservative party, but believing that a change in the corn laws was necessary, he resigned his seat for Dorset in January 1846, and for a time was out of parliament. In the next parliament he was returned (30 July 1847) for the city of Bath. The leisure which he obtained by retiring from parliament was turned by him to account in visiting the slums of London and acquiring a more full acquaintance with the condition of the working classes. A statement of some of his experiences in this field was given in an article in the 'Quarterly

Review' for December 1846. His interest was especially intensified in two movements: the education of the neglected poor, and the improvement of the dwellings of the people.

The movement for 'ragged schools,' as they were now called, or 'industrial feeding schools,' as Mr. Sheriff Watson of Aberdeen had proposed to call them, had already been inaugurated in the northern kingdom. Ashley became the champion of the cause in parliament. In 1848 he told the House of Commons that ten thousand children had been got into ragged schools, who, there was every reason to hope, would be reclaimed. For thirty-nine years he held the office of chairman of the Ragged School Union, and during that time as many as three hundred thousand children were brought under the influence of the society. The Shoeblack Brigade was the result of another effort for the same class. At one time it numbered 306 members, and its earnings in one year were 12,000*l*. The Refuge and Reformatory Union was a kindred movement; ultimately it came to have 589 homes, accommodating fifty thousand children. Lord Palmerston's bill for the care and reformation of juvenile offenders, which has had so beneficial an influence, was a fruit of Shaftesbury's influence.

Very early in his career he had become profoundly impressed with the important influence of the dwellings of the people on their habits and character. To the miserable condition of their homes he attributed two-thirds of the disorders that prevailed in the community. In 1851 he drew attention to the subject in the House of Lords. The Lodging House Act was passed, which Dickens described as the best piece of legislation that ever proceeded from the English parliament. This, however, represented but a small portion of his labours for the improvement of houses. The views which he so clearly and forcibly proclaimed led many to take practical steps to reform the abuse. The Peabody scheme was at least indirectly the fruit of his representations. On 3 Aug. 1872 he laid the foundation-stone of buildings at Battersea, called the Shaftesbury Park Estate, containing twelve hundred houses, accommodating eight thousand people. On his own estate at Wimborne St. Giles he built a model village, where the cottages were furnished with all the appliances of civilised life, and each had its allotment of a quarter of an acre, the rent being only a shilling a week. As chairman of the central board of public health he effected many reforms, especially during the visitation of cholera in 1849. He was also chairman of a sanitary commission for the Crimea, in regard to which Miss Nightingale wrote that 'it saved the British army.'

Besides originating and actively promoting to the very end of his life the social reforms now enumerated, Shaftesbury took an active interest in the Bible, Missionary, and other religious societies, and was very closely identified with some of the most important of them. Of the British and Foreign Bible Society, he was president for a great many years. The London City Mission, pursuing its labours among the London poor, deeply interested him. The Church Missionary Society, as well as the missionary societies of the nonconformists, found in him a most ardent friend. He had great pleasure in the Young Men's Christian Association. He was the chief originator of a movement for holding religious services in theatres and music halls—a movement which he had to defend in the House of Lords from the charge of lowering religion by associating its services with scenes of frivolity.

Of the variety and comprehensiveness of the objects to which his life had been directed an idea may be formed from the enumeration of the city chamberlain when the freedom of the city of London was conferred upon him. The chamberlain referred to his labours in connection with the Climbing Boys Act, the Factory and Ten Hours Acts, Mines and Collieries Regulation Acts, the establishment of ragged schools, training ships, and refuges for boys and girls, his share in the abolition of slavery, the protection of lunatics, the promotion of the City Mission and the Bible Society, and likewise his efforts for the protection of wronged and tortured dumb animals.

In religion Shaftesbury was a very cordial and earnest supporter of evangelical views. Ritualism and rationalism were alike abhorrent to him. While attached to the church of England his sympathies were with evangelicalism wherever he found it. Sometimes he expressed himself against opponents with an excessive severity of language, inconsistent with his usual moderation. All movements in parliament and elsewhere in harmony with evangelical views, such as Sir Andrew Agnew's for the protection of the Lord's day, the union of religion and education, and opposition to the church of Rome, found in him a cordial advocate. But his heart was especially moved by whatever concerned the true welfare of the people. Though the reverse of a demagogue, retaining always a certain aristocratic bearing as one who valued his social rank, he was as profoundly interested in the people as the most ardent democrat. Hating socialism and all

schemes of revolutionary violence, he most earnestly desired to see the multitude enjoying a larger share of the comforts of life. He had thorough confidence in the power of christianity to effect the needed improvements, provided its principles were accepted and acted on, and its spirit diffused among high and low.

At various times, and especially after he became connected with Lord Palmerston, Shaftesbury was invited to join the cabinet. At one time he was offered the chancellorship of the duchy of Lancaster, but as he made it a condition that he should be at liberty to oppose the Maynooth endowment the post was refused. The first time the ribbon of the Garter was offered to him he declined it, though he accepted it some years later (21 May 1862). Beginning life as a conservative, his interest in the people and very genuine love for civil and religious liberty drew him towards the popular side. His freedom from party ties sometimes enabled him to act as mediator when an understanding between parties was indispensable. In many confidential matters he was the adviser of Lord Palmerston, and especially in the filling up of vacant bishoprics and other important offices in the church of England. His great influence with the people was recognised in times of peril and turned to useful account. He was oftener than once consulted by the queen and the prince consort on trying emergencies. In 1848, when the mob of London was believed to be meditating serious riots, Ashley was requested to use his influence to prevent the outbreak. He summoned to his aid the City Mission, and for weeks together very earnest efforts were made to restrain the multitude, with the result that when the panic was over, Sir George Grey, home secretary, wrote to him and thanked him and the City Mission for their valuable aid. On one occasion he received a memorial from forty notorious London thieves asking him to meet with them. He complied with the request, and addressed a meeting of 450, whom he besought to abandon their evil ways, and with such success that the greater part, availing themselves of an emigration scheme, were rescued from a life of crime.

In appearance Shaftesbury was tall and handsome, with a graceful figure and well-cut regular features. He spoke with neatness, force, and precision, and was highly effective without being much of an orator. From time to time he received valuable testimonials from the class to whose benefit his labours were directed. One of these, which he valued very highly, was a colossal bust presented to Lady Shaftesbury in 1859 by four thousand Lancashire operatives. Another was a donkey given to him by the London costermongers. His eightieth birthday was celebrated by a great public meeting in the Guildhall, presided over by the lord mayor, and represented on the part of the government by the late Mr. W. E. Forster [q. v.], who not only rehearsed Shaftesbury's achievements, but referred to his own obligations to his example. In 1884 he received the freedom of the city of London. In May 1885 he was presented with an address from old scholars of the ragged schools. In reply he declared that he would rather be president of the ragged schools than of the Royal Academy; but for himself he would only say that the feeling in his heart was, 'What hast thou that thou hast not received?'

Shaftesbury retained a great part of the vigour both of his mind and body to very near the end of his life. The infirmities of old age showed themselves chiefly in gout and deafness. In the autumn of 1885 he went to Folkestone, but died of congestion of the lungs, 1 Oct. 1885. He was lord-lieutenant of Dorset from 1856 till death.

The lives of Howard, Mrs. Fry, Wilberforce, and other great philanthropists are associated mainly with a single cause—Shaftesbury's with half a score. They opened out to him one after another in a kind of natural succession, and while at the very outset he had to contend with vehement opposition, during the latter part of his career he was borne along by the applause of the community, found willing coadjutors in all ranks of society, and had no more serious opponent than the *vis inertiæ* of a slumbering public. He was indeed the impersonation of the philanthropic spirit of the nineteenth century. Mr. Carlyle, in his 'Latter-Day Pamphlets,' has written severely enough against 'this universal syllabub of philanthropic twaddle,' but his sarcasm does not hit Shaftesbury. What horrified Carlyle was the coddling of criminals and increasing the burdens of honest labourers in the interest of scoundrels. Carlyle wrote in the name of justice. In the same name Shaftesbury worked. To redress wrong was the object of his first undertakings. He carried the same principle with him throughout. His mind did not greatly appreciate political changes which sought to elevate the social position of the workman, nor did he favour these much when others brought them forward. To promote industry, self-control, and useful labour, to make men faithful to the obligations of home and country and religion, were his constant aims. It would not be easy to tell how much the life of Shaftesbury has availed in warding

off revolution from England, and in softening the bitter spirit between rich and poor.

[Burke's Peerage; Quarterly Review, December 1846; Times, 2 Oct. 1885; Speeches by the Earl of Shaftesbury, with Introduction by himself, 1868; Books for the People, No. xxi. The Earl of Shaftesbury; Hodder's Life and Work of the Seventh Earl of Shaftesbury, 3 vols. 1886.]

W. G. B.

COOPER, Sir ASTLEY PASTON (1768–1841), surgeon, was fourth son of the Rev. Samuel Cooper, D.D., curate of Great Yarmouth, and rector of Morley and Yelverton, Norfolk (B.A. of Magdalene College, Cambridge, 1760, M.A. 1763, D.D. 1777), author of a poem called 'The Task,' published soon after Cowper's famous 'Task,' upon which Dr. Parr made the epigram:

To Cowper's Task see Cooper's Task succeed;
That was a Task to write, but this to read.

Samuel Cooper published a large number of sermons, wrote comments on Priestley's letters to Burke on civil and ecclesiastical government (1791), and died at Great Yarmouth on 7 Jan. 1800, aged 61 (*Gent. Mag.* 1800, i. 89, 177).

Mrs. Cooper, a Miss Bransby, wrote storybooks for children and novels of the epistolary kind. Their eldest son, Bransby, was M.P. for Gloucester for twelve years, from 1818 to 1830.

Cooper was born on 23 Aug. 1768, at Brooke Hall, about seven miles from Norwich. He was a lively scapegrace youth, and learnt little, being educated at home. His grandfather, Samuel Cooper, was a surgeon of good repute at Norwich, and his uncle, William Cooper, surgeon to Guy's Hospital. He was apprenticed in 1784 to his uncle, but soon transferred to Henry Cline [q. v.], surgeon to St. Thomas's, who exercised very great influence over him. He spent one winter (1787–8) at the Edinburgh Medical School, under Gregory, Cullen, Black, and Fyfe. Both before and after his return to London he attended John Hunter's lectures. He was appointed demonstrator of anatomy at St. Thomas's in 1789, being only twenty-one years old. Two years later Cline made him joint lecturer with himself in anatomy and surgery. In December 1791 he married Miss Anne Cock, who brought him a considerable fortune. The summer of 1792 was spent in Paris, security being obtained through friends of Cline, whose democratic principles Cooper warmly espoused.

On his return from Paris, Cooper devoted himself largely to study and teaching, and succeeded in developing the subject of surgery into a separate course of lectures from anatomy. At first too theoretical to please, he soon found that his strength lay in discussing his own cases, with all the illustration that he could supply from memory of other cases. He thus became a most interesting practical lecturer, and meddled little with theory. In 1793 he was selected to lecture on anatomy at the College of Surgeons, which office he held till 1796 with great success. In 1797 he removed from Jeffreys Square to 12 St. Mary Axe, formerly Mr. Cline's house.

In 1800 Cooper was appointed surgeon to Guy's on the resignation of his uncle, but not before he had abjured his democratic principles. From this time forward, while he gave much of his time to the hospital and medical school, his private practice rapidly increased until it became perhaps the largest any surgeon has ever had. In 1802 he was elected a fellow of the Royal Society, being awarded the Copleian medal for his papers on the 'Membrana Tympani of the Ear.' He continued an indefatigable dissector, rising very early. All kinds of specimens of morbid anatomy which could illustrate surgery were brought to him, and he was also resolute in making post-mortem examinations wherever possible. He was often in contact with the resurrectionists of the period, and many interesting anecdotes of this part of his career are given in his 'Life.' He himself stated before a committee of the House of Commons: 'There is no person, let his situation in life be what it may, whom, if I were disposed to dissect, I could not obtain. The law only enhances the price, and does not prevent the exhumation.'

In 1805 Cooper took an important part in founding the Medico-Chirurgical Society, being its first treasurer. Its early volumes of 'Transactions' contain several papers by him. He now published his important work on 'Hernia,' part 1 in 1804, part 2 in 1807, the illustrations to which were so expensive that Cooper was a loser of a thousand pounds when every copy had been sold. In 1806 he left St. Mary Axe for New Broad Street, spending here the nine most remunerative years of his life. In one year his income was 21,000*l.* His largest fee, a thousand guineas, was tossed to him by Hyatt, a rich West Indian planter, in his nightcap, after a successful operation for stone.

In 1813 Cooper was appointed professor of comparative anatomy by the Royal College of Surgeons, and lectured during 1814 and 1815. In the latter year he moved to New Street, Spring Gardens, and in the following May performed his celebrated operation of tying the aorta for aneurysm. In 1820, having for some years attended Lord Liverpool, he was called in to George IV, and afterwards

performed a small operation upon him. This was followed by the bestowal of a baronetcy.

It was not till 1822 that Cooper became an examiner at the College of Surgeons, publishing in the same year his valuable work on 'Dislocations and Fractures of the Joints.' In January 1825 he resigned his lectureship at St. Thomas's; but finding that he was to be succeeded by Mr. South as anatomical lecturer, contrary to his understanding that his nephew, Bransby Cooper, was to be appointed, he induced Mr. Harrison, the treasurer of Guy's, to found a separate medical school at Guy's, with Aston Key and Bransby Cooper as lecturers on surgery and anatomy respectively. St. Thomas's claimed the valuable specimens Cooper had deposited there to illustrate his lectures, and the latter vigorously set about making a new collection. His energy and name, although he now became consulting surgeon to Guy's, and seldom lectured, started the new school successfully.

In 1827 Cooper was president of the College of Surgeons. In 1828 he was appointed surgeon to the king. He had for some years spent much time at his estate at Gadesbridge, near Hemel Hempstead. From 1825 he took his home farm into his own hands, and one of his experiments was buying lame or ill-fed horses in Smithfield cheaply and feeding and doctoring them himself, often turning them into much better animals. Lady Cooper's death in 1827 was a heavy blow to him, and he resolved to retire altogether from practice. By the end of the year, however, he returned to his profession, and in July 1828 married Miss C. Jones. The publication of further important works occupied him, and in 1836 he was a second time president of the College of Surgeons. He died on 12 Feb. 1841, in his seventy-third year, in Conduit Street, where he had practised latterly, and was buried, by his express desire, beneath the chapel of Guy's Hospital. He left no family, his only daughter having died in infancy. The baronetcy fell to his nephew, Astley, by special remainder.

A statue of Cooper, by Baily, was erected, chiefly by members of the medical profession, in St. Paul's Cathedral, near the southern entrance. An admirable portrait of him by Sir Thomas Lawrence exists. His name is commemorated by the triennial prize of three hundred pounds, which he established for the best original essay on a professional subject, to be adjudged by the physicians and surgeons of Guy's, who may not themselves compete.

No surgeon before or since has filled so large a space in the public eye as Cooper. He appears to have had a singularly shrewd knowledge of himself, as evidenced by the following quotations from an estimate he left, written in the third person (*Life*, ii. 474–6). 'Sir Astley Cooper was a good anatomist, but never was a good operator where delicacy was required.' Here, no doubt, Cooper does himself injustice. 'Quickness of perception was his forte, for he saw the nature of disease in an instant, and often gave offence by pouncing at once upon his opinion . . . He had an excellent and useful memory. In judgment he was very inferior to Mr. Cline in all the affairs of life . . . His principle in practice was never to suffer any who consulted him to quit him without giving them satisfaction on the nature and proper treatment of their case.' His success was due to markedly pleasing manners, a good memory, innumerable dissections and post-mortem examinations, and a remarkable power of inspiring confidence in patients and students. His connection with the resurrectionists and the marvellous operations attributed to him combined to fascinate the public mind to an extraordinary degree. A great portion of his practice was really medical, and in this department his treatment was very simple. 'Give me,' he would say, 'opium, tartarised antimony, sulphate of magnesia, calomel, and bark, and I would ask for little else.' He had a genuine, even an overweening, love for his profession. 'When a man is too old to study, he is too old to be an examiner,' was one of his expressions; 'and if I laid my head upon my pillow at night without having dissected something in the day, I should think I had lost that day.' He cannot be classed among men of genius or even of truly scientific attainments; his works are not classics, but they are more than respectable. They are defective especially from their almost entire omission to refer to the works of others. The 'Quarterly Review' (lxxi. 560) terms him 'a shrewd, intelligent man, of robust vigorous faculties, sharp set on the world and its interests.'

Mr. Travers, who became Cooper's articled pupil in 1800, says at that time he had the handsomest, most intelligent and finely formed countenance he ever saw. He wore his hair powdered, with a queue; his hair was dark, and he always had a glow of colour in his cheeks. He was remarkably upright, and moved with grace, vigour, and elasticity. His voice was clear and silvery, his manner cheerily conversational, without attempt at oratory. He spoke with a rather broad Norfolk twang, often enlivened with a short 'Ha! ha!' and, when he said anything which he thought droll, would give a very peculiar short snort and rub his nose with the back

of his hand (SOUTH, *Memorials*, p. 33). He suffered from hernia early in life, but was able to keep himself perfectly free from derangement by his own method of treatment.

His life by his nephew is a most tedious performance, but includes much interesting matter, including anecdotes of Lord Liverpool and George IV.

The following is a list of Cooper's most important writings: 1. 'Observations on the effects that take place from the Destruction of the Membrana Tympani of the Ear,' two papers, 'Phil. Trans.' 1800, 1801. 2. 'Anatomy and Surgical Treatment of Hernia,' two parts, folio, 1804, 1807; 2nd ed. 1827. 3. 'Surgical Essays, by A. Cooper and B. Travers,' two parts (all published), 8vo, 1818, 1819. 4. 'On Dislocations and Fractures of the Joints,' 4to, 1822. 5. 'Lectures on the Principles and Practice of Surgery, with additions by F. Tyrrell,' 8vo, 3 vols. 1824–7; 8th ed. 12mo, 1835. 6. 'Illustrations of Diseases of the Breast,' part i. 4to, 1829 (no more published). 7. 'Structure and Diseases of the Testis,' 8vo, 1830. 8. 'The Anatomy of the Thymus Gland,' 4to, 1832. 9. 'The Anatomy of the Breast,' 4to, 1840; besides numerous articles in the 'Medico-Chirurgical Transactions' and medical journals, and surgical lectures published by the 'Lancet' in 1824–6 (see the full bibliography in DECHAMBRE'S *Dict. Encyc. des Sciences Médicales*, vol. xx. Paris, 1877).

[B.B. Cooper's Life, 2 vols. Lond. 1843; Quarterly Review, lxxi. 528–60; Feltoe's Memorials of J. F. South; Bettany's Eminent Doctors, i. 202–26.] G. T. B.

COOPER, CHARLES HENRY (1808–1866), biographer and antiquary, descended from a family long settled at Bray, Berkshire, was born at Great Marlow, Buckinghamshire, on 20 March 1808, being the eldest son of Basil Henry Cooper, solicitor, by Harriet, daughter of Charles Shoppee of Uxbridge. He was educated at home until he reached his seventh year, when he was sent to a school kept by a Mr. Cannon at Reading. There he remained to the end of 1822. From an early age he evinced a passion for reading, and as his father possessed an extensive and excellent library, he was enabled to lay the foundation of that stock of historical and antiquarian learning by which in after life he was so greatly distinguished. In 1826 he settled at Cambridge, and applied himself with great diligence to the study of the law. On 1 Jan. 1836, when the Municipal Corporations Act came into operation, he was elected coroner of the borough, though he was not admitted a solicitor until four years later. In 1849 he was appointed town clerk of Cambridge, which office he held till his death. In 1851 he was elected a fellow of the Society of Antiquaries. Having an intimate acquaintance with the law and possessing great powers as an orator, he acquired an extensive practice as a solicitor. In 1855 he was engaged in the Cambridge arbitration which resulted in the Award Act of the following year, and for the learning and legal acumen displayed by him on this occasion a high compliment was passed upon him by the arbitrator, Sir John Patteson.

His claim to remembrance is, however, mainly founded upon his elaborate works relating to the history and topography of Cambridge and the biography of distinguished members of the university. The first production of his pen was 'A New Guide to the University and Town of Cambridge,' which was published anonymously in 1831. It is superior to most works of its class, the descriptions of the architecture of the various buildings being very excellent. In 1842 the first volume appeared of the 'Annals of Cambridge,' which was followed by three other volumes, dated respectively 1843, 1845, and 1852, and by a portion of a fifth (pp. 1–128) in 1853. This work is arranged chronologically, and contains an account of all matters relating to the university and town from the fabulous times of Cantaber and King Cassibelan down to the close of the year 1853. It was brought out in parts by subscription and amid great difficulties. Many of the academical authorities were much averse to its publication, as they entertained a wholly unfounded idea that it would in some way tend to deprive the university of its ancient privileges. In 1858 the first volume appeared of a work more ambitious in its plan and relating to a subject more widely interesting. This was the 'Athenæ Cantabrigienses,' written conjointly by Cooper and his eldest son, Thompson Cooper, F.S.A. The idea of the book was suggested by the famous 'Athenæ Oxonienses' of Anthony à Wood. It contains carefully written memoirs of the worthies who received their education or were incorporated at Cambridge, and, like the companion work of Wood, is arranged in chronological order according to the date of death. The first volume embraces 1500–85, and the second, published in 1861, extends to 1609. A portion of a third volume, extending to 1611, was printed but not published, though most of the memoirs in this unfinished volume were afterwards reproduced in Thompson Cooper's 'Biographical Dictionary.' Like the 'Annals,' this work, which is universally admitted to be a valuable addition to our biographical

literature, was published by private subscription. After the decease of the principal author the university handsomely offered to defray the cost of printing at the University Press the remainder of the 'Athenæ,' but his two sons, after making some further progress with the preparation of the manuscript, were reluctantly obliged by the pressure of their professional avocations to finally abandon the undertaking. The extensive collection of notes for bringing the work down to 1866 remains in the possession of Cooper's widow, together with another vast mass of manuscript materials for a new 'Biographia Britannica.'

Cooper's last work, 'The Memorials of Cambridge,' appeared at Cambridge in 3 vols. 1858–66. It was originally intended to be based on the work published under the same title by Le Keux, but during its progress it was altered and modified so extensively that it may be regarded as substantially a new and an original work. Cooper was a constant and valued contributor to the 'Gentleman's Magazine,' 'Notes and Queries,' and the proceedings of the antiquarian societies of London and Cambridge. He always freely and ungrudgingly assisted in any literary undertaking. Thomas Carlyle, in his 'Life and Letters of Cromwell,' acknowledges the value of the information given to him by Cooper, and numerous other writers have made similar acknowledgments. Cooper died at his residence, 29 Jesus Lane, Cambridge, on 21 March 1866. The funeral took place at the cemetery, Mill Road, Cambridge, on the 26th, when the members of the corporation attended with the insignia of office. A bust of Cooper, executed by Timothy Butler, was afterwards placed by public subscription in the Cambridge town hall. He married in 1834 Jane, youngest daughter of John Thompson of Prickwillow, by whom he had issue eight children. The survivors were Thompson Cooper (*d.* 1904); John William Cooper, LL.D., of Trinity Hall, Cambridge; and a daughter, Harriet Elizabeth.

He left in manuscript a 'Memoir of Margaret, Countess of Richmond and Derby,' mother of Henry VII. This work, written in 1839, was edited by the Rev. J. E. B. Mayor 'for the two colleges of her foundation'—Christ's and St. John's—in 1874, 8vo. Mr. Mayor, who for thirteen years was Cooper's intimate literary friend, wrote a character of him shortly after his death. 'The best years of his life,' says Mr. Mayor, 'were devoted to investigating our academic history, though few of those for whom he toiled appreciated his work, and many ignorantly regarded him as an enemy; they might have learned that he loved to identify himself with the university, rejoicing when he could add a new name to our list of worthies. The void which Mr. Cooper has left behind him cannot be filled. Cambridge never had nor will have a town clerk so entirely master of its archives, or more devoted to its interests; no town in England has three such records to boast of as the "Memorials of Cambridge," the "Annals of Cambridge," and "Athenæ Cantabrigienses." *Alma Mater* has lost one who did her work, under great discouragement, better than any of her sons could have done it. One need not be a prophet to foretell that two hundred years hence Mr. Cooper's works will be more often cited than any other Cambridge books of our time.'

Brit. 9th edit.; Cooper's Annals of Cambridge, iv. 599, 707; Ashmole's Berkshire, iii. 19; Cambridge Chronicle and Cambridge Independent Press, 24 March 1866; Gardiner and Mullinger's Study of English History (1881), pp. 329, 330.] T. C.

COOPER, CHARLES PURTON (1793–1873), lawyer and antiquary, was born in 1793. He was educated at Wadham College, Oxford, where he was a contemporary of Bethell, and in 1814 he attained a double first class in honours, and graduated B.A. on 7 Dec., and on 5 July 1817 M.A. He was called to the bar at Lincoln's Inn in Michaelmas term 1816, and, after practising with success as an equity draughtsman, was appointed a queen's counsel in 1837, and was long queen's serjeant for the duchy of Lancaster. In 1836 he became a bencher of Lincoln's Inn, and in 1843 presented to the society two thousand volumes of civil and foreign legal works, having previously presented a hundred and fifty volumes of American law reports. He was treasurer in 1855, and master of the library in 1856. His enthusiasm for the cause of legal reform attracted the attention of Brougham, by whom he was introduced to the Holland House circle and the heads of the whig party. Lord Brougham appointed him secretary of the second record commission, in which capacity he bought and printed so many books, that the commission's debt, over and above the 400,000*l.* voted by parliament, rose to 24,000*l.* Lord Holland recommended him for the post of solicitor-general when Rolfe was appointed. He played an active part in public affairs in his own county, Kent, where he resided at Denton Court, near Canterbury. He appeared as a candidate for Lambeth in 1850, but withdrew from the contest; in 1854 he unsuccessfully contested Canterbury, and was pro-

posed as a candidate for West Kent in 1855, but declined to stand. His great knowledge of jurisprudence and legal antiquities procured him a fellowship of the Royal Society, and the degree of LL.D. of the universities of Louvain and Kiel. He was also a fellow of the Society of Antiquaries, and corresponding member of the royal academies of Lisbon, Munich, Berlin, and Brussels. He enjoyed a leading practice in the court of Vice-chancellor Knight-Bruce, but, having openly quarrelled with that judge, quitted his court and lost his practice. Disappointment and difficulty now overtook him. He endeavoured without success to obtain government assistance for a project for digesting and sifting on a settled scheme all the law reports down to that date. He at length retired to Boulogne, where, after unsuccessfully endeavouring to carry on his projects of legal reform, he at length died of paralysis and bronchitis on 26 March 1873. His activity and industry were very great, and he was a most voluminous writer. In his later years he published a printed list of no less than fifty-two pamphlets, written, edited, or printed by him on political topics between 1850 and 1857. His principal works were: 1. 'An Account of the Parliamentary Proceedings relating to the Practice in Bankruptcy, Chancery, and the House of Lords,' 1828. 2. 'Notes, etc., in French on the Court of Chancery,' 1828, 2nd edit. 1830. 3. 'Notes on Registration and forms in Conveyancing,' 1831. 4. 'An Account of the Public Records of the United Kingdom,' 2 vols. 1832. 5. 'Speech for Rev. C. Wellbeloved in the case of Lady Hewley's Foundation, Attorney-general *v.* Shore,' 1834. 6. 'Notes on the Act for regulating Municipal Corporations,' 1835. 7. 'Reports of Cases decided by Lord Brougham in 1833 and 1834 from the original MSS.,' 1835. 8. 'Reports of Cases decided by Lords Cottenham and Langdale, and by Vice-chancellor Shadwell in 1837 and 1838,' with notes 1838-41. 9. 'Reports of Lord Cottenham's decisions,' 1846. 10. A letter to the Lord Chancellor on defects in the law as to the custody of lunatics, 1849. 11. A pamphlet on the reform of solicitors' costs, 1850. 12. A letter to Sir George Grey on the sanitary state of St. George's parish, 1850. 13. A pamphlet on the condition of the court of chancery, 1850. 14. A pamphlet on the masters in chancery. 15. A pamphlet on the House of Lords as a court of appeal. 16. Chancery Miscellanies under his editorship, Nos. 1-13, 1850 and 1851. 17. Parliamentary and political Miscellanies under his editorship, Nos. 1-20, 1851. 18. A letter on the pope's Apostolic Letters of 1850, 1851. 19. A pamphlet on the Government and the Irish Roman catholic members, 1851. 20. 'Reports of Cases and Dicta in Chancery from MSS., with notes, Nos. 1-7, 1852. 21. 'Memorandum of a proposal to classify the Law Reports,' Boulogne, 1860. 22. A similar proposal for digesting the statute-book, Boulogne, 1860. 23. On Freemasonry, Folkestone, 1868.

[Law Times, 5 April 1873; Solicitor's Journal, 29 March 1873; Times, 2 April 1873.]

J. A. H.

COOPER, DANIEL (1817?-1842), naturalist, was born about 1817, being the second son of John Thomas Cooper, the chemist. He was educated for the medical profession, and while still a lad showed great love of natural history, particularly botany and conchology. He took an active part in establishing the Botanical Society of London, of which he became first curator, his duties being to receive and distribute the dried plants among the members. At this time he was an assistant in the zoological department of the British Museum, but had employed his leisure hours in compiling his 'Flora Metropolitana,' much being due to his own observations. This work contains a list of the land and fresh water shells round London, which was also separately issued. The next year, 1837, a supplement to his 'Flora' was published, the wrapper containing announcements of his botanical classes and sets of his shells, to be had at his address, 82 Blackfriars Road. In 1840 he exhibited some ferns from Settle, Yorkshire, at the Linnean Society, of which society he was an associate. With Mr. Busk he began the 'Microscopic Journal,' and edited a new edition of Bingley's 'Useful Knowledge.'

Shortly after this he gave up lecturing on botany and entered the army at Chatham; then being attached to the 17th lancers, he joined his regiment at Leeds as assistant-surgeon, but died two months afterwards, 24 Nov. 1842, at the early age of twenty-five. He was buried with military honours at Quarry Hill cemetery, Leeds.

B. D. J.

COOPER, or COWPER, EDWARD (*d.* 1725?), printseller, carried on the leading business in London from the time of James II to nearly the close of the reign of George I. His name as vendor is to be found on a great number of mezzotints, and this may have led to the belief that he was an actual engraver. He issued many im-

portant prints by Faithorne, Lens, Pelham, Simon (later period), Smith (earlier period), Williams, and others. He lived at the Three Pigeons in Bedford Street, Covent Garden, and probably died about the beginning of 1725, as an advertisement in the 'Daily Post' of April in that year announced the sale of his household goods and stock-in-trade. Bowles and other publishers purchased some of his plates, and issued inferior impressions from them. There are mezzotint portraits of Cooper by P. Pelham, after J. Vander Vaart, dated 1724, of his son John (a child), of Priscilla (wife or daughter), and of Elizabeth (a young daughter).

[J. C. Smith's British Mezzotinto Portraits, pp. 144, 463, 969, 1078, 1683; Granger's Biogr. Hist. 1824, v. 346, 399; Noble's Biogr. Hist. iii. 428, 451; Strutt's Biogr. Dict. i. 215; Bromley's Catalogue; Walpole's Cat. of Engravers (Dallaway), v. 207.] H. R. T.

COOPER, EDWARD JOSHUA (1798-1863), astronomer, born at Stephen's Green, Dublin, in May 1798, was the eldest son of Edward Synge Cooper, upon whom, in 1800, through the death of his father, the Right Hon. Joshua Cooper of Markree Castle, co. Sligo, and the ill-health of his elder brother, devolved the management of the large family estates. From his mother, Anne, daughter of Harry Verelst, governor of Bengal, Cooper derived his first notions of astronomy. The taste was hereditary on the father's side also, and was confirmed by visits to the Armagh observatory during some years spent at the endowed school of that town. His education was continued at Eton, whence he passed on to Christ Church, Oxford, but left the university after two years without taking a degree. The ensuing decade was mainly devoted to travelling. By his constant practice of determining with portable instruments the latitudes and longitudes of the places visited, he accumulated a mass of geographical data, which, however, remained unpublished. In the summer of 1820 he met Sir William Drummond at Naples, and, by the interest of a controversy with him on the subject of the Dendera and Esneh zodiacs, was induced to visit Egypt for the purpose of obtaining accurate copies of them. He accordingly ascended the Nile as far as the second cataract in the winter of 1820-1, and brought home with him the materials of a volume entitled 'Views in Egypt and Nubia,' printed for private circulation at London in 1824. A set of lithographs from drawings by Bossi, a Roman artist engaged by Cooper for the journey, formed its chief interest, the descriptive letterpress by himself containing little novelty.

His excursions eastward reached to Turkey and Persia, while in 1824-5 he traversed Denmark, Sweden, and Norway, as far as the North Cape. Unremitting attention to its conditions led him to regard Munich and Nice as the best adapted spots in Europe for astronomical observation. Succeeding on his father's death in 1830 to his position at Markree, he immediately determined upon erecting an observatory there. An object-glass by Cauchoix, 13½ inches across and of 25 feet focal length, the largest then in existence, was purchased by him in 1831, and mounted equatorially by Thomas Grubb of Dublin in 1834. Cast iron was for the first time employed as the material of the tube and stand; but a dome of the requisite size not being then feasible, the instrument was set up, and still remains, in the open air. A five-foot transit by Troughton, a meridian-circle three feet in diameter, fitted with a seven-inch telescope, ordered in 1839 on the occasion of a visit to the works of Ertel in Bavaria (see DOBERCK, *Astr. Nach.* xcii. 65), and a comet-seeker, likewise by Ertel, acquired in 1842, were successively added to the equipment of what was authoritatively described in 1851 as 'undoubtedly the most richly furnished of private observatories' (*Monthly Notices*, xi. 104).

Cooper worked diligently in it himself when at Markree, and obtained, March 1842, in Mr. Andrew Graham an assistant who gave a fresh impulse to its activity. By both conjointly the positions of fifty stars within two degrees of the pole were determined in 1842-1843 (*ib.* vii. 14); systematic meridian observations of minor planets were set on foot; the experiment was successfully made, 10-12 Aug. 1847, of determining the difference of longitude between Markree and Killiney, ninety-eight miles distant, by simultaneous observations of shooting stars; and a ninth minor planet was discovered by Graham 25 April 1848, named 'Metis,' at the suggestion of the late Dr. Robinson, because its detection had ensued from the adoption of a plan of work laid down by Cooper. Meteorological registers were continuously kept at Markree during thirty years from 1833, many of the results being communicated to the Meteorological Society. In 1844-5 Cooper and Graham made together an astronomical tour through France, Germany, and Italy. The great refractor formed part of their luggage, and, mounted on a wooden stand with altitude and azimuth movements, served the former to sketch the Orion nebula, and to detect independently at Naples, 7 Feb. 1845, a comet (1844, iii.) already observed in the southern hemisphere.

From the time that the possibility of further planetary discoveries had been recalled to the attention of astronomers by the finding of

Astræa 8 Dec. 1845, Cooper had it in view to extend the star-maps then in progress at Berlin, so as to include stars of the twelfth or thirteenth magnitude. A detailed acquaintance with ecliptical stars, however, was indispensable for the facilitation of planetary research—Cooper's primary object—and the Berlin maps covered only an equatorial zone of thirty degrees. He accordingly resolved upon the construction of a set of ecliptical star-charts of four times the linear dimensions of the 'Horæ' prepared at Berlin. Observations for the purpose were begun in August 1848, and continued until Graham's resignation in June 1860. The results were printed at government expense in four volumes with the title 'Catalogue of Stars near the Ecliptic observed at Markree' (Dublin, 1851–6). The approximate places were contained in them of 60,066 stars (epoch 1850) within three degrees of the ecliptic, only 8,965 of which were already known. A list of seventy-seven stars missing from recent catalogues, or lost in the course of the observations, formed an appendix of curious interest. The maps corresponding to this extensive catalogue presented by his daughters after Cooper's death to the university of Cambridge, have hitherto remained unpublished. Nor has a promised fifth volume of star places been forthcoming. For this notable service to astronomy, in which he took a large personal share, Cooper received in 1858 the Cunningham gold medal of the Royal Irish Academy. He had been a member of that body from 1832, and was elected a fellow of the Royal Society 2 June 1853. Cooper had observed and sketched Halley's comet in 1835; Mauvais' of 1844 was observed and its orbit calculated by him during a visit to Schloss Weyerburg, near Innsbrück (*Astr. Nach.* xxii. 131, 209). The elements and other data relative to 198 such bodies, gathered from scattered sources during several years, were finally arranged and published by him in a volume headed 'Cometic Orbits, with copious Notes and Addenda' (Dublin, 1852). Although partially anticipated by Galle's list of 178 sets of elements appended to the 1847 edition of Olbers's 'Abhandlung,' the physical and historical information collected in the notes remained of permanent value, and constituted the work a most useful manual of reference. The preface contains statistics of the distribution in longitude of the perihelia and nodes of both planetary and cometary orbits, showing what seemed more than a chance aggregation in one semicircle. Communications on the same point were presented by him to the Royal Astronomical Society in 1853 (*Monthly Notices*, xiv. 68), to the Royal Society in 1855 (*Proc.* vii. 295), and to the British Association in 1858 (*Report*, ii. 27).

Cooper succeeded to the proprietorship of the Markree estates on the death without issue in 1837 of his uncle, Mr. Joshua Cooper, and was conservative member of parliament for Sligo co. from 1830 to 1841, and again from 1857 to 1859. He was twice married: first to Miss L'Estrange of Moystown, King's County, who survived but a short time, and left no children; secondly to Sarah Frances, daughter of Mr. Owen Wynne of Haslewood, co. Sligo, by whom he had five daughters. Her death preceded by a brief interval, and probably hastened, his own. He died at Markree Castle 23 April 1863, having nearly completed his sixty-fifth year. He was a kind as well as an improving landlord; his private life was blameless, and he united attractiveness of manner to varied accomplishments. He kept up to the last his interest in scientific pursuits, and numerous records of his work in astronomy were printed in the 'Monthly Notices,' the 'Astronomische Nachrichten,' and other learned collections. He imparted his observations of the annular eclipse of 15 May 1836 to the Paris Academy of Sciences (*Comptes Rendus*, xxvi. 110). For some years after his death the Markree observatory was completely neglected. It was, however, restored in 1874, when Mr. W. Doberck was appointed director, and the great refractor began to be employed, according to Cooper's original design, for the study of double stars.

[Proc. R. Soc. xiii. i; Observatory, vii. 283, 329 (Doberck); Times, 27 April 1863; Burke's Landed Gentry, 1868; R. Soc. Cat. Sc. Papers.]

A. M. C.

COOPER, ELIZABETH (*fl.* 1737), compiler of 'The Muses' Library,' the widow of an auctioneer, applied herself to the study of the early English poets, and in 1737 published 'The Muses' Library; or a Series of English Poetry from the Saxons to the Reign of King Charles II,' vol. i. The preface is well written, the extracts are not injudiciously chosen, and the critical remarks appended to each extract are sensible. Mrs. Cooper was largely assisted in her undertaking by the antiquary Oldys, whose services she acknowledges in the preface. No more than vol. i. was published. The unsold copies were reissued in 1741 with a new title-page, but the book attracted little attention. Mrs. Cooper was the authoress of 'The Rival Widows, or the Fair Libertine. A Comedy,' 8vo, acted for nine nights at Covent Garden (the authoress taking the principal character on her benefit nights), and printed in 1735 with a dedication to the Dowager

Duchess of Marlborough. She also wrote an unprinted play, 'The Nobleman,' acted once at the Haymarket about May 1736.

[Genest's Hist. of the Stage, iii. 461–2; Biographia Dramatica, ed. Jones, i. 148, iii. 84, 212–13; Oldys's Diary (1863); Gent. Mag. v. 138–9.] A. H. B.

COOPER, GEORGE (1820–1876), organist, was born on 7 July 1820 at Lambeth. His father was assistant organist at St. Paul's. His early proficiency and facility of execution—he had practised assiduously on an old pedal harpsichord—were remarked by Attwood, the chief organist of the cathedral, who on several occasions made him extemporise at the festivals of the Sons of the Clergy. At the age of eleven he often took the service instead of his father, and in 1834 received the appointment of organist of St. Benet, Paul's Wharf. Two years later he became organist of St. Ann and St. Agnes, and on Attwood's death, in March 1838, he succeeded his father as assistant organist of the cathedral. His father, who had resigned at that time, died in 1843, on which Cooper obtained his post at St. Sepulchre's. In the same year he was appointed to Christ's Hospital. In September 1856 he was appointed organist of the Chapel Royal, *vice* J. B. Sale, deceased. This appointment, together with those at St. Paul's and St. Sepulchre's, he retained till the time of his death. He published a book of 'Organ Arrangements,' an 'Organist's Assistant,' an 'Introduction to the Organ,' and an 'Organist's Manual' (1851). In 1862 he revised the music for the Rev. W. Windle's 'Church and Home Metrical Psalter and Hymn Book,' contributing several tunes of his own composition. On the death of Dr. Gauntlett in February 1876 he undertook to complete the musical editing of 'Wesley's Hymns.' He had finished the task at the time of his death, 2 Oct. 1876, and the book appeared in 1877.

COOPER, SIR GREY (*d.* 1801), politician, was lineally descended from John Cooper, who is said to have been created a baronet of Nova Scotia in 1638. Sir John Cooper, the son and successor of the first baronet, died without issue, but the title was assumed in 1775 by Sir Grey, the great-grandson of the Rev. James Cooper, the second baronet's next brother. Cooper, who was a native of Newcastle-on-Tyne, entered at the Temple, and was in due time called to the bar, but on the formation of the Rockingham ministry in 1765 he plunged into politics in support of the new ministry. A pamphlet published anonymously, but believed to have been the composition of Charles Lloyd, private secretary to George Grenville, was issued in that year, and from the circumstance of its authorship attracted some attention. It was entitled 'An Honest Man's Reasons' for declining to take any part in the New Administration,' and was promptly answered by Cooper in two anonymous productions, the first called 'A Pair of Spectacles for Short-sighted Politicians; or a Candid Answer to a late extraordinary Pamphlet, entitled "An Honest Man's Reasons, &c.,"' 1765, and the second entitled 'The Merits of the New Administration truly stated,' 1765. These brochures recommended him to the notice of the Rockingham ministry as a fit holder of the office of secretary of the treasury, but as his acceptance of the post would have involved his abandonment of a legal career, he did not consent to change his mode of life until he had secured 'an adequate pension in case of dismission.' His services as joint secretary of the treasury were so acceptable that he was continued therein under the successive governments of Lord Chatham, Duke of Grafton, and Lord North (1765–82). On the downfall of the last ministry he went out of office, but on the formation in 1783 of the coalition cabinet of North and Fox he became a lord of the treasury, and remained there until the dismissal of the ministry by the king, after which date he never resumed office. While one of the treasury secretaries under Lord North he managed the Cornish boroughs and the duchy revenues, but with these exceptions his energies were confined to the more legitimate duties of his office. In December 1765 he stood for Rochester against John Calcraft and was duly elected. At the dissolution in 1768 he was returned for Grampound, from 1774 to 1784 he sat for Saltash, and from 1786 to 1790 he was one of the members for Richmond in Yorkshire. Cooper's administrative abilities were justly esteemed, and he was considered a high authority on financial questions. During the debates on the commercial treaty with France (1787) he took an active part in the opposition, and yielded to few 'in his accurate knowledge of the complicated interests which it included.' On this and the other financial measures of Pitt he directed a keen and searching criticism. Cooper retired from public life some years before his death, and his nomination in 1796 as a privy councillor was a worthy tribute to his past services as a public official. He died very suddenly at Worlington, Suf-

folk, on 30 July 1801, aged 75, and was buried in the church, where is a monument to his memory. His first wife (1753) was Margaret, daughter of Sir Henry Grey of Howick, who died without issue in 1755. His second wife (1762) was Elizabeth, daughter of Mr. Kennedy of Newcastle-upon-Tyne; she died at Worlington on 3 Nov. 1809, aged 75, having had issue two sons and two daughters. One of these sons came into possession in 1797, under a reversionary patent, of the post of auditor of the land revenue in nearly every county in England, a place worth about 2,000*l.* per annum, and Cooper was supposed to share in the emoluments. Two of Cooper's letters on public affairs are in the 'Correspondence of the first Lord Auckland,' i. 357–9, 361–2, several to Sir Philip Francis are in the 'Memoirs of Francis,' ii. 41, 85, and many sprightly notes from him are in 'Garrick's Correspondence,' vols. i. and ii. He was the author, in addition to the works already stated, of 'The State of Proceedings in the House of Commons on the Petition of the Duke and Duchess of Athol, relating to the Isle of Man,' 1769, and of 'Stanzas . . . inscribed to the Reverend William Mason, as a Testimony of Esteem and Friendship.'

[Brit. Mus. Add. MS. 19167, f. 9; Gent. Mag. 1801, pt. ii. 769–70, 1809, p. 1084; Wraxall's Memoirs (1884 ed.), i. 428, iii. 56, iv. 402, v. 99; Almon's Anecdotes, i. 92–4; Albemarle's Rockingham, i. 309–10; Grenville Papers, iv. 157; Nichols's Illustr. of Lit. vi. 700–1.] W. P. C.

COOPER, JOHN (*d.* 1626), musician. [See COPERARIO, GIOVANNI.]

COOPER, JOHN (*fl.* 1810–1870), actor, was the son of a tradesman in Bath, in which city he was born. After playing Alonzo in a private theatre, he appeared on the Bath stage, 14 March 1811, as Inkle in 'Inkle and Yarico,' and subsequently enacted two or three other parts. After a short visit to Cheltenham, he appeared on 15 May 1811 at the Haymarket as Count Montalban in the 'Honeymoon,' and, besides playing other characters, was the original William Wyndham in Dimond's 'Royal Oak,' 10 June 1811, and Hartley in Theodore Hook's 'Darkness Visible,' 23 Sept. 1811. He then joined Cherry, the manager of several Welsh theatres, after whose death he played in the north of England and Scotland. In Edinburgh he acted Edgar to the Lear of Kean, and was in Glasgow the original Virginius in Knowles's tragedy of that name, subsequently (17 May 1820) produced by Macready at Covent Garden. On 1 Nov. 1820 he made as Romeo his first appearance at Drury Lane. His Romeo was received with much favour. Othello, which followed on 8 Nov. 1820, Booth being Iago, was less successful. In the course of the opening season at Drury Lane he played Titus in Payne's 'Brutus, or the Fall of Tarquin,' Alonzo in 'Pizarro,' Antony in 'Julius Cæsar,' Hastings in 'Jane Shore,' Tullus Aufidius in 'Coriolanus,' Joseph in the 'School for Scandal,' Richmond in 'Richard III,' Inkle in 'Inkle and Yarico,' Frederick in the 'Poor Gentleman,' Don Julio in 'Bold Stroke for a Husband,' Rob Roy, Iago to Kean's Othello, and many other parts, besides 'creating' several new rôles, the most important of which was the Doge in Byron's 'Marino Faliero.' Talfourd speaks of his performance as not readily to be forgotten (*New Monthly Mag.* iii. 274). During the twenty-five years which followed his services were generally in request at Drury Lane, at Covent Garden, where he appeared on 14 Oct. 1823 as St. Franc in the 'Point of Honour,' a translation by Charles Kemble of 'Le Déserteur' of Mercier, and at the Haymarket. Once, in mutiny at a proposed reduction of salary, he went as a star to the Surrey, and played in the 'Law of the Land.' A steady, a capable, and an eminently conscientious but a heavy and mechanical actor, he played during this period a singularly large number of parts, some of them of leading importance. He was the original Duke of Sheridan Knowles's 'Love,' Covent Garden, 1839, and played many characters originally in the dramas of the same author. Among his best parts were Iago and the Ghost in 'Hamlet.' Previous to, and during Charles Kean's occupation of the Princess's, he was at that theatre, taking such characters as Henry IV in 'King Henry IV, Part I.,' the Duke of York in 'King Richard II,' 12 March 1857, Kent in 'King Lear,' 5 April 1858, and appearing as the original Mr. Benson in Morton's 'Thirty-three last Birthday.' Upon retirement from the Princess's, Cooper withdrew from the stage upon a competency he had saved. At the close of his life he lived at 6 Sandringham Gardens, Ealing, and he died on 13 July 1870 at Tunbridge Wells, whither he had gone in search of health.

COOPER, JOHN GILBERT (1723–1769), poet and miscellaneous writer, was descended from an ancient family of Notting-

hamshire, which was impoverished on account of its loyalty during the time of Charles I. His father possessed Thurgarton Priory, granted to one of his ancestors by Henry VIII, and here the son was born in 1723. He was educated at Westminster School, and in 1743 entered Trinity College, Cambridge, but quitted it on his marriage to Miss Wright, daughter of Sir Nathan Wright, the recorder of Leicester, without taking a degree. In 1745 he published the 'Power of Harmony,' in two books, in which he promulgated that attention to what was beautiful and perfect in nature was the best means to harmonise the soul. The style is modelled on that of the author of the 'Characteristics' [see COOPER, ANTHONY ASHLEY, third earl of Shaftesbury], of whom he was an enthusiastic disciple. Under the name of 'Philaretes' Cooper became one of the chief contributors to Dodsley's 'Museum,' started in 1746. In 1749 he wrote a Latin epitaph on the death of his son, who expired the same day that he was born. The epitaph, a very affected piece of composition, appeared in the 'Gentleman's Magazine' for 1778, p. 486, accompanied with a poetical English translation. In 1749 Cooper published a 'Life of Socrates,' with an edition of his writings collected from all the ancient authorities. For this work he received notes from John Jackson, an opponent of Warburton, who took care to handle the conclusions of Warburton with some severity. Warburton replied in a note to his edition of Pope (ed. 1751, i. 151), characterising the attack as 'ignorant abuse, the offspring of ignorance.' To this Cooper replied in 'Cursory Remarks on Warburton's edition of Pope,' asserting that he attacked him as an author and not as a man. In 1754 he published 'Letters on Taste,' which received a high encomium from Johnson. In 1755 he published 'The Tomb of Shakespeare, a Vision,' and in the following year, in the 'Genius of Britain,' denounced the proposal to bring Hessian troops to defend the kingdom. In 1758 he published 'Epistles to the Great from Aristippus in retirement,' which was soon afterwards followed by the 'Call of Aristippus, Epistle IV. to Mark Akenside, M.D.' In 1759 he published a translation of Gresset's 'Vert-Vert,' which was reprinted in the 'Repository' in 1777. In 1764 Dodsley published those of his poems which had appeared in the 'Museum,' and in Dodsley's collections, the title being 'Poems on several subjects.' He died at Mayfair, London, in April 1769.

T. F. H.

COOPER, RICHARD, the elder (*d.* 1764), engraver, was born in London, and studied engraving under John Pine. On the death of his father he inherited some money and quitted his profession as an engraver in order to visit Italy and study art there. He remained there some years, acquiring considerable knowledge of the great masters, and becoming a good draughtsman and fair painter himself. He also formed a good collection of drawings by the old masters and prints of various schools and countries. On his return to England he was induced by a friend and brother artist, Mr. Guthrie, to accompany the latter on a visit to Edinburgh. Scotland was at that time suffering from a lack of first-rate artists, and Cooper was warmly welcomed, so much so that he decided on settling in Edinburgh, and resumed his old profession of engraver. Finding plenty of employment he built for himself a house in St. John Street, the interior of which he decorated with pictures from his own hand. Here he took various apprentices, the best known of whom was Robert Strange [q. v.], who was apprenticed to Cooper for six years, and became not only an inmate but an intimate friend of the family. About 1738 Cooper married Miss Ann Lind, by whom he left a son, Richard Cooper the younger [q. v.], who followed his father's profession. According to Strange, Cooper as an engraver lacked practice, but all his work showed spirit and taste. He is chiefly known for his engravings of contemporary portraits, among which were John Taylor, oculist, after W. De Nune; William Carstares and Andrew Allan, both after W. Robinson; Sir Hugh Dalrymple, after W. Aikman; John Napier, the inventor of logarithms; George, lord Jeffreys, and others. He also occasionally engraved in mezzotint, viz. Archibald, duke of Argyll, after W. Aikman; John Dalrymple, earl of Stair, after Kneller; Lady Wallace, and others. He also engraved anatomical plates for the 'Edinburgh Medical Essays,' &c., book-plates, and other similar compositions. He died in 1764, and was buried in the Canongate churchyard, Edinburgh. W. Robinson painted his portrait, and Cooper engraved it himself. J. Donaldson engraved his portrait in mezzotint, and this is perhaps identical with a mezzotint portrait of him from a picture by G. Schroider.

L. C.

COOPER, RICHARD, the younger (1740?–1814?), painter and engraver, son of Richard Cooper the elder, engraver, of

Edinburgh [q. v.], was born in Edinburgh about 1740, and after receiving instruction from his father went to Paris and studied engraving under J. P. Le Bas, the famous French engraver, to whom he owed the correctness and brilliancy which distinguished some of his engravings. In 1761 he exhibited at the Incorporated Society of Artists a drawing from a picture by Trevisani, probably for the engraving of a Magdalen after that artist, which he exhibited at the Free Society of Artists in the following year. In 1762 also he exhibited one of his best engravings, viz. 'The Children of Charles I,' after Vandyck; at the Incorporated Society of Artists in 1764 he exhibited 'The Virgin and Child,' after Correggio, a very brilliant engraving. His name does not appear again as an exhibitor for some years, and during this period he seems to have visited Italy and produced a series of tinted drawings of Rome and its vicinity, which have gained for him the name of the 'English Poussin.' These he engraved, aquatinted, and published in 1778 and 1779, besides exhibiting some of the drawings at the Royal Academy. In 1782 he completed a large and important work, which he aquatinted and exhibited in 1783 at the Incorporated Society of Artists; this was the 'Procession of the Knights of the Garter,' from a design by Vandyck formerly in Charles I's collection, and intended to have been painted for the Banqueting House at Whitehall. Other engravings by him were portraits of 'William III and Mary;' Thomas Wentworth, earl of Strafford; Frederick, prince of Wales, and his sisters; 'Rembrandt's Mistress' (in mezzotint), 'A Bacchanal,' after N. Poussin; 'A View of the Port of Messina before the Earthquake in 1783,' after T. M. Slade. About 1787 Cooper settled in Charles Street, St. James's Square, and devoted himself to drawing, exhibiting numerous drawings at the Royal Academy up to 1809; among these were two of Windsor Castle, which were engraved and aquatinted by S. Alken. He was appointed drawing-master to Queen Charlotte, and also held that position in Eton School. He is stated to have been alive in 1814. Samples of his drawings may be seen at the South Kensington Museum and at the print room, British Museum; in the latter collection there are also numerous engravings, etchings, and lithographs by him.

[Redgrave's Dict. of Artists; Nagler's Künstler-Lexikon; Bryan's Dict. of Artists (ed. Graves); Sarsfield Taylor's State of the Arts in Great Britain and Ireland; Graves's Dict. of Artists, 1760-1880; Guiffrey's Vandyck; Catalogues of the Royal Academy, South Kensington Museum, &c.] L. C.

COOPER, ROBERT (*fl.* 1681), geographer, son of Robert Cooper of Kidderminster, Worcestershire, became a servitor of Pembroke College, Oxford, in 1666, graduated in arts, and was made fellow of his college through the influence of Dr. Hall, the master. He was a good preacher and well skilled in mathematics. On 8 April 1681 he was admitted to the rectory of Harlington, near Hounslow, Middlesex, on the presentation of Sir John Bennett, afterwards Lord Ossulston, and was alive in 1700 (Newcourt). He wrote 'Proportions concerning Optic-glasses, with their Natural Reasons drawn from Experiments,' 1679, 4to, and 'A General Introduction to Geography' prefixed to the first volume of the 'English Atlas,' Oxford, 1680, fol.

[Wood's Athenæ Oxon. (Bliss), iv. 749; Life (Bliss), lxxxix; Kennet's Register, p. 500; Newcourt's Repertorium, i. 632.] W. H.

COOPER, ROBERT (*fl.* 1800-1836), engraver, was largely employed during the first quarter of the century in engraving portraits. Among the publications on which he was engaged were: 'La Belle Assemblée,' a fashionable periodical; 'Old Mortality' and other novels by Sir Walter Scott; Lodge's 'Portraits of Illustrious Personages;' Chamberlaine's 'Imitations of Original Drawings, by Hans Holbein;' Tresham and Ottley's 'British Gallery of Pictures,' &c. He was employed by the Duke of Buckingham to execute some private plates for him; the most important and the best known of these is the engraving Cooper executed of the 'Chandos' portrait of Shakespeare. For him also he engraved portraits of the Duke of Buckingham, after Saunders, and Earl Temple, after the same; Count Gondomar, after Velazquez; Marquis de Vieuville, after Vandyck, and others. Cooper was also a very prolific engraver of book plates and vignettes, &c., and exhibited with the Associated Engravers in 1821. He was in addition a publisher, and in this line of business he seems to have met with financial disaster, as on 31 Oct. 1826 and the two following days his collection and stock of prints, drawings, and copperplates were dispersed by auction at Southgate's Rooms in Fleet Street. Among the drawings were some by Samuel de Wilde [q. v.], after whom Cooper executed numerous engravings of leading actors and actresses of the day for various theatrical publications. He is stated to have been living in 1836. He left unfinished in 1826 a large engraving of 'Christ bearing the Cross,' after Mignard.

[Redgrave's Dict. of Artists; Leblanc's Manuel de l'Amateur d'Estampes; Bromley's Cat. of

British Engraved Portraits; Collection of Sale Catalogues in the Print Room, British Museum.]

L. C.

COOPER, SAMUEL (1609–1672), miniature painter, was born in London in 1609. He was a nephew of John Hoskins, who was eminent in the reign of Charles I as a painter of miniatures, and by whom he and his brother Alexander were instructed in the same branch of art. Samuel soon surpassed his uncle, who is said to have been jealous of him. Horace Walpole says that he 'owed a great part of his merit to the works of Van Dyck, and yet may be called an original genius, as he was the first who gave the strength and freedom of oil to miniature.' His heads excel in the variety of their tints and in the management of the hair, but the drawing of the neck and shoulders is often so incorrect as to afford grounds for the conjecture that it was for this reason that so many of his works were left unfinished. For many years he resided in the then fashionable locality of Henrietta Street, Covent Garden, and allusion is made to him in the 'Diary' of his friend Samuel Pepys, who calls him 'the great limner in little.' He was induced to visit France, where he remained some time, and painted portraits on a somewhat enlarged scale. He afterwards visited Holland. He died in London 5 May 1672, aged 63, and was buried in the old church of St. Pancras, where there is a mural monument to his memory. He was an excellent linguist and musician, and played well on the lute. Some verses 'To Mr. Sam. Cooper, having taken Lucasia's Picture given December 14, 1660,' are in a folio volume of 'Poems by Mrs. Katherine Philips, the matchless Orinda,' published in London in 1667. His widow, whose sister was the mother of Alexander Pope, received a pension from the French court, and was promised one by the court of England, but the latter was never paid. Cooper is the most eminent painter of miniatures that England has produced, and his works are much sought after. He painted Oliver Cromwell several times; the profile in the collection of the Duke of Devonshire being that from which Houbraken engraved his portrait. One of his best works is a fine head of Cromwell in the collection of the Duke of Buccleuch, and another profile is in the possession of Lord Houghton. The Duke of Devonshire possesses also another miniature of Cromwell, and one of Mrs. Claypole, the favourite daughter of the Protector; and the Duke of Buccleuch has in his fine collection those of Milton, Prince Rupert, James II, when duke of York, Charlotte de la Tremouille, countess of Derby, Richard Cromwell, Elizabeth Cromwell, wife of the Protector, Mrs. Claypole, John Thurloe, Lucius Cary, lord Falkland, George Monck, duke of Albemarle, James Graham, marquis of Montrose, and Samuel Butler. In the royal collection there are miniatures of Charles II, Queen Catharine of Braganza, James II, James, duke of Monmouth, George Monck, duke of Albemarle, and Robert Walker, the portrait painter. Cooper painted many other celebrated persons of the Commonwealth and the succeeding reign, including John Hampden, General Ireton, General Fleetwood, William Lenthall, Colonel Lilburne, Thomas Hobbes, Anthony Ashley Cooper, first earl of Shaftesbury, and Edmund Waller, the poet. Some of these are in the possession of the Duke of Northumberland and the Earl of Gosford, while others are at Althorp, Burleigh, Castle Howard, and Penshurst. Those which were in the collection of Sir Andrew Fountaine were destroyed by fire at White's chocolate house in 1733. Many miniatures by him were lent to the Exhibition of Portrait Miniatures held at the South Kensington Museum in 1865, and to the Exhibition of Works by the Old Masters at the Royal Academy in 1879. A head of Cooper from an original drawing by himself was engraved by Raddon for Wornum's edition of Walpole's 'Anecdotes of Painting.'

[Walpole's Anecdotes of Painting, ed. Wornum, 1849, ii. 529; Redgrave's Dict. of Artists; Cat. of Exhibition of Portrait Miniatures at South Kensington, 1865; Royal Academy Cat. Old Masters, 1879.] R. E. G.

COOPER, SAMUEL, D.D. (1739–1800). [See under COOPER, SIR ASTLEY PASTON.]

COOPER, SAMUEL (1780–1848), surgical writer, was born in September 1780. His father, who had made a fortune in the West Indies, died when his three sons were still young. The eldest, George, became a judge of the supreme court in Madras, and was knighted. The second, Samuel, was educated by Dr. Burney at Greenwich, and in 1800 entered St. Bartholomew's Hospital, where he showed great promise. In 1803 he became M.R.C.S., and settled in Golden Square. In 1806 he gained the Jacksonian prize at the College of Surgeons for the best essay on 'Diseases of the Joints.' In 1807 he published his 'First Lines of Surgery,' which went through seven editions. In 1809 the first edition of his great 'Surgical Dictionary' appeared, and its popularity was instant and great. During Cooper's lifetime seven large and carefully revised editions appeared. In 1810 Cooper married a Miss Cranstoun, but she died in the following year, leaving a daughter, afterwards married to Thomas Mor-

ton, surgeon to University College Hospital. After his wife's death Cooper (in 1813) entered the army as surgeon, and served on the field of Waterloo. Retiring on the conclusion of peace, he devoted his chief attention to editing the successive editions of his two principal works, and also gained a considerable surgical practice. In 1827 he became a member of the council of the College of Surgeons, and from 1831 to 1848 was surgeon to University College Hospital and professor of surgery in the college. In 1845 he was elected president of the College of Surgeons, and in 1846 fellow of the Royal Society. He died of gout on 2 Dec. 1848.

Besides his principal works Cooper wrote a book on 'Cataract,' 1805, and edited the third and fourth editions of Dr. Mason Good's 'Study of Medicine.' He delivered the Hunterian oration in 1834. The 'Dictionary' was translated into French, German, and Italian, and several times republished in America.

[Lancet, 1848, ii. 646; Gent. Mag. 1849, i. (March), 320; biographical notice by G. L. Cooper, prefixed to vol. ii. of the 8th edition of the Dictionary of Practical Surgery, 1872; Clarke's Autobiographical Recollections of the Medical Profession, 1874, pp. 323–6; for discussions connected with Cooper's resignation of the University College chair, see Lancet 1848, multis locis.] G. T. B.

COOPER or COUPER, THOMAS (1517?–1594), bishop of Winchester, was born in Oxford, the son of a very poor tailor in Cat Street, and educated as one of the choristers in Magdalen College school. He made so much progress that he was elected probationer of the college in 1539, and after graduating became a fellow and master of the school in which he had been educated. Among his eminent pupils was William Camden. It had been Cooper's intention to take orders, but having adopted protestant views he found himself checked by the accession of Queen Mary; he therefore changed his purpose, took a degree in physic, and began to practise in Oxford. In 1545 Thomas Lanquet died while writing a 'Chronicle of the World.' He had brought it down from the creation to A.D. 17, and now Cooper undertook to carry it on to the reign of Edward VI. His portion is about thrice as much as Lanquet's, and the whole was published in 1549. Another edition was surreptitiously put forth, with additions by a third writer, in 1559, greatly to Cooper's annoyance, who published two more editions under the title of 'Cooper's Chronicle,' one in 1560, and another in 1565. All these are in quarto.

Simultaneously with the 'Chronicle' he had engaged in another work, which was published in folio in 1548, 'Bibliotheca Eliotæ. Sive Dictionarium Lat. et Angl. auctum et emend. per Tho. Cooper.' A second edition was published in 1552, entitled 'Eliot's Dictionary, the second time enriched and more perfectly corrected by Thos. Cooper, schoolmaster of Maudlen's in Oxford.' And a third edition appeared in 1559.

On the death of Queen Mary he recurred to his original purpose and was ordained, speedily gaining the character of a zealous preacher. And now he engaged in by far his greatest literary work, 'Thesaurus Linguæ Romanæ et Britannicæ . . . op. et ind. T. Cooperi Magdalenensis. Accessit Dictionarium Historicum et Poeticum,' Lond. 1565. It was reprinted in 1573, 1578, and 1584. This book, commonly known as 'Cooper's Dictionary,' delighted Queen Elizabeth so much that she expressed her determination to promote the author as far as lay in her power. His life, however, was anything but happy. He had married unhappily, his wife was utterly profligate. He condoned her unfaithfulness again and again, refusing to be divorced when the heads of the university offered to arrange it for him, and declaring that he would not charge his conscience with so great a scandal. On one occasion his wife, in a paroxysm of fury, tore up half his 'Thesaurus,' and threw it into the fire. He patiently set to work and rewrote it (AUBREY'S *Lives*, ii. 290).

In 1562 he began to engage in controversy. A reply to Bishop Jewel's 'Apology' had been written and circulated, apparently in manuscript only, entitled 'An Apology of Private Mass.' To this an answer now appeared: 'An Answer in Defence of the Truth against the Apology of Private Mass,' the work replied to being prefixed. In the 'Biographia Britannica,' and in Jelf's edition of Jewel's works, this treatise is attributed to Jewel, but erroneously. In the preface Jewel is referred to as 'a worthy learned man,' and Dr. Cradocke, Margaret professor of divinity of Oxford, writing in 1572, speaks of it as 'the treatise of the right reverend father, Bishop Cowper.' And Fulke, also writing in Cooper's lifetime, calls it his. This treatise was reprinted under the auspices of the Parker Society, and edited by Dean Goode in 1850. In 1567 Cooper was made dean of Christ Church, and for several years was vice-chancellor. In 1569 he was appointed to the deanery of Gloucester, and in 1570–1 to the bishopric of Lincoln. In 1573 he published a 'Brief Exposition' of the Sunday lessons, of which Archbishop Parker thought so

highly that he wrote to the lord treasurer requesting him to recommend to the queen's council that orders should be given to have a copy placed in every parish church, 'for that the more simple the doctrine was to the people, the sooner might they be edified, and in an obedience reposed' (Strype, *Parker*). Other works of his during his occupation of the see of Lincoln were 'A True and Perfect Copy of a Godly Sermon preached in the Minster at Lincoln 28 Aug. 1575, on Matt. xvi. 26, 27;' 'Articles to be enquired of within the Diocese of Lincoln in the Visitation,' 1574; 'Injunction to be observed throughout the Diocese,' 1577; and 'Certain Sermons wherein is contained the Defence of the Gospel against cavils and false accusations . . . by the friends and favourers of the Church of Rome,' 1580. There are twelve of these sermons, on Rom. i. 16; Matt. vii. 15, 16; 1 Cor. x. 1, 3, 5; Matt. xiii. 3, 5; John viii. 46.

In 1584, on the death of Bishop Watson, he was translated to Winchester, which he held for ten years, 'where,' says Wood, 'as in most parts of the nation, he became much noted for his learning and sanctity of life.' Godwin agrees with this opinion, 'a man from whose praises I can hardly temper my pen.' Winchester had been notoriously so rich a see, that a witticism of Bishop Edyngdon had been constantly quoted to the effect that 'Canterbury had the highest rack, but Winchester had the deepest manger.' It was repeated to Cooper, who replied that he found that much of the provender had been swept out of the manger—a reference to recent confiscation of church property. On his appointment to this see he issued as visitor certain injunctions to the president and fellows of Magdalen, in which he lamented the infrequency of the administration of holy communion, and ordered that it should be celebrated on the first Sunday in every month, and received by as many members of the society as possible. Remarking on the negligent manner in which the public services of the chapel were performed on Sundays and at other times, he ordered that if any fellow, demy, chaplain, or clerk came late, went early, or misbehaved himself, he should be admonished and punished by the president, vice-president, and dean.

He had not been long in his new see before he was again in controversy, and with a formidable adversary, namely 'Martin Marprelate.' Under this name appeared in 1588–1589 a series of seven tracts, attacking the English prelacy with coarse wit and invective. Several answers appeared of the same tone and character, in rhyme and in prose. Cooper also replied, but with such gravity as became his position, in his 'Admonition to the People of England, wherein are answered not only the slanderous untruths reproachfully uttered by Martin the Libeller, but also many other crimes by some of the brood, objected generally against all Bishops and the chief of the Clergy purposely to deface and discredit the present state of the church,' 1589. It was published anonymously, but with the initials T. C. at the end of the preface. There is no question of its being Cooper's. Martin retorted in a pamphlet entitled, 'Ha' ye any work for the Cooper?'

A few manuscripts by Bishop Cooper are in existence. A Latin address of congratulation from the university of Oxford to Queen Elizabeth on her visit to the Earl of Leicester, the chancellor of the university, delivered before her by Cooper himself, is at C. C. C. A document at Corpus Christi, Cambridge, is entitled 'Thomæ Cooperi Christiana cum fratribus consultatio, utrum pii verbi ministri præscriptam a magistratibus vestium rationem suscipere et liquido possint et jure debeant.' And there is a book of ordinances and decrees drawn up for Magdalen College, Oxford, by Cooper as visitor in 1585. In the Record Office are also some autographs, one of much interest to local historians, concerning the musters of his diocese, addressed to the Earl of Essex, lord-lieutenant of Hampshire.

Bishop Milner, the Roman catholic historian of Winchester, charges Cooper with the establishment of a cruel persecution of his co-religionists in Hampshire. But this is somewhat hard on Cooper. The increase of persecution was owing to the new act of 1581, and Cooper's appointment to Winchester synchronises with the beginning of hostilities with Spain. Milner, after naming some priests who perished as traitors at Winchester, gives, on the authority of a manuscript by one Stanney, of St. Omer, details of the execution of five laymen. But a letter of Bishop Cooper is in the Record Office in which he recommends 'that an hundred or two of obstinate recusants, lusty men, well able to labour, might by some convenient commission be taken up and sent to Flanders as pioneers and labourers, whereby the country would be disburdened of a company of dangerous people, and the rest that remained be put in some fear.' A return made in 1582 states the number of recusants in Hampshire as 132, more than in any county except York and Lancashire, which have 327 and 428 respectively.

Cooper seems also to have exerted himself,

by command of Queen Elizabeth, in putting down 'prophesyings' in his diocese.

He died at Winchester on 29 April 1594, and was buried in the choir, near the bishop's seat. A monument placed over his grave described him as 'munificentissimus, doctissimus, vigilantissimus, summe benignus egenis.' It has now disappeared; probably, as Milner suggests, it was removed on the repairing of the choir. He left a widow (Amy) and two daughters, Elizabeth, wife of John Belli, provost of Oriel, and afterwards chancellor of the diocese of Lincoln, and Mary, wife of John Gouldwell, gent.

[Wood's Athenæ Oxon. (Bliss), i. 608; Harrington's Nugæ Antiquæ, i. 69; Cassan's Lives of the Bishops of Winchester, ii. 36–48; Milner's History of Winchester, i. 290; Cooper's Athenæ Cantab. ii. 166; Bloxam's Register of Magd. Coll., Oxford.] W. B.

COOPER, COUPER, or COWPER, THOMAS (*fl.* 1626), divine, was born in London and educated at Westminster, whence he was elected in 1586 on the foundation of Christ Church, Oxford, and as a member of that house proceeded B.A. on 14 Dec. 1590, M.A. on 19 June 1593, and B.D. on 14 April 1600. His first call, as he himself tells us, was to succeed 'that painefull and profitable Teacher Maister [William] Harrison' as one of the preachers for the county palatine of Lancaster, and on 1 Aug. 1601 he was presented by his college to the vicarage of Great Budworth, Cheshire, which he held until 1604. On 8 May in the latter year he became vicar of Holy Trinity, Coventry, but resigned in January 1610. In 1620 he was living in Whitecross Street, London, apparently befriended by Lord-chief-justice Montagu, to whom and his lady Cooper expresses himself under deep obligations. In September 1626, having been appointed a 'preacher' to the fleet at 5*l.* a month by Captain Richard Gyffard, he petitioned 'the most illustrious and renowned prince, George, duke of Buckingham,' for a small advance of salary to enable him to get to Portsmouth. Cooper published: 1. 'The Romish Spider, with his VVeb of Treason. Wouen and Broken: together with the seuerall vses that the World and Church shall make thereof,' 3 pts. 4to, London, 1606 (republished the same year with a new title-page, 'A Brand taken out of the Fire,' &c.) 2. 'Nonæ Novembris æternitati consecratæ in memoriam admirandæ illius liberationis Principis et Populi Anglicani à proditione sulphurea.' [In verse and prose] 4to, Oxford, 1607. 3. 'The Chvrches Deliverance, contayning Meditations . . . vppon the Booke of Hester. In remembrance of the wonderfull deliuerance from the Gunpoulder-Treason,' 4to, London, 1609. 4. 'The Mystery of Witch-craft. Discouering the Truth, Nature, Occasions, Growth and Power therof. Together with the Detection and Punishment of the same. As also the seuerall Stratagems of Sathan, ensnaring the poore Soule by this desperate practize of annoying the bodie,' &c., 3 books, 12mo, London, 1617. 5. 'The Cry and Reuenge of Blood. Expressing the Nature and haynousnesse of wilfull Murther . . . exemplified in a most lamentable History thereof, committed at Halsworth in High Suffolk,' &c. 4to, London, 1620. 6. 'VVilie begvile ye, or the Worldlings gaine,' &c., 4to, London, 1621.

Wood's account of Cooper is vague and inaccurate.

[Prefaces to Works as cited above; Welch's Alumni Westmon. (1852), p. 59; Ormerod's Cheshire, i. 452; Dugdale's Warwickshire (Thomas), i. 174; Cal. State Papers, Dom. 1603–10 p. 263, 1625–26 p. 425; Wood's Fasti (Bliss), i. 250, 262, 285; Brit. Mus. Cat.] G. G.

COOPER, THOMAS, M.D. (1759–1840), natural philosopher, lawyer, and politician, was born in London on 22 Oct. 1759, and matriculated from University College, Oxford, in Feb. 1779, aged nineteen; in 1787 he was called to the bar from the Inner Temple. While studying law he extended his researches into anatomy and medicine. His name does not occur in the official list of graduates. He was admitted to the bar and went on circuit for a few years; but entering into the political agitations of the period, he was sent, in company with James Watt, the inventor of the steam-engine, by the democratic clubs of England to the affiliated clubs in France. There he took part with the Girondists, but perceiving their inevitable downfall he escaped to England. In his old age he said that the four months he spent at Paris were the happiest of his life, and that in them he spent four years (*Encyclopædia Americana*, ii. 402). For this journey he and Watt were called to account by Edmund Burke, and this led to the publication of a violent pamphlet by Cooper in reply (Muirhead, *Life of Watt*, pp. 492, 493; Smiles, *Lives of Boulton and Watt*, pp. 408, 414). When his publisher proposed to reissue the reply in a cheaper form, Cooper received a note from Sir John Scott, attorney-general, informing him that, although there was no exception to be taken to his pamphlet when in the hands of the upper classes, yet the government would not allow it to appear at a price which would insure its circula-

tion among the people (Ripley and Dana, *American Cyclopædia*, ed. 1859, v. 674).

While in France he had learned the secret of making chlorine from common salt, and he now became a bleacher and calico printer in Manchester, but his business was unsuccessful (Sutton, *Lancashire Authors*, p. 25). He next went to America, to which country his friend Priestley had already emigrated, and for some time he practised as a lawyer at Sunbury, Pennsylvania. Uniting with the democrats, he opposed with vivacity the administration of John Adams. In consequence of his making a violent attack on Adams in a communication to the Pennsylvania 'Reading Weekly Advertiser' of 26 Oct. 1799, he was tried for a libel under the Sedition Act in 1800 and sentenced to six months' imprisonment and fined four hundred dollars (Wharton, *State Trials of the United States*, pp. 659–81; Rutt, *Life of Priestley*, ii. 61). When the democratic party came into power he transacted, in 1806, the business of a land commissioner on the part of the state with such ability as to triumph over difficulties with the Connecticut claimants in Luzerne county that had broken down two previous commissioners. Governor M'Kean appointed Cooper, in the same year, president judge of one of the Pennsylvania common pleas districts, an office which he filled with energy, but from which he was removed in 1811 by Governor Snyder, at the request of the legislature, on representations chiefly of an overbearing temper.

He next occupied the chair of chemistry in Dickinson College at Carlisle. In 1816 he was appointed professor of mineralogy and chemistry in the university of Pennsylvania, and in 1819 he became, at first professor of chemistry, and then, in 1820, president of the South Carolina College, Columbia. Retiring on account of age in 1834, he devoted his last years, in conjunction with Dr. McCord, to a revision of the statutes of South Carolina. These were published in 10 vols., Columbia, 1836–41, 8vo. Cooper died in South Carolina on 11 May 1840.

He was eminent for the versatility of his talent, the extent of his knowledge, and his conversational powers. In philosophy he was a materialist, and in religion a freethinker. President Adams referred to him in his old age as 'a learned, ingenious, scientific, and talented madcap.'

His principal works are: 1. 'Some Information respecting America,' London, 1794, 8vo. 2. 'Political Essays,' 2nd ed., Philadelphia, 1800, 8vo. 3. 'The Bankrupt Law of America compared with the Bankrupt Law of England,' Philadelphia, 1801, 8vo. 4. 'Opinion in the Case of Dempsey *v.* The Insurance Co. of Pennsylvania, on the effect of a Sentence of a Foreign Court of Admiralty; published by A. J. Dallas,' Philadelphia, 1810, 8vo. Judge Brackenridge recommended every American student of law to read this judgment, as it was a model which deserved to be admired (*Miscellanies*, p. 525 *n.*) 5. 'Introductory Lecture at Carlisle College, Philadelphia,' on chemistry, &c., among the ancients, Carlisle, 1812, 8vo. 6. 'An English Version of the Institutes of Justinian,' Philadelphia, 1812, 8vo; New York, 1841, 8vo; Philadelphia, 1852. He contrasts the Roman jurisprudence with that of the United States. 7. 'A Practical Treatise on Dyeing and Callicoe Printing,' Philadelphia, 1815, 8vo. 8. 'Tracts on Medical Jurisprudence,' Philadelphia, 1819, 8vo. 9. 'Strictures on Crawford's Report recommending Intermarriage with the Indians,' Philadelphia, 1824, 8vo. 10. 'Lectures on the Elements of Political Economy,' Columbia, 1826, 1829, 8vo. McCulloch says that 'this work, though not written in a very philosophical spirit, is the best of the American works on political economy that we have ever met with' (*Literature of Political Economy*, p. 19). 11. 'Two Essays: On the Foundation of Civil Government; On the Constitution of the United States,' Columbia [S. C.], 1826, 8vo. 12. 'A Treatise on the Law of Libel and the Liberty of the Press,' New York, 1830, 8vo. 13. 'On the Connection between Geology and the Pentateuch, in a Letter to Professor Silliman [occasioned by his Syllabus to Bakewell's 'Geology']. To which is added the Defence of Dr. Cooper before the Trustees of the South Carolina College,' Columbia, 1833, 8vo. He was also engaged in the publication of a magazine of scientific information, 'The Emporium of Arts and Sciences,' five volumes of which appeared at Philadelphia, 1812–14. Two of these were prepared by Dr. John Redman Coxe, the remainder by Cooper.

T. C.

COOPER, THOMAS HENRY (1759?–1840?), botanist, drew up a list of the indigenous plants of the county for Horsfield's 'History of Sussex,' which came out in 1835, and was printed in vol. ii. App. pp. 5–22; a separate 8vo edition was also issued. His name appears as fellow of the Linnean Society in

1835 as living at Nottingham, in subsequent lists, from 1836 to 1841, as of Grafton Street, Fitzroy Square.

[Annual Lists, Linn. Soc.; Journ. Bot. new ser. iv (1875), sup. p. 6.] B. D. J.

COOPER, THOMAS THORNVILLE (1839–1878), one of the most adventurous of modern English travellers, the eighth son of John J. Cooper, coalfitter and shipowner, was born on 13 Sept. 1839, at Bishopwearmouth. He was educated at the Grange School, Bishopwearmouth, under Dr. Cowan, who by his judicious sympathy helped to foster his innate love of travel. He was then sent to a tutor in Sussex, where his health failed, and he was advised to take a voyage to Australia. On the voyage the crew mutinied, and Cooper had to take it in turns with the captain to stand guard, pistol in hand, at the cabin door. On arriving at St. George's Sound he decided to remain in Australia and make several journeys into the interior of the country. In 1859 he proceeded to India, and obtained employment at Madras in the house of Arbuthnot & Co. In 1861 he threw up his appointment and went to Scinde on a visit to a brother who was resident there. In the following year he visited Bombay and thence went by way of Beypore and Madras to Burmah. At Rangoon he devoted himself to the study of Burmese, and had made considerable progress in the language, when in 1863 he took ship to rejoin his brother, who was now established at Shanghai. He joined the Shanghai volunteers and took his share in the protection of the city against the Taiping rebels. On the suppression of the rebellion, the question of opening up the country to foreign commerce was brought prominently forward, and in 1868 Cooper, at the invitation of the Shanghai chamber of commerce, undertook an attempt to penetrate through Tibet to India. On 4 Jan. he left Hankow and travelled by way of Ch'êng-tu, Ta-tsien-lu, and Lit'ang to Bat'ang. From this point he had hoped to reach Roemah on the Lohit Brahmaputra in eight days; but the Chinese authorities positively forbade him to continue his journey westward. He therefore decided to take the Talifu route to Bamò. He struck southwards, following the valley of the Lan-ts'ang and reached Tse-ku on the western bank of that river—the most westerly point that has been reached by any traveller from China in the region of the great rivers north of Bamò. At this point he was within a hundred miles of Manchi, on the Upper Irawadi, which was visited by Wilcox from India in 1826. Still continuing his journey southward he arrived at Wei-si-fu, nearly due west of Li-kiang-fu, where he obtained passports for Talifu. At a distance of three days' journey from Weisi, however, he was stopped by a tribal chief, who refused to allow him to proceed. He was compelled, therefore, to return to Weisi, where he was imprisoned and threatened with death by the civil authorities on suspicion that he was in communication with the Panthay rebels of Yunnan. For five weeks he was kept a close prisoner, and was afterwards (6 Aug.) allowed to depart. Finding it impossible to prosecute his exploration further, he returned to Ya-chow, and proceeding down the Min river he struck the Yang-tsze at Sui-fu, and thence descended the river to Hankow, where he arrived on 11 Nov. 1868. Almost immediately afterwards he returned to England and published an account of his travels in a valuable work entitled 'A Pioneer of Commerce.' Having failed to reach India from China, he attempted in 1869 to reverse the process, and to enter China from Assam. On this journey he left Sadiya in October of that year, and passing up the line of the Brahmaputra, through the Mishmi country, reached Prun, a village about twenty miles from Roemah. Here he again met with such determined opposition from the authorities, that he was obliged to turn back. The history of his adventures on the journey he published in 'Mishmee Hills.' Shortly after his return to England he was appointed by the India Office to accompany the Panthay mission which had visited London to the frontier of Yunnan. On arriving at Rangoon, however, he learned that the rebellion had been crushed, and his mission was therefore at an end. He was appointed by Lord Northbrook political agent at Bamò. Unfortunately ill-health obliged him to return almost immediately to England, where he was attached to the political department of the India Office. In 1876 he was sent to India with despatches and presents to the viceroy in connection with the imperial durbar of Delhi, and was subsequently reappointed political agent at Bamò. While there (1877) he had the satisfaction of welcoming Captain Gill after his adventurous journey through China. Gill, in his 'River of Golden Sand,' speaks of his reception with lively gratitude. There also he was treacherously murdered on 24 April 1878 by a sepoy of his guard, whose enmity he had aroused by the infliction of a slight punishment. Cooper was a man of great physical powers, and was endowed with the calm courage essential for a successful traveller. Under a somewhat reserved demeanour he possessed a warm and generous nature, and won the regard and affection of

all who knew him by his singleness of heart and his unaffected modesty.

[Yule's Geographical Introduction to the abridged edition of Gill's River of Golden Sand, &c.] R. K. D.

COOPER, WILLIAM (*fl.* 1653), puritan divine, married the daughter of a Dutch painter who was in favour with Laud, and so obtained the living of Ringmere in Sussex. Contrary to expectation, he showed himself a puritan. From 1644 to 1648 he was chaplain to Elizabeth, queen of Bohemia, sister of Charles I, and resided in her household at the Hague. In 1653 he was appointed to examine candidates for the ministry. He was ejected from St. Olave's, Southwark, in 1662, and in 1681 was confined in the crown office. He published several sermons, some of them edited by Annesley in his 'Morning Exercises at Cripplegate,' wrote the annotations on Daniel in 'Poole's Commentary,' and is said also to have written Latin verses, but this may be a confusion with Dr. William Cooper. He was alive in 1683.

[Palmer's Nonconformist's Memorial, i. 174; Dunn's Seventy-five Eminent Divines, 60.]

COOPER, WILLIAM DURRANT (1812–1875), antiquary, came from a family intimately connected for many generations with the county of Sussex. His ancestor Thomas Cooper was a squire dwelling at Icklesham in the seventeenth century; his father, also called Thomas Cooper, was a solicitor practising at Lewes. His mother, Lucy Elizabeth Durrant, was a great-granddaughter of Samuel Durrant of Cockshot in Hawkhurst, a parish situate in Kent, but on the borders of Sussex. Their eldest son, William Durrant Cooper, was born in the picturesque High Street of Lewes, in that section within the parish of St. Michael, on 10 Jan. 1812, and was educated at the grammar school of Lewes. When only fifteen years old he became an articled clerk to his father, and at once occupied his leisure hours with the study of the history of his native county. When Horsfield undertook the task of compiling a history of Sussex, he found a ready coadjutor in Cooper. The 'Parliamentary History of the County of Sussex and of the several Boroughs and Cinque Ports therein,' an inelegantly printed volume of fifty-three double column quarto pages, was his first publication (1834). It dealt with a subject unduly neglected in English history, and as the county contained numerous boroughs which were by-words for venality, its pages disclosed many incidents of political intrigue and corruption. His next work was 'A Glossary of the Provincialisms in use in Sussex. Printed for private distribution,' 1836, and reissued with considerable additions in 1853, when it was procurable by the world at large. Local expressions had, fifty years ago, attracted but slight attention, and this little catalogue of the words and phrases common on and around the South Downs tended to increase the study of provincial expressions generally, but it has now been superseded by the more complete collections of Mr. Parish. A third work, on Sussex, consisted of a memoir of the 'Sussex Poets,' published in 1842, and originally delivered as a lecture at Hastings. He is stated in 'Notes and Queries' (13 Nov. 1886, p. 398) to have printed privately in this year (1842) a paper of 'Reasons for a new edition of the Nursery Rhymes.' During these years Cooper had not neglected to acquire the necessary training for his profession, and at the Michaelmas term of 1832 he was admitted attorney and solicitor. In the following year he gave some evidence on the parish registers of his native shire before the committee of the House of Commons which investigated that difficult subject. Like his ancestors, he was a zealous liberal, and like them he battled energetically for his party in the Sussex elections. In 1837 he came to live in London, and, practically deserting the law, attached himself to the parliamentary staff of the 'Morning Chronicle' and the 'Times.' The Duke of Norfolk, mindful of a Sussex antiquary who had done good service for his own political creed, rewarded him with the honourable posts of steward for the leet court of Lewes borough and auditor of Skelton Castle in Cleveland, and it was in the muniment room at Skelton that Cooper discovered the 'Seven Letters written by Sterne and his Friends,' which he edited for private circulation in 1844. He had long been a member of the Reform Club, and since 1837 had acted as its solicitor, but the most lucrative position which he obtained was that of solicitor to the vestry of St. Pancras (20 Dec. 1858). Cooper's father died in 1841 and his mother in 1867. In 1872 he was himself stricken with an attack of paralysis, but he lingered three years longer, dying at 81 Guilford Street, Russell Square, on 28 Dec. 1875. He was never married. Two of his brothers predeceased him; a third, with an only sister, outlived him.

Cooper contributed a host of valuable articles to the 'Sussex Archæological Collections,' and for many years edited its annual volume gratuitously, during which period he annotated the papers of other antiquaries profusely. On his retirement from this post he

was presented, at the society's meeting at Pulborough (August 1865), with a handsome silver salver. His contributions to the society's transactions on 'Hastings' and 'The Oxenbridges of Brede Place, Sussex, and Boston, Massachusetts,' and his articles in the eighth volume of its collections, were published separately. For the Camden Society he edited 'Lists of Foreign Protestants in England, 1618-88,' 'Savile Correspondence, Letters to and from Henry Savile,' 'Expenses of the Judges of Assize on Western and Oxford Circuits, 1596-1601,' and 'The Trelawny Papers,' the last of which appeared in the 'Camden Miscellany,' vol. ii. For the Shakespeare Society he edited Udall's comedy of 'Ralph Roister Doister' and the tragedy of 'Gorboduc.' To the 'Reliquary' he communicated an article on 'Anthony Babington and the Conspiracy of 1586,' printed separately in 1862. Many of his papers appeared in the transactions of the London and Middlesex Archæological Society, one was in the Surrey Archæological Society proceedings, and a paper on 'John Cade's followers in Kent' was contributed to the Kent Society, and published as an appendix to B. B. Orridge's 'Illustrations of Jack Cade's Rebellion.' Cooper was one of the earliest contributors to 'Notes and Queries,' and a frequent writer in the 'Archæologia.' He compiled a history of Winchelsea in 1850, and wrote for vols. viii. and xxiii. of the 'Sussex Archæological Collection' two further papers on the same subject. Lower was indebted to him for information published in the work on 'Sussex Worthies,' and three manuscript volumes of his notes on Sussex were sold in the second parts of Mr. L. L. Hartley's library on 3–14 May 1886.

[Two Sussex Archæologists, W. D. Cooper and M. A. Lower, by Henry Campkin, 1877; Notes and Queries, 5th ser. v. 40 (1876); Lower's Hist. of Sussex, i. 261, ii. 251.] W. P. C.

COOPER, WILLIAM RICKETTS (1843–1878), oriental student, began life as a designer of carpet patterns, an occupation which he exchanged for that of a London missionary, until the influence of Joseph Bonomi the younger [q. v.] directed his varied energies to the study of Egyptian antiquities, to which the rest of his short life was devoted. Without being precisely a scholar, he accomplished a great deal of valuable work. He was one of the principal originators in 1870 of the Society of Biblical Archæology, of which he was the active and zealous secretary from its foundation, until delicate health compelled him in 1876 to retire to Ventnor, where he died two years later. The following is a list of his useful and painstaking publications: 1. 'Serpent Myths of Ancient Egypt,' 1873. 2. 'The Resurrection of Assyria,' 1875. 3. Lectures on 'Heroines of the Past,' 1875. 4. An address on 'Egypt and the Pentateuch,' 1875. 5. 'Archaic Dictionary,' 1876. 6. 'The Horus Myth and Christianity,' 1877. 7. 'Short History of the Egyptian Obelisk,' 1877; 2nd edition, 1878. 8. 'Christian Evidence Lectures,' delivered in 1872 and published 1880. In addition to these works, the valuable series of translated Assyrian and Egyptian documents, entitled 'Records of the Past,' owes its origin to Cooper's energy and zeal. He translated Lenormant's 'Chaldæan Magic,' 1887.

[Athenæum, No. 2665; Academy, No. 342; Proceedings of the Society of Biblical Archæology, 1878; personal knowledge.] S. L.-P.

COOPER, WILLIAM WHITE (1816–1886), surgeon-oculist, was born at Holt in Wiltshire on 17 Nov. 1816. After studying at St. Bartholomew's Hospital, London, he became M.R.C.S. in December 1838, and F.R.C.S. in 1845. His notes of Professor Owen's lectures at the College of Surgeons were published after revision, under the title of 'Lectures in the Comparative Anatomy and Physiology of the Invertebrate Animals,' in 1843. Becoming associated with John Dalrymple, the ophthalmic surgeon [q. v.], Cooper followed in his footsteps and gained a large practice. He was one of the original staff of the North London Eye Institution, and subsequently ophthalmic surgeon to St. Mary's Hospital, Paddington. He was a careful, steady, and neat operator, and judicious and painstaking in treatment. In 1859 he was appointed surgeon-oculist in ordinary to Queen Victoria, whose sincere regard he gained (*Court Circular*, 2 June 1886). It was announced on 29 May 1886 that he was to be knighted, but on the same day he was seized with acute pneumonia, of which he died on 1 June 1886. Cooper's personal character was most estimable, combining kindliness, sincerity, and simplicity with much energy. He wrote an 'Invalid's Guide to Madeira,' 1840; 'Practical Remarks on Near Sight, Aged Sight, and Impaired Vision,' 1847, second edition 1853; 'Observations on Conical Cornea,' 1850; 'On Wounds and Injuries of the Eye,' 1859. He also published in 1852 a volume of 'Zoological Notes and Anecdotes' under the pseudonym 'Sestertius Holt,' of which a second edition appeared in 1861 under the title 'Traits and Anecdotes of Animals.' It was illustrated with full-page plates by Wolf.

[Lancet, 19 June 1886, p. 1187.] G. T. B.

COOTE, Sir CHARLES (*d.* 1642), military commander in Ireland, was the elder son of Sir Nicholas Coote of an old Devonshire family, and first landed in Ireland in 1600 as captain in Mountjoy's army, and served in the wars against O'Neill, earl of Tyrone. He was present at the siege of Kinsale in 1602, and on 4 June 1605 was appointed provost-marshal of the province of Connaught for life with the fee of 5*s.* 7½*d.* per day, and twelve horsemen of the army. On 23 Nov. 1613 he was appointed general collector and receiver of the king's composition money in Connaught for life. In 1620 he was promoted vice-president of Connaught, and sworn a member of the privy council, and on 2 April 1621 was created a baronet of Ireland. On 7 May 1634 he was made 'custos rotulorum' of Queen's County, which he represented in the parliament of 1639. At the outbreak of the rebellion in 1641 he was in the possession of property, chiefly in Connaught, valued at 4,000*l.* a year. In November after it commenced he had a commission to raise a thousand men, and was appointed governor of Dublin. On the 29th he marched towards Wicklow with five hundred foot and eighty horse for the relief of the castle, and, having effected his purpose, returned in haste to place Dublin in a state of defence, defeating on the way Luke O'Toole at the head of a thousand native troops. Cox (*History of Ireland*) states that he was 'very rough and sour in his temper,' and committed 'acts of revenge and violence with too little discrimination.' In December he was accused by the lords of the Pale of having thrown out suggestions for a general massacre of the Irish catholics; but the lords justices cleared him of the imputation (Sir John Temple's *Irish Rebellion*, pp. 23–4). On the 15th of this month he sent a party of horse and foot to fall upon the rebels in the king's house at Clontarf, and on 11 Jan. he dislodged fourteen hundred men out of Swords. On 23 Feb. he accompanied the Earl of Ormonde to Kilsaghlan, and drove the Irish out of their entrenchments. On 10 April he was despatched with Sir Thomas Lucas and six troops of horse to relieve Birr. On the way he had to pass a causeway which the rebels had broken, and at the end of which they had cast up entrenchments, which were defended by a large force, but advancing at the head of thirty dragoons he compelled them to retreat with a loss of forty men. He then relieved in succession Birr, Burris, and Knocknamease, and after forty-eight hours on horseback returned to camp late on the 11th without the loss of a single man. From this successful dash through the district of Mountrath, the title of earl of Mountrath was taken by his eldest son when he was raised to the peerage. After taking part in the battle of Kilrush under the Earl of Ormonde against Lord Mountganet, Coote assisted Lord Lisle, lieutenant-general of horse, to capture Philipstown and Trim. At the break of day that town was, however, surprised by the Irish with three thousand men, when Coote issued out of the gate with seventeen horsemen and routed them, but was shot dead, 7 May 1642. By his marriage with Dorothea, younger daughter and coheiress of Hugh Cuffe of Cuffe's Wood in the county of Cork, he had four sons and one daughter, his eldest son being Charles, lord Mountrath [q. v.]

[Cox's History of Ireland; Carte's Life of Ormonde; Lodge's Peerage of Ireland (Archdall), ii. 63–8; Burke's Dormant and Extinct Peerage (1883), pp. 133–4; Gilbert's History of the Irish Confederation (1882); Cal. State Papers, Irish Series.] T. F. H.

COOTE, Sir CHARLES, Earl of Mountrath (*d.* 1661), was the eldest son of Sir Charles Coote [q. v.], military commander in Ireland. In 1639 he was elected member of parliament for Leitrim, and succeeded his father as provost marshal of Connaught. In 1641 he was besieged in Castle Coote by about twelve hundred Irish, but succeeded in raising the siege within a week. Not long afterwards he defeated Hugh O'Connor, titular prince of Connaught, and also took Con O'Rourke and his party prisoners. In April he relieved Athlone with provisions, and 12 May 1642 caused the surrender of Galway. On 16 Feb. 1643–4 he and his brother were appointed collectors and receivers-general of the king's composition money and arrears in Connaught during their lives, and on 12 May 1645 he was made lord president of the province of Connaught, with a grant of 500*l.* a year. In November 1646 he caused the Irish to withdraw from Dublin. In 1649 he was besieged in Londonderry by those of the Irish who had declared for Charles II, and was reduced to such extremities that in his letters asking assistance he stated that without immediate relief he must surrender (Whitelocke, *Memorials*, p. 396); but the siege having been raised by his brother, he made a sally, scouring the country within a radius of seven miles, and taking many prisoners. After this he arranged terms of peace with Major-general Owen Row O'Neal, and having been reinforced with a thousand foot and five hundred horse he cleared the country round Derry within a radius of fourteen miles (*ib.* p. 426). In December he defeated four thousand highlanders and Irish under Munro, who had come to the relief of Carrickfer-

gus, after which Carrickfergus surrendered (*ib.* p. 436; *A Bloody Fight in Ireland and a great Victory obtained by Sir Charles Coote, Lord President of Connaught, and commander of those forces, and of Londonderry, against the British forces of Laggan, with some Regiments of Irish and Highlanders under Major-general Monro*, 1649). In the beginning of 1650 he advanced towards Belfast (WHITELOCKE, p. 433). On 21 June he routed the Irish with great slaughter at Skirfold, and on 8 July took Athlone and Portumna. In November 1651 he joined Ireton and harassed the barony of Burren. He then blockaded Galway (*ib.* p. 497), which surrendered 12 May 1652. Having reduced Sligo and the northern strongholds, he marched against the royal forces in Kerry, after which the Marquis of Clanricarde surrendered. On 17 Dec. he was appointed a commissioner of the Commonwealth in Connaught. Next to Roger Boyle, Lord Broghill, afterwards earl of Orrery [q. v.], Coote was the ablest friend of the Commonwealth in Ireland, and enjoyed the implicit trust of the parliamentary party even after the death of Cromwell, becoming in Jan. 1659 a commissioner of government. He was M.P. for Sligo and Mayo cos. 1654, 1656, and 1659. On the deposition of Richard Cromwell he, however, at once recognised that the cause of Charles II was in the ascendant, and in order to secure the favour of the royalists went to Ireland to take measures for his restoration. Notwithstanding the mutual jealousy of Broghill and Coote, they saw the expediency of working harmoniously together in the cause they had decided to support. According to Clarendon, the hesitation of Broghill, who was watching for a convenient opportunity to serve the king, was removed by the decisive steps at once adopted by Coote, whom Clarendon describes as 'a man of less guilt' (than Broghill) 'and more courage and impatience to serve the king' (*History of the Rebellion*, Oxford ed. iii. 999). Coote sent Sir Arthur Forbes, a 'Scottish gentleman of good affection to the king,' to Brussels to the Marquis of Ormonde, 'that he might assure his majesty of his affection and duty; and that if his majesty would vouchsafe himself to come into Ireland the whole kingdom would declare for him' (*ib.* p. 1000). The king deemed it expedient to try his fortunes first in England; but meanwhile, before the arrival of Sir Arthur Forbes in March with letters expressing the king's satisfaction at the proposal, though he deemed it inexpedient to land in Ireland, Broghill and Coote had virtually secured Ireland for the king, Coote having made himself master of Athlone, Drogheda, Limerick, and Dublin. For these services Coote was rewarded on 30 July 1660 by the appointment to be president of Connaught, and by a grant of the lands and liberties of the barony of Westmeath, which was renewed to him 29 March 1661. On 6 Sept. he was created Earl of Mountrath. On 9 Feb. 1660 he was appointed colonel of a regiment of horse, and on 31 Dec. was named one of the lords justices of Ireland, to whom, 15 Oct. 1661, a grant was made of 1,000*l.* to be equally divided among them as it should become due upon forfeited bonds. By the Act of Settlement it was enacted that he should be paid his arrears due for service in Ireland before 5 June 1649, not to exceed 6,000*l.* On 30 July 1661 he was appointed receiver-general of the composition money in Connaught and Thomond, and named governor of Queen's County. He died 18 Dec. of the same year, and was buried in the cathedral of Christ Church, Dublin. By his first wife, Mary, second daughter of Sir Francis Ruish of Ruish Hall, he had a son, Charles, who became second earl; and by his second wife, Jane, daughter of Sir Robert Hannay, knight and baronet, he had two sons and three daughters. After his death she married Sir Robert Reading of Dublin, baronet.

T. F. H.

COOTE, CHARLES, D.C.L. (1761–1835), historian and biographer, was son of John Coote, a bookseller of Paternoster Row, and the author of several dramatic pieces, who died in 1808. He was sent to St. Paul's School in 1773 (GARDINER, *Register of St. Paul's School*, pp. 154, 167, 397, 402), was matriculated as a member of Pembroke College, Oxford, in 1778, took the degree of B.A. in 1782, and on 30 Dec. 1784 was elected a scholar on the Benet or Ossulstone foundation in that society. He proceeded M.A. in 1785, B.C.L. by commutation on 10 July 1789, D.C.L. on 14 July following, and was admitted a member of the College of Advocates on 3 Nov. the same year (*Cat. of Oxford Graduates*, ed. 1851, p. 150). He devoted his attention to literature rather than to law, and was for some time editor of the 'Critical Review.' To adopt his own words, 'even after his enrolment among the associated advocates he for some years did not

dwell within the circuit of the college, and when he became a resident member he rather patiently awaited employment than eagerly sought it' (*Catalogue of English Civilians*, p. 133). Of a retired disposition, with much of that eccentricity and indolence which often accompany literary merit, he passed through his profession with credit and respect, but reaped little pecuniary reward (*Gent. Mag.* new ser. v. 93). Not being an able speaker he was rarely employed as an advocate, but he frequently acted as a judge in the court of delegates. He died at Islington on 19 Nov. 1835. Henry Charles Coote, his son, is separately noticed.

His works are: 1. 'Elements of the Grammar of the English Language,' 1788, a work interesting to the grammarian and philologist; a second edition appeared in 1806. 2. 'The History of England from the earliest Dawn of Record to the Peace of 1783,' London, 9 vols. 8vo. 1791–8; to which he added in 1803 another volume, bringing down the history to the peace of Amiens in 1802. This history, though well written, is deficient in antiquarian research. 3. 'Τῆς Ἐλεγείας ἣν Θωμᾶς Γραῖος ἐν κοιμητηρίῳ ἀγροικῷ ἐξέχυσε μετάφρασις Ἑλληνική,' 1794. 4. 'Life of Caius Julius Cæsar,' 1796. 5. 'History of the Union of the Kingdoms of Great Britain and Ireland: with an introductory Survey of Hibernian Affairs traced from the times of Celtic Colonisation,' 1802. This contains a narrative of every important circumstance connected with what George III called the happiest event of his reign. The demand for the work was, however, very inconsiderable, even after the experiment of a formal appeal to the members of the Union Club. 6. 'Sketches of the Lives and Characters of Eminent English Civilians, with an historical introduction relative to the College of Advocates, and an enumeration of the whole series of academic graduates admitted into that society, from the beginning of the reign of Henry VIII to the close of the year 1803. By one of the Members of the College,' London, 1804, 8vo. An incomplete and unsatisfactory work, but valuable nevertheless to the biographer as being the only one that treats of the subject. 7. A continuation to the eighteenth century of Mosheim's 'Ecclesiastical History' by Maclaine, 6 vols. 1811 (*Biog. Dict. of Living Authors*, 1816, p. 75). 8. 'The History of Ancient Europe, from the earliest times to the subversion of the Western Empire, with a survey of the most important Revolutions in Asia and Africa,' 3 vols. London, 1815, 8vo; this work was intended to accompany Dr. William Russell's 'History of Modern Europe' (Lowndes, *Bibl. Man.*, ed. Bohn, p. 520). 9. An edition of the works of Horace. 10. A continuation of Russell's 'History of Modern Europe from 1763 to the Pacification of Paris in 1815,' London, 2 vols. 1818; the same continued to 1825, London, 1827. 11. A continuation of Goldsmith's 'History of England,' 1819, translated into French and Italian.

[Authorities cited above.] T. C.

COOTE, EDMUND (*fl.* 1597), grammarian, matriculated as a pensioner of Peterhouse, Cambridge, in May 1566, and graduated B.A. in 1579–80, M.A. in 1583. He was elected head-master of the grammar school of Bury St. Edmunds, Suffolk, on 5 June 1596, in succession to John Wright, M.A., and he resigned that office and was succeeded by Nicholas Martyn, M.A., on 18 May 1597. Of his subsequent history nothing appears to be known. During his brief tenure of the mastership of Bury school he published an educational work which became popular to an extraordinary degree. In its thirty-fourth edition it is entitled: 'The English Schoolmaster. Teaching all his Scholars, of what age soever, the most easie, short, and perfect order of distinct Reading, and true Writing, our English-tongue, that hath ever yet been known or published by any,' Lond. 1668, 4to. Other editions were published at London in 1627, 1638, 1667, 1673, 1675, 1692, and 1704. The Dublin edition of 1684 purports to be the forty-second. Heber gave six guineas for a copy of the thirty-seventh edition (1673). The repetition system revived as a novelty by Ollendorff was well known to Coote, who says: 'I have so disposed the placing of my first book, that if a child should tear out every leaf so fast as he learneth, yet it shall not be greatly hurtful: for every new chapter repeateth and teacheth again all that went before.' In all the known copies of the 'English School-master' the author is misnamed Edward Coote.

[Donaldson's Retrospective Address read at the Tercentenary Commemoration of King Edward's School, Bury St. Edmund's, 2 Aug. 1850, pp. 28–30, 69; Proceedings of Bury and West Suffolk Institute, i. 59; Cooper's Athenæ Cantab. ii. 243; Addit. MS. 5865, f. 96; Davy's Athenæ Suffolcienses, i. 138; Cat. of Printed Books in Brit. Mus.; Watt's Bibl. Brit.] T. C.

COOTE, Sir EYRE (1726–1783), general, fourth son of the Rev. Chidley Coote, D.D., of Ash Hill, co. Limerick, a descendant, like the Cootes, Earls of Bellamont, and the Cootes, Earls of Mountrath, of Sir Charles Coote, bart., provost-marshal of Connaught, by Jane Evans, sister of the first Lord Carbery, was born at Ash Hill in 1726. He entered the army at an

early age, is said to have served in Germany and took some part against the rebels of 1745 in Scotland. In 1754 he sailed for India with the 39th regiment, then known as Adlercron's from its colonel's name, which was the first English regiment ever sent to India, and received in consequence the famous motto 'Primus in Indis.' In the 'Army List' of 1755 it appears that he was gazetted a captain in the 39th on 18 June 1755, and there is no doubt that he was in India in the following year, when his regiment formed part of the expedition sent to Bengal from Madras in that year to punish Surajah Dowlah for the 'Black Hole of Calcutta' atrocity. He was present at the capture of Calcutta, where he hoisted the English colours on Fort William, and of Chandernagore, and then occupied Katwa, from which place Colonel Clive advanced against Surajah Dowlah with 750 European soldiers from the 39th regiment and the French prisoners taken at Chandernagore, one hundred artillerymen, sixty sailors, 2,100 sepoys, and seven 6-pounders. When he came face to face with Surajah Dowlah's army, Colonel Clive called his famous council of war, consisting of twenty European officers. Clive first gave his opinion against immediate action, and was supported by Major Kilpatrick, commanding the company's troops, and Major Archibald Grant, commanding the 39th, and by the majority of the officers present. In opposition to this weight of opinion, Captain Eyre Coote—who is everywhere called major, though there is no evidence that he held that local rank, and he certainly had not been gazetted to it—argued that it was better to fight at once. The men were in high spirits, and any delay would give time for Law to arrive with his Frenchmen to the assistance of Surajah Dowlah, to whom their French prisoners of war would at once desert. After the council Clive retired for a time to think, and on his return he showed that Coote's arguments had convinced him, for he gave orders to prepare for battle. In the victory of Plassey Coote himself played a great part, for he commanded the 3rd division in the field, and was afterwards sent against M. Law. His services were not forgotten by Clive, and it was upon his recommendation that Coote was gazetted on 20 Jan. 1759 lieutenant-colonel commandant of a new regiment, which was numbered the 84th, specially raised in England for service in India.

This new battalion he joined at Madras in October 1759, when, as senior officer, he assumed the command of all the troops in the Madras presidency. The first news he heard was that the Comte de Lally was threatening the important fortress of Trichinopoly with a powerful army, and he at once marched south from Madras with seventeen hundred English soldiers and three thousand sepoys to make a diversion. He moved with great rapidity and took the important town of Wandewash on 30 Nov. 1759 after a three days' siege, and immediately afterwards reduced the fort of Carangooly. His movements had their intended effect, and Lally, abandoning his attack on Trichinopoly, came against the small English army at the head of 2,200 Europeans and 10,300 sepoys, and at once besieged it in Wandewash. Coote closely watched the besiegers, and on 22 Jan. 1760 he suddenly burst out of the town, and in spite of the disparity in numbers he utterly defeated the French in their entrenchments. This great victory sealed the downfall of the French in India. It is second only to Plassey in its importance, and even the Comte de Bussy, who was taken prisoner, and had been second in command to Lally, expressed his admiration for Coote's courage and admirable generalship. The French never again made head in India; Lally's prestige was gone, and Coote, after taking Arcot, prepared to besiege Pondicherry, the last refuge of the defeated general. At this moment Major the Hon. William Monson arrived at Madras with a commission to take command of the forces in the Madras presidency, and with directions for Coote to proceed with his regiment to Bengal. The Madras council, however, protested against this measure, and Monson declared that he could not besiege Pondicherry without the 84th, when Coote, with admirable self-abnegation, allowed his regiment to serve under Monson, and remained himself at Madras. Monson, however, soon fell ill, and on 20 Sept. 1760 Coote assumed the command of the investing army, while Admiral Stevens blockaded Pondicherry at sea. Owing to the rains Coote could not undertake regular siege operations, but the garrison of the blockaded city was soon reduced to the extremity of famine. On 1 Jan. 1761 a tremendous storm blew the English fleet to the northward, and Lally hoped for succour from M. Raymond at Pulicat, but Admiral Stevens, by great exertions, got back in four days before assistance arrived, and Lally was forced to surrender to Coote, who took fourteen hundred prisoners and immense booty. This conquest completed the destruction of the French power in India, and in 1762 Coote returned to England. He purchased the fine estate of West Park in Hampshire, and was presented with a diamond-hilted sword worth 700*l.* by the directors of the East India Company. He was also promoted colonel on 4 April 1765 and elected M.P. for Leicester

in 1768. In 1769 he was again appointed commander-in-chief in the Madras presidency, but he soon found that he could not get on with the governor of Madras, Josias Du Pré, so he abruptly threw up his command and came back to England by the overland route through Egypt, which he was one of the first to adopt, in October 1770. The king and the court of directors expressed approval of Coote's conduct; he was invested a K.B. on 31 Aug. 1771, promoted major-general on 29 Sept. 1775, made colonel of the 27th regiment in 1771 and of the Inniskillings on 19 Feb. 1773, was M.P. for Poole 1774–80, and finally appointed commander-in-chief in India on 17 April 1777, being promoted lieutenant-general on 29 Aug.

Coote assumed the command-in-chief at Calcutta on 25 March 1779, in the place of General Clavering, and Warren Hastings at once attempted to win him over to his side in the internecine conflict between himself and certain members of his council at Calcutta. It was one of the articles in the impeachment of Hastings that he had worked upon the general's reputed avarice by allowing him 18,000*l.* a year field allowances, even when not actively employed, in addition to his salary of 16,000*l.* a year. There is little doubt that Hastings did make use of his knowledge of Coote's weakness, and that he saddled the Nabob of Oude with the payment of this additional sum. Coote, however, was not a man to be bribed, and his temper was too like that of Hastings himself to permit of opposition to the governor-general. Hyder Ali, who had made himself rajah of Mysore, rushed like a whirlwind over the Carnatic, and by his defeat and capture of Colonel Baillie at Parambakam had Madras at his mercy. Warren Hastings at once suspended Governor Whitehill, and despatched Coote with full powers and all the money he could spare to Madras, while he ordered all the troops available to march down the coast under the command of Colonel Pearse. Coote reached Madras on 5 Nov. 1780, and on 17 Jan. 1781 marched northwards from Madras with all the troops he could muster, in order to draw Hyder Ali after him. His march was successful, and he raised the siege of Wandewash; but Hyder Ali, artfully enticing him further by threatening Cuddalore, induced him to march on that city, when the Mahometan suddenly interposed his great army between Coote and his supplies and base of action at Madras. Coote's position at Cuddalore would have been desperate if the French admiral d'Orves had kept him from receiving supplies from the sea, for the Nabob of Arcot was playing a double part and really deceiving his English allies; but fortunately d'Orves soon sailed away and left Sir Edward Hughes in command of the sea. Yet Coote's position at Cuddalore was very precarious; he could not bring Hyder Ali to an action, and his men were losing courage. On 16 June he left Cuddalore, and on the 18th he attacked the pagoda of Chelambakam, but was repulsed, and he then retreated to Porto Novo, close to the sea, to concert measures for a new attack on the pagoda with Admiral Hughes. Then Hyder Ali came out to fight; the repulse at Chelambakam had been greatly exaggerated, and he thought himself sure of an easy victory. Coote was at once told that the enemy was fortifying himself only seven miles off, and he called a council of war, which, even when he pointed out that defeat meant the loss of the Madras presidency, unanimously decided to fight. Coote accordingly marched out at 7 a.m. on the morning of 1 July 1781 with 2,070 Europeans and six thousand sepoys, and found Hyder Ali with forty thousand soldiers and many camp-followers in a strong position resting on the sea, defended by heavy artillery. Coote examined the position for an hour under a heavy fire, and then ordered Major-general James Stuart to turn the enemy's right upon the sandhills and attack him in flank. Stuart advanced at 4 p.m. and was twice repulsed, but at last, aided by the fire of an English schooner, he was successful. Coote then ordered his first line under Major-general Munro to advance, and Hyder Ali was utterly defeated. Coote followed up his great victory by a series of successes. He joined Pearse at Pulicat on 2 Aug.; he took Tripassoor on 22 Aug.; and, with his army increased to twelve thousand men, he stormed Parambakam on 27 Aug., and defeated Hyder Ali on the very spot where but a year before he had captured Colonel Baillie's force. He continued his successes until 7 Jan. 1782, defeating Hyder Ali in four more regular engagements, and retaking fortresses from him, and then he was forced by ill-health to return to Bengal, handing over the command of the troops to Major-general James Stuart. His stay in Calcutta partially restored his health, but on his way back to Madras the ship he sailed in was chased by a French cruiser, which so upset his enfeebled frame that he died, two days after reaching Madras, on 26 April 1783. The victory of Porto Novo as surely saved Madras from Hyder Ali as Wandewash had saved it from Lally. Coote's body was brought back from India, and landed at Plymouth with great pomp on 2 Sept.; it was interred at

Rockburne Church in Hampshire, close to his estate of West Park, where the East India Company erected a monument over it with an epitaph by Mr. Henry Bankes, M.P. Coote was married, but had no children, and left his vast property to his nephew, the second Sir Eyre Coote, K.B. [q.v.]

Colonel Wilks, in his 'Historical Sketches of the South of India,' thus shortly describes the character of Coote, under whom he served: 'Nature had given to Colonel Coote all that nature can confer in the formation of a soldier; and the regular study of every branch of his profession, and experience in most of them, had formed an accomplished officer. A bodily frame of unusual vigour and activity, and mental energy always awake, were restrained from excessive action by a patience and temper which never allowed the spirit of enterprise to outmarch the dictates of prudence. Daring valour and cool reflection strove for the mastery in the composition of this great man. The conception and execution of his designs equally commanded the confidence of his officers; and a master at once of human nature and of the science of war, his rigid discipline was tempered with an unaffected kindness and consideration for the wants and even the prejudices of the European soldiers, and rendered him the idol of the native troops.' His portrait still hangs in the exchange at Madras, and, when Colonel Wilks wrote, no sepoy who had served under him ever entered the room without making his obeisance to Coote Bahadur (Wilks, *Historical Sketches of the South of India*, ed. 1869, i. 251, 252).

[There is no good biography of Coote extant. For his Indian career, see all histories of British India, but more especially Cambridge's War on the Coromandel; Orme's History of the late Events in India; Wilks's Historical Sketches of the South of India; while a good modern account of the battle of Porto Novo is given in Malleson's Decisive Battles of British India.]

H. M. S.

COOTE, Sir EYRE (1762–1823), general, was the second son of the Very Rev. Charles Coote, dean of Kilfenora, brother of Charles Henry Coote, who succeeded the last Earl of Mountrath as second Lord Castle Coote in 1802, and nephew of Sir Eyre Coote, K.B., the celebrated Indian general [q.v.], to whose vast estates in England and Ireland he eventually succeeded. He was born in 1762, was educated at Eton, and received his first commission at the age of fourteen as an ensign in the 37th regiment. He at once embarked for America with his regiment, and carried the colours at the battle of Brooklyn on 27 Aug. 1776. He was then promoted lieutenant, and served with that rank at York Island, Rhode Island, the expedition to the Chesapeake, and the battles of Brandywine, Germantown, and Monmouth Court House. He was promoted captain on 10 Aug. 1778, and served in the campaign in New York in 1779, at the siege of Charleston in 1780, and finally throughout Lord Cornwallis's campaigns in Virginia up to the capitulation of Yorktown, when he became a prisoner. After his release he returned to England, and became major of the 47th regiment in 1783, and lieutenant-colonel of the 70th in 1788. In 1793, on the outbreak of the war with France, he accompanied Sir Charles Grey to the West Indies in command of a battalion of light infantry, formed from the light companies of the various regiments in the expedition, and greatly distinguished himself throughout the operations there, and especially at the storming of the Morne Fortuné in Guadeloupe, for which he was thanked in general orders (see *Military Panorama* for May 1813). He was promoted colonel on 24 Jan. 1794, and returned with Sir Ralph Abercromby in 1795 to the West Indies, where he again distinguished himself, and for his services was made an aide-de-camp to the king. In 1796 he was made a brigadier-general, and appointed to command the camp at Bandon in Ireland, and on 1 Jan. 1798 he was promoted major-general, and shortly after given the important command of Dover. From his holding that post he was appointed to command the troops employed in the expedition which had been planned by Sir Home Popham to cut the sluices at Ostend, and thus flood that part of the Netherlands which was then in the possession of the French. The troops were only thirteen hundred in number, and were successfully disembarked and cut the sluices as proposed on 18 May. A high wind off the land then sprang up, and the ships could not come in to take the troops off. French troops were hurried up, and the small English force was completely hemmed in, and after a desperate resistance, in which he lost six officers and 109 men killed and wounded, Coote, who was himself severely wounded, was forced to surrender. He was soon exchanged, and then returned to his command at Dover, but was summoned from it in 1799 to command a division in the expedition to the Helder. Coote's and Don's division formed Sir J. Pulteney's column in the fierce battles of Bergen, but the successes of Pulteney's and Abercromby's columns could not make up for the failure of the rest, and the Duke of York had to sign the disgraceful convention of Alkmaer. In 1800 Coote was appointed to command a brigade in the Mediterranean, and bore his part in the disembarkation of Sir Ralph

Abercromby in Egypt and in the battles there of 8, 13, and 21 March. When Sir John Hutchinson, who succeeded Sir Ralph Abercromby, commenced his march to Cairo, Coote was left in command before Alexandria, and conducted the blockade of that city from April to August 1801. In the latter month General Hutchinson rejoined the army before Alexandria, and determined to take it. He ordered Coote to take two divisions round to the west of the city, and to attack the castle of Marabout, which commanded it. The operation was successfully conducted; Coote took Marabout after a stubborn resistance, and Alexandria surrendered. His services in Egypt were so conspicuous that Coote was made a knight of the Bath, and also a knight of the new order of the Crescent by the sultan, and appointed to command an expedition which was to assemble at Gibraltar for service against South America. This expedition, however, was stopped by the peace of Amiens, and Coote returned to England, and in 1802 he was elected M.P. for Queen's County, in which he possessed large property inherited from the famous Sir Eyre Coote. He had already represented, in the Irish House of Commons, Ballynakill (1790–97) and Maryborough (1797–1800). He did not sit long in the House of Commons at this time, for in 1805 he was promoted lieutenant-general, and appointed lieutenant-governor and commander-in-chief of Jamaica. In April 1808 he resigned his government from ill-health, for the West Indian climate greatly tried his constitution and affected his brain. Nevertheless, he was appointed second in command to Lord Chatham in 1809, when the Walcheren expedition was projected, and he superintended all the operations of the seige of Flushing until its surrender. His proceedings, however, were so eccentric during the expedition, that it was obvious that he could never again be trusted with a command. He was colonel of the 62nd foot 1806–10, elected M.P. for Barnstaple 1812, and promoted general in 1814. His conduct became more and more eccentric, and on 25 Nov. 1815 he was brought up at the Mansion House before the lord mayor on a charge of indecent conduct. The case was dismissed, but the Duke of York, the commander-in-chief, heard of these proceedings, and, in spite of strong representations from many distinguished officers, he directed Sir John Abercromby, Sir Henry Fane, and Sir George Cooke to report upon the matter. These three generals, after a long inquiry, reported that Coote was eccentric, not mad, and that his conduct had been unworthy of an officer and a gentleman. Coote was removed from his regiment, dismissed from the army, and degraded from the order of the Bath—severe punishment for a veteran officer, whose brain had been affected by severe wounds and service in tropical climates. Coote lost his seat in parliament at the dissolution of 1818, and died 10 Dec. 1823. He was twice married, and left issue by both wives. His first wife, Sarah (died 1795), daughter of John Robbard, is the subject of one of Romney's famous paintings.

[European Mag., April 1810, Military Panorama, May 1813, and 'A Plain Statement of Facts relative to Sir Eyre Coote, containing the official correspondence and documents connected with his case,' 1816.] H. M. S.

COOTE, HENRY CHARLES, (1815–1885), writer of the 'Romans in Britain' and several legal treatises, was son of the well-known civilian, Charles Coote [q. v.] He was admitted a proctor in Doctors' Commons in 1840, practised in the probate court for seventeen years, and, when that court was thrown open to the whole legal profession in 1857, became a solicitor. He wrote several books on professional subjects, but devoted all his leisure in middle life to the study of early English history, folklore, and foreign literature. Coote frequently travelled in Italy, and was an accomplished linguist. He was a fellow of the Society of Antiquaries, a founder of the Folklore Society, and an industrious contributor to learned periodicals. Attacked by paralysis in 1882, he died 4 Jan. 1885, being buried at Kensal Green.

Coote's name is chiefly associated with his endeavours to prove that the Roman settlers in Britain were not extirpated at the Teutonic conquest of the fifth century, and that the laws and customs observed in this country under Anglo-Saxon rule were in large part of Roman origin. The theory was first advanced by Coote in some papers published in the 'Gentleman's Magazine,' and in 1864 this material was expanded into a little volume entitled 'A Neglected Fact in English History.' Little attention was paid to Coote's researches until 1870, when Mr. E. A. Freeman subjected them to a fierce attack in a paper issued in 'Macmillan's Magazine.' Coote was stimulated to revise his work, and in 1878 he published a larger volume entitled 'The Romans in Britain.' All accessible authorities are here laid under contribution, and the importance of Coote's conclusions were acknowledged by Mr. Frederic Seebohm in his 'English Village Community,' 1883. Although Mr. Freeman and his disciples decline to modify their opinion that the Anglo-Saxon *régime* and population were free from any Roman taint, Coote's reasoning makes it clear that this opinion can only be finally accepted

with large and important qualifications. Several papers bearing on this and cognate points were contributed by Coote to the 'Transactions of the London and Middlesex Archæological Society.'

Coote's other writings are: 1. 'Practices of the Ecclesiastical Courts, with Forms and Tables of Costs,' 1846. 2. 'The Common Form Practice of the Court of Probate in granting probates . . . with the New Act (20 & 21 Vict. c. 77),' 1858; 2nd edition (with Dr. T. H. Tristram's 'Practice of the Court in Contentious Business') 1859; 9th edition 1883. 3. 'Practice of the High Court of Admiralty,' 1860; and 2nd edition 1869. His last published work was a paper in the 'Folk-lore Quarterly Journal' for January 1885, to which he was a very frequent contributor.

[Athenæum for 17 Jan. 1885, p. 86, and 24 Jan. p. 122; Brit. Mus. Cat.]

COOTE, HOLMES (1817–1872), surgeon, was born on 10 Nov. 1817, and was second son of Richard Holmes Coote, a conveyancer. He was educated at Westminster School, and at the age of sixteen was made apprentice to Sir William Lawrence, one of the surgeons to St. Bartholomew's Hospital. In 1845 he obtained a prize at the College of Surgeons for an essay 'On the Anatomy of the Fibres of the Human Brain, illustrated by the Anatomy of the same parts in the Lower Vertebrata.' His first book was published in 1849, 'The Homologies of the Human Skeleton,' and is an explanation of the relation of the several bones of the human skeleton to the parts of the archetype skeleton of Richard Owen. It is a mere piece of book-work. He was elected demonstrator of anatomy in the St. Bartholomew's Medical School, and continued to teach in the dissecting-room till elected assistant surgeon in 1854. Shortly after he received leave from the governors of the hospital to be absent as civil surgeon in charge of the wounded from the Crimean war at Smyrna. After his return he published 'A Report on some of the more important Points in the Treatment of Syphilis,' 1857, and in 1863 he was elected surgeon to the hospital. Besides some shorter writings, Coote published in the 'St. Bartholomew's Hospital Reports' three papers on diseases of the joints (vols. i. and ii.), one on the treatment of wounds (vol. vi.), on rickets (vol. v.), on operations for stone (vol. iv.), and one on a case of aneurysm. In 1867 he published a volume 'On Joint Diseases.' He wrote easily, but without much collected observation, thought, or research, and it is only as evidence of the practice of his period that his works deserve consultation. He was a tall man of burly frame, of kindly disposition and convivial tastes. He married twice, but was never in easy circumstances, nor attained much practice. While still in the prime of life he looked older than his years, and was attacked by general paralysis with delusions of boundless wealth, and died in December 1872.

[Memoir by Luther Holden in St. Bartholomew's Hospital Reports, 1873; MS. Minute-book of Medical Council of St. Bartholomew's; personal knowledge.] N. M.

COOTE, RICHARD, first Earl of Bellamont (1636–1701), governor of New York, was the only son of Richard Coote, lord Coloony in the peerage of Ireland (who had been granted that title on the same day, 6 Sept. 1660, that his elder brother, Sir Charles Coote [q. v.], was created Earl of Mountrath), by Mary, daughter of Sir George St. George of Carrickdrumruske, co. Leitrim, and sister of the first Lord St. George. He succeeded his father as second Lord Coloony in 1683, and having married Catherine, daughter and heiress of Bridges Nanfan of Birtsmorton, Worcestershire, he acquired an interest in that county, and was elected M.P. for Droitwich in 1688. He was a vigorous supporter of William III both in parliament and in the campaign in Ireland, and, though attainted by James's Irish parliament in 1689, he was largely rewarded by King William, made treasurer and receiver-general to Queen Mary, appointed governor of co. Leitrim, and finally, on 2 Nov. 1689, created Earl of Bellamont in the peerage of Ireland. He was re-elected for Droitwich in 1689, and continued to sit in the English House of Commons until 1695, in which year he was appointed governor of New England, with a special mission to put down piracy and unlawful trading. A certain Colonel Robert Levingston suggested to Lord Bellamont that Captain Kidd was a fit man to put down the piracy which prevailed in the West Indies and on the American coast, and when the king was obliged to refuse Kidd a ship of war, Levingston and Lord Bellamont induced the Duke of Shrewsbury, Lords Somers, Orford, Romney, and others, to advance a sum of 6,000*l.*, with which the Adventure was fitted out for Kidd, with special powers to arrest pirates. When Lord Bellamont arrived at his seat of government in 1697 after the peace of Ryswick, he heard that Kidd had been reported as a most audacious pirate by the East India Company, and that he was again on the American coast, and he felt his honour involved in seizing this pirate captain, whom he had been chiefly instrumental in

fitting out. Kidd wrote to Lord Bellamont that he was innocent of the crimes imputed to him, and the governor replied that if that was the case he might safely come to see him at Boston. Kidd accordingly came to Boston on 1 June 1699, but his former patron immediately arrested him, and, as there was no law in New England against piracy, sent him to England for trial in 1700. The whole question of the partners who had fitted out Kidd's ship was discussed in the House of Commons, and it was finally decided on 28 March 1701 that the grant to Lord Bellamont under the great seal of all the goods taken by Kidd from other pirates was not illegal. Lord Bellamont's short government in New England was not entirely taken up by his efforts to arrest Kidd. Bancroft speaks of him as 'an Irish peer with a kind heart, and honourable sympathies for popular freedom' (Bancroft, *History of the United States of America*, ii. 233), and tells a story of him, that he once said publicly to the House of Assembly of New York: 'I will pocket none of the public money myself, nor shall there be any embezzlement by others' (*ib.* ii. 234). Lord Bellamont died at New York on 5 March 1701, and was honoured with a public funeral there.

[Lodge's Peerage of Ireland, ed. Archdall, iii. 209–12; Bancroft's Hist. of the United States of America.] H. M. S.

COPCOT, JOHN, D.D. (*d.* 1590), master of Corpus Christi College, Cambridge, is said to have been a native of Calais. He matriculated at Cambridge as a pensioner of Trinity College on 16 Nov. 1562. He became a scholar of the college, proceeded B.A. in 1566, and was soon afterwards elected to a fellowship. He commenced M.A. in 1570, had a license as one of the preachers of the university in 1576, proceeded B.D. in 1577, and was created D.D. in 1582. In 1584 he preached at St. Paul's Cross, London, upon Psalm lxxxiv., in defence of the discipline of the established church against the attacks contained in Dudley Fenner's publication, entitled 'Counter-Poyson.' In October 1586 he preached a learned Latin sermon before the convocation in St. Paul's Cathedral (Fuller, *Church Hist.*, ed. Brewer, v. 83). In November the same year he became vice-chancellor of the university of Cambridge. When chosen vice-chancellor he was only a fellow of Trinity College, 'within which he gave upper hand to Dr. Still (then master), but took it of him when out of the walls of the college' (Fuller, *Hist. of Cambridge*, ed. Prickett and Wright, p. 281). An act was accordingly made among the doctors that for the future no one who was not head of a house should be eligible for the vice-chancellorship (*Addit. MSS.* 5807 f. 40, 5866 f. 32 *b*). Copcot's official year was unquiet. Serious dissensions prevailed in several colleges, rigorous measures were deemed necessary to repress nonconformity and to preserve discipline, and the university was involved in unpleasant disputes with the town (Cooper, *Annals of Cambridge*, ii. 428–51).

On 6 Nov. 1587 Copcot was, on the recommendation of Lord Burghley, elected master of Corpus Christi College. He was also rector of St. Dunstan-in-the-East, London, prebendary of Sidlesham in the church of Chichester, and chaplain to Archbishop Whitgift. On more than one occasion he represented the clergy of London in convocation, and he was among the fit and able persons recommended to be employed in the conferences with priests and jesuits (Strype, *Life of Whitgift*, p. 99, folio). His ejection of Anthony Hickman from a fellowship in Corpus Christi College occasioned many disputes in that society. Hickman was eventually restored by superior authority (Masters, *Hist. of C. C. C. C.* pp. 120–2). Copcot died in the early part of August 1590; the place of his burial is unknown (Cooper, *Athenæ Cantab.* ii. 94).

He is said to have been well skilled in controversy, and a great critic in the Latin language. Fuller relates that he was very familiar with the elder John Drusius, who wrote a letter to him superscribed 'Manibus Johannis Copcot'—to the ghost of John Copcot—so much was the doctor macerated by constant study (*Hist. of Cambridge*, p. 103).

He was author of 'A Sermon preached at Powles Crosse in 1584, wherein answeare is made unto the autor of the Counter-Poyson touching the sense of the 17th verse of the fifte chapter of the first to Timothye. Also an answeare to the defence of the reasons of the Counter-Poyson for the maintenaunce of the Eldership,' Lambeth MS. 374, f. 115. An extract from the sermon is in 'A Parte of a Register of sundrie memorable matters written by divers godly and learned men, who stand for a Reformation in the Church' (Ames, *Typogr. Antiq.* ed. Herbert, p. 1675; Tanner, *Bibl. Brit.* p. 277). His 'Injunctions for Christ's College, Cambridge,' December 1586 (Latin), are in Strype's 'Annals.' Other letters relating to Cambridge affairs have been printed.

To Copcot's exhortations the university of Cambridge is indebted for the valuable collection of records made by Robert Hare (Masters, *Hist. of C. C. C. C.* p. 124; Cooper, *Athenæ Cantab.* iii. 47).

[Authorities cited above; also Egerton MSS. 2528, 2598 f. 240.] T. C.

COPE, ALAN (*d.* 1578), catholic divine, was a native of the city of London. He was educated at Oxford, and after taking the degree of B.A. was made perpetual fellow of Magdalen College in 1549. He graduated M.A. in 1552, being that year senior of the act celebrated on 18 July. In 1558 he was unanimously chosen senior proctor of the university. He studied civil law for five years, and supplicated for the degree of B.C.L. on 17 Dec. 1558, and again on 30 April 1560 (Boase, *Register of the University of Oxford*, i. 218). In the latter year, when he saw that the Roman catholic religion would be silenced in England, he obtained leave of absence from his college and withdrew to the continent. After staying some time in Flanders he went to Rome, where, applying himself to the study of canon law and divinity, he became doctor in those faculties (Dodd, *Church Hist.* ii. 62). The pope made him a canon of St. Peter's, thus providing for him an honourable and a plentiful subsistence. He died at Rome in September or October 1578, and was buried in the church belonging to the English college (*Diaries of the English College, Douay*, p. 145; Pits, *De Angliæ Scriptoribus*, p. 772), 'leaving behind him a most admirable exemplar of virtue, which many did endeavour to follow, but could not accomplish' their desires' (Wood, *Athenæ Oxon.*, ed. Bliss, i. 456).

His works are: 1. 'Syntaxis Historiæ Evangelicæ,' Louvain, 1572, 4to; Douay, 1603, 4to (Duthillœul, *Bibliographie Douaisienne*, p. 56). 2. 'Dialogi sex contra Summi Pontificatus, Monasticæ Vitæ, Sanctorum, Sacrarum Imaginum Oppugnatores, et Pseudo-martyres; in quibus explicantur Centurionum etiam Magdeburgensium, auctorum Apologiæ Anglicanæ, Pseudo-martyrologorum nostri temporis, maxime vero Joannis Foxi mendacia deteguntur,' Antwerp, 1566, 4to, illustrated with a plate of the miraculous cross, found in an ash tree at St. Donat's, Glamorganshire, shortly after the accession of Elizabeth (Gillow, *Bibl. Dict. of the English Catholics*, i. 561). Although this work appeared under Cope's name, it was really written by Dr. Nicholas Harpsfield during his imprisonment in the Tower. Harpsfield entrusted its publication to Cope, who, to avoid the aggravation of his friend's hardships, put his own name to the book, concealing the name of the author under the letters A. H. L. N. H. E. V. E. A. C., that is, 'Auctor hujus libri, Nicolaus Harpsfeldus. Eum vero edidit Alanus Copus' (Reynold, *Conference with Harte*, p. 36). 3. 'Carminum diversorum lib. i.' (Tanner). Cope was not, as Fuller states, the author of the 'Ecclesiastical History of England' which goes under the name of Nicholas Harpsfield.

[Authorities cited above; Boase's Register of the Univ. of Oxford, 300; Lowndes's Bibl. Man. (Bohn), Suppl. p. 233; Fuller's Church Hist. (Brewer), ii. 358, 466, iv. 456; Cat. of Printed Books in Brit. Mus.] T. C.

COPE, Sir ANTHONY (*d.* 1551), author, second son of William Cope of Hanwell, Oxfordshire, cofferer to Henry VII, by his second wife Joan, daughter of John Spencer of Hodnell, Warwickshire, was a member of Oriel College, Oxford, but does not appear to have graduated. After leaving Oxford, he travelled in France, Germany, and Italy, visiting various universities, and became 'an accomplished gentleman,' writing 'several things beyond the seas,' which, Wood says, are spoken of in an epigram made by Spagnoli, or, as he was called, Johannes Baptista Mantuanus. This epigram was seen by Bale, but appears now to be lost. At the age of twenty-six he succeeded to his father's estates, inheriting an old manor house near Banbury called Hardwick, and the mansion of Hanwell left incomplete by his father, which he finished, and which is described by Leland as 'a very pleasant and gallant house.' In 1536 he had a grant of Brook Priory in Rutlandshire, which he afterwards sold, and bought considerable property in Oxfordshire. He was engaged in a dispute with the vicar of Banbury in 1540, and received the commendation of the council for his conduct. He was first vice-chamberlain, and then principal chamberlain to Catherine Parr, and was knighted by Edward VI on 24 Nov. 1547, being appointed in the same year one of the royal visitors of Canterbury and other dioceses. In 1548 he served as sheriff of Oxfordshire and Berkshire. He died at Hanwell on 5 Jan. 1551, and was buried in the chancel of the parish church. He married Jane, daughter of Matthew Crews, or Cruwys, of Pynne in Stoke English, Devonshire, and by her had a son Edward (who married Elizabeth, daughter of Walter Mohun of Wollaston, Northamptonshire, and had two sons, Anthony and Walter [q. v.]), and a daughter Anne, wife of Kenelm Digby of Drystoke, Rutlandshire. He wrote: 1. 'The Historie of the two moste noble Capitaines in the Worlde, Anniball and Scipio . . . gathered and translated into Englishe out of T. Livius and other authorities' (black letter), T. Berthelet, London, 1544, 4to, also in 8vo 1561, 4to 1568 with date of colophon 1548, 8vo 1590 (all in the British Museum), with three stanzas prefixed by Berthelet, and dedicatory preface to the king, in which reference is made to 'youre most famous subduynge of the Romayne monster Hydra.' 2. 'A Godly Meditacion upon XX. select and

chosen Psalmes of the Prophet David . . . by Sir Anthony Cope, Knight' (black letter), J. Day, 1547, 4to, reprinted with biographical preface and notes, 1848, by William H. Cope. Among the manuscripts at Bramshill are two ascribed to Cope—an abbreviated chronology and a commentary on the first two gospels dedicated to Edward VI.

SIR ANTHONY COPE (1548?–1614), Cope's elder grandson, high sheriff of Oxfordshire (1581, 1590, and 1603), represented Banbury in seven parliaments (1571–83, 1586–1604), and Oxfordshire (1606–14). He was committed to the Tower (27 Feb. to 23 March 1586–7) for presenting to the speaker a puritan revision of the common prayer-book and a bill abrogating existing ecclesiastical law. He became a knight (1590) and a baronet (29 June 1611); twice entertained James I at Hanwell (1606 and 1612); married (1) Frances Lytton, by whom he had 4 sons and 3 daughters, and (2) Anne Paston, who had been twice a widow; died July 1614, and was buried at Hanwell. The present baronet, Sir Anthony Cope of Bramshill, Hampshire, descends from Anthony, Sir Anthony's second son.

[W. H. Cope's preface to the Meditations; Hist. MSS. Comm. 3rd Rep. 242–4; Davenport's Lord Lieutenants of Oxfordshire; Nichols's Progresses; Wood's Athenæ Oxon. (Bliss), i. 192; Bale's Brit. Scriptt. xi. 74; Pits. Angliæ Scriptt. 735; Tanner's Bibl. Brit. 198; Leland's Itinerary (Hearne, 1744), iv. ii, 59; Strype's Cranmer (8vo ed.), 209.] W. H.

COPE, EDWARD MEREDITH (1818–1873), classical scholar, was born on 28 July 1818 at Birmingham, was educated at the schools of Ludlow and Shrewsbury, and entered Trinity College, Cambridge, in 1837. After taking his degree in the mathematical tripos of 1841, and appearing as senior in the classical tripos, he was elected fellow of Trinity College in 1842, and took the degree of M.A. in 1844. In 1845 he was appointed assistant tutor of Trinity College, and here, excepting the portions of the year he spent in foreign travel, the greater part of his life was spent. He was ordained deacon in 1848 and priest in 1850, but he found the work of the educational clergy more congenial than that of the parochial. In 1867 he was a candidate for the Greek professorship at Cambridge; the votes of the electors were divided, and as the vice-chancellor and the master of Trinity College, on whom the election then devolved, differed, the appointment lapsed to the chancellor, who gave it to Dr. Kennedy. There is no doubt that his disappointment on this occasion preyed on Cope's mind, and was one of the causes of his seizure in 1869. His mind then gave way, and after lingering for four years, he died on 4 Aug. 1873, and was buried at Birmingham.

Eminent as a Greek and Latin scholar, he knew the chief modern languages of Europe. His first published work of any importance was his criticism of Mr. Grote's dissertation on the sophists in the 'Cambridge Journal of Classical Philology,' 1854–6. He published a translation of the Gorgias in 1864, and an introduction to Aristotle's 'Rhetorick' in 1867. After his death his translation of the 'Phædo' was edited by Mr. H. Jackson, and his edition of the 'Rhetorick of Aristotle,' with an elaborate commentary, by Mr. J. E. Sandys in 1877. Notes and corrections of his are in a later volume of Grote's 'History of Greece.'

[Munro's Memoir, prefixed to Sandys's edition of the Rhetorick, Camb. 1877.] H. R. L.

COPE, SIR JOHN (*d.* 1760), commander-in-chief of the forces in Scotland during the rebellion of 1745, was early indebted to the favour of Thomas Wentworth, third earl of Strafford [q.v.], with whom, as appears from letters in the British Museum, he was on terms of intimate friendship. He entered the army as a cavalry office, and in 1707 held the rank of cornet. He was colonel of 39th foot 1730–32, 5th foot 1732–7, 9th dragoons 1737–41, and 7th dragoons 1741 till death. He obtained the dignity of a knight of the Bath. He was M.P. for Queenborough 1722–7, for Liskeard 1727–34, and for Orford 1738–41. In 1742 he was one of the generals appointed to the command of troops sent to assist the queen of Hungary. Promoted brigadier-general in 1735 and major-general in 1739, he became lieutenant-general in 1743. In 1745, when Prince Charles landed in the highlands, he was commander-in-chief in Scotland, and on rumours reaching him of the prince's arrival he resolved to march to the highlands to check the prince's progress. The feverish eagerness with which at the urgent request of the lords of the regency he set out on this expedition was gradually spent on the march northwards. When he left Stirling on 19 Aug. the number of men under his command did not exceed fourteen hundred, and the auxiliaries on which he relied to join him on the march, not having time for preparation, failed to appear. The difficulties of the mountain passes also began to overawe his resolution, and when he came in sight of the rebels posted at Corryarak, barring the way to Fort Augustus, he became alarmed, and at the junction of the roads at Catlaig turned southwards towards Inverness. The highlanders on learning the news uttered cries of exultation, and advanced to Garvamore. At first they had the intention of cutting off

his retreat, but on second thoughts it was resolved to march southward into the low country in the hope of seizing Edinburgh before Cope should return. Cope now recognised the necessity of occupying his former position at Stirling, but without reinforcements of highlanders, which he found it impossible to procure, could not dare to retreat by land. He accordingly sent news of his predicament to the authorities in Edinburgh, and transports were sent to bring his troops back by sea from Aberdeen, but while they were landing at Dunbar the rebels had taken possession of Edinburgh. On news reaching the rebels that Cope was marching to its relief, they boldly resolved to meet him in the open. On 20 Sept. both armies, nearly equal in strength, came in sight of one another at Prestonpans, upon which Cope resolved to take up a strong but cramped position, with his front to Prestonpans and his right to the sea, a boggy morass about half a mile in breadth stretching between the two armies. As night was approaching the troops on both sides resolved to defer the conflict till the morrow, but one of the rebels from Edinburgh, who was thoroughly acquainted with the ground, having undertaken to point out a ford where the morass could be easily crossed, Charles and his officers resolved to cross over in the darkness, and make their attack just as day began to break. The ruse was completely successful, for such was the impetuous rush of the highlanders that the troops of Cope, half awake and utterly bewildered, could make no effective resistance, and in a few minutes were in headlong flight. Only one round of ammunition was fired, and not one bayonet was stained with blood. Few except the cavalry made good their escape, the whole of the infantry being either killed or taken prisoners. The ludicrous part played by Cope is ridiculed in the well-known song 'Hey, Johnnie Cope! are ye waukin yet?' A council of officers was appointed to inquire into his conduct, but they unanimously absolved him from all blame, their decision being that he 'did his duty as an officer, both before and after the action; and his personal behaviour was without reproach; and that the misfortune on the day of action was owing to the shameful behaviour of the private men, and not to any misconduct or misbehaviour of Sir John Cope or any of the officers under his command.' In 1751 he was placed on the staff in Ireland. He died 28 July 1760 (*Scots Mag.* xxii. 387).

MS. 22231; Letters to Lord Strafford, 1707–24, Add. MSS. 31134, 31135, 31141; Cope's opinion in favour of a march into Germany, Add. MS. 22537.] T. F. H.

COPE, MICHAEL (*fl.* 1557), protestant author, fled from England to escape persecution in the reign of Mary, and took refuge in Geneva, where he preached much in French. He was the author of 'A faithful and familiar Exposition of Ecclesiastes,' written in French, Geneva, 1557, 4to, with corrections, 1563; and 'An Exposition upon fyrste chap. of ye prouerbis of Salomon by Mygchell Coope,' which Luke Harrison received license to print in 1564.

[Wood's Athenæ Oxon. (Bliss), i. 192; Tanner's Bibl. Brit. 199; Ames's Typogr. Antiq. (Herbert), 929.] W. H.

COPE, RICHARD (1776–1856), author and divine, was born near Craven Chapel, Regent Street, London, on 23 Aug. 1776. When less than twelve years old he entered upon business life; but it proved uncongenial to his disposition, and he became a student at the Theological College, Hoxton, in March 1798. After remaining in that institution for more than two years, he received an invitation from the independent congregation at Launceston in Cornwall. He preached his first sermon there (28 June 1800), remained on trial for twelve months, was ordained in the church on 21 Oct. 1801, and remained in that position until 24 June 1820, having for the previous twenty years kept with great success a boarding school, which was attended by the sons of dissenters throughout the county. From 1820 to 1822 he filled the post of tutor in the Irish Evangelical College, Manor Street, Dublin; but the appointment afforded him but slight satisfaction, and he eagerly withdrew. After this brief change of occupation, Cope returned to preaching. He was minister of Salem Chapel, Wakefield, from 1822 to 1829; of Quebec Chapel, Abergavenny, from 1829 to 1836; and of New Street Independent Chapel at Penryn, in his old county of Cornwall, from April 1836 until his death. He died at Penryn on 26 Oct. 1856, and was buried on 31 Oct. He married Miss Davies at St. James's Church, Piccadilly, on 30 June 1801. The degree of M.A. was conferred upon him at Marischal College, Aberdeen, on 12 March 1819, and he

was elected F.S.A. on 13 Feb. 1824. Cope's 'Autobiography and Select Remains,' edited by his son, R. J. Cope, in 1857, included poems from the 'Evangelical Magazine' (1815–17), and 'Youth's Magazine' (1816). Cope published: 1. 'The object accomplished by the Abolition of the Slave-trade,' a sermon, 1807. 2. 'Adventures of a Religious Tract,' anonymous (1820, 1825). 3. 'Robert Melville, or Characters contrasted,' Abergavenny, 1827. 4. 'Pulpit Synopsis,' outlines of sermons, 1837. 5. 'Entertaining Anecdotes,' 1838. 6. 'Pietas Privata,' 1857.

[Autobiography, 1857; Boase and Courtney's Bibl. Cornub.; Boase's Collectanea Cornub. p. 161.] W. P. C.

COPE, Sir WALTER, (*d.* 1614), politician, second son of Edward and grandson of Sir Anthony Cope [q. v.], was M.P. for St. Mawes in 1588, for Weymouth in 1601, for Westminster in 1604, and for Stockbridge in 1614. He was member of the Elizabethan Society of Antiquaries; was knighted 20 April 1603; became chamberlain of the exchequer, where he helped to catalogue the records, in 1609, master of the wards July 1613, and keeper of Hyde Park 1612. In 1607 he built at Kensington a house called Cope Castle (designed by John Thorpe), and bought Kensington manor in 1612. James I stayed with him in November 1612. He died, 27,000*l.* in debt, 31 July 1614, and was buried at Kensington. His only child, Isabel (by Dorothy, second daughter of Richard Grenville of Wotton), inherited the Kensington mansion, which was renamed Holland House by her husband Henry Rich, earl of Holland. Cope wrote an apology for his friend Salisbury's financial policy, printed in Gutch's 'Collectanea Curiosa,' i. 119. Many of his letters are at Hatfield.

[Nichols's Progresses; Cal. State Papers, 1590–1614; Collins's Baronetage, i. 112; Princess Liechtenstein's Holland House; Hearne's Curious Discourses.]

COPELAND, THOMAS (1781–1855), writer on surgery, son of the Rev. William Copeland, curate of Byfield, Northamptonshire (1747–1787), was born in May 1781, studied under Mr. Denham at Chigwell in Essex, and in London under Edward Ford [q. v.], his maternal uncle. He afterwards attended the medical classes in Great Windmill Street and at St. Bartholomew's Hospital. On 6 July 1804 he was admitted a member of the Royal College of Surgeons, and on the 14th of the same month was appointed an assistant surgeon in the 1st foot guards. He embarked with his regiment for Spain under Sir John Moore, and was present at the battle of Corunna in 1809. On his return to England and retirement from the army, finding that his uncle was declining practice, Copeland occupied his residence, 4 Golden Square, and having been appointed surgeon to the Westminster General Dispensary, he at once entered into a large connection, chiefly among the aristocracy. In 1810 he brought out 'Observations on the Diseases of the Hip-joint, by E. Ford; edited and revised with additions, by T. Copeland.' In the same year he published 'Observations on some of the principal Diseases of the Rectum,' a work which ran to three editions. His new and scientific treatment of these diseases established his reputation and fairly earned for him the distinction of being the founder of rectum surgery. As a consulting surgeon in this class of maladies his opinion in the west end of London was in much request. He was the first to suggest the removal of the septum narium by means of an ingeniously contrived pair of forceps, in cases where its oblique position obstructed the passage of air through the nostrils. He was elected a F.R.S. on 6 Feb. 1834, and in 1843 became an honorary F.R.C.S. For a time he was a member of the council of the College of Surgeons, and became surgeon-extraordinary to Queen Victoria in 1837. He removed to 17 Cavendish Square in 1842, but his health failing him he limited his practice from that period. He was also the author of 'Observations on the Symptoms and Treatment of the Diseased Spine, more particularly relating to the Incipient Stages,' 1815; a second edition appeared in 1818 and the work was translated into several European languages. Among his contributions to professional journals was a paper entitled 'History of a Case in which a Calculus was voided from a Tumour in the Groin' (*Trans. Med.-Chir. Soc.* iii. 191). His career was marked by a becoming deference to the regulations of professional etiquette, and by courtesy and friendship towards his brother practitioners. He died from an attack of jaundice at Brighton on 19 Nov. 1855. His wife died on 5 Dec. 1855. He left 180,000*l.*, bequeathing 5,000*l.* both to the Asylum for Poor Orphans of the Clergy, and to the Society for the Relief of Widows and Orphans of Medical Men.

[Gent. Mag. January 1856, p. 91; Pettigrew's Medical Portrait Gallery (1840), vol. iv. No. 2; Medical Circular, 13 July 1853, p. 31; Medical Directory, 1856, p. 727.] G. C. B.

COPELAND, WILLIAM JOHN (1804–1885), scholar and divine, was the son of William Copeland, surgeon, of Chigwell, Essex, where he was born on 1 Sept. 1804. When eleven years old he was admitted at

St. Paul's School (11 Sept. 1815), and while there won the English verse prize (1823) and the high master's prize for the best Latin essay (1824). In the latter year he proceeded with a Pauline exhibition to Trinity College, Oxford, and, like another distinguished sympathiser with tractarian doctrines, was first a scholar and then a fellow of that college. Trinity College ranked second to Oriel only in sympathy with the Oxford movement, and Copeland, though never wavering in his attachment to the English church, entered into close connection with all the leading tractarians of the university. While at college he was ill and took no honours; but he was always known as one of the best Latin scholars at Oxford. His degrees were B.A. 1829, M.A. 1831, and B.D. 1840, and he was duly elected to a fellowship. In 1829 he was ordained to the curacy of St. Olave, Jewry; for the next three years he was curate of Hackney; and in 1832 he went to Oxford, where he remained until he accepted, in 1849, the college living of Farnham, Essex. This was his sole preferment in the church, and after a long illness he died at the rectory on 26 Aug. 1885. He never neglected his parochial duties, and he rebuilt the parish church with extreme care of design and execution.

Copeland was gifted with a keen sense of humour and with strong sympathies, which attracted to him a host of friends. He collected materials for, if he did not actually begin to write, a history of the tractarian movement; and as he possessed a tenacious memory, and had been intimately allied with the leaders of the cause, he would have completed the task to perfection. Newman dedicated to Copeland his 'Sermons on Subjects of the Day' as the kindest of friends, and Copeland edited eight volumes of Newman's 'Parochial and Plain Sermons' (1868), an edition which was more than once reprinted, besides printing a valuable volume of selections from the same series of discourses. The 'Homilies of St. John Chrysostom on the Epistle to the Ephesians' were translated by Copeland, and included in the fifth volume of the 'Library of the Fathers;' and Mozley says that Copeland contributed to the 'Tracts for the Times.' Part of his library passed, through the agency of his nephew, W. Copeland Borlase, formerly M.P. for St. Austell, Cornwall, to the National Liberal Club.

[Gardiner's St. Paul's School, 253, 403, 424, 427; T. Mozley's Reminiscences, ii. 3; Guardian, 2 Sept. 1885, p. 1294.] W. P. C.

COPELAND, WILLIAM TAYLOR (1797–1868), alderman of London, and porcelain manufacturer, was born 24 March 1797. He was the son of William Copeland, the partner of Josiah Spode, and after the decease of his father and the retirement of the latter he was for a long period at the head of the large pottery establishment known as that of 'Spode' at Stoke-on-Trent, and also of the firm in London. In 1828–9 he served the office of sheriff of London and Middlesex, and during the year was elected alderman for the ward of Bishopsgate. He became lord mayor in 1835, and was seven years president of the royal hospitals of Bridewell and Bethlehem (1861–8), and member of the Irish Society, upon which devolves the management of the estates in Ireland belonging to the city of London. In 1831 and 1833 he as a liberal contested unsuccessfully the borough of Coleraine, but was seated on petition in both years, and retained his seat until the general election of 1837. He was then returned as a conservative for Stoke-on-Trent, which seat he held until 1852, when he was defeated, and again from 1857 to 1865. He was a moderate conservative after abandoning the liberal party, and although he did not take an active part in the debates of the House of Commons, he was a useful member of committees, and a watchful guardian of the interests of the important district of the potteries which he represented. He also took an active part in civic affairs, maintaining with chivalrous zeal the ancient rights and privileges of the city of London whenever any of these were objects of attack. Copeland's name will rank along with that of Minton and one or two others as the real regenerators of the industry of the potteries. Though not possessing the knowledge of art which distinguished Wedgwood, he chose as his associates men of unquestionable taste and judgment, among whom was Thomas Battam, with whose aid the productions of his manufactory gained a world-wide renown, and in all the great international exhibitions of recent times obtained the highest commendation both for their design and execution. But the branch of ceramic art which Copeland carried to the highest degree of perfection was the manufacture of parian groups and statuettes, in which he secured the co-operation of some of the most eminent sculptors of the day, including Gibson, Calder Marshall, Foley, Marochetti, and Durham. Copeland was in early life a keen sportsman, keeping a stud of race-horses, and always identifying himself with those who sought to maintain the honour of the sport as an old English institution. He died at Russell Farm, Watford, Hertfordshire, 12 April 1868.

[Times, 14 April 1868, reprinted in Gent. Mag. 1868, i. 691; City Press, 18 April 1868; Art Journal, 1868, p. 158.] R. E. G.

COPERARIO, GIOVANNI, whose name is also sometimes spelt COPRARIO (*d.* 1626), musician, is said to have been an Englishman, of the name of John Cooper. According to Wood, he was 'an Englishman borne, who havinge spent much of his time in Italy, was there called *Coprario*, which name he kept when he returned into England, at which time he was esteemed famous for instrumental musick and composition of fancies, and thereupon was made composer to King Charles I. He was one of the first authors that set lessons to the viol lyra-way, and composed lessons not only to play alone, but for two or three lyra-viols in consert, which hath been approved by many excellent masters' (WOOD, *Bodl. MS.* 19 (D.) No. 106). In 1606 Coperario published 'Funeral Teares, for the death of . . . the Earle of Devonshire. Figured in seaven songes, whereof sixe are so set forth that the wordes may be exprest by a treble voice alone to the lute and base viole, or else that the meane part may bee added, if any shall affect more fulnesse of parts. The seaventh is made in forme of a dialogue, and cannot be sung without two voyces.'

At the great feast given on 16 July 1607 to James I by the Merchant Taylors' Company, when John Bull and Nathaniel Giles superintended the music, Coperario was paid 12*l.* for setting certain songs sung to the king. In conjunction with N. Laniere [q. v.], he wrote music for a masque of Campion's, performed at Whitehall on St. Stephen's night, 1613, on the occasion of the marriage of Somerset and Lady Frances Howard; for this he was paid 20*l.* (DEVON, *Issues of the Exchequer*, 1836, p. 165). He is said also (but on doubtful authority) to have been the composer of the music to the 'Maske of Flowers,' represented at Whitehall by the gentlemen of Gray's Inn on Twelfth night, 1613–14, and for the masque of the Inner Temple and Gray's Inn performed on the occasion of the marriage of the Princess Elizabeth and the Palsgrave, in February 1612–13. In 1613 Coperario published 'Songs of Mourning: Bewailing the untimely death of Prince Henry. Worded by Tho. Campion. And set forth to bee sung with one voyce to the Lute, or Violl,' and in the following year he contributed two compositions ('O Lord, how doe my woes' and 'I'll lie me down and sleep') to Sir William Leighton's 'Teares or Lamentacions of a Sorrowfull Soule.' Coperario was the music-master of Charles I, on whose accession he was made composer of music in ordinary, with a yearly salary of 40*l.* He died in 1626, and was succeeded in his post by Alfonso Ferrabosco [q. v.] No portrait of him is now known to exist, but when Vertue visited the music school at Oxford in 1732–3 he made a note that there was then in the collection a half-length of him, dressed in white (*Add. MS.* 23071, fol. 65). There is much music extant by Coperario, principally in the libraries of the queen, the British Museum, Christ Church and the Music School (Oxford), and the Royal College of Music. His compositions are chiefly instrumental fantasias, or 'Fancies,' in several parts, and show that he was a master in the art of polyphonic writing. But his importance in the history of English music lies in the fact that he must have been in Italy at the very time when the homophonic school arose, and that though his own bent was clearly towards the earlier school, yet his compositions for solo voices are written in the new manner, which was afterwards so astonishingly developed by his pupils, William and Henry Lawes. Coperario, in fact, with Ferrabosco and Laniere, forms the connecting link between Italy and England at the period when the musical drama originated.

[Grove's Dict. of Music, i. 398 *b*; State Papers, Dom. Ser., Charles I, App. 7 July 1626; Hawkins's Hist. of Music, iii. 372; Fenton's Observations on some of Mr. Waller's Poems (ed. 1742), p. cii; Clode's Memorials of the Merchant Taylors' Company, p. 177; information from the Rev. J. H. Mee and Mr. W. R. Sims.] W. B. S.

COPINGER, WILLIAM (*d.* 1416), clerk, was a member of a family settled at Buxhall, Suffolk. His will is dated 20 Jan. 1411–12, and was proved on 2 March 1415–16. He was buried at Buxhall (DAVY, *Athenæ Suffolcenses*, i., *Brit. Mus. Add. MS.* 19165, f. 53). Copinger's claim to be included among English writers rests upon the testimony of Bishop Bale, who mentions in his note-book (Bodleian Library, *Cod. Selden.*, supra, 64, f. 58 *b*) that he found two works of his in the possession of Balliol College, Oxford. These works were a treatise, 'De Virtutibus et Vitiis,' and a 'Sacramentale' in one book (so too in BALE, *Scriptt. Brit. Cat.* xi. 48, pt. ii. 62 et seq.) Pits expands this account by the statement that Copinger was a master of arts of some note in the university of Oxford, and that he is supposed to have been a member of Balliol College (*De Anglicæ Scriptoribus*, appendix, ii. 22, p. 852). Two copies of the 'De Virtutibus et Viciis Auctoritates Sacre Scripture et Sanctorum ac Philosophorum' remain in the Balliol Library (codd. lxxxiii. 136–67, lxxxvi. f. 2 et seq.), both of the fourteenth century; and the former has the following colophon—'Explicit tractatus de viciis et virtutibus compilatus. Toppynger' (or perhaps 'Toppyng'—the flourish is am-

biguous). The name is apparently that, not of the author, but of the transcriber (H. O. Coxe, *Catal. of Oxford MSS.*, Balliol College, p. 24 *a*), and the initial letter is not *C* but *T*. Finally, there is no christian name given; and it is possible that the name 'William' was prefixed through an inadvertent confusion with a William Copinger of New College, who proceeded B.C.L. in 1542 (Wood, *Fasti Oxon.* i. 116, ed. Bliss), or perhaps with another William Copinger who made extracts from a Dublin chartulary which formed part of Sir James Ware's collection, and afterwards passed into the possession of the Earl of Clarendon (*Catal. Cod. MSS. Angl.* vol. ii. pt. ii. p. 8, 1697). As for the 'Sacramentale' referred to above, it is probably a copy of the well-known 'Pupilla Oculi' of John Borough [q. v.], (Balliol MS. ccxx. f. 54). It results, therefore, that Copinger has only found a place in English biographical dictionaries in consequence of an error of transcription on the part of Bishop Bale.

[Authorities cited above.] R. L. P.

COPLAND, JAMES, M.D. (1791–1870), physician, was born in November 1791 in the Orkney Isles, and was the eldest of nine children. He went to school at Lerwick, and in November 1807 entered the university of Edinburgh. His studies were at first directed towards theology, but after a time he preferred medicine, and graduated M.D. in 1815. He at once sought occupation in London, but finding none that suited him, after eighteen months, went to the Gold Coast as medical officer to the settlements of the African Company. He landed at Goree, Senegal, Gambia, and Sierra Leone, learning all he could of the diseases of the country, and on leaving Sierra Leone had abundant opportunity of making use of his newly acquired knowledge, for three-fourths of the crew fell ill of fever, and in the midst of the epidemic a gale carried away the masts. Soon after the storm Copland landed and made his way along the coast amidst the savages, sometimes on foot, sometimes in small trading vessels or in canoes, till he reached Cape Coast Castle, where he lived for some months. In 1818 he returned to England, but soon started on travels through France and Germany. In 1820 he became a licentiate of the College of Physicians of London, and settled in Walworth. In London physicians without friends and without hospital appointments, or the opportunity of becoming known as teachers, have from time to time endeavoured to rise in their profession by constant writing and publication. This was the course which Copland chose. His laborious habits make it probable that he might have added something to medical knowledge, but the method he adopted inevitably ended in his becoming an eminent compiler and not a learned physician. He began by writing on the medical topography of West Africa ('Quarterly Journal of Foreign Medicine,' 1820), on human rumination, on yellow fever, on hydrophobia, on cholera ('London Medical Repository,' 1821), and then engaged in a discussion ('London Medical and Physical Journal') on chronic peritonitis. The question disputed was how to determine whether such cases were due to tubercle or merely to chronic inflammation. Copland's paper shows no great knowledge of morbid anatomy, nor does he know enough to grasp the extreme difficulty of determining the point in particular cases during life. In 1822 he took a house in Jermyn Street, became editor of 'The London Medical Repository,' and wrote much in that journal on many subjects. In 1824 he published notes to a translation of Richerand's 'Physiology,' and in 1825 issued a prospectus for an 'Encyclopædia of Medicine.' At the same time he lectured on medicine at a medical school then existing in Little Dean Street, and somewhat later at the Middlesex Hospital. In 1828 and 1829 he again issued proposals for an encyclopædia, but again without success, till at last the scheme was adopted by Messrs. Longman, the publishers, and in 1832 the first part was issued and the work ultimately finished by Copland in three stout volumes, with double columns, on 3,509 closely printed pages. The 'Dictionary of Practical Medicine,' a book, by one man, on every part of medicine, the small-type columns of which would extend, if placed in succession, for almost a mile, is a marvel of persevering industry, unfortunately more astonishing than useful. The book is only comparable to the 'Continent' of Al Rhasis, a vast collection of opinions and statements ungoverned by discernment. Our own time, wiser than the centuries which succeeded Al Rhasis, leaves Copland's dictionary as undisturbed on the shelves as the 'Continent' itself. An abridgment was published by the author in 1866.

In 1832 the article on cholera was published as a separate book, 'Pestilential Cholera, its Nature, Prevention, and Curative Treatment.' Copland was elected F.R.S. in 1833, and fellow of the College of Physicians in 1837. He attained considerable practice and wrote in 1850 a small book 'On the Causes, Nature, and Treatment of Palsy and Apoplexy,' and in 1861 'The Forms, Complications, Causes, Prevention, and Treatment of Consumption and Bronchitis,' comprising also

the causes and prevention of scrofula. He was president of the Pathological Society, but did not obtain the respect of the practical morbid anatomists who attended its meetings, and who were often led to smile when the president claimed as his own numerous modern discoveries in pathology. Copland wrote more on medicine than any fellow of the college of his time, or of any past time, and was respected in the college, where he was Croonian lecturer 1844, 1845, 1846; Lumleian lecturer 1854, 1855, and Harveian orator 1857. He gave up practice about a year before his death, which took place at Kilburn 12 July 1870.

[Pettigrew's Medical Portrait Gallery, i. 109, where the materials for the memoir were supplied by Copland himself; Munk's Coll. of Phys. 1878, iii. 216; verbal accounts of surviving contemporary physicians.] N. M.

COPLAND, PATRICK, LL.D. (1749–1822), naturalist, was born in 1749 at the manse of Fintray, Aberdeenshire, where his father was minister, and elected professor of natural philosophy in Marischal College and University, Aberdeen, in 1775. In 1779 he was transferred to the chair of mathematics, but in 1817 was again appointed to his former chair, which he held till his death (10 Nov. 1822). He enjoyed considerable local reputation as a teacher; but his claim to notice lies in the pains he took to form a collection of models and other apparatus suitable for a museum of natural philosophy. Hardly anything of this kind was known in the north of Scotland; but by means of assistance from the Board of Trustees and Manufactures, he contrived to form a valuable collection, travelling on the continent for information, and doing not a little by his own mechanical skill, and by directing and superintending his workmen. This service looks but small in the light of our vast modern museums of science and art, our international exhibitions, and illustrated scientific journals; but to Copland belongs the credit of having discovered a want, and done what he could in his circumstances to supply it. Copland was also among the first to extend the knowledge of science beyond academic circles by means of a popular course of natural philosophy.

[Anderson's Scottish Nation; Kennedy's Annals of Aberdeen, vol. ii.] W. G. B.

COPLAND, ROBERT (*fl.* 1508–1547), author and printer, was, according to Bagford, in the service of Caxton. Copland himself, in the prologue to 'Kynge Appolyn of Thyre' (1510), mentions that he gladly follows 'the trace of my mayster Caxton, begynninge with small storyes and pamfletes, and so to other,' but a few lines lower down he requests the reader 'to pardon myn ignorant youth,' and this at a period eighteen or nineteen years after Caxton's death. He was undoubtedly in the office of Wynkyn de Worde, who left him ten marks, and who in the same and other works is referred to as 'my mayster.' The first volume bearing his imprint is 'The Boke of Justices of Peas . . . emprynted at London in Flete-strete at the signe of the Rose Garland by Robert Copland,' in 1515. W. de Worde issued the same book in 1510 and 1515. Copland was a bookseller and stationer as well as printer, as appears from the colophon to 'The Questionary of Cyrurgyens' (1541), 'translated out of the Frensshe, at the instigacion and costes of the ryght honest parsone Henry Dabbe, stacyoner and biblyopolyst in Paules churche yarde, by Robert Coplande of the same faculte.' His known typographical productions are only about twelve in number. They are all rare, but are not distinguished for mechanical excellency. Herbert says that in 'The xij Fruytes of the Holy Goost,' printed by him in 1535, the comma stop is first to be found in black-letter books, the virgil or dash being used previously. In Andrew Borde's 'Pryncyples of Astronamye' the author speaks of his 'Introduction to knowledge' being at that time printing 'at old Robert Copland's, the eldist printer of Ingland.' This date is believed to have been about 1547, which brings us to the time (1548) when Robert's successor, William Copland [q. v.], issued his first dated book. Stow records that a 'William Copland, Taylor, the king's merchant,' was churchwarden in 1515 and 1516 at St. Mary-le-Bow, and gave the great Bow bell, but what relation he was to the two printers of the name is not known (*Survey*, 1754, i. 542).

The most famous of Copland's literary productions are two pieces of verse, 'The Hye way to the Spyttel Hous' and 'Jyl of Breyntford's Testament.' The former is a dialogue, written with much force and humour, between Copland and the porter of St. Bartholomew's Hospital. 'It is one of the most vivid and vigorous productions of the time' (C. H. Herford, *England and Germany in the Sixteenth Century*, 1886, p. 358), and is full of curious information about the cheats and beggars who resorted to the hospital at some period after Henry VIII's statute (1530–1) against vagabonds (see l. 375), and subsequent to the Reformation (l. 551). 'Jyl of Breyntford' is based upon a coarse popular tale. Both pieces were in Captain Cox's library. Copland translated three romances of chivalry as well as other works from the

French, and contributed verses to several books. It is extremely probable that we owe the first English version of 'Eulenspiegel' to him. Three undated editions of 'Howleglas' were issued by William Copland between 1548 and 1560. Wood believed him to have been a poor scholar at Oxford.

The following is a list of his writings: 1. 'The Kalender of Shepeherdes,' London, W. de Worde, 1508 and 1528, 4to, translated from 'Le Compost et Kalendrier des Bergers,' first printed in 1493, and afterwards with variations (see NISARD, *Livres Pop.*, 1864, i. 84–121). It contains many curious scraps of folklore, and consists of prose and verse mingled with woodcuts. In the prologue we are told that having come across the work 'in rude and Scottish language,' the translator 'shewed the said book unto my worshipful mayster, Wynkyn de Worde, at whose commandment and instigation I, Robert Copland, have me applied directly to translate it out of French again into our maternal tongue.' 2. 'Kynge Appolyn of Thyre,' London, W. de Worde, 1510, 4to (translated from the French 'Appolyn, roi de Thire;' the Roxburghe copy in the possession of the Duke of Devonshire at Chatsworth is the only one known, reproduced in facsimile by E. W. Ashbee, 1870, 4to). 3. 'The Myrrour of the Chyrche . . . by Saint Austyn of Abyndon,' London, W. de Worde, 1521, 4to, translated, with additional verses (see *Notes and Queries*, 4th ser. xi. 401), from the 'Speculum Ecclesiæ' of Edm. Rich, archbishop of Canterbury (see HOOK, *Lives of the Archbishops*, iii. 218–22), possibly from a French version. 4. 'A Goosteley Treatyse of the Passyon of our Lorde Jesu Chryst, with many deuout contemplacyons, examples, and exposicyons of the same,' London, W. de Worde, 1521 and 1532, 4to (translated from the French by Chertsey; Copland only supplied the verse). 5. 'The Introductory to write and to pronounce Frenche, compyled by Alexander Barcley,' London, R. Copland, 1521, folio (at the end 'The maner of dauncynge of base daunces . . . translated out of frenche by R. Copland'). 6. 'The Rutter of the See, with the Hauores, Rodes, Soundynges, Kennynges, Wyndes, Flodes and Ebbes, Daungers and Coastes of Dyuers Regyons,' &c., London, R. Copland, 1528, 12mo (from the 'Grant Routier' of Pierre Garcie, first printed at Rouen about 1521, and frequently after. The 'Rutter' was also added to and ran through several editions). 7. 'The Secret of Secrets of Aristotyle, with the Gouernale of Princes,' London, R. Copland, 1528, 4to (translated from the French with 'L'Envoy' in verse by the translator). 8. 'The Hye Way to the Spyttel Hous' [col.] 'Enprynted at London in the Flete-strete, at the Rose Garland, by Robert Copland,' n.d., 4to (printed after 1535, only two or three copies known; reproduced in Utterson's 'Select Pieces of Early Popular Poetry,' 1817, ii. 1–50, in Hazlitt's 'Remains of the Early Popular Poetry of England,' iv. 17–72; and analysed in Herford's 'England and Germany in the Sixteenth Century,' 1886, pp. 357–62). 9. 'The Complaynte of them that ben to late maryed,' London, W. de Worde, n.d. 4to (8 leaves). 'Payne and Sorowe of Euyll Maryage,' W. de Worde, n.d. 4to (4 leaves). 'A Complaynt of them that be to soone maryed,' W. de Worde, 1535, 4to (13 leaves). All three are evidently translated from the French (see COLLIER, *Bibliog. Account*, i. 524–6). 10. 'The Life of Ipomydon,' London, W. de Worde, n.d. 4to (adapted from the romance of Hue of Rotelande; the former Heber copy is the only one known). 11. 'The maner to liue well . . . compyled by maistre Johan Quentin,' London, R. Copland, 1540, 4to (translated from the French). 12. 'The Questionary of Cyrurgyens, with the formulary of lytel Guydo in Cyrurgie,' &c., London, R. Wyer, 1541, 4to (translated from the French). 13. 'The Knyght of the Swanne: Helyas,' London, W. Copland, n.d. 4to (the copy in the Garrick collection in the British Museum is the only one known; reprinted in Thoms, 'Early Prose Romances,' vol. iii.) 14. 'The Art of Memorye, that otherwise is called The Phœnix,' London, W. Middleton, n.d. 8vo (translated from the French). 15. (*a*) 'Jyl of Breyntford's Testament. Newly compiled' [col.] 'Imprented at London in Lothbury ouer agaynst Sainct Margaretes church by me Wyllyam Copland,' n.d. 4to (printed shortly after 1562; the only copy known is in the Bodleian Library, privately reprinted by F. J. Furnivall as 'Jyl of Breyntford's Testament, the Wyll of the Deuyll, and other short pieces,' 1871, 8vo); (*b*) 'Jyl of Braintford's Testament newly compiled' [col.] 'Imprinted at London by me William Copland,' n.d. 4to (printed after (*a*) according to Furnivall; Collier and Hazlitt take the opposite view. Collier's copy of (*b*), described in his 'Bibl. Account,' i. 152–5, cannot be traced; no other copy is known. There are many variations between the two editions). 16. 'The Seuen Sorowes that women have when theyre Husbandes be deade. Compyled by R. Copland,' London, W. Copland, n.d. 4to (12 leaves; copy in British Museum, not seen by Halliwell and Furnivall, dialogue in verse, with woodcut). 17. Copland also contributed verses to Chaucer's 'Assemble of Foules,' 1530, W. Walter's 'Spectacle of Louers,' n.d. (see COL-

LIER, ii. 482-3), and a prologue to 'The Castell of Pleasure,' W. de Worde, n.d.

COPLAND, WILLIAM (*fl.* 1556-1569), printer, is believed by Dibdin (*Typogr. Antiq.* iv. 127) to have been the younger brother of Robert Copland [q. v.] He worked in his office until the death of the latter, and continued as printer in the same house. An original member of the Stationers' Company, he was named in the charter of 1556 (ARBER, *Transcript*, i. xxviii). The first book for which he is recorded to have had license was an edition of Isocrates' 'Admonition to Demonicus,' in 1557. A copy, bearing date 1 Jan. 1558, is in the Bodleian and a fragment—the appendix only—at the British Museum; the appendix consists of Benedict Burgh's translation of Cato's 'Disticha.' The earliest dated volume bearing his imprint is 'The Understandinge of the Lordes Supper. . . . Jmprinted at London, in Fletestrete, at ye signe of the Rose Garland,' in 1548. In 1561 he was in Thames Street, 'in the Vyntre upon the Three Craned Warfe,' and at one time had an office in Lothbury, 'over against Sainct Margarytes church.' Among the noteworthy books issued from his press were 'The xiii bukes of Eneados' (1553, 4to), 'The foure Sonnes of Aimon' (1554, folio), 'Kynge Arthur' (1557), folio, and the following without a date: 'Syr Isenbras,' 4to, 'Howleglas' (three editions), 4to, 'The Knyght of the Swanne,' 4to, 'Jyl of Breyntford's Testament' (two editions, 4to), Borde's 'Introduction of Knowledge,' 4to, 'Valentyne and Orson,' 4to, and other popular romances. Dibdin knew of no book printed by Copland after 1561, although 'A Dyalogue between ij Beggers' is registered for him between 1567 and 1568 (*Transcript*, i. 355).

He compiled 'A boke of the Properties of Herbes,' 1552, 4to, issued from his own press. Both Robert and William Copland used the same kind of worn and inferior types, and their workmanship shows little of the beauty that marks the productions of Wynkyn de Worde, but the memory of William deserves respect as one who printed many interesting specimens of popular English literature, all of which are now extremely rare. The titles of many of them are in the list of Captain Cox's library, and it is extremely likely that Copland's actual editions were those in that famous collector's cabinet. William Copland died between July 1568 and July 1569 (AMES, *Typogr. Antiq.* (Herbert), i. 353). The fact that the Stationers' Company 'Payd for the buryall of Coplande vjs' must not be considered to mean that they were called upon to bear his funeral expenses, but rather that the company had in some way honoured the last ceremonies of a benefactor and original member.

[Besides the authorities mentioned above see Collier's Bibliographical Account, i. 11, 153; Catalogue of Books in the British Museum, printed to 1640, 1884, 3 vols. 8vo; Captain Cox, his Ballads and Books, ed. by F. J. Furnivall (Ballad Soc.), 1871.] H. R. T.

COPLESTON, EDWARD (1776-1849), bishop of Llandaff, was born 2 Feb. 1776 at Offwell in Devonshire, of which parish his father was the rector. He was descended from one of the most ancient families in the west of England, which was said to have been in possession of its estates before the Conquest. The remains of them were all lost in the cause of Charles I by the bishop's direct ancestor, John Copleston; and his descendant was not a little proud of the family tree, which he spent much time in tracing backwards to its roots. He was educated at home, and at the age of fifteen he gained a scholarship at Corpus Christi College, Oxford, and two years afterwards the chancellor's prize for Latin hexameters upon 'Marius amid the ruins of Carthage.' His Latin poetry was remarkably good, and a Latin epistle which he addressed to a friend in his seventeenth year will bear comparison with Gray's or Milton's. After proceeding B.A. in 1795 he was invited by the authorities of Oriel to fill a vacant fellowship for which none of the candidates were considered good enough. In 1796 he won the prize for an English essay on the subject of agriculture, and in 1797 graduated M.A. and succeeded to a college tutorship, which he held for thirteen years. At this time he commanded a company in the Oxford volunteers, and was celebrated for his bodily strength and activity. He once walked all the way from Oxford to Offwell; and his biographer thinks he must be nearly the last man who was robbed by a highwayman near London, a calamity that befell Copleston between Beaconsfield and Uxbridge on 12 Jan. 1799. As tutor of Oriel he made the acquaintance of John William Ward (after-

wards Lord Dudley), with whom he continued to correspond; and in 1841 he published a selection of his letters, which are full of interest.

Copleston, together with the head of his college, Dr. Eveleigh, whom he described as the author and prime mover of the undertaking, was a warm supporter of the new examination statute which was promulgated in 1800, and he volunteered to be one of the first examiners in the new schools. In the same year he became vicar of St. Mary's, Oxford, and in 1802 professor of poetry, in which capacity he showed himself an accomplished critic, as well as a master of Latinity. His Prælections were greatly admired by Newman, who said, however, that the style was 'more Coplestonian than Ciceronian.' His 'Advice to a Young Reviewer,' a parody of the method of criticism adopted in the earlier numbers of the 'Edinburgh Review,' is a marvellous piece of imitation, full of the finest irony. The review soon afterwards published an attack on the Oxford system of education, to which Copleston at once replied and completely demolished his antagonist, whom he convicted not only of stark ignorance of what he had undertaken to condemn, but of much bad Latin besides. Lord Grenville wrote to thank him for his able defence of Latin versification against the swords of the barbarians. The reviewer answered him, and Copleston wrote three 'replies' in all, which contain in a small compass the whole case in favour of a classical education as then understood. This defence is the more valuable as Copleston's own intellect was of an order capable of grappling with tougher questions than the value of elegant scholarship. In 1819 he published two letters to Sir Robert Peel, one on the currency and one on pauperism, showing a mastery of political economy. The mischievous effects of a variable standard of value was the subject of the first, which was spoken of in the most flattering terms by Tierney, Baring (afterwards Lord Ashburton), and Sir James Mackintosh in the House of Commons. He advocated the immediate resumption of cash payments, and considered that when this had been effected, then, and not till then, it would be just to repeal the corn laws; paper currency being a concession to the commercial world as protection duties were to the agricultural. In the letters on pauperism he traced the condition of the labouring classes in England to the decline in the value of money, and held that the true remedy was a corresponding increase in the rate of wages. He disliked the principle of a poor law altogether, and seems not to have discerned the real utility of the allotment system, for which it was proposed, in a bill brought in by the government in 1819 but never carried, to enable the parochial authorities to acquire land. Before quitting Copleston's connection with literature we may mention his notice in the 'Quarterly Review' of a book very little known, namely, a Latin history of the insurrection of 1745, written by a Scotchman, which Copleston pronounced to be in some parts almost equal to Livy.

Proctor in 1807, Copleston became prebendary of Hoxton in St. Paul's Cathedral 1812. In 1814, on the death of Dr. Eveleigh, he was appointed provost of Oriel. He had been dean for some years, and to him, perhaps more than to any other, is to be attributed the high character which the college acquired during the first quarter of the nineteenth century. The best description of it during the twenty years after Copleston's appointment is in Cardinal Newman's 'History of his Religious Opinions,' and in Mozley's 'Reminiscences of Oriel.' But in the 'Memoir of Bishop Copleston,' published in 1851, is to be found a very interesting letter from Mr. John Hughes, formerly a member of the college, containing a picture of Oriel men and manners during the time when Copleston's influence was supreme, which shows that in those days the whole body of Oriel undergraduates held their heads higher than their fellows.

Copleston was a tory of the Pitt and Canning, not of the Eldon and Perceval, school; and in the contest for the chancellorship of the university in 1814 he threw his whole influence into the scale of Lord Grenville, who was elected by a small majority. Lord Liverpool had a just apprehension of his merits, and in 1826 made him dean of Chester. In 1827 he was further promoted to the bishopric of Llandaff and deanery of St. Paul's. In parliament he supported the bill for the removal of Roman catholic disabilities. But he opposed the Reform Bill, his dislike of which he explained at some length in a letter to Lord Ripon in November 1831. In Copleston's opinion the better plan would have been to revive the royal prerogative as to issuing and discontinuing writs, a practice by which the processes of enfranchisement were adjusted to the changes of population without any parliamentary agitation. As a politician he is classed by Archbishop Whately as 'a decided tory.' But he was certainly more liberal than the bulk of the tory party fifty years ago. He was in favour of the admission of dissenters to the universities. He supported Dr. Hampden; and we may therefore attach to his disapproval of the Maynooth grant, and of the Jew Declaration Bill, more than ordinary weight. The protest against the third read-

ing of the Maynooth Bill entered on the journals of the House of Lords was probably drawn up by the bishop, and expresses very clearly and concisely his logical objection to the measure.

As bishop of Llandaff he devoted himself strenuously to the work of church restoration which was then commencing in Wales, and more than twenty new churches and fifty-three glebe houses were built in his diocese during his tenure of the see. He also took care to require a knowledge of the Welsh language from the clergy whom he instituted, though he was always of opinion that the want of Welsh services had been greatly exaggerated. All the business of life, he said, was conducted in English, and the natural inference was that the vast majority of the Welsh people had no difficulty in understanding an English service. However, he quite recognised the necessity of having in every parish a clergyman who could speak Welsh. His charges delivered to the clergy of the diocese between 1831 and 1849 contain his views on this question, as well as on the great public controversies of the day. He was a high churchman, who at the same time was thoroughly opposed to the tractarians. He could see no logical distinction between the sacerdotal theory which they inculcated and the Roman doctrine of the priesthood. But all this time he had an equally strong aversion to dissent as substituting unauthorised for authorised teaching, and the order which the christian church had sanctioned by ancient and universal usage for the new-fangled systems of individuals. The bishop died on 14 Oct. 1849, and was buried in the ruined cathedral of Llandaff, having just completed his seventy-third year.

[W. J. Copleston's Memoirs of Edward Copleston, Bishop of Llandaff; Remains of the late Edward Copleston, with an introduction by Archbishop Whately, 1854; Mozley's Reminiscences of Oriel College, 1883; Annual Register, 1849.]

T. E. K.

COPLEY, ANTHONY (1567–1607 ?), poet and conspirator, third son of Sir Thomas Copley [q. v.], was born in 1567. He was left in England when his father went abroad, but in 1582, 'being then a student at Furnivals Inn,' he 'stole away' and joined his father and mother at Rouen. At Rouen he stayed for two years, and was then sent to Rome. There he remained for two years in the English college, having a pension of ten crowns from Pope Gregory. On leaving Rome he proceeded to the Low Countries, where he obtained a pension of twenty crowns from the Prince of Parma, and entered the service of the King of Spain, in which he remained until shortly before 1590. In that year he returned to England without permission, and was soon arrested and put in the Tower, whence we have a letter from him dated 6 Jan. 1590–1 to Wade, then lieutenant of the Tower, giving an account of his early life, and praying for pardon and employment. Other letters from him (printed by Strype) give information respecting the English exiles. Soon after we find him residing as a married man at Roughay, in the parish of Horsham, and on 22 June 1592, in a letter from Topcliffe to the queen, he is described as 'the most desperate youth that liveth. . . . Copley did shoot a gentleman the last summer, and killed an ox with a musket, and in Horsham church threw his dagger at the parish clerk. . . . There liveth not the like, I think, in England, for sudden attempts, nor one upon whom I have good grounds to have watchful eyes' (STRYPE, *Annals*, vol. iv.) He appears to have been an object of great suspicion to the government, and to have been imprisoned several times during the remainder of Elizabeth's reign. His writings, however, breathe fervent loyalty and devotion to the queen. In 1595 he published 'Wits, Fittes, and Fancies fronted and entermedled with Presidentes of Honour and Wisdom; also Loves Owle, an idle conceited dialogue between Love and an olde Man,' London, 1595 (Bodleian). The prose portion of this work is a collection of jests, stories, and sayings, chiefly taken from a Spanish work, 'La Floresta Spagnola,' and was reprinted in 1614 with additions, but without 'Love's Owle' (Brit. Mus.) This work was followed in 1596 by 'A Fig for Fortune' (Brit. Mus.), reprinted by the Spenser Society in 1883. It is a poem in six-line stanzas, and, like 'Love's Owle,' does not convey a very high idea of Copley's poetical powers. Extracts from it will be found in Corser's 'Collectanea,' ii. 456–9.

At the end of Elizabeth's reign Copley took an active part in the controversy between the Jesuits and the secular priests, and wrote two pamphlets on the side of the seculars, 'An Answere to a Letter of a Jesuited Gentleman, by his Cosin, Maister A. C., concerning the Appeale, State, Jesuits,' 1601, 4to (Brit. Mus.) This was followed by 'Another Letter of Mr. A. C. to his Disjesuited Kinsman concerning the Appeale, State, Jesuits. Also a third Letter of his Apologeticall for himself against the calumnies contained against him in a certain Jesuiticall libell intituled A manifestation of folly and bad spirit,' 1602, 4to (Bodleian); in this he announces 'my forthcoming Manifestation of the Jesuit's Com-

monwealth,' which, however, does not seem to have appeared. On the accession of James to the crown, Copley was concerned in the plot for placing Lady Arabella Stuart on the throne. (A proclamation for his apprehension in 1603 is in the Brit. Mus.) He and the other conspirators were tried and condemned to death (see *State Trials*), but Copley was afterwards pardoned (pardon dated 18 Aug. 1604), having made a confession relating the entire history of the plot, which is printed *in extenso* in the appendix to vol. iv. of Tierney's edition of Dodd's 'Church History.' We afterwards find him in 1606 (1607?) a guest, from January to April, in the English college at Rome, after which he disappears from view.

R. C. C.

COPLEY, SIR GODFREY (*d.* 1709), founder of the Copley medal, was son of Sir Godfrey Copley of Sprotborough, Yorkshire, who was made a baronet 17 June 1661, and was M.P. for Aldborough in 1678 and 1681. Copley became second baronet on his father's death about 1684. Of his early life nothing is known. He was elected M.P. for Thirsk in every parliament between 1695 and his death. He took no active part in the debates, but in 1697 resisted the attempt to convict Sir John Fenwick of treason on the evidence of one witness; was a commissioner of public accounts in 1701; and in April 1704 became controller of the accounts of the army. He was elected a fellow of the Royal Society in 1691, and displayed great interest in its proceedings; aided his friend, Sir Hans Sloane, in forming his scientific collections, and himself brought together a valuable collection of prints and mathematical instruments. He died at his London house in Red Lion Square 'of a quinsey,' and was buried at Sprotborough. He married, first, Catherine, daughter of John Purcell of Nantriba, Montgomeryshire; and secondly, in 1700, Gertrude, daughter of Sir John Carew of Antony, Cornwall. The latter survived him, and remarried in 1716 Sir Coppleston Warwick Bampfield. Copley left an only daughter, Catherine, who became the wife of Joseph Moyle, in favour of whose descendants the Copley baronetcy was revived in 1778. The Moyles assumed the name of Copley in 1768. Copley's portrait by Sir Godfrey Kneller was engraved in mezzotint in 1692.

By his will, dated 14 Oct. 1704, and proved 11 April 1709, Copley bequeathed to Sir Hans Sloane and Abraham Hill 'one hundred pounds in trust for the Royal Society of London for improving natural knowledge, to be laid out in experiments or otherwise for the benefit thereof as they shall direct and appoint.' No award was made till 1731, when in that and the following year Stephen Gray received the prize for new electrical experiments; J. T. Desaguliers was the next recipient in 1734. On 10 Nov. 1736 the Royal Society resolved to convert the bequest into a gold medal, to be awarded annually. J. T. Desaguliers was the first winner of the Copley medal in 1736, and it has been awarded annually since that date.

[Noble's Biog. Hist. Continuation of Granger, i. 201–2; Burke's Extinct Baronetage; Luttrell's Relation, iv. v. vi.; Weld's Hist. of the Royal Society, i. 384–6, ii. 566; T. Thomson's Hist. of Royal Society; Nichols's Lit. Illustr. i. 478, iv. 74–6, where several letters from Copley to his friend Thomas Kirk are printed.] S. L.

COPLEY, JOHN SINGLETON, the elder (1737–1815), portrait-painter, born at Boston, Massachusetts, 3 July 1737, was the son of Richard Copley, a native of the county of Limerick, and Mary Singleton, daughter of John Singleton of Quinville Abbey, county Clare. Both families were of English origin, the Copleys a Yorkshire, the Singletons an old Lancashire family, who had settled in Ireland in 1661. Richard and Mary Copley emigrated in 1736, immediately after their marriage, to Boston, where the former died in the following year, leaving only one child, the future artist. Ten years afterwards, 22 May 1747, his widow married Mr. Peter Pelham of Boston, who died in 1751, leaving one son, Henry Pelham, who also became an artist, and attained some eminence in England as a miniature painter, but ultimately settled down in Ireland as the manager of Lord Lansdowne's estates there. The elder Pelham was a man of superior education, and esteemed as a portrait-painter and engraver. He was, according to Whitmore, an American authority, 'the founder of these arts in New England.' It was probably due to his influence that Copley showed in later life that he had been carefully educated, and had early become familiar with the best English literature. His bias for art, developed in early boyhood, was fostered and directed by his stepfather, who taught him to engrave as well as to paint. In both arts he had early made considerable progress, for portraits of undoubted merit, executed by him when he was fifteen or sixteen, still exist. The engraving of one of these, a likeness of the Rev. William Welsteed of Boston, bears the date 1753, with the inscription, 'J. S. Copley pinxit et fecit.' By 1755 his talent was so far

recognised that General (then Colonel) George Washington sat to him for his portrait, and he seems to have found in the succeeding years a good deal to do in painting the portraits of local and other celebrities. From 1758 onwards he made rapid strides in his art, both as a draughtsman and colourist. Of two of his portraits, Colonel and Mrs. Lee, painted in 1769, he often spoke in his later years as of an excellence which he never surpassed. Mrs. Pelham and her son moved in the best society of Boston, and that society was composed of remarkable elements, in which learning and general culture, statesmanship and business capacity, borrowed refinement from the presence of many women conspicuous for beauty and accomplishments. Copley was not the only artist there. The younger Smibert, Greenwood, and Blackburn all practised as portrait-painters. From these he could not have learned much, though his pictures of this period, it is said, show that he had imitated and surpassed Blackburn in the treatment of his draperies, in which Blackburn excelled. There were a few good pictures by European masters in Boston, to which Copley, of course, had access, among them two portraits by Vandyck and one by Sir Godfrey Kneller. But, like most men of genius, Copley had to trust to his own persistent study and practice and his close habit of observation for those qualities in his pictures which gave them value. The multitude of his portraits executed in America is sufficient proof of his industry and conscientiousness. His prices were of a very modest character, but by 1771 they had placed him in fairly comfortable circumstances. He is described by a Colonel Trumbull, who then visited him, as 'living in a beautiful house fronting on a fine open common; attired in a crimson velvet suit, laced with gold, and having everything about him in very handsome style.' His income, it appears from one of his letters, was 'three hundred guineas a year, equal to nine hundred a year in London,' and in 1773 he was the owner of about eleven acres of land, 'the fine open common' above spoken of, on which the finest and most populous portion of the city of Boston is now built. On 16 Nov. 1769 Copley married Miss Susannah Farnum Clarke, daughter of Richard Clarke, a leading Boston merchant, soon afterwards famous as the consignee of the cargoes of tea which were thrown into the sea at Boston (16 Dec. 1773) by the citizens of Boston, disguised as Mohawk Indians, by way of protest against the tea duties recently imposed by England. It was characteristic of Copley's conscientious nature that he did not marry until he was able to offer to the beautiful, accomplished, and amiable woman whom he made his wife the assurance of a settled home, and the companionship of a man whose work was even then recognised in England as giving promise of a great future. In 1766, not 1760, as stated by Allan Cunningham and other biographers, he had sent to his countryman, Benjamin West, then for three years established in London, a picture representing a boy, his half-brother, Henry Pelham, seated at a table with a squirrel. The picture showed the hand of a master. No letter accompanied it, but that it was from America West concluded from the canvas being stretched on American pine, and the squirrel being a flying squirrel peculiar to its western forests. Conjecture as to the artist was subsequently removed by a letter from Copley requesting West's good offices to get it into the exhibition of the Society of Incorporated Artists. This was a privilege denied by the rules of the society to all but members. Such, however, were the merits of the picture, that the rule was waived, and Copley's reputation was at once established among his English brethren. Next year he sent over for exhibition by the society, of which he was now admitted a member, a full-length portrait of a young lady with a bird and a dog. This picture, as well as that of the previous year, had an interest beyond that of mere portraiture. Both were sent over to be sold, 'should any one be inclined to purchase them,' Copley writes to an English friend, 'at such a price as you may think proper.' Sold they probably were at a higher price than they would have fetched in America. But 'The Boy with the Squirrel,' if it ever was sold, came again into the hands of the painter. It remained one of the most cherished possessions of his son, Lord Lyndhurst [see COPLEY, JOHN SINGLETON, the younger, LORD LYNDHURST], and after his death was bought (5 March 1864) for 230 guineas at the sale of his pictures by Mrs. Amory of Boston, a granddaughter of the artist. Desire to see the masterpieces of antique art, and more particularly of the great painters of Italy, and the natural ambition to try his fate in competition with the living artists of the age, had by this time taken a strong hold of Copley's mind. But the hazards of the venture were serious. 'I might in the experiment,' he writes to a friend in England, 'waste a thousand pounds and two years of my time, and have to return baffled to America.' In 1768 he leaves it to his friend West's more experienced judgment to say whether or not the time was ripe for his coming to Europe, begging

him at the same time not to let 'benevolent wishes for his welfare induce a more favourable opinion of his works than they deserved.' His marriage in the following year, and the birth in rapid succession of three children, the eldest and youngest daughters, and the second the future Lord Lyndhurst, postponed for a time the thought of the visit to Europe. This could not be thought of until money had been earned by his pencil for the expenses of his tour and the maintenance of his family during his absence. The prospect of a troubled future for America, resulting from its uneasy relations with the mother country, was no doubt present to Copley's mind when he left Boston to cross the Atlantic in June 1774, leaving his family behind him. A cordial welcome greeted him in England. Strange (afterwards Sir Robert), the great engraver, and Sir Joshua Reynolds called on him. West took him to see all that was best in art in London, and, along with Sir Joshua, was at pains to find sitters for him during the brief interval between his arrival in London and his departure for the continent. He began portraits of the king and queen for Governor Wentworth. 'I might,' he writes to his wife from Rome (26 Oct. 1774), 'have begun many pictures in London if I had pleased, and several persons are waiting my return to employ me.' But it was all-important for him to make his visit to the galleries of the continent without loss of time. The relations between England and America were becoming more strained every day, and he could not say how soon he might have to decide between returning to Boston and bringing over his family to England. Leaving England on 21 Aug. he reached Rome in October by way of Lyons, Marseilles, Genoa, Pisa, and Florence. A Mr. Carter, an artist, who could speak French and Italian, which Copley could not, accompanied him. Carter, says Allan Cunningham, was 'a captious, cross-grained, and self-conceited person,' and in a journal of his tour which he kept he tried to present Copley in a most disadvantageous light, as selfish and stiff-necked in his opinions. Copley, on the other hand, had a mean opinion of Carter's abilities and breeding, and in later life spoke of him as 'a sort of snail which crawled over a man in his sleep, and left its slime and no more.' In person Carter described Copley—and, allowing for a tinge of ill-nature, his description may be trusted—as 'very thin, pale, a little pock-marked, prominent eyebrows, small eyes, which after fatigue seemed a day's march in his head.' Copley's letters from Italy to his wife have been preserved, and they may be more safely relied on for a picture of his mind and character than Carter's splenetic caricature. 'Could I address you,' he writes from Geneva (8 Oct. 1774), 'by any name more dear than that of wife, I should delight in using it when I write; but how tender soever the name may be, it is insufficient to convey the attachment I have for you.' His dominant thought is to get through the studies he has set before him, that their separation may be as short as possible, 'for till we are together I have as little happiness as yourself. As soon as possible you shall know what my prospects are in England, and then you will be able to determine whether it is best for you to go there or for me to return to America.' Meanwhile revolution in America had become imminent, and it appears by a letter from Rome (26 Oct. 1774) that Copley had heard from his wife that things were in such a state that she would not regret leaving Boston. This, he says, will determine him to stay in England, where he has no doubt he will find as much to do as in Boston and on better terms. One pang he has, the loss of his property in Boston. 'I cannot count it anything now; I believe I shall sink it all. . . . I wish I had sold my whole place; I should then have been worth something. I do not know now that I have a shilling in the world.' His deep anxiety about his home only quickened his study of the triumphs of art around him. 'I shall always,' he writes (Rome, 5 Nov. 1774), 'enjoy a satisfaction from this tour which I could not have had if I had not made it. I know the extent of the arts, to what length they have been carried, and I feel more confidence in what I do myself than before I came.' The next letter from his wife satisfied him that England must be his future home. The next few months were devoted to the study of the best works of art in Rome, Naples, Bologna, Parma, Modena, and Venice. With little to learn as a colourist, having already established a distinct and admirable style of his own, his attention was chiefly directed to the masterpieces of ancient sculpture, with a view to correcting his deficiencies as a draughtsman. As he had not time to make all the studies he wished, he purchased casts of a few of the finest statues in Rome, 'for even in Rome,' he says truly, 'the number of the very excellent is not great.' The casts arrived in England a mass of fragments, having been badly packed, a disappointment which Lord Lyndhurst used to say his father never ceased to mourn throughout his life. War had now broken out in America. Copley had all along maintained that this would be the result of the attempt to tax the colony, and he was

equally confident that once begun it would not close until independence had been secured. He was at Parma engaged upon a copy of the St. Jerome of Correggio when he learned to his surprise and inexpressible relief that his wife had reached England (28 June 1775) safely with three of her children: Elizabeth, born in 1770; John Singleton, born 21 May 1772; and Mary, born in 1773. A son, born after Copley left Boston, and who died there soon afterwards, remained behind with Copley's mother, who was too feeble to bear the voyage, and with her son Henry Pelham. Knowing that his wife and children were well cared for on reaching England by her brother-in-law, Mr. Bromfield, Copley visited the galleries of Austria, Germany, and Holland before returning to London, which he reached in December 1776. He at once settled down to work, first in a house in Leicester Fields, from which he subsequently removed to 25 George Street, Hanover Square, where the rest of his life was spent, and which was occupied by his son until his death in 1863. Copley, who was made A.R.A. in 1776 and R.A. in 1779, now felt that he need not confine himself to portrait-painting, but might safely indulge a long-cherished ambition, and follow the example of West in painting pictures of historical or imaginative interest. The first of these, 'A Youth rescued from a Shark,' illustrative of an accident which occurred to Mr. (afterwards Sir) Brook Watson in the harbour of Havannah, was exhibited in 1779. It was presented by Copley to Christ's Hospital School, and in a fine mezzotint by Valentine Green became and is still familiar on many a wall in England. His reputation as a portrait-painter was enhanced by a fine picture which contained portraits of himself, his father-in-law, Mr. Clarke, who had been driven from America, his wife, and four children, a work which was greatly admired when last publicly seen in England, at the Great Exhibition of 1862, for its composition, drawing, force of expression, and fine colour. It hung on the walls of the house in George Street until the death of Lord Lyndhurst, when it was bought for a thousand guineas by Mr. Charles S. Amory of Boston, U.S., husband of a granddaughter of Copley's. It is said to have been materially injured in the hands of a cleaner to whom it was entrusted after the sale. Commissions for portraits at good prices were not wanting. While busy with these Copley had the happy thought of perpetuating on canvas the remarkable incident of Lord Chatham's last appearance in the House of Lords (7 April 1778). The picture is of high value because of the number of portraits, carefully studied from the life, which it contains. In it Copley has preserved the remarkable incident, not generally known, that while the whole house rose, every member of it showing interest and concern, the Earl of Mansfield, who bore Lord Chatham a determined animosity, sat still, as Lord Camden, who was present, writes in a letter to the Duke of Grafton (see STANHOPE, *England*, vi. 45, ed. 1853), 'almost as much unmoved as the senseless body itself.' The picture, now, together with the sketch for it (in which the Earl of Mansfield is standing), in the National Gallery, created great interest. Two thousand five hundred copies of it, engraved by Bartolozzi in his best style, were rapidly sold. Copies were sent to Boston and were hailed with pride by Copley's fellow-citizens. His mother, writing thence (6 Feb. 1788), tells him: 'Your fame, my dear son, is sounded by all who are lovers of the art you bid fair to excel in.' Fine as this work is, considering the difficulty of the subject, it yields in charm and artistic value to another picture of Copley's painted in 1783 for Alderman Boydell's gallery, which is now also in the National Gallery, of 'The Death of Major Pierson' in repelling the attack of the French at St. Helier, Jersey (6 Jan. 1781). The woman flying from the crowd in terror with a child in her arms was painted from a young American woman, the nurse of Copley's family; the figure between her and the wall is Mrs. Copley, who, as this and other pictures show, was as remarkable for her beauty as by all accounts she was for her worth; the boy in a green dress running by the nurse's side is young Copley, afterwards Lord Lyndhurst. This picture, for which the nation gave sixteen hundred guineas in 1864, had every justice done to it by Sharp, whose engraving from it is much prized by collectors. These works established Copley's reputation as an historical painter, and secured him a commission from the corporation of London for a very large picture painted in 1789–90, now in the Guildhall, of 'The Repulse and Defeat of the Spanish Floating Batteries at Gibraltar' (13 Sept. 1782). Having to introduce into it the portraits of four Hanoverian generals, Copley, accompanied by his wife and eldest daughter, went to Hanover to paint their likenesses, furnished with an autograph letter of introduction from George III, which secured for them a most hospitable reception. In society they met the Charlotte of Goethe's 'Werther,' but were sorely disappointed to find in her none of the charm with which the novelist had invested her in what was to them a favourite romance. This picture, no

common work, but not wholly pleasing, was also finely engraved by Sharp. Another of his historical pictures, 'The Surrender of Admiral de Windt to Admiral Duncan' (afterwards Lord Camperdown), near Camperdown (11 Oct. 1797), helped to maintain his popularity. He also painted a fine portrait of Admiral Duncan, which was exhibited at the Royal Academy in 1798, and engraved, but remained in the family of the artist till Lord Lyndhurst's death. The larger picture was bought by Lord Camperdown in 1802 for a thousand guineas, and is now at Camperdown, the family seat in Scotland. Another of Copley's best historical pictures, now in the public library of Boston, U.S., for which it was bought by subscription, represents Charles I demanding in the House of Commons (4 Jan. 1642) the surrender of Hampden, Pym, Hollis, and Hazelrigg. This work, begun in 1785, occupied some years in execution. It contained no fewer than fifty-eight likenesses, all taken from contemporary portraits, which in most cases had to be studied by Copley in the country houses where they were preserved, it being his invariable rule to spare no pains in giving to his historical pieces the interest of actual portraiture. This picture, unhappily lost to England, is warmly prized in its home across the Atlantic, where every work that came from Copley's hand while in America has been carefully chronicled, and his name, as one of Boston's sons, is cherished with genuine pride. It has been given to Copley Square, one of the finest features of the town—a square, built upon part of the property above mentioned as belonging to Copley. This property, which if preserved to the family would have been in itself a fine fortune, was unfortunately sacrificed either by the malversation or ignorance of Copley's agent. Young Copley went over to America in 1795 in the hope of recovering it, but found there was no alternative but to accept of a compromise of all his father's claims for a few thousand pounds. This loss fell heavily upon Copley. He had a strong personal attachment to the property, and to lose it became every day more serious, with the expenses of a rising family growing upon him, and the demand for his pictures falling off during the protracted European war, when the purses of the British public were too much exhausted to have much to spare for works of art. 'At this moment,' Copley writes to his son-in-law Mr. Green (4 March 1812), 'all pursuits which are not among those which are the essentials of life are at an end.' Still Copley worked on with untiring industry. He was especially happy in a home presided over by a wife conspicuous no less for good sense than for her sweet and cultivated manners, and in children who loved him, and gave him no pain, who appreciated his genius, and vied with each other in making him forget the anxieties of contracted means. To the last he was a true enthusiast in his art. With his brush in his hand every care and anxiety, Lord Lyndhurst used to say, was forgotten. He loved books also. His daughters read to him while he worked, and when his easel work for the day was done, he turned to his favourite poets for refreshment and relaxation. In 1800 his eldest daughter was most happily married to Mr. Gardiner Greene, a merchant of Boston, U.S. From this gentleman, and from his own son, who was making his way successfully at the bar, Copley received very considerable assistance in his later years. In August 1815 he was struck down by paralysis, and died on 9 Sept. following. His debts were found largely to exceed the value of his estate, but they were undertaken by his son and fully discharged. He was survived by Mrs. Copley, who died in 1836 at the age of ninety-one, and by his daughter Mary, who attained the great age of ninety-five, dying in 1868. The industry of Copley never flagged. Before he left America it has been ascertained that he had executed at least 290 oil paintings, forty crayon portraits, and nineteen miniatures. These have all along been highly prized by his countrymen, many of whom seized the opportunity of a visit to Europe to have their portraits painted by him. It is probably by his portraits that Copley's reputation will be longest maintained. There are many of them scattered throughout England. As a rule they bear the stamp of individuality, are well modelled, and rich in colour. In Buckingham Palace a fine specimen of what he could do in this way exists in the portraits of three daughters of George III playing in a garden, where the accessories are imagined, and treated with a fancy and care that are characteristic of the thoroughness which Copley put into his work. It has been engraved, as most of Copley's important pictures were, but the engraving does no justice to the picture. Copley, like Reynolds, made experiments in colours, but not, like Reynolds, so far as we can ascertain, to the prejudice of his pictures. Allan Cunningham, who had seen the fine specimens of his work which Lord Lyndhurst collected wherever he could, and which at his death were again scattered, speaks highly of Copley's powers as a colourist. His 'Samuel reproving Saul for sparing the Amalekites' is mentioned by him as 'a fine bit of colouring, with good feeling and good drawing too.' 'Copley,' he adds, 'shares with West the re-

proach of want of natural warmth, uniting much stateliness with little passion.' This is, no doubt, to some extent, true of some of his imaginative works, such as his 'Abraham's Sacrifice,' 'Samuel and Eli,' 'Hagar and Ishmael,' and 'The Red Cross Knight;' but his age was not favourable to the freedom and realistic force which marked the treatment of similar subjects by the old masters, and which are justly demanded from the modern school. In colouring Copley avoided the opaque and monotonous smoothness of West. He always kept nature before him, and had no fear, as many of his contemporaries had, that she 'would put him out.' Many of his best pictures have gone to America; but his merits being now better appreciated in England, those that remain with us are not likely to leave the country. His portrait, a fine work by Gilbert Stewart, engraved in Cunningham's 'Lives of the Painters,' where it is erroneously ascribed to Gainsborough, is that of a man of marked character, of a contemplative and dreamy disposition, and at the same time of great tenacity of purpose. It is now in the possession of Lady Lyndhurst.

[Domestic and Artistic Life of John Singleton Copley, Boston, U.S., 1884, by Mrs. Martha Badcock Amory, daughter of Copley's eldest daughter, Mrs. Greene; Cunningham's Lives of the Painters, &c., ed. 1833, vol. v.; Sketch of the Life and List of some of the Works of John Singleton Copley, by Augustus Thorndike Perkins, Boston, U.S., 1873; Life of Lord Lyndhurst, by Sir Theodore Martin; family papers.]

T. M.

COPLEY, JOHN SINGLETON, the younger, Lord Lyndhurst (1772–1863), lord chancellor, son of John Singleton Copley the elder [q. v.], and of his wife, Mary Farnum Clarke, was born in Boston, U.S., on 21 May 1772. He was brought over by his mother to England in June 1775, along with two sisters. His father had come to Europe in 1774. His uncle, Mr. Clarke, having become obnoxious to his fellow-citizens from his attachment to the English government, had been compelled to fly for safety to Canada. The position of Copley's wife and children in Boston had become so unpleasant, and the prospects of Copley himself as an artist, should he return to America, were so doubtful, that Mrs. Copley decided on removing to London, where friends and relatives were already settled, and a career as an artist awaited her husband on his return from abroad. The family first lived in a house in Leicester Fields, from the windows of which Lord Lyndhurst remembered to have seen the Gordon riots in June 1780. A few years afterwards they removed to 25 George Street, Hanover Square, where the elder Copley resided till his death in 1815, where also his widow died at the ripe age of ninety-one in 1836, and where Lord Lyndhurst, except for a short interval, lived till his death in 1863. Young Copley, according to family tradition, was full of vivacity and humour—qualities which he carried into his future life. When friends from America, to which his eldest sister returned on her marriage, carried back to him in his old age the tales they had heard of his boyish pranks, which used to provoke his father into saying, 'You'll be a boy, Jack, all your life!' the aged ex-chancellor would answer with a smile, 'Well, I believe my father was right there.' He was of a sweet, loving temper, and his pleasant way of looking at things was a welcome element in contrast with the anxious and meditative cast of his father's mind, and the somewhat serious temperament of his mother. 'I am naturally a friend to gaiety,' he writes in 1791; 'I love to see what is to be seen'—a characteristic which coloured all his life. He was devoted to his parents, and in their happy and well-regulated home he acquired the simplicity of tastes and the habit of strong family attachment for which he was conspicuous through life. His education was begun at the private school in Chiswick of Dr. Horne, of whom Lord Lyndhurst in his ninety-first year recorded that he was 'a good classical scholar, and infused into his pupils a fair proportion of Latin and Greek.' Dr. Horne thought highly of his pupil, writing of him (23 Nov. 1789) as 'a prodigiously improved young man.' Early he acquired the habit, for which he was celebrated in after life, of thoroughly mastering and fixing with precision in his memory whatever engaged his attention, whether in science or in literature. When repeating his lessons in the classics to his sister, he used to say, 'No matter whether you understand the text or not, be sure I make no mistake in a single word, or even in an accent.' For mathematics, and also for mechanical science, he early showed a marked aptitude. He had no gift for the painter's art, but living as he did in the midst of artists, and delighting in the results of their labours, he gladly availed himself of his opportunities of attending the lectures on art of Sir Joshua Reynolds, Barry, and others. He used to tell of being present at one of Reynolds's lectures, when, an alarm having arisen that the floor was about to give way, Burke, who was there, appealed to the audience to be calm, and not to accelerate the catastrophe by a rush. In these early days he took a keen interest in the progress of art and in the prosperity of the Royal Academy. How

thoroughly conversant he was with its early history and what it had done for art, and how this had been retained in his memory through more than fifty years, was shown when, speaking in the House of Lords (4 March 1859) on the proposed removal of the Academy from the National Gallery to Burlington House, he brought forward all the circumstances attending its establishment with as much freshness and fluency as if they were of recent occurrence. His wish in youth was to be an architect, but of this his father would not hear. He had formed a high estimate of his son's abilities; and, as these seemed especially fitted to win distinction at the bar, young Copley was sent to be educated, with a view to the legal profession, to Cambridge, where he was entered as a pensioner at Trinity College on 8 July 1790. He had every motive to make the best use of his time at the university. His father was not rich, and was dependent on a precarious profession. With an intellect so keen and a memory of unusual tenacity, it was comparatively easy for young Copley to cover a wide field of study, not only in literature, but also in mathematics, physics, and mechanical science. In the mathematical tripos of 1794 he took his degree as second wrangler, being beaten by the senior wrangler of the year, George Butler [q. v.], afterwards headmaster of Harrow and dean of Peterborough. A failure in health alone prevented him from coming out as senior wrangler. 'My health,' he writes to his father (17 Jan. 1794) in announcing this fact, 'was my only enemy. I am the more pleased at my place, as this study (mathematics) has only been adopted by me within these nine months, whereas several of my opponents have been labouring for years. As I predicted, I am *first* in my own college.' He also took the King William prize in the Michaelmas term 1794. On 19 May of the same year he was admitted a member of the Hon. Society of Lincoln's Inn, and kept the Easter term there. Returning to the university, he obtained (10 Aug. 1795) the appointment of travelling bachelor, with a grant of 100*l.* a year for three years, and in the following month was elected a fellow of his college. At the end of 1795 he sailed for America, where, since the peace of 1784, friendly relations with England had been established. He was warmly welcomed in his native city of Boston, where his father's reputation as an artist stood very high. The chief object of his visit was, if possible, to recover a valuable property on Beacon Hill there which belonged to his father. It had been sold by Mr. Copley's agent in his absence without due authority, and the price never accounted for. Young Copley soon found that the transaction could not be annulled, and he was glad to compromise with the purchasers, who had bought the property in good faith, and who now agreed to pay 4,000*l.* to Copley to have their title confirmed. Had things turned out otherwise, Copley would undoubtedly have returned to America, and his son would probably have carried out an intention he for some time entertained of settling there as a farmer. Young Copley made a tour through the United States, with Volney, the French author, for a travelling companion during a portion of his travels. In admirable Latin letters, addressed to Dr. Bellward, the vice-chancellor of the university of Cambridge, he recorded the more important details of what he had seen, and so fulfilled his duty as a travelling bachelor. On his return to England he went back to Cambridge for a short period, and took the M.A. degree, 5 July 1796. He then devoted himself to the study of the law. His first practice was as a special pleader, his scanty briefs being mainly supplemented by the allowance attached to his fellowship, which he enjoyed up to 1804. His first chambers were in Essex Court, Temple, where he was installed in 1800, in which year his eldest and favourite sister was married to Mr. Gardiner Greene, a merchant of Boston, U.S. To Mr. Greene young Copley owed the funds which enabled him to be called to the bar. His prospects up to 1804 were so gloomy, that he thought seriously of forsaking the bar for the church. Of this his father would not hear, and wrote to Mr. Greene for assistance. It came promptly, and in acknowledging it (30 May 1804) young Copley writes to Mr. Greene: 'Assisted by your friendship, I am about to launch my bark into a wider sea; I am not insensible to the dangers with which it abounds. But while to some it proves disastrous and fatal, to others it affords a passage to wealth, or, what is of more value than wealth, to reputation and honours.' On 18 June 1804 he was called to the bar and joined the midland circuit. His great abilities were by this time recognised by his brethren at the bar. He worked hard, and was assiduous in attendance on the courts. Briefs came in, he continued to rise, but even in 1806, we are told, 'the profits increase very, very slowly.' During 1807 the progress grew more rapid—the work harder, and, though he was a brilliant talker, and enjoyed dances, he renounced society, finding it incompatible with the pressure of business. By this time, his mother writes, 'his prospects are satisfactory, and remove our anxious concern on that score. He has made a great advance,

and says he must style himself, as others do, "a lucky dog."' Meanwhile he had removed his chambers to Crown Office Row, and these he retained until he left the bar. Out of his increasing income he was able to assist his father, whose art had ceased to be profitable; but down to 1812 it did no more than meet the immediate wants of his parents and himself. In the March of that year Copley got his first great start in his profession by his defence at the Nottingham assizes of John Ingham, one of the leading Luddites, who was charged with what was then the capital offence of rioting and the destruction of machinery. By an ingenious objection to the indictment he got his client off scot-free. The sympathies of the mob were all with Ingham, and Copley had difficulty in preventing them from carrying himself to his hotel upon their shoulders. Just before this he had resolved to give up the circuit, finding it did not pay; but he never afterwards wanted briefs when he came to Nottingham. The turn in his affairs had come which 'led on to fortune.' In 1813 he was raised to the dignity of serjeant-at-law. During the next two years his success enabled him to increase the comforts of his father, but it was not such as to enable him to fulfil his mother's wish that he should marry. His father's death in September 1815 threw the whole burden of his family upon him. It was cheerfully accepted by 'the best of sons and the best of brothers,' as he was called by his father. Old Copley left heavy debts; his son assumed them all, and paid them out of his hard-won earnings to the last penny. Years had only drawn closer the bonds of affection between his mother and sister and himself. Mr. and Mrs. Greene tried hard to get them to make a home with them at Boston, but they refused. 'It would be distressing indeed,' Mrs. Copley writes, 'to break up my son's only domestic scene for comfort and resort from his arduous attention to business. His kind and feeling heart you know, and it has had a large scope for action.' In the action of Boville *v.* Moore and others for infringement of a patent, tried in March 1816 before Chief-justice Gibbs, Copley gained great distinction by the masterly way in which he explained the intricate machinery of the bobbin-net frame, which, according to Dr. Ure, is 'as much beyond the most curious chronometer as that is beyond a roasting-jack,' illustrating his exposition as he went along by working a model of the machine with what seemed the dexterity of a practised hand. He had made himself master of the subject by running down to Nottingham two days before, studying the machine at his client's works, and turning out with his own hands an unexceptionable specimen of bobbin-net lace. Copley succeeded in proving that the plaintiff's machine was only an improvement on the spinning-jenny invented some years before by Mr. Heathcot, and in so doing not only secured a verdict for his clients, but enabled Heathcot to take measures, which he did forthwith, to reap the solid fruits of his invention. From this time fees poured in upon Copley so largely, that he was able by degrees to pay off his father's debts, and to place his family in greater comfort than they had known for years. He now became the acknowledged leader of his circuit, and was recognised by his professional brethren as marked for distinction. This opinion was confirmed by the brilliant appearances which he made in two celebrated trials for treason in 1817. The first of these was that of Dr. Watson and Thistlewood, afterwards the head of the Cato Street conspiracy. Copley's speech is said by Lord Campbell, who heard it, to have been 'one of the ablest and most effective ever delivered in a court of justice.' It was marked by that 'luminous energy' which characterised all his speeches. Not a superfluous sentence, no patches of rhetoric, the points chosen with unfaltering judgment, and driven home with convincing force, all indicating a mind which, as Sir Samuel Shepherd once said of Copley, 'had no rubbish in it.' Mainly through Copley's eloquence a verdict of acquittal was obtained. The exceptional ability shown by Copley determined the government to secure his services at the next state trial. This was that of Brandreth Turner and others for riot at a special assize in Derby (October 1817), when effective use was made by Mr. Denman of the fact that his clients, the accused, were in this way deprived of 'that bulwark which they would otherwise have found in Copley's talents, zeal, eloquence, and useful experience.' Less scrupulous politicians accused Copley of deserting his principles, assuming that he had shared the opinions of the Luddites and others whom he had defended, simply because he had done his duty as their counsel to the best of his ability. Soon after this trial Lord Liverpool was the means of bringing Copley into parliament, but without 'pledge, promise, or condition of any sort,' which he certainly would not have done, unless he had felt sure that Copley's political opinions were such that his support of the general policy of the government might be relied on. Copley took his seat in March 1818 as member for Yarmouth in the Isle of Wight. During this session he spoke only twice, but his position

is denoted by the fact that on the first occasion he was selected to answer Sir Samuel Romilly, and on the second his speech brought up Sir James Mackintosh to reply. In the following session Copley sat for the borough of Ashburton, and in 1818 he received his first step towards judicial promotion in being appointed king's serjeant and chief justice of Chester, in which capacity he gave proofs of the high judicial qualities for which he was afterwards pre-eminently distinguished. His first labours as a judge were soon ended, for in June 1819 he was appointed solicitor-general on Sir Robert (afterwards Lord) Gifford becoming attorney-general, and was knighted. In March 1819 he married Sarah Garay, daughter of Charles Brunsden, and widow of Lieutenant-colonel Charles Thomas of the Coldstream guards, a beautiful and brilliant woman, between twenty and thirty years of age. By this time he had established his reputation as a great lawyer, with a mind of unusual subtlety, while distinguished as a speaker by terseness and luminous vigour of expression. 'He is more than a lawyer,' says Mr. J. P. Collier in his 'Criticisms of the Bar,' published in 1819, 'and apparently well read not only in the historians, but also in the poets of his country, so that at nisi prius he shines with peculiar brightness.' These qualities were enhanced by a singularly handsome presence and a fine voice, as well as by perfect courtesy to both bar and bench, which, Lord Campbell says, 'made him popular with all branches of the profession of the law.' In the House of Commons the charm of these characteristics was heightened by dignity of bearing and frank courage in debate, his bearing 'always erect, his eye sparkling, and his smile proclaiming his readiness for a jest.' While in office as solicitor-general Copley added greatly to his reputation both as a debater and as a leading counsel. His appearance in the trial of Thistlewood and others for high treason, and in the proceedings in the House of Lords against Queen Caroline, both in 1820, will always be a model of the dignity, the moderation, the mastery of essential details, the skill in cross-examination, the scrupulous accuracy, and the tempered glow of eloquence, which make the triumphs of the great advocate. In 1824 Copley became attorney-general, and held the office till the death of Lord Gifford in September 1826, when he was appointed master of the rolls, retaining his seat, upon re-election, for Cambridge university, which he had secured the previous June. He was also appointed, in succession to Lord Gifford, recorder of Bristol, by the unanimous vote of the town council. This office and that of master of the rolls, which, like Lord Gifford, he held along with it, he retained for only eight months, having by the wish of the king, on the refusal of Lord Eldon to continue in office, been nominated as chancellor in the following April, and raised to the peerage as Baron Lyndhurst. When Canning's brief administration was closed by his death on 8 Aug. following, Lord Lyndhurst was continued in the office of chancellor by Lord Goderich. On power passing, or rather being forced, from that nobleman's feeble hands in the ensuing December, the Duke of Wellington at once requested Lyndhurst to retain his seat on the woolsack, which he did until the fall of the Wellington administration in 1830. During this period the duke and Sir Robert Peel leaned so greatly upon his advice and assistance, that, next to theirs, his was the most potential voice in the cabinet. In debate his services were of the highest value. He spoke rarely, and only on great occasions, when he made his powers so strongly felt by his political adversaries that he became the mark, as a dreaded enemy in those days was sure to become, for envenomed slanders in their journals. These he treated with contempt, except when they impugned his integrity as a public man. At last he was driven to put two of his libellers to proof of their charges that he had used the patronage of his office to put money in his pocket, and obtained triumphant verdicts against them. The charge was never more misapplied, his rule on all such matters being *detur digniori*, and this, as appointments given by him to such sturdy political opponents as Mr. (afterwards Lord) Macaulay and the Rev. Sydney Smith proved, without reference to party considerations. As Lyndhurst's practice had been confined to the common law bar, he was for some time at a disadvantage as the head of the court of equity. But this disadvantage he set himself to conquer, and with the success which might have been expected from an intellect so acute, and so accustomed to refer all questions to governing principles. Although in the question of parliamentary reform, on which the Wellington administration fell in November 1830, to be succeeded by that of Earl Grey, he did not share the extreme views of his leader, he was too much attached to him, and too little in sympathy with the views of Earl Grey, to have accepted office under him. It was creditable to Lord Grey, and to his chancellor, Lord Brougham, that on the retirement of Sir William Alexander in December 1830 from the office of chief baron, they proposed to Lyndhurst to take his place, thus securing to the state the benefit of his fine judicial

powers, and doing a kindness to an honoured friend, though redoubtable political opponent. With the full concurrence of the Duke of Wellington, Sir Robert Peel, and Lord Aberdeen, whom he consulted, Lyndhurst accepted the appointment, the emoluments of which, 7,000*l.* a year, were of moment to him; and in the four years during which he held it he raised the reputation of his court to the highest point. So sound were his judgments that they were very rarely carried to appeal. The operation of taking notes was so irksome to him that he left the task to his chief clerk. But such was the tenacity of his memory, and his skill in arranging the details of evidence during the progress of the case, that his summings-up were masterpieces of accuracy as well as terseness, helping the jury when mere reading of the evidence in the ordinary way would probably have bewildered them. The most signal instance of his marvellous power of digesting masses of evidence, reducing them into order, and retaining them in his memory, was his judgment in the case of Small *v.* Attwood. The hearing of the case began 21 Nov. 1831, and occupied twenty-one days in reading the depositions and hearing the arguments of counsel. On 1 Nov. 1832 Lyndhurst delivered a judgment 'by all accounts,' says Lord Campbell, 'the most wonderful ever heard in Westminster Hall. It was entirely oral, and without even referring to any notes, he employed a long day in stating complicated facts, in entering into complex calculations, and in correcting the misrepresentations of counsel on both sides. Never once did he falter or hesitate, and never once was he mistaken in a name, a figure, or a date.' He had to defend this judgment some years afterwards on an appeal to the House of Lords in a speech which, Lord Campbell says, 'again astounded all who heard it.' His judgment was reversed, wrongly, as is now admitted by the soundest lawyers. In the discussions in the House of Lords in 1831 Lyndhurst took a leading part, and his speeches, read by the light of what has since happened, while they prove him to have had the prophetic intuitions of the statesman, are worthy to be read no less for political instruction than for that best eloquence which, having important things to say, says them in the clearest and most emphatic and tersest language. He succeeded (7 May 1832) in carrying a motion for postponing consideration of the clauses for disfranchisement, and, the ministry having resigned, he was at once sent for by William IV, who, upon his advice, authorised him to ascertain the views of the leaders of the opposition as to taking office. The Duke of Wellington was prepared to have done so; Sir Robert Peel, however, was not. Lord Grey resumed office, and the Reform Bill passed without further opposition. Unlike his great rival and friend Brougham, Lyndhurst never rose to speak in the House of Lords unless he felt that his silence might be misconstrued or injure a good cause. He was always eagerly listened to. His speeches were never prepared. except in this, that the subject was thought over and over. 'With the exception of certain phrases,' he told the Rev. Whitwell Elwin, 'which necessarily grow out of the process of thinking, I am obliged to leave the wording of my argument to the moment of delivery.' But here he seemed to be never at a loss. His mind as he spoke worked with an energy that completely took possession of his hearers. In delivering his judgments also this was eminently conspicuous. He so stated the facts that those who listened saw things with the same clearness as himself, and so were led insensibly up to his own conclusions. He was well described by a writer in 1833: 'You can hear a pin fall when he is addressing the house; you may imagine yourself listening to—looking at—Cicero. His person, gesture, countenance, and voice are alike dignified, forcible, and persuasive. . . . He stands steadily, however vehement and impassioned in what he is delivering, never suffering himself to "overstep the modesty of nature," to be betrayed into ungainly gesticulations.' On the fall of Lord Melbourne's administration in November 1834, Lyndhurst again became chancellor during the short administration of Sir Robert Peel, which terminated in the following April. Being free from constant work as a judge, he now took a more active part in the discussions of the House of Lords. He led the opposition (1835) in the debates on the Municipal Reform Bill, in the face of a very determined and angry opposition, carrying several important amendments which he believed, and which have been found to be, improvements on the measure as introduced. To the principle of the Irish Municipal Reform Bill (1836) he set up a determined resistance, which was fatal to the measure, and drew down upon him the envenomed attack of the whigs, as well as of O'Connell and others, for having spoken of the Irish as 'aliens in blood, in language, and in religion,' a phrase which he proved, when the bill came back with the commons' amendments, that he had never used, demonstrating at the same time, from the language of Irish agitators themselves, that it had been made their boast that their countrymen were what Lyndhurst was accused of having called them. In this session he was the means of

carrying the valuable bill for authorising the defence by counsel of prisoners in criminal trials. A singular fatality had this year befallen most of the government measures, a fact of which the most was made by Lyndhurst in a review of the session (18 Aug.), the first of a series of similar assaults on Lord Melbourne's administration, which helped materially to shake it by the skill of analysis and the vigour of their invective. This was a busy year with Lyndhurst, for besides playing a prominent part in politics, he attended closely to appeals in the House of Lords as well as to the business of the privy council. In 1837 his attention was chiefly directed to judicial business. But, in concert with Lord Brougham, he rendered important service in bringing into shape several bills for the reform of the criminal law, introduced by Sir John Campbell, then attorney-general. The Irish Municipal Corporations Reform Bill, again introduced in much the same terms as the previous year, was again defeated, the house refusing by a majority of eighty-six to let it go into committee. In two successive sessions the bill shared the same fate, and it only passed in 1840 with material modifications in the direction indicated by Lord Lyndhurst. In January 1834 Lady Lyndhurst, to whom he was warmly attached, had died after a short illness. Four years afterwards, in August 1837, he married Georgiana, daughter of Lewis Goldsmith, a union the happiness of which was unbroken to his death. His skill as lawyer and legislator was shown in the session of 1838 by his amendments on the bill for the abolition of imprisonment for debt, and also on the Juvenile Offenders Bill. In 1840 he was elected, in opposition to Lord Lyttelton, by a majority of 485, to the office of high steward of the university of Cambridge, an honour which he prized as one of the chief distinctions of his career, especially as men of all shades of opinion had combined to confer it. 'His reception in the senate house,' writes one who was present, 'was a striking and strange exhibition of reverential uproar, such as I never witnessed except in the same place five years before, when the great duke was presented as "Doctor" Wellington.' When Sir Robert Peel was called, in August 1841, to form a ministry on the defeat of the Melbourne administration, he at once named as his chancellor Lord Lyndhurst, with whom he had for years 'been on the most confidential intercourse on political matters,' and on whom, to use his own words, 'he could confidently rely when real difficulties were to be encountered.' Lyndhurst was now in his sixty-ninth year, but he was strong, and proved himself quite equal to the heavy work of his office. During his tenure of it he displayed in a pre-eminent degree the judicial aptitude, the desire to arrive at truth, and the splendid power of statement for which he had previously made a great reputation. His speeches in the House of Lords were confined almost exclusively to questions of legal reform raised by himself or others. Despite the pressure of advancing years and the threatened loss of eyesight, he forbore to retire, as he wished to do, when his leader became involved in difficulty with his party by the pressure of the question of free trade in 1844–5, and remained to fight and fall with him upon that question. With heartfelt delight he retired from office, and retreated to a country house at Turville, which he had taken on lease some years before, and where he was happy with his family, his books, his friends, and the occupations of a farm. In 1846 he made, with the approval of the Duke of Wellington, an unsuccessful attempt to reunite the broken ranks of the conservative party, under the leadership of Lord Stanley. But all hope of healing the breach failed owing to the resistance of Lord George Bentinck, the leader for the time of the protectionists. On this Lyndhurst was glad to retire for a time from active participation in the debates of the House of Lords, but he continued to keep up intimate relations with Lord Stanley and other leading men of his party. For the next two years he appeared little in public life. The blindness with which he had been for some time threatened had become so great that for the greater part of 1849 he could neither read nor write. But his family made this deprivation comparatively light for him by reading to him whatever he wished, and his remarkable tenacity of memory came to his aid by retaining every fact and figure of importance. In June 1849 he created surprise by rising to speak in the House of Lords against the royal assent being given to an act of the Canadian legislature, under which he contended that compensation for loss in the Canadian rebellion might be given to those who had abetted it. Frail and feeble physically as he obviously was, it was apparent that nothing but a strong sense of duty could have induced him to appear; but it was soon seen that he had lost nothing of his old intellectual vigour, as for more than an hour he rivetted the attention of the house. There was something singularly pathetic in his words, when, apologising for having addressed their lordships at all, he said, 'Perhaps it is the last time I shall ever do so.' It was, happily, very far from being so; for although now verging on his eightieth year, his eyes

were on two several occasions successfully operated upon, and for nearly ten years more the voice of 'the old man eloquent' was heard with perhaps greater effect than at any previous period of his career. His spirit retained something of the buoyancy of youth. He was happy in his home and in his friends, felt a keen interest not only in the political movements, but also in the literature and scientific discoveries of the day. The bitterness of his political adversaries was subdued by the commanding powers and unmistakable patriotism by which every speech he made was distinguished. Even so late as 1851 Lord Derby was anxious for him to become lord chancellor for the fourth time. He was quite equal to the fatigue of office, but he could not afford its expenses; and he was at an age, and had long been of a temper, which prefers to speak on public questions unfettered by the ties of party. After a successful operation for cataract in July 1852 he was present in the House of Lords at all important debates, and his speeches excited universal admiration by their ripe sagacity, their play of humour and invective, the glow of genuine feeling, and the marvellous command of all historical and other facts bearing upon his argument. Thus of his speech against the proposal to create life peerages (7 Feb. 1856) Lord Campbell, who did not love the man, says that it was 'the most wonderful ever heard. It would have been admirable for a man of thirty-five, and for a man of eighty-four it was miraculous.' Even more remarkable were his speeches in 1859 and 1860 on the national defences, passages in which will always be of priceless value as warnings how alone England can maintain the pre-eminence and the empire she has won. His last speech was spoken (7 May 1861) on a bill for establishing the validity of wills of personal estate. It showed no decline in the strong reason and masculine eloquence with which he had long fascinated the peers; but, though he frequently attended the house afterwards, he was no more heard in debate. The remaining years of his life were happy, if life can be made happy by 'love, honour, troops of friends,' and by carrying into the enforced quiet of extreme age the keen appreciation of all that is best in literature and art and human nature, and a living hope of a better life to come. All these Lord Lyndhurst had in an eminent degree. After a brief illness he passed gently and tranquilly away on 12 Oct. 1863, being then in his ninety-second year. Of the many panegyries which appeared after his death perhaps none is at once more true and striking than that by Lord Brougham (*Memoirs*, iii. 437): 'Lyndhurst was so immeasurably superior to his contemporaries, and indeed to almost all who had gone before him, that he might well be pardoned for looking down rather than praising. Nevertheless he was tolerably fair in the estimate he formed of character, and being perfectly free from all jealousy or petty spite, he was always ready to admit merit where it existed. Whatever he may have thought or said of his contemporaries, whether in politics or at the bar, I do not think his manners were ever offensive to anybody, for he was kind and genial. His good nature was perfect, and he had neither nonsense nor cant any more than he had littleness or spite in his composition.' The life of Lyndhurst in the volume of Lord Campbell's 'Lives of the Chancellors' published after Lord Campbell's death, while containing some interesting facts, is so full of misstatements and malignant innuendo as to be worthless as an authority. Written apparently to blast the good name of a great lawyer and statesman, it has only proved damaging to the reputation of its author for accuracy, candour, and honourable feeling.

The portraits of Lyndhurst are: 1. As a child in his mother's lap, in what is known as the family portrait, by his father, now in the possession of Mr. Amory, Boston, U.S. 2. As the boy in the green jacket in the picture of 'The Death of Major Peirson,' National Gallery. Between this period and his becoming chancellor no portrait of him has been traced. 3. In Sir George Hayter's picture of the House of Commons, 5 Feb. 1833, now in the National Portrait Gallery. 4. In the picture in the same gallery of Fine Arts Commission, 1846, by J. Partridge. 5. Separate life-size half-length portrait, study for the preceding, in the possession of Lady Lyndhurst, excellent. 6. Full-length in robes of lord high chancellor, by J. Phillips, now in National Portrait Gallery, not good as a likeness. 7. A miniature when at the age of sixty-three, by Sir William Ross, in the possession of Lady Lyndhurst, excellent. 8. A crayon drawing by Mr. George Richmond, in the possession of Francis Barlow, long his lordship's secretary, excellent. This has been admirably engraved, first as a private plate, and again as the frontispiece to Martin's 'Life of Lyndhurst,' by the late Francis Holl, R.A. 9. A bust by Behnes, presented to Lady Lyndhurst by his lordship's friends in 1841, and after his death presented by her to Trinity College, Cambridge, which is considered by those who knew Lord Lyndhurst best to be faultless as a likeness. 10. An unsatisfactory unfinished portrait, taken about two years before Lord Lyndhurst's death, by Mr. G. F. Watts, in

National Portrait Gallery. There is also a good engraved likeness of Lyndhurst, about the age of sixty, in Ryall's 'Portraits of Conservative Statesmen.'

COPLEY, SIR THOMAS (1534–1584), of Gatton, Surrey, and Roughay, Sussex, and of the Maze, Southwark, who was knighted (perhaps by the king of France), and created a baron by Philip II of Spain, and who is frequently referred to by contemporaries as Lord Copley, was one of the chief Roman catholic exiles in the reign of Elizabeth. Camden styles him 'e primariis inter profugos Anglos.' He was the eldest son of Sir Roger Copley by his wife Elizabeth, daughter of Sir William Shelley of Michelgrove, a judge of the common pleas [q. v.], and was one of the coheirs of Thomas, last lord Hoo and Hastings, whose title he claimed and sometimes assumed. Lord Hoo's daughter Jane married his great-grandfather, Sir Roger Copley. Another daughter married Sir Geoffrey Boleyn, and was the great-grandmother of Anne Boleyn. The lords of the manor of Gatton then, as for nearly three centuries afterwards, returned the members of parliament for the borough, and in 1554 Copley, when only twenty years of age, was returned 'by the election of Dame Elizabeth Copley' (his mother) as M.P. for Gatton. He sat for the same place in the later parliaments of 1556, 1557, 1559, and 1563, and distinguished himself in 1558 by his opposition to the government of Philip and Mary (*Commons' Journals*). He was then a zealous protestant, and was much in favour with his kinswoman Queen Elizabeth at the commencement of her reign. In 1560 she was godmother to his eldest son Henry. According to Father Parsons (*Relation of a Trial between the Bishop of Evreux and the Lord Plessis Mornay*, 1604) the falsehoods he found in Jewel's 'Apology' (1562) led to his conversion to the church of Rome. After suffering (as he intimates in one of his letters) some years' imprisonment as a popish recusant, he left England without license in or about 1570, and spent the rest of his life in France, Spain, and the Low Countries, in constant correspondence with Cecil and others of Elizabeth's ministers, and sometimes with the queen herself, desiring pardon and permission to return to England and to enjoy his estates; but acting as the leader of the English fugitives, and generally in the service of the king of Spain, from whom he had a pension, and by whom he was created baron of Gatton and grand master of the Maze (or *Maes*) (CAMDEN). He also received letters of marque against the Dutch. His title of baron and these letters form two of the subjects of the correspondence that passed between himself and the queen's ministers (*Cal. State Papers*, Dom. Ser.) Much of his correspondence is to be found in the 'State Papers,' and in the Cottonian, Lansdowne, and Harleian MSS. He died in Flanders in 1584, and in the last codicil to his will styles himself 'Sir Thomas Copley, knight, Lord Copley of Gatton in the county of Surrey' (Probate Office). By his wife Catherine, daughter and coheiress of Sir John Luttrell of Dunster, Somerset, he had four sons and four daughters. His eldest son Henry, Queen Elizabeth's godson, died young; William succeeded at Gatton. The third son was Anthony [q. v.]

JOHN COPLEY (1577–1662), the youngest son of Sir Thomas, was born at Louvain and became a priest, but in 1611 left the church of Rome for that of England, and in 1612 published 'Doctrinall and Morall Observations concerning Religion: wherein the author declareth the Reasons of his late unenforced departure from the Church of Rome; and of his incorporation to the present Church of England . . .,' imprinted by W. S. for R. Moore, London, 1612, 4to (Brit. Mus.) In the same year he obtained the living of Bethersden in Kent, to which he was collated by Archbishop Abbot; he resigned it four years later on receiving from the same prelate the rectory of Pluckley in Kent. We find from the 'State Papers' and the 'Commons' Journals' that he and the puritan squire Sir Edward Dering [q. v.] were at constant feud. Dering complains of Copley's 'currishness' in a characteristic letter dated 27 May 1641. In 1643 the House of Commons found him to be a 'delinquent,' and sequestered the living of Pluckley. On the Restoration his benefice was restored to him, and he died there in 1662, aged 85. THOMAS COPLEY (1594–1652?), the eldest son of William Copley of Gatton (the heir and successor of Sir Thomas, and elder brother of Anthony and John), became a jesuit, and took an active part in the foundation of the colony of Maryland.

[Cal. S.P. Dom. 1547–80, 1581–90, 1591–4, also Harl. Lansd. and Cotton. MSS.; Commons' Journals; Strype's Annals; Camden's 'Annales;' Loseley MSS.; Collect. Topog. et Geneal. v. viii; Hasted's Kent; Life of Father Thomas Copley, a founder of Maryland, by K. C. Dorsey, in the 'Woodstock Letters,' 1885 (Baltimore, U.S.A.); Proceedings in Kent, Camd. Soc. p. 47.] R. C. C.

COPPE, ABIEZER, *alias* **HIGHAM** (1619–1672), fanatic, son of Walter Coppe, was born at Warwick on 30 May 1619 (Wood erroneously says 20 May). From the Warwick grammar school he proceeded in 1636 to All Souls, Oxford, as servitor, and shortly afterwards became one of the 'post-masters' of Merton. Wood describes his student life as grossly immoral. He left the university on the outbreak of the civil war without a degree. He was first a presbyterian, but it is not asserted that he exercised any ministry in that connection. Becoming an anabaptist, he was zealous in the cause throughout Warwickshire and the neighbouring counties. He was anabaptist preacher to the garrison at Compton House, Warwickshire. John Dury [q. v.], the well-known enthusiast for the union of protestants, writes to him (23 June 1651), 'You have been a preacher and a leading man.' He boasted of having baptised seven thousand persons in the midlands. Then he turned ranter, and is said to have been in the habit of preaching stark naked. This may account for his fourteen weeks' imprisonment at Warwick. He joined a society of ranters of the worst type, known among themselves as 'My one flesh.' Lawrence Claxton [q. v.], who was a ringleader among these practical antinomians in 1650, was told that if he 'had come a little sooner' he might have 'seen Mr. Copp, who then had lately appeared in a most dreadful manner.' Wood adds that he became a Muggletonian, but of this there is no evidence. He had dealings with Richard Coppin [q. v.], the universalist, and describes himself as a leveller, but not a 'sword-leveller.' The publication of his 'Fiery Flying Roll' (1650) got him into prison at Coventry, whence he was removed to Newgate in January, a follower having collected 50*l.* to pay his Coventry debts. At this time he was married, and had a young family, but was at variance with his wife, of whom, however, he speaks kindly. He mentions that his house had been burned, and that his parents had discarded him. On 1 Feb. 1650 (Wood erroneously says 2 Feb.) parliament issued an order that his book, containing 'many horrid blasphemies,' be seized and burned by the hangman. The two ordinances against blasphemy, of 10 May and 9 Aug. 1650, were occasioned by his case. From Newgate he put forth an exculpatory protest, and at length a complete recantation, dating it 30 May, the day of his nativity, 1619, and of his 'new birth,' 1651. Regaining his liberty, he preached a recantation sermon at Burford, Oxfordshire, on 23 Dec. 1651. He found a friend in a noted mystic, John Pordage [q. v.], whose appearances in behalf of Coppe were made a ground by the parliamentary commissioners for confirming (1655) Pordage's ejection from his living. We lose sight of Coppe till the Restoration, when he changed his name, and practised physic as Dr. Higham, in the parish of Barnes, Surrey. He still continued occasionally to preach in conventicles. His earlier excesses had undermined his constitution, and he died in August 1672 (buried at Barnes 23 Aug.)

That Coppe's mind was disordered is clear. The licentiousness of which he is accused does not appear in his writings, but he makes a merit of his sins of the tongue. 'It's meat and drink to an Angel [who knows none evil, no sin] to swear a full-mouthed oath' (*Fiery Flying Roll*, pt. ii. p. 12, second paging). His tenets are the ordinary mystical views of the ranters, who were charged with holding that there is no God and no sin. His denial of sin in the elect was a distorted antinomianism. Coppe's style is fantastic enough, but he has some passages of almost poetical beauty. His account of his giving all he had to a chance beggar ('Because I am a king I have done this, but you need not tell any one') reveals the pathetic side of his madness (*ib.* pt. ii. pp. 4–6).

He published: 1. 'Epistle' (London, 13 Jan. 1648, i.e. 1649) prefixed to 'John the Divines Divinity,' &c., by J. F., 1649 (Wood). 2. 'An Additional and Preambular Hint' (really a postscript) to Coppin's 'A Hint of the Glorious Mystery,' &c., 1649, 4to; reprinted in Coppin's 'Divine Teachings,' 1649, 4to. 3. 'Some Sweet Sips of some Spirituall Wine,' &c., 1649, 12mo. 4. 'A Fiery Flying Roll,' &c., 1649, 4to (very long title, in which the author's name is given as 'Auxilium Patris, כף, alias Coppe'). 5. 'A Second Fiery Flying Roule,' &c., 1649, 4to (this and the preceding were printed in London and issued together, without publisher's name, on 4 Jan. 1650, according to the British Museum copy; the 'contents' of pt. ii. are printed in pt. i.; some copies have the imprint 'Coventrie, 1650'). 6. 'A Remonstrance of the Sincere and Zealous Protestation . . . against the Blasphemous and Execrable Opinions . . . the Author hath (through mistake) been mis-suspected of,' &c., 1651, 4to (published 3 Jan.) 7. 'Copp's Return to the Wayes of Truth,' &c., 1651, 4to. Posthumous (or perhaps reprint) was, 8. 'The Character of a True Christian,' 1680, fol. (poem in fourteen stanzas).

[Wood's Athenæ Oxon. (Bliss), iii. 959, 1099; Broadsheet, Order of Parliament, 1 Feb. 1649 (i.e. 1650); Claxton's 'Lost Sheep Found,' 1660; Crosby's Hist. of the Baptists, 1738, i. 225; Barclay's Inner Life Rel. Soc. Commonwealth, 1876, p. 422; works cited above.] A. G.

COPPIN or COPPING, JOHN (*d.* 1583), Brownist, was an inhabitant of Bury St. Edmunds. He enthusiastically accepted the teachings of Robert Browne [q. v.]; preached Browne's doctrines in his native town; contrived to distribute books written by Browne and his friends; and refused to conform to the established ecclesiastical usages. For this conduct, the commissary of the Bishop of Norwich committed him to prison in 1576. He remained in confinement for seven years, but under no very close surveillance, and his family was permitted to live with him. 'Many godly and learned preachers' visited him, and tried to convert him from his unorthodox views. In August 1578 his wife was delivered of a child, but Coppin refused to have it baptised by 'an unpreaching minister.' Meanwhile he sought to bring his fellow-prisoners to his way of thinking; called a clergyman for reading the Book of Common Prayer 'a dumb dog;' asserted that all who observed saints' days were idolaters; and frequently argued that 'the queen was sworn to keep God's law, and she is perjured.' Coppin found a disciple in Elias Thacker, another prisoner, and their violent language produced such disorder in the prison that the magistrates applied to the Bishop of Norwich and to the judges of assize to remove them elsewhere, but this request was refused. The attention of the government was, however, directed to the scandal, and an indictment was drawn up against Coppin, Thacker, and one Thomas Gibson, a bookbinder of Bury, for disobeying the ecclesiastical laws of the realm, and for conspiring 'to disperse Browne's books and Harrison's books.' They were brought before Sir Christopher Wray, lord chief justice, at the summer assizes on 4 June 1583. Gibson was acquitted of the charge of supplying the prisoners with the books, and released. The judge extracted from the other defendants the admission that they acknowledged 'her majesty chief ruler civilly . . . and no further.' Both expressed unqualified admiration of Browne's book; were convicted, and condemned to be hanged. Thacker was executed before the court rose; Coppin on the following day, 5 June. Many books by Browne and Harrison—forty in all—were burnt in front of the stake. Stow, in his chronicle, represents their offence as solely consisting in circulating seditious books; Strype points out, however, that the judges distinctly asserted that the punishment of death was awarded them for denying the queen's supremacy. The proceedings appear to have been hastily and irregularly conducted. Dr. Dexter (1880), following Governor Bradford in his 'Dialogue' (1648), numbers Coppin and Thacker among the six early martyrs to congregationalism. Bradford assigns to them the last words (addressed to the judge): 'My lord, your face we fear not, and for your threats we care not, and to come to your read service we dare not.'

[Strype's Annals, II. ii. 186–7, III. i. 28, 269, ii. 172; Fuller's Church Hist. ed. Brewer, v. 70; Stow's Annals, p. 1174; Young's Chronicles of the Pilgrim Fathers of Plymouth (1841), p. 427; Dexter's Congregationalism, 206–10; Brook's Puritans, i. 262–4 (where Coppin is called minister near Bury St. Edmunds); Neal's Hist. of Puritans, i. 342.] S. L.

COPPIN, RICHARD (*fl.* 1646–1659), universalist, was probably a native of Kent, where, early in the seventeenth century, there were several families of Coppin, at Bekesbourne and Deal. About 1630 one Coppin introduced the doctrines of the 'spirituels,' or brethren of the free spirit, at Lille. Richard Coppin says that he was brought up in the church of England, and spent an idle but not a vicious youth. In religion he was repelled by the formality of the services and the careless lives of the clergy in his neighbourhood. After the suppression of episcopacy (9 Oct. 1646) he attached himself for a short time to the presbyterians in London. He afterwards joined the independents and the anabaptists. Two years later he became the subject of an inward experience very similar to that of the early quakers, and received a commission to preach, 'not from Oxford or Cambridge or the Schools of Antichrist,' but 'given by Christ at Sion house in Heaven.' He was not to exercise a settled ministry, or receive 'yearly maintenance;' anything given him for his preaching he gave to the poor. He began to preach in Berkshire, whither he had removed from London, the effect of his first discourse being that he was 'persecuted, hated, and rejected.' Not having 'freedom to speak,' he 'fell a writing.' His first publication came out (1649) under the patronage of Abiezer Coppe [q. v.] Seven Berkshire ministers and several in Oxfordshire opposed his book and endeavoured to bring him to a recantation, some offering to help him in that case to preferment. A curious story is told of a Berkshire gentleman, who at the suggestion of the clergy bought up 10*l.* worth of his books, but who did not burn them as intended, remarking that he 'did not know but that they might yield him his money again, if the things should after come in request.' On 7 July 1651 he had a discussion at Burford, Oxfordshire, with John Osborn, or Osborne, minister of Bampton in the Bush; at this time he is described as of Westwell, a parish two miles from Burford (see OSBORN, *World to come*, 1651). He first got into trouble by

preaching on four successive days in the parish church of Evenlode, Worcestershire. He had been invited by parishioners, with the consent of the rector, Ralph Nevil. Nevil, however, brought neighbouring clergy to discuss matters with Coppin in the church, and eventually got a warrant against him for blasphemy. Coppin was tried before Chief Baron Wilde at the Worcester assizes on 23 March 1652. The jury found him guilty of denying heaven and hell; but Wilde reproved them for their verdict, and bound over Coppin to appear for judgment at the next assize. By that time his accusers had fresh evidence, relating to Coppin's proceedings at Enstone, Oxfordshire, whereupon Judge Nicholes bound him to appear at the next Oxford assize. On 10 March 1653 he was tried at Oxford before Serjeant Green; the jury at first disagreed, but eventually found him guilty. Green bound him over to the next assize, when Judge Hutton gave him his discharge. Preaching at Stow-on-the-Wold, Gloucestershire, on 19 March 1654, Coppin was again apprehended and brought for trial at Gloucester on informations before Serjeant Glyn on 22 July. Glyn would not receive the informations, and so the matter ended. We next meet Coppin at Rochester. About 1650, Joseph Salmon, a Kentish minister, had 'set up a course of preaching every sabbath day' in Rochester Cathedral. Salmon was an allegorist, and is said to have 'sowed the seeds of ranting familism.' In midsummer 1655 Salmon went abroad, and his chief followers brought Coppin from London to fill his place. Whatever Salmon may have been, Coppin was no ranter, indeed he speaks of being persecuted by ranters; yet it is probable that his acquaintance with Abiezer Coppe introduced him to the sectaries of Rochester. At the end of September or beginning of October 1655, Walter Rosewell, incumbent of Chatham, went to hear Coppin preach, and gained the impression that he affirmed the peccability of Christ and denied the resurrection of the flesh. Rosewell, with other presbyterians, agreed to conduct a Tuesday lecture in the cathedral to counteract Coppin's heresies. A public discussion was held in the cathedral (from 3 to 13 Dec.) between Coppin and Rosewell, assisted by Daniel French, minister of Stroud, the mayor presiding; before it ended, Gaman, an anabaptist, put himself forward to oppose both parties. On Saturday night, 22 Dec., Coppin was served with a warrant forbidding him to preach next day, and requiring his attendance before the magistrates on Monday. He preached, not in the cathedral, where a guard of soldiers was set, but in the college-yard, and in the fields. On 24 Dec. Major-general Kelsie and other magistrates committed him to Maidstone gaol. Before 26 June 1656 he had been set free by habeas corpus. Nothing further has been ascertained of him beyond the date of his last publication, 1659.

It is not certain whether Coppin or Gerard Winstanley was the first in England to preach universal salvation; both began to publish in the same year, 1649. The universalist views of their contemporary, Jeremy White, were not published till 1712. Coppin writes with a good deal of unction, and deals more moderately with his opponents than they with him. There is no question of the blamelessness of his life. His followers seem to have formed a sect; the tenets of 'the Copinists' are given by S. Rogers (*The Post-Boy robb'd of his Mail*, 2nd ed. 1706, p. 428). In later times he has found an admirer in Cornelius Cayley [q. v.], and a critic in James Relly, a universalist of another type (see his 'The Sadducee detected,' &c. 1764, 8vo).

Coppin published: 1. 'A Hint of the Glorious Mystery of the Divine Teachings,' &c., 1649, 4to, with addendum by Abiezer Coppe [q. v.] 2. 'Antichrist in Man, opposeth Emmanuel, or, God in us,' &c., 1649, 4to (dedicated especially to his followers 'about Redding and Henly upon Thames;' paging runs on from no. 1). 3. 'The Exaltation of all things in Christ and Christ in all things,' &c., 1649, 4to (dated 18 Sept.; paging runs on from no. 2); 2nd ed. (really the 3rd), undated, 4to, with preface by Cornelius Cayley (dated London, 3 Oct. 1763). 4. 'Divine Teachings: in three parts,' &c., 1649, 4to (consists of the above three tracts bound together with general title); reprinted with title 'The Glorious Majestie of Divine Teachings, &c.,' 1653, 4to. 5. 'Man's Righteousnesse examined,' &c., 1652, 4to (partly an exposition of 2 Pet. ii.) 6. 'Saul smitten for not smiting Amalek,' &c., 1653, 4to, reprinted without date [1763 ?], 12mo. 7. 'A Man-Child born, or, God manifest in Flesh,' &c., 1654, 4to (published 25 June; consists of a sermon preached at St. Giles's, Cripplegate, 25 Dec. 1653). 8. 'Truth's Testimony,' &c., 1655 (published 3 March); reprinted without date [1763 ?], 12mo (contains an account of the author's life and trials up to date). 9. 'A Blow at the Serpent,' &c., 1656, 4to; reprinted 1764, 4to (preface dated 12 Feb.; account of the Rochester discussion; prefixed are verses by J. L., i.e. Jane Leade. Replies were published by Rosewell, 'The Serpent's Subtilty,' &c., 1656, 4to; and by Edward Garland, minister at Hartlip, Kent, 'An Answer to . . . a Blow at the Serpent,' &c., 1657, 4to). 10. 'The Three-

fold State of a Christian' [1656?], reprinted at end of 1764 of No. 9. 11. 'Michael opposing the Dragon,' &c., 1659, 4to; reprinted, in weekly numbers, 1763, 4to (reply to Garland).

COPPINGER, EDMUND (*d.* 1592), fanatic, is described as 'descended of a good house and linage, and one of her Maiestie's sworne servants, but a yonger brother, having no great livelihood' (COSIN, *Conspiracie for Pretended Reformation*, 1592). With a Yorkshire gentleman, Henry Arthington, he championed the claims of the notorious religious enthusiast, William Hacket, who had a wild scheme for abolishing bishops and deposing Queen Elizabeth. Hacket proclaimed himself to be the Messiah, and Coppinger joined Arthington in holding a demonstration (in Cheapside) to support the impostor's claim. The three men were thrown into prison. Hacket was hanged on 28 July 1592; Coppinger died eight days afterwards from voluntary starvation; Arthington repented of his errors and was pardoned. The affair caused considerable excitement.

[Cosin's Pretended Reformation, 1592; Stow's Annales, ed. Howes, 1615, pp. 760–1; Fuller's Church History, book ix.] A. H. B.

COPPOCK, JAMES (1798–1857), electioneering agent, born at Stockport on 2 Sept. 1798, was the eldest son of William Coppock, mercer, of that town. He was educated at the school of the Rev. Mr. Higginson, unitarian minister of Stockport, and, after serving an apprenticeship to his father's business, was placed as a clerk with a wholesale haberdasher in London. He afterwards ventured a small capital as a partner in a silk firm, but, owing to commercial disasters following on the French revolution of 1830, he lost all. He married in 1829. After careful consideration he resolved to enter the legal profession, and in 1832 articled himself to a solicitor in Furnival's Inn. He was admitted on the roll of attorneys in 1836. He had always been an active politician, and on the occurrence of the first election for Finsbury after the Reform Act of 1832 he took a prominent part in the contest. After the second general election under the act, on the formation of a county registration society by the liberal party, with branches throughout England, Coppock was appointed secretary, with a residence in the society's rooms at 3 Cleveland Row, St. James's. These rooms were the rendezvous of agents and solicitors from all parts of the country, and from his rapid decision and sound judgment Coppock quickly became a power in politics. When, a few years later, the society's operations ceased, he took the lease of the premises in Cleveland Row, and established himself as a solicitor and parliamentary agent. From this time forward there was scarcely a contested return before the House of Commons in which he had not an active interest. The coolness and daring with which he fought his opponents with their own weapons have become proverbial. He helped to establish the London Reform Club, and was elected an honorary life member and appointed solicitor. Although in his day no man was a fiercer partisan, Coppock was respected by friend and foe. In the August before his death he received the appointment of county court treasurer, but business, both private and public, of a harassing nature accumulated, and the strain of overwork was too great. He died at his house in Cleveland Row on 19 Dec. 1857. Well-executed and excellent portraits of Mr. and Mrs. Coppock (lithographs) were published in London in 1850.

COPPOCK or **CAPPOCH, THOMAS** (1719–1746), Jacobite, a native of Manchester, was educated in the free school there and at Brasenose College, Oxford (B.A. 15 Oct. 1742). Afterwards he took holy orders. He joined the army of Prince Charles Edward at Manchester, and was one of those left behind at Carlisle. Having been tried and condemned for high treason, he was drawn, hanged, and quartered at Carlisle on 18 Oct. 1746. An absurd report was circulated that the Pretender had nominated this young clergyman to the see of Carlisle, and one of the witnesses at the trial, improving the story, stated that Coppock received that appointment from Hamilton, the governor of the town for the prince. In contemporary journals Coppock is seriously spoken of as 'the titular bishop of Carlisle.' It has been said that Coppock led a very irregular and immoral life; but no reliance can be placed on these statements. They emanated from his political enemies, and are to be found in the following pamphlets: 'An Authentic History of the Life and Character of Thomas Cappoch, the rebel-bishop of Carlisle,' London, 1746, 8vo, reprinted in the 'Carlisle Tracts,' 1839; 'The Genuine Dying Speech of the Rev. Parson Coppock, pretended Bishop of Carlisle,' Carlisle [1746], 8vo. This pretended speech is an obvious fabrication. What is probably a correct version of Coppock's last words is given in 'True Copies of the Dying Declarations of Arthur, lord Balmerino,

Thomas Syddall,' and others, Edinburgh, 1750, 8vo.

COPSI, COPSIGE, or COXO, Earl of Northumberland (*d.* 1067), a thegn noted for his wisdom in council, administered the government of Northumberland under Tostig, the earl, at the time of the Northumbrian revolt of 1065. He lost office at the deposition of his master, and may have shared his banishment, for he is said to have taken part in Tostig's expedition against England in the spring of 1066. After the coronation of William the Conqueror, Copsi, like the other northern lords, made his submission to the new king at Barking. When William was about to visit Normandy, he granted Copsi the earldom of Bernicia, or Northumberland north of the Tyne. This grant involved the deposition of Oswulf, the descendant of the ancient earls. By thus appointing a native as his lieutenant, William hoped to gain the obedience of the yet unconquered north, while Copsi probably looked on his appointment by the Norman king simply as a means of self-aggrandisement. Having gathered an army, he marched northwards and dispossessed Oswulf, who was forced to betake himself to the forests and mountains. Before long, however, the banished earl formed a band of men, like himself of broken fortunes, and came upon Copsi unawares while he was feasting at Newburn on 12 March 1067. The earl fled for refuge to the nearest church. Oswulf's men set the church on fire, and so forced Copsi to come forth. When he came to the door, Oswulf cut off his head. The Normans, who called him 'Coxo,' made a hero of him, and William of Poictiers speaks in warm terms of the nobility of his birth and of his fidelity to the king, declaring that his men pressed him to side with his own people against the Conqueror, and that his death was the consequence of his faithfulness. He gave several gifts of land to the church of Durham, and a silver cup, which was there in the time of the writer of the Durham history.

[Symeon's Hist. de Dunelm. Eccl. 37, Historia regum, 204 (Twysden); William of Poictiers, 148, 158 (Giles); Orderic, 506 (Duchesne); Gaimar, 5164 (Mon. Hist. Brit.); Dugdale's Monasticon, i. 235; Freeman's Norman Conquest, ii. 484, iv. 21, 76, 107, 741–4.] W. H.

CORAM, THOMAS (1668?–1751), philanthropist, was born at Lyme Regis, Dorsetshire, in 1667 or 1668. His father is supposed to have been captain of a ship. In 1694 he was settled at Taunton, Massachusetts. By a deed dated 8 Dec. 1708 he gave fifty-nine acres of land at Taunton to be used for a schoolhouse, whenever the people should desire the establishment of the church of England. In the deed he is described as 'of Boston, sometimes residing in Taunton,' and he seems to have been a shipwright. He gave some books to the library at Taunton, one of which, a Book of Common Prayer, given to him by Speaker Onslow, is (or was in 1844) preserved in St. Thomas's Church, Taunton. In 1704 Coram helped to obtain an act of parliament giving a bounty on the importation of tar from the colonies. In 1719 he was stranded off Cuxhaven, when sailing for Hamburg in the Sea Flower, and the ship was plundered by the neighbouring inhabitants. He then settled in London, where he carried on business for some time. He became known for his public spirit. Old Horace Walpole (afterwards Lord Walpole) called him (18 April 1735) 'the honestest, most disinterested, most knowing person about the plantations he had ever talked with' (Cox, *Walpole*, iii. 243). He obtained an act of parliament taking off the prohibition upon deal from Germany and the Netherlands. In 1732 he was appointed one of the trustees for Georgia, then founded through Oglethorpe's exertions. In 1735 he brought forward a scheme for settling unemployed English artisans in Nova Scotia. The plan was approved by the board of trade, and after being dropped for a time was carried out before Coram's death. Brocklesby also states that on some occasion he obtained a change in the colonial regulations in the interest of English hatters, and refused to take any reward from his clients except a hat. Meanwhile he had become interested in another object. Going into the city upon business he had been frequently shocked by the sight of infants exposed in the streets, often in a dying state. He began to agitate for the foundation of a foundling hospital. He laboured for seventeen years, and induced many ladies of rank to sign a memorial (given in 'Account of Foundling Hospital,' 1826). A charter was at last obtained, considerable sums subscribed, and the first meeting of the guardians was held at Somerset House 20 Nov. 1739. At a later court a vote of thanks was presented to Coram, who requested that thanks should also be given to the ladies interested. Some houses were first taken in Hatton Garden, where children were first admitted in 1741. A piece of land was bought for 7,000*l.* Lord Salisbury, the owner, insisted that the whole of his ground 'as far as Gray's Inn Lane' should be taken; but he subscribed 500*l.* himself. The foundation was laid 16 Sept. 1742. The west wing was finished, and the

children removed from Hatton Garden in October 1745. Great interest was excited in the undertaking, especially by Hogarth, who in May 1740 presented his fine portrait of Coram to the hospital. Hogarth also presented a picture of Moses with Pharaoh's daughter, and gave tickets in the lottery for the 'March to Finchley,' one of which won the prize. He also introduced a portrait of Coram into an engraved power of attorney for receiving subscriptions to the hospital. Handel gave performances at the hospital in 1749 and 1750. Coram continued to be interested in the hospital. In his later years he advocated a scheme for the education of Indian girls in America. After the loss of his wife he neglected his private affairs, and fell into difficulties. A subscription was raised for him. He told Brocklesby that as he had never wasted his money in self-indulgence, he was not ashamed to confess that he was poor (HAWKINS, *Johnson*, p. 573). On 20 March 1749 an annuity of 161*l.* was assigned to him, the Prince of Wales subscribing 21*l.* annually, and, it is added, paying as regularly as the merchants who were the principal contributors. The pension was transferred on Coram's death to Leveridge, a worn-out singer. Coram died 29 March 1751, aged 83, and was buried 3 April following in the chapel of the Foundling Hospital. An inscription is placed there, and a statue of him by W. Calder Marshall was erected in front of the building a hundred years afterwards. Brocklesby describes him as a rather hot-tempered, downright sailorlike man, of unmistakable honesty and sterling goodness of heart. His portraits by Hogarth and by R. Nebot have been engraved.

[Memoranda, or Chronicles of the Foundling Hospital (1847), and History of the Foundling Hospital (1858), by John Brownlow, where Brocklesby's account of Coram and other documents are given; History of St. Thomas's Church, Taunton, Mass., by N. T. Brent, rector; Accounts of the Foundling Hospital (1798 and 1826); London Mag. viii. 627, xx. 188; Gent. Mag. xii. 497, xix. 235, xxi. 141; Hutchins's Dorsetshire, i. 409.]

CORBAUX, MARIE FRANÇOISE CATHERINE DOETTER (1812–1883), painter and biblical critic, usually called FANNY CORBAUX, was daughter of an Englishman who lived much abroad, and was well known as a statistician and mathematician. When she was very young her father was reduced from affluence to poverty, and she was obliged to turn her talents for painting to account. Having studied at the National Gallery and the British Institution, she received in 1827 the large silver medal of the Society of Arts for an original portrait in miniature, the silver Isis medal for a copy of figures in water-colours, and the silver palette for a copy of an engraving. In 1828 an original composition of figures in water-colours again obtained the silver Isis medal, and a portrait in miniature, exhibited in 1830, won the gold medal. In the latter year she was elected an honorary member of the Society of British Artists, and for a few years she exhibited small oil pictures at its gallery. Subsequently she joined the New Society of Painters in Water Colours, and became a regular contributor to its annual exhibitions. She designed the illustrations for Moore's 'Pearls of the East,' 1837, and for 'Cousin Natalia's Tales,' 1841. As a biblical critic she gained some reputation by her communications to periodicals and literary societies on subjects relating to scripture history. Among these were 'Letters on the Physical Geography of the Exodus,' published in the 'Athenæum.' Another series, giving the history of a remarkable nation, called 'the Rephaim' in the Bible, and showing their connection with the political and monumental history of Egypt and that of the Exodus, appeared in the 'Journal of Sacred Literature.' She likewise wrote an historical and chronological introduction to 'The Exodus Papyri,' by D. I. Heath, 1855. In 1871 she received a civil list pension of 50*l.* She died at Brighton, after many years of suffering, on 1 Feb. 1883.

[Men of the Time (1879), p. 268; Vapereau's Dict. des Contemporains (1880), p. 468; Athenæum, 10 Feb. 1883, p. 192; Cat. of Printed Books in Brit. Mus.] T. C.

CORBEIL, CURBUIL or CORBEUIL, WILLIAM OF (*d.* 1136), archbishop of Canterbury, was doubtless born at the little town of Corbeil, on the Seine, halfway between Paris and Melun, unless indeed the unimportant village, Corbeil-le-Cerf, some distance south of Beauvais, has a better claim to this distinction. He studied at Laon under the famous Anselm of Laon, where he dwelt in the house of the bishop and acted as tutor to the sons of 'Ranulf, chancellor of the king of the English' (*Liber de Miraculis S. Mariæ Laudunensis*, ii. c. 6, in MIGNE, vol. clvi.) A Ranulf was chancellor from 1107 to 1123; but a plausible attempt has been made to identify the father of William's pupils with Ranulf Flambard, the notorious bishop of Durham, and minister of William Rufus, one of whose clerks William undoubtedly was (*English Historical Review*, No. 5, pp. 103–12). In that capacity he was present in 1104 at the great ceremonies which attended the dedication of the new cathedral and the translation of the relics of St. Cuthberht to a wor-

thier shrine within it, and was one of those who with Alexander, brother of Eadgar, king of Scots, were commissioned to visit the relics to ascertain their genuineness (SYMEON DUNELM. i. 258, cf. ii. 269, Rolls Ser.) It is curious that the clerk of Flambard should also be described as a special friend of Anselm. This may possibly point to some change in William's character, which ultimately led him, 'gratia meliorandæ vitæ,' as Symeon says, to renounce the world for the quasi-monastic position of a canon regular of the order of St. Augustine. This rule had recently been introduced into England, and found a special patron in Richard of Belmeis [q. v.], bishop of London, one of the most important of Henry I's ministers. Belmeis founded a house of Austin canons at St. Osyth or Chich in Essex, and made William its first prior.

On 19 Sept. 1122 Archbishop Ralph died. After an interval of nearly five months Henry I held a great gathering of magnates at Gloucester to deliberate as to the appointment of his successor (2 Feb. 1123). Besides a large number of bishops, earls, and knights, the prior and some of the monks of Christ Church were in attendance. The latter declared that they had resolved to elect a monk of their own body, and requested the king to mention which of them would please him best. The bishops, however, who were nearly all seculars, urged the king to appoint a clerk. The secular magnates, the earls and knights, sided with the monks, who for two days withstood the pressure of the bishops. But the will of Bishop Roger of Salisbury was all-powerful with Henry, and ultimately led him to adopt the policy of the bishops. At last four clerks were selected, and it was agreed that whomsoever of the four the chapter should select should be appointed archbishop by the king. One of the four was William, and on him the final choice of the monks fell, as an Augustinian canon was the nearest approach to a monk which circumstances allowed them to select. They had, however, great misgivings, because only three seculars had previously been appointed successors of St. Augustine; and, though a monkish writer admitted that he afterwards did nothing they ought to be sorry for, the relations between William and his monastic chapter were never very cordial (SYM. DUNELM. ii. 269; *Chron. Sax.* s. a. 1123; WILL. MALM. *Gesta Pontif.* p. 146; ORDERICUS, bk. xii. c. 16, in MIGNE, *Patrologia*, clxxxviii. 896; HEN. HUNT. p. 245; HOVEDEN, i. 180).

Henry's ratification of the compulsory choice of the monks completed the preliminaries, but a new difficulty arose over William's consecration. Thurstan of York, who had recently succeeded in vindicating the independence of the northern archbishopric, offered to perform that ceremony. But William refused, except on the impossible condition that Thurstan would acknowledge him as primate of all England. Finally William was consecrated at Canterbury by his own suffragans on 18 Feb. Gervase says that he was consecrated by Richard of Belmeis, William Giffard of Winchester and other bishops assisting; but the continuator of Florence of Worcester says that the Bishop of Winchester consecrated him, while another authority asserts that the Bishop of London was already suffering from paralysis.

The disputes of the rival primates still continued. William at once proceeded to Rome to obtain the pallium, and Thurstan, fearing lest his enemy should obtain some advantage over him in the papal curia, started off on the same destination, on the pretext of a summons to a council then being held at Rome. King Henry, who seems to have done his best to support William, sent a strong embassy, including the Bishop of St. David's and several clerks, to Rome to help him. But Thurstan managed to get there first and to prejudice the curia against William to such an extent that on his arrival he found great difficulties in attaining the object of his mission. It was objected that he had been elected uncanonically in the royal court, 'in curia quæ a cruore dicitur, ubi sanguinum judicia fiunt,' that the chapter had not consented to his election, that the choice of a clerk was contrary to the orders of St. Augustine, and that he had not been consecrated by his brother archbishop. In addition the old question of the relations of York and Canterbury seems to have been revived. For seven days he was unable to obtain an interview with the pope, and Calixtus II in his previous patronage of Thurstan had already manifested his hostility to Canterbury (GERVASE, i. 72). At last the strenuous intercession of King Henry and of his son-in-law, the Emperor Henry V, just released from excommunication, had its effects on Calixtus. Moreover, 'they overcame Rome by what overcomes all the world, gold and silver' (*Chron. Sax.* s. a. 1123). In a public audience William bitterly complained of Thurstan's persistent hostility and derogation of the rights of the see of Canterbury. Thurstan's unsatisfactory answer and inability to produce the documents on which he relied for the support of the liberties of his church induced the pope to confer the pallium on William, but he postponed making any decision as to the claims of the rival churches. Both prelates returned

children removed from Hatton Garden in October 1745. Great interest was excited in the undertaking, especially by Hogarth, who in May 1740 presented his fine portrait of Coram to the hospital. Hogarth also presented a picture of Moses with Pharaoh's daughter, and gave tickets in the lottery for the 'March to Finchley,' one of which won the prize. He also introduced a portrait of Coram into an engraved power of attorney for receiving subscriptions to the hospital. Handel gave performances at the hospital in 1749 and 1750. Coram continued to be interested in the hospital. In his later years he advocated a scheme for the education of Indian girls in America. After the loss of his wife he neglected his private affairs, and fell into difficulties. A subscription was raised for him. He told Brocklesby that as he had never wasted his money in self-indulgence, he was not ashamed to confess that he was poor (Hawkins, *Johnson*, p. 573). On 20 March 1749 an annuity of 161*l.* was assigned to him, the Prince of Wales subscribing 21*l.* annually, and, it is added, paying as regularly as the merchants who were the principal contributors. The pension was transferred on Coram's death to Leveridge, a worn-out singer. Coram died 29 March 1751, aged 83, and was buried 3 April following in the chapel of the Foundling Hospital. An inscription is placed there, and a statue of him by W. Calder Marshall was erected in front of the building a hundred years afterwards. As a biblical critic she gained some reputation by her communications to periodicals and literary societies on subjects relating to scripture history. Among these were 'Letters on the Physical Geography of the Exodus,' published in the 'Athenæum.' Another series, giving the history of a remarkable nation, called 'the Rephaim' in the Bible, and showing their connection with the political and monumental history of Egypt and that of the Exodus, appeared in the 'Journal of Sacred Literature.' She likewise wrote an historical and chronological introduction to 'The Exodus Papyri,' by D. I. Heath, 1855. In 1871 she received a civil list pension of 50*l.* She died at Brighton, after many years of suffering, on 1 Feb. 1883.

[Men of the Time (1879), p. 268; Vapereau's Dict. des Contemporains (1880), p. 468; Athenæum, 10 Feb. 1883, p. 192; Cat. of Printed Books in Brit. Mus.] T. C.

CORBEIL, CURBUIL or CORBEUIL, WILLIAM OF (*d.* 1136), archbishop of Canterbury, was doubtless born at the little town of Corbeil, on the Seine, halfway between Paris and Melun, unless indeed the unimportant village, Corbeil-le-Cerf, some distance south of Beauvais, has a better claim to this distinction. He studied at Laon under the famous Anselm of Laon, where he dwelt in the house of the bishop and acted as tutor to the sons of 'Ranulf, chancellor of the king of the English' (*Liber de Miraculis S. Mariæ Laudunensis*, ii. c. 6, in Migne, vol. clvi.) A Ranulf was chancellor from 1107 to 1123; but a plausible attempt has been made to identify the father of William's pupils with Ranulf Flambard, the notorious bishop of Durham, and minister of William Rufus, one of whose clerks William undoubtedly was (*English Historical Review*, No. 5, pp. 103–12). In that capacity he was present in 1104 at the great ceremonies which attended the dedication of the new cathedral and the translation of the relics of St. Cuthberht to a wor-

thier shrine within it, and was one of those who with Alexander, brother of Eadgar, king of Scots, were commissioned to visit the relics to ascertain their genuineness (Symeon Dunelm. i. 258, cf. ii. 269, Rolls Ser.) It is curious that the clerk of Flambard should also be described as a special friend of Anselm. This may possibly point to some change in William's character, which ultimately led him, 'gratia meliorandæ vitæ,' as Symeon says, to renounce the world for the quasi-monastic position of a canon regular of the order of St. Augustine. This rule had recently been introduced into England, and found a special patron in Richard of Belmeis [q. v.], bishop of London, one of the most important of Henry I's ministers. Belmeis founded a house of Austin canons at St. Osyth or Chich in Essex, and made William its first prior.

On 19 Sept. 1122 Archbishop Ralph died. After an interval of nearly five months Henry I held a great gathering of magnates at Gloucester to deliberate as to the appointment of his successor (2 Feb. 1123). Besides a large number of bishops, earls, and knights, the prior and some of the monks of Christ Church were in attendance. The latter declared that they had resolved to elect a monk of their own body, and requested the king to mention which of them would please him best. The bishops, however, who were nearly all seculars, urged the king to appoint a clerk. The secular magnates, the earls and knights, sided with the monks, who for two days withstood the pressure of the bishops. But the will of Bishop Roger of Salisbury was all-powerful with Henry, and ultimately led him to adopt the policy of the bishops. At last four clerks were selected, and it was agreed that whomsoever of the four the chapter should select should be appointed archbishop by the king. One of the four was William, and on him the final choice of the monks fell, as an Augustinian canon was the nearest approach to a monk which circumstances allowed them to select. They had, however, great misgivings, because only three seculars had previously been appointed successors of St. Augustine; and, though a monkish writer admitted that he afterwards did nothing they ought to be sorry for, the relations between William and his monastic chapter were never very cordial (Sym. Dunelm. ii. 269; *Chron. Sax.* s. a. 1123; Will. Malm. *Gesta Pontif.* p. 146; Ordericus, bk. xii. c. 16, in Migne, *Patrologia*, clxxxviii. 896; Hen. Hunt. p. 245; Hoveden, i. 180).

Henry's ratification of the compulsory choice of the monks completed the preliminaries, but a new difficulty arose over William's consecration. Thurstan of York, who had recently succeeded in vindicating the independence of the northern archbishopric, offered to perform that ceremony. But William refused, except on the impossible condition that Thurstan would acknowledge him as primate of all England. Finally William was consecrated at Canterbury by his own suffragans on 18 Feb. Gervase says that he was consecrated by Richard of Belmeis, William Giffard of Winchester and other bishops assisting; but the continuator of Florence of Worcester says that the Bishop of Winchester consecrated him, while another authority asserts that the Bishop of London was already suffering from paralysis.

The disputes of the rival primates still continued. William at once proceeded to Rome to obtain the pallium, and Thurstan, fearing lest his enemy should obtain some advantage over him in the papal curia, started off on the same destination, on the pretext of a summons to a council then being held at Rome. King Henry, who seems to have done his best to support William, sent a strong embassy, including the Bishop of St. David's and several clerks, to Rome to help him. But Thurstan managed to get there first and to prejudice the curia against William to such an extent that on his arrival he found great difficulties in attaining the object of his mission. It was objected that he had been elected uncanonically in the royal court, 'in curia quæ a cruore dicitur, ubi sanguinum judicia fiunt,' that the chapter had not consented to his election, that the choice of a clerk was contrary to the orders of St. Augustine, and that he had not been consecrated by his brother archbishop. In addition the old question of the relations of York and Canterbury seems to have been revived. For seven days he was unable to obtain an interview with the pope, and Calixtus II in his previous patronage of Thurstan had already manifested his hostility to Canterbury (Gervase, i. 72). At last the strenuous intercession of King Henry and of his son-in-law, the Emperor Henry V, just released from excommunication, had its effects on Calixtus. Moreover, 'they overcame Rome by what overcomes all the world, gold and silver' (*Chron. Sax.* s. a. 1123). In a public audience William bitterly complained of Thurstan's persistent hostility and derogation of the rights of the see of Canterbury. Thurstan's unsatisfactory answer and inability to produce the documents on which he relied for the support of the liberties of his church induced the pope to confer the pallium on William, but he postponed making any decision as to the claims of the rival churches. Both prelates returned

home. A papal legate, the Cardinal John of Crema, was sent to England to settle the question on the spot (SYM. DUNELM. ii. 269, 273). On his way back to England William visited the king in Normandy (FLOR. WIG. cont. ii. 78). On his arrival he was enthroned at Canterbury, and consecrated Bishops Alexander of Lincoln and Godfrey of Bath.

The legation of John of Crema (1125) excited great indignation in England, as attacking the rights of Canterbury and the English church. Received with great pomp by both William and Thurstan, John on Easter day usurped William's function by officiating at high mass in Canterbury Cathedral. The spiteful monks regarded this indignity as a retribution for the election of a clerk as archbishop. In the legatine council held on 9 Sept. in Westminster Abbey the cardinal took precedence over both archbishops, though in the writs of summons William claims that the council was celebrated with his assent (WILKINS, i. 408). The canons passed were mainly directed against the married clergy (GERVASE, ii. 279–81, gives them at length); but nothing effectual was settled with regard to Thurstan and William. In consequence probably of this, both archbishops again started for Italy on the conclusion of the council, Thurstan accompanying the legate, and William being summoned by his rival, though his indignation at the proceedings of the legate and a desire to prevent the continuance of such missions also contributed to take him there. He was, however, well received by the new pope, Honorius II, and won an important victory by obtaining for himself the appointment as papal legate in England and Scotland, while Thurstan had to return empty-handed. This was the most important act of William's archbishopric. It secured him personally an immediate precedence over the northern primate, though at the expense of some diminution of the independence of his own see. It saved England for a time from the unwelcome presence of an Italian legate. It became the precedent for the later custom of making the archbishop of Canterbury the 'legatus natus' of the Roman see. The supreme jurisdiction of the pope was thus admitted, though in English hands it assumed its least offensive form (STUBBS, *Const. Hist.* iii. 229; the bull, dated 25 Jan. 1126, is in WILKINS's *Concilia*, i. 409).

Even now, however, William's difficulties with Thurstan were not at an end. Soon after his return Thurstan rushed into a new quarrel because his rival alone was suffered to impose the crown on the king's head at the Christmas court at Windsor. Again, William refused to allow Thurstan to bear his primatial cross erect before him within the southern province, and turned his cross-bearer out of the royal chapel. At a council held by him at Westminster in 1127, as archbishop and legate, Thurstan refused to attend. At the council of 1129, however, Thurstan got over his scruples, and on one occasion went so far as to ask for William's advice. After the secession of several monks from the abbey of St. Mary's, York, to which the establishment of the great Cistercian house of Fountains was ultimately due, Thurstan wrote a long and temperate letter to William, as legate, dwelling on the advantages of intercommunication between the chief rulers of the church and asking him to join in protecting the stricter monks and to co-operate with him in restoring order in the divided monastery (WALBRAN, *Memorials of Fountains*, pref. xxx–xxxii. Surtees Society, and pp. 11–29, where the letter is printed in full). It is unknown whether William interfered or not. If he did, his good offices were of no avail.

With King Henry William seems to have generally remained on fair terms. In 1126 he was the first to take the oaths to observe the succession of Matilda. At Michaelmas 1129 he, with the king's permission, held a council at London to deal with the chronic difficulty of the married clerks. It was agreed by the bishops that the offenders were all to put away their wives by St. Andrew's day or give up their benefices. But the king took advantage of the simplicity of the archbishop and allowed all who paid him a sufficient fine to keep their wives; at which the bishops were both sorry and angry (HEN. HUNT. p. 251; *Chron. Sax.* s. a. 1129).

William of Corbeil was, like his early patrons Flambard and Belmeis, a great builder. He received a gift from the king of the church and castle of Rochester, a see always intimately connected with the archbishopric, and to which William had appointed his archdeacon John as bishop. There he continued Gundulf's great works by constructing the lofty and massive keep of the castle which is still standing (GERVASE, ii. 381; cf. HASTED, *Kent*, iv. 695, from *Regist. Priorat. Christi Cant.* and G. T. CLARK, *Mediæval Military Architecture*, ii. 421). He also took an active interest in the rebuilding of the cathedral of St. Andrew in that city, and attended its dedication, 5 May 1130. His benefactions to the chapter were also numerous (THORPE, *Registrum Roffense*). Immediately before that he had celebrated, with a magnificence that contemporaries could only parallel by the opening of Solomon's Temple,

the dedication of the magnificent new cathedral at Canterbury which Lanfranc had begun, Anselm continued, and to which William himself had contributed largely (4 May 1130). The kings of England and Scotland and a whole crowd of bishops, earls, and barons were present. Henry signalised the event by giving the collegiate church of St. Martin's, Dover, to the church of Canterbury. He resolved to refound St. Martin's, to turn out the secular canons, whose corrupt life was, according to the monks, but typical of their class, and put in their place Augustinian canons from Merton, for whose greater protection from the distractions of town life he transferred the college from the old church within Dover town to a new and sumptuous structure in the neighbouring country, built with Caen stone. But the monks of Christchurch at once claimed that the church was theirs and not the archbishop's. Though the prior supported the archbishop, a bolder champion of their rights was found in a monk named Jeremias, who prevented the bishops of St. David's and Rochester from introducing the Merton canons, and appealed to Rome on behalf of the rights of Christchurch. The archbishop's death was accelerated by his hurrying from his sick bed at his manor house of Mortlake to support by his presence the unlucky canons. Advantage was taken of his death to secure St. Martin's for Benedictine monks as a cell of Christchurch (Gervase, i. 96, ii. 383; Dugdale, *Monasticon*, iv. 528, 544).

Another quarrel broke out between William and Hugh, abbot of St. Augustine's, Canterbury (Gervase, Thorn in Twysden, *Scriptores Decem*, p. 1798). His restoration of the abandoned nunnery at Minster in Sheppey proved more fortunate than his attempt at Dover (Dugdale, *Monasticon*, ii. 50, from charter of Henry IV to Minster; cf. Leland, *Collectanea*, i. 89).

In 1134 William became involved in a quarrel with Bishop Alexander of Lincoln, which drove both prelates to Normandy to lay their grievances before King Henry. Next year, when Henry died, William, after some hesitation, consented to the election of Stephen. His weak plea for delay and circumspection and his insistence on the oaths he had sworn to maintain the succession of Matilda were overborne by the improbable assertion of one of Stephen's partisans that Henry on his deathbed had released them from their oaths. On 22 Dec. 1135 he crowned Stephen at Westminster, doubtless consoling himself for his perjury by the full promises of increased liberties for the church which Stephen had offered in his charters (Will. Malm. *Hist. Novella*, lib. i. cap. 11). But lovers of portents noticed that in his flurry the archbishop forgot the kiss of peace, and that the consecrated host slipped from his trembling hands (Gervase, ii. 383). He officiated at the burial of Henry I at Reading. But before long he removed from court disgusted, because at the Easter feast of 1136 Henry, earl of Huntingdon, the son of David, king of Scots, was placed by the new king in the most honourable position on his right hand. William's health, however, was now breaking up. His journey from Mortlake hastened his end. He died at Canterbury on 21 Nov. 1136, and was buried in his cathedral. The partisans of the Angevins rejoiced that within a year of his perjury he had lost his life (Hen. Hunt. p. 256).

William of Corbeil seems to have been a weak man, easily moulded by his surroundings, and without very decided character. Good luck rather than wit won him his exalted station. His panegyrists can only say that he was a man of modest life and of good education (Symeon, ii. 269), and that he was very religious, rather affable, and neither inert nor imprudent (Will. Malm. *Gesta Pontif.* p. 146). Henry of Huntingdon, however, roundly declares that his glories could not be celebrated, for they did not exist (*De Contemptu Mundi*, in Rolls edition, p. 314). The author of the 'Gesta Stephani' (p. 6) goes still further in denouncing him as a hypocrite, whose meekness and piety were but cloaks to an avarice which massed up treasures that it would have been better to distribute in alms.

[Gervase of Canterbury, Henry of Huntingdon, Anglo-Saxon Chronicle, Symeon of Durham, all in Rolls Ser.; William of Malmesbury's Gesta Pontificum (Rolls Ser.) and Historia Novella (Eng. Hist. Soc.); Gesta Stephani and the Continuator of Florence of Worcester, both in Eng. Hist. Soc.; T. Stubbs's Act. Pont. Ebor. in Twysden's Scriptores Decem. The modern life in Hook's Archbishops of Canterbury, vol. ii. ch. v., is fairly accurate though carelessly incomplete; Canon Raine's Life of Thurstan in Fasti Eboracenses, especially pp. 193–7, gives from the northern authorities a very different account of the relations of the two archbishops from that generally accepted in the south, or even at Durham.]

T. F. T.

CORBET, CLEMENT (*d.* 1652), civilian, was the sixth son of Sir Miles Corbet of Sprowston, Norfolk, who was high sheriff of that county in 1591, by Katherine, daughter of Sir Christopher Heydon (*Visitation of Norfolk in* 1563, ed. Dashwood, i. 35). He was admitted a scholar of Trinity Hall, Cambridge, on 7 Dec. 1592, took the degree of

LL.B. in 1598, was elected a fellow of his college on 10 Dec. the same year, and was created LL.D. in 1605. In May 1607 he was chosen professor of law at Gresham College, London, and he occupied that chair till November 1613 (WARD, *Lives of the Gresham Professors, with the Author's MS. Notes*, p. 238). On the death of Dr. John Cowell he was elected to succeed him in the mastership of Trinity Hall, Cambridge, 12 Oct. 1611, being at that time chancellor of the diocese of Chichester (LE NEVE, *Fasti*, ed. Hardy, iii. 679). On 9 May 1612 he was admitted a member of the College of Advocates at Doctors' Commons (COOTE, *English Civilians*, p. 71). He was vice-chancellor of Cambridge in 1613–14 (*Addit. MS.* 5866, f. 34). In 1625 he was appointed vicar-general and principal official to the bishop of Norwich, and the following year he resigned the mastership of Trinity Hall (LE NEVE, *Fasti*, ii. 496). He died on 28 May 1652, and was buried in the chancel of Belaugh church, Norfolk, where a monument, with a Latin inscription, was erected to his memory (LE NEVE, *Monumenta Anglicana*, Suppl. p. 10, No. 21; BLOMEFIELD, *Norfolk*, ed. 1808, viii. 189). By his wife Elizabeth Kemp, he had one son, Samuel, and five daughters. The portrait of him which is preserved in the master's lodge at Trinity Hall was bequeathed to that society by Thomas Baker the antiquary (*Addit. MS.* 5807, ff. 110 *b*, 111).

[Authorities cited above.] T. C.

CORBET, EDWARD (*d.* 1658), divine, born at Pontesbury in Shropshire, 'of the ancient family of the Corbets in that county,' was educated at Shrewsbury and Merton College, Oxford, of which house he was admitted a probationer fellow in 1624. Meanwhile he had taken his B.A. degree on 4 Dec. 1622, and became proctor on 4 April 1638. At Merton he distinguished himself by his resistance to the attempted innovations of Laud, and subsequently gave evidence at the archbishop's trial. 'Being always puritannically affected,' he was chosen one of the assembly of divines, and a preacher before the Long parliament. In the latter capacity he published: 'God's Providence: a sermon [on 1 Cor. i. 27] preached before the Hon. House of Commons, at their late solemne fast, 28 Dec. 1642,' 4to, London, 1642 [O.S.] For this discourse he received the thanks of the house, and by an ordinance dated 17 May 1643 was instituted to the rectory of Chartham, Kent. He held this living until 1646, when he returned to Oxford as one of the seven ministers appointed by the parliament to preach the loyal scholars into obedience, which office he found little to his liking. He was also elected one of the visitors of the university, 'yet seldom or never sat among them.' On 20 Jan. 1647–8 he was installed public orator and canon of the second stall in Christ Church, in room of Dr. Henry Hammond, who had been ejected by the visitors, but being, as Wood observes, 'a person of conscience and honesty,' he resigned both places in the following August. The same year he proceeded D.D. on 12 April. At length in the beginning of 1649 he was presented, on the death of Dr. Thomas Soame, to the valuable rectory of Great Hasely, near Oxford. Corbet married Margaret, daughter of Sir Nathaniel Brent [q. v.], by whom he had three children, Edward, Martha, and Margaret. He died in London on 5 Jan. 1657–8, 'aged fifty-five years or thereabouts,' and was buried on the 14th in the chancel of Great Hasely near his wife, who had died in 1656. By his will he left 'to the publique Library of the uniuersitie of Oxford Bishop Robert Abbot's Comentaryes on the Romans in fower Volumes in manuscript,' besides gifts of books to Shrewsbury and Merton.

State Papers, Dom. 1638–9 pp. 46, 68, 1639–40 pp. 508–9, 1640–41 p. 325; History of the Troubles and Tryal of Archbp. Laud, cap. 19, p. 207; Prynne's Canterburies Doome, p. 71; Rushworth's Historical Collections (ed. 1659–1701), pt. iii. vol. ii. pp. 330, 338; Hasted's Kent (fol. ed.), iii. 156; Le Neve's Fasti (Hardy), ii. 520, iii. 493, 535; Wilkinson's Funeral Sermon on Mrs. Margaret Corbet, 1656; Will. reg. in P.C.C. 58, Wotton.] G. G.

CORBET, JOHN (1603–1641), minister of Bonhill, anti-presbyterian author, son of William Corbet, a 'portioner' of Glasgow, was born about 1603. He graduated at the university of Glasgow in 1623, and after acting for some time as schoolmaster at Renfrew was ordained minister of Bonhill in 1637. According to Robert Baillie (*Letters and Journals*, i. 189), 'upon some rashness of the presbytery of Dumbarton' he was put 'to some subjection of the assembly's declaration,' and 'not being willing to do so fled to Ireland.' This is in direct contradiction of the statement of Burnet (*Life of Bedell*, 140) that it was for writing a book called 'Lysimachus Nicanor' he was 'forced to flee his country.' The book, however, was published in 1640, while Corbet was already deposed by the assembly 16 April 1639. The full title is 'The Epistle Congratulatorie of Lysimachus Nicanor of the Societie of Jesu to the Covenanters in Scotland, wherein is pa-

ralleled our Sweet Harmony and Correspondence in Doctrine and Practice.' By Baillie (*Letters and Journals*, i. 243) it is erroneously ascribed to Bishop Lesley. It was answered by Baillie in his 'Ladensium Αὐτοκατάκρισις, the Canterbvrians self-conviction, &c., with a postscript to the personat Jesuite Lysimachus Nicanor,' Amsterdam, 1640; and a metrical answer to it, ascribed to Sir William Moore, was also published in the same year under the title 'A Covnter Bvff to Lysimachus Nicanor, calling himself a Jesuite.' Previous to the appearance of 'Lysimachus Nicanor,' Corbet had published at Dublin in 1639 'The Ungirding of the Scottish Armour, or an Answer to the Informations for Defensive Armes against the King's Majestie which were drawn up at Edinburg by the common help and industrie of the three Tables of the rigid Covenanters,' described by Baillie as 'one of the most venemous and bitter pamphlets against us all that could come from the hand of our most furious and enraged enemie.' Corbet had been recommended to Adair, archbishop of Killala, for a living in his gift, and, according to Baillie, the archbishop, playing upon his name Corbet, 'which means crow in Scotland,' declined to patronise him on the ground that 'it was an ill bird that defiles its own nest.' He, however, obtained the living of Killaban and Ballintubride in 1640, but during the rebellion of 1641 was 'hewn in pieces by two swineherds in the very arms of his poor wife.'

[Robert Baillie's Letters and Journals, i. 162, 189, 243; Ware's Hibernia, i. 652, ii. 340–1; Irving's Scottish Writers, ii. 65, 123; Hew Scott's Fasti Eccles. Scot. ii. 346.] T. F. H.

CORBET, Sir JOHN (1594–1662), patriot, was the eldest son of Richard Corbet, by his wife Anne, daughter of Thomas Bromley, lord chancellor of England, and grandson of Reginald Corbet [q. v.], one of the justices of the queen's bench in the reign of Elizabeth. He was baptised at Stoke-upon-Terne, Shropshire, on 20 May 1594 (parish register). He was created a baronet on 19 Sept. 1627 (*Patent Roll*, 3 Chas. I, pt. xxxvi. No. 2). Blakeway states that Corbet 'was one of those five illustrious patriots, worthy of the eternal gratitude of their country, who opposed the forced loan' in 1627. Though many of the country gentlemen were imprisoned for refusing to pay the loan, only five of them, viz. Sir John Corbet, Sir Thomas Darnel, Sir Walter Earl, Sir John Heveningham, and Sir Edmund Hampden, sued out their habeas corpus. The case was heard in Michaelmas term 1627, and judgment was given on 28 Nov., when the court unanimously refused to admit the five appellants to bail (Cobbett, *State Trials*, 1809, iii. 1–59). They therefore remained in custody until 29 Jan. following, when they were released by the order of the king in council. The date of Corbet's baronetage seems, however, to throw considerable doubt upon Blakeway's statement, as Corbet must have refused to pay the loan prior to September 1627, and it is hardly credible that he could have been created a baronet after his refusal. Probably his identity has been confused with Sir John Corbet of Sprowston, Norfolk, whose baronetage was of earlier date (see *Cal. State Papers*, Dom, 1627–8, p. 327; Forster, *Life of Eliot*, 1864, vol. ii. passim). In 1629 Corbet served the office of high sheriff of Shropshire. Having publicly stated at the quarter sessions for Shropshire that the muster-master wages were illegal and contrary to the petition of right, he was 'put out of the commission of the peace, attached, and brought before the council board, and was committed to the Fleet and there kept prisoner twenty-four weeks and three days, the plague being then in London' (*Hist. MSS. Comm.* 4th Rep. 99 *b*). On 10 June 1635 Corbet was again imprisoned in the Fleet on an information against him in the Star-chamber (*Cal. State Papers*, Dom. 1635, p. 238), and in October he petitioned the king for his release, stating that he had 'remained four months a prisoner, to the great affliction of his lady and his sixteen children, the eldest not above sixteen years of age' (*ib.* p. 455). In the following month he was released on giving a bond for 2,000*l.* for his appearance (*ib.* p. 507). In 1640 he was returned as one of the knights of the county of Shropshire, which he continued to represent throughout the Long parliament. The House of Commons by a resolution of 4 June 1641 declared that the imposition of 30*l.* per annum laid upon the subjects of the county of Shropshire for the muster-master's fee by the Earl of Bridgewater, lord-lieutenant of the county, was an illegal charge; that the attachment by which Corbet had been committed was an illegal warrant, and that he ought 'to have reparation for his unjust and vexatious imprisonment' (*House of Commons' Journals*, ii. 167).

On 30 Nov. 1641 he was chosen one of the twelve gentlemen who were deputed to present the petition and remonstrance to the king (*ib.* 327). In June 1645 his name appears in the list of those whom the committee appointed to consider the necessities of the members thought proper recipients of a 'weekly allowance of four pounds per week for their present maintenance' (*ib.* iv. 161). Corbet died in July 1662, in the sixty-eighth

year of his age, and was buried in the parish church at Market Drayton. He married Anne, daughter of Sir George Mainwaring, knt., of Ightfield, Shropshire, by whom he had ten sons and ten daughters. She was known as the 'good Lady Corbet,' and survived her husband twenty years, dying on 29 Oct. 1682. He was succeeded in the baronetcy by his eldest son John who, opposed to his father in politics, sided with the royalists. For this he had to compound by payment of 10,000*l.* He only outlived his father a few years, and was buried in Westminster Abbey, on 22 Feb. 1665. The baronetcy became extinct upon the death of Sir Henry Corbet, the seventh baronet, on 7 May 1750, when the family estates passed to his nephew, Corbet D'Avenant, who assumed the name of Corbet, and was created a baronet on 27 June 1786. Upon his death, on 31 March 1823, the second baronetcy also became extinct. A portrait of the first baronet by Sir Peter Lely is in the possession of Mr. H. Reginald Corbet of Adderley Hall.

[Blakeway's Sheriffs of Shropshire (1831), p. 111; Lloyd and Duke's Antiquities of Shropshire (1844), p. 147; Collectanea Topographica et Genealogica (1841), vii. 98, 372; Wotton's English Baronetage (1741), ii. 75; Burke's Extinct and Dormant Baronetage (1838), pp. 132–4; Chester's Westminster Abbey Registers (1875), pp. 33, 161, 369; Official Return of Lists of Members of Parliament, pt. i. p. 492.]

G. F. R. B.

CORBET, JOHN (1620–1680), puritan author, son of Roger Corbet, a shoemaker of Gloucester, was born in that city in 1620, and, having received his early education at the grammar school there, became a commoner of Magdalen Hall, Oxford, in 1636, where he proceeded B.A. 5 Jan. 1639 (Wood, *Fasti Oxon.* i. 507). Having taken orders, he was the next year appointed incumbent of St. Mary-de-Crypt, Gloucester, one of the city lecturers, and usher in the free school attached to his church. When Gloucester was garrisoned for the parliament, he was appointed chaplain to Colonel Edward Massey, the governor, and preached violently against the royal cause, saying that 'nothing had so much deceived the world as the name of a king, which was the ground of all mischief to the church of Christ.' His official connection and friendship with Massey gave him the opportunity of learning full particulars of military events, and his account of the civil war and of the siege of Gloucester up to June 1643, which is written without invective and in a simple style, is of the greatest value. At the close of the war he became a preacher at Bridgwater, Somerset (Wood), and afterwards removed to Chichester. He was next presented to the rectory of Bramshot, Hampshire, and while holding that living supplicated for the degree of B.D. on 14 May 1658; but whether he performed the necessary exercises or was admitted to the degree does not appear. In 1662 he was ejected from Bramshot for nonconformity, and retired to London, where he lived without preaching until the death of his first wife, of whom nothing is known (Baxter, *Works*, xviii. 185; Wood). He then lived, probably as chaplain, in the house of Sir John Micklethwaite, president of the College of Physicians, and after a while, desiring to be near Richard Baxter [q. v.], entered the household of Alderman Webb at Totteridge in Hertfordshire. About this time he married his second wife, a daughter of Dr. William Twiss, and took up his abode with Baxter, who says that they never once 'differed in any point of doctrine, worship, or government, ecclesiastical or civil, or ever had one displeasing word.' On the publication of the king's license in March 1671, he was invited by some of his old congregation to return to Chichester. During his residence there he took part in a disputation between the bishop, Gunning, and the nonconformists, and it is said that the bishop treated him with unfairness and discourtesy. Although he suffered terribly from stone, he continued to preach until November 1680. He then went up to London, hoping to obtain relief, but died on 26 Dec. before an operation could be performed. He was buried in St. Andrew's, Holborn, and his funeral sermon was preached by Baxter, who declared that 'he was a man so blameless in all his conversation,' that he never heard any one 'accuse or blame him except for nonconformity.'

Corbet's works are: 1. 'A historicall relation of the Military Government of Gloucester from the beginning of the Civill Warre betweene the King and the Parliament, to the recall of Colonell Massie,' 1645, 4to, republished as 'A true and impartiall Historie of the Military Government . . .' 1647, 4to, also in the 'Somers Tracts,' v. 296–375, and in Washbourn's 'Bibliotheca Gloucestrensis,' 1–152. 2. 'A Vindication of the Magistrates of the city of Gloucester from the calumnies of Robert Bacon . . .' 1646, 4to; and together with this, 3. 'Ten Questions discussed' [against] 'close Antinomianism.' 4. 'The Interest of England in the matter of Religion,' in 2 parts, 1661, 8vo. This was answered by Sir Roger L'Estrange in his 'Interest Mistaken, or the Holy Cheat,' 1661; and by the author of the 'Presbyterian unmasked,' 1676, 1681. 'A nameless writer,' Baxter says, 'pub-

lished a bloody invective against his pacificatory book, "The Interest of England," as if it had been written to raise a war' (*Works*, xviii. 188). 5. 'A Discourse of the Religion of England . . .' 1667, 4to, answered in the same year by 'A Discourse of Toleration,' anon., but by Dr. Perinchief, prebendary of Westminster (Wood), and by 'Dolus an Virtus?' 6. 'A Second Discourse of the Religion of England,' 1668, 4to, also answered. 7. 'The Kingdom of God among Men,' 1679, 8vo, with which are: 8. 'A Point of Church Unity discussed;' and 9. 'An Account of Himself about Conformity.' 10. 'Self-employment in Secret,' 1681, 12mo, posthumous, 1700, and many subsequent editions. 11. 'The Nonconformist's Plea for Lay Communion with the Church of England,' with 'A Defence of my Endeavours for . . . the Ministry,' in answer to Bishop Gunning, 1683, 4to. 12. 'A humble Endeavour of . . . explication . . . of the Operations of God,' 1683, 4to. 13. 'Remains,' 1684, 4to. Corbet also took part in compiling the first volume of Rushworth's 'Historical Collections.'

[Wood's Fasti, i. 507; Athenæ Oxon. (Bliss), iii. 1264; Baxter's Works (Orme), xviii. 162–92; Palmer's Nonconformist's Memorial, ii. 259; Washbourn's Bibl. Gloucestr. i. introd.]

W. H.

CORBET, MILES (*d.* 1662), regicide, was the second son of Sir Thomas Corbet, knight, of Sprowston, Norfolk, and Anne, daughter of Edward Barret of Belhouse, Essex (Burke, *Extinct Baronetage*). He became a barrister, entered Lincoln's Inn, and was appointed recorder of Great Yarmouth, which place he represented in the parliaments of 1628 and 1640. In the civil war he took part with the parliament, and became a member of the committee for the county of Norfolk. According to Whitelock, Corbet was chairman of the committee for managing the evidence against Laud, and was very zealous in the prosecution of the archbishop (Whitelock, *Memorials*, p. 75). But he was specially notorious as chairman of the committee of examinations, whose arbitrary and inquisitorial procedure gained him great unpopularity. In that capacity Corbet examined the papers of James Howell (*Epistolæ Ho-elianæ*, ed. 1754, p. 285), and came into collision with John Lilburne and Clement Walker, who have left detailed accounts of their controversies with him (Lilburne, *Innocency and Truth justified*, p. 13; Walker, *History of Independency*, i. 52). 'The committee of examinations, where Mr. Miles Corbet kept his justice seat,' writes Holles, 'was worth something to his clerk if not to him; what a continual horse-fair it was, even like dooms-day itself, to judge persons of all sorts and sexes!' (*Memoirs*, p. 128). In May 1644 parliament appointed Corbet to the post of clerk of the court of wards (Whitelock, p. 87), and on 7 March 1648 he was made one of the registrars of the court of chancery in place of Colonel Long, one of the impeached members (*ib.* 294). In the following December Corbet acted as one of the king's judges, to which he thus refers in his dying speech: 'For this for which we are to die I was no contriver of it; when the business was motioned I spoke against it, but being passed in parliament I thought it my duty to obey. I never did sit in that which was called the high court of justice but once.' But from the table of attendances in Nalson's edition of the 'Journal of the High Court of Justice,' it appears that Miles Corbet was present at five meetings, and in addition to this signed the death-warrant. Ludlow (*Memoirs*, p. 378) and the author of 'Regicides No Saints' (p. 91) agree in affirming that he did not sit till the day of sentence was pronounced, and it is possible that he has been confounded with John Corbet. In October 1650 Corbet was nominated one of the four commissioners appointed by parliament for settling the affairs of Ireland; his instructions are printed in the 'Parliamentary History' (xix. 406). During the remainder of the commonwealth and the protectorate he continued to be employed in Ireland. On 13 June 1655 he was appointed chief baron of the exchequer in Ireland (*State Papers*, Dom.) Ludlow states that he manifested such integrity in his different employments in Ireland that 'he improved his own estate for the public service whilst he was the greatest husband of the treasure of the commonwealth' (*Memoirs*, p. 378). In December 1659 Dublin was surprised by a party of officers, and Corbet was arrested by Major Warren as he was coming from church (*ib.* p. 299). He soon after returned to England, but on 19 Jan. 1660 a charge of high treason was presented against him by Sir Charles Coote and others (Kennet, *Register*, p. 24). Ludlow, who was involved in the same accusation, encouraged Corbet to appear in spite of it in the House of Commons, and the house fixed a day for the two to make answer to the charges (Ludlow, p. 312; Kennet, p. 46). But the hearing of this defence was adjourned, and a few days later Corbet was called before the council of state and obliged to enter into an engagement not to disturb the existing government (Ludlow, p. 331). He succeeded in getting returned to the Convention parliament for Yarmouth, but there was a double

return, and on 18 May his election was annulled, and he thought it best to fly from England. In 1662 Corbet, in company with Barkstead and Okey, was seized by Sir George Downing in Holland, and shipped over to England (Heath, *Chronicle*, p. 842). As Corbet, like his companions, had been excluded from the act of indemnity, it was sufficient to prove his identity to obtain a sentence of death against him. He was executed on 19 April 1662 (Kennet, *Register*). In his dying speech Corbet protested that a sense of public duty, not self-interest, had been the inspiring motive of his political life. 'When I was first called to serve in parliament I had an estate; I spent it in the service of the parliament. I never bought any king's or bishop's lands; I thought I had enough, at least I was content with it; that I might serve God and my country was that I aimed at.'

[Ludlow's Memoirs, 1751; Heath's Chronicle, 1663; Kennet's Register; Noble's Lives of the Regicides. A list of contemporary pamphlets dealing with the trial and execution of Corbet is appended to the life of John Barkstead in vol. iii.]

C. H. F.

CORBET, REGINALD (*d.* 1566), judge, second son of Sir Robert Corbet, knight, of Moreton Corbet, Shropshire, by Elizabeth, daughter of Sir H. Vernon, knight, of Haddon, was elected reader at the Middle Temple in the autumn of 1551, though he did not perform the duties of the post until the following Lent, received a serjeant's writ on 27 Oct. 1558, which was renewed on 12 Dec., Queen Mary having died in the meantime, and took the degree on 19 April 1559. On 16 Oct. following he was appointed to a puisne judgeship in the queen's bench. He died in 1566. His son Richard married Anne, daughter of Lord Chancellor Bromley, and their son, John, was created a baronet in 1627 [see Corbet, Sir John].

[Wotton's Baronetage, ii. 74; Dugdale's Orig. 217, Chron. Ser. 90, 92; Plowden's Reports, p. 356; Foss's Lives of the Judges.] J. M. R.

CORBET, RICHARD (1582–1635), bishop successively of Oxford and Norwich, and poet, born in 1582, was son of Vincent Corbet, a gardener or nurseryman of Ewell, Surrey. He was educated at Westminster School, whence he proceeded to Broadgates Hall, afterwards Pembroke College, Oxford, in Lent term 1597–8. In 1598 he was elected a student of Christ Church, and proceeded B.A. on 20 June 1602 and M.A. on 9 June 1605. Wood says that in his young days he was 'esteemed one of the most celebrated wits in the university, as his poems, jests, romantic fancies, and exploits, which he made and perform'd extempore, shew'd.' Aubrey says that 'he was a very handsome man, but something apt to abuse, and a coward.' He took holy orders, and his quaint wit in the pulpit recommended him to all 'ingenious men.' In 1612, while proctor of the university and senior student of Christ Church, he pronounced funeral orations at Oxford on Prince Henry and Sir Thomas Bodley; the latter was published in 1613. Corbet was for some years vicar of Cassington, Oxfordshire, and James I made him one of the royal chaplains in consideration of his 'fine fancy and preaching.' When preaching before the king at Woodstock on one occasion Corbet broke down, and a university wag wrote a poem, which was very popular, describing the awkward misadventure (*Wit Restor'd*, 1658). In 1616 he was recommended for election to the projected Chelsea College, and on 8 May 1617 he was admitted B.D. at Oxford. In 1618 he made a tour in France, which he humorously described in an epistle to his friend Sir Thomas Aylesbury, and in 1619 the death of his father left him a little landed property in the city of London. He was early in 1620 appointed to the prebend of Bedminster Secunda in the cathedral of Salisbury, which he resigned on 10 June 1631 (cf. Le Neve, *Fasti*, ii. 656), and to the vicarage of Stewkley, Berkshire (1620), which he held till his death. On 24 June 1620 he was installed dean of Christ Church, at the early age of thirty-seven, and was then friendly with the powerful Duke of Buckingham. On 9 Oct. 1628, when the deanery was required by the Earl of Dorset for Brian Duppa [q. v.], Corbet was elected to the vacant see of Oxford, and was translated to the see of Norwich on 7 May 1632. He preached before Charles I at Newmarket on 9 March 1633–4 (*Strafford Papers*, i. 221), and contributed 400*l.* to the rebuilding of St. Paul's in 1634. Corbet was strongly opposed to the puritans, and frequently admonished his clergy for puritan practices. On 26 Dec. 1634 he turned the Walloon congregation out of the bishop's chapel, which had been lent to them for their services since 1619. He died at Norwich on 28 July 1635, and was buried in his cathedral.

Throughout his life Corbet was famed for his conviviality. Stories are told of his merry-making in London taverns in youth in company with Ben Jonson and other well-known dramatists, and of the practical jokes he played at Oxford when well advanced in years. It is stated that after becoming a doctor of divinity he put on a leathern jerkin and sang ballads at Abingdon Cross. When bishop he 'would sometimes,' writes Aubrey, 'take the

key of the wine-cellar and he and his chaplain (Dr. Lushington) would go and lock themselves in and be merry. Then first he layes down his episcopal hat—"There layes the Dr." Then he putts off his gowne—"There lyes the bishop." Then 'twas "Here's to thee, Corbet," and "Here to thee, Lushington."' Wood says that Corbet 'loved to the last boy's play very well,' and Aubrey, who describes his conversation as 'extreme pleasant,' gives some very entertaining examples of it. Ben Jonson was always on intimate terms with him, and repeatedly stayed with him at the deanery of Christ Church. Jonson wrote a poem on Corbet's father (printed in BEN JONSON, *Underwoods*), which attests the dramatist's affectionate regard for both father and son. Corbet appears to have built a 'pretty house' near Folly Bridge, Oxford, where he often stayed after leaving Christ Church.

Corbet's poems are for the most part in a rollicking satiric vein, and are always very good-humoured, with the single exception of his verses 'upon Mrs. Mallet, an unhandsome gentlewoman that made love to him.' The well-known 'Fairies Farewell,' a graceful and fanciful piece of verse, is his most serious production. The 'Iter Boreale,' an account of the holiday tour of four Oxford students in the midlands north of Oxford, is the longest, and probably suggested Brathwaite's 'Drunken Barnabees Journal.' One of Strafford's correspondents describes Corbet as 'the best poet of all the bishops of England.' The poems were first collected and published in 1647, under the title of 'Certain Elegant Poems written by Dr. Corbet, bishop of Norwich,' with a dedication to 'the Lady Teynham.' A part of this collection appeared in 1648, under the title of 'Poetica Stromata,' and it is probable that that volume was edited by some of the bishop's friends. In 1672 the former collection was reissued with a few additions, some typographical corrections, and a dedication to Sir Edmund Bacon of Redgrave. In 1807 Mr. Octavius Gilchrist republished all Corbet's printed poems, and added several from Ashmolean and Harleian MSS., together with the funeral oration on Prince Henry from an Ashmolean MS. and a complete memoir. Alexander Chalmers reprinted Gilchrist's volume in his collection of the poets. In 'Notes and Queries' (3rd ser. ii. 494–5) is a version of Corbet's poem on the Christ Church bell—'Great Tom'—printed from an Ashmolean MS., which is far longer than any other printed version. Some verses before Richard Vaughan's 'Waterworks' (1610), subscribed Robert Corbett, are attributed to the bishop. A manuscript volume of satires in the library of Canterbury Cathedral, dated about 1600, and entitled 'The Time's Whistle, a New Daunce of the Seven Sins and other poems, compiled by R. C., Gent.,' was printed for the first time by J. M. Cowper for the Early English Text Society in 1871. Mr. Cowper suggested that the author—'R. C., Gent.'—was the bishop. Internal evidence gives some support to the theory, but the description of the author and the date of the collection destroy it.

Corbet married Alice, daughter of Leonard Hutton, vicar of Flower, Northamptonshire, by whom he had a daughter, Alice, and a son, Vincent (*b.* 10 Nov. 1627). Some exquisitely tender lines, addressed to the latter when three years old, are printed among Corbet's poems, but young Corbet disappointed his father's hopes. 'He went to school at Westminster with Ned Bagshawe,' writes Aubrey, 'a very handsome youth, but he is run out of all and goes begging up and down to gentlemen.'

A portrait of Corbet by Cornelius Jansen is in Christ Church Hall, Oxford.

S. L.

CORBET, ROBERT (*d.* 1810), captain in the navy, of an old Shropshire family, attained the rank of lieutenant on 22 Dec. 1796; and having served with distinction during the operations on the coast of Egypt in 1801, in command of the Fulminette cutter, was promoted to be commander on 29 April 1802. On the renewal of the war he was appointed to the Bittern brig, and sent to the Mediterranean, where he won high praise from Nelson, then commander-in-chief of the station, and especially by the capture of the Hirondelle privateer (*Nelson Despatches*, vi. 51, 58, 363). In April 1805 he was appointed, by Nelson, acting captain of the Amphitrite, but he was not confirmed in the rank till 24 May 1806. Shortly afterwards he commissioned the Néréide frigate, and in her took part in the operations in the Rio de la Plata. He then passed on to the Cape of Good Hope, and in August 1808 was sent to Bombay to refit. His conduct at Bombay, in taking on himself the duties of senior officer and breaking through the routine of the station, drew

on him the displeasure of the commander-in-chief, Sir Edward Pellew, afterwards Viscount Exmouth, who represented that Corbet's letters and actions were unbecoming. The ship's company of the Néréide also preferred a complaint against him of cruelty and oppression. Corbet, in reply, demanded a court-martial; and Pellew, not being able to form a court at Bombay, ordered the ship to return to the Cape of Good Hope, in order that he might be tried there. This was, unfortunately, not explained to the men, who, conceiving that their temperate complaint had been unheeded, broke out into open mutiny. The mutiny was quelled, and when the ship arrived at the Cape, ten of the ringleaders were tried, found guilty, and sentenced to death, protesting their innocence of any evil design, beyond a wish for the ship to return to the Cape, so that their grievances might be inquired into. One of the ten was left for execution, but the other nine were pardoned. When this trial was over, that on Corbet began. No charges of diabolical cruelty were ever more simply put, or more clearly proved, even if they were not admitted. It was acknowledged that the number of men flogged was very great; that the cat in ordinary use had knots on the tails, and that the backs of the sufferers were habitually pickled; that the boatswain's mates and other petty officers were encouraged to thrash the men without any formality—an irregular punishment known as 'starting,' and that these startings were administered with thick sticks. There were numerous other minor charges, and Corbet, making no attempt to refute the evidence, based his defence on the necessities of his position and the custom of the service. The ship's company, he urged, was exceptionally bad; drunkenness, malingering, and skulking were everyday offences; desertion was frequent; the petty officers were as bad as or worse than the men; 'severity was necessary to reform their conduct, and perhaps it was used.' The prisoner was, strangely, acquitted on all the counts except on that of having caused men to be punished 'with sticks of an improper size and such as are not usual in his majesty's service,' and for this alone he was reprimanded. The admiralty, however, wrote (4 Aug. 1809) to express high disapproval 'of the manifest want of management, good order, and discipline' in the ship, and strongly condemned and prohibited 'starting,' which they pronounced 'unjustifiable,' and 'extremely disgusting to the feelings of British seamen.' After the court-martial, however, Corbet resumed the command of the Néréide, and on 21 Aug. 1809 had an important share in the capture of the Caroline frigate and other vessels in St. Paul's Bay in the Isle of Bourbon (James, *Nav. Hist.* ed. 1860, v. 58). The Caroline was received into the service as the Bourbonnaise, and Corbet appointed to command her for the voyage to England. He arrived at Plymouth in the spring of 1810, and was immediately appointed to the Africaine, under orders to go out to the station from which he had just come. The Africaine had been some time in commission, and her men were extremely averse to receiving their new captain, who was reported to be a monster of cruelty. They forwarded a round-robin to the admiralty, expressing their determination not to let Corbet come on board. But the ship was in Plymouth Sound, and the Menelaus dropped alongside ready to fire into her. The mutiny was thus repressed almost before it broke out, and Corbet going on board read his commission and assumed the command. Some further display of ill-will was repressed without undue severity, and during the passage out to Mauritius the ship's company seem to have been well satisfied with their lot. On 11 Sept. 1810 they sighted Mauritius. During the previous month things had gone badly with the English squadron. The Sirius, Magicienne, and Néréide had been destroyed [see Willoughby, Nisbet Josiah], and the Iphigenia had been captured [see Chads, Henry Ducie]. Corbet learned at the same time that two sail seen in the distance were the French frigates Astrée and Iphigénie (the former Iphigenia). He stood towards them; was joined by Commodore Rowley in the Boadicea frigate, together with the Otter and the Staunch; and the capture of the French ships appeared probable. It was not till the morning of the 13th that the Africaine was close up with the French ships; they were then within two or three hours' sail of Port Louis, and the Boadicea was some five miles dead to leeward. Corbet, fearing they might escape, opened fire on the Astrée, which immediately returned it. In her second broadside a round-shot took off Corbet's right foot, and a splinter smashed his right thigh. He was carried below, and died a few hours afterwards. But meantime the Africaine, overpowered by the two French ships, all her officers being killed or wounded, having sustained a total loss of 163 killed and wounded out of a complement of 295, and being dismasted and helpless, struck her flag and was taken possession of. In the afternoon, when the Boadicea with the Otter and Staunch came up, the French fled, leaving their prize, which was recaptured without difficulty (James, v. 176).

The loss of the Africaine and the death of Corbet have been fertile subjects for naval myths. It was currently said that the men refused to fight, and allowed themselves to be shot down by the dozen, sooner than endeavour to win a victory for their hated captain (Basil Hall, *Fragments of Voyages and Travels*, 2nd ser. iii. 322), a statement which is clearly disproved by the evidence of Captain Jenkin Jones, a master's mate on board the Africaine (*Character and Conduct of the late Captain Corbet vindicated*, 1839, p. 15). It was also reported that Corbet was shot by one of his own men, which the character of his wounds shows was impossible; and again that, refusing to survive his defeat, he tore the bandages off the stump of his leg, and so bled to death (Brenton, *Nav. Hist.* iv. 477), a story possible, but entirely unsupported by any evidence. It seems certain, however, that, notwithstanding the good behaviour of the men, which Captain Jones extols, and the discipline on which Corbet prided himself, the fire of the Africaine was wild and ineffective; that she fired away all her shot without inflicting any serious loss on either of her opponents, whose return, on the contrary, was deadly and effective. Of Corbet's courage there can be no doubt; but his judgment in engaging may be questioned, his neglect of the essential training of his men must be blamed, and the brutal severity of his punishments has left a stain on his character which even his gallant death cannot wipe away.

[Minutes of the courts-martial and official letters in the Public Record Office; the pamphlet by Captain Jenkin Jones which is referred to in the text is a collective reprint of articles which appeared in the United Service Journal, 1832, pt. iii. pp. 162, 397.] J. K. L.

CORBET, WILLIAM (1779–1842), Irish rebel and French general, son of a schoolmaster in the county of Cork, was born at Ballythomas in that county on 17 Aug. 1779. He was well educated by his father, who was a good scholar, and as he was a protestant, he was entered with his brother Thomas at Trinity College, Dublin, in 1794. At college he took more interest in politics than in his work, and became a member of the Society of United Irishmen and a friend of T. A. Emmett and Hamilton Rowan. He was also a leading debater in the Trinity College Historical Society, of which he was for some time secretary, and was one of the students who signed the address to Grattan in 1795. In 1798 took place the famous inquiry by Lord Clare, the chancellor of the university, and Dr. Duigenan into the conduct of the undergraduates; it was alleged that a treasonable song had been sung at a social meeting in Corbet's rooms; Lord Clare asserted the existence of an assassination committee, and Corbet was solemnly expelled with eighteen others, including T. A. Emmett. He then went deeper into treasonable practices and started for France, where he received a commission as captain, and was appointed to accompany the staff in the expedition of Humbert. He was on the same ship as Napper Tandy, which did not land in Ireland, and he therefore got safely back to France. He was then made an adjutant-general, and while he was at Hamburg, planning another descent upon Ireland, he was arrested there, contrary to the law of nations, by Sir James Craufurd, the English resident, together with Napper Tandy, Blackwell, and Morres, in November 1798. After being confined for some months at Hamburg, he was sent off to England in an English frigate in September 1799. Lord Grenville did not quite know what to do with these prisoners; Bonaparte loudly declaimed against their arrest, and declared his intention of executing certain English prisoners at Lille if any harm happened to them; and they were therefore confined in the Kilmainham prison at Dublin without being brought to trial. From Kilmainham Corbet and Blackwell made their escape in 1803, and after many risks and adventures arrived safely in Paris. Corbet's commission of 1798 was recognised, and he entered the Irish Legion, from which he was soon transferred as a captain to the 70th French regiment of the line. With the French army he served in Masséna's expedition to Portugal, and greatly distinguished himself in the retreat from Torres Vedras and especially at the battle of Sabugal. When Marmont succeeded Masséna he took Corbet on his staff, and after the battle of Salamanca, Clausel made him chef de bataillon of the 47th regiment, with which he served until 1813, when Marmont summoned him to Germany to join his staff. He served with Marmont throughout the campaigns of 1813 and 1814, at Lutzen, Bautzen, Dresden, Leipzig, &c., and he was made a commander of the Legion of Honour. After the first abdication of Napoleon he was promoted colonel in January 1815, and acted as chief of the staff to General d'Aumont at Caen. After the second restoration he was placed on half-pay, and was looked upon with disfavour by the Bourbons because of his friendship with General Foy, the leader of the opposition, whose acquaintance he had made in Spain. In 1828 he was selected by Marshal Maison to accompany him in his expedition to the Morea, and was allowed to go, in spite of the opposi-

tion of Lord Stuart de Rothesay, the English ambassador at Paris. His services in Greece were very great. After serving as governor of Navarino, Messina, and Nauplia, he relieved Argos from the attack of Colocotroni, who was then acting in the interest of Russia and Count Capo d'Istria, and utterly defeated him. This victory was of the greatest importance; it finally overthrew the Russian party, upset the schemes of Capo d'Istria, and practically placed King Otho upon the throne. He was rewarded by being made a knight of the order of Saint Louis and of the Redeemer of Greece, and was promoted general of brigade. He succeeded General Schneider as commander-in-chief of the French forces in Greece in 1831, and returned to France in 1832 with them. He was soon after promoted general of division, and after commanding at Caen and Tulle, died at Saint-Denis 12 Aug. 1842.

[His autobiography, printed first at Paris in 1807, is reprinted with an interesting biography founded on facts, related by Mrs. Lyons of Cork, Corbet's only sister, in R. R. Madden's third series of The United Irishmen, their Lives and Times, Dublin, 1846. The details of his escape from Kilmainham are given in Miss Edgeworth's novel of Ormond.] H. M. S.

CORBETT, THOMAS (*d.* 1751), secretary of the admiralty, of the family of Corbet of Moreton Corbet, and apparently a near relation of Andrew Corbett, an 'instrument' of the treasurer of the navy, temp. William III (*Cal. S. P.*, Treasury), was secretary to Sir George Byng, viscount Torrington [q. v.], during the expedition to Sicily (1718–20), of which he afterwards published an account. On his return to England he was appointed chief clerk of the admiralty in 1723, and in 1728 second secretary of the admiralty under Josiah Burchett [q. v.]; on Burchett's retirement in 1742 he became senior secretary, with John Cleveland under him. He held this office till his death in 1751, and during the whole time lived on terms of friendly equality with the many distinguished officers with whom he was thrown in contact. His letter to Anson (*Add. MS.* 15955, f. 250), pointing out the impropriety of his promotion of Peircy Brett [see ANSON, GEORGE, LORD], is not that of a mere official, but rather that of an old shipmate and social equal. He was M.P. for Saltash 1734 till death.

[Corbett's official letters in the Public Record Office are very numerous, but contain little of biographical interest. The notice of the family in Burke's 'Landed Gentry' is very inaccurate, and makes it quite impossible to identify this member of it. It is there said that William Corbett, who adopted the mode of writing his name with two t's, was secretary of the admiralty and had three sons, Thomas, Vincent, and William, cashier of the navy. Thomas, the secretary of the admiralty, had a younger brother, William, who began life as secretary to Viscount Torrington in the Baltic expedition of 1717, and was afterwards cashier of the navy; but there never was a William Corbett secretary of the admiralty; and Andrew Corbett, the 'instrument' of the treasurer of the navy, signed his name with two t's. It seems not improbable that Thomas's father was William, that Andrew was his uncle, and that Burke has confused the three.] J. K. L.

CORBETT, WILLIAM (*d.* 1748), violinist and composer, seems to have held the latter position at the theatre in Lincoln's Inn Fields at the beginning of the eighteenth century, since he wrote the music for 'Henry IV' (produced there by Betterton in 1700), for 'Love Betrayed,' an adaptation by Burnaby of 'Twelfth Night,' and for 'As you find it,' by the Hon. C. Boyle (both produced in 1703). In 1705 he became leader of the opera band, a position which he retained until 1711, when the production of Handel's 'Rinaldo' occasioned the removal of the whole body of orchestral players in favour of a new set of instrumentalists. It seems to have been at this juncture that Corbett went for the first time to Italy, since Burney implies that he was there during Corelli's lifetime, and it is probable that he was there at the time of Corelli's death in 1713, as he became possessed of the master's own violin. Whether or no he was a pupil of Corelli, it is certain that he was greatly influenced by that composer's style, as his own works conclusively prove. As a concert was given in Hickford's Room on 28 April 1714 'for Signora Lodi and Mr. Corbet,' he must have returned by that time, and it would seem to have been about this year that he was appointed to the royal band of music. In 1710 his name is not on the list of musicians, and from 1716 it appears without intermission until 1747. By this time he had written, besides the theatrical music we have mentioned, several sets of sonatas for violins, flutes, &c., and one of the 'act-tunes' in 'As you find it' had been set as a song, 'When bonny Jemmy first left me.' A few years later he went again to Italy for the express purpose of collecting music and instruments of all kinds. He remained abroad for a good many years, making Rome his headquarters, and visiting all the principal cities of Italy. He was suspected in many quarters of being employed by the government as a spy upon the Pretender, but the truth seems to have been that his researches were not only sanctioned by the government (he was allowed to retain his posi-

tion in the court band during his absence), but actually paid for by the English authorities. If we may believe a pencilled memorandum on the back of a copy of his mezzotint portrait in the British Museum, he was given an additional salary of 300*l.* a year 'to travel into Italy and collect fine music.' His acquisitions, however, remained his own property, as appears from the advertisements of various sales, at which he disposed of some of them. In March 1724–5 he was at home again, for at this time he advertises 'an entertainment of music, with variety of new concertos for violins, hautbois, trumpets, German-flutes, and French-horns; with several pieces by Mr. Corbett on a particular new instrument never heard in England' (BURNEY). These 'concertos' had probably nothing to do with his most celebrated work, to be hereafter referred to, nor is it known what the 'particular new instrument' was, unless it was the Crescentini harpsichord mentioned in the list of his effects contained in his will. In 1728 the first part (twelve) of his best known concertos was published under the title of 'Le Bizzarie universali.' They are in four parts, for strings only, and the author appends the word 'Diletante' to his name, adding that they are composed 'on all the new gustos in his travels through Italy.' They were published by subscription, and in the year of their appearance the composer gave a concert on the occasion of his farewell to public life at Hickford's Room, where they were performed. On two separate occasions, the second in 1741, he advertised sales of his foreign collection of instruments and music, probably with only partial success, and in 1742 two more sets of concertos were issued, each set containing twelve as before. The title this time is in English throughout, and runs: 'Concertos, or the Universal Bizzaries in seven parts, for four violins, tenor violin, and violoncello, with a thorough-bass for a harpsichord.' The peculiarity of the concertos is that to each one is prefixed the name of an Italian city or a country of Europe, implying that each is written in the characteristic style of the place after which it is named. It cannot be said that there is much difference of style between the 'Alla Milanese' and the 'Alla Scotese,' or between any other of the concertos, but they are all written with considerable knowledge of effect. Corbett died on 7 March 1747–8, bequeathing his collections to Gresham College, with a salary of 10*l.* a year to a female servant of his own, who was to show them to visitors. The college authorities refused the legacy on account of the insufficiency of space at their disposal, and the collection was sold by auction, the musical instruments, &c. on 9 or 11 March 1750–1, at 'the Great Room over against Beauford Buildings in the Strand, formerly the Hoop Tavern,' and the music at his house in Silver Street, Golden Square. By the terms of his will, four sets of his works were to be given every year to strangers 'from foreign countrys if they are good performers, but they are not to be sold on any account.' He directed also that he was to be buried 'in my family grave in the churchyard of St. Margaret's, Westminster, in a private manner, with two coaches only besides the hearse, at or some short time before twelve of the clock at night.' How far these injunctions were complied with we have no means of knowing. There are two mezzotints by Simon, after a portrait by Austin, representing Corbett with and without his wig. A copy of the second of these is in the British Museum, and has been already referred to. It shows his coat of arms, argent, two crows in a pale sable, with a label of three points for difference, all within a bordure engrailed bezantée. These arms prove him to have belonged to some branch of the Shropshire family, though his exact place in the genealogy is impossible to find.

CORBIE or CORBINGTON, AMBROSE (1604–1649), jesuit, one of the sons of Gerard Corbie [q. v.] and his wife, Isabella Richardson, was born near Durham on 7 Dec. (O.S.) 1604 (OLIVER, *Jesuit Collections*, p. 74). At the age of twelve he was placed in the English college at St. Omer, whence he removed in 1622 to the English college at Rome. He was admitted into the Society of Jesus at Watten in 1627, and became a professed father in 1641. For some years he taught the belles-lettres with great applause in the college at St. Omer (SOUTHWELL, *Bibl. Scriptorum Soc. Jesu*, p. 45). In 1645 he was minister at Ghent (FOLEY, *Records*, vii. 167). He was appointed confessor in the English college at Rome, where he died on 11 April 1649.

He wrote: 1. 'Certamen Triplex a tribus Societ. Jesu ex Provincia Anglicana sacerdotibus RR. PP. P. Thoma Hollando, P. Rodulpho Corbæo, P. Henrico Morsæo, intra proximum triennium, pro avita fide, religione, sacerdotio, contra veritatis, pietatis, ecclesiæque hostes, susceptum fortiter, decertatum constanter, confectum feliciter, Lon-

dini in Anglia,' Antwerp, 1645, 16mo, with three engraved portraits; reprinted, Munich, 1646, 16mo. The two Latin editions of this book are in great requisition among collectors (BACKER, *Bibl. des Écrivains de la Compagnie de Jésus*, ed. 1869, i. 1369; *Cat. of the Huth Library*, i. 282). An English translation by William Barclay Turnbull was published at London, 1858, 8vo (GILLOW, *Bibl. Dict. of the English Catholics*, i. 564). 2. An account of his father. Printed in Foley's 'Records,' iii. 64. 3. 'Vita e morte del fratello Tomaso Stilintono [i.e. Stillington, alias Oglethorpe], novitio Inglese della Compagnia di Giesu, morto in Messina, 15 Sept. 1617;' manuscript at Stonyhurst College (*Hist. MSS. Comm.* 3rd Rep. 338).

[Authorities cited above.] T. C.

CORBIE or CORBINGTON, GERARD (1558–1637), catholic exile, was a native of the county of Durham. He was a severe sufferer for his profession of the catholic faith, being compelled frequently to cross to Ireland, and ultimately he became a voluntary exile with his family in Belgium. Three of his sons, Ambrose [q. v.], Ralph [q. v.], and Robert, having joined the Society of Jesus, his son Richard having died when a student at St. Omer, and his two daughters, May and Catharine, having become Benedictine nuns, he and his wife Isabella (*née* Richardson) agreed to separate and to consecrate themselves to religion. He accordingly entered the Society of Jesus at Watten as a temporal coadjutor, in 1628, and she in 1633, when in her eightieth year, became a professed Benedictine nun at Ghent, and died a centenarian in 1652. Gerard became blind five years before his death, which occurred at Watten on 17 Sept. 1637.

[Foley's Records, iii. 62–8; Oliver's Jesuit Collections, 674.] T. C.

CORBIE or CORBINGTON, RALPH (1598–1644), jesuit, son of Gerard Corbie [q. v.], was born on 25 March 1598, near Dublin, his parents having been compelled to retire to Ireland from the county of Durham in order to escape persecution at home (OLIVER, *Jesuit Collections*, p. 74). At the age of five he was taken to England by his parents, and he spent his childhood in the bishopric of Durham or in Lancashire. Afterwards he studied in the English college at St. Omer, at Seville, and at Valladolid, where he was ordained priest. He entered the Society of Jesus at Watten in 1626. About 1631 he was sent to the English mission, and the county of Durham was the scene of his labours (FOLEY, *Records*, vii. 169). Being seized by the rebels at Hamsterley on 8 July 1644, when vesting for mass, he was conveyed to London and committed to Newgate on the 22nd of that month, together with John Duckett, a secular priest. At their trial at the Old Bailey sessions (4 Sept.) they both admitted they were priests; they were condemned to death and executed at Tyburn on 7 Sept. 1644.

There is a long life of Corbie in Foley's 'Records,' iii. 68–96, taken principally from the 'Certamen Triplex' written by his brother Ambrose Corbie [q. v.] From the latter work Father Matthias Tanner in his 'Societas Jesu usque ad sanguinis et vitæ profusionem militans,' and Bishop Challoner in his 'Memoirs of Missionary Priests' (edit. 1742, ii. 278–85), derived their notices. There is an engraved portrait of him in the 'Certamen Triplex.'

[Authorities cited above; also Dodd's Church Hist. iii. 111; Granger's Biog. Hist. of England (1824), ii. 386; Gillow's Bibl. Dict. vol. i.; Hist. MSS. Comm. 3rd Rep. 339.] T. C.

CORBMAC, SAINT (6th cent.), was the son of Eogan, and descended in the ninth generation from Olioll Olum, king of Munster (*d.* 234). He had five brothers, all of whom 'laboured for Christ' in different provinces of Ireland, and 'to each the piety of after times assigned heavenly honours.' One of them, St. Emhin, is the reputed author of the 'Tripartite Life of St. Patrick.'

Corbmac, desirous of pursuing a religious life, set out from his birthplace in Munster for the north of Ireland, in search of a solitary place. Arriving in Connaught, he first visited the court of Eogan Bel, who lived in the fortress of Dun Eogain, situated on an island in Lough Measg. The remains of this fortress were visible when Dr. O'Donovan visited the island in 1838. Not being well received by the king, Corbmac left the island, announcing as a prophet of God that 'it was preordained' that the palace should become a monastery.

Crossing the river Robe on his journey northward, he arrived at Fort Lothair, in the territory of Ceara (Carra, county of Mayo). Here he was hospitably received by Olioll Inbanda and Aedh Flaithemda, sons of Cellach, and twelve chieftains, but when about to settle among them he was opposed by St. Finan, who had built an oratory there, and was afraid that 'the boundaries of his church would be narrowed if another set up near him.' This Finan was abbot of Teampull Ratha, a church the ruins of which are still to be seen in the parish of Raymochy, co. Donegal. In consequence of this opposition he pursued his journey, and arrived at the dwelling of a virgin named Daria, daughter of Catheir,

son of Lugaidh, a prince in that territory. Shé was also known as So-deilbh, or 'of beautiful form,' and according to Colgan was venerated on 26 Oct. In consequence of her kindness he promised her an abundance of cattle; hence the plain was known as the 'plain of the heifers,' now Moygawnagh, in Tirawley.

Travelling still northwards, he reached the estuary of the Moy, where the sixteen sons of Amalgaid were assembled in convention. St. Emhin in the 'Tripartite' reckons only twelve; but the statement of Colgan, taken from the 'Book of Lecan,' is in some degree supported by the 'Tribes and Customs of Hy Fiachrach,' which states them as fifteen. Amalgaid had two wives, Tressan, daughter of Nadfraoich, king of Munster, and Erc, daughter of Eochaidh, king of Leinster. The sons of the former were favourable to Corbmac when he presented himself at the assembly, and requested permission to settle there, but the sons of Erc opposed him. In the end, however, he was permitted to choose a place to dwell in, and he accordingly selected a favourable spot at the estuary of the Moy. The fishery, according to the Bardic accounts, had been famous from the remotest times, and in later ages had been visited and blessed by St. Patrick, St. Brigid, and others. The establishment founded here was enriched by grants of lands and tithes. Among other gifts bestowed on it were the lands of Cill-roe and Cill-aladh, held formerly by Bishop Muredach and the sons of Droigin. Besides the sons of Amalgaid other chieftains became his supporters, as for instance Eochaidh Breac, whose posterity, the Hy Eachach of Hy Fiachrach Aidne, were devoted to him. In the lapse of time their devotion grew cold, and Corbmac was superseded by later saints, among whom were St. Cumain Fota, a descendant of Erc, and St. Deirbile, also a native saint.

When his establishment was placed on a secure foundation, he turned his thoughts to the neighbouring territory of Luigni (Legney, county Sligo), over which and the adjacent territory of Gaileanga (Gallen, county Mayo) Diermid, son of Finbarr, then ruled, who was of the race of Cian, son of Olioll Olum, and therefore of his kindred. This prince received him kindly, and bound his seven successors to pay three cows annually to Corbmac and those who should come after him; but Aidan, son of Colman, who had a monastery near, fearing lest the interests of his church should suffer, remonstrated with him, and advised that he as a stranger should return to his own country, and seek for lands there. King Diermid tried to make peace, but Corbmac determined to return to his friends, the sons of Amalgaid, and devoted himself to the office of peacemaker, endeavouring to establish good feeling between them and the race of Cian. For this purpose he induced them to hold a meeting at a hill called Tulach Chapaich, 'the hill of friendship,' at which were present with him St. Froech of Cluain Colluing and St. Athracht of Killaraght. Here a perpetual league of friendship was formed. This was afterwards renewed, and three celebrated conventions were held there.

'So devoted was Corbmac and so holy his manner of life that gifts were bestowed on him continually, and he was treated as their tutelar divinity.' Once more, however, intrigues were set on foot against him as a stranger and intruder, and three messengers in succession were sent to order him to leave the district. The first of these having been cursed by the saint was devoured by wolves on the mountain of Sliabh botha, near Ros Airgid, where a cairn marks the spot. The other two messengers having deprecated the saint's wrath escaped with their lives. This incident was evidently suggested by the story of Elijah in 2 Kings chap. i.

Corbmac is credited with having cured a youth who suffered from a 'deadly, contagious disease caused by a pestilential exhalation' from the mountain Sith badha, near Rathcroghan, co. Roscommon, believed to be haunted by demons. To him is also ascribed a bath, called Dabhach Corbmaic, in which whoever bathed should not die a violent death, and, if a maiden, should have a happy marriage.

Such are the facts recorded in the 'Book of Lecan.' The question, however, of the date at which he flourished is one of peculiar difficulty, owing to the anachronisms which abound in it. Colgan thought he flourished in the fifth century, and Lanigan considered that some indications pointed to the seventh; but there are grounds for thinking that his true date is the sixth century; for as he was ninth in descent from Olioll Olum, A.D. 234, allowing thirty years for each generation, we have 270 + 234, which gives A.D. 504. Again, his brother St. Emhin, according to Ussher, flourished in 580, and most of the events of his history, as his visit to King Eogan Bel (*d.* 547) and Olioll Inbanda (544), fall within the sixth century. There is, it is true, a difficulty in the case of St. Becan, who is reckoned among his brothers, as the 'Four Masters' give his death at 688; but Keating (*Reign of Diarmuid Mac Fergusa*) says some authorities held that besides Fiacha Muillethan, Eogan Mor had another son Diarmuid, from whom Becan was descended. He would thus be a near relative, not a brother of Corbmac, and

the period of his death does not affect the calculation. Colgan suggests that the anachronisms are due to interpolations, and perhaps also what is said of the sons of Amalgaid may be referred to the tribes descended from them, and thus belonging to a later period than the narrative would lead one to expect. Colgan gives his life at 26 March, but is uncertain whether that or 13 Dec. is the right date. At the latter the Corbmac mentioned in the 'Martyrology of Donegal' seems to be our saint, and is called Cruimther [i.e. presbyter] Corbmac.

Hist. ii. 215; Keating's Hist. of Ireland, reign of Diarmuid Mac Fergusa; Annals of the Four Masters, A.D. 544.] T. O.

CORBOULD, HENRY (1787–1844), painter, son of Richard Corbould [q.v.], a landscape and miniature painter, was born in London on 11 Aug. 1787. He entered at an early age the schools of the Royal Academy, where he gained a silver medal for a study from the life, and while there obtained the friendship of Flaxman, Westmacott, Chantrey, and West, to whom he sat as a model in the pictures representing 'Christ rejected' and 'Christ healing the Sick in the Temple.' Corbould's first picture, 'A Study,' was hung in the Academy in 1807, when he resided at 70 John Street, Fitzroy Square. In 1808 he exhibited 'Coriolanus.' For a considerable time he was principally engaged in designing for book illustrations, such as 'The Nightingale, a Collection of Songs set to Music,' 'Elegant Epistles from the most Eminent Writers,' 'The Beauties of Shakespeare,' 'The Works of Virgil, translated into English by John Dryden,' 'The Poetical Works of James Beattie, LL.D., and William Collins,' 'Logic, or the Right Use of Reason, by Isaac Watts, D.D.,' &c. He was, however, employed for about thirty years by the trustees of the British Museum in making highly finished drawings from the Elgin and other marbles in that institution, which were afterwards published, and are now preserved in the department of prints and drawings. Corbould made drawings from the Duke of Bedford and Lord Egremont's collections; the Dilettanti Society, and the Society of Antiquaries, of which he was a distinguished member. Several of his pictures were engraved by John Bromley, Hopwood, and Robert Cooper. He designed in 1838 the diploma of 'The Manchester Unity of the Independent Order of Odd Fellows,' engraved by J. A. Wright. He also made the drawings for an edition of Camden's 'History of England,' most of which were engraved by W. Hawkins. Corbould was seized with apoplexy while riding from St. Leonard's to Hurst Green, Sussex, and expired at Robertsbridge, in about ten hours after the attack, on 9 Dec. 1844, and was buried in Etchingham Church, Sussex. He left four sons.

[Redgrave's Dict. of Artists of the English School; manuscript notes in the British Museum.] L. F.

CORBOULD, RICHARD (1757–1831), painter, born in London 18 April 1757, possessed talents of a very versatile kind, which he exercised in nearly every department of his art. He painted, both in oils and water-colours, portraits, landscapes, still life, and history, miniatures on enamel and ivory, also on porcelain, and occasionally etched. He was very clever at imitating the style of the old masters, and yet could show an originality of his own. He first appears as an exhibitor in 1776 at the Free Society of Artists, to which he sent 'The Morning,' after Claude Lorraine, a stained drawing, 'A Bunch of Grapes,' and another landscape. In 1777 he sent a miniature to the exhibition of the Royal Academy, and continued to exhibit there numerous pictures in varied styles up to 1811. Among these may be noticed: 'Cottagers gathering Sticks' (1793); four pictures representing 'The Seasons' (1794); 'The Fisherman's Departure' and 'Return' (1800); 'The Millennial Age; Isaiah xi. 6, 8' (1801), a picture very much admired at the time; 'Eve caressing the Flock' (1802); 'Hero and Leander' (1803); 'Hannibal on his passage over the Alps, pointing out to his soldiers the fertile plains of Italy' (1808); 'Contemplation' (1811). He last appears as an exhibitor in 1817 at the British Institution. It is, however, as a designer of illustrations for books that Corbould is most widely known. He was largely employed by publishers, and his illustrations, engraved by the best artists, show great taste, and occupy one of the highest places in that department of art. We may instance those that he contributed to Cooke's pocket editions of 'English Classics' (published 1795–1800), especially those for Richardson's 'Pamela.' Corbould resided for some years in John Street, Tottenham Court Road, but later in life removed to the north of London. He died at Highgate 26 July 1831, aged 74, and was buried in the churchyard of St. Andrew's, Holborn, Gray's Inn Road. He left a family of whom two sons, Henry [q.v.] and George Corbould, also distinguished themselves as painters.

Redgrave's Dict. of Artists; Graves's Dict. of Artists (1760–1880); Gent. Mag. (1831), ci. 2; Catalogues of Royal Academy, British Institution, &c.] L. C.

CORBRIDGE, THOMAS OF (*d.* 1304), archbishop of York, was probably native of the little town of Corbridge on the Upper Tyne, near Hexham. He became a doctor of divinity (RISHANGER, p. 194, Rolls Ser.), but at what university seems to be unknown. Dr. Stubbs (*Act. Pont. Ebor.* col. 1728) also declares him to have been an incomparable professor of all the liberal arts. He became prebendary of Oswaldwick in York Minster (LE NEVE, iii. 206), but resigned it in 1279, when he was made chancellor of the cathedral on Wickwaine's elevation to the archbishopric. In 1280 he was appointed with the archdeacon of Richmond to inquire into the election of Robert of Scarborough to the deanery. In 1281 he was sent to Rome on cathedral business at the expense of Archbishop Wickwaine. On 16 June 1290 he was made sacrist of St. Sepulchre's Chapel, York, and gave up the chancellorship on the condition that he should not be annoyed or molested in his office, the previous occupant of which, Percival de Lavannia, an Italian nominee of the pope, had left everything in confusion. But Corbridge soon found such troubles on the manors of his new benefice, that he took advantage of a stipulation he had insisted on to resume his post of chancellor, which, however, had been already occupied by Thomas of Wakefield. An unseemly dispute ensued, in which Archbishop Romanus upheld Wakefield, while the dean and chapter vigorously supported Corbridge. The latter went to Rome to urge his claims on the curia, but failed to win his case. He had already incurred sentence of excommunication (27 July 1290). The remission of the sentence in March 1291 probably points to his submission. Wakefield seems to have held the chancellorship until his death in 1297, and even then the appointment of Robert of Riplingham was in complete disregard of Corbridge's claims (LE NEVE, iii. 164). He retained, however, the sacristy and also the stall of Stillington. His favour with the chapter led to his election by a majority as archbishop on 12 Nov. 1299 in succession to Henry of Newark. On 16 Nov. Edward I gave his consent (*Pat.* 27 E. I, m. 2, in LE NEVE, iii. 104). Corbridge proceeded to Rome for his pallium, and was there consecrated bishop by Boniface VIII himself. The pope insisted, however, on a surrender of the archbishopric into his own hands, and on reappointing Corbridge of his own authority. He also nominated his own grandnephew to Corbridge's vacant preferments.

Little of great importance happened during Corbridge's tenure of the archbishopric. His episcopal register, though copious enough in its entries, testifies by the singular absence of public documents of general interest the personal insignificance or want of influence of the archbishop. His name is rarely found in the state papers of the period, and still less in the chronicles. In 1301 he attended the parliament of Lincoln, and in 1302 those of Westminster and London. In 1303 he sent his contingent against the Scots. The northern war brought the king and court a great deal to York, and on several occasions Corbridge was involved in disputes with Edward. In his quarrels with the provost of Beverley, who wished to settle the question of the visitation of that church in the English courts, while Corbridge wanted to have it decided at Rome, Edward strongly took the side of Beverley. Again in 1304 Corbridge resented Edward's attempt to force John Bush, one of his clerks, into his own old preferment, now vacant apparently by Francesco Gaetani's resignation. The king completely disregarded the appointment of Gilbert Segrave, favoured both by pope and archbishop. John Bush won his suit in the royal courts, which adjudged that the benefices were in the royal gift. The temporalities of the see were seized upon by the king, and remained in his hands until the archbishop's death. Under Corbridge's prelacy the chronic feud with the archbishop of Canterbury with reference to the right of the northern primate to bear his cross erect within the southern province involved him in more than one dispute with Archbishop Winchelsea. The equally interminable feud with York's only powerful suffragan, the Bishop of Durham, was also continued. Corbridge wrote a strong letter to Bishop Antony Bek [see BEK, ANTONY I], remonstrating against his extraordinary conduct in besieging the prior and convent of Durham, cutting off their supplies, and stopping their water. We do not learn that he obtained much satisfaction. It was probably much easier to compel the weak bishop of Whithern to cause the restoration to Alexander, son of Robert Bruce, of the goods of his church of Carnmoel, stolen while he was at his studies at Cambridge. Corbridge showed, as his dealings with Durham and Beverley prove, a commendable zeal for the interests of his see. He also vindicated the old right of the archbishop to coin money. He manifested his strictness by forbidding tournaments and duels during Lent. His papal leanings came out in his quarrels with the king. He was, however, a friend of Edmund, earl of Cornwall, and was left in that noble's will the legacy of a ring of gold. He

provided fairly for his kinsfolk, several of whose names appear in the documents of the period. He died in disgrace at Laneham in Nottinghamshire on 22 Sept. 1304. He was buried at Southwell on 29 Sept. beneath a blue marble slab close to the pulpit. The effigy is now destroyed.

[All that is known of Corbridge is to be found collected in Canon Raine's biography of him in Fasti Eboracenses, pp. 353–61, the main authorities for which are the life in Stubbs's Act. Pontif. Ebor. cols. 1728–9, and Corfield's MS. Register, extracts from which are given. Several of his letters from the same source are printed in Canon Raine's Letters from the Northern Registers (Rolls Series). Other facts come from Prynne's Records, vol. iii.; Parliamentary Writs, i. 89, 112, 114, 367, 370; Wilkins's Concilia, ii. 255, 264; Abbreviatio Placitorum, pp. 251–2; Le Neve's Fasti Ecclesiæ Anglicanæ, ed. Hardy, iii. 104, 163, 206, 212; MS. Cotton Vitellius A. ii.; Godwin, De Præsulibus (1743), pp. 684–5.]

T. F. T.

CORCORAN, MICHAEL (1827–1863), brigadier-general of federal volunteers in the American civil war, was born at Carrowskill, co. Sligo, Ireland, 21 Sept. 1827. He emigrated to America in 1849, and obtained employment at first as a clerk in the New York city post office. He became colonel of the 69th New York militia, and on the call for troops in April 1861 took the field with his battalion, and distinguished himself at the first battle of Bull's Run, where he was wounded and made prisoner. He was confined successively at Richmond, Charleston, Columbia, Salisbury, N.C., and other places, and was one of the officers selected for execution in the event of the federal authorities having carried out their threat of hanging the captured crews of confederate vessels as pirates. Exchanged on 15 Aug. 1862, he was made a brigadier-general, and raised an Irish legion. He took part in the battles of Nausomond and Suffolk in North Carolina in 1863, and checked the advance of the confederates on Norfolk. He died, from the effects of a fall from his horse near Fairfax, Virginia, on 22 Dec. 1863.

[Drake's Amer. Biog.] H. M. C.

CORDELL, CHARLES (1720–1791), catholic divine, son of Charles Cordell, of the diocese of London, and his wife, Hannah Darell, of the ancient family of Darell of Scotney Castle, Sussex, and Calehill, Kent, was born on 5 Oct. 1720, and educated in a school at Fernyhalgh, Lancashire, and in the English college at Douay, where he was ordained priest. He became chaplain at Arundel Castle in 1748; was subsequently stationed at Roundhay, Yorkshire, and in the Isle of Man; and on 10 June 1765 took charge of the chapel in Newgate Street, Newcastle-on-Tyne, where he continued till his death on 26 Jan. 1791 (*Catholic Miscellany*, vi. 387).

He published: 1. 'The Divine Office for the Use of the Laity,' 4 vols. 16mo [Sheffield], 1763; second edit. 2 vols. 8vo [Newcastle-on-Tyne], 1780; new edition, 'with corrections and additions by the Rev. B. Rayment, Manchester, 1806 (*Notes and Queries*, 3rd ser. x. 330, 383). 2. 'A Letter to the Author of a Book called "A Candid and Impartial Sketch of the Life and Government of Pope Clement XIV,"' 1785. The work to which this 'Letter' relates was written by Father John Thorpe, an English ex-jesuit, and edited by Father Charles Plowden. It is a collection of scandalous stories about Ganganelli that were circulated at Rome by his enemies. Cordell deemed it to be his duty to defend the action of the pope in suppressing the Society of Jesus (Gillow, *Bibl. Dict. of the English Catholics*, i. 565, 567).

Cordell also translated several works from the French, including 'The Life of Pope Clement XIV' (Ganganelli), by Caraccioli (1776); 'Interesting Letters of Pope Clement XIV' (2 vols. 1777); 'The Manners of the Christians' by Fleury (1786), and 'The Manners of the Israelites' by Fleury (1786).

[Authorities cited above.] T. C.

CORDELL, Sir WILLIAM (*d.* 1581), master of the rolls, son of John Cordell, esq., by Eva, daughter of Henry Webb of Kimbolton, Huntingdonshire, was born at Edmonton, Middlesex, and educated at Cambridge, though at what college is not known. He was admitted a member of Lincoln's Inn in 1538, and called to the bar in 1544. In 1545 he obtained the manor of Long Melford, Suffolk, and was M.P. for Dunheved. In the parliament which met 1 March 1552–3 he sat for Steyning, and he became solicitor-general to Queen Mary on 30 Sept. 1553. In that capacity he took part in the prosecution of Sir Thomas Wyatt for high treason. He served the office of Lent reader of Lincoln's Inn in 1553–4, and shortly afterwards became one of the governors of that society, a post which he held on many subsequent occasions. On 5 Nov. 1557 he was constituted master of the rolls, having previously received the honour of knighthood. Queen Mary appointed him one of her privy council, and granted him a license to have twelve retainers. He was returned for Suffolk to the parliament which assembled on 20 Jan. 1557–8, and was chosen speaker of the House of Commons. In 1558

he was despatched to the north with Thirleby, bishop of Ely, to inquire into the cause of quarrel between the Earls of Northumberland and Westmorland.

Queen Elizabeth, though she removed him from the privy council, continued him in the office of master of the rolls, and he was in the ecclesiastical commission. In the course of this reign he was a member of various important royal commissions. He was M.P. for Middlesex in the parliament which met on 11 Jan. 1562-3. In 1569 he subscribed a declaration of his obedience to the Act of Uniformity. He was returned by the city of Westminster to the parliament which assembled on 2 April 1571. On 4 Aug. 1578 he most sumptuously entertained the queen in his house at Long Melford. He died at the Rolls House in Chancery Lane, London, on 17 May 1581, and was buried in Long Melford church, where a fine marble monument was erected to his memory.

He married Mary, daughter of Richard Clopton, esq., but, leaving no children, Joan, his sister, the wife of Richard Allington, esq., became his heir. By his will he made provision for the foundation at Long Melford of a hospital, dedicated to the Holy Trinity, for a warden, twelve brethren, and two sisters. He evinced much interest in the progress of Merchant Taylors' School, and rendered very essential assistance in the foundation of St. John's College, Oxford, of which he was visitor for life. In that college is a curious portrait of him by Cornelius de Zeem.

[Baga de Secretis; Cooper's Athenæ Cantab. i. 431, 568; Davy's Suffolk Collections, ii. 51, 93, 99, 100, 124–30; Foss's Judges of England, v. 476; Fuller's Worthies (Suffolk); Manning's Speakers, 214; Strype's Works (general index); Wilson's Merchant Taylors' School.] T. C.

CORDEN, WILLIAM (1797–1867), china and portrait painter, was born at Ashbourne, Derbyshire, 28 Nov. 1797, and served his apprenticeship at the china works at Derby under Mr. Bloor; here he was employed in painting flowers and portraits. At the close of his apprenticeship he set up for himself as a portrait-painter, commencing with portraits of his employer's family. His early works in this line were mostly miniatures on ivory, but later he reverted to painting on china and also on enamel. He often attained a delicate and beautiful finish, but spoilt many pieces by carelessness and haste in firing them. In July 1829 he received a commission to paint the portrait of Mr. Batchelor, one of the king's pages, at Windsor. This led to his securing the patronage of the royal family, and he received commissions from George IV, and in 1843 from Queen Victoria. In 1844, at the wish of the prince consort, he was sent to Coburg to copy the family portraits at the castle of Rosenau. In 1836 he exhibited at the Royal Academy a portrait of Sir Walter Scott on china, copied from the portrait at Windsor by Sir Thomas Lawrence. Corden died at Nottingham on 18 June 1867. William Corden, jun., of Windsor, who exhibited various pictures at the Royal Academy from 1845 to 1855, was in all probability his son.

[Redgrave's Dict. of Artists; Graves's Dict. of Artists, 1760–1880; Wallis and Bemrose's Pottery and Porcelain of Derbyshire; Royal Academy Catalogues.] L. C.

CORDER, WILLIAM (1804–1828), murderer, was a young man of some property. He had become the father of an illegitimate child by Maria Marten, a native of Polstead, Suffolk, who had before borne children to at least two other men, but who still continued to live with her parents. Corder frequently promised to marry Marten, and at length arranged that she should leave her home on 18 May 1827, dressed in male attire, and join him at a place known as the Red Barn, whence they would proceed together to Ipswich to be married on the following morning. Maria Marten left her home as desired, and was never again seen alive. At first no suspicion was aroused, for Corder paid frequent visits to his wife's parents, telling them that their daughter was living happily as companion to a lady. He kept them regularly informed of his wife's supposed movements, and wrote many letters, in which he professed great surprise that her letters to her mother had never reached Polstead, and mentioned his inquiries on the subject at the post-office. Matters continued thus till the following April, when the body of Maria Marten was discovered buried beneath the floor of the Red Barn, a search having been made at the instigation of the girl's mother, who, as was said at the time, repeatedly dreamed that her daughter lay buried in the place in question. It was found that Maria Marten had been shot through the head and stabbed in the heart. Corder was at once arrested, and in the August following was brought up for trial at Bury St. Edmunds. Conclusive evidence was adduced to prove that he had committed the murder. Corder, however, protested his innocence and addressed the jury in his own defence, alleging that he had quarrelled with the deceased in the barn and had then left her; that he stopped on hearing the report of a pistol, and going back found that she had shot herself; and that in the fear of being charged with murder

he had buried the body. Chief-baron Alexander summed up strongly against the probability of the prisoner's story; the jury brought in a verdict of guilty; Corder was sentenced to death, and executed on the Monday following, 11 Aug. 1828. In the interval between his trial and execution Corder made a full confession of his guilt. The amount of public interest aroused by this case was almost unparalleled, there being several extraordinary incidents connected with it. It came out, for instance, that in the period between the murder and its discovery Corder had advertised for a wife, and had married a very respectable schoolmistress, who was one of forty-five respondents. Six columns, or a quarter of its entire space, was given by the 'Times' to the report of the trial, which extended over two days. The execution was witnessed, it was estimated, by ten thousand persons, and the rope with which the criminal was hanged is said to have been sold at the rate of a guinea per inch. Macready informed the Rev. J. M. Bellew that at a performance of 'Macbeth' at Drury Lane on 11 Aug., when Duncan asked 'Is execution done on Cawdor?' a man in the gallery exclaimed 'Yes, sir; he was hung this morning at Bury.' Corder's skeleton is still preserved in the Suffolk General Hospital at Bury St. Edmunds, and in the Athenæum of the same town is a history of the murder and trial, by J. Curtis (Kelly, 1828), bound in Corder's skin, which was tanned for the purpose by George Creed, surgeon to the hospital.

[Gent. Mag. August 1828; Annual Register, 1828, pp. 106 et seq.; Times, 8, 9, 10, and 12 Aug. 1828.] A. V.

CORDEROY, JEREMY (*fl.* 1600), divine, was the son of a Wiltshire gentleman. He was sent about 1577 to St. Alban Hall, Oxford, and after taking his degree in arts in due course continued to reside there for the purpose of studying theology. He took holy orders, and in 1590 was appointed a chaplain of Merton College, a post which he occupied for at least thirteen years and possibly longer. He was the author of two small works: 'A Short Dialogue, wherein is proved that no Man can be Saved without Good Works,' Oxford, 1604, 12mo, 2nd edit.; and 'A Warning for Worldlings, or a Comfort to the Godly and a Terror to the Wicked, set forth Dialoguewise between a Scholler and a Trauailer,' London, 1608, 12mo. In the latter, which is an argument against atheism, the 'scholler' would appear to be meant for Corderoy himself, and speaks of his not having been preferred to any living, since, although some had been offered to him, they were not such as he could enter into with a good conscience.

[Wood's Athenæ Oxon. (Bliss) ii. 47; Brit. Mus. Cat.] A. V.

CORDINER, CHARLES (1746?–1794), writer on antiquities, became episcopalian minister of St. Andrew's Chapel, Banff, in 1769. He was the author of 'Antiquities and Scenery of the North of Scotland, in a series of Letters to Thomas Pennant,' London, 1780; and 'Remarkable Ruins and Romantic Prospects of North Britain, with Ancient Monuments and singular subjects of Natural History,' 2 vols. London, 1788–95. This work, which is illustrated with engravings by Peter Mazell, was published in parts, but Cordiner did not live to see the publication of the last part. He died at Banff 18 Nov. 1794, aged 48, leaving a widow and eight children. James Cordiner [q. v.] was his son.

[Advertisement to Remarkable Ruins and Romantic Prospects; Scots Magazine, lvi. 735.]

CORDINER, JAMES (1775–1836), author of 'A Description of Ceylon,' third son of the Rev. Charles Cordiner [q. v.], episcopal minister of Banff, was born in 1775. He received the first rudiments of education at Banff, and afterwards studied at the University and King's College, Aberdeen, where in an 'album' or register of students now in the university library his name appears among those entering the first class in Greek (taught by Professor John Leslie) in the session 1789–1790, and in a roll of 'Artium Magistri' of 29 April 1793. In 1797 he was appointed to a charge at the Military Orphan Asylum, Madras, and to do duty as chaplain with the 80th foot, then at Trincomalee, where he remained about twelve months. Thence, at the desire of the governor, Hon. F. North, afterwards earl of Guildford, he proceeded to Colombo to do chaplain's duty with the 51st foot, under orders for that place. He remained in Ceylon as garrison chaplain at Colombo and principal of all the schools in the island, where he was the only church of England clergyman, up to 1804, when he returned home. On his departure he was presented by the civil and military officials at Colombo with a piece of plate of the value of 210 guineas, as a mark of their attachment and esteem.

On 26 May 1807 Cordiner was appointed by the constituent members of the congregation one of the ministers of St. Paul's Episcopal Church (or chapel as it then was called) at Aberdeen, at a stipend of 70*l.* a year. He appears to have come to them from London on the recommendation of the Rev. Dr. Macleod of St. Anne's, Soho. The important com-

munity of episcopalians worshipping at St. Paul's Chapel was at that time, as it continued down to 1870 or later, not part of the Scottish episcopalian church, but one of those episcopalian communities claiming connection with the church of England as distinct from the native nonjuring episcopalian body. After faithfully discharging the duties of the ministry for many years, Cordiner resigned, on account of ill-health, on 13 Nov. 1834, and was granted a retiring annuity of 100*l.*, with the chapel-house as a residence. He died of congestion of the lungs on 13 Jan. 1836, in the sixty-first year of his age and the thirty-seventh of his ministry, and was buried in the churchyard of St. Nicholas, Aberdeen, where is a tombstone to his memory. He left a widow, who for many years received a small annuity (twelve guineas) from the chapel funds, and a son Charles, a clergyman of the church of Scotland, who down to 1864 or later was presbyterian minister of Kinnenmouth, a chapel-of-ease in Lonmay parish, Aberdeenshire.

After his return from Ceylon Cordiner published 'A Description of Ceylon, with narratives of a Tour round the Island in 1800, the Expedition to Candy in 1803, and a Visit to Ramasseram in 1804' (London, 1807). From the preface it appears that the author did not accompany the expedition to Kandy, but was furnished with the particulars from official sources. He is therefore not responsible for statements which, as Sir Emerson Tennent has pointed out (Tennent, *Ceylon*, ii. 77), when read by the light of Governor North's confidential correspondence, place the authorities in a very regrettable light. The work, which is in two quarto volumes, contains fine plates from original drawings by the author of objects of interest in the island. Cordiner also wrote 'A Voyage to India,' which was published in 1820.

[Reference has been made to Cordiner's and Sir Emerson Tennent's writings, but the above details have been chiefly obtained, through the courtesy of the librarian of Aberdeen University, from the collegiate and church records of Aberdeen, and from an obituary notice of Cordiner in the Aberdeen Journal, 20 Jan. 1836: of this paper the University Library contains a complete file from 1747, which is probably unique. The misstatements as to the circumstances as well as the date of Cordiner's death in Notes and Queries, 3rd ser. vi., are stated to have probably arisen from confusion with the case of a relative of the same name.] H. M. C.

COREY, JOHN (*fl.* 1700–1731), actor and dramatist, came of an ancient family in Cornwall, and was born in Barnstaple. He was entered at New Inn for the study of the law, but abandoned that profession for the stage. In 1701 he produced at Lincoln's Inn Fields 'A Cure for Jealousy,' 4to, 1701, a poor comedy which met with no success. It was followed at the same house, 2 Oct. 1704, by 'Metamorphosis, or the Old Lover outwitted,' 4to, 1704, a farce said by the author to be taken from Molière, but in fact extracted from 'Albumazar' by Tomkis. These were his only dramatic essays, though 'The Generous Enemies,' 4to, 1672, by another John Corey, licensed 30 Aug. 1671, has been erroneously ascribed to him. His first recorded appearance as an actor took place on 21 Oct. 1702, when at Lincoln's Inn Fields he played Manly in 'The Beau's Duel, or a Soldier for the Ladies,' by Mrs. Carroll, afterwards Mrs. Centlivre. For twenty-nine years he played at this house, the Haymarket, or Drury Lane, acting at first young lovers in comedy, and afterwards characters in dramas, but seldom apparently in his long career being troubled with a part of primary importance. Dorante in the 'Gamester,' an adaptation of 'Le Joueur' of Regnard, 22 Feb. 1705; Seyton in 'Macbeth,' 1708; Numitorius in Dennis's 'Appius and Virginia,' 5 Feb. 1709; Egbert in Aaron Hill's 'Elfrid, or the Fair Inconstant,' 3 Jan. 1710; Gonsalvo in the 'Perfidious Brother,' claimed by Theobald and by Mestayer, 21 Feb. 1716, and Amiens in 'Love in the Forest,' an adaptation of 'As you like it,' 9 Jan. 1723, indicate fairly his range. According to Isaac Reed's unpublished 'Notitia Dramatica' he played 26 April 1725 Macbeth for his benefit. He is unmentioned in the 'Apology' of Cibber, with whom he constantly acted. He was short in stature and his voice was poor, but he was otherwise a fair actor. The 'Biographia Dramatica' says he died 'about 1721.' He was on the stage, however, ten years later, since on 31 May 1731 his name appears as filling the part of Sir William Worthy in 'Patie and Peggy,' an alteration by Theophilus Cibber of Allan Ramsay's 'Gentle Shepherd,' and it is to be found in the playbills of intervening years.

[Genest's Account of the English Stage; Baker, Reed, and Jones's Biographia Dramatica; Isaac Reed's MS. Notitia Dramatica; List of Dramatic Authors; Appendix to Whincop's Scanderbeg, 1747.] J. K.

CORFE, ARTHUR THOMAS (1773–1863), organist and composer, third son of Dr. Joseph Corfe [q. v.], was born 9 April 1773, at Salisbury, where his father was organist. In early life he was a pupil of a Mr. Antram of Salisbury, and in 1783 he became a chorister of Westminster Abbey under Dr. Cooke. He was for some time a pupil of Cle-

menti for the pianoforte, and in 1796 he married Frances, daughter of the Rev. J. Davies, vicar of Padworth, Berkshire, by whom he had fourteen children. In 1804, on the resignation of his father, he succeeded him as organist of the cathedral, and by 1813 he had got the choir into a state of remarkable perfection, if we may believe the account given of the Salisbury service by a correspondent of the 'Gentleman's Magazine' of that date. In 1828 he organised and undertook at his own risk a festival at Salisbury, which took place with very great success on 19-22 Aug. of that year. He himself conducted the whole of the performances, and his eldest son, John Davis Corfe (1804-1876), who was organist of Bristol Cathedral for more than fifty years, played the organ for his father. Among the solo singers were Miss Paton, Mme. Caradori-Allan, and Braham. Corfe's work as a composer is not remarkable. He wrote a service and a few anthems, besides some pianoforte pieces. He published also a good many arrangements of different kinds, and a book on 'The Principles of Harmony and Thorough-bass.' Towards the end of his life his health showed signs of failing, but he attended the daily service regularly until the end. On 28 Jan. 1863 he was found in the early morning dead, kneeling by his bedside as if in prayer. He was buried in the cloisters of the cathedral. Several of his sons were choristers at Magdalen College, Oxford. His fourth son, George, became resident medical officer at the Middlesex Hospital, and wrote several medical treatises. His younger son, Charles William (*b.* 1814), took the degree of Mus. Doc. (Oxon. 1852), and was organist of Christ Church, Oxford, from 1846 to his retirement shortly before his death on 16 Dec. 1883. He was appointed choragus to the university in 1860, and published several glees, part-songs, anthems, &c.

[Grove's Dict. of Music; Quarterly Musical Mag. x. 1, 140, &c.; Gent. Mag. 3rd ser. xiv. 394; Brown's Biog. Dict. of Musicians; information from the family.] J. A. F. M.

. CORFE, JOSEPH (1740-1820), born at Salisbury in 1740, was in all probability a relation of the two musicians of that name who were lay vicars of Winchester Cathedral near the end of the seventeenth century, and of a James Corfe who published some songs under initials about 1730-50. Joseph Corfe received his early musical education from Dr. Stephens, the organist of the cathedral, and was for some time one of the choristers. On 21 Feb. 1783 he was appointed one of the gentlemen of the Chapel Royal. He had previously been made a lay vicar of Salisbury, and in 1792 was given the post of cathedral organist there. He had appointed his son, John Corfe, as his deputy in the Chapel Royal, on 2 April 1791. In 1804 he resigned the post of organist in favour of his son, Arthur Thomas Corfe [q. v.], and died in 1820, shortly before 1 Oct., on which date his successor was appointed to the Chapel Royal. His chief original production is a volume of church music, containing a well-known service in B flat, and eleven anthems. He wrote also thirty-six glees, mainly arranged from familiar melodies, selections of sacred musical compositions, a 'Treatise on Singing,' and 'Thorough-bass simplified, or the whole Theory and Practice of Thorough-bass laid open to the meanest capacity.' In estimating his works, it must be remembered that he was a contemporary of Jackson of Exeter, and that the influences which formed that most insipid composer were not unfelt by him. Though some of the verses and other portions of the anthems in his volume show the weaknesses which were prevalent at the time, they are more than made up for by the strength and interest of many of the grander numbers, in which a sound fugal style is frequently apparent.

CORK, Earls of. [See Boyle, Richard, first Earl, 1566-1643; Boyle, Richard, second Earl, 1612-1697; Boyle, Richard, fourth Earl, 1695-1753; Boyle, John, fifth Earl, 1707-1762.]

CORK, Countess of. [See Monckton, Mary, 1746-1840.]

CORKER, JAMES or MAURUS (1636-1715), Benedictine monk, was a native of Yorkshire. He was brought up in the protestant religion, but was converted to catholicism, and joining the Benedictine order was professed in the monastery of St. Adrian and St. Dionysius at Lambspring in Germany on 23 April 1656 (*Hist. MSS. Comm.* 3rd Rep. 236). He was sent on the English mission in the southern province in 1665, and for twelve years he was chaplain to a widow lady of distinction. Being alarmed at the narrative of Titus Oates, who had included him among those concerned in the pretended popish plot, he concealed himself for several months, but at last he was apprehended and committed prisoner to Newgate. On 18 July 1679 he was tried at the Old Bailey with Sir George Wakeman, William Marshall, and William Rumley; but their innocence was so evident that the jury returned a verdict of

'not guilty. Corker was detained, however, on account of his sacerdotal character, and on 17 Jan. 1679-80 was tried for high treason in having taken holy orders from the see of Rome, was found guilty, and sentenced to death. It is stated that during his confinement in Newgate he reconciled more than a thousand persons to the catholic church (Weldon, *Chronological Notes*, p. 219), and he acted as spiritual director to the unfortunate Oliver Plunket, catholic archbishop of Armagh (*ib.* p. 223; Moran, *Memoirs of Archbishop Plunket*, pp. 346, 365). He was elected president-general of his order in 1680, being installed in Newgate, and in the following year he was made cathedral prior of Canterbury.

On the accession of James II he was restored to liberty, and was even received by his majesty at court as resident ambassador of the elector of Cologne on 31 Jan. 1687-8. He has been charged with indiscretion in accepting this public appointment, but the circumstance seems to have been overlooked that the abbot of Lambspring had been sometimes accredited to the court of Charles II by this very elector (Oliver, *Catholic Religion in Cornwall*, p. 495). Lingard states that Corker on the occasion of his reception at court was accompanied by six other monks in the habit of the Benedictine order. He remarks that 'it was a ludicrous rather than an offensive exhibition; but while it provoked the sneers and derision of the courtiers it furnished his enemies with a new subject of declamation against the king, who, not content with screening these men from legal punishment, brought them forward as a public spectacle to display his contempt of the law and defiance of public opinion' (*Hist. of England*, ed. 1849, x. 294).

From a manuscript preserved at Ampleforth College it appears that in the reign of James II Corker, having first set up a chapel in the Savoy, from which, owing to a dispute with the jesuits, he was persuaded by the king to remove, 'went to St. John's, corruptly called St. Jone's [at Clerkenwell], and there built a mighty pretty convent, which the revolution of 1688 pulled down to the ground, to his very great loss, for as he was dean of the rosary he melted down the great gold chalice and patten to help towards this building, supplying the want of them with one of silver just of that make. He counted this convent, for the conversion of souls, amongst those things which the holy fathers of the church allow the church treasures to be spent on' (Cromwell, *Hist. of Clerkenwell*, pp. 86, 87). The establishment had but a brief existence, being the first object of attack by the populace when the news reached London of the safe landing of William, prince of Orange. On Sunday, 11 Nov. 1688, a crowd assembled round the building and was about to demolish it when a military force arrived. The ecclesiastics at Clerkenwell tried to save their property. They succeeded in removing most of their furniture before any report of their intentions got abroad; but at length the suspicions of the rabble were excited. The last two carts were stopped in Holborn, and all that they contained was publicly burned in the middle of the street.

Forced to seek refuge on the continent, Corker was declared the second president-elect of the English Benedictine congregation held at Paris in 1689, and in the following year (but in 1693, according to Oliver) he was elected abbot of Lambspring in Germany (Weldon, *Chronological Notes*, Append. p. 23). It is stated that in 1691 he was voted abbot of Cismar. He caused the quarters of his friend, the martyred archbishop of Armagh, to be transferred to Lambspring and honourably embalmed. On 27 July (O.S.) 1696 he resigned his dignity and returned to England. He lived 'in a recluse solitary manner' at 'Stafford House, near the park;' his room was lined with books and 'ghastly pictures drawn dead with ropes about their necks,' representing the victims of the popish plot. He said that he was comforted when under sentence of death by the hope that his sufferings would expiate the guilt of an ancestor in accepting Norstall Abbey (*Letter from E. Corker*, 4 Jan. 1703–4, communicated by Mr. L. J. D. Townshend). He died at Paddington, London, on 22 Dec. 1715, and was buried at St. Pancras.

His works are: 1. 'Stafford's Memoires; or a brief and impartial account of the birth and quality, tryal, and final end of William, late Lord Viscount Stafford. Beheaded on Tower Hill, Wednesday, 29 Dec. 1680' (anon.), Lond., 1681, 12mo; 2nd edit. 1682 (Pezius, *Epistolæ Apologeticæ pro Ordine S. Benedicti*, p. 240). 2. 'Roman Catholick Principles in reference to God and the King' (anon.) This remarkable treatise first appeared as a small pamphlet in 1680, and at least two other editions of it were published in that year. It is reprinted in 'Stafford's Memoires.' Six editions of the 'Principles' were published before 1684, and six were published by Goter in 1684–6 at the end of his 'Papist misrepresented and represented.' Bishop Coppinger gave at least twelve editions of the 'Principles,' first in his 'Exposition,' and afterwards in his 'True Piety.' Eleven or twelve more editions were published between 1748 and 1813, and a reprint appeared in the 'Pamphleteer' in 1819 (xiii. 86 et seq.), and

again with the title of 'The Catholic Eirenicon, in friendly response to Dr. Pusey,' Lond., 1865, 8vo. On perusing the work Dr. Leland, the historian, is said to have declared that if such were the principles of catholics no government had any right to quarrel with them. Charles Butler, who reprints it (*Memoirs of the English Catholics*, ed. 1822, iii. 493), declares it to be a clear and accurate exposition of the catholic creed on some of its most important principles, and Dr. Oliver calls it a 'concise but luminous treatise' (*Catholic Religion in Cornwall*, p. 509). Bishop Milner, however, asserted in an official charge to his clergy in 1813 that it 'is not an accurate exposition of Roman catholic principles, and still less the faith of catholics' (*Supplementary Memoirs*, pp. 264–78). In consequence of some exceptions taken against the accuracy of the 'Propositions' which form the heading of 'The Faith of Catholics' by the Rev. Joseph Berington and Dr. John Kirk, the latter reprinted Corker's treatise in 1815 (*Rambler*, ix. 248; Gillow, *Bibl. Dict. of the English Catholics*, i. 570, 571). 3. 'A Remonstrance of Piety and Innocence; containing the last Devotions and Protestations of several Roman Catholicks, condemned and executed on account of the Plot,' Lond., 1683, 12mo. 4. 'A Sermon on the Blessed Eucharist,' Lond., 1695, 12mo. 5. 'Correspondence with Oliver Plunket, Archbishop of Armagh;' manuscripts formerly in the possession of the Rev. Charles Dodd, who, in his 'Church History,' ii. 514–19, has printed some letters from Corker, giving an account of Plunket's life. 6. 'Queries to Dr. Sacheverell from North Britain' (anon.), no place or date, 4to; probably printed in 1710. 7. 'A Rational Account given by a Young Gentleman to his Uncle of the Motives and Reasons why he is become a Roman Catholick, and why he declines any farther disputes or contests about Matters of Religion' (anon.), s. l. aut an. 4to, pp. 8 (Gillow, *Bibl. Dict. of the English Catholics*, i. p. xx).

C.

CORMAC MAC ART, also known as Cormac ua Cuinn and Cormac Ulfada (*d.* 260), grandson of Conn of the Hundred Battles [q. v.], became king of Ireland, according to Tigernach, in 218; reigned till 254, when he abdicated in favour of his son, Cairbre Liffeachair, and died in 260. He appears first in history in connection with the death of Lugaid Mac Con, king of Ireland, who is said to have been slain at his instigation, when distributing gold and silver to the learned. The next occupant of the throne, according to the 'Annals of the Four Masters,' was Fergus dubhdeadach, 'of the black teeth,' an Ulidian or native of Uladh. Cormac, to avenge an insult received from him, made an alliance with Tadg, son of Cian, on condition that Tadg should receive a grant of land in Breagh or East Meath. Fergus, attacked by their united armies, was defeated, and he and his two brothers were slain in the battle of Crinna, a place on the river Boyne near Stackallen Bridge. The stipulated reward was duly paid, and the posterity of Tadg dwelling there were afterwards known as the Cianachta of Breagh. All rivals being now removed, Cormac succeeded to the throne. His reign, like that of all Irish kings of the period, was a constant succession of wars with chieftains who were supposed to be under his sway. His chief opponents appear to have been the people of Uladh, a district corresponding with the counties of Down and Antrim, whose king Fergus he had slain. More than once he was driven from his kingdom, and sailed away with his fleet, remaining on one occasion three years in exile, during which he visited Scotland, and according to the 'Four Masters' became king there; at another time he expelled the Ulidians, and drove them to the Isle of Man. 'His reign was rendered illustrious by his victories over the Ulidians and the success which attended his arms in Albany. At this period it probably was that Cairbre Riada and his adherents obtained a footing in those parts of Erin and Albany which afterwards bore his name' (Reeves).

A romantic incident in his life is connected with these expeditions. One of the captives carried off from Scotland was Ciarnuit, daughter of the king of the Picts, said to have been the handsomest woman of her time. Cormac hearing of her beauty took her to his house, but his wife, moved by jealousy, insisted that the bondmaid should be under her orders, and imposed on her the task of grinding a large quantity of corn every day with a handmill or quern. After some time Cormac, learning from her that she was no longer able to perform the task, and being greatly attached to her, sent over the sea to Scotland for a millwright, who erected a water-mill at Tara. This was the first mill erected in Ireland. Its situation is known, and local tradition preserved the memory of its origin in the time of Dr. Petrie.

One of the most tragical occurrences of his reign was the murder of thirty princesses by Dunlaing, king of Leinster, in the house known as the southern Claenfert at Tara. Cormac quickly avenged their deaths by slaying twelve chieftains of Leinster, and imposing the tax called the Boruma on Leinster with increased severity. This tax had originally been exacted by Tuathal Teachtmhar (A.D. 106), and was a perennial source of warfare between the Leinster rulers and their overking. It was finally remitted through the intervention of St. Dairchell [q. v.]

Towards the close of his reign occurred the expulsion of the Desi, descendants of Fiacha Suighdhe, brother of Conn of the Hundred Battles, who were seated in the plain of Breagh. According to one account of the cause of this event, Aengus, 'of the dreadful spear,' or, as 'Lebar na h-Uidhre' has it, 'the poisoned spear,' having been wronged by Cellach, son of Cormac, hastened in a fury to Tara, slew Cellach in his father's presence, killing also the steward of Tara, and piercing his father's eye by the same stroke that killed his son. For this crime the tribe of the Desi, to which Aengus belonged, were expelled by Cormac after several battles, and finally settled in Waterford, where they have given their name to the baronies of Decies.

To the reign of Cormac belongs the history of the famous warrior Finn mac Cumhail, who was slain, according to the 'Four Masters,' in 283. The only unsuccessful battle in which Cormac was engaged was that of Droma Damgaire, now Knocklong, in the county of Limerick. Cormac had made an unprovoked attack on Fiacha Muilleathan, king of Munster, assigning as a pretext that a double tribute was due to him as overking, inasmuch as there were two provinces in Munster. Receiving a reply that there was no precedent for such a demand, he marched direct for Droma Damgaire, and a battle ensued in which he was defeated and pursued to Ossory, and also obliged to give hostages and indemnify Fiacha for his losses. Neither the 'Four Masters' nor Tigernach make any special mention of this expedition, though minute accounts of it are preserved in the 'Book of Lismore' and elsewhere. 'The truth is' (as Dr. O'Donovan observes) 'that the annalists of Leath Cuinn (the north of Ireland) pass over the affairs of Munster very slightly, and seem unwilling to acknowledge any triumph of theirs over the race of Conn of the Hundred Battles, and this feeling was mutual on the part of the race of Olioll Olum.'

The injury to Cormac's eye already referred to made it necessary for him, according to Irish custom, to abdicate, as no one with a personal blemish could reign at Tara. He was accordingly succeeded by his son, and retired to Aicill, now the hill of Skreen, near Tara, visiting occasionally Cleiteach on the Boyne. He now applied himself to legislation, and his reputation in this capacity far exceeded his martial achievements. 'He was a famous author in laws, synchronisms, and history; for it was he that established law, rule, and direction for each science and for each covenant according to propriety, and it is his laws that governed all that adhered to them to the present time' (*Four Masters*).

Dr. Petrie, in his 'Essay on the History and Antiquities of Tara Hill,' discusses at some length the question of the laws attributed to him. On the subject of the use of letters in Ireland at that early period, which affects the authenticity of Cormac's alleged legislation, Innes observes: 'It may have very well happened that some of the Irish before that time passing over to Britain or other parts of the Roman empire where the use of letters was common might have learned to read and write.'

Cormac is said to have become a Christian seven years before his death, being 'the third man in Ireland who believed.' This will appear possible when it is considered that he had been in contact with Roman civilisation in Britain, where Christianity is known to have spread among the Roman colonists about the commencement of the third century (HADDAN). He died at Cleiteach, A.D. 260. The early account simply says he was choked by a salmon bone; but an interlined gloss in 'Lebar na h-Uidhre' suggests that it was the *siabhra* or genii that killed him, and the 'Four Masters' add that it was on account of his abandoning the worship of idols. The account of his burial seems to favour the belief that he was a Christian. It is said in 'Lebar na h-Uidhre' that he desired to be buried at Ros na righ, but after his death it was decided that he should be interred at Brugh na Boinne, 'where all the kings of Tara were buried.' When, however, they proceeded to carry out their purpose, the river Boyne 'rose against them three times,' and they had to abandon the attempt, and he was taken to Ros na righ, which was thenceforward the burial-place of the Christian kings. The reign of Cormac is the epoch at which most of the monuments remaining at Tara had their origin. Of these an interesting account will be found in the learned essay of Dr. Petrie.

Down, Connor, and Dromore, 319; Remains of Rev. A. Haddan, p. 223.] T. O.

CORMAC, PRESBYTER (6th cent.), Irish saint. [See CORBMAC.]

CORMAC (836–908), king of Cashel, born in 836, was son of Cuilennan, chief of the Eoghanacht, or elder branch of the descendants of Oillil Olum. He received literary education from Sneidhghius of Disert Diarmada, and attained excellence in all the parts of learning as then esteemed in Ireland; that is in verse composition, in the explanation of hard words, in history, in the art of penmanship; to all which he added the reputation of piety, and crowned the whole by becoming the chief bishop in Leth Mogha. The very ancient church which is the present glory of the rock of Cashel was then unbuilt, and the summit of the crag was enclosed by a rampart of loose stones, the stronghold of the kings of the south, within which a small low stone-roofed building was the bishop's church. In 900 he became king of Cashel, and was thus the chief temporal as well as the chief spiritual authority in the south of Ireland. When the south was threatened with invasion, Cormac led the men of Munster against Flann, king of Ireland, at Moylena (the present Tullamore, King's County), and having won a battle marched on into southern Meath and against the Connaughtmen, and brought hostages and booty home down the Shannon. But the south of Ireland has never been able to achieve more than a temporary success over the north, and two years later, in the early autumn, Flann with Cearbhall, king of Leinster, and Cathal, king of Connaught, brought a great force against Cormac. He met them on the road into Munster, at the present Ballymoon. His army was routed, and an old account of the battle thus relates his death: 'A few remained with Cormac, and he came forward along the road, and abundant was the blood of men and horses along that road. The hind feet of his horse slipped on the slimy road in the track of that blood, the horse fell backwards and broke Cormac's back and his neck, and he said when falling "In manus tuas Domine commendo spiritum meum," and he gives up his spirit, and the impious sons of malediction come and thrust spears into his body and cut his head from his body' (O'DONOVAN, *Three Fragments*, Dublin, 1860). It was Fiach ua Ugfadhan who decapitated the body on a stone still pointed out and within a drive of Ballitore. A poem ascribed to Dallan mac Moire (*Annala Rioghachta Eireann*) gives the day of the battle as the seventeenth of the calends of September. The true year was 908. There is a very ancient stone cross with twelve rudely carved apostles on the base near the field of battle. A glossary of hard Irish words called 'Sanas Chormaic' is invariably attributed to this king Cormac. Later editors have made alterations, but enough remains of the original to make the 'Sanas' valuable as the most venerable monument of the literature of Munster and as the earliest Irish dictionary. It contains explanations of more than thirteen hundred words. The etymologies are of course merely fanciful, but blended with them are stories, allusions to customs, some of the few relics of Irish pagan lore, and other historical fragments. The oldest extant fragment of the glossary is in the 'Book of Leinster,' a manuscript of about A.D. 1200, and the oldest complete manuscript (Royal Irish Academy, H. and S. No. 224, s. 3/67), is of the fifteenth century. Some Irish writers state that the glossary was part of a large work known as 'Saltair Chaisil.' This has been generally attributed to Cormac, but there are no safe grounds for believing it to be his, or indeed for regarding it as anything but an ancient collection of transcripts, such as the existing 'Lebor na Huidri.' The 'Sanas Chormaic' was first printed by Whitley Stokes in 1862 ('Three Irish Glossaries,' by W. S., London). This edition contains a general introduction, an account of the codices, an Irish text, and copious philological notes. The glossary had been previously translated and annotated by John O'Donovan, and Whitley Stokes has also edited this translation.

M.

CORMACK, SIR JOHN ROSE, M.D. (1815–1882), was born at Stow, Midlothian, on 1 March 1815, his father, the Rev. John Cormack, D.D., being minister there. He studied medicine at Edinburgh, graduating in 1837, and receiving a gold medal for his thesis on the presence of air in the organs of circulation. In the same year he was senior president of the Edinburgh Royal Medical Society, and presided at its centenary festival. After study in Paris he commenced practice in Edinburgh, and was appointed physician to the Royal Infirmary and the Fever Hospital. His 'Observations on the Relapsing Fever Epidemic in 1843' increased his reputation, and he sought permission to give clinical

lectures at the infirmary. This being refused, he resigned in 1845, and removed to London in 1847, where he practised until ill-health compelled him to settle in Orleans in 1866. In 1869, on the death of Sir Joseph Olliffe, physician to the British embassy, he removed to Paris, graduating M.D. in the university of France in 1870. With his wife, one son (a doctor, who died in 1876), and one daughter, he remained in Paris during the siege and the Commune, and rendered conspicuous services to British residents, and to the wounded of both sides. He was made chevalier of the Legion of Honour in 1871, and knighted in 1872. He was afterwards appointed physician to the Hertford British Hospital, established by Sir R. Wallace, and had a considerable practice in Paris. He was a skilful physician, characterised by great sympathy and devotion to duty. He died on 13 May 1882 at his house in the Rue St.-Honoré; his widow survived him three months; he had a son and four daughters.

Cormack was much occupied in medical literature. In 1841 he started the 'Edinburgh Monthly Journal of Medical Science,' and conducted it ably until 1847. He established the 'London Journal of Medicine' in 1849, carrying it on till the end of 1852, when he was appointed editor of the 'Association Medical Journal' (now known as the 'British Medical Journal'). He resigned this post in September 1855. He translated four volumes of Trousseau's 'Clinical Lectures' (vols. ii–v.) for the New Sydenham Society. In 1876 he published a collection of his principal writings, including some valuable papers on cholera, diphtheria, and paralysis, under the title of 'Clinical Studies,' in two volumes.

[British Medical Journal, 20 May 1882, p. 761; Medical Times, 10 June 1882, p. 624; Lancet, 20 May 1882, p. 847.] G. T. B.

CORNBURY, Viscount (1710–1753). [See Hyde, Henry.]

CORNELISZ, LUCAS (1495–1552 ?), historical and portrait painter, was the third son of Cornelis Engelbrechtsen, one of the earliest Dutch painters, who was the master of Lucas van Leyden. He was born at Leyden in 1495, and became a pupil of his father, but finding the pursuit of art in his native city a precarious means of existence, he combined with it the business of a cook, and so obtained the cognomen of 'de Kok.' He painted well in oil and in distemper, and his designs are described by Van Mander as having been executed with care and much expression. But the struggle to maintain his wife and family by the practice of his art in Leyden was so severe that he resolved to come to England, where the fine arts had received much encouragement since the accession of Henry VIII. He is said by Sandrart to have arrived here soon after 1509, but the fact of his having brought with him a wife and seven or eight children renders it improbable that his arrival here took place earlier than about 1527. The return of Holbein to England in 1532 would materially affect the position of other artists, and it is probable that after a sojourn of five years Lucas departed, and then went to Italy, as conjectured by M. Eugène Müntz, who has proved that a certain Luca Cornelio, or Luca d'Olanda, was in the service of the court of Ferrara, and assisted in the manufactory of tapestry under Hercules II, between 1535 and 1547, for which he designed cartoons of the cities of the house of Este, of grotesques, and of the favourite horses of the duke. Nothing further is known of Lucas Cornelisz, but he is said to have died in 1552.

Van Mander mentions pictures by him, especially 'The Adulteress before Christ,' which existed at Leyden in his time; but many of his works are said to have been brought to England by persons who accompanied the Earl of Leicester when he went as governor to the Low Countries. The most important works of Lucas Cornelisz which remain in this country are the sixteen small portraits of the constables of Queenborough Castle, now at Penshurst, although almost all of them must be copies of earlier pictures, if not apocryphal. Five small heads of ladies—including those of Margaret, archduchess of Austria, and Elizabeth of Austria, queen of Denmark—in the collection at Hampton Court, and a portrait of John of Gaunt, duke of Lancaster, in the possession of the Duke of Beaufort, are also attributed to him.

The two elder brothers of Lucas Cornelisz were likewise artists. The eldest, Pieter Cornelisz Kunst, was a painter upon glass; the second, Cornelis Cornelisz Kunst, a painter of scriptural subjects, was born at Leyden in 1493, and died in 1544.

CORNELIUS À SANCTO PATRICIO (*fl.* 1650), Irish jesuit. [See Mahony, Cornelius.]

CORNELIUS, JOHN (1557–1594), jesuit, was a native of Bodmin, Cornwall. His parents were Irish, and, though living in the humblest station, are said to have sprung from

the illustrious family of the O'Mahons or O'Magans. His patron, Sir John Arundell of Lanherne, sent him to Oxford, where he was elected a Cornish fellow of Exeter College on 30 June 1575. He was expelled for popery by the royal commission on 3 Aug. 1578 (BOASE and COURTNEY, *Bibl. Cornubiensis*, iii. 1134; cf. DODD, *Church Hist.* ii. 74). Thereupon he proceeded to the English college at Rheims, and after staying there for some time, he entered the English college at Rome for his higher studies and theology on 1 April 1580 (FOLEY, *Records*, vi. 141). Having been ordained priest he left the college for England in 1583. He returned to his kind patron, Sir John Arundell, after whose death he became chaplain to his widow, Anne, daughter of Edward, earl of Derby, and relict of Charles, seventh lord Stourton. For ten years he laboured in maintaining the catholic faith not only by his admirable discourses, but by the exercise of the powers he was reputed to possess as an exorcist. It is reported that before he attained his thirtieth year his prayer, fasting, and the austerities he underwent in the expulsion of evil spirits made his hair grey in a few months. So great was his supposed power in driving evil spirits out of the bodies of the possessed that his fame was spread abroad among all the catholics of England. The expelled spirits, it is said, often went forth uttering terrible curses, and vociferating that they could by no means withstand the charity of the father, whose very approach sometimes put them to flight (FOLEY, *Records*, iii. 446 et seq.; GERARD, *Narrative of the Gunpowder Plot*, p. 17; MORUS, *Hist. Missionis Anglicanæ Soc. Jesu*, pp. 165–6; CHALLONER, *Missionary Priests*, ed. 1741, i. 306). At length he was apprehended at Lady Arundell's country seat, Chideock Castle, Dorsetshire, on 14 April 1594, by the sheriff of the county. At the same time Thomas Bosgrave, a Cornish gentleman, who was a kinsman of Sir John Arundell, and two servants of the family were taken into custody for aiding and assisting the priest. Cornelius was ordered to be sent to London, where he was examined by the lord treasurer, the Archbishop of Canterbury, and other members of the privy council, who strove to extort from him, first by words, and afterwards by the rack, the names of such catholics as had relieved him, but he refused to the last to make any discovery which might prejudice his benefactors. He was remanded to Dorchester for trial, where he and his three companions were found guilty, Cornelius of high treason for being a priest and coming into this kingdom and remaining here; Bosgrave and the servants of felony, for aiding Cornelius, knowing him to be a priest. They were executed at Dorchester on 4 July 1594. Cornelius had been admitted into the Society of Jesus at London shortly before his apprehension (TANNER, *Societas Jesu usque ad sanguinis et vitæ profusionem militans*, p. 29).

The 'Acts' of this martyr, written by Sir John Arundell's daughter Dorothy, who became a nun at Brussels, are among the archives of the jesuits at Rome (FOLEY, *Records*, iii. 437, 474). His portrait is at the Gesù there. A photograph of a sketch by Mr. Charles Weld is in Foley's 'Records.'

T. C.

CORNELYS, THERESA (1723–1797), of Carlisle House, Soho Square, born at Venice in 1723, was the daughter of an actor named Imer. At the age of seventeen she became the mistress of the senator Malipiero, and thirteen years later held the same relation to the margrave of Baireuth, at that time being married to a dancer of the name of Pompeati. For a time she had the direction of all the theatres in the Austrian Netherlands. When at Amsterdam as a singer she was known as Mme. Trenti, and took the name of Cornelis (or Cornelys) from that of a gentleman at Amsterdam, M. Cornelis de Rigerboos. As Mme. Pompeati she sang in Gluck's opera, 'La Caduta de' Giganti,' at the Haymarket, 7 Jan. 1746, and 'though nominally second woman, had such a masculine and violent manner of singing that few female symptoms were perceptible' (BURNEY, *History of Music*, iv. 453). Casanova speaks of her as being at Venice in 1753. She came to England in 1759 (*Home Office Papers*, 1770–1772, p. 139). On 26 Feb. 1761 she was advertised, as Madame Pompeati, to take part at the 'Music Room in Dean Street,' for the benefit of a Signor Siprutini, and again on 29 Feb. 1764 at the chapel of the Lock Hospital in Dr. Arne's oratorio of 'Judith.' In 1760 Mrs. Cornelys purchased Carlisle House in Soho Square, and first figured as a manager of public assemblies. The two houses Nos. 21A and 21B on the east side of the square, at the corner of Sutton Street, stand upon the site of the mansion, which was built by Charles Howard, third earl of Carlisle, between 1686 and 1690. The third and fourth meetings of 'The Society,' as the ladies and gentlemen who subscribed to the balls organised by Mrs. Cor-

nelys called themselves, are noticed in the 'Public Advertiser,' 30 Dec. 1760 and 15 Jan. 1761. She showed herself well versed in the art of advertising. In February 1763 she gave a ball 'to the upper servants of persons of fashion, as a token of the sense she had of obligations to the nobility and gentry, for their generous subscription to her assembly.' The assembly-rooms became highly successful, and the eleventh meeting was advertised to take place on 5 May 1763. She endeavoured to preserve orderly and respectable behaviour by appropriate regulations. On Friday, 24 Feb. 1764, she first added to the inducement of a ball a 'grand concert of vocal and instrumental music,' and on 6 April of the same year it was announced to the 'subscribers to the society in Soho Square that the first meeting for the morning subscription music will be held this day.' She became involved in quarrels, and appears to have been threatened with the terrors of the Alien Act. This did not prevent her from enlarging and redecorating her apartments. 'But,' says Walpole, writing to George Montagu, 16 Dec. 1764, 'Almack's room [opened February 1765], which is to be ninety feet long, proposes to swallow up both hers, as easily as Moses's rod gobbled down those of the magicians' (Cunningham's ed. iv. 302). Bach and Abel directed her concerts in 1766, and the 'society nights' were so well attended that she was obliged to make a new door in Soho Square. In April 1768 her assembly included some of the royal family and the Prince of Monaco, and in the following August the King of Denmark and suite visited Carlisle House. A gallery for the dancing of 'cotillons' and 'allemandes' and a new range of rooms were opened in January 1769, and in the same year there was a festival and grand concert, under the direction of Guadagni, on 6 June, with illuminations, in honour of the king's birthday. This was the most flourishing period of Carlisle House. At a masked ball, given on 27 Feb. 1770, by the gentlemen of the 'Tuesday Night's Club,' the Duke of Gloucester and half the peerage were present. Miss Monckton, afterwards known as 'Old Lady Cork,' appeared in the character of an Indian sultana, wearing 30,000*l.* worth of jewellery. With a view to future opposition, a portion of the profits of the first harmonic meeting, in 1771, was devoted to the poor of the parish. The proprietors of the Italian Opera House considered the 'harmonic meetings' an infringement of their privileges and as forming a dangerous rival to their attractions. She and the other organisers were fined at Bow Street, and an indictment brought before the grand jury 24 Feb. 1771 for keeping 'a common disorderly house.' The opening of the Pantheon and the institution of 'The Coterie,' by certain of the members of 'The Society of Carlisle House,' were also fatal blows. The list of bankrupts of the 'London Gazette' (November 1772) includes the name of 'Teresa Cornelys, dealer,' and the following month Carlisle House and its contents were advertised to be sold by auction, by order of the assignees. Goldsmith's 'Threnodia Augustalis' for the death of the Princess Dowager of Wales, with music by Vento, was given at the rooms 20 Feb. 1772. In 1774 Mrs. Cornelys kept an hotel at Southampton; and on 20 June 1775 a grand regatta took place on the Thames, on which occasion a fête was given at Ranelagh. Mrs. Cornelys had the sole management of the decorations and supper, for which she was allowed seven hundred guineas (Malcolm, *London during the Eighteenth Century*, 1808, 416–18). A Mrs. Cornelys acted in various Irish theatres between 1774 and 1781, but it is doubtful whether she can be identified with Theresa Cornelys, who was able in 1776 to reobtain temporary possession of Carlisle House. She appears to have had no further connection with Carlisle House after that date. It was pulled down in 1788 and the present houses built on the site. St. Patrick's (Roman catholic) Chapel (consecrated 1792) in Sutton Street was the old banqueting- or ball-room; the entrance for carriages and chairs was at the end of the chapel, in what is now Messrs. Crosse & Blackwell's cooperage yard. A 'Chinese bridge' connected the house in the square with the banqueting-room.

The notorious 'White House,' also in Soho Square, has frequently been confused with Carlisle House. 'She has been the Heidegger of the age, and presided over our diversions,' says Walpole; she 'drew in both righteous and ungodly . . . and made her house a fairy palace for balls, concerts, and masquerades' (Letter to Sir H. Mann, 22 Feb. 1771, Cunningham's ed. v. 283). Casanova, who saw her in prosperous days, refers to her as possessing a country house at Hammersmith, and, 'outre les immeubles, trois secrétaires, trente-deux domestiques, six chevaux, une meute et une dame de compagnie' (*Mémoires*, v. 426). A contemporary caricature, 'Lady Fashion's Secretary's Office, a Peticoat recommendation the best,' represents her as a dignified-looking, middle-aged dame, with somewhat marked features.

She remained in obscurity many years under the name of Mrs. Smith. Some time before her death she was a seller of asses' milk at Knightsbridge, and tried to get up a

series of public breakfasts under royal patronage. This final effort had no success, and she died in the Fleet Prison 19 Aug. 1797, at the age of seventy-four (*Gent. Mag.* 1797, pt. ii. p. 890). She had a son and a daughter. The former, 'le petit Aranda' of Casanova, took the name of Altorf, and was tutor for some years to 'the late Earl of Pomfret, who . . . held him in esteem for his talents, attainments, and moral character' (J. Taylor, *Records of my Life*, i. 266). He died before his mother, for whom he had provided during his life. Sophie, the daughter, was highly educated at the Roman catholic nunnery at Hammersmith. 'An artful hypocrite' (*ib.* i. 271), she gave out, after her mother's fall, that she was of noble parentage. Casanova, on the other hand, claims the paternity. Charles Butler made her an allowance, and she subsequently lived with the Duchess of Newcastle in Lincolnshire, and with Lady Spencer (who left her an annuity) at Richmond. She took the name of Miss Williams, and was employed by the Princess Augusta as a kind of almoner.

[Newspaper cuttings and manuscript materials brought together by the late Dr. E. F. Rimbault for a History of Soho, and obligingly lent by Messrs. Dulau & Co. These collections were also used in the privately printed pamphlet, Mrs. Cornelys' Entertainments at Carlisle House [by T. Mackinlay, of Dalmaine & Co., 1840]. The facts for the early career of Mrs. Cornelys are given by Casanova, of unsavoury memory. The statements made in his Mémoires respecting her (see Brussels edition, 1881, i. 72, 130, ii. 305–6, iii. 311–21, 322–51, v. 426, &c.) are corroborated by notices derived from other sources. Thus some remarkable and hitherto unnoticed proofs of Casanova's veracity are furnished in addition to those supplied by F. W. Barthold, Die geschichtlichen Persönlichkeiten in J. Casanova's Memoiren, Berlin, 1846.] H. R. T.

CORNER, GEORGE RICHARD (1801–1863), antiquary, born in 1801 in the parish of Christ Church, Blackfriars Road, London, was the eldest of the six children of Richard Corner, a solicitor in Southwark, by Maria, daughter of Mr. James Brierley. He was educated at Gordon House, Kentish Town, and followed his father's profession with success. About 1835 he was appointed vestry clerk of the parish of St. Olave, Southwark; during the prevalence of the cholera in that parish he displayed great activity. On 28 Nov. 1833 Corner was elected a fellow of the Society of Antiquaries, and from this time forward he published numerous archæological papers, many of them connected with the history of Southwark. His first communication to the Society of Antiquaries was made on 9 Jan. 1834, when he pointed out the distinction, not previously recognised, between the three manors of Southwark (see the memoir in the *Archæologia*, xxv. 620). He contributed other papers to the 'Archæologia' from 1835 to 1860.

Corner was one of the original members of the Numismatic Society of London, founded 1836 (see list of members in *Numismatic Journal*), but apparently did not make a special study of coins. He was also a member of the British Archæological Association from the time of its establishment in 1843; he exhibited numerous antiquities before this society, and contributed accounts of them to its journal (a list is given in *Journ. Brit. Arch. Assoc.* xx. 184–6). He took much interest in the Archæological Society of Surrey, and contributed to its 'Proceedings,' as also to the 'Sussex Archæological Collections,' vol. vi., the 'South London Journal' (1857), and the 'Collectanea Topographica et Genealogica,' vols. v. and vii. He was also an occasional contributor to the 'Gentleman's Magazine.' Corner published separately: 1. 'A Concise Account of the Local Government of the Borough of Southwark,' Southwark, 1836, 8vo. 2. 'The Rental of St. Olave and St. John, Southwark,' 1838, 4to; a second edit. in 1851. Corner is described as a man of social habits and of kind and agreeable manners. Towards the close of his life 'he fell into difficulties occasioned . . . by family misfortunes.' He died suddenly on 31 Oct. 1863, at Queen's Row, Camberwell, and was buried in Nunhead cemetery, Peckham. Corner married in 1828 Sarah, youngest daughter of Timothy Leach of Clapham, by whom he had two sons and two daughters who survived him. His brother, Arthur Bloxham Corner (*d.* 17 Jan. 1861), was her majesty's coroner and attorney in the court of Queen's Bench. Another brother, Richard James Corner, was appointed chief justice of her majesty's settlement on the Gold Coast, and was joint author (with A. B. Corner) of Corner's 'Crown Practice,' 1844.

[Gent. Mag. xv. 3rd ser. (1863), 808, xvi. 3rd ser. (1864), 528–30; Journal of British Archæological Association, xx. 181–6; Proceedings Soc. Antiquaries, ii. 2nd ser. (1864), 392.] W. W.

CORNER, JOHN (*fl.* 1788–1825), engraver, is best known by a publication entitled 'Portraits of Celebrated Painters.' This work was intended to be a serial, and the first part was published in 1816. The plates combined a portrait of each painter with his most celebrated work, accompanied by a memoir; but as it did not command any sale it only reached twenty-five portraits. Corner was largely employed as an engraver, especially for por-

traits, among which were: Charles Macklin, actor, from a model by Lochée; Mr. Merry as Calista, after De Wilde, for Bell's 'British Theatre;' W. T. Lewis, actor, after M. Brown; John O'Keefe, poet, after W. Lawranson, in the 'European Magazine,' 1788; Sir Godfrey Kneller; Simon Vouet, painter, after Vandyck and others. He also engraved 'Apparent Difficulties,' from a print by E. Penny. The date of his death is unknown.

CORNETO, ADRIAN. [See CASTELLO, ADRIAN DE.]

CORNEWALL, CHARLES (1669–1718), vice-admiral, son of Robert Cornewall of Berrington, Herefordshire, and uncle of Captain James Cornewall [q. v.], was baptised 9 Aug. 1669. He entered the navy in 1683; on 19 Sept. 1692 was appointed to the command of the Portsmouth sloop; and in 1693 commanded the Adventure of 44 guns, and accompanied Admiral Russell to the Mediterranean, where he remained till 1696. On 18 Jan. 1695–6 he shared in the capture of the two French ships Trident and Content. Captain Killigrew of the Plymouth, the senior officer present, was slain in the action, and Cornewall was promoted to the command of the Plymouth. In March 1701 he was appointed to the Shrewsbury, but resigned the command a few months later in consequence of the sudden death of his father, whose concerns, he wrote on 25 Sept. 1701, 'are like to prove more troublesome and tedious than I expected, though when settled may prove of very considerable advantage to my children.' In 1702 Cornewall commanded the Exeter, and in 1705 relieved Captain Norris in the command of the Oxford. In her he again went out to the Mediterranean, where he remained for the next two years, under the command of Sir Clowdisley Shovell, and afterwards of Sir Thomas Dilkes, having for some time, in the autumn of 1707, the charge of a detached squadron on the coast of Naples. In March 1708 he returned to England, sitting in parliament for Bewdley 1709–10, and for Weobley from 1715 till death. In December 1709 he was appointed to command in the Downs and before Dunkirk; and in October 1710 left England in command of the Dreadnought and in charge of the trade for the Levant. This he conducted safely to Smyrna, and by December 1711 was again in England. From the accession of George I he was comptroller of storekeeper's accounts at the admiralty till promoted to be rear-admiral on 16 June 1716. In the following October he was appointed commander-in-chief in the Mediterranean, with special instructions to take such measures as were requisite to restrain the aggressions of the Sallee corsairs, and to enter into a treaty with the Emperor of Morocco. In this work he was occupied for the next year, residing at Gibraltar, where an angry quarrel sprang up between him and the governor, arising out of the soldiers' unwillingness to admit the admiral's authority even in matters relating to the ships in the port, and gradually increasing in bitterness. The blame of this seems to have lain entirely with the governor, who said publicly, at his own table, that 'either Mr. Cornewall or himself was the vilest fellow upon earth,' and permitted, if he did not encourage, his officers to 'drink damnation to the admiral and the negotiation he was conducting.' Cornewall may possibly have also used strong language, for he seems to have been a man of hot temper; but the correspondence between the two ended in the expression of Cornewall's determination to refer the matter to the king or to the speaker of the House of Commons. He seems to have been prevented doing so by being called away from Gibraltar on more active service. He had already, in March 1717–8, been advanced to the rank of vice-admiral, and in June 1718 he hoisted his flag on board the Shrewsbury, as second in command of the fleet under Sir George Byng, in which capacity he had an honourable share in the victory off Cape Passaro on 31 July [see BYNG, GEORGE; BALCHEN, SIR JOHN]. He afterwards shifted his flag to his former ship, the Argyle, and convoyed the prizes to Port Mahon, whence he proceeded towards England. His health had been very feeble for some time; and putting into Lisbon on the homeward passage, he died there on 7 Oct. 1718. He left, among other children, a son Jacobs, the father of Charles Wolfran Cornwall [q. v.]; Wolfran was the name of Cornewall's uncle, a captain in the navy, who died in 1719. Cornewall's younger brother, Frederick (*d.* 1748), vicar of Bromfield for forty-six years, was father of Captain Frederick Cornewall, R.N., father of Folliott H. W. Cornewall [q. v.]

Till May 1709 Cornewall invariably spelled his name in this manner, as the collateral branches of his family still do. At that date he dropped the *e*. The change probably originated in a desire to distinguish between the different branches of the family.

[Captain's Letters, and Home Office Records (Admiralty), vol. xlvii., in the Public Record Office; Charnock's Biog. Nav. ii. 410; Burke's Landed Gentry.] J. K. L.

CORNEWALL, FOLLIOTT HERBERT WALKER, D.D. (1754–1831), bishop of Worcester, was the second son of Frederick Cornewall of Delbury (1706–1788), captain in the royal navy, by Mary, daughter of Francis Herbert of Ludlow, first cousin of the first Earl of Powis. Charles Cornewall [q. v.] was his granduncle. His brother Frederick (*d.* 1783) was M.P. for Ludlow in 1780. He was born in 1754 and educated for the church, in which, having graduated B.A. at St. John's College, Cambridge, in 1777, he took orders. He proceeded M.A. in 1780, and the same year, through the interest of his second cousin, Charles Wolfran Cornwall [q. v.], speaker of the House of Commons, he obtained the post of chaplain to that assembly. He was preferred to a canonry at Windsor in 1784 and appointed master of Wigston's Hospital, Leicester, in 1790, dean of Canterbury in Jan. 1793, bishop of Bristol in 1797. He exchanged this see for that of Hereford in 1803, and in 1808 he was translated to the see of Worcester. He died on 5 Sept. 1831 at Hartlebury, and was buried in the family vault at Delbury, Shropshire. Cornewall married Anne, eldest daughter of the hon. and rev. George Hamilton, canon of Windsor, by whom he had issue two sons and one daughter. He published 'A Sermon preached before the House of Commons on 30 Jan. 1782,' and also 'A Fast Sermon preached before the House of Lords in 1798.'

[Burke's Royal Families, ii. cxcix; Burke's Landed Gentry (art. 'Cornewalls of Delbury'); Gent. Mag. (1831), p. 370.] J. M. R.

CORNEWALL, JAMES (1699–1744), captain in the navy, third son of Henry Cornewall of Bradwardine, near Hereford, nephew of Vice-admiral Charles Cornewall [q. v.], was, on 3 April 1724, promoted to be captain of the Sheerness frigate, in which for the next four years he was employed on the coast of North America, and principally at Boston, in protecting the legitimate trade, and in suppressing piracy. His correspondence at this time throws a curious light on the state of colonial navigation, and recalls to mind the opening chapters of Fenimore Cooper's 'Water Witch' and 'Red Rover.' He returned to England in August 1728, and in December 1732 was appointed to the Greyhound, a small frigate, in which, during the following summer, he was employed on the coast of Morocco, where, in the course of 1733, he established friendly relations with the Sallee corsairs and the bashaw of Tetuan. He returned to England and paid off in the following March, and in June commissioned the Deptford of 50 guns, which for the next two years he commanded in the Channel and on the coast of Portugal under Sir John Norris. Early in 1737 he commissioned the Greenwich for service on the coast of Africa, where his duties would seem to have been regulating the trade with the negroes, as well for other commodities as for slaves. Some rumour afterwards reached the admiralty that he had himself been guilty of carrying slaves to Barbadoes, but it seems to have been quite unsupported by evidence, and led to nothing but a caution addressed to Anson, who succeeded him (*Admiralty Minute*, 7 April 1738). In 1739 Cornewall was appointed to the St. Albans of 50 guns, in which during the months of September and October, in company with the Weymouth, he cruised off the Azores in quest of homeward-bound Spanish ships. It was afterwards proposed to send him, in command of a small squadron, into the China seas and Western Pacific, to cooperate with a similar squadron sent round Cape Horn into the Eastern Pacific [see ANSON, GEORGE, LORD]; but the project fell through, on account of the strain of the West Indian expedition. In 1741 Cornewall was appointed to the Bedford, in which, in the following year, he accompanied Vice-admiral Mathews to the Mediterranean. There, in 1743, he was transferred to the Marlborough of 90 guns, which in the action off Toulon was next astern of the Namur, bearing Mathews's flag [see MATHEWS, THOMAS], and in support of the Namur was closely engaged with the Real Felipe and her seconds (11 Feb. 1743–4). It was on these two ships that the brunt of the fighting fell; and when the Namur shot up into the wind, the Marlborough, left to herself, sustained heavy loss. She was completely dismasted, was reduced to a wreck, had 43 killed and 120 wounded. Among the former was Cornewall, whose legs were swept off by a chain shot. A large and ornate monument to his memory was erected at the public expense in Westminster Abbey. He was M.P. for Weobley 1732–4 and 1737–41.

Cornewall's cousin, Frederick Cornewall, was first lieutenant of the Marlborough, and on the captain's death succeeded to the command, until his right arm was shot off. He was promoted to post rank on the same day, commanded the Revenge in the action off Minorca in 1756, and died in 1786.

[Official Letters, &c., in the Public Record Office; Minutes of the Court-martial on Admiral Mathews; Charnock's Biog. Nav. iv. 130, iii. 263, v. 288; Collins's Baronetage (1741), vol. iii. pt. ii. p. 580.] J. K. L.

CORNEY, BOLTON (1784–1870), critic and antiquary, was born at Greenwich on

28 April 1784, and baptised in the parish church of St. Alphage. His son, writing in 1881, says: 'Owing to his exceeding deafness and consequent reticent habits, I know very little of his early history, and I have never known any relations on his side, as he married so late in life' (*Notes and Queries*, 6th ser. iv. 291). It has been stated that he served for some time in the revenue service, but this is doubtful. He obtained in 1803 a commission as ensign in the 28th regiment of foot, and in 1804 a medal for good marksmanship inscribed 'Royal Greenwich Volunteers.' The middle portion of his life was spent at Greenwich, where he held the post of first clerk in the steward's department at the Royal Hospital (*Navy List*, 1840, p. 138). From this he did not retire till 1845 or 1846, when he married a daughter of Captain (afterwards Admiral) Richard Pridham of Plymouth. He then removed to Barnes in Surrey, where he continued to reside till his death on 30 Aug. 1870 (*Notes and Queries*, 4th ser. vi. 206). He left an only son, Bolton Glanvil Corney, born in 1851, who became a member of the Royal College of Surgeons, and was appointed government medical officer at Fiji.

In early life he formed an attachment to literature, and after his removal to Barnes he plunged more deeply than ever into his bibliophilic researches, and lived and died literally in the midst of his books. The walls, not only of his study, but of his bedroom, were lined from floor to ceiling with laden bookshelves, and the carpets were hidden by masses of books piled four and five high on the floor (*Athenæum*, 17 June 1871, p. 754). He was a member of the council of the Shakspere Society and the Camden Society, and one of the auditors of the Royal Literary Fund. In all matters relating to the book department of the British Museum he took a lively interest. He engaged in several warm controversies with Mr. (afterwards Sir Anthony) Panizzi, and in 1856 he sent a protest to Lord Palmerston against that gentleman's appointment as principal librarian (Fagan, *Life of Panizzi*, ii. 12, 13; *British Museum Reports and Minutes of Evidence*, 1850, pp. 400–3; *Notes and Queries*, 6th ser. iv. 375).

His works are: 1. 'Researches and Conjectures on the Bayeux Tapestry' [Greenwich, 1836], 12mo, Lond. 1838, 8vo. He contended that the tapestry was not executed till 1205, and his view was adopted by Dr. Lingard (J. C. Bruce, *Bayeux Tapestry elucidated*, pp. 11, 163). Edouard Lambert published a reply to Corney under the title of 'Réfutation des objections faites contre l'antiquité de la Tapisserie de Bayeux,' Bayeux, 1841, 8vo. 2. 'Curiosities of Literature by I. D'Israeli illustrated,' Greenwich [1837], 12mo. To this caustic criticism D'Israeli replied in 'The Illustrator illustrated' [1838], whereupon Corney brought out a second edition of his work, 'revised and acuminated, to which are added, Ideas on Controversy, deduced from the practice of a Veteran; and adapted to the meanest capacity,' Lond. 1838, 12mo. One hundred copies of the 'Ideas on Controversy' were separately printed. 3. 'On the new General Biographical Dictionary: a Specimen of Amateur Criticism, in letters to Mr. Sylvanus Urban,' Lond. 1839, 8vo, privately printed. In these letters, which originally appeared in the 'Gentleman's Magazine,' he severely criticised the earlier portions of the well-known biographical compilation published under the name of the Rev. Hugh James Rose. 4. 'Comments on the Evidence of Antonio Panizzi, Esq., before the Select Committee of the House of Commons on the British Museum, A.D. 1860;' privately printed. 5. 'The Sonnets of William Shakspere: a Critical Disquisition suggested by a recent discovery' (by V. E. Philarète Chasles, relating to the inscription which precedes the sonnets in the edition of 1609) [Lond. 1862], 8vo; privately printed. 6. 'An Argument on the assumed Birthday of Shakspere: reduced to shape, 1864;' privately printed.

He edited, from a manuscript in his own possession, 'An Essay on Landscape Gardening,' by Sir John Dalrymple, one of the barons of the exchequer in Scotland, Greenwich, 1823, 12mo (*Men of the Time*, 7th edit.); 'The Seasons,' by James Thomson, with illustrations designed by the Etching Club, 1842; Goldsmith's 'Poetical Works, illustrated, with a Memoir,' in 1846; 'The Voyage of Sir Henry Middleton to Bantam and the Maluco Islands in 1604' (for the Hakluyt Society), 1855; 'Of the Conduct of the Understanding, by John Locke,' in 1859. He was a frequent contributor to 'Notes and Queries' and the 'Athenæum;' and he made special collections concerning Caxton, which he placed at the disposal of Mr. Blades (Blades, *Life and Typography of William Caxton*, vol. i. pref. p. xi and pp. 282–5, ii. 259).

[Authorities cited above; also Add. MS. 20774, ff. 40, 45; Cat. of Printed Books in Brit. Mus.]

T. C.

CORNHILL, WILLIAM of (*d.* 1223), bishop of Coventry and Lichfield, belonged to a family several members of which were high in the service of Henry II and his sons. Their name indicates their London origin, and the first mentioned, Gervase of Cornhill, was sheriff of London early in Henry II's reign. He afterwards became an itinerant justice,

and was sheriff of Surrey and Kent for many years. He left three sons, Henry, Reginald, and Ralph, of whom Reginald was the most conspicuous. This Reginald also was sheriff of Kent for a very long period, the principal interests of the family being now centred in that county. He was a close friend of King John, and hated as one of the cruellest of his evil counsellors. It was under his auspices that Cornhill, who was probably his nephew, but possibly his son, first entered into public life. About 1204 Cornhill's name begins to appear frequently in the records as a royal clerk and an officer of the exchequer. In that year he received from King John the grant of some houses in London (*Rotuli Chartarum*, i. 123); a little later the justiciar Fitz Peter was ordered to furnish him with a revenue of twenty marks out of the first vacant benefice in the king's patronage (*Rot. de Libertate*, 69, 80), and in September he received a grant of twenty acres in the wood of Tilgholt in Kent (*Rot. Chart.* 137). In 1205 the king presented him to the rectory of Maidstone (*ib.* 157), and made him custos of the vacant bishopric of Winchester and abbey of Malmesbury (*Rot. Lit. Claus.* i. 23; *Rot. Lit. Pat.* i. 57). In 1206 he was put in charge of the temporalities of Lincoln (*ib.* 65). In 1207 the king made him archdeacon of Huntingdon (*ib.* 73). His present to the king of five hundred marks was doubtless the price paid for the preferment (*Rot. de Finibus*, 412). The king's quarrel with the pope did not shake Cornhill's fidelity. In 1208 he acted as a justiciar, and remained during the next two years in constant attendance on the king. In 1208 he was also appointed guardian of the lands and goods belonging to clerks in the diocese of Lincoln, which had been seized by the crown on their owners refusing to celebrate divine service during the interdict (*Fœdera*, Record ed. i. 100). In 1213 he was presented to the churches of Somerton and Fereby; was appointed jointly with his cousin or brother, the younger Reginald of Cornhill, royal chamberlain (*Rot. Lit. Pat.* 95, 96), and in return for the payment of two hundred marks received the custody of the estates of two rich minors (*Rot. de Finibus*, 466, 467). In August 1214 John's influence succeeded in obtaining his election as bishop both by the monks of Coventry and the canons of Lichfield (*Rot. Lit. Claus.* i. 196 *b*; *Rot. Chart.* 198 *b*), a see that had been vacant several years owing to a disputed election. After some delay he was consecrated by Langton at Reading on 25 Jan. 1215 (*An. Wav.* in *An. Mon.* ii. 282; Walt. Cov. ii. 218), the king making him a large grant of venison from Windsor Forest towards his consecration feast (*Rot. Lit. Claus.* 182 *b*). The fidelity which had adhered to John during the troubles of the interdict was equally unshaken by the revolt of the barons. Cornhill remained actively on the king's side to the very last; went on unsuccessful missions to persuade the Londoners and the Welsh princes to espouse his master's cause (*Fœdera*, Record ed. i. 121,127); accompanied him to Runnymede (Matt. Paris, ii. 589, ed. Luard), and was named in the great charter as one of the magnates by whose advice it was issued. In the next reign he continued steadfast to John's son, and was among the four bishops present when the legate Gualo crowned Henry III at Gloucester (*An. Wav.* in *An. Mon.* ii. 286). Of his acts as bishop little is recorded. He made a grant, confirmed by a bull of Honorius III, to the canons of Lichfield of the right of electing their own dean, an appointment previously in the hands of the bishop (Thomas Chesterfield in *Anglia Sacra*, i. 436–7), and was further their benefactor by his gift of the impropriations of Hope, Tideswell, Earnley, Cannock, and Rugeley (*Anglia Sacra*, i. 446). In September 1221 he was deprived of speech by a sudden stroke of paralysis in the midst of an ordination service (*An. Wav.* ii. 295; *An. Dunstap.* iii. 76, which gives the date as 1222). He died on 19 Aug. 1223, and was buried in his cathedral. His body was discovered in 1662, and an inscribed plate found on the coffin (Willis, *Cathedrals*, ii. 386). His kinsfolk continued to hold prominent positions. One of the family, Henry Cornhill, dean of St. Paul's, distinguished himself by leading the opposition to the papal collector, Master Martin, in 1244 (Matt. Paris, iv. 374, ed. Luard; Newcourt, *Repert. Eccles.* i. 36).

[Rotuli Clausarum, Rotuli Chartarum, Rotuli Literarum Patentium, Rymer's Fœdera, vol. i., and Rotuli de Finibus, all in Record Commission's editions; Matthew Paris, ed. Luard (Rolls Series); Annales Monastici (Rolls Series); Anglia Sacra; Foss's Judges of England, ii. 53, 54; Madox's Hist. of Exchequer.] T. F. T.

CORNISH, HENRY (*d.* 1685), alderman of London, executed under James II, was a well-to-do merchant of London, and alderman of Vintry ward from 24 Sept. 1680 till the surrender of the city's charter in Oct. 1683. In the 'London Directory' for 1677 he is described as a 'factor' residing in 'Cateaton Street, near Blackwelhall Gate.' He was inclined to presbyterianism in religion, and in politics was a whig. On 24 June 1680 he was chosen sheriff of London in conjunction with Slingsby Bethel [q. v.] It was afterwards discovered that Cornish and his colleague had not taken the oath according to the Corporation Act, and the election was

declared void. A second election was fixed for 17 July, when Cornish and Bethel took the oath under the Corporation Act, and claimed the appointment. The court, which regarded the city's choice with disgust, resolved to force on the city two sheriffs of its own choosing named Box and Nicolson. The latter demanded a poll, which lasted, amid great excitement, until 22 July, and on the 29th following Cornish and Bethel were declared elected. Cornish headed the poll with 2,400 votes. 'He was,' says Burnet, writing of these events, 'a plain, warm, honest man, and lived very nobly all this year.' On 14 May 1681 Cornish, with other members of the corporation, went to Windsor to present a petition to the king for the summoning of parliament, but Charles declined to receive the deputation. Cornish appeared as a witness for the defence at the trial of Fitzharris, a papist informer (9 June 1681); and this conduct, which seems to have been due to a misconception, brought him into no little temporary odium. On 18 Jan. 1681–2 he was one of the five aldermen on the committee of defence 'against the quo warranto brought against the charter of the city.' On 3 July 1682 proceedings were taken against him by the court for rioting and abetting riots in the city on the occasion of the election of sheriffs in the preceding June, when the lord mayor, a friend of the court, had been roughly handled. After scandalous delay, on 8 May 1683, Cornish was convicted, and on 26 May was fined a thousand marks (the account of the trial is printed in Howell's 'State Trials,' ix. 187–293). In October 1682 the city whigs desired to choose Cornish as lord mayor; three candidates were nominated for the office, but by the wholesale rejection of votes Cornish was defeated. He polled only forty-five votes below the successful candidate, although he stood at the bottom of the poll. John Rumsey, a fellow arrested on suspicion of complicity in the alleged Rye House plot in 1683, was aware of Cornish's unpopularity with the authorities, and offered to produce evidence implicating the alderman in the conspiracy. The offer was not accepted, because no other testimony against Cornish was forthcoming. But Cornish was narrowly watched by the agents of the court, and since he proved himself no more conciliatory to James II than to his brother, it was deemed advisable in 1685 to remove him. Goodenough, an attorney whom Cornish had made his enemy by declining to make him his deputy-sheriff in 1680, arranged with Rumsey to corroborate the false testimony with regard to the Rye House plot, and to add evidence proving an attachment for the Duke of Monmouth. In the middle of October 1685 Cornish was arrested suddenly, and committed to Newgate on a vague charge of high treason. The trial took place at the Old Bailey on Monday, 19 Oct.; Rumsey and Goodenough gave evidence, and Cornish was convicted and condemned to death. Benjamin Calamy attended him in prison. Four days later he was executed in Cheapside, at the corner of King Street, within sight of his own house. The indignation which he displayed in his speech from the scaffold led his enemies to state that he died drunk. But William Penn, who witnessed the execution, declared that Cornish only showed the honest resentment natural to an outraged man (Burnet). After his body had been cut down and quartered it was delivered up to the relatives and buried in the church of St. Lawrence by the Guildhall. On 30 Jan. 1688–9 an act of parliament was passed reversing the attainder of Cornish.

An account of Cornish's trial appeared in 1685; his last speech in the press-yard of Newgate was issued, together with the last words of Colonel Rumbold. 'Remarks on the Tryal of Henry Cornish,' an attack upon the judicial procedure at the trial, was written by Sir John Hawles, solicitor-general under William III, and was several times published.

CORNISH, JOSEPH (1750–1823), dissenting writer, youngest of seven children of Joseph Cornish, woollen-dresser (*d.* 1776), by his second wife, Honour (*d.* 1769), was born at Taunton on 16 Dec. 1750. His family was presbyterian, and two of his father's eight brothers were in the ministry of that body, John at Leather Lane, London, and James at Dulverton, Somersetshire. Cornish, having received a classical grounding under a clergyman named Patch, and Glass, a churchman not in orders, became in 1765 one of the first pupils of Joshua Toulmin (afterwards D.D.), a learned baptist divine. Toulmin gained him admission (September 1767) as a foundation student in Coward's Academy, Hoxton. The divinity tutor was Samuel Morton Savage, a moderate Calvinist, his coadjutors being Andrew Kippis and Abraham Rees, both Arians. Cornish became an author shortly before leaving the academy, his 'Address to Protestant Dissenters' being issued early in 1772. As a student he was much noticed by Thomas Amory, D.D. (1701–1774) [q. v.], to whose ministry at Taunton his parents had been attached, and who recom-

mended him to a small presbyterian congregation at Colyton, Devonshire, vacant for four years. Though he had a unanimous call to Epsom, he preferred Colyton, as being nearer to his father's residence, and began his ministry there in July 1772. At the suggestion of Philip Furneaux, D.D. (1726–1783) [q. v.], he offered himself in the same year as a candidate for the afternoon lectureship at Salters' Hall, in succession to Hugh Farmer (1714–1787) [q. v.], but was unsuccessful. He received presbyterian ordination at Taunton on 11 May 1773. His stipend at Colyton, including endowment, averaged no more than 40*l.*, but he boarded with one of his leading hearers for under 20*l.* a year, and always found it possible to 'spare something for charitable purposes.' Late in 1781 he had a unanimous call to Tewkesbury; his regard for his Colyton friends led him, after some hesitation, to resist the temptation of a larger income. In the same way he declined overtures from Banbury in 1792. Ten years before this he had opened a classical school, which he taught in the gallery of his meeting-house till he was able at Christmas 1796 to buy a house and take boarders. His school, which he continued in one shape or another till Christmas 1819, was very successful, and not confined to dissenters. His father's business had been ruined by the American war, and some time before his death he had made a composition with his creditors. As soon as his savings enabled him to do so, Cornish honoured his father's memory by paying every creditor in full. Cornish while at Hoxton Academy adopted what he calls the 'very high Arian scheme' associated with the name of Samuel Clarke (1675–1729) [q. v.], and to this he adhered through life. Under his preaching his congregation grew for a time, but eventually declined. On 28 April 1814 four neighbouring ministers addressed to him a curious letter, suggesting that he should retire in favour of a Calvinistic successor. This he was not disposed to do, and a new meeting-house was built for the Calvinistic dissenters. Cornish continued to discharge his ministerial duties till August 1823, when he was attacked by illness. He assisted at the Lord's supper on 5 Oct., and died on 9 Oct. 1823. He was buried at Colyton on 17 Oct.; a marble tablet to his memory was placed in his meeting-house. He never married. Among his benefactions was a sum of 400*l.* given to the London presbyterian fund.

As a writer Cornish is a good specimen of the class of men to whom dissent meant religious liberty rather than sectarian organisation or theological system. His breviates of nonconformist history are pointed and telling. His 'Life of Thomas Firmin' [q. v.] is an improvement on the earlier biography, but it was set aside by the unitarians 'because it contained some apology for Mr. Firmin's continuing in the church.' He published: 1. 'A Serious and Earnest Address to Protestant Dissenters,' 1772, 12mo (went through three large editions). 2. 'A Brief and Impartial History of the Puritans,' 1772, 12mo. 3. 'A Blow at the Root of all Priestly Claims,' 1775, 8vo. 4. 'A Letter to the Venerable Bishop of Carlisle,' &c., 1777, 8vo (in reply to Bishop Edmund Law, on subscription). 5. 'The Life of Mr. Thomas Firmin, citizen of London,' 1780, 12mo (preface acknowledges the assistance of Kippis and Bretland). 6. 'An Attempt to display the Importance of Classical Learning,' &c., 1783, 12mo. 7. 'The Miseries of War,' &c., 1784, 12mo (a thanksgiving sermon on 29 July). 8. 'A Brief Treatise on the Divine Manifestations to Mankind in general, and to some in particular,' Taunton, 1787, 12mo. 9. 'A Vindication of the Doctrine of the Pre-existence of Christ,' Taunton, 1789, 12mo. 10. 'Evangelical Motives to Holiness,' Taunton, 1790, 12mo. 11. 'A Brief History of Nonconformity,' &c., 1797, 12mo (a rewritten issue of No. 2, revised by Samuel Palmer of the 'Nonconformist's Memorial'). Cornish projected a 'Life of John Lilburne,' but the work, though announced, was never published. He wrote in the 'Monthly Repository' (1819, p. 77 sq.) 'On the Decline of Presbyterian Congregations,' and some short pieces in later volumes, including a letter (September 1798) to Thomas Williams, imprisoned for selling Paine's 'Age of Reason.' Cornish sent Williams five guineas as a testimony against a wicked prosecution, and at the same time advised him to read works on the evidences (*Monthly Repository*, 1822, p. 586 sq.)

[Cornish's Autobiography, somewhat abridged by Rev. James Manning of Exeter, is printed in Monthly Repository, 1823, p. 617 sq.; see also same magazine, 1816, p. 649 sq., 1823, p. 635; Murch's Hist. Presb. and Gen. Bapt. Churches in West of Eng., 1835, p. 336 sq., 340 sq.]

A. G.

CORNISH, Sir SAMUEL (*d.* 1770), vice-admiral, is said to have risen from a very humble origin, to have served his apprenticeship on board a collier, to have been afterwards in the East India Company's service, and to have entered the navy as an able seaman. All this, however, is based only on vague tradition. The first certain knowledge that we have is that on 16 Nov. 1739 he was appointed lieutenant of the Lichfield, and

that on 11 Nov. 1740 he followed Captain Knowles from her to the Weymouth. As first lieutenant of the Weymouth he served in the expedition to Cartagena in March to April 1741, and on his return to England was made commander of the Mortar bomb. On 12 March 1741–2 he was advanced to post rank and appointed to the Namur as flag captain to Vice-admiral Mathews, with whom he went out to the Mediterranean. On 21 Sept. 1742 he was appointed to command the Guernsey of 50 guns, and in her he continued till the end of the war, doing occasional good service in the destruction of the enemy's privateers, and taking part in the action off Toulon (11 Feb. 1743–4), though without winning any distinction (*Narrative of the Proceedings of His Majesty's Fleet in the Mediterranean . . . from the year* 1741 *to March* 1744, pp. 26, 57). In 1755 he commissioned the Stirling Castle for service in the Channel, and in 1758 was transferred to the Union of 90 guns, with an order from Lord Anson to wear a distinguishing pennant. On 14 Feb. 1759 he was promoted to be rear-admiral of the white, and in May was sent out to the East Indies with a small squadron to reinforce Vice-admiral Pocock, who early in the following spring resigned the command of the station to Rear-admiral Steevens. Steevens died on 17 May 1761, and was succeeded by Cornish. Under his two predecessors the French power in the East had been annihilated; Pondicherry, their last stronghold, having surrendered on 15 Jan. 1761. Cornish was thus at liberty, when the war with Spain broke out, to give his undivided attention to the new enemy. The news was brought out by Colonel and Brigadier-general Draper of the 79th regiment [see Draper, Sir William], who also carried orders to the admiral to co-operate in the reduction of the Philippine Islands. This he did with his whole force, amounting to seven ships of the line, besides frigates; and having taken the precaution of sending cruisers in advance to the entrance of the China seas, all intelligence was prevented reaching the islands. Their first intimation of the pending danger was the entry of the fleet into the Bay of Manila on 23 Sept. 1762. The Spaniards were thus found quite unprepared, and it was determined to take advantage of the surprise by attacking the town without delay. The troops under Draper, about thirteen hundred strong, were reinforced by some seven hundred seamen and three hundred marines. They landed on the 25th, and at once broke ground before the town. The siege was vigorously pushed. On the evening of 5 Oct. the breach was judged practicable; the Spaniards had no means of further resistance, nor do they appear to have formed any resolution of offering any, but they still obstinately refused to surrender. The next morning, at daybreak, the place was taken by storm. There were, of course, some irregularities, which, however, were quickly repressed, on the governor's agreeing to pay a ransom of four million dollars. A large quantity of naval and military stores fell into the hands of the captors, and the islands were taken possession of in the name of the king of Great Britain; but in Lord Bute's headlong eagerness for peace they were restored without any equivalent, and on the bills drawn by the governor being presented in Spain, payment was refused: under Bute's leadership it was not insisted on, and was never made.

On 21 Oct. 1762 Cornish was advanced vice-admiral of the blue, and returned to England next year. He had no further service, was created a baronet on 9 Jan. 1766, and was whig M.P. for Shoreham from 1765 till death. His title became extinct on his death, without issue, 30 Oct. 1770. His large fortune, acquired in the East Indies and by the Manila prize-money, went to his nephew, Samuel Pitchford, captain in the navy, who in accordance with the will, took the name of Cornish. He commanded the Arrogant of 74 guns in the battle of Dominica, 12 April 1782, and died, admiral of the red, in 1816.

CORNWALL, Earls of. [See Richard, 1209–1272; Gaveston, Piers, *d.* 1312; John, 1316–1336.]

CORNWALL, BARRY. [See Procter, Bryan Waller.]

CORNWALL, CHARLES WOLFRAN (1735–1789), speaker of the House of Commons, grandson of Charles Cornewall [q. v.], and only son of Jacobs Cornwall of Berrington, Herefordshire, by his wife, Rose, daughter of Robert Fowler of Barton Priors, was born on 15 June 1735. He received his education at Winchester and New College, Oxford. Although he was called to the bar at Gray's Inn, and became a bencher of the inn, he does not appear to have had any considerable amount of practice, and soon retired from professional life. In 1763 he was appointed commissioner for examining the German accounts, and on his retirement from that office received

a pension of 1,500*l.* a year. His political career was decided by his marriage in 1764 with Elizabeth, daughter of Colonel Charles Jenkinson, and sister of Charles Jenkinson, then secretary-at-war, and afterwards Lord Hawkesbury and Earl of Liverpool. In the parliament of 1768 he represented Grampound, in those of 1774 and 1780 Winchelsea, and in that of 1784 Rye. Having fallen out with his brother-in-law, he attached himself for a short time to Shelburne's party, and acted with the whigs in the Middlesex election case and some other like matters. His defection, however, did not last long. He held office as a lord of the treasury in North's government from 1774 to 1780, and was made chief justice in eyre of the royal forests north of the Trent, and a privy councillor. At the meeting of the parliament of 1780 he was chosen speaker of the House of Commons. Despite Wraxall's approval of his voice, figure, and deportment, he owed his position rather to family influence than to any peculiar merit. His habit of relieving the weariness of his position during the debates of the house by frequent draughts of porter is noticed by Wraxall and commemorated in the 'Rolliad:'

There Cornwall sits, and ah! compelled by fate,
Must sit for ever, through the long debate.
. . . . .
Like sad Prometheus fastened to the rock,
In vain he looks for pity to the clock;
In vain th' effects of strengthening porter tries,
And nods to Bellamy for fresh supplies.

He was re-elected in the parliament of 1784. On 27 Feb. 1786 Pitt brought forward a motion for fortifying the dockyards; the house divided, and the numbers being equal, 169 on each side, Speaker Cornwall gave his casting vote against the government. He died, while still holding office, on 2 Jan. 1789. Being master of St. Cross Hospital, near Winchester, he was buried in St. Cross Church. A long epitaph was inscribed on his monument. He left no children. His wife survived him until 8 March 1809, and was buried with him. Wraxall, in his spiteful way, says: 'Never was any man in a public situation less regretted or sooner forgotten.'

[Manning's Lives of the Speakers, 456–61; Return of Members of Parliament, ii.; Parliamentary History, xxv. 1156; Wraxall's Historical and Posthumous Memoirs (ed. 1884), i. 259–61, iii. 385, iv. 269; Gent. Mag. lix. i. 87.] W. H.

CORNWALL, HENRY OF (1235–1271). [See HENRY.]

CORNWALL, JOHN OF (*fl.* 1170), theologian. [See JOHN.]

CORNWALLIS, CAROLINE FRANCES (1786–1858), authoress, was the daughter of the Rev. William Cornwallis, rector of Wittersham and Elham in Kent. When only seven years old Caroline produced 'histories, poems, commentaries, and essays' which would fill volumes, and at fifteen she made a vow 'to forsake all the follies' of her age. From 1810 to 1826, although suffering frequently from ill-health, she devoted herself to the acquirement of knowledge, while never neglecting her home duties. She learnt Latin, Greek, Hebrew, and German, and acquired some knowledge of philosophy, natural and social science, history, theology, law, and politics.

Sismondi, who at an earlier period had offered her marriage and had ever since remained her warm friend, lent her his house at Pescia in 1826. She studied Tuscan criminal procedure, and made an abstract of the Tuscan code. She was delighted by the 'contrast between polished society and wild nature,' and 'enjoyed life for the first time for many years.' Her father's death in December 1827 necessitated her return to England, but in 1829 she returned to Italy. In 1842 the outcome of much thought and study appeared in her first work, 'Philosophical Theories and Philosophical Experience, by a Pariah.' It was the first volume in a series entitled 'Small Books on Great Subjects,' a series projected and carried out by Miss Cornwallis with the assistance of a few friends. By far the greater number of the twenty-two volumes were from her pen. The series embraced such various subjects as Greek philosophy, theology, geology, chemistry, criminal law, the philosophy of ragged schools, and grammar. These volumes, published anonymously, were widely read both in England and America. In 1853 she was bracketed with Mr. Micaiah Hill for the prize of 200*l.* offered by Lady Byron for the best essay on 'Juvenile Delinquency.' She was an ardent advocate for the higher education of women, and for the removal of the legal disabilities under which they suffered. On the latter subject she contributed two articles to the 'Westminster Review' (1856, 1857). She also wrote on 'Naval Schools' for 'Fraser.' After many years of bodily weakness, but with unabated vigour of mind, she died at Lidwells in Kent on 8 Jan. 1858, having lived to see many of her hopes realised in the improvement of the laws relating to women, and in the establishment of ragged and industrial schools. In appearance Miss Cornwallis was large-featured, tall, and thin. Her 'Letters,' published in 1864, are remarkable for thoughtfulness, variety, and grasp of subject, and a delightful play of humour.

[Selections from the Letters of Caroline Frances Cornwallis, 1864; No. I. Small Books on Great Subjects; article in Chambers's Encyclopædia; unpublished letters; private information.]

S. L. M.

CORNWALLIS, SIR CHARLES (*d.* 1629), courtier and diplomatist, second son of Sir Thomas Cornwallis [q. v.], controller of Queen Mary's household, who had been imprisoned by Elizabeth in 1570, was probably born at his father's house, Brome Hall, Suffolk. On 11 July 1603 he was knighted, and in 1604 became M.P. for Norfolk. Early in 1605 he was sent as resident ambassador to Spain. He was from the first very active in attempting to protect English merchants from the persecution of the Inquisition, and endeavoured in vain to impress the home government with the necessity of serving English commercial interests. He was recalled in September 1609, and his secretary, Francis Cottington, took his place at Madrid. In 1610 he became treasurer of the household of Henry, prince of Wales, resisted the proposal to marry the prince to a daughter of the Duke of Savoy, and attended his master through his fatal illness of 1612. He was a candidate for the post of master of the wards in the same year; was one of four commissioners sent to Ireland on 11 Sept. 1613 to investigate Irish grievances, and reported that Ireland had no very substantial ground for complaint. In 1614 Cornwallis was suspected of fanning the parliamentary opposition to the king. One Hoskins, who had made himself conspicuous in the House of Commons by his denunciation of Scotchmen and Scotch institutions, declared when arrested that he was Cornwallis's agent. Cornwallis disclaimed all knowledge of Hoskins, but admitted that he had procured the election of another member of parliament, and had supplied him with notes for a speech against recusants and Scotchmen. The privy council placed Cornwallis under arrest in June 1614, and he was imprisoned in the Tower of London for a year. Cornwallis, who was at one time living at Beeston, Suffolk, retired late in life to Harborne, Staffordshire, where he died on 21 Dec. 1629. He was buried in London at St. Giles's-in-the-Fields.

Cornwallis married thrice: (1) Elizabeth, daughter of Thomas Farnham of Fincham, Norfolk; (2) Anne or Elizabeth, daughter of Thomas Barrow, widow of Ralph Skelton (*d.* 30 March 1617); (3) Dorothy (*d.* 29 April 1619), daughter of Richard Vaughan, bishop of London, and widow of John Jegon, bishop of Norwich. Sir William Cornwallis [q. v.] was Sir Charles's son by his first wife, and one of the portraits in the print preceding Sir William's 'Essayes' is believed to represent the author's father.

Cornwallis wrote: 'A Discourse of the most illustrious Prince Henry, late Prince of Wales, written an. 1626,' London, 1641 and 1644, 1738 and 1751; republished in 'Somers Tracts' (ii.), and in the 'Harleian Miscellany' (iv.) In Gutch's 'Collectanea Curiosa' are two papers by Cornwallis detailing the negotiations for Prince Henry's marriage with the Spanish infanta and the Savoyard princess. Winwood's 'Memorials' (ii. and iii.) and Sawyer's 'Memorials of Affairs of State,' 1725, include a large number of Cornwallis's official letters from Spain; many of the originals are in the British Museum (Harl. MS. 7007).

[Davy's Athenæ Suffolc. i. 323, in Brit. Mus. Add. MS. 19165; Winwood's Memorials, ii. and iii.; Correspondence of Lady Jane Cornwallis; Lodge's Illustrations, iii. 344; Birch's History of Henry, prince of Wales (1760); Gardiner's Hist. of England, i. and ii.; Spedding's Life of Bacon.] S. L.

CORNWALLIS, CHARLES, first MARQUIS and second EARL CORNWALLIS (1738–1805), governor-general of India, and lord-lieutenant of Ireland, the sixth child and eldest son of Charles, first earl Cornwallis, was born in Grosvenor Square on 31 Dec. 1738. The family of Cornwallis was established at Brome Hall, near Eye, in Suffolk, in the course of the fourteenth century, and members of it occasionally represented the county in the House of Commons during the next three hundred years. Frederick Cornwallis, created a baronet in 1627, fought for Charles I, and followed Charles II into exile. He was created Lord Cornwallis of Eye, Suffolk, in 1661, and his descendants by fortunate marriages increased the importance of the family. Charles, fifth lord Cornwallis, married Elizabeth, daughter of Lord Townshend and niece of Sir Robert Walpole, and was created Earl Cornwallis and Viscount Brome in 1753. His son Charles was educated at Eton, where he received an injury to his eye by an accidental blow at hockey from the Hon. Shute Barrington, afterwards bishop of Durham. He obtained his first commission as ensign in the 1st, or grenadier, guards, on 8 Dec. 1756. His military education then commenced, and after travelling on the continent with a Prussian officer, Captain de Roguin, Lord Brome, as he was then styled, studied at the military academy of Turin.

While at Geneva, in the summer of 1758, he heard that the guards had been ordered to join Prince Ferdinand of Brunswick. He tra-

velled at once to Ferdinand's headquarters, and arrived there six weeks before the English troops, when he was appointed aide-de-camp to the Marquis of Granby. He served on Granby's staff for more than a year, and was present at Minden. He returned to England in August 1759, on being promoted captain into the 85th regiment. In January 1760 he was elected M.P. for the family borough of Eye in Suffolk, and on 1 May 1761 he obtained the lieutenant-colonelcy of the 12th regiment, and assumed its command in June. His regiment was hotly engaged in the battle of Kirch Donkern, or Vellinghausen, on 15 July, and in many minor actions, and then went into winter quarters. Throughout the campaign of 1762 he was also present, and his regiment was particularly distinguished at the battles of Wilhelmstadt and Lutterberg, and he returned to England in November to take his seat as second earl Cornwallis, to which title he had succeeded on the death of his father on 23 June.

Cornwallis determined to act with the whig peers, and in opposition to Lord Bute, and when Rockingham became prime minister in July 1765, Cornwallis became a lord of the bedchamber. He was also made an aide-de-camp to the king in August 1765, and colonel of the 33rd regiment in March 1766. When Rockingham went out of office in August 1766, Cornwallis, under the influence of his friend Lord Shelburne, consented to serve under the Duke of Grafton, and accepted from him the appointment of chief justice in eyre south of the Trent in December 1766. He took no great part in political debates, but he was one of the four peers who supported Lord Camden in his opposition to the resolution asserting the right of taxation in America. He refused to remain in office in England after Shelburne's resignation, and in 1769 threw up both his appointments as lord of the bedchamber and as chief justice in eyre, to become joint vice-treasurer of Ireland, on which Junius (under the pseudonym of Domitian) observed, on 5 March 1770, that the 'young man has taken a wise resolution at last, for he is retiring into a voluntary banishment in hopes of recovering the ruins of his reputation.' In 1768 Cornwallis married Jemima Tullikens, daughter of Colonel James Jones of the 3rd guards. The king certainly did not regard Cornwallis with the same detestation as most of the whig leaders, for in 1770 he was made constable of the Tower of London, and in 1775 he was promoted major-general.

George III no doubt felt that he could depend upon the loyalty of Cornwallis, who did not refuse to take a command in the war against the American insurgents, though he had systematically opposed the measures which caused the insurrection. The events of 1775 made it necessary to reinforce the English army in America, and on 10 Feb. 1776 Cornwallis, in spite of the entreaties of his wife, set sail in command of seven regiments of infantry. When he reached Cape Fear, he found that Sir William Howe had evacuated Boston and retired to Halifax. To that place he brought the reinforcements, and when the army was reconstituted he took command of the reserve division, while his seniors, Lieutenant-generals Henry Clinton and Earl Percy, took command of the 1st and 2nd divisions respectively. Under Sir William Howe, Cornwallis co-operated in the operations in Staten Island and Long Island, in the battle of Brooklyn and the capture of New York, and after the battle of White Plains he took Fort Lee on 18 Nov., and rapidly pursued Washington to Brunswick and then to Trenton, thus completely subduing the state of New Jersey. The military ability shown by Cornwallis in these operations was fully recognised by Sir William Howe (*Cornwallis Correspondence*, i. 25), but, unfortunately, Howe himself was quite unable to seize the advantage which his subordinate's ability gave him. In the following year Cornwallis won the victory of Brandywine on 13 Sept., and safely occupied Philadelphia on the 28th. He then came home on leave and was promoted lieutenant-general, and again sailed on 21 April 1778 to take up the post of second in command to Sir Henry Clinton [q.v.], who had succeeded Sir William Howe as commander-in-chief in America. On joining Clinton at Philadelphia, Cornwallis soon found that that general had no more grasp of the critical situation of affairs than Sir William Howe, and, in utter disgust at his refusal to attempt operations on a large scale, he at once sent in his resignation, which the king refused to accept. Cornwallis understood what a change had been made in the position of affairs by the active intervention of France; he saw the necessity of occupying every port at which French troops could be disembarked; he wished to stop the supplies of money and stores which poured into the southern states by the Chesapeake, and he knew that the English army must win some striking success to counterbalance the evil effects of the surrender of Burgoyne at Saratoga. As a general, he wished to make use of the untried resources of the southern states, to rally the loyalists there, and to act upon the focus of the insurrection from the south. Clinton, however, could not understand these views of Cornwallis, and was quite satisfied with small

predatory expeditions. During 1778 Cornwallis did little but cover the retreat from Philadelphia to New York, and then returned to England on the news of the dangerous illness of his wife. Lady Cornwallis died on 16 Feb. 1779, and after that event Cornwallis again offered his services to the king, and reached New York in the month of August.

Cornwallis was now at last enabled to carry his ideas about the southern states into execution. Clinton agreed to go to South Carolina, and on 12 May 1780 Charleston surrendered to him. In the following month he left the southern states, with a force of four thousand soldiers, to Cornwallis, and retired to New York to leave him to carry out his schemes as best he could. Cornwallis showed his military capacity in his defeat of General Gates at Camden on 16 Aug. 1780, and he managed to keep the southern states in fair order, and to repel the attacks of the various insurgent bands. In 1781 he decided to march northwards into Virginia, and hoped to form a junction with Clinton's army upon the Chesapeake, and from that point to subdue the most important rebel state. Leaving Lord Rawdon to command on the frontiers of South Carolina, and Colonel Balfour at Charleston, he moved northward. The expedition began with disaster. Colonel Tarleton was defeated at Cowpens on 17 Jan. by General Greene, but on the next day Cornwallis formed a junction with a division under Alexander Leslie, and pursued the victorious Americans. He at last came up with them at Guilford Court-house, where he defeated the insurgents, and took Greene's guns on 15 March after a sharp engagement, in which he was himself wounded. His plans after this victory are well shown in a letter to General Phillips, who had been sent to the Chesapeake by Clinton, dated 10 April: 'I have had a most difficult and dangerous campaign, and was obliged to fight a battle two hundred miles from any communication, against an enemy seven times my number. The fate of it was long doubtful. We had not a regiment or corps that did not at some time give way. It ended, however, happily, in our completely routing the enemy and taking their cannon. . . . I last night heard of your arrival in the Chesapeake. Now, my dear friend, what is our plan? . . . If we mean an offensive war in America, we must abandon New York, and bring our whole force into Virginia; we then have a stake to fight for, and a successful battle may give us America. If our plan is defensive, mixed with desultory expeditions, let us quit the Carolinas (which cannot be held defensively while Virginia can be so easily armed against us), and stick to our salt pork at New York, sending now and then a detachment to steal tobacco, &c.' (*Cornwallis Correspondence*, i. 87). In May Cornwallis effected a junction with General Phillips's force at Petersburg, though Phillips died before his arrival, and he established himself, by Sir Henry Clinton's express orders, at Yorktown on 2 Aug., though he did not regard his force as sufficiently strong to hold that exposed post (see his despatch of 27 July to Sir Henry Clinton, *ib.* i. 107–9). Washington soon perceived the mistake, and after he was joined in the beginning of September by the French troops, which the Comte de Grasse had landed at James Town, he decided to move with all his forces against Cornwallis. The result of this movement was never doubtful; Clinton sent no help; the English force was surrounded and outnumbered; on 14 Oct. the advanced redoubts at Yorktown were stormed, and on 19 Oct. Cornwallis was obliged to capitulate. On that very day Sir Henry Clinton sailed from New York for the Chesapeake, and arrived there on the 24th to find that he was too late. The capitulation was signed, and the war of American independence was at an end. Neither the government nor the English people blamed Cornwallis. His schemes had been admirable in a political as well as in a military aspect, and had it not been for the arrival of the French troops they might have succeeded.

As early as May 1782, when Cornwallis was still a prisoner on 'parole,' he was asked to go to India as governor-general and commander-in-chief, but his position as a prisoner on 'parole' prevented him from accepting the office. His great political friend was still Lord Shelburne. He resigned his office of constable of the Tower in Feb. 1783, and was succeeded in that position for the time by Lord George Lennox; but in the November of that year he again received the office of constable, though as a military post only. Pitt had, however, set his heart on Cornwallis's accepting the governor-generalship of India. Both Pitt and Dundas thought him the only man capable of restoring the military and civil services of India to an efficient state, and of repairing the bad effect upon English prestige of the defeats experienced in the second Mysore war. Cornwallis, however, positively refused the offer of the double appointment when it was again made to him in February 1785, but at last, after a short mission to Frederick the Great in August and September under the pretext of attending the great Prussian reviews in Silesia, he consented to accept it on 23 Feb. 1786, 'much against his will and with grief of heart' (*ib.* i. 208).
